> In consideration of reaching an agreement for 2024 mitigation and accommodating continued negotiations, and recognizing conservation actions taken in 2023, SWC forgives any remaining obligations for the outstanding 2022 breach previously found by IDWR for Bingham Ground Water District, Bonneville-Jefferson Ground Water District, and Jefferson-Clark Ground Water District. This provision resolves issue 4 identified in the *Notice of Hearing* issued December 29, 2023, in IDWR Docket No. CM-MP-2016-001….

2024 Stipulation, at 2 ¶ 7. Because the SWC and IGWA agree to forgiveness of the 2022 deficiency in exchange for reaching an agreement in 2024, accommodating continuing negotiations, and recognizing conservation performed in 2023 well in excess of the 240,000-acre-foot requirement, the Director accepts the stipulated forgiveness as compliance with the *2016 Mitigation Plan* for the 2024 season. As a result, the Director concludes that Bingham Ground Water District, Bonneville-Jefferson Ground Water District, and Jefferson-Clark Ground Water District are no longer in breach of the *2016 Mitigation Plan* for the 2024 season and will be removed from the curtailment list.

While the Director accepts that the stipulated forgiveness is sufficient to consider the ground water districts in compliance with the *2016 Mitigation Plan* for the 2024 season such that they can be removed from the curtailment list, Hearing Officer Roger S. Burdick is currently presiding over a proceeding that involves issues related to the 2022 breach. The outstanding issues in that proceeding are as follows:

> 1) Did the Director error by not issuing an order specifying the actions needed to cure the 2022 breach of the 2016 Mitigation Plan by certain ground water districts?
>
> 2) Did the Director error by not immediately issuing an order curtailing ground water districts that breached the 2016 Mitigation Plan in 2022?
>
> 3) Can the 2009 mitigation plan be used to cure the ground water districts' 2022 breach of the 2016 Mitigation Plan?
>
> 4) What action must be taken by the ground water districts to cure their 2022 breach of the 2016 Mitigation Plan?

Order Authorizing Discovery; Scheduling Order; Order Suspending IDAPA 37.01.01.354; Notice of Prehearing Conference and Hearing, at 4, No. CM-MP-2016-001. These four legal issues are still before Hearing Officer Burdick and answers to those will come from Hearing Officer Burdick. In the *2024 Stipulation*, the parties stipulate to stay Docket No. CM-MP-2016-001, which includes Hearing Officer Burdick's case. Should Hearing Officer Burdick issue a recommended order before the parties "jointly file stipulate[d] motions to stay litigation until October 1, 2024," the Director will stay review of the recommended order until October 1, 2024. *2024 Stipulation*, at 3 ¶ 9.

C. Storage Water Delivery in 2024

In addition to the conservation obligation, the *2016 Mitigation Plan* also obligates IGWA to deliver 50,000 ac-ft of storage water annually. As explained in the *Amended Order Determining Deficiency*:

> [T]he 50,000 acre-foot obligation does not come due until 21 days after the day of allocation. Furthermore, the *2016 Settlement Mitigation Plan* does not require documentation of securing the water…. In addition, the *2016 Settlement Mitigation Plan* specifically spells out a dispute resolution process if the Districts breach the 50,000 acre-foot obligation. Only if that dispute resolution process fails does the Director get involved.

Amended Order Determining Deficiency, at 9 (internal citations omitted).

In the *2024 Stipulation*, the parties agree that "[f]or the 2024 irrigation season, the Groundwater Users will deliver 65,000 acre-feet of storage water to the SWC as set forth in Appendix B. 50,000 acre-feet will be delivered in accordance with the 2016 Plan, and 15,000 acre-feet will be delivered in accordance with the 2021 Remedy Agreement." *2024 Stipulation*, at 2 ¶6.

The 50,000-acre-foot storage water delivery term is IGWA's obligation, however, Appendix B identifies that the Idaho Water Resource Board will provide 5,000 of the 50,000 acre-feet. Nevertheless, in consideration of the parties' agreement, supported by the Raybould Letter confirming IWRB's commitment to providing the 5,000 acre-feet, and in light of the *2016 Mitigation Plan*'s dispute resolution process, the Director is satisfied that the Districts are in compliance with the storage water delivery element of the *2016 Mitigation Plan* for 2024. The Director's acceptance of the IWRB delivering 5,000 acre-feet of the 50,000 storage water delivery obligation in 2024 should not be interpreted as an amendment to the requirements of the *2016 Mitigation Plan* or agreement to allowing the IWRB to carry a share of the obligation in future years.

CONCLUSION

Pursuant to section 3 of the *2024 Stipulation*, the Director approves the *2024 Stipulation* as evidence of compliance with the *2016 Mitigation Plan* for the 2024 irrigation season. Put differently, the parties' *2024 Stipulation* establishes to the satisfaction of the Director that the ground water districts are operating in accordance with a Department-approved mitigation plan for 2024. A *Seconded Order Amending Curtailment* list removing Bingham Ground Water District, Bonneville-Jefferson Ground Water District, Jefferson-Clark Ground Water District, and Carey Valley Ground Water District from the curtailment list will be issued concurrently with this Order.

ORDER

Based upon and consistent with the foregoing, IT IS HEREBY ORDERED that the SWC and IGWA's *Joint Motion for Order Approving 2024 Stipulation* is GRANTED. The Director's May 3, 2024 *Final Order Specifying Additional Actions* is STAYED until October 1, 2024.

Dated this 20th day of June 2024.

MATHEW WEAVER
Director

EXPLANATORY INFORMATION TO ACCOMPANY A FINAL ORDER

(To be used in connection with actions when a hearing was **not** held)

(Required by Rule of Procedure 740.02)

The accompanying order is a "**Final Order**" issued by the department pursuant to section 67-5246, Idaho Code.

PETITION FOR RECONSIDERATION

Any party may file a petition for reconsideration of a final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: The petition must be received by the Department within this fourteen (14) day period.** The department will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law. See section 67-5246(4), Idaho Code.

REQUEST FOR HEARING

Unless the right to a hearing before the director or the water resource board is otherwise provided by statute, any person who is aggrieved by the action of the director, and who has not previously been afforded an opportunity for a hearing on the matter shall be entitled to a hearing before the director to contest the action. The person shall file with the director, within fifteen (15) days after receipt of written notice of the action issued by the director, or receipt of actual notice, a written petition stating the grounds for contesting the action by the director and requesting a hearing. See section 42-1701A(3), Idaho Code. **Note: The request must be received by the Department within this fifteen (15) day period.**

APPEAL OF FINAL ORDER TO DISTRICT COURT

Pursuant to sections 67-5270 and 67-5272, Idaho Code, any party aggrieved by a final order or orders previously issued in a matter before the department may appeal the final order and all previously issued orders in the matter to district court by filing a petition in the district court of the county in which:

i. A hearing was held,
ii. The final agency action was taken,
iii. The party seeking review of the order resides, or
iv. The real property or personal property that was the subject of the agency action is located.

The appeal must be filed within twenty-eight (28) days of: a) the service date of the final order, b) the service date of an order denying petition for reconsideration, or c) the failure within twenty-one (21) days to grant or deny a petition for reconsideration, whichever is later. See section 67-5273, Idaho Code. The filing of an appeal to district court does not in itself stay the effectiveness or enforcement of the order under appeal.

TRENT TRIPPLE, Clerk
By ERICA WEEKLEY
DEPUTY

IN THE DISTRICT COURT OF THE FOURTH JUDICIAL DISTRICT OF THE STATE OF IDAHO, IN AND FOR THE COUNTY OF ADA

IDAHO GROUNDWATER APPROPRIATORS, INC.,

Petitioner,

vs.

THE IDAHO DEPARTMENT OF WATER RESOURCES, and MATHEW WEAVER in his capacity as the Director of the Idaho Department of Water Resources,

Respondents,

and

AMERICAN FALLS RESERVOIR DISTRICT #2, MINIDOKA IRRIGATION DISTRICT A&B IRRIGATION DISTRICT, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, TWIN FALLS CANAL COMPANY, CITY OF POCATELLO, CITY OF BLISS, CITY OF BURLEY, CITY OF CAREY, CITY OF DECLO, CITY OF DIETRICH, CITY OF GOODING, CITY OF HAZELTON, CITY OF HEYBURN, CITY OF JEROME, CITY OF PAUL, CITY OF RICHFIELD, CITY OF RUPERT, CITY OF SHOSHONE, AND CITY OF WENDELL, BONNEVILLE-JEFFERSON GROUND WATER DISTRICT, and BINGHAM GROUNDWATER DISTRICT,

Intervenors.

Case No. CV01-23-13173

ORDER GRANTING STIPULATED MOTION FOR STAY

IN THE MATTER OF THE DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY AND FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIRS DISTRICT NO. 2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY.	))))))))))

On July 8, 2024, the parties filed a stipulated motion requesting the Court issue an order staying this proceeding until October 1, 2024, at which time the parties will either (1) stipulate to dismissal of this action, or (2) file a notice with the Court asking the Court to move forward with considering the pending petition for rehearing. The Court in an exercise of its discretion will grant the stipulated motion on the basis it is unopposed.

THEREFORE, BASED ON THE FOREGOING, THE FOLLOWING ARE HEREBY ORDERED:

1. The stipulated motion for stay is hereby granted.

2. All proceedings in the above-captioned matter are stayed until October 1, 2024.

Dated 7/12/24

DISTRICT COURT 4TH JUDICIAL DISTRICT
OF THE STATE
- OF -
IDAHO
IN AND FOR ADA COUNTY

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **ORDER REVISING APRIL 2024 FORECAST SUPPLY AND AMENDING CURTAILMENT ORDER** ***(METHODOLOGY STEPS 5 & 6)***

The Director of the Idaho Department of Water Resources ("Department") finds, concludes, and orders as follows:

FINDINGS OF FACT

A. Background

1. On July 19, 2023, the Department issued its *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("*Methodology Order*"). The *Methodology Order* established nine steps for determining material injury to members of the Surface Water Coalition ("SWC"). This order applies Steps 5 and 6 of the *Methodology Order*.

2. Step 5 of the *Methodology Order* addresses the final injury determination to reasonable carryover for members of the SWC. Step 5 states:

> If the storage allocations held by members of the SWC fill, there is no reasonable carryover shortfall. If the storage allocations held by members of the SWC do not fill, within fourteen (14) days following the publication of Water District 01's initial storage report . . . the volume of water secured by junior ground water users to fulfill the reasonable carryover shortfall shall be made available to injured members of the SWC.

Methodology Order, at 43. On November 30, 2023, the Director issued the *Final Order Establishing 2023 Reasonable Carryover* (*Methodology Step 9*) ("*2023 Step 9 Order*") concluding that no member of the SWC is owed reasonable carryover storage in 2023 for use in 2024. *2023 Step 9 Order*, at 5.

3. Step 6 of the *Methodology Order* states:

> Approximately halfway through the irrigation season, but following the events described in Step 5, the Director will, for each member of the SWC: (1) recalculate RISD [Reasonable In-Season Demand]; (2) issue a revised FS [Forecast Supply]; and (3) estimate the Time of Need date.

Methodology Order, at 43. (footnote omitted).

4. On April 18, 2024, the Director issued his *Final Order Regarding April 2024 Forecast Supply (Methodology Steps 1 – 3)* ("*April Forecast Supply Order*"). The *April Forecast Supply Order* predicted a demand shortfall to the SWC of 74,100 acre-feet for the 2024 irrigation season. *April Forecast Supply Order*, at 3. At that time, the only member of the SWC predicted to experience material injury during the 2024 irrigation season was Twin Falls Canal Company ("TFCC"). *Id.* The Director ordered that, on or before May 2, 2024, ground water users with consumptive water rights "junior to March 31, 1954, within the Eastern Snake Plain Aquifer area of common ground water supply shall establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted April IDS [in-season demand shortfall] of 74,100 acre-feet in accordance with an approved mitigation plan." *Id.* at 6. The Director also ordered that, "[i]f a junior ground water user cannot establish . . . that they can mitigate for their proportionate share of the predicted April IDS in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water user." *Id.*

5. On May 30, 2024, the Director issued a *Final Order Curtailing Ground Water Rights Junior to March 31, 1954* ("*Curtailment Order*"). The Director ordered that:

> [E]ffective May 30, 2024, ground water users holding water rights bearing priority dates junior to March 31, 1954, within the ESPA ACGWS [Eastern Snake Plain Aquifer area of common ground water supply], and listed in Attachment A to this order shall immediately curtail/refrain from diversion and use of ground water pursuant to those water rights unless notified by the Department that the order of curtailment has been modified or rescinded as to their water rights.

Curtailment Order, at 9.

6. In response to additional ground water district filings and a change to the area of common ground water supply, the Director amended the curtailment list on June 6, 2024[1], June 20, 2024[2], and June 28, 2024[3].

[1] *Order Amending Curtailment List*, June 6, 2024.
[2] *Second Order Amending Curtailment List*, June 20, 2024.
[3] *Order Regarding Mid-Season Change to Area of Common Ground Water Supply for the Eastern Snake Plain Aquifer; Third Order Amending Curtailment List*, June 28, 2024.

B. April through June Climate

7. The April 2024 Joint Forecast prepared by the United States Army Corps of Engineers and the United States Bureau of Reclamation ("BOR") predicted a near-normal 3,370,000 acre-feet of unregulated inflow at the Snake River near Heise gage for the period April–July 2024. *April Forecast Supply Order*, at 2. The Joint Forecast "is generally as accurate a forecast as is possible using current data gathering and forecasting techniques." *Methodology Order*, at 19.

8. The April through June precipitation was below average while the April through June temperature was above average. According to data measured at the Natural Resources Conservation Service's SNOTEL sites in the Upper Snake River Basin, the basin received 64%, 92%, and 54% of average precipitation in April, May, and June, respectively. The National Weather Service's Twin Falls weather station reported 27%, 55%, and 14% of normal precipitation in April, May, and June, respectively. Twin Falls temperatures were 2.3 degrees above normal for April, -1.9 degrees below normal for May, and 4.4 degrees above normal for June.[4]

C. Reasonable In-Season Demand

9. RISD "is the projected annual diversion volume for each SWC entity during the year of evaluation that is attributable to the projected beneficial use of growing crops within the service area of the entity." *Methodology Order*, at 13. In April, the demand from the 2018 baseline year ("BLY") defines the RISD. *Id.* at 17. During the irrigation season, the RISD for the completed portion of the irrigation season is recalculated by dividing the actual crop water need ("CWN") for each entity by the project efficiency for that entity. *Id.* at 17, 43. For the remainder of the irrigation season, the RISD is the demand defined by the July–October 2018 BLY. RISD is calculated on a monthly time step.

i. Crop Water Need

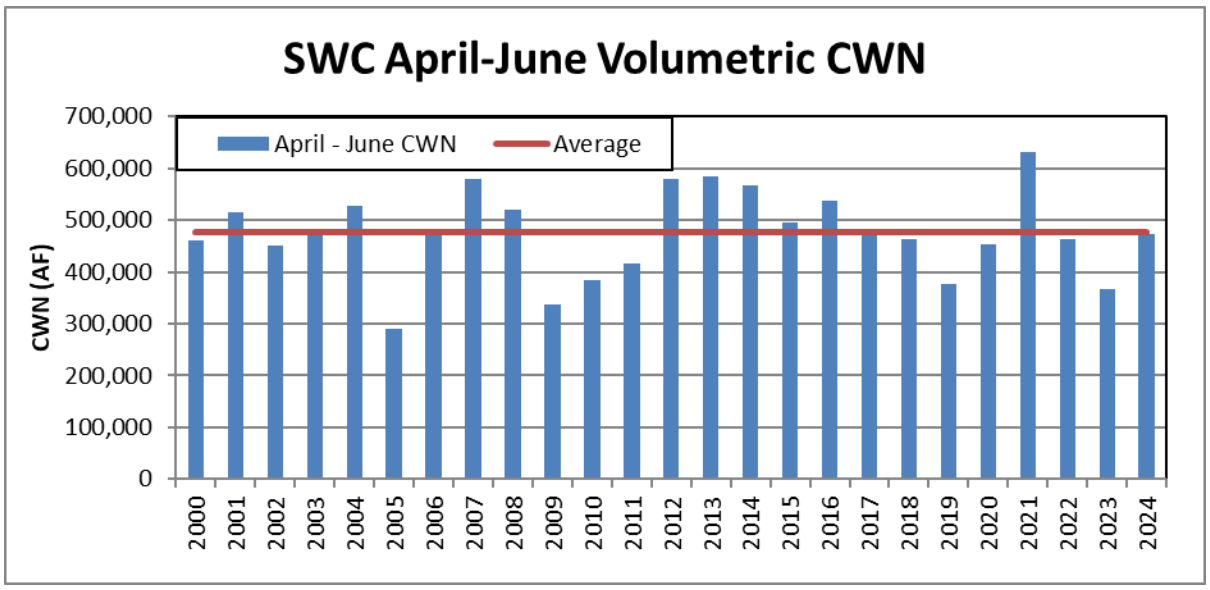
10. "CWN is the volume of irrigation water required for crop growth within a SWC entity boundary, such that crop growth is not limited by water availability." *Methodology Order*, at 15. "CWN is the difference between the fully realizable consumptive use associated with crop growth, or ET [evapotranspiration], and effective precipitation . . . ." *Id.*

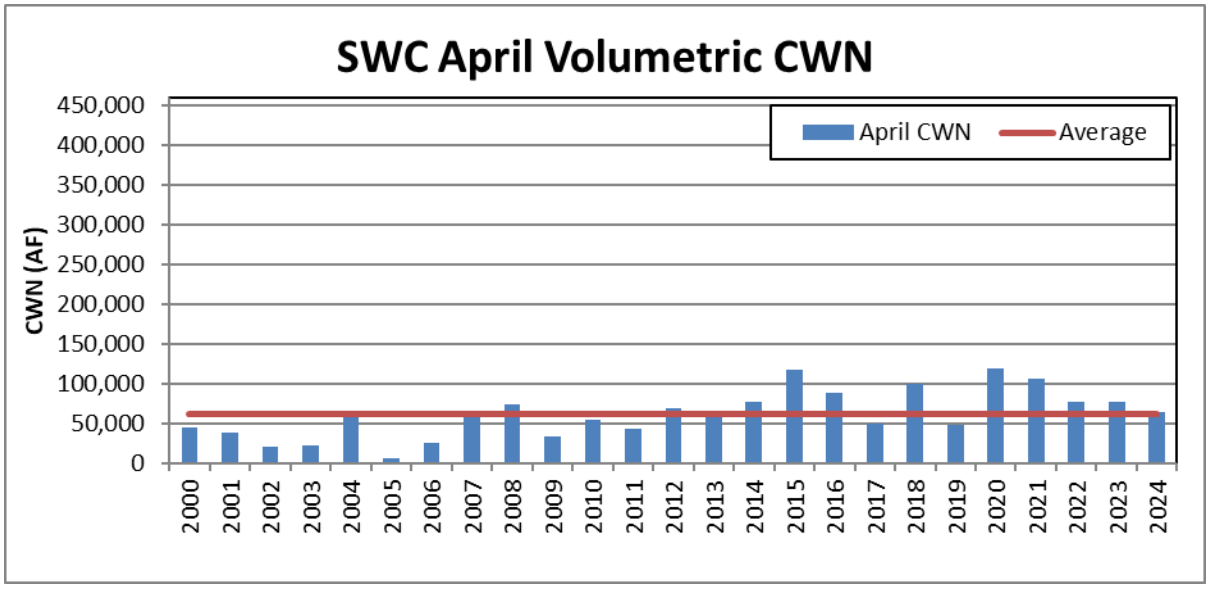
11. CWN is an input variable for calculating RISD for the completed portion of the irrigation season. *Id.* at 17. Actual RISD for the completed portion of the irrigation season is combined with monthly predicted baseline demands for the remaining months of the irrigation season to calculate a season-total RISD volume. *Id.* at 17–18. In-season demand shortfall is then calculated as the difference between the adjusted FS and the RISD. *Id.* at 23.

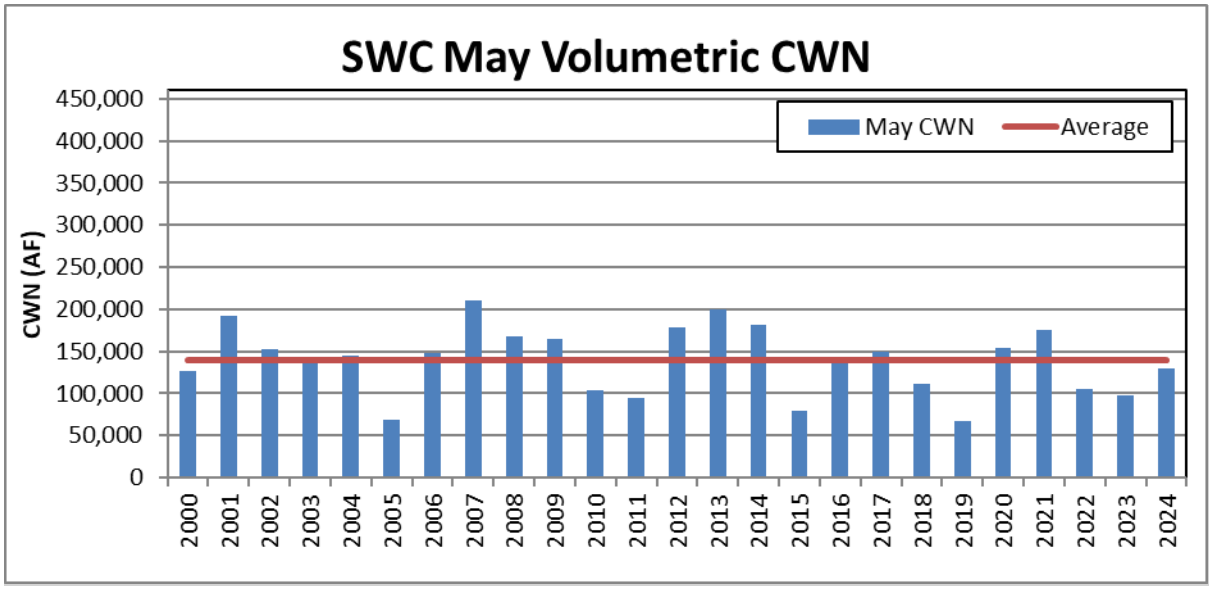
12. As calculated from the beginning of the irrigation season (April 1), the SWC's volumetric CWN for the current water year through June 30, 2024, is 473,375 acre-feet. This

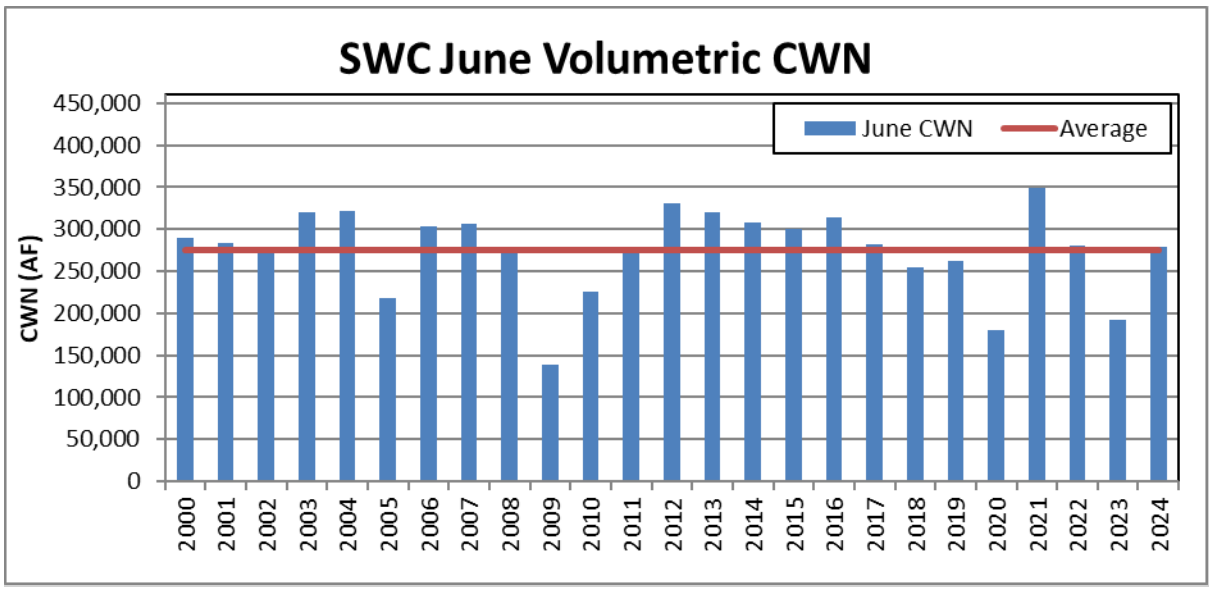
[4] Precipitation and temperature data obtained from the NOAA National Weather Service Preliminary Monthly Climate Data for the Twin Falls 3SE weather station (Twin Falls Airport).

volume is 99% of the 2000-2023 average CWN for April 1–June 30 and 102% of the CWN for the 2018 BLY. The following graphs summarize monthly volumetric CWN values:









ii. Extension of BLY

13. The RISD for the remaining portion of the irrigation season (July–October) is the July–October demand for the 2018 BLY. The numeric July–October demand values are shown in the table in Finding of Fact 14 below.

iii. Calculation of RISD

14. As calculated from the beginning of the irrigation season (April 1), the SWC's volumetric RISD for 2024 through June is 1,312,217 acre-feet. This volume is 100% of the

2000-2023 average demand from April 1–June 30 and 93% of the demand for the 2018 BLY. The recalculated RISD at this point of the 2024 irrigation season by entity is:

	April–June CWN (AF)	E_p (April–June)	April–June RISD (AF)	July–October Demand for 2018 BLY (AF)	Recalculated RISD (AF)
A&B	11,079	0.42-0.99	19,503[5]	38,528	58,032[5]
AFRD2	53,373	0.21-0.38	177,086	274,485	451,571
BID	40,576	0.30-0.47	101,186	145,546	246,732
Milner	11,319	0.37-0.73	21,972	36,432	58,404
Minidoka	72,113	0.35-0.53	159,603	196,968	356,571
NSCC	113,058	0.22-0.40	378,994	594,099	973,093
TFCC	171,857	0.26-0.51	453,873	653,473	1,107,346

D. Forecast Supply

15. When calculated during the irrigation season, the FS is the sum of the year-to-date actual natural flow diversions, the forecasted natural flow supply for the remainder of the season, and the storage allocation for each member of the SWC. *Methodology Order*, at 43. For this order, the FS is the sum of the actual natural flow supply from April through June, the predicted natural flow supply from July through October, and the actual storage allocations. Actual natural flow diversions for the completed portion of the irrigation season are extracted from the Department's water rights accounting program. The natural flow diversions for the remainder of the irrigation season are estimated by regression analysis. *Id.* at 20–21, 43. Storage allocations are determined by Water District 01 after the Day of Allocation. *Id.* at 43.

i. Sum of Actual Natural Flow Diverted

16. Actual natural flow diverted for the period April through June for each SWC member are summarized in the table contained within the Summary of Forecast Supply section in Finding of Fact 24.

ii. Regression Models to Predict Natural Flow (July–October)

17. Natural flow diversions were predicted for the remainder of the irrigation season by regression analysis. The *Methodology Order* established the following predictor variables for the regression models: natural flow in the Snake River near Heise as reported by the BOR, snow water equivalent ("SWE") data from the Two Ocean Plateau SNOTEL site, Spring Creek discharge, and ground water levels near American Falls Reservoir. *Methodology Order*, at 20. Unique regression models with unique predictor variable groups are established in the *Methodology Order* for each SWC member. *Id.* at 20–21.

[5] The Department has modified the total A&B irrigated acreage count to 14,749 acres. Based on the decision in CV01-23-13238, the new acreage count removes A&B Irrigation District's enlargement acres.

18. Either June 15 or July 1 SWE values for the Two Ocean Plateau SNOTEL site are used as input variables in each of the regression models developed in the *Methodology Order*. *Id.* Two Ocean Plateau SWE data was selected as a predictor variable in the *Methodology Order* based upon stepwise statistical analysis carried out in the development of each regression model. *Id.* The Two Ocean Plateau SWE data is an optimum predictor variable for several reasons, including: its elevation (the site is located above 9,000 ft and typically still has snow late in the runoff season (June 15 and July 1); its location (the site is in the headwaters of the Snake River above Jackson Reservoir); and its period of record, which is sufficiently long enough to support model development.

19. On July 1, 2024, the Two Ocean Plateau SNOTEL station reported 0.0 inches of SWE. When the snow water equivalent is zero on July 1, the predicted natural flow supplies for the period July 1–October 31 for A&B, AFRD2, and Milner are zero acre-feet. *Methodology Order*, at 20.

20. The input variables used to predict July–October natural flow volumes for BID, Minidoka, and NSCC in 2024 include: (1) 6.3 inches of SWE reported by the Two Ocean Plateau SNOTEL site on June 15, 2024; (2) 2,728,698 acre-feet of natural flow runoff at the Snake River near Heise (April–June) as reported by the BOR; and (3) 24.59 feet depth to water at well 05S 31E 27ABA1 as measured by the Department on March 23, 2024.

21. The variables used to predict the July–October natural flow volume for TFCC in 2024 include: (1) 6.3 inches of the SWE reported by the Two Ocean Plateau SNOTEL Site on June 15; (2) 2,728,698 acre-feet of natural flow runoff at the Snake River near Heise (April–June) as reported by the BOR; and (3) 80,044 acre-feet of discharge (January–May) as measured and reported by the United States Geologic Survey for its *Spring Creek at Sheepskin Rd Nr Fort Hall ID* Gage (Gage No. 13075983).

iii. Storage Allocations

22. Storage allocation values for each member of the SWC were established by Water District 01 on June 29, 2024, and are summarized in the table in Finding of Fact 24 below.

iv. Adjustments to Total Supply

23. Natural flow and storage water supplies were both adjusted, as shown in the table in Finding of Fact 24 below. Adjustments to natural flow include wheeled water to the Southwest Irrigation District through BID and Milner, 341 acre-feet and 277 acre-feet, respectively. Adjustments to natural flow also include wheeled water as a part of the Idaho Water Resource Board's water right to AFRD2, NSCC, and TFCC, 53,113 acre-feet, 62,081 acre-feet, and 4,999 acre-feet, respectively. The only adjustments made to the stored water supply in the table below were for the Minidoka Credit. Adjustments for wheeled storage water published in WD1's weekly reports were not included as an adjustment because wheeled water does not actually increase the amount of water available for use by the SWC. Water supplied to or from the rental pool was not included in the adjustments.

v. Summary of Forecast Supply

24. The following table summarizes the calculated FS and its individual components for each of the SWC members.

	Natural Flow Diverted through 6/30 (AF)	Predicted Natural Flow 7/1 to 10/31 (AF)	Natural Flow Adjustment (AF)	Preliminary Storage Allocation (AF)	Minidoka Credit Adjustment (AF)	Forecast Supply (AF)
A&B	23,491	0	0	135,192	0	158,683
AFRD2	234,645	0	(53,113)	386,794	1,000	569,326
BID	103,731	39,252	(341)	222,568	5,130	370,339
Milner	25,242	0	(277)	89,059	0	114,024
Minidoka	133,857	56,736	0	360,165	8,370	559,127
NSCC	416,055	145,826	(62,081)	844,928	(7,750)	1,336,977
TFCC	433,773	436,235	(4,999)	242,320	(6,750)	1,100,579

E. Revised Shortfall Prediction

25. In-season demand shortfall ("IDS") is calculated as the difference between RISD and the FS.

26. Based on the above, and as summarized in the following table, the Director predicts that TFCC will be materially injured by junior ground water pumping.

	Forecast Supply (AF)	RISD (AF)	Shortfall (AF)
A&B	158,683	58,032	0
AFRD2	569,326	451,571	0
BID	370,339	246,732	0
Milner	114,024	58,404	0
Minidoka	559,127	356,571	0
NSCC	1,336,977	973,093	0
TFCC	1,100,579	1,107,346	6,800
		Total	6,800

27. The current predicted shortfall to the SWC's RISD is 6,800 acre-feet.

28. At approximately the halfway point of the irrigation season, the estimated Time of Need is established by predicting when the remaining storage balance equals the volume of reasonable carryover. This year, because TFCC is the only entity with a calculated injury, the Time of Need equals the predicted day when its remaining storage equals its reasonable carryover volume of 37,400 acre-feet. To calculate the Time of Need for TFCC, the Department

chose 2023 as the analogous year to predict TFCC's storage use for the remainder of the 2024 irrigation season. The analogous year, 2023, was selected based on similar Blackfoot to Milner reach gains. Assuming TFCC's storage use for the remainder of the 2024 season will match its storage use in 2023, the Time of Need is predicted to occur on September 6, 2024, for TFCC.

F. Step 6

29. Step 6 requires the following:

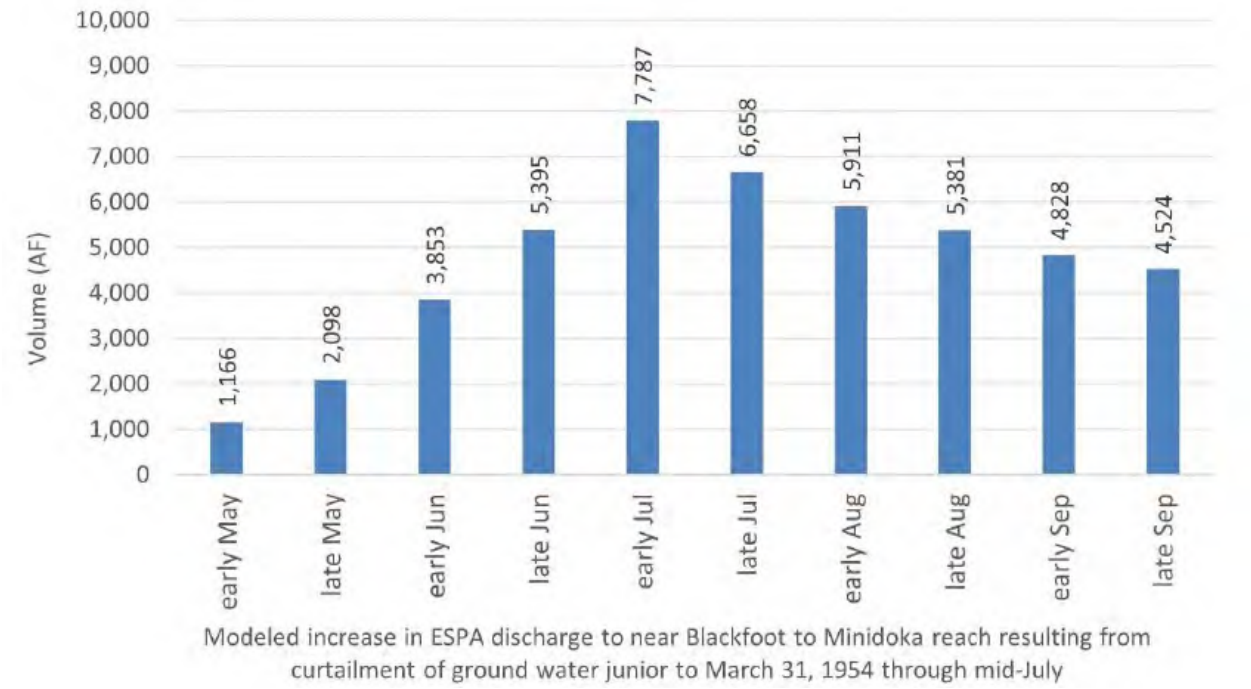
> Upon a determination of an additional mitigation obligation, junior ground water users will be required to establish, to the satisfaction of the Director, their ability to secure a volume of storage water or to conduct other approved activities pursuant to an approved mitigation plan that will deliver the additional mitigation obligation water to the injured members of the SWC at the Time of Need. If junior ground water users fail or refuse to submit this information within fourteen (14) days from issuance of a Step 6 order, the Director will issue an order curtailing junior ground water users. A transient ESPAM simulation will be run to determine the priority date to produce the necessary additional mitigation obligation volume by September 30 of the same year. Curtailment will be simulated within the area of common ground water supply, as described by CM Rule 50.01.

Methodology Order, at 44 (footnote omitted). Effective July 1, 2024, Senate Bill 1341 added a new section to Idaho Code, Idaho Code § 42-233c, which modified the description of the ESPA area of common ground water supply.

30. The predicted July IDS for TFCC is 6,800 acre-feet.

31. In April 2024, pursuant to the *Methodology Order*, the Department ran the Eastern Snake Plain Aquifer Model version 2.2 ("ESPAM2.2") to calculate the priority curtailment date, such that the curtailment of all water rights junior to the date within the area of common ground water supply, would produce a volume of water equal to the April IDS in the Snake River between May 1 and September 30. The ESPAM2.2 simulation predicted curtailment of ground water rights bearing priority dates junior to March 31, 1954, would produce the volume of water equal to the predicted April IDS of 74,100 AF in the near Blackfoot to Minidoka reach. *April Forecast Supply Order*, at 4.

32. In July 2024, the Department ran the ESPAM2.2 to simulate the effect of adjusting the curtailment priority date in mid-July. The ESPAM2.2 simulation calculated that the curtailment of ground water rights junior to March 31, 1954, through mid-July, will produce a volume of water greater than the predicted July IDS of 6,800 AF in the near Blackfoot to Minidoka reach between July 1 and September 30 of this irrigation season. The following figure summarizes the results of the ESPAM2.2 simulation increase:



33. The July through September benefits to the near Blackfoot to Minidoka reach from the predicted curtailment of ground water rights bearing priority dates junior to March 31, 1954, are greater than 6,800 acre-feet. Accordingly, the continued curtailment of junior ground water rights is not necessary in response to the predicted July IDS.[6] Curtailment may be reinstated this irrigation season if the Step 7 revised IDS is greater than the simulated benefits to the near Blackfoot to Minidoka reach remaining to accrue by September 30.

CONCLUSIONS OF LAW

1. Idaho Code § 42-602 authorizes the Director to supervise water distribution within water districts:

> The director of the department of water resources shall have direction and control of the distribution of water from all natural water sources within a water district to the canals, ditches, pumps and other facilities diverting therefrom. Distribution of water within water districts created pursuant to section 42-604, Idaho Code, shall

[6] The method deployed in this as-applied order for calculating mid-season adjustments to the curtailment priority date using ESPAM2.2 was presented to the SWC Methodology Technical Working Group on November 28, 2022. The method assumes all groundwater users were curtailed or provided an equivalent aquifer enhancement mitigation volume at the same time and location as the curtailment. Some ground water users junior to March 31, 1954, were protected from curtailment this year by compliance with approved mitigation plans that authorize the direct delivery of storage water to the SWC as an alternative to full mitigation of pumping depletions to the aquifer. Therefore, the actual volume of water accruing to the near Blackfoot to Minidoka reach due to curtailment is less than the volume simulated by ESPAM2.2. If the Director were to calculate mid-season adjustments to the curtailment date without acknowledging the effects of pumping depletions mitigated by direct delivery of storage water, the curtailment date would unfairly shift to include more senior water users not protected by approved mitigation plans based on stipulated agreements.

> be accomplished by watermasters as provided in this chapter and supervised by the director. The director of the department of water resources shall distribute water in water districts in accordance with the prior appropriation doctrine. The provisions of chapter 6, title 42, Idaho Code, shall apply only to distribution of water within a water district.

2. Idaho Code § 42-607 states the watermaster, under the direction of the Idaho Department of Water Resources, shall regulate diversions "during times of water scarcity, in order to supply the prior rights of others from such stream or water supply . . . ."

3. Because the Department did not determine a shortfall to the SWC's reasonable carryover at the end of the 2023 irrigation season, junior water users are not obligated to secure or deliver storage water this year under Step 5 of the *Methodology Order.*

4. Based on the Findings of Fact 6 through 27 above, it is reasonably certain TFCC will be materially injured. The calculated shortfall to TFCC is 6,800 acre-feet.

5. In the *April Forecast Supply Order*, the Director predicted a demand shortfall for the SWC of 74,100 acre-feet. Because the shortfall volume calculated consistent with Step 6 of the *Methodology Order* is different than the shortfall predicted in the *April Forecast Supply Order*, the curtailment date established in the May 30, 2024, *Curtailment Order* must be adjusted.

6. Using the ESPAM2.2, the Department has determined that the curtailment of ground water rights bearing priority dates junior to March 31, 1954, from May 1–July 15 would result in a volume of water greater than the predicted July IDS of 6,800 AF in the near Blackfoot to Minidoka reach between July 1 and September 30 of this irrigation season. Accordingly, the continued curtailment of ground water rights beyond mid-July is unwarranted at this time.

7. Because further curtailment is unwarranted, it is necessary for the Department to amend the June 28, 2024 *Order Regarding Mid-Season Change to Area of Common Ground Water Supply for the Eastern Snake Plain Aquifer; Third Order Amending Curtailment List* ("*Third Amended Curtailment Order*") so that ground water users holding water rights listed in Attachment C to the *Third Amended Curtailment Order* are no longer curtailed.

ORDER

Based upon and consistent with the foregoing, IT IS HEREBY ORDERED as follows:

Effective immediately, all ground water users holding water rights listed in Attachment C to the June 28, 2024 *Third Amended Curtailment Order* are no longer curtailed.

IT IS FURTHER ORDERED that watermasters for the water districts within the ESPA ACGWS who regulate ground water are directed to review the water rights listed in Attachment C to the June 28, 2024 *Third Amended Curtailment Order* and inform water users that they are no longer curtailed.

Dated this 17th day of July 2024.

MATHEW WEAVER
Director

Deputy Attorney General

EXPLANATORY INFORMATION TO ACCOMPANY A FINAL ORDER

(To be used in connection with actions when a hearing was **not** held)

(Required by Rule of Procedure 740.02)

The accompanying order is a "**Final Order**" issued by the department pursuant to section 67-5246, Idaho Code.

PETITION FOR RECONSIDERATION

Any party may file a petition for reconsideration of a final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: The petition must be received by the Department within this fourteen (14) day period.** The department will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law. See section 67-5246(4), Idaho Code.

REQUEST FOR HEARING

Unless the right to a hearing before the director or the water resource board is otherwise provided by statute, any person who is aggrieved by the action of the director, and who has not previously been afforded an opportunity for a hearing on the matter shall be entitled to a hearing before the director to contest the action. The person shall file with the director, within fifteen (15) days after receipt of written notice of the action issued by the director, or receipt of actual notice, a written petition stating the grounds for contesting the action by the director and requesting a hearing. See section 42-1701A(3), Idaho Code. **Note: The request must be received by the Department within this fifteen (15) day period.**

STATE OF IDAHO

DEPARTMENT OF WATER RESOURCES

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-MP-2024-003
IN THE MATTER OF THE SURFACE WATER COALITIONS' AND THE GROUND WATER DISTRICTS' 2024 STIPULATED MITIGATION PLAN	**JOINT MOTION FOR ORDER APPROVING 2024 STIPULATED MITIGATION PLAN**

Twin Falls Canal Company, North Side Canal Company, American Falls Reservoir District No. 2, Milner Irrigation District, Burley Irrigation District, A&B Irrigation District, and Minidoka Irrigation District (collectively, the "Surface Water Coalition"), and North Snake Ground Water District, Magic Valley Ground Water District, Carey Valley Ground Water District, Aberdeen-American Falls Ground Water District, Bingham Ground Water District, Bonneville-Jefferson Ground Water District, Jefferson-Clark Ground Water District, Madison Ground Water District, and Henry's Fork Ground Water District (collectively, the "Ground Water Districts"), through counsel, jointly move the director pursuant to rule 220 of the Rules of Procedure of the Idaho Department of Water Resources and rule 43 of the Rules for Conjunctive Management of Surface and Ground Water Resources for an order approving the 2024 Stipulated Mitigation Plan attached hereto as Appendix A (the "Plan").

Pursuant to Conjunctive Management Rule 43.01.a, the names and addresses of the entities submitting the Plan are:

- North Snake Ground Water District
  214 E. Yakima St., Suite A
  Jerome, Idaho 83338

- Magic Valley Ground Water District
  P.O. Box 430
  Paul, Idaho 83347

- Carey Valley Ground Water District
  P.O. Box 261
  Carey, Idaho 83320

- Aberdeen-American Falls Ground Water District
  P.O. Box 70
  American Falls, Idaho 83211

- Bingham Ground Water District
  P.O. Box 1268
  Blackfoot, Idaho 83221

- Bonneville-Jefferson Ground Water District
  P.O. Box 51121
  Idaho Falls, Idaho 83405

- Jefferson-Clark Ground Water District
  P.O. Box 118
  Terreton, Idaho 83450-0118

- Madison Ground Water District
  P.O. Box 15
  St. Anthony, Idaho 83445

- Henry's Fork Ground Water District
  P.O. Box 15
  St. Anthony, Idaho 83445

Pursuant to Conjunctive Management Rule 43.01.b, the Plan is designed to mitigate material injury to water rights held by members of the Surface Water Coalition, and to provide safe harbor to groundwater rights held by patrons of the Ground Water Districts and other entities representing groundwater users that participate in and comply with the Plan.

Pursuant to Conjunctive Management Rule 43.01.c, sections 4 and 6 of the Plan identify the water supply proposed to be used for mitigation and any circumstances or limitations on availability of such supplies.

Pursuant to Conjunctive Management Rule 43.01.d, the Plan includes information that will allow the Director to evaluate the factors set forth in Conjunctive Management Rule 43.03. The

Plan is submitted pursuant to stipulation of the Ground Water Districts and the Surface Water Coalition in accordance with Conjunctive Management Rule 43.03.o, as set forth in section 11 of the Plan.

RESPECTFULL SUBMITTED the 19th day of November, 2024.

APPENDIX A

2024 STIPULATED MITIGATION PLAN

This 2024 Stipulated Mitigation Plan ("Plan") is entered into between the parties defined in section 1. The parties agree as follows:

1. Parties. The parties to this Plan are (a) the members of the SWC, (b) ground water districts that sign this Plan by November 14, 2024, pursuant to section 2, and (c) ground water districts and other entities representing groundwater users that subsequently participate in this Plan pursuant to section 10. Parties may be referred to individually in this Plan as a "party."

1.1 Surface Water Coalition. The members of the SWC are A&B Irrigation District, American Falls Reservoir District No. 2, Burley Irrigation District, Milner Irrigation District, Minidoka Irrigation District, North Side Canal Company, and Twin Falls Canal Company (individually, a "SWC member," collectively, the "SWC"). Each SWC member is a party to this Plan.

1.2 Ground Water Districts. The ground water districts initially invited to participate in this Plan are Aberdeen-American Falls Ground Water District, Bingham Ground Water District, Bonneville-Jefferson Ground Water District, Carey Valley Ground Water District, Henry's Fork Ground Water District, Jefferson-Clark Ground Water District, Madison Ground Water District, Magic Valley Ground Water District, and North Snake Ground Water District. Only those ground water districts who sign this Plan by November 14, 2024, pursuant to section 2, or who participate in this Plan pursuant to section 10, are parties to this Plan. Ground water districts and other entities who participate in this Plan are referred to herein individually as "District" and collectively as the "Districts." Any ground water district who does not sign this Plan by November 14, 2024, or who does not participate in this Plan pursuant to section 10, shall not be a party to this Plan, shall not be bound by the terms of this Plan, and shall not benefit from this Plan. The failure of any ground water district to participate in this Plan shall not alter the proportionate obligations of any District.

2. Approval Process and Effective Date. This Plan shall be submitted to the boards of the SWC and the ground water districts identified in sections 1.1 and 1.2 for review by November 1, 2024. Ground water districts that elect to participate in this Plan pursuant to section 1.2 will have until November 14, 2024, to sign this Plan. The SWC will have until November 15, 2024, to sign this Plan. This Plan shall be effective once it is signed by all members of the SWC and at least five of the nine ground water districts identified in section 1.2. The SWC shall not enter into a separate stipulated mitigation plan or agreement with any ground water district that does not participate in this Plan during the term of this Plan.

3. Term.

3.1 Initial Term. The initial term of this Plan is four years, beginning January 1, 2024, and ending December 31, 2027. Compliance with section 4 (groundwater conservation) shall begin January 1, 2024. Compliance with all other sections shall begin November 1, 2024.

3.2 Renewal Terms. This Plan shall automatically renew for successive four-year terms unless a party provides written notice of termination to the other parties by September 15 prior to the end of the term then in effect, in which case this Plan will terminate at the end of such term.

4. Groundwater Conservation. During the term of this Plan, each District will conserve, at a minimum, the volume of groundwater set forth in the "Conservation Obligation" column in Appendix A, on an average annual basis over four-year periods, as measured from the District's baseline groundwater diversion set forth in Appendix A.

4.1 Compliance Periods. Groundwater conservation shall be measured over four-year periods known as "compliance periods." Each four-year term of this Plan is a compliance period; thus, the first compliance period is 2024-2027, the second compliance period is 2028-2031, and so on until Plan termination.

4.2 District Conservation Obligations. As of November 15, 2024, the conservation obligations of the Districts collectively total 205,000 acre-feet annually as initially shown in Appendix A. The Districts' collective conservation of 205,000 acre-feet equates to a total annual divertible volume of 1,590,034 acre-feet as initially shown in Appendix A. Each District's proportionate share of the annual divertible volume is also set forth in Appendix A. Appendix A will be updated annually by the Districts to reflect additions and removals of groundwater rights participating in this Plan through the Districts. Groundwater rights added to a District after November 15, 2024, shall proportionately increase the District's baseline diversion volume, annual conservation obligation, annual divertible volume, and compliance period allocation in Appendix A, and groundwater rights removed from a District after November 15, 2024, shall proportionately decrease the District's baseline diversion volume, annual conservation obligation, annual divertible volume, and compliance period allocation in Appendix A. If a groundwater right is added to or removed from a District for only part of a compliance period, the adjustment to the District's baseline diversion volume, annual conservation obligation, annual divertible volume, and compliance period allocation shall be prorated based on the portion of the compliance period in which the groundwater right participates in this Plan.

4.3 Compliance Period Allocations. At the beginning of each compliance period, each District will be allocated a volume of water that may be diverted during that four-year period, calculated by multiplying the District's annual divertible volume by four, plus surplus allocation carried over from the prior compliance period in accordance with section 4.7, if any. The Districts' four-year compliance period allocations are set forth in Appendix A. Districts are not restricted to the use of one-fourth of their compliance period allocation during each year of the compliance period; rather, Districts may divert more or less than one-fourth of their compliance period allocation in any given year so long as the total amount diverted during a compliance period does not exceed the District's total compliance period allocation. Each District shall independently comply with its individual compliance period allocation in accordance with sections 4.4 and 4.5.

4.4 Patron Allocations. Each District will apportion its compliance period allocation to the District's patrons in the form of a diversion allocation in accordance with Idaho Code § 42-5244A. Districts may allow patrons with multiple groundwater rights to pool their individual water right allocations for purposes of compliance. Districts may also allow patrons to exchange or transfer patron allocations within the District, so long as such patrons do not divert water in excess of the maximum rate or volume authorized under their water rights. District patrons may use their diversion allocation over a compliance period as they choose; however, when a District patron depletes their allocation, that patron will not receive any additional allocation until the next compliance period starts, unless the patron acquires additional allocation from (a) other patrons within the District in accordance with this section 4.4, or (b) the District as a result of managed aquifer recharge in accordance with section 4.5. If a District patron diverts more than their allocation and does not acquire additional allocation, the provisions of section 9.1 apply.

4.5 District Aquifer Recharge. Districts may supplement their compliance period allocation by performing managed aquifer recharge in accordance with standards set forth in Appendix C and with section 4 of the Memorandum of Agreement executed contemporaneously with this Plan. Credit for the managed aquifer recharge shall be determined as follows:

4.5.1 In-District Site. Recharge accomplished at a site within the boundaries of the District performing the recharge or at a site within 12 miles of the boundary of the

District ("In-District Site") will count 1:1 as a reduction in groundwater use within the District performing the recharge.

4.5.2 Out-of-District Site. Recharge performed at a site other than an In-District Site ("Out-of-District Site") will be modeled using the current version of the Eastern Snake Plain Aquifer ("ESPA") Model to quantify the steady-state impact to the Near Blackfoot to Minidoka reach of the Snake River. The impact of recharging the same volume of water at the In-District Site nearest to the Near Blackfoot to Minidoka reach will also be modeled using the ESPA Model to quantify the steady-state impact to the Near Blackfoot to Minidoka reach. The modeled steady-state impact of recharge at the Out-of-District Site will be divided by the modeled steady-state impact of recharge at the In-District Site. If the calculated ratio is less than two (the steady-state impact of recharge at the Out-of-District site is less than twice the steady-state impact of recharge at the In-District Site), the credit towards reduction in groundwater use will be equal to the calculated ratio multiplied by the volume of water recharged. If the calculated ratio is greater than two (the steady-state impact of recharge at the Out-of-District Site is greater than twice the steady-state impact of recharge at the In-District Site), the credit towards reduction in groundwater use will be limited to twice the volume of water recharged.

4.6 Measurement.

4.6.1 Groundwater. Measurement and reporting of non-irrigation diversions will occur on an annual basis. The Districts will develop and implement methods to read irrigation diversions monthly. Irrigation diversions shall be read from June to October, with the June reading including diversions from the start of the irrigation season. The Districts will have functioning programs by the start of the 2026 irrigation season to read irrigation diversions monthly. The Districts' methods may include telemetry, self-reporting with photo evidence, or other reliable techniques to report water diversions. Measurements shall be made available to the appropriate watermaster and the watermaster will make the measurement data publicly available upon request.

4.6.2 Surface Water. The SWC will continue to support the measurement and reporting of the SWC's surface water diversion by Water District 1 and the measurement and reporting of the SWC's return flows by the Idaho Department of Water Resources ("Department").

4.6.3 Reach Gains. Reach gains to the Near Blackfoot to Minidoka reach of the Snake River shall be measured based on calendar year reach gains from the ESPA as reported by the Department to the Idaho Water Resource Board.

4.7 Conservation Carryover. If a District has remaining allocation (*i.e.* the District performs surplus groundwater conservation) at the end of the first compliance period (2024-2027), the surplus will be carried over to the second compliance period (2028-2031). At the annual meeting held in 2031 pursuant to section 7, the parties shall commence discussions to determine the minimum reach gain conditions and other water supply factors that must be maintained to allow surplus allocation to be carried over from one compliance period to the next, which determination shall be documented by a written amendment to this Plan executed by the parties by September 15, 2031.

4.8 Annual Report. By February 15 annually, the Districts will submit a report to the SWC and the Department documenting the Districts' compliance with section 4 during the previous calendar year.

5. Reach Gain Mitigation Fund. The parties understand that the Idaho Water Resource Board ("Board") will contribute $5,000,000 to develop projects that will target and maximize benefits to the reach gains in the Near Blackfoot to Minidoka reach. The projects will be selected by the Board with input from the parties as to the criteria for ranking proposed projects. The Board will make the final decision on projects. Beginning in 2035, the Districts will collectively deposit $250,000 annually into a bank account maintained by the Districts to fund development and implementation of projects designed to further increase reach gains to the Near Blackfoot to Minidoka reach of the Snake River. If, during the second compliance period (2028-2031) or any subsequent compliance period, the average annual reach gains to the Near Blackfoot to Minidoka reach of the Snake River for that compliance period drops below the 2023 reach gains, the Districts will then deposit $500,000 annually, until average annual reach gains over the most recent compliance period equal or exceed the 2023 reach gains. Each District shall be independently responsible to deposit its proportionate share of the $250,000 or $500,000 in proportion to its respective steady-state impacts to the Near Blackfoot to Minidoka reach of the Snake River under the current version of the Model (ESPAM 2.2) as set forth in Appendix B.

6. Storage Water Component. The Districts will collectively secure the volume of storage water required by section 6.1 to meet irrigation needs and carryover storage of the SWC in accordance with section 6.4.

6.1 Storage Water Volume. The Districts will secure 75,000 acre-feet of storage water for the 2025 and 2026 irrigation seasons. In 2027, the maximum volume of storage water the Districts are required to secure is capped at 82,500 acre-feet. If reach gains to the Near Blackfoot to Minidoka reach of the Snake River in 2026 are greater than 2023 reach gains, the Districts will secure 75,000 acre-feet of storage for the 2027 irrigation season. If reach gains to the Near Blackfoot to Minidoka reach of the Snake River in 2026 are less than or equal to 2023 reach gains, the Districts will secure 82,500 acre-feet of storage for the 2027 irrigation season. At the annual meeting held in 2027 pursuant to section 7, the parties shall commence discussions to determine the amount of storage the Districts will be required to secure in 2028 and subsequent years, which determination shall be documented by a written amendment to this Plan executed by the parties by September 15, 2027.

6.2 Storage Water Allocation. Each District will secure its proportionate share of the storage water required by section 6.1 based on their respective steady-state impact to the Near Blackfoot to Minidoka reach of the Snake River as defined by the current version of the ESPA Model. The Districts' respective steady-state impacts under the current version of the Model (ESPAM 2.2) are set forth in Appendix B. If the Districts' respective steady-state impacts set forth in Appendix B change due to Model updates adopted by the Department, or due to changes in the universe of water rights participating in this Plan (e.g., additions or removals of groundwater participating in this Plan through the Districts), the parties will revise Appendix B to reflect the most up-to-date calculation of their respective steady-state impacts. If additional organized groundwater groups join this Plan as contemplated in section 10, they will provide a proportionate share of the storage water required by this section 6.1, thereby reducing the proportionate obligations of the Districts, and the parties will revise Appendix B to reflect the most up-to-date calculation of the proportionate shares of the Districts and additional organized groundwater groups participating in this Plan.

6.3 Acquisition of Storage. Within twenty-one (21) days after the Water District 1 "day of allocation," the Districts will secure, to the satisfaction of the Department, leases or options to lease the volume of storage water required by section 6.1, or demonstrate the ability to supply water under alternative

mitigation actions pursuant to section 6.7. Within seven (7) days thereafter, the Districts will supply copies of such agreements to the SWC.

6.4 Delivery of Storage. If the Water District 1 storage water account of any SWC member drops below the reasonable carryover volume listed in Appendix D between the Water District 1 day of allocation and November 10, the SWC member may draw on the secured storage for in-season irrigation needs and to maintain its reasonable carryover volume by notifying the Districts no later than November 15, and the Districts shall assign storage to such SWC member in the amount needed to maintain its reasonably carryover volume, up to the maximum volume required by section 6.1. The SWC shall not draw down their storage water accounts unnecessarily.

6.5 SWC Lease Adjustment. If a SWC member requesting delivery of storage water pursuant to section 6.4 leases storage water to another person or entity during an irrigation season, other than to the U.S. Bureau of Reclamation for flow augmentation as assigned by Water District 1 or as required rentals by Water District 1 to participate in the rental pool, such water shall be deducted from the volume of storage water the Districts are required to deliver to that SWC member under section 6.4.

6.6 2024 Storage Delivery. The Districts supplied 60,000 acre-feet of storage to the SWC for mitigation purposes pursuant to the *2024 Stipulation* dated June 24, 2024. Any portion of such storage that is not diverted by the SWC during the 2024 irrigation season or delivered to maintain reasonable carryover shall revert to the Districts.

6.7 Alternative Mitigation Actions. The Districts may take alternative actions to deliver water to the SWC, including but not limited to acquiring natural flow, in lieu of securing and delivering storage water. To the extent alternative actions deliver water to the SWC in accordance with state law (including Water District 1 procedures), they shall offset the amount of storage water the District implementing such alternative actions is required to secure under section 6.1 or deliver under section 6.4.

7. Oversight Committee. There will be an oversight committee ("Committee") established to review implementation of this Plan. The Committee shall be made up of the chairs (or their designees) of each party. Additional groundwater groups who join this Plan pursuant to section 10 will have a position on the Committee. Committee meetings will be co-chaired by one representative of the SWC and one representative of the Districts. By February 15 annually, the Committee shall meet to review (a) the annual report submitted by the Districts in accordance with section 4.8; (b) carryover storage from the prior irrigation season; (c) the reach gains to the Near Blackfoot to Minidoka reach of the Snake River; (d) the delivery of storage water to the SWC pursuant to section 6; (e) progress of any alternative mitigation actions taken pursuant to section 6.7; (f) progress of the Board's managed recharge program and the Cooperative Cloud Seeding Program; (g) changes to Appendix A pursuant to section 4.2; and (h) additional groundwater users joining this Plan pursuant to section 10 and the corresponding adjustment to Appendix B. The Committee is advisory in nature, has no authority to bind any party, but may submit recommendations to the Department upon unanimous agreement of Committee members.

8. Safe Harbor. Districts and their patrons that comply with this Plan shall receive safe harbor from the SWC delivery call (IDWR Docket No. CM-DC-2010-001) during the term of this Plan.

9. Enforcement. Each District is independently responsible for complying with its proportionate obligations under sections 4, 5 and 6. If a District does not comply, such non-compliance shall not adversely affect any other District that is in compliance with its proportionate obligations under this Plan.

9.1 Groundwater Conservation. If a District patron fails to comply with their patron allocation, the District shall report the patron to the Department for enforcement under Idaho Code § 42-5244B. Non-compliance shall result in curtailment by the Department, pursuant to Idaho Code § 42-5244B. District

patrons are independently responsible to comply with their respective patron allocations, such that non-compliance by one patron shall not adversely affect any other patron that is in compliance with its patron allocation. If a District reports a non-compliant patron to the Department for enforcement, that patron's allocation under section 4.4 will be deducted from the District's compliance period allocation under section 4.3, and the non-compliant patron's diversions will be deducted from a District's diversions when the District documents compliance under section 4.8, until the non-compliance is remedied. Non-compliant patrons subject to enforcement under this section 9.1 shall not be considered a participant in this Plan until the non-compliance is remedied.

9.2 Storage Water. If a District fails to secure its proportionate share of storage water in accordance with section 6.3, or deliver its proportionate share of storage water in accordance with section 6.4 or deliver water under alternative mitigation actions in accordance with section 6.7, the non-compliant District shall lose safe harbor under section 8, and patrons of the non-compliant District shall be subject to administration pursuant to Conjunctive Management Rule 40.05 unless and until such non-compliance is remedied.

9.3 Reach Gain Mitigation Fund. If a District fails to contribute its proportionate share of funding for projects to improve Near Blackfoot to Minidoka reach gains in accordance with section 5, patrons of the non-compliant District shall be subject to administration pursuant to Conjunctive Management Rule 40.05 until such non-compliance is remedied.

10. Additional Organized Ground Water Groups May Join Plan. Ground water districts or other entities representing groundwater users brought into the area of common ground water supply through the passage of Senate Bill 1341 (2024) or brought in through expansion of the area of common ground water supply as allowed by Senate Bill 1341 (2024) may seek to join this Plan. Upon the written consent of all parties, which consent shall not be unreasonably withheld, the parties and the entity joining this Plan shall execute an addendum to this Plan whereby the joining entity agrees to (a) perform groundwater conservation equivalent to the Districts, which conservation shall be in addition to the 205,000 acre-feet required under section 4; (b) contribute pro rata toward the reach gain fund under section 5; (c) contribute pro rata toward the storage water obligation under section 6, which shall proportionately reduce the storage obligation of the Districts; (d) perform such other obligations as may reasonably be required as a consequence of joining this Plan; and (e) consent to be bound by all other terms of this Plan on the same terms and conditions as the Districts.

11. Mitigation Plan Approval. Within ten (10) days after the Effective Date, the parties will submit this Plan to the Department for approval as a stipulated mitigation plan under rule 43 of the Conjunctive Management Rules. Upon approval, this Plan shall (a) supersede and replace the stipulated mitigation plan previously approved in IDWR Docket No. CM-MP-2016-001, and such plan, together with the agreements upon which it is predicated,[1] shall be null and void; (b) supersede and replace the mitigation plans previously approved in IDWR Docket Nos. CM-MP-2009-006 and CM-MP-2009-007, which shall be null and void. The parties acknowledge that all terms of the *2024 Stipulation* dated June 19, 2024, have been satisfied except for the groundwater conservation obligation in paragraph 5 which is superseded and replaced by section 4 of this Plan.

12. Miscellaneous.

[1] The mitigation plan approved in IDWR Docket No. CM-MP-2016-001 is predicated upon the *Settlement Agreement Entered Into June 30, 2015 Between Participating Members of the Surface Water Coalition and Participating Members of Idaho Ground Water Appropriators, Inc.*, which was amended and clarified by the *Agreement* dated October 7, 2015, the *Addendum to Settlement Agreement* dated October 19, 2015, and the *Second Addendum to Settlement Agreement* dated December 14, 2016.

12.1 Amendment. This Plan may be amended only by a written instrument signed by all parties and approved by the Department.

12.2 Notices. Notices required or permitted to be given to any party under this Plan shall be in writing and shall be effective (a) when personally delivered, (b) three days after mailing via U.S. Postal Service certified mail, (c) upon delivery by a reputable overnight courier, or (d) upon delivery via email to an authorized representative of the party. Notices sent by email shall be deemed received when the designated recipient acknowledges receipt via reply email.

12.3 Appendices. All appendices cited in, and attached to, this Plan are incorporated into this Plan by reference as if set forth fully herein.

12.4 Counterparts. This Plan may be executed in counterparts which, when taken together, shall constitute one and the same document.

12.5 Digital Signatures. Digital and scanned signatures to this Plan shall be valid and effective to bind the party so signing.

APPENDIX A

Groundwater Conservation Allocations

District	Baseline Diversion Volume	Annual Conservation Obligation	Annual Divertible Volume	Compliance Period Allocation
American Falls-Aberdeen	286,111	34,132	251,979	1,007,916
Bingham	274,578	32,756	241,822	967,287
Bonneville-Jefferson	161,987	16,500	145,487	581,948
Carey	5,545	661	4,883	19,533
Jefferson-Clark	445,393	53,134	392,259	1,569,037
Henry's Fork	76,241	9,095	67,146	268,583
Madison	78,095	3,000	75,095	300,380
Magic Valley	258,203	30,803	227,400	909,601
North Snake	208,881	24,919	183,962	735,849
	1,795,034	**205,000**	**1,590,034**	**6,360,135**

APPENDIX B

Storage Water Allocations Based on Initial 75,000AF Obligation

District	Baseline Diversion Volume	NB-M SS Baseline Impact	% of total SS Impact	Share of 75k Storage
American Falls-Aberdeen	286,111	210,298	28.6%	21,420.0
Bingham	274,578	173,258	23.5%	17,647.0
Bonneville-Jefferson	161,987	79,000	10.7%	8,047.0
Carey	5,545	2,714	0.4%	277.0
Jefferson-Clark	445,393	109,276	14.8%	11,130.0
Henry's Fork	76,241	3,528	0.5%	359.0
Madison	78,095	2,949	0.4%	300.0
Magic Valley	258,203	123,758	16.8%	12,605.0
North Snake	208,881	31,566	4.3%	3,215.0
	1,795,034	**736,347**	**100%**	**75,000**

APPENDIX C

Managed Aquifer Recharge Standards

1. Natural flow water rights used for recharge must have "recharge" listed as an authorized beneficial use.

2. Water must be recharged in the calendar year of the irrigation season in which mitigation credit is claimed.

3. In-canal recharge will be accounted for in accordance with Idaho Water Resource Board standards taking into consideration historical diversion rates.

4. The following information must be provided by the entity conducting the recharge:

    4.1 Water source.

    4.2 Water right number or storage spaceholder providing storage.

    4.3 If storage water is leased, a copy of the lease contract.

    4.4 Copy of the recharge contract with the entity that performed the recharge.

    4.5 Location(s) where recharge occurred.

    4.6 Dates recharge was performed.

    4.7 Total volume recharged at each recharge site.

    4.8 Daily or weekly measurement data supporting the total volume recharged.

    4.9 Description of measurement device and accuracy

APPENDIX D

Reasonable Carryover Volumes

SWC Member	Carryover Volume
A&B Irrigation District	22,700
American Falls Reservoir Dist. #2	16,700
Burley Irrigation District	0
Milner Irrigation District	16,100
Minidoka Irrigation District	0
North Side Canal Company	113,300
Twin Falls Canal Company	37,400

BEFORE THE DEPARTMENT OF WATER RESOURCES
OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **FINAL ORDER CURTAILING GROUND WATER RIGHTS JUNIOR TO JANUARY 25, 1970**

The Director of the Idaho Department of Water Resources ("Department") finds, concludes, and orders as follows:

FINDINGS OF FACT

1. On July 19, 2023, the Department issued its *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("*Methodology Order*"). The *Methodology Order* established nine steps for determining material injury to members of the Surface Water Coalition ("SWC").[1]

2. On November 29, 2024, the Director issued the *Final Order Establishing 2024 Reasonable Carryover (Methodology Step 9)* ("*Step 9 Order*"). Therein, the Director concluded there is a 44,900-acre-foot ("AF") volume of material injury to Twin Falls Canal Company's reasonable carryover. *Step 9 Order*, at 5. The Director concluded no other members of the SWC have a reasonable carryover shortfall. *Id*.

3. The Director ordered that within fourteen days of November 29, 2024, "junior ground water users holding consumptive ground water rights within the Eastern Snake Plain Aquifer area of common ground water supply [2] bearing priority dates junior to January 25, 1970, must mitigate for the reasonable carryover shortfall of 44,900 AF in accordance with an approved mitigation plan." *Id*. The Director also ordered that, if such junior ground water users cannot establish that they can mitigate for the reasonable carryover shortfall "in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water use." *Id.* at 5–6.

[1] The SWC is comprised of A&B Irrigation District, American Falls Reservoir District #2, Burley Irrigation District, Milner Irrigation District, Minidoka Irrigation District, North Side Canal Company, and Twin Falls Canal Company.

[2] In 2024, the Idaho Legislature established a new area of common ground water supply boundary for the Eastern Snake Plain Aquifer in Idaho Code § 42-233c. The new boundary is currently the ESPAM2.2 model boundary, but the boundary may be expanded by the Director in the future. I.C. § 42-233c(1)–(2). This new boundary supersedes the boundary in Rule 50.01 of the Department's Rules for Conjunctive Management of Surface and Ground Water Resources ("CM Rules"). *See Idaho Cnty. Nursing Home v. Idaho Dep't of Health & Welfare*, 120 Idaho 933, 937, 821 P.2d 988, 992 (1991) ("When a conflict exists between a statute and a regulation, the regulation must be set aside to the extent of the conflict."); *compare* I.C. § 42-233c, *with* IDAPA 37.03.11.050.01. The Department used the ESPAM2.2 model boundary in the model simulation for the *Step 9 Order*.

4. There are currently seven approved mitigation plans in place responding to the SWC delivery call.[3]

(1) Docket No. CM-MP-2007-001 for the benefit of J.R. Simplot Company, Basic American Foods, and ConAgra Foods Packaged Foods Company, Inc., d/b/a Lamb-Weston (collectively, the "Water Mitigation Coalition");

(2) Docket No. CM-MP-2009-006 for the benefit of the Idaho Ground Water Appropriators, Inc. ("IGWA") (conversions, dry ups, and recharge);

(3) Docket No. CM-MP-2009-007 for the benefit of IGWA (delivery of stored water);

(4) Docket No. CM-MP-2010-001 for the benefit of the Southwest Irrigation and Goose Creek Irrigation Districts (collectively, "SWID");

(5) Docket No. CM-MP-2015-003 for the benefit of the A&B Irrigation District ("A&B");

(6) Docket No. CM-MP-2016-001 for the benefit of IGWA ("*2016 Mitigation Plan*"); and

(7) Docket No. CM-MP-2019-001 for the benefit of certain cities commonly referred to as the "Coalition of Cities," the City of Idaho Falls, and the City of Pocatello (collectively, the "Cities").

5. In the *Step 9 Order*, the Director found that due to the nature of the approved mitigation plans for the Water Mitigation Coalition, SWID, and the Cities, these entities do not need to establish that they can mitigate for their proportionate share of the reasonable carryover shortfall. *Step 9 Order*, at 5 n.10.

6. Regarding IGWA's approved *2016 Mitigation Plan*, on June 20, 2024, the SWC and IGWA submitted a *Joint Motion for Order Approving 2024 Stipulation*, requesting that the Director issue an order accepting a stipulation entered into by the parties ("*2024 Stipulation*") as compliance with the *2016 Mitigation Plan* for the 2024 irrigation season. On June 20, 2024, the Director issued an *Order Approving 2024 Stipulation as Compliance with Approved Mitigation Plan* ("*Order Approving 2024 Stipulation*").[4] At the issuance of this order, the Director does not know whether IGWA complied with the *2024 Stipulation* or whether IGWA is in compliance with the *2016 Mitigation Plan*.

7. In the *Step 9 Order*, the Director found that "following the Director's issuance of his *Order Approving 2024 Stipulation*, the SWC and IGWA worked in good faith and at length to establish a new ongoing stipulated mitigation plan. On November 19, 2024, the SWC and certain

[3] In December 2023 and January 2024, a number of ground water districts submitted new individual mitigation plans. The plans were advertised, and they were protested by various entities. The Director has appointed an independent hearing officer, Gerald F. Schroeder, to hear the contested cases on behalf of the Department. Those proceeding are ongoing and no final orders have been issued related to the new mitigation plans.

[4] The *2024 Stipulation* and *Order Approving 2024 Stipulation* can be viewed on the Department's website: https://idwr.idaho.gov/legal-actions/mitigation-plan-actions/SWC/IGWA/.

ground water districts[5] submitted a new stipulated mitigation plan ("*2024 Stipulated Mitigation Plan*") and requested that the Director issue an order approving the plan." *Id*. The *2024 Stipulated Mitigation Plan* was publicly advertised in December 2024 in accordance with Idaho Code § 42-222(1) and CM Rule 43. *See id*. Protests against approval of the *2024 Stipulated Mitigation Plan* must be filed with the Department by December 23, 2024. "Because of the new *2024 Stipulated Mitigation Plan*, the Director will not at this time subject junior ground water users in good standing with the [Districts] to curtailment under this order." *Id*. The Districts do not need to establish that they can mitigate for their proportionate share of the reasonable carryover shortfall.

8. However, in the *Step 9 Order*, the Director found that due to the nature of A&B's mitigation plan, within fourteen days of November 29, 2024, "A&B must establish to the satisfaction of the Director its ability to mitigate for its proportionate share of the reasonable carryover shortfall, which is 248 AF." *Id*.

9. In response to the *Step 9 Order's* requirement for A&B to establish how it will mitigate its proportionate share of the reasonable carryover shortfall, A&B's attorney sent a letter to the Director stating, "I have conferred with manager Justin Temple and it is [A&B's] intent to continue to curtail the enlargement water rights (2,063 acres) for the 2025 irrigation season." Ltr. from Travis Thompson, attorney for A&B, to Mat Weaver, Department Director (Dec. 13, 2024).

CONCLUSIONS OF LAW

1. Idaho Code § 42-602 authorizes the Director to supervise water distribution within water districts:

> The director of the department of water resources shall have direction and control of the distribution of water from all natural water sources within a water district to the canals, ditches, pumps and other facilities diverting therefrom. Distribution of water within water districts created pursuant to section 42-604, Idaho Code, shall be accomplished by watermasters as provided in this chapter and supervised by the director.
>
> The director of the department of water resources shall distribute water in water districts in accordance with the prior appropriation doctrine. The provisions of chapter 6, title 42, Idaho Code, shall apply only to distribution of water within a water district.

2. As explained above, within fourteen days of November 29, 2024, "junior ground water users holding consumptive ground water rights within the Eastern Snake Plain Aquifer area of common ground water supply bearing priority dates junior to January 25, 1970, must mitigate for the reasonable carryover shortfall of 44,900 AF in accordance with an approved mitigation plan." *Step 9 Order*, at 5. If a junior ground water user does not establish that they can

[5] The signatory districts to the new *2024 Stipulated Mitigation Plan* are American Falls-Aberdeen Ground Water District, Bingham Ground Water District, Bonneville-Jefferson Ground Water District, Carey Valley Ground Water District, Henry's Fork Ground Water District, Jefferson-Clark Ground Water District, Madison Ground Water District, Magic Valley Ground Water District, and North Snake Ground Water District. For purposes of this order, said nine ground water districts are collectively referred to as the "Districts."

mitigate for the reasonable carryover shortfall in accordance with an approved mitigation plan, the ground water user will be subject to this "order curtailing the junior-priority ground water use." *Id.* at 5–6.

3. Due to the nature of the approved mitigation plans for the Water Mitigation Coalition, IGWA, SWID, and the Cities, these entities do not need to establish that they can mitigate for their proportionate share of the reasonable carryover shortfall. Junior ground water users entitled to protection under the Water Mitigation Coalition's, IGWA's, SWID's, or the Cities' approved mitigation plans will not be subject to curtailment related to the reasonable carryover shortfall.

4. A&B has failed to provide timely documentation that it has adequately secured the storage water necessary to mitigate fully for its obligation under its approved mitigation plan. Instead, A&B sent a letter stating that it intends "to continue to curtail the enlargement water rights (2,063 acres) for the 2025 irrigation season." Accordingly, to ensure that A&B's enlargement ground water rights junior to January 25, 1970, are curtailed during the 2025 irrigation season, the Director will include A&B's enlargement water rights junior to January 25, 1970, on the curtailment list in Attachment A to this order.

5. The Director concludes that junior-priority ground water users who have not established that they can mitigate for the reasonable carryover shortfall in accordance with an approved mitigation plan should be curtailed. Junior-priority ground water users subject to curtailment are listed in Attachment A to this order.

ORDER

Based upon and consistent with the foregoing, IT IS HEREBY ORDERED that effective December 17, 2024, ground water users holding water rights bearing priority dates junior to January 25, 1970, within the Eastern Snake Plain Aquifer area of common ground water supply ("ESPA ACGWS") and listed in Attachment A to this order, shall curtail/refrain from diversion and use of ground water pursuant to those water rights unless notified by the Department that the curtailment order has been modified or rescinded as to their water rights.

IT IS FURTHER ORDERED that watermasters for the water districts within the ESPA ACGWS who regulate ground water are directed to review the water rights listed in Attachment A to this order and begin the curtailment process.

IT IS FURTHER ORDERED that this order applies to consumptive ground water rights, including but not limited to, agricultural, commercial, industrial, and municipal uses. This order excludes ground water rights used for *de minimis* domestic purposes where such domestic use is within the limits of the definition set forth in Idaho Code § 42-111 and ground water rights used for *de minimis* stock watering where such stock watering use is within the limits of the definitions set forth in Idaho Code § 42-1401A(11), pursuant to IDAPA 37.03.11.020.11.

Dated 17th day of December 2024.

MATHEW WEAVER
Director

EXPLANATORY INFORMATION TO ACCOMPANY A FINAL ORDER

(To be used in connection with actions when a hearing was **not** held)

The accompanying document is a "**Final Order**" issued by the Idaho Department of Water Resources ("Department") pursuant to Idaho Code § 67-5246.

PETITION FOR RECONSIDERATION

(*See* Idaho Code § 67-5246(4))

Any party may file a petition for reconsideration of this final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: the petition must be received by the Department within this fourteen (14) day period.** The presiding officer will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law.

REQUEST FOR HEARING

(*See* Idaho Code § 42-1701A(3))

Unless the right to a hearing before the Department or the Water Resource Board is otherwise provided by statute, any person aggrieved by any final decision, determination, order or action of the Director, and who has not previously been afforded an opportunity for a hearing on the matter may request a hearing pursuant to Idaho Code § 42-1701A(3). A written petition to the Director contesting this final order and requesting a hearing must be filed with the Department by any aggrieved person **within fifteen (15) days after service of this final order**.

CERTIFICATE OF SERVICE

(*See* IDAPA 37.01.01.053, 37.01.01.202)

All documents filed with the Department in connection with a petition for reconsideration or a request for hearing of this final order shall be served on all other parties to the proceedings in accordance with Rules of Procedure 53 and 202.

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF THE MITIGATION PLAN FILED BY A&B IRRIGATION DISTRICT FOR THE DISTRIBUTION OF WATER TO WATER RIGHTS HELD BY THE SURFACE WATER COALITION	Docket No. CM-MP-2015-003 **FINAL ORDER APPROVING AMENDED MITIGATION PLAN**

The Director of the Idaho Department of Water Resources ("Department") finds, concludes, and orders as follows:

FINDINGS OF FACT

1. On May 12, 2005, the Department received A&B Irrigation District's ("A&B") *Request for Approval of Mitigation Plan of A&B Irrigation District* filed in the underlying Surface Water Coalition ("SWC")[1] delivery call case, No. CM-DC-2010-001. This mitigation plan was not published by the Department and no order was issued approving the plan.

2. On May 21, 2015, the Department received *A&B Irrigation District's Amended Rule 43 Mitigation Plan* ("*A&B Mitigation Plan*"). The *A&B Mitigation Plan* was submitted pursuant to Rule 43 of the Department's Rules for Conjunctive Management of Surface and Ground Water Resources ("CM Rules"). IDAPA 37.03.11.043. The plan was not stipulated to by the SWC.

3. The *A&B Mitigation Plan* "mitigate[s] for any shortfalls caused by [A&B's] junior priority ground water that are subject to curtailment." *A&B Mitigation Plan*, at 3. The components of the plan are: (1) conversion of approximately 1,378 acres from ground water irrigation to surface water irrigation; (2) enrolling 121 acres in the federal Conservation Reserve Enhancement Program; (3) development of a future ground water to surface water conversion pumping plant and pipeline project; and (4) delivering available storage water to injured SWC members, if necessary, from A&B's storage water rights held in American Falls Reservoir and Palisades Reservoir or renting storage water through Water District 01's Rental Pool ("storage water component"). *Id*.

4. Notice of the proposed *A&B Mitigation Plan* was advertised in the Idaho Mountain Express, Mountain Home News, and Times News in accordance with Idaho Code § 42-222(1) and CM Rule 43. No protests were received.

5. On December 16, 2015, the Director issued a *Final Order Approving Mitigation Plan*, approving the *A&B Mitigation Plan*, "conditioned upon confirmation that A&B's mitigation activities fully mitigate for depletions caused by A&B's junior-priority ground water diversions in each year that a curtailment order is issued." *Final Order Approving Mitigation Plan*, at 3.

[1] The SWC members include American Falls Reservoir District #2, Burley Irrigation District, Milner Irrigation District, Minidoka Irrigation District, North Side Canal Company, and Twin Falls Canal Company.

6. If, during the irrigation season, the Director determines that junior ground water users' diversions will result in injury to the SWC and that a shortfall obligation is owed to the SWC, junior ground water users are given no less than 14 days to establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the obligation in accordance with an approved mitigation plan. *Final Order Regarding April 2023 Forecast Supply (Methodology Steps 1-3)* ¶ 13, at 3–4, No. CM-DC-2010-001 (April 21, 2023) (citing *Methodology Order* ¶ 4, at 40). The exception to this is if their mitigation plan is of a nature such that they do not need to mitigate for their proportionate share. *See id*. at 5 n.5. A&B is required to submit documentation to the Department for the Director to determine whether A&B will fully mitigate for its proportionate share of any shortfall obligation. *E.g*., *id*. at 5 n.5, at 6; *see Final Order Approving Mitigation Plan*, at 3.

7. On December 27, 2023, A&B and the SWC filed a *Stipulation Regarding A&B Irrigation District's Amended Rule 43 Mitigation Plan* ("*Stipulated Mitigation Plan*") with the Department, pursuant to CM Rule 43.

8. A&B and the SWC filed the *Stipulated Mitigation Plan* "so that A&B does not have to submit new documentation every year showing that it can mitigate for its proportionate share of a predicted demand shortfall." *Stipulated Mitigation Plan*, at 2. A&B explains that historically it has mitigated injury to the SWC members through its practice of curtailing ground water diversions to approximately 3,574 acres within Unit B of A&B's irrigation service area and replacing the ground water with surface water (i.e., soft conversions). *Id*. A&B states that it holds rights to storage water in American Falls Reservoir (46,826 acre-feet) and Palisades Reservoir (90,800 acre-feet) and can provide storage water to injured SWC members "if the benefits of the [soft] conversions do not satisfy the injury caused by A&B's ground water rights that are found to be subject to curtailment in any given year." *Id*. at 2–3.[2]

9. In January 2024 notice of the proposed *Stipulated Mitigation Plan* was advertised in the Idaho Statesman, Mountain Home News, Idaho Mountain Express, Post Register, Idaho State Journal, Times News, Lewiston Tribune, and Rexburg Standard Journal in accordance with Idaho Code § 42-222(1) and CM Rule 43.

10. The *Stipulated Mitigation Plan* was timely protested by the Coalition of Cities.[3] However, on May 9, 2024, the Department received a conditional *Stipulated Withdrawal of Protest* from A&B and the Coalition of Cities.[4] The withdrawal of the Coalition of Cities' protest is conditioned upon the Department approving the *Stipulated Mitigation Plan* and including the following findings:

---

[2] Although not discussed in the *Stipulated Mitigation Plan*, it is the Department's understanding that there are a total of 61.6 acres within A&B that are currently enrolled in the federal Conservation Reserve Enhancement Program.

[3] The Coalition of Cities consists of the cities of Bliss, Burley, Carey, Declo, Dietrich, Gooding, Hazelton, Heyburn, Jerome, Paul, Richfield, Rupert, Shoshone, and Wendell.

[4] After receiving the Coalition of Cities' protest, the Director authorized Gerald F. Schroeder to hear the contested case in this matter. *Notice of Prehr'g; Order Appointing Hr'g Officer*, at 2. Given the requested amendment was filed as a stipulation and the Coalition of Cities conditionally withdrew its protest, the Director has determined the assistance of a hearing officer is no longer needed to resolve the contested case. The Director hereby withdraws the order of appointment and issues this final order as the presiding officer.

- The Stipulation addresses a procedural issue pertaining to its December 16, 2015 approved Mitigation Plan and the Stipulation does not affect any mitigation obligations of the Coalition of Cities.
- The Stipulation does not impact or shift any calculated proportionate impact of any injury finding to the Coalition of Cities that may be attributed to A&B's junior priority groundwater rights for purposes of the SWC delivery call.

Stipulated Withdrawal of Protest, at 2.

11. The Director finds that the *Stipulated Mitigation Plan* does not affect any mitigation obligations of the Coalition of Cities. Further, it does not impact or shift any calculated proportionate impact of any injury finding to the Coalition of Cities that may be attributed to A&B's junior priority ground water rights for purposes of the SWC delivery call.

CONCLUSIONS OF LAW

1. Idaho Code § 42-602, addressing the authority of the Director over the supervision of water distribution within water districts, provides:

> The director of the department of water resources shall have direction and control of the distribution of water from all natural water sources within a water district to the canals, ditches, pumps and other facilities diverting therefrom. Distribution of water within water districts created pursuant to section 42-604, Idaho Code, shall be accomplished by watermasters as provided in this chapter and supervised by the director.
>
> The director of the department of water resources shall distribute water in water districts in accordance with the prior appropriation doctrine. The provisions of chapter 6, title 42, Idaho Code, shall apply only to distribution of water within a water district.

2. In addition, Idaho Code § 42-1805(8) provides the Director with authority "[t]o promulgate, adopt, modify, repeal and enforce rules implementing or effectuating the powers and duties of the department."

3. Idaho Code § 42-603 grants the Director authority to adopt rules governing water distribution. In accordance with chapter 52, title 67, Idaho Code, the Department adopted rules regarding the conjunctive management of surface and ground water that were last updated on March 18, 2022. IDAPA 37.03.11.000. "The [CM Rules] prescribe procedures for responding to a delivery call made by the holder of a senior-priority surface or ground water right against the holder of a junior-priority ground water right in an area having a common ground water supply." IDAPA 37.03.11.001.

4. CM Rule 42.02 states: "The holder of a senior-priority surface or ground water right will be prevented from making a delivery call for curtailment of pumping of any well used by the holder of a junior-priority ground water right where use of water under the junior-priority

right is covered by an approved and effectively operating mitigation plan." IDAPA 37.03.11.042.02.

5. CM Rule 43.01 (a–d) sets forth the criteria for submission of a mitigation plan to the Director.

6. CM Rule 43.03 establishes the "[f]actors that may be considered by the Director in determining whether a proposed mitigation plan will prevent injury to senior rights . . . ." IDAPA 37.03.11.043.03. Factors that may be considered by the Director include:

> b. Whether the mitigation plan will provide replacement water, at the time and place required by the senior-priority water right . . . .
>
> c. Whether the mitigation plan provides replacement water supplies or other appropriate compensation to the senior-priority water right when needed during a time of shortage . . . .
>
> . . . .
>
> o. Where the petitioners and respondents have entered into an agreement on an acceptable mitigation plan even though such plan may not otherwise be fully in compliance with these provisions.

Id.

7. The *Stipulated Mitigation Plan* does not fundamentally change the components of the *A&B Mitigation Plan*. Instead, the *Stipulated Mitigation Plan* addresses what A&B has referred to as "a procedural issue." *Stipulated Withdrawal of Protest*, at 2. A&B states "[t]he parties are filing the current stipulation consistent with other stipulated mitigation plans (i.e., [Southwest Irrigation District and Goose Creek Irrigation District (collectively, "SWID")], [Idaho Ground Water Appropriators, Inc.], Coalition of Cities) so that A&B does not have to submit new documentation every year showing that it can mitigate for its proportionate share of a predicted demand shortfall." *Stipulated Mitigation Plan*, at 2. The problem with A&B's statement is that the other stipulated mitigation plans are fundamentally different from A&B's plan. In those other stipulated mitigation plans, the SWC stipulated to junior ground water users providing aquifer mitigation actions every year during the term of the plans, regardless of any annual mitigation obligation. And in return, the junior ground water users get safe harbor from the SWC delivery call. For example, in its mitigation plan,[5] SWID agrees to undertake recharge, conversions, voluntary curtailment, and limit their season of use as mitigation activities. *SWID Mitigation Plan*, at 2. And in return, the SWC stipulated that SWID's junior ground water users would not be subject to curtailment "[i]n exchange for the mitigation activities identified" in the plan. *Id.* at 3. Unlike the *SWID Mitigation Plan*, the *A&B Mitigation Plan* does not provide safe harbor for specific activities. Instead, A&B's plan requires that A&B "mitigate for any shortfalls caused by" A&B's junior ground water diversions. *A&B Mitigation Plan*, at 3. Under its plan, A&B may undertake a series of different mitigation activities, and if those activities do not offset

[5] The SWID-SWC mitigation agreement ("*SWID Mitigation Plan*") was submitted to the Department as Exhibit A to the parties' January 4, 2018 *Joint Motion for Approval of Mitigation Agreement*, *In re SWID Mitigation Plan for the SWC Delivery Call*, No. CM-MP-2010-01.

their depletive effect on the SWC, A&B has committed to provide storage water to make up the difference. *Id.* This has not changed in the *Stipulated Mitigation Plan*. *Stipulated Mitigation Plan*, at 2.

8. In the SWC delivery call, the mitigation obligation owed by ground water users can vary from year to year and within an irrigation season depending on current water supply and crop need requirements. Only by applying current water supply and crop need requirements and the methodology order process can the Department determine A&B's proportionate share of any obligation, and whether A&B must provide storage water to offset the depletive effects of its pumping on the SWC. Accordingly, when an injury determination is made, A&B will still be required to submit documentation to the Department regarding its execution of the storage water component of its mitigation activities.

9. If the Director determines that A&B's ground water rights are subject to curtailment and A&B seeks to have its junior priority water rights removed from any curtailment list, A&B cannot simply state that it has storage water available to mitigate for its proportionate share of any predicted shortfall. Instead, A&B must submit legally enforceable contracts, options, or similar documentation to the Director to establish that it has secured the water necessary to mitigate for its obligation. Similar documentation includes any written commitments between A&B and the watermaster for storage water to be deducted from A&B's annual storage allocation and to be controlled, assigned, and delivered by the watermaster to mitigate injury to other members of the SWC.

10. While the new *Stipulated Mitigation Plan* does not fundamentally change the components of the *A&B Mitigation Plan* and will not allow A&B to avoid providing documentation showing that it can mitigate for its proportionate share of a predicted demand shortfall, the Director recognizes that the *A&B Mitigation Plan* was not stipulated to by the SWC and this new plan is stipulated to by the SWC. The Director should approve the plan in recognition that the SWC has now stipulated to it.

ORDER

Based upon and consistent with the foregoing, IT IS HEREBY ORDERED that the *Stipulation Regarding A&B Irrigation District's Amended Rule 43 Mitigation Plan* submitted by A&B and SWC is APPROVED as an amendment to the *A&B Irrigation District's Amended Rule 43 Mitigation Plan*.

IT IS FURTHER ORDERED that when required by the Department, A&B must submit adequate documentation to the Department establishing it has secured the water necessary to mitigate for its proportionate share of any predicted shortfall or otherwise be subject to curtailment.

DATED this 10th day of January 2025.

MATHEW WEAVER
Director

CERTIFICATE OF SERVICE

I HEREBY CERTIFY that on this 10th day of January 2025, the above and foregoing was served on the following by the method(s) indicated below:

EXPLANATORY INFORMATION TO ACCOMPANY A FINAL ORDER

(To be used in connection with actions when a hearing was **not** held)

The accompanying document is a "**Final Order**" issued by the Idaho Department of Water Resources ("Department") pursuant to Idaho Code § 67-5246.

PETITION FOR RECONSIDERATION

(*See* Idaho Code § 67-5246(4))

Any party may file a petition for reconsideration of this final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: the petition must be received by the Department within this fourteen (14) day period.** The presiding officer will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law.

REQUEST FOR HEARING

(*See* Idaho Code § 42-1701A(3))

Unless the right to a hearing before the Department or the Water Resource Board is otherwise provided by statute, any person aggrieved by any final decision, determination, order or action of the Director, and who has not previously been afforded an opportunity for a hearing on the matter may request a hearing pursuant to Idaho Code § 42-1701A(3). A written petition to the Director contesting this final order and requesting a hearing must be filed with the Department by any aggrieved person **within fifteen (15) days after service of this final order**.

CERTIFICATE OF SERVICE

(*See* IDAPA 37.01.01.053, 37.01.01.202)

All documents filed with the Department in connection with a petition for reconsideration or a request for hearing of this final order shall be served on all other parties to the proceedings in accordance with Rules of Procedure 53 and 202.

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-MP-2024-003 **AMENDED FINAL ORDER APPROVING STIPULATED MITIGATION PLAN**
IN THE MATTER OF THE SURFACE WATER COALITIONS' AND THE GROUND WATER DISTRICTS' 2024 STIPULATED MITIGATION PLAN	

This order amends and replaces the *Final Order Approving Stipulated Mitigation Plan* ("*Approval Order*") issued on January 3, 2025, under the above caption.

The Director of the Idaho Department of Water Resources ("Department") finds, concludes, and orders as follows:

FINDINGS OF FACT

1. On November 15, 2024, A&B Irrigation District, American Falls Reservoir District No. 2, Burley Irrigation District, Milner Irrigation District, Minidoka Irrigation District, North Side Canal Company, and Twin Falls Canal Company (collectively, the "Surface Water Coalition" or "SWC"), and Aberdeen-American Falls Ground Water District, Bingham Ground Water District, Bonneville-Jefferson Ground Water District, Carey Valley Ground Water District, Henry's Fork Ground Water District, Jefferson-Clark Ground Water District, Madison Ground Water District, Magic Valley Ground Water District, and North Snake Ground Water District (collectively, the "Districts") fully executed the *2024 Stipulated Mitigation Plan* ("*Mitigation Plan*"). The previously listed entities are collectively known as the "Stipulating Parties."

2. On November 19, 2024, the Stipulating Parties filed the *Mitigation Plan* with the Department as Appendix A of their *Joint Motion for Order Approving 2024 Stipulated Mitigation Plan* ("*Joint Motion*"). The *Mitigation Plan* was submitted pursuant to Rule 43 of the Department's Rules for Conjunctive Management of Surface and Ground Water Resources ("CM Rules"). IDAPA 37.03.11.043.

3. The *Mitigation Plan* is designed to mitigate material injury to water rights held by members of the SWC and is intended to satisfy the Districts' obligations under the ongoing SWC delivery call case, No. CM-DC-2010-001. *See Joint Motion*, at 3.

4. The initial term of the *Mitigation Plan* is four years, beginning January 1, 2024, and ending December 31, 2027. *Mitigation Plan*, § 3.1. The plan automatically renews for successive four-year terms unless terminated as described in the plan. *Id.* § 3.2

5. Through the *Mitigation Plan*, the SWC and the Districts agree that:

(a) during the term of the plan, "each District will conserve, at a minimum, the volume of groundwater set forth in the 'Conservation Obligation' column in Appendix A" of the *Mitigation Plan*, *id*. § 4, on an average annual basis over four-year periods known as compliance periods, *id*. §§ 4–4.1;

(b) as of November 15, 2024, the Districts' conservation obligations collectively total 205,000 acre-feet annually, which equates to a total annual divertible volume of 1,590,034 acre-feet, *id*. § 4.2;

(c) "[a]t the beginning of each compliance period, each District will be allocated a volume of water that may be diverted during that four-year period, calculated by multiplying the District's annual divertible volume by four, plus surplus allocation carried over from the prior compliance period," if allowed, *id*. § 4.3;

(d) each District's "four-year compliance period allocations are set forth in Appendix A" of the *Mitigation Plan*, *id*. § 4.3, which "will be updated annually by the Districts to reflect additions and removals of groundwater rights participating in [the *Mitigation Plan*] through the Districts," *id*. § 4.2;

(e) "[e]ach District will apportion its compliance period allocation to the District's patrons in the form of a diversion allocation in accordance with Idaho Code § 42-5244A," *id*. § 4.4;

(f) the "Districts may supplement their compliance period allocation by performing managed aquifer recharge" in accordance with certain standards set forth in the *Mitigation Plan*, *id*. § 4.5;

(g) the "[m]easurement and reporting of non-irrigation diversions will occur on an annual basis" and "[t]he Districts will develop and implement methods to read irrigation diversions monthly" as set forth in the *Mitigation Plan*, *id*. § 4.6.1;

(h) "[r]each gains to the Near Blackfoot to Minidoka reach of the Snake River shall be measured based on calendar year reach gains from the ESPA as reported by the Department to the Idaho Water Resource Board," *id*. § 4.6.3;

(i) "[b]y February 15 annually, the Districts will submit a report to the SWC and the Department documenting the Districts' compliance with section 4 [(concerning groundwater conservation)] during the previous calendar year," *id*. § 4.8 (emphasis omitted);

(j) "[b]eginning in 2035, the Districts will collectively deposit $250,000 annually into a bank account maintained by the Districts to fund development and implementation of projects designed to further increase reach gains to the Near Blackfoot to Minidoka reach of the Snake River" and this amount may increase under certain circumstances described in the plan, *id*. § 5;

(k) "[t]he Districts will collectively secure the volume of storage water required by section 6.1 to meet irrigation needs and carryover storage of the SWC in accordance with section 6.4" of the *Mitigation Plan*, *id*. § 6 (emphasis omitted);

(l) "[t]he Districts may take alternative actions to deliver water to the SWC, including but not limited to acquiring natural flow, in lieu of securing and delivering storage water," *id*. § 6.7;

(m) "[t]here will be an oversight committee [ ] established to review implementation of [the *Mitigation Plan*]," *id*. § 7;

(n) the "Districts and their patrons that comply with [the *Mitigation Plan*] shall receive safe harbor from the SWC delivery call" during the term of the plan, *id*. § 8;

(o) "[e]ach District is independently responsible for complying with its proportionate obligations under sections 4, 5 and 6" of the *Mitigation Plan,* and "[i]f a District does not comply, such non-compliance shall not adversely affect any other District that is in compliance with its proportionate obligations" under the plan, *id*. § 9 (emphasis omitted); and

(p) "[g]round water districts or other entities representing groundwater users brought into the area of common ground water supply through the passage of Senate Bill 1341 (2024) or brought in through expansion of the area of common ground water supply as allowed by Senate Bill 1341 (2024) may seek to join [the *Mitigation Plan*]," *id*. § 10.

6. The *Mitigation Plan* will supersede and replace previously approved mitigation plans in Department Docket Nos. CM-MP-2009-006, CM-MP-2009-007, and CM-MP-2016-001. *Id.* § 11.

7. Notice of the proposed *Mitigation Plan* was advertised in the Idaho Statesman, Mountain Home News, Idaho Mountain Express, Post Register, and Idaho State Journal on December 4 and 11, 2024; the Times News and Lewiston Tribune on December 5 and 12, 2024; and the Rexburg Standard Journal on December 6 and 13, 2024, in accordance with Idaho Code § 42-222(1) and CM Rule 43. No protests were received.

8. On January 3, 2025, the Director issued a final order approving the *Mitigation Plan*. However, the Director concluded that sections 4.6.1 and 4.6.3 of the *Mitigation Plan* should be revised to avoid future misunderstandings. *Approval Order* ¶¶ 10–12. Accordingly, the *Approval Order* was issued with certain alterations to sections 4.6.1 and 4.6.3. *Id*. at 5.

9. On January 17, 2025, pursuant to Idaho Code § 67-5246(4), the SWC filed for reconsideration of the *Approval Order*. *Pet. for Recons./Req. for Hr'g*, at 1–2 [hereinafter *SWC Petition*]. No responses to the *SWC Petition* were filed with the Department.

10. On reconsideration, the Director found the SWC's argument for an alternate revision of section 4.6.3 reasonable. *Order Granting Pet. for Recons. & Den. Req. for Hr'g*, at 3 [hereinafter *Order Granting Reconsideration*]. Therefore, exercising his discretion, the Director granted the SWC's petition for reconsideration and now amends Conclusion of Law 11 and the order below to be consistent with the concurrently issued *Order Granting Reconsideration*. *See id*.

CONCLUSIONS OF LAW

1. Idaho Code § 42-602 grants authority to the Director to supervise water distribution within water districts:

> The director of the department of water resources shall have direction and control of the distribution of water from all natural water sources within a water district to the canals, ditches, pumps and other facilities diverting therefrom. Distribution of water within water districts created pursuant to section 42-604, Idaho Code, shall be accomplished by watermasters as provided in this chapter and supervised by the director.
>
> The director of the department of water resources shall distribute water in water districts in accordance with the prior appropriation doctrine. The provisions of chapter 6, title 42, Idaho Code, shall apply only to distribution of water within a water district.

2. Idaho Code § 42-1805(8) authorizes the Director "[t]o promulgate, adopt, modify, repeal and enforce rules implementing or effectuating the powers and duties of the department."

3. Idaho Code § 42-603 grants the Director authority to adopt rules governing water distribution.

4. In accordance with chapter 52, title 67, Idaho Code, the Department adopted rules regarding the conjunctive management of surface and ground water that were last updated on March 31, 2022. IDAPA 37.03.11.000. "The [CM Rules] prescribe procedures for responding to a delivery call made by the holder of a senior-priority surface or ground water right against the holder of a junior-priority ground water right in an area having a common ground water supply." IDAPA 37.03.11.001.

5. CM Rule 42.02 states: "The holder of a senior-priority surface or ground water right will be prevented from making a delivery call for curtailment of pumping of any well used by the holder of a junior-priority ground water right where use of water under the junior-priority right is covered by an approved and effectively operating mitigation plan." IDAPA 37.03.11.042.02.

6. CM Rule 43.01.a–d sets forth the criteria for submission of a mitigation plan to the Director.

7. CM Rule 43.03 establishes the "[f]actors that may be considered by the Director in determining whether a proposed mitigation plan will prevent injury to senior rights . . . ." IDAPA 37.03.11.043.03(a)–(o). One such factor the Director may consider is "[w]hether the petitioners and respondents have entered into an agreement on an acceptable mitigation plan even though such plan may not otherwise be fully in compliance with these provisions." IDAPA 37.03.11.043.03(o).

8. The SWC and the Districts have entered into an agreement on a mitigation plan in accordance with CM Rule 43.03(o). The SWC stipulates that the *Mitigation Plan* "is designed to mitigate material injury to water rights held by members of the Surface Water Coalition." *Joint Motion*, at 3. The SWC and the Districts agree that "Districts and their patrons that comply with [the *Mitigation Plan*] shall receive safe harbor from the SWC delivery call" during the term of the plan. *Mitigation Plan*, § 8.

9. The *Mitigation Plan* describes numerous ongoing activities including: (a) setting conservation obligations and compliance periods; (b) setting individual patron level allocation and compliance requirements; (c) allowing aquifer recharge to supplement the Districts' compliance period allocation; (d) requiring measurement and reporting obligations; (e) allowing conservation carryover; (f) establishing a reach gain mitigation fund; (g) securing and assigning storage water; (h) permitting alternative mitigation actions; (i) establishing an oversight committee; (j) providing safe harbor; and (k) establishing enforcement procedures. *Id.* §§ 4–10.

10. Section 4.6.1 of the *Mitigation Plan* uses more precise language to describe the measurement actions required for non-irrigation diversions than irrigation diversions. It states that non-irrigation diversions shall be "measure[d] and report[ed]" but that irrigation diversions shall be "read." To avoid ambiguity and the potential for future misunderstanding, the need to measure and report all ground water diversions should be clarified and the term "read" should be replaced with "measure," "report," or both in section 4.6.1.

11. Section 4.6.3 of the *Mitigation Plan* states that "[r]each gains to the Near Blackfoot to Minidoka reach of the Snake River shall be measured based on calendar year reach gains from the ESPA as reported by the Department to the Idaho Water Resource Board." The problem with this statement is that it is inaccurate. In fact, the Department measures and reports Near Blackfoot to Minidoka reach gains to the Idaho Water Resource Board based on a water year schedule, not a calendar year schedule. To ensure accuracy and avoid the potential for future misunderstanding, while still preserving the intent of the stipulating parties, "as reported by the Department to the Idaho Water Resource Board" should be stricken from section 4.6.3.

12. Having reviewed the *Mitigation Plan* and the CM Rules, the Director will approve the *Mitigation Plan* with alterations to sections 4.6.1 and 4.6.3, consistent with paragraphs 10 and 11 above.

ORDER

Based upon and consistent with the foregoing, IT IS HEREBY ORDERED that the *2024 Stipulated Mitigation Plan* is APPROVED with the following alterations in strikeout/underline:

(a) **4.6.1 Groundwater.** Measurement and reporting of non-irrigation diversions will occur on an annual basis. The Districts will develop and implement methods to ~~read~~ measure irrigation diversions monthly. Irrigation diversions shall be ~~read~~ measured and reported from June to October, with the June ~~reading~~ reporting including diversions from the start of the irrigation season. The Districts will have functioning measurement and reporting programs by the start of the 2026 irrigation season to ~~read~~ measure and report irrigation diversions monthly. The Districts' methods may include telemetry, self-reporting with photo evidence, or other reliable techniques to report water diversions. Measurements shall be ~~made available~~ reported to the appropriate watermaster and the watermaster will make the measurement data publicly available upon request.

(b) **4.6.3 Reach Gains.** Reach gains to the Near Blackfoot to Minidoka reach of the Snake River shall be measured based on calendar year reach gains from the ESPA ~~as reported by the Department to the Idaho Water Resource Board~~.

Dated this 7th day of February 2025.

MATHEW WEAVER
Director

CERTIFICATE OF SERVICE

I HEREBY CERTIFY that on this 7th day of February 2025, the above and foregoing, was served by the method indicated below, and addressed to the following:

EXPLANATORY INFORMATION TO ACCOMPANY A FINAL ORDER

(To be used in connection with actions when a hearing was **not** held)

The accompanying document is a "**Final Order**" issued by the Idaho Department of Water Resources ("Department") pursuant to Idaho Code § 67-5246.

PETITION FOR RECONSIDERATION

(*See* Idaho Code § 67-5246(4))

Any party may file a petition for reconsideration of this final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: the petition must be received by the Department within this fourteen (14) day period.** The presiding officer will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law.

REQUEST FOR HEARING

(*See* Idaho Code § 42-1701A(3))

Unless the right to a hearing before the Department or the Water Resource Board is otherwise provided by statute, any person aggrieved by any final decision, determination, order or action of the Director, and who has not previously been afforded an opportunity for a hearing on the matter may request a hearing pursuant to Idaho Code § 42-1701A(3). A written petition to the Director contesting this final order and requesting a hearing must be filed with the Department by any aggrieved person **within fifteen (15) days after service of this final order**.

CERTIFICATE OF SERVICE

(*See* IDAPA 37.01.01.053, 37.01.01.202)

All documents filed with the Department in connection with a petition for reconsideration or a request for hearing of this final order shall be served on all other parties to the proceedings in accordance with Rules of Procedure 53 and 202.

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **FINAL ORDER REGARDING APRIL 2025 FORECAST SUPPLY** **(METHODOLOGY STEPS 1–3)**

FINDINGS OF FACT

1. On July 19, 2023, the Idaho Department of Water Resources ("Department") issued its *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("*Methodology Order*"). The *Methodology Order* established nine steps for determining material injury to members of the Surface Water Coalition ("SWC"). This order applies steps 1, 2, and 3 of the *Methodology Order*.[1]

A. Step 1

2. By April 1 of each year, Step 1 requires members of the SWC to submit to the Department electronic shapefiles delineating the total anticipated irrigated acres for the upcoming year "or confirm in writing that the existing electronic shape file submitted by SWC has not varied by more than five percent." *Methodology Order* ¶ 1, at 41.

3. On March 13, 2025, Minidoka Irrigation District ("Minidoka") submitted its electronic shapefile delineating its total irrigated acres to the Department. The Department also received a letter from Milner Irrigation District ("Milner") stating that its total number of irrigated acres has not varied by more than five percent.

4. On March 14, 2025, the Department received a letter from American Falls Reservoir District #2 ("AFRD2"), stating that its total number of irrigated acres has not varied by more than five percent.

5. On March 25, 2025, the Department received a letter from A&B Irrigation District ("A&B"), Burley Irrigation District ("BID"), North Side Canal Company ("NSCC"), and Twin Falls Canal Company ("TFCC"). In the letter, A&B, BID, and NSCC confirmed that their total

[1] Shortly after the *Methodology Order* was issued, the Idaho Ground Water Appropriators, Inc. ("IGWA") and certain Idaho cities filed petitions for judicial review in Ada County (Nos. CV01-23-13173 and CV01-23-13238). IGWA's petition for judicial review is stayed until December 31, 2027. The cities' petition for judicial review is pending before the Idaho Supreme Court. The filing of a petition for judicial review does not stay the effectiveness of an order. I.C. § 67-5274. No party to the judicial review proceedings has requested a stay of the *Methodology Order*. Accordingly, the Director will apply the *Methodology Order* in this order.

number of irrigated acres for 2025 will not vary by more than five percent from the electronic shapefiles submitted in prior years. With the letter, TFCC submitted an electronic shapefile delineating its total irrigated acres.

6. Based on the information submitted by the SWC, the Department will use the following total irrigated acres:

	Total Irrigated Acres[2]	Data Source
A&B	14,749[3]	SRBA Partial Decree
AFRD2	62,361	SRBA Partial Decree
BID	46,035	2013 shapefile submitted by BID, reduced by the Department for overlapping acres and acres outside of service area.
Milner	13,264	2010 service area shapefile, reduced by the Department for overlapping acres and acres outside of service area.
Minidoka	74,759	2025 shapefile submitted by Minidoka, reduced by the Department for overlapping acres and acres outside of the service area.
NSCC	154,067	SRBA Partial Decree
TFCC	195,568	2025 shapefile submitted by TFCC, reduced by the Department for overlapping acres and acres outside of service area.

B. Step 2

7. Step 2 states that, within fourteen days of the issuance of the joint forecast prepared by the United States Bureau of Reclamation ("USBR") and the United States Army Corp of Engineers ("USACE"), the Director "will issue a final order predicting the April [Forecast Supply] for the water year for each SWC entity. The Director will compare the April [Forecast Supply] for each SWC entity to the [Baseline Demand] for each SWC entity to determine if an in-season demand shortfall ("IDS") is anticipated for the upcoming irrigation season." *Methodology Order* ¶ 3, at 42.

8. On April 2, 2025, the USBR and USACE issued their joint forecast ("Joint Forecast"), predicting an unregulated inflow of 3,380,000 acre-feet at the Snake River near Heise gage for the period of April through July. The forecasted flow volume equates to 102% percent of the average.[4] The Joint Forecast "is generally as accurate a forecast as is possible using current data gathering and forecasting techniques." *Id.* ¶ 49, at 19 (citation omitted).

[2] "The number of irrigated acres used in this methodology order is the number of reported acres unless that number is larger than the decreed irrigated acres, and if so, then the decreed acres are used." *Methodology Order* ¶ 22, at 11.

[3] The Department has modified the total A&B irrigated acreage count to 14,749 acres. Based on Judge Wildman's district court decision, the new acreage count removes A&B's enlargement acres. *Mem. Decision & Order*, at 8, *City of Idaho Falls v. Idaho Dep't of Water Res.*, No. CV01-23-13238 (Ada Cnty. Dist. Ct. Idaho May 31, 2024).

[4] The average is based on the years 1991–2020. The Joint Forecast relies on a "30-Year Climate Normal" to calculate an average April through July runoff volume.

9. The April–July Heise natural flow data from the years 1990–2024 were data inputs for the development of regression equations for A&B and Milner to predict the natural flow supply.[5] Data greater or less than two standard deviations from average were excluded from the regression development.

10. The April–July Heise natural flow data from the years 1990–2024 and Box Canyon November–March total discharge data for the period 1989–2024, were data inputs for the development of multiple linear regression equations to predict the natural flow supplies for AFRD2, BID, Minidoka, NSCC, and TFCC. *Methodology Order* ¶ 49, at 19. The U.S. Geological Survey measures and monitors the flow at the Box Canyon stream flow measurement gage. The Box Canyon November–March total discharge used by the Director in the regression models for 2025 totaled 93,344 acre-feet.

11. The storage allocations were predicted for each SWC member. As of April 6, 2025, Water District No. 1's preliminary water right accounting indicates water rights for Jackson Lake 1906, Lake Walcott, Jackson Lake 1910, Jackson Lake 1913, Palisades Winter Water Savings, Island Park 1921, American Falls Winter Water Savings, and Henrys Lake 1965 are satisfied. The remaining reservoir rights are 445,474 acre-feet short of satisfaction. Based on a comparison of the current Heise natural flow forecast to the analogous year of 2020, the Director anticipates the remaining reservoir water rights will be satisfied, and the SWC will receive a full storage allocation. The storage allocations are based on the anticipated full allocation minus evaporation charges.

12. Based on the above, the Director projects the following shortfalls:

	Predicted Natural Flow Supply	Predicted Storage Allocation	Minidoka Credit Adjustment	Total Forecast Supply	Baseline Demand (BLY 2018)	In-Season Demand Shortfall
A&B	11,718	135,194		146,912	64,192	0
AFRD2	103,492	386,596	1,000	491,088	458,890	0
BID	106,140	222,485	5,130	333,755	262,211	0
Milner	15,143	87,870		103,013	58,417	0
Minidoka	150,989	360,077	8,370	519,436	354,851	0
NSCC	431,090	844,703	-7,750	1,268,043	1,026,661	0
TFCC	823,929	241,584	-6,750	1,058,763	1,121,717	63,000
		Total Predicted April In-Season Demand Shortfall (AF)				63,000

[5] Attached hereto, as Attachment A, are the regression analyses for each SWC entity used to predict natural flow supply.

C. Step 3

13. Step 3 requires the following:

> Step 3: By May 1, or within fourteen (14) days from issuance of the final order predicting the April [Forecast Supply], whichever is later in time, junior ground water users with approved mitigation plans for delivery of water must secure, to the satisfaction of the Director, a volume of water equal to their proportionate share of the April IDS unless the April IDS is revised as explained below in paragraph 6. If junior ground water users secured water for a reasonable carryover shortfall to an individual SWC member in the previous year, the current-year mitigation obligation to the individual SWC member will be reduced by the quantity of water secured for the reasonable carryover shortfall. The secured water will not be required to be delivered to the injured members of the SWC until the Time of Need.

Methodology Order ¶ 4, at 42.

14. The predicted April IDS for TFCC is 63,000 acre-feet. Because the TFCC is the only SWC entity with a predicted shortfall, the total predicted April IDS is 63,000 acre-feet.

15. The Eastern Snake Plain Aquifer Model ("ESPAM") is used to predict the junior priority water rights that must be curtailed to produce the volume of water equal to the predicted April IDS in the near Blackfoot to Minidoka reach. The ESPAM is updated periodically as new field measurements and advancements in modeling technology become available. ESPAM Version 2.2 ("ESPAM2.2") is the latest model version.[6]

16. The Department ran ESPAM2.2 to predict the junior priority water rights within the area of common ground water supply[7] that must be curtailed to produce the volume of water equal to the predicted April IDS between May 1 and September 30 of this irrigation season pursuant to the *Methodology Order*. Ground water rights bearing priority dates junior to August 28, 1955, must be curtailed to produce the volume of water equal to the predicted April IDS in the near Blackfoot to Minidoka reach.

CONCLUSIONS OF LAW

1. The Fifth Judicial District Court, in and for the County of Minidoka, held that the evidentiary standard of proof to apply in conjunctive administration of hydraulically connected water rights is clear and convincing. *See Mem. Decision & Order on Pets. for Jud. Rev.*, *A&B*

[6] The Department finalized ESPAM2.2 model documentation reports (including a model calibration report, a predictive uncertainty analysis, a superposition model scenario, and a curtailment scenario) on May 27, 2021. *See* Idaho Dep't of Water Res., *ESPAM2.2 Reports* (2021), https:// research.idwr.idaho.gov/files/projects/espam/browse/ESPAM22_Reports/.

[7] The current area of common ground water supply for the Eastern Snake Plain Aquifer is defined in Idaho Code § 42-233c as the aquifer underlying the Eastern Snake River Plain as described in the model calibration report for ESPAM2.2 dated May 2021.

Irr. Dist., Inc. v. Idaho Dep't of Water Res., No. CV-2009-647 (Minidoka Cnty. Dist. Ct. Idaho May 4, 2010); *Mem. Decision & Order on Pets. for Reh'g*, *A&B Irr. Dist., Inc. v. Idaho Dep't of Water Res.*, No. CV-2009-647 (Minidoka Cnty. Dist. Ct. Idaho Nov. 2, 2010).

2. "Clear and convincing evidence refers to a degree of proof greater than a mere preponderance." *Idaho State Bar v. Topp*, 129 Idaho 414, 416, 925 P.2d 1113, 1115 (1996) (internal quotations omitted). "Clear and convincing evidence is generally understood to be '[e]vidence indicating that the thing to be proved is highly probable or reasonably certain.'" *State v. Kimball*, 145 Idaho 542, 546, 181 P.3d 468, 472 (2008) (citing *In re Adoption of Doe*, 143 Idaho 188, 191, 141 P.3d 1057, 1060 (2006)); *see also Idaho Dep't of Health & Welfare v. Doe*, 150 Idaho 36, 41, 244 P.3d 180, 185 (2010).

3. The Director must utilize the best available technology for determining the impact of junior ground water diversions. *See Clear Springs Foods, Inc. v. Spackman*, 150 Idaho 790, 814, 252 P.3d 71, 95 (2011). ESPAM 1.1 and 2.1 are the model versions utilized previously in the SWC delivery call proceedings. Previously, the Director determined that ESPAM 2.1 was the best available scientific tool for predicting the effects of ground water pumping. *See Idaho Ground Water Assoc. v. Idaho Dep't of Water Res.*, 160 Idaho 119, 124, 369 P.3d 897, 902 (2016). ESPAM 2.2 is the latest version of the ESPAM model. The improvements incorporated into ESPAM 2.2, as discussed in Finding of Fact 15, make it the best available scientific tool for predicting the effects of ground water pumping in this proceeding.

4. In 2025, the Director will have sufficient information to quantify the irrigated areas for each of the SWC members as required by Step 1.

5. The USBR-USACE April Joint Forecast predicts an unregulated inflow of 3,380,000 acre-feet at the Snake River near Heise gage from April to July. The forecasted volume equates to 102% of the average.

6. The predicted April IDS is 63,000 acre-feet. Junior ground water users holding consumptive water rights bearing priority dates junior to August 28, 1955, within the Eastern Snake Plain Aquifer area of common ground water supply must mitigate for their proportionate share of the predicted April IDS in accordance with an approved mitigation plan.[8] Junior ground water users mitigating for their proportionate share of the predicted April IDS with a secured volume of water pursuant to an approved mitigation plan must, to the satisfaction of the Director, secure their proportionate share for delivery to the injured members of the SWC on or before May 1, 2025. There was a reasonable carryover shortfall of 44,900 acre-feet in the fall of 2024.

[8] There are five approved mitigation plans responding to the SWC delivery call, each is stipulated to by the SWC: (1) No. CM-MP-2015-003 for the benefit of A&B; (2) No. CM-MP-2010-001 for the benefit of Southwest Irrigation District and Goose Creek Irrigation District (collectively, "SWID"); (3) No. CM-MP-2024-003 for the benefit of the Ground Water Districts; (4) No. CM-MP-2019-001 for the benefit of the Coalition of Cities; and (5) No. CM-MP-2007-001 for the benefit of the Water Mitigation Coalition. Given the nature of certain plans, the Department must calculate the proportionate share of the predicted IDS. With regard to A&B's mitigation plan, A&B's proportionate share of the predicted April IDS of 63,000 acre-feet is 384 acre-feet. Due to the nature of the mitigation plans for SWID, the Ground Water Districts, the Coalition of Cities, and the Water Mitigation Coalition, these entities do not need to establish that they can mitigate for their proportionate share of the predicted IDS.

However, because junior ground water users did not secure any mitigation water for a carryover shortfall, there is no adjustment to the mitigation obligation.

7. If, on or before May 1, 2025, ground water users holding consumptive water rights bearing priority dates junior to August 28, 1955, within the Eastern Snake Plain Aquifer area of common ground water supply[9] fail to establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted April IDS of 63,000 acre-feet in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water user. Junior ground water users who are mitigating with a secured volume of water are not required to assign the secured volume of water until after the Director issues a subsequent order requiring the assignment of the water.

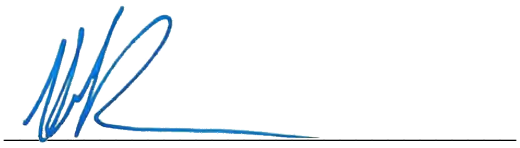
8. If, at any time prior to the Director's final determination of the April Forecast Supply, the Director can determine with certainty that any member of the SWC has diverted more natural flow than predicted, or has accrued more storage than predicted, the Director will revise his initial, predicted IDS determination.

ORDER

Based upon and consistent with the foregoing, IT IS HEREBY ORDERED as follows:

The Director predicts an April IDS of 63,000 acre-feet. On or before May 1, 2025, ground water users holding consumptive water rights bearing priority dates junior to August 28, 1955, within the Eastern Snake Plain Aquifer area of common ground water supply shall establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted April IDS of 63,000 acre-feet in accordance with an approved mitigation plan. If a junior ground water user cannot establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted April IDS in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water user.

Dated this 16th day of April 2025.



MATHEW WEAVER
Director

[9] On June 28, 2024, the Director issued an order declaring that ground water rights that were to be newly included in the Eastern Snake Plain Aquifer area of common ground water starting July 1, 2024, due to the passage of Senate Bill 1341, would not be subject to administration until November 1, 2025. *Order Re. Mid-Season Change to Area of Common Ground Water Supply for E. Snake Plain Aquifer; 3d Order Am. Curtailment List*, at 4; *see* S.B. 1341, 67th Leg., 2d Reg. Sess. (Idaho 2024) (enacted as I.C. § 42-233c). Accordingly, ground water users holding consumptive water rights bearing priority dates junior to August 28, 1955, that were newly included in the Eastern Snake Plain Aquifer area of common ground water supply per the Director's June 28, 2024 order, are not subject to administration at this time and are not required to establish that they can mitigate for their proportionate share of the predicted April IDS.

CERTIFICATE OF SERVICE

I HEREBY CERTIFY that on this 16th day of April 2025, the above and foregoing, was served by the method indicated below, and addressed to the following:

EXPLANATORY INFORMATION TO ACCOMPANY A FINAL ORDER

(To be used in connection with actions when a hearing was **not** held)

The accompanying document is a "**Final Order**" issued by the Idaho Department of Water Resources ("Department") pursuant to Idaho Code § 67-5246.

PETITION FOR RECONSIDERATION

(*See* Idaho Code § 67-5246(4))

Any party may file a petition for reconsideration of this final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: the petition must be received by the Department within this fourteen (14) day period.** The presiding officer will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law.

REQUEST FOR HEARING

(*See* Idaho Code § 42-1701A(3))

Unless the right to a hearing before the Department or the Water Resource Board is otherwise provided by statute, any person aggrieved by any final decision, determination, order or action of the Director, and who has not previously been afforded an opportunity for a hearing on the matter may request a hearing pursuant to Idaho Code § 42-1701A(3). A written petition to the Director contesting this final order and requesting a hearing must be filed with the Department by any aggrieved person **within fifteen (15) days after service of this final order**.

CERTIFICATE OF SERVICE

(*See* IDAPA 37.01.01.053, 37.01.01.202)

All documents filed with the Department in connection with a petition for reconsideration or a request for hearing of this final order shall be served on all other parties to the proceedings in accordance with Rules of Procedure 53 and 202.

Attorneys for A&B Irrigation District

RECEIVED
Apr 29, 2025
DEPARTMENT OF
WATER RESOURCES

BEFORE THE DEPARTMENT OF WATER RESOUCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **A&B IRRIGATION DISTRICT'S REQUEST FOR HEARING**

COMES NOW, A&B IRRIGATION DISTRICT ("A&B" or "District"), by and through counsel of record, and hereby requests a hearing in the above-referenced matter pursuant to I.C. § 42-1701A(3) and submits the following list of initial issues regarding the Director's *Final Order Regarding April 2025 Forecast Supply* issued on April 16, 2025. A&B reserves the right to supplement this request as necessary.

1) Whether the order's identified proportionate share (384 acre-feet) of the predicted injury (63,000 acre-feet) to TFCC is calculated correctly based upon A&B's actual diversion

and use of water rights that are subject to the identified curtailment date (junior to August 28, 1955).

2) Whether A&B should be allowed to mitigate for a portion of groundwater right 36-15127A (approximately 508.3 acres) that will be diverted used during the 2025 irrigation season, as opposed to mitigating for all 1,886.4 acres authorized by the water right.
3) Whether the steady-state use of the ESPAM 2.2 in identifying A&B's proportionate share is consistent with the transient use of the model in identifying ground water rights subject to curtailment as outlined in the *Sixth Methodology Order*.
4) For other issues and matters that may discovered in this proceeding.

DATED this 29th day of April, 2025.

Travis L. Thompson

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **FINAL ORDER CURTAILING GROUND WATER RIGHTS JUNIOR TO AUGUST 28, 1955**

The Director of the Idaho Department of Water Resources ("Department") finds, concludes, and orders as follows:

FINDINGS OF FACT

1. On July 19, 2023, the Director issued the *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("*Methodology Order*").[1] The *Methodology Order* established nine steps for determining material injury to members of the Surface Water Coalition ("SWC").[2]

2. On April 16, 2025, the Director issued the *Final Order Regarding April 2025 Forecast Supply (Methodology Steps 1–3)* ("*As-Applied Order*"), which applied steps 1, 2, and 3 of the *Methodology Order*. The Director predicted an April in-season demand shortfall ("IDS") of 63,000 acre-feet. *As-Applied Order*, at 3. The Director ordered that, by May 1, 2025, ground water users with consumptive water rights "bearing priority dates junior to August 28, 1955, within the Eastern Snake Plain Aquifer area of common ground water supply [("ESPA ACGWS")] shall establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted April IDS of 63,000 acre-feet in accordance with an approved mitigation plan." *Id.* at 6. The Director also ordered that, if such a junior ground water user cannot establish that they can mitigate for their proportionate share of the predicted IDS "in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water user." *Id.*

[1] Shortly after the *Methodology Order* was issued, the Idaho Ground Water Appropriators, Inc. ("IGWA") and certain Idaho cities filed petitions for judicial review in Ada County (Nos. CV01-23-13173 and CV01-23-13238). IGWA's petition for judicial review is stayed until December 31, 2027. The cities' petition for judicial review is pending before the Idaho Supreme Court. The filing of a petition for judicial review does not stay the effectiveness of an order. I.C. § 67-5274. No party to the judicial review proceedings has requested a stay of the *Methodology Order*.

[2] The SWC is comprised of A&B Irrigation District, American Falls Reservoir District #2, Burley Irrigation District, Milner Irrigation District, Minidoka Irrigation District, North Side Canal Company, and Twin Falls Canal Company.

3. There are currently five approved mitigation plans in place responding to the SWC delivery call:

(1) Docket No. CM-MP-2010-001 for the benefit of the Southwest Irrigation District and Goose Creek Irrigation District (collectively, "SWID");

(2) Docket No. CM-MP-2019-001 for the benefit of certain cities commonly referred to as the "Coalition of Cities";

(3) Docket No. CM-MP-2015-003 for the benefit of the A&B Irrigation District ("A&B");

(4) Docket No. CM-MP-2007-001 for the benefit of certain entities commonly referred to as the "Water Mitigation Coalition"; and

(5) Docket No. CM-MP-2024-003 for the benefit of certain ground water districts commonly referred to as the "Ground Water Districts."

4. In the 2025 *As-Applied Order*, the Director found that due to the nature of the approved mitigation plans for SWID, the Coalition of Cities, the Water Mitigation Coalition and the Ground Water Districts, these entities do not need to establish they can mitigate for their proportionate share of the predicted April IDS. *As-Applied Order*, at 5 n.8. However, the Director found that A&B must mitigate for its proportionate share of the predicted IDS of 63,000 acre-feet and determined that A&B's proportionate share is 384 acre-feet. *Id*.

5. In response to the 2025 *As-Applied Order*'s requirement for junior ground water right holders to establish how they will mitigate their proportionate share of the predicted demand shortfall, A&B sent a letter to the Director stating:

> [I]t is the District's intent to continue to curtail the enlargement water rights (2,063 acres) for the 2025 irrigation season. The District will also deliver surface water to an additional 1,510.6 acres that could have been irrigated with some of the District's ground water rights with an April 1, 1962 priority (water right nos. 36-15127A et al.). The District intends to continue to deliver surface water to lands formerly irrigated with groundwater, approximately 3,573.6 in total, with groundwater supplied to certain areas as needed for pipeline operations.

Letter from Travis Thompson, attorney for A&B, to Mat Weaver, Department Director (April 29, 2025). In the letter, A&B also stated:

> [T]o the extent that A&B needs to also show that it has 384 acre-feet of storage to delivery to [Twin Falls Canal Company], that water is expected to be available in its final storage allocation for the 2025 irrigation [sic] (American Falls and Palisades storage space). If necessary, that amount of storage will be available for formal assignment from A&B to [Twin Falls Canal Company] through the Water District 01 rental pool.

Id. A&B requested the Department's input on how best to address questions regarding assignment of storage. *Id*. Separately, A&B also submitted *A&B Irrigation District's Request for Hearing*, seeking a hearing on the Department's calculation of its proportional share.

CONCLUSIONS OF LAW

1. Idaho Code § 42-602 authorizes the Director to supervise water distribution within water districts:

> The director of the department of water resources shall have direction and control of the distribution of water from all natural water sources within a water district to the canals, ditches, pumps and other facilities diverting therefrom. Distribution of water within water districts created pursuant to section 42-604, Idaho Code, shall be accomplished by watermasters as provided in this chapter and supervised by the director. The director of the department of water resources shall distribute water in water districts in accordance with the prior appropriation doctrine. The provisions of chapter 6, title 42, Idaho Code, shall apply only to distribution of water within a water district.

2. As explained above, by May 1, 2025, ground water users with consumptive water rights "junior to August 28, 1955, within the [ESPA ACGWS]" had to "establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted April IDS of 63,000 acre-feet in accordance with an approved mitigation plan." *As-Applied Order*, at 6. If a junior ground water user does not establish that they can mitigate for their proportionate share of the predicted April IDS "in accordance with an approved mitigation plan" the ground water user will be subject to this "order curtailing the junior-priority ground water user." *Id.*

3. Due to the nature of the approved mitigation plans for SWID, the Coalition of Cities, the Water Mitigation Coalition, and the Ground Water Districts, these entities do not need to establish that they can mitigate for their proportionate share of the predicted April IDS. Junior ground water users entitled to the protection of SWID, the Coalition of Cities, the Water Mitigation Coalition, and the Ground Water Districts mitigation plans will not be subject to curtailment during the 2025 irrigation season.

4. In its April 29, 2025 letter to the Director, A&B stated that it would continue to curtail its enlargement water rights for the 2025 irrigation season. To ensure that A&B's enlargement water rights are curtailed for the 2025 irrigation season, the Director will include the enlargement water rights on the list of water rights subject to curtailment. This list is attached as Attachment A to this order. In the letter, A&B also stated that it would continue to provide surface water to certain acres within the A&B project. This would result in only 534.3 acres being irrigated with water rights with a priority date junior to August 28, 1955. As of the date of this order, A&B has not provided documentation that it has secured the storage water necessary to mitigate for its obligation under its approved mitigation plan. With the understanding that A&B possesses over 137,000 acre-feet of storage space and is in the process of securing a lease within Water District 01 for the required mitigation amount, water right no. 36-15127B will not be placed on the

curtailment list. If A&B has not secured the lease by June 6, 2025, water right no. 36-15127B will be added to the curtailment list.

5. Consistent with the *As-Applied Orde*r, Idaho Code § 42-602, and decisions of the courts, the Director must order curtailment of junior-priority ground water users that have not established they can mitigate in accordance with an approved mitigation plan. Junior-priority ground water users subject to curtailment are listed in Attachments A to this order.

ORDER

Based upon and consistent with the foregoing, IT IS HEREBY ORDERED that effective May 31, 2025, ground water users holding water rights bearing priority dates junior to August 28, 1955, within the ESPA ACGWS, and listed in Attachment A to this order, shall curtail/refrain from diversion and use of ground water pursuant to those water rights unless notified by the Department that the order of curtailment has been modified or rescinded as to their water rights.

IT IS FURTHER ORDERED that holders of ground water rights listed in Attachment A to this order may seek to participate in an approved mitigation plan through a ground water district and shall have fifteen days from the date of this order to join, solely for mitigation purposes, the ground water district situated nearest the lands to which the water rights are appurtenant. *See* H.B. 737a, 58th Leg., 2d Reg. Sess. (Idaho 2006) (*Act Relating to the Administration of Ground Water Rights Within the Eastern Snake River Plain*); *see also* I.C. § 42-5259.

IT IS FURTHER ORDERED that on or before June 6, 2025, A&B shall provide documentation, to the satisfaction of the Director, that it has secured a lease for the amount of storage water necessary to mitigate for its obligation under its approved mitigation plan. If A&B cannot establish, to the satisfaction of the Director, that it has secured such a lease, the Director will issue an order adding water right no. 36-15127B on the list of water rights subject to curtailment.

IT IS FURTHER ORDERED that watermasters for the water districts within the ESPA ACGWS who regulate ground water are directed to review the water rights listed in Attachment A to this order and begin the curtailment process.

IT IS FURTHER ORDERED that this order shall apply to consumptive ground water rights, including but not limited to, agricultural, commercial, industrial, and municipal uses. This order excludes ground water rights used for *de minimis* domestic purposes where such domestic use is within the limits of the definition set forth in Idaho Code § 42-111 and ground water rights used for *de minimis* stock watering where such stock watering use is within the limits of the definitions set forth in Idaho Code § 42-1401A(11), pursuant to IDAPA 37.03.11.020.11.

Dated this 16th day of May 2025.

MATHEW WEAVER
Director

EXPLANATORY INFORMATION TO ACCOMPANY A FINAL ORDER

(To be used in connection with actions when a hearing was **not** held)

The accompanying document is a "**Final Order**" issued by the Idaho Department of Water Resources ("Department") pursuant to Idaho Code § 67-5246.

PETITION FOR RECONSIDERATION

(*See* Idaho Code § 67-5246(4))

Any party may file a petition for reconsideration of this final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: the petition must be received by the Department within this fourteen (14) day period.** The presiding officer will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law.

REQUEST FOR HEARING

(*See* Idaho Code § 42-1701A(3))

Unless the right to a hearing before the Department or the Water Resource Board is otherwise provided by statute, any person aggrieved by any final decision, determination, order or action of the Director, and who has not previously been afforded an opportunity for a hearing on the matter may request a hearing pursuant to Idaho Code § 42-1701A(3). A written petition to the Director contesting this final order and requesting a hearing must be filed with the Department by any aggrieved person **within fifteen (15) days after service of this final order**.

CERTIFICATE OF SERVICE

(*See* IDAPA 37.01.01.053, 37.01.01.202)

All documents filed with the Department in connection with a petition for reconsideration or a request for hearing of this final order shall be served on all other parties to the proceedings in accordance with Rules of Procedure 53 and 202.

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **ORDER REVISING APRIL 2025 FORECAST SUPPLY AND CONTINUING MAY 16, 2025 CURTAILMENT ORDER** ***(METHODOLOGY STEPS 5 & 6)***

The Director of the Idaho Department of Water Resources ("Department") finds, concludes, and orders as follows:

FINDINGS OF FACT

A. Background

1. On July 19, 2023, the Department issued its *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("*Methodology Order*"). The *Methodology Order* established nine steps for determining material injury to members of the Surface Water Coalition ("SWC"). This order applies Steps 5 and 6 of the *Methodology Order*.

2. Step 5 of the *Methodology Order* addresses the final injury determination to reasonable carryover for members of the SWC. Step 5 states:

> If the storage allocations held by members of the SWC fill, there is no reasonable carryover shortfall. If the storage allocations held by members of the SWC do not fill, within fourteen (14) days following the publication of Water District 01's initial storage report . . . the volume of water secured by junior ground water users to fulfill the reasonable carryover shortfall shall be made available to injured members of the SWC.

Methodology Order, at 43. On November 29, 2024, the Director issued the *Final Order Establishing 2024 Reasonable Carryover* (*Methodology Step 9*) ("*2024 Step 9 Order*") establishing a reasonable carryover shortfall of 44,900 acre-feet. Junior ground water users were given 14 days to provide a volume of water to fulfill the carryover shortfall. No water users secured water. While the SWC's storage allocation did not fill this year, because no water users secured water in 2024 to fulfill the carryover shortfall, there is no volume of water to be made available to the SWC under Step 5.

3. Step 6 of the *Methodology Order* states:

> Approximately halfway through the irrigation season, but following the events described in Step 5, the Director will, for each member of the SWC: (1) recalculate RISD [Reasonable In-Season Demand]; (2) issue a revised FS [Forecast Supply]; and (3) estimate the Time of Need date.

Methodology Order, at 43 (footnote omitted).

4. On April 16, 2025, the Director issued his *Final Order Regarding April 2025 Forecast Supply (Methodology Steps 1 – 3)* ("*April Forecast Supply Order*"). The *April Forecast Supply Order* predicted a demand shortfall to the SWC of 63,000 acre-feet for the 2025 irrigation season. *April Forecast Supply Order*, at 3. At that time, the only member of the SWC predicted to experience material injury during the 2025 irrigation season was Twin Falls Canal Company ("TFCC"). *Id.* The Director ordered that, on or before May 1, 2025, ground water users with consumptive water rights "junior to August 28, 1955, within the Eastern Snake Plain Aquifer area of common ground water supply shall establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted April IDS [in-season demand shortfall] of 63,000 acre-feet in accordance with an approved mitigation plan." *Id.* at 6. The Director also ordered that, "[i]f a junior ground water user cannot establish . . . that they can mitigate for their proportionate share of the predicted April IDS in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water user." *Id.*

5. On May 16, 2025, the Director issued a *Final Order Curtailing Ground Water Rights Junior to August 28, 1955* ("*Curtailment Order*"). The Director ordered that:

> [E]ffective May 31, 2025, ground water users holding water rights bearing priority dates junior to August 28, 1955, within the ESPA ACGWS [Eastern Snake Plain Aquifer area of common ground water supply], and listed in Attachment A to this order, shall curtail/refrain from diversion and use of ground water pursuant to those water rights unless notified by the Department that the order of curtailment has been modified or rescinded as to their water rights.

Curtailment Order, at 4.

B. April through June Changing Water Supply Conditions and Climate

6. The April 2025 Joint Forecast prepared by the United States Army Corps of Engineers ("USACE") and the United States Bureau of Reclamation ("BOR") predicted 3,380,000 acre-feet of unregulated inflow at the Snake River near Heise gage for the period April–July 2025, which equates to 102% of the 1991–2020 average. *April Forecast Supply Order*, at 2. The Joint Forecast "is generally as accurate a forecast as is possible using current data gathering and forecasting techniques." *Methodology Order*, at 19.

7. The June 2025 Joint Forecast prepared by the USACE and the BOR predicted 1,350,000 acre-feet of unregulated inflow at the Snake River near Heise gage for the period June–July 2025, which equates to 75% of the 1991–2020 average. The June forecast represents a decrease in the forecast runoff compared to the 1991–2020 average.

8. The April through June precipitation was below average, while the April through June temperature was above average. According to data measured at the Natural Resources Conservation Service's SNOTEL sites in the Upper Snake River Basin, the basin received 73%, 75%, and 18% of average precipitation in April, May, and June, respectively. The National Weather Service's Twin Falls weather station reported 9%, 38%, and 0% of normal precipitation in April, May, and June, respectively. Twin Falls temperatures were 2.5, 3.8, and 3.4 degrees above normal for April, May, and June, respectively.[1]

C. Reasonable In-Season Demand

9. RISD "is the projected annual diversion volume for each SWC entity during the year of evaluation that is attributable to the projected beneficial use of growing crops within the service area of the entity." *Methodology Order*, at 13. In April, the demand from the 2018 baseline year ("BLY") defines the RISD. *Id.* at 17. During the irrigation season, the RISD for the completed portion of the irrigation season is recalculated by dividing the actual crop water need ("CWN") for each entity by the project efficiency for that entity. *Id.* at 17, 43. For the remainder of the irrigation season, the RISD is the demand defined by the July–October 2018 BLY. RISD is calculated on a monthly time step.

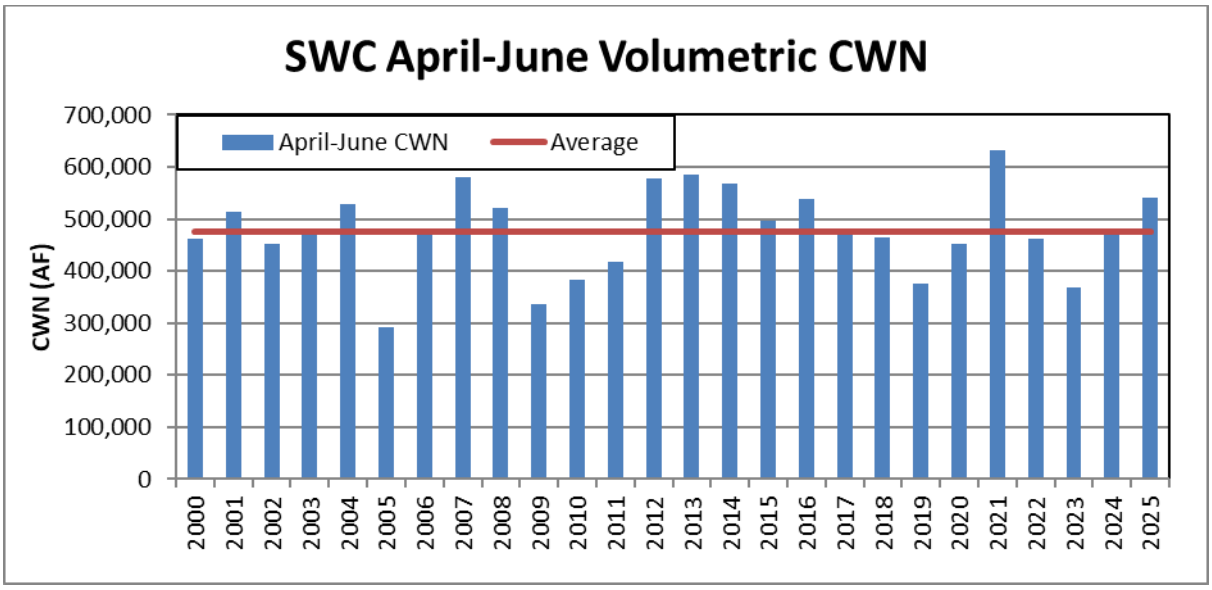
i. Crop Water Need

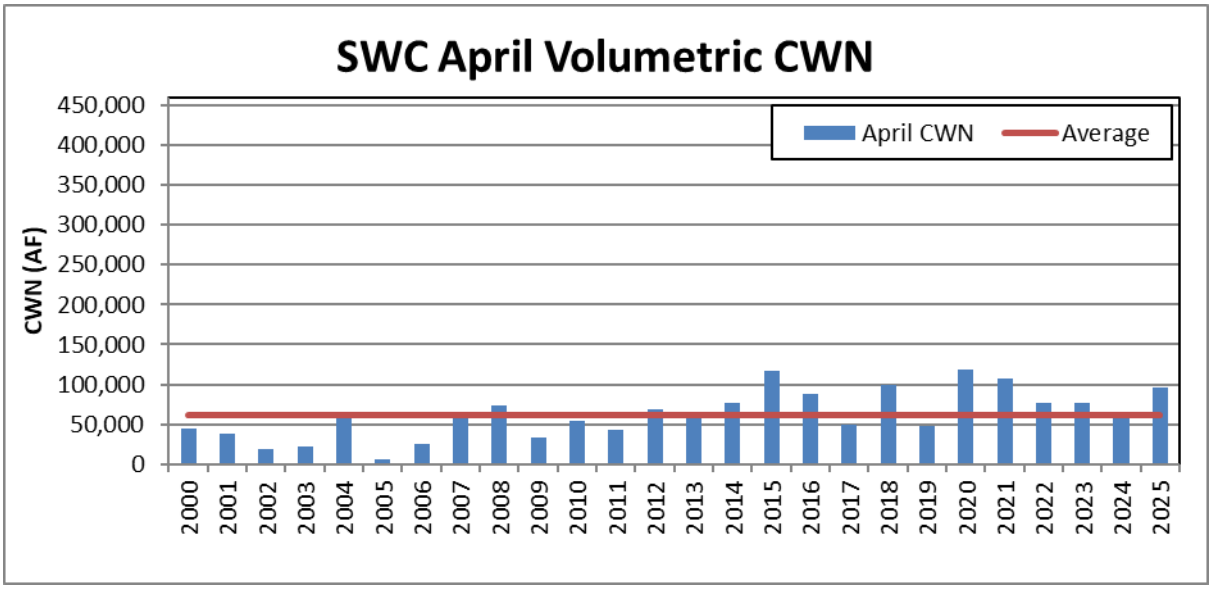
10. "CWN is the volume of irrigation water required for crop growth within a SWC entity boundary, such that crop growth is not limited by water availability." *Methodology Order*, at 15. "CWN is the difference between the fully realizable consumptive use associated with crop growth, or ET [evapotranspiration], and effective precipitation . . . ." *Id.*

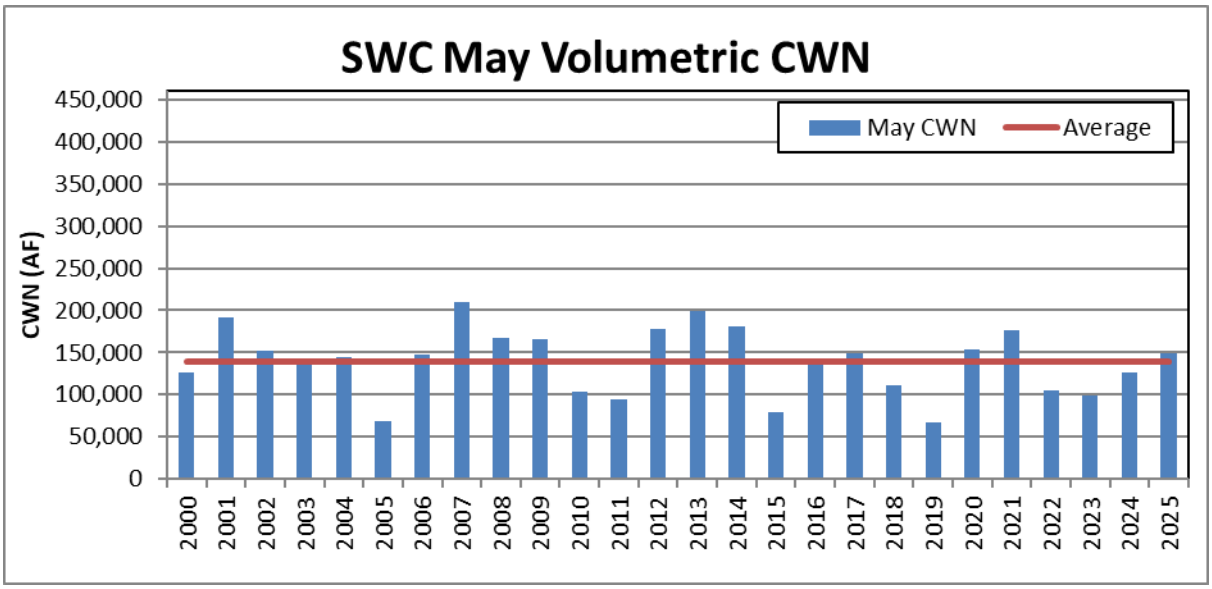
11. CWN is an input variable for calculating RISD for the completed portion of the irrigation season. *Id.* at 17. Actual RISD for the completed portion of the irrigation season is combined with monthly predicted baseline demands for the remaining months of the irrigation season to calculate a season-total RISD volume. *Id.* at 17–18. In-season demand shortfall is then calculated as the difference between the adjusted FS and the RISD. *Id.* at 23.

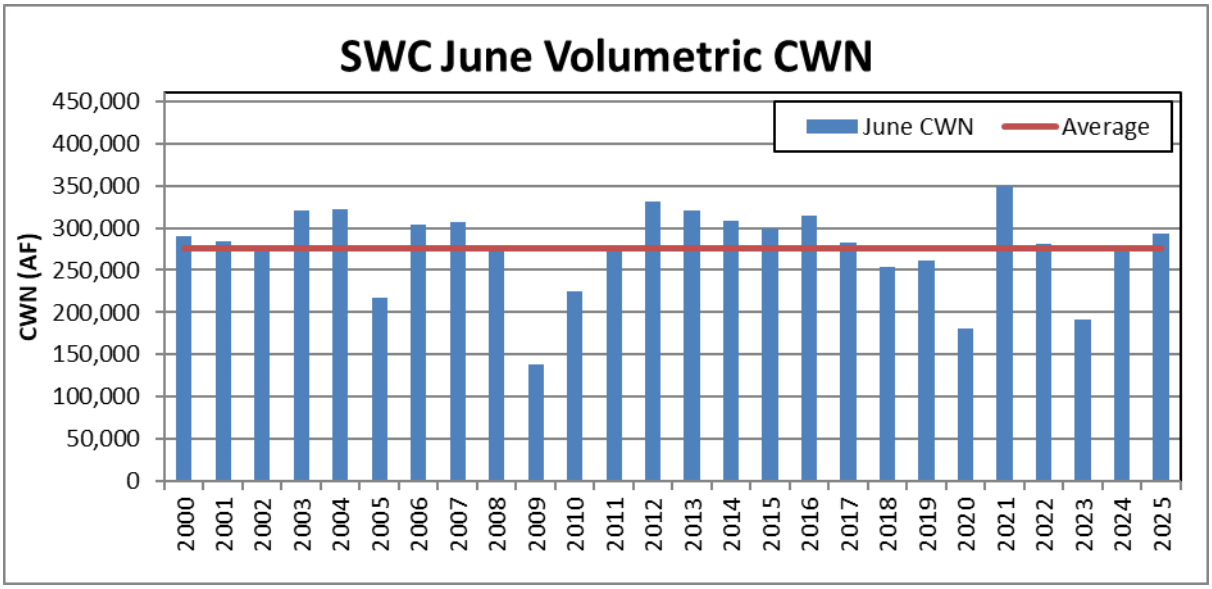
[1] Precipitation and temperature data obtained from the NOAA National Weather Service Preliminary Monthly Climate Data for the Twin Falls 3SE weather station (Twin Falls Airport).

12. As calculated from the beginning of the irrigation season (April 1), the SWC's volumetric CWN for the current water year through June 30, 2025, is 540,010 acre-feet. This volume is 113% of the 2000–2024 average CWN for April 1–June 30 and 116% of the CWN for the 2018 BLY. The following graphs summarize monthly volumetric CWN values:









ii. Extension of BLY

13. The RISD for the remaining portion of the irrigation season (July–October) is the July–October demand for the 2018 BLY. The numeric July–October demand values are shown in the table in Finding of Fact 14 below.

iii. Calculation of RISD

14. As calculated from the beginning of the irrigation season (April 1), the SWC's volumetric RISD for 2025 through June is 1,482,623 acre-feet. This volume is 113% of the 2000–2024 average demand from April 1–June 30 and 105% of the demand for the 2018 BLY. The recalculated RISD at this point of the 2025 irrigation season by entity is:

	April–June CWN (AF)	E_p (April–June)	April–June RISD (AF)	July–October Demand for 2018 BLY (AF)	Recalculated RISD (AF)
A&B	14,705	0.41-0.92	26,308	38,528	64,836[2]
AFRD2	59,878	0.20-0.37	196,184	274,485	470,669
BID	46,315	0.30-0.47	117,704	145,546	263,250
Milner	12,908	0.36-0.68	24,864	36,432	61,296
Minidoka	86,474	0.36-0.54	190,333	196,968	387,301
NSCC	127,790	0.21-0.40	421,800	594,099	1,015,899
TFCC	191,940	0.27-0.51	505,430	653,473	1,158,903

D. Forecast Supply

15. When calculated during the irrigation season, the FS is the sum of the year-to-date actual natural flow diversions, the forecasted natural flow supply for the remainder of the season, and the storage allocation for each member of the SWC. *Methodology Order*, at 43. For this order, the FS is the sum of the actual natural flow supply from April through June, the predicted natural flow supply from July through October, and the actual storage allocations. Actual natural flow diversions for the completed portion of the irrigation season are extracted from the Department's water rights accounting program. The natural flow diversions for the remainder of the irrigation season are estimated by regression analysis. *Id.* at 20–21, 43. Storage allocations are determined by Water District 01 after the Day of Allocation. *Id.* at 43.

i. Sum of Actual Natural Flow Diverted

16. Actual natural flow diverted for the period April through June for each SWC member are summarized in the table contained within the Summary of Forecast Supply section in Finding of Fact 23.

ii. Regression Models to Predict Natural Flow (July–October)

17. Natural flow diversions were predicted for the remainder of the irrigation season by regression analysis. The *Methodology Order* established the following predictor variables for the regression models: natural flow in the Snake River near Heise as reported by the BOR, snow water equivalent ("SWE") data from the Two Ocean Plateau SNOTEL site, Spring Creek discharge, and ground water levels near American Falls Reservoir. *Methodology Order*, at 20.

[2] The Department has modified the total A&B irrigated acreage count to 14,749 acres. Based on the decision in CV01-23-13238, the new acreage count removes A&B Irrigation District's enlargement acres.

Unique regression models with unique predictor variable groups are established in the *Methodology Order* for each SWC member. *Id.* at 20–21.

18. Either June 15 or July 1 SWE values for the Two Ocean Plateau SNOTEL site are used as input variables in each of the regression models developed in the *Methodology Order*. *Id.* Two Ocean Plateau SWE data was selected as a predictor variable in the *Methodology Order* based upon stepwise statistical analysis carried out in the development of each regression model. *Id.* The Two Ocean Plateau SWE data is an optimum predictor variable for several reasons, including: its elevation (the site is located above 9,000 ft and typically still has snow late in the runoff season (June 15 and July 1); its location (the site is in the headwaters of the Snake River above Jackson Reservoir); and its period of record, which is sufficiently long enough to support model development.

19. On July 1, 2025, the Two Ocean Plateau SNOTEL station reported 0.0 inches of SWE. When the snow water equivalent is zero on July 1, the predicted natural flow supplies for the period July 1–October 31 for A&B, AFRD2, and Milner are zero acre-feet. *Methodology Order*, at 20.

20. The input variables used to predict July–October natural flow volumes for BID, Minidoka, and NSCC in 2025 include: (1) 0.0 inches of SWE reported by the Two Ocean Plateau SNOTEL site on June 15, 2025; (2) 2,198,456 acre-feet of natural flow runoff at the Snake River near Heise (April–June) as reported by the BOR; and (3) 26.64 feet depth to water at well 05S 31E 27ABA1 as measured by the Department on March 23, 2025.

21. The variables used to predict the July–October natural flow volume for TFCC in 2025 include: (1) 6.3 inches of the SWE reported by the Two Ocean Plateau SNOTEL Site on June 15; (2) 2,198,456 acre-feet of natural flow runoff at the Snake River near Heise (April–June) as reported by the BOR; and (3) 76,458 acre-feet of discharge (January–May) as measured and reported by the United States Geologic Survey for its Spring Creek at Sheepskin Rd Nr Fort Hall ID Gage (Gage No. 13075983).

iii. Storage Allocations

22. Storage allocation values for each member of the SWC were established by Water District 01 on June 27, 2025, and are summarized in the table in Finding of Fact 24 below.

iv. Adjustments to Total Supply

23. Natural flow and storage water supplies were both adjusted, as shown in the table in Finding of Fact 24 below. Adjustments to natural flow include wheeled water to the Southwest Irrigation District through BID and Milner, 637 acre-feet and 516 acre-feet, respectively. Adjustments to natural flow also include wheeled water as a part of the Idaho Water Resource Board's water right to AFRD2, and BID, 1,441 acre-feet and 400 acre-feet, respectively. The only adjustments made to the stored water supply in the table below were for the Minidoka Credit. Adjustments for wheeled storage water published in WD1's weekly reports were not included as an adjustment because wheeled water does not actually increase the amount of water

available for use by the SWC. Water supplied to or from the rental pool was not included in the adjustments.

v. Summary of Forecast Supply

24. The following table summarizes the calculated FS and its individual components for each of the SWC members.

	Natural Flow Diverted through 6/30 (AF)	Predicted Natural Flow 7/1 to 10/31 (AF)	Natural Flow Adjustment (AF)	Preliminary Storage Allocation (AF)	Minidoka Credit Adjustment (AF)	Forecast Supply (AF)
A&B	10,356	0	0	120,473	0	130,829
AFRD2	90,653	0	(1,441)	383,912	1,000	474,124
BID	104,871	5,393	(1,037)	214,990	5,130	329,347
Milner	14,082	0	(516)	80,506	0	94,072
Minidoka	132,717	7,315	0	338,930	8,370	487,332
NSCC	366,647	53,561	0	798,776	(7,750)	1,211,234
TFCC	463,935	393,524	0	232,941	(6,750)	1,083,650

E. Revised Shortfall Prediction

25. In-season demand shortfall ("IDS") is calculated as the difference between RISD and the FS.

26. Based on the above, and as summarized in the following table, the Director predicts that TFCC will be materially injured by junior ground water pumping.

	Forecast Supply (AF)	RISD (AF)	Shortfall (AF)
A&B	130,829	64,836	0
AFRD2	474,124	470,669	0
BID	329,347	263,250	0
Milner	94,072	61,296	0
Minidoka	487,332	387,301	0
NSCC	1,211,234	1,015,899	0
TFCC	1,083,650	1,158,903	75,300
		Total	75,300

27. The current predicted shortfall to the SWC's RISD is 75,300 acre-feet.

28. At approximately the halfway point of the irrigation season, the estimated Time of Need is established by predicting when the remaining storage balance equals the volume of reasonable carryover. This year, because TFCC is the only entity with a calculated injury, the Time of Need equals the predicted day when its remaining storage equals its reasonable carryover volume of 37,400 acre-feet. To calculate the Time of Need for TFCC, the Department chose 2021 as the analogous year to predict TFCC's storage use for the remainder of the 2025 irrigation season. The analogous year, 2021, was selected based on similar Blackfoot to Milner reach gains. Assuming TFCC's storage use for the remainder of the 2025 season will match its storage use in 2021, the Time of Need is predicted to occur on August 28, 2025, for TFCC.

F. Step 6

29. Step 6 requires the following:

> Upon a determination of an additional mitigation obligation, junior ground water users will be required to establish, to the satisfaction of the Director, their ability to secure a volume of storage water or to conduct other approved activities pursuant to an approved mitigation plan that will deliver the additional mitigation obligation water to the injured members of the SWC at the Time of Need. If junior ground water users fail or refuse to submit this information within fourteen (14) days from issuance of a Step 6 order, the Director will issue an order curtailing junior ground water users. A transient ESPAM simulation will be run to determine the priority date to produce the necessary additional mitigation obligation volume by September 30 of the same year. Curtailment will be simulated within the area of common ground water supply, as described by CM Rule 50.01.

Methodology Order, at 44 (footnote omitted). Effective July 1, 2024, Senate Bill 1341 added a new section to Idaho Code, Idaho Code § 42-233c, which modified the description of the ESPA area of common ground water supply.[3]

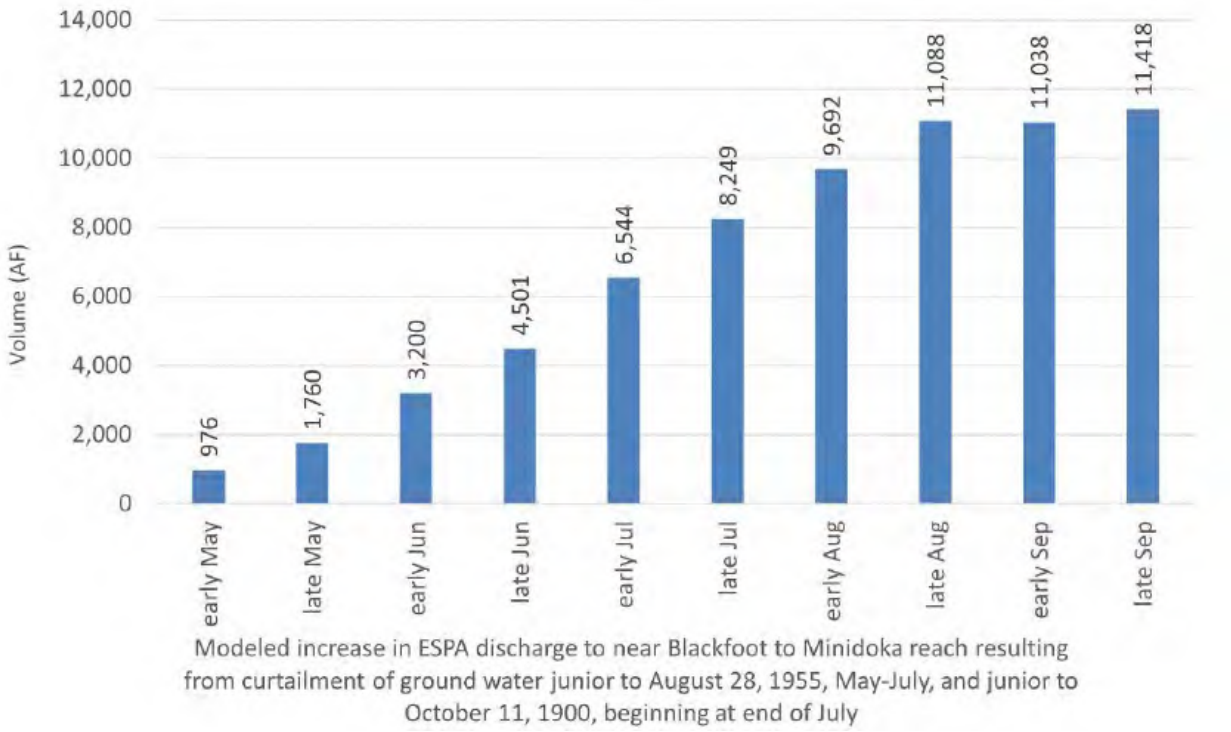
30. The predicted July IDS for TFCC is 75,300 acre-feet.

31. In April 2025, pursuant to the *Methodology Order*, the Department ran the Eastern Snake Plain Aquifer Model version 2.2 ("ESPAM2.2") to calculate the priority curtailment date, such that the curtailment of all water rights junior to the date within the area of common ground water supply, would produce a volume of water equal to the April IDS in the Snake River between May 1 and September 30. The ESPAM2.2 simulation predicted curtailment of ground water rights bearing priority dates junior to August 28, 1955, would produce the volume of water equal to the predicted April IDS of 63,000 AF in the near Blackfoot to Minidoka reach. *April Forecast Supply Order*, at 4.

32. In July 2025, the Department ran the ESPAM2.2 to simulate the effect of adjusting the curtailment priority date at the end of July. The ESPAM2.2 simulation calculated that the curtailment of ground water rights junior to August 28, 1955, through the end of July followed

[3] S.B. 1341, 67th Leg., 2d Reg. Sess. (Idaho 2024).

by curtailment of groundwater rights junior to October 11, 1900,[4] will produce a volume of water of 58,000 AF in the near Blackfoot to Minidoka reach between July 1 and September 30 of this irrigation season. The following figure summarizes the results of the ESPAM2.2 simulation:



Modeled increase in ESPA discharge to near Blackfoot to Minidoka reach resulting from curtailment of ground water junior to August 28, 1955, May-July, and junior to October 11, 1900, beginning at end of July

33. The predicted July through September benefits to the near Blackfoot to Minidoka reach from curtailment of ground water rights bearing priority dates junior to August 28, 1955, through the end of July followed by curtailment of groundwater rights junior to October 11, 1900, are less than the July IDS of 75,300 acre-feet. Increasing the curtailment to include ground water rights junior to October 11, 1900, will offset as much of the July IDS as possible.

CONCLUSIONS OF LAW

1. Idaho Code § 42-602 authorizes the Director to supervise water distribution within water districts:

> The director of the department of water resources shall have direction and control of the distribution of water from all natural water sources within a water district to the canals, ditches, pumps and other facilities diverting therefrom. Distribution of water within water districts created pursuant to section 42-604, Idaho Code, shall be accomplished by watermasters as provided in this chapter and supervised by the director. The director of the department of water resources shall distribute water in water districts in accordance with the prior appropriation doctrine. The provisions of chapter 6, title 42, Idaho Code, shall apply only to distribution of water within a water district.

[4] October 11, 1900, is the priority date equal to TFCC's Water Right No. 1-209, the most senior SWC natural flow water right predicted to be injured.

2. Idaho Code § 42-607 states the watermaster, under the direction of the Idaho Department of Water Resources, shall regulate diversions "during times of water scarcity, in order to supply the prior rights of others from such stream or water supply . . . ."

3. This year, no water is required to be allocated to the SWC pursuant to Step 5 related to a reasonable carryover shortfall because no junior water users secured water in 2024 to fulfill the carryover shortfall.

4. Based on the Findings of Fact 6 through 27 above, it is reasonably certain TFCC will be materially injured. The calculated shortfall to TFCC is 75,300 acre-feet.

5. In the *April Forecast Supply Order*, the Director predicted a demand shortfall for the SWC of 63,000 acre-feet. Because the shortfall volume calculated consistent with Step 6 of the *Methodology Order* is different than the shortfall predicted in the *April Forecast Supply Order*, the curtailment date established in the May 16, 2025 *Curtailment Order* must be adjusted.

6. Using the ESPAM2.2, the Department has determined that the curtailment of ground water rights bearing priority dates junior to August 28, 1955, through the end of July followed by curtailment of groundwater rights junior to October 11, 1900, would result in a volume of water less than the predicted July IDS of 75,300 acre-feet in the near Blackfoot to Minidoka reach between July 1 and September 30 of this irrigation season. Accordingly, increasing the curtailment to include ground water rights junior to October 11, 1900, is necessary for curtailment to offset as much of the July IDS as possible.

7. Junior ground water users holding consumptive water rights bearing priority dates junior to October 11, 1900, within the Eastern Snake Plain Aquifer area of common ground water supply[5] must mitigate for their proportionate share of the predicted July IDS in accordance with an approved mitigation plan.[6] Junior ground water users mitigating for their proportionate share of the predicted July IDS with a secured volume of water pursuant to an approved mitigation plan must, to the satisfaction of the Director, secure their proportionate share for delivery to the injured members of the SWC on or before July 24, 2025.

[5] The current area of common ground water supply for the Eastern Snake Plain Aquifer is defined in Idaho Code § 42-233c as the aquifer underlying the Eastern Snake River Plain as described in the model calibration report for ESPAM2.2 dated May 2021.

[6] There are five approved mitigation plans responding to the SWC delivery call, the SWC stipulates to each: (1) No. CM-MP-2015-003 for the benefit of A&B; (2) No. CM-MP-2010-001 for the benefit of Southwest Irrigation District and Goose Creek Irrigation District (collectively, "SWID"); (3) No. CM-MP-2024-003 for the benefit of the Ground Water Districts; (4) No. CM-MP-2019-001 for the benefit of the Coalition of Cities; and (5) No. CM-MP-2007-001 for the benefit of the Water Mitigation Coalition. Given the nature of certain plans, the Department must calculate the proportionate share of the predicted IDS. With regard to A&B's mitigation plan, A&B's proportionate share of the predicted July IDS is 5,039 acre-feet. In response to the *April Forecast Supply Order,* A&B has already secured 164 acre-feet of storage water for the 2025 irrigation season. Due to the nature of the mitigation plans for SWID, the Ground Water Districts, the Coalition of Cities, and the Water Mitigation Coalition, these entities do not need to establish that they can mitigate for their proportionate share of the predicted IDS.

8. If, on or before July 24, 2025, ground water users holding consumptive water rights bearing priority dates junior to October 11, 1900, within the Eastern Snake Plain Aquifer area of common ground water supply fail to establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted July IDS of 75,300 acre-feet in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water user. Junior ground water users who are mitigating with a secured volume of water are not required to assign the secured volume of water until after the Director issues a subsequent order requiring the assignment.

ORDER

Based upon and consistent with the foregoing, IT IS HEREBY ORDERED as follows:

The Director predicts an in-season IDS of 75,300 acre-feet. On or before July 24, 2025, ground water users holding consumptive water rights bearing priority dates junior to October 11, 1900, within the Eastern Snake Plain Aquifer area of common ground water supply shall establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted IDS of 75,300 acre-feet in accordance with an approved mitigation plan. If a junior ground water user cannot establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted IDS of 75,300 acre-feet in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water user.[7]

IT IS FURTHER ORDERED that the May 16, 2025 *Curtailment Order* remains in full force and effect. All ground water users holding water rights listed in Attachment A to the May 16, 2025 *Curtailment Order* bearing priority dates junior to August 28, 1955, shall continue to be curtailed from diversion and use of ground water pursuant to those water rights unless they are mitigating in accordance with an approved mitigation plan or are notified by the Department that the order of curtailment has been modified or rescinded as to their water rights.

Dated this 10th day of July 2025.

MATHEW WEAVER
Director

[7] On June 28, 2024, the Director issued an order declaring that ground water rights that were to be newly included in the Eastern Snake Plain Aquifer area of common ground water starting July 1, 2024, due to the passage of Senate Bill 1341, would not be subject to administration until November 1, 2025. *Order Re. Mid-Season Change to Area of Common Ground Water Supply for E. Snake Plain Aquifer; 3d Order Am. Curtailment List,* at 4. Accordingly, ground water users holding consumptive water rights bearing priority dates junior to October 11, 1900, that were newly included in the Eastern Snake Plain Aquifer area of common ground water supply per the Director's June 28, 2024 order, are not subject to administration at this time and are not required to establish that they can mitigate for their proportionate share of the predicted IDS.

EXPLANATORY INFORMATION TO ACCOMPANY A FINAL ORDER

(To be used in connection with actions when a hearing was **not** held)

The accompanying document is a "**Final Order**" issued by the Idaho Department of Water Resources ("Department") pursuant to Idaho Code § 67-5246.

PETITION FOR RECONSIDERATION

(*See* Idaho Code § 67-5246(4))

Any party may file a petition for reconsideration of this final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: the petition must be received by the Department within this fourteen (14) day period.** The presiding officer will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law.

REQUEST FOR HEARING

(*See* Idaho Code § 42-1701A(3))

Unless the right to a hearing before the Department or the Water Resource Board is otherwise provided by statute, any person aggrieved by any final decision, determination, order or action of the Director, and who has not previously been afforded an opportunity for a hearing on the matter may request a hearing pursuant to Idaho Code § 42-1701A(3). A written petition to the Director contesting this final order and requesting a hearing must be filed with the Department by any aggrieved person **within fifteen (15) days after service of this final order**.

CERTIFICATE OF SERVICE

(*See* IDAPA 37.01.01.053, 37.01.01.202)

All documents filed with the Department in connection with a petition for reconsideration or a request for hearing of this final order shall be served on all other parties to the proceedings in accordance with Rules of Procedure 53 and 202.

Attorneys for A&B Irrigation District

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **A&B IRRIGATION DISTRICT'S REQUEST FOR HEARING**

COMES NOW, A&B IRRIGATION DISTRICT ("A&B or "District"), by and through counsel of record, and hereby requests a hearing in the above-referenced matter pursuant to I.C. § 42-1701A(3) and submits the following list of initial issues regarding the Director's *Order Revising April 2025 Forecast Supply and Continuing May 16, 2025 Curtailment Order* issued on July 10, 2025. A&B reserves the right to supplement this request as necessary.

1. Whether the order's identified proportionate share (5,039 acre-feet) of the predicted injury (75,300 acre-feet) to TFCC is calculated correctly based upon A&B's actual diversion and use of water rights that are subject to the identified curtailment date (junior to October 11, 1900).

2. Whether the steady-state use of the ESPAM 2.2 in identifying A&B's proportionate share of the estimated in-season demand shortfall is consistent with the transient use of the model in identifying ground water rights subject to curtailment as outlined in the *Sixth Methodology Order*.

3. Whether the Director's failure to implement the May 16, 2025 curtailment order in accordance with Idaho law has injured A&B by subjecting its senior water right 36-2080 to curtailment and/or mitigation requirements during the 2025 irrigation season.

4. For other and further reasons as may be discovered prior to hearing. A&B reserves the right to identify additional issues as necessary in this proceeding.

DATED this 24th day of July, 2025.

_/s/ Jessica Nielsen_____
Jessica Nielsen
Assistant for Travis L. Thompson

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **ORDER GRANTING A&B IRRIGATION DISTRICT'S REQUESTS FOR HEARING, CONSOLIDATING PROCEEDINGS FOR HEARING, AND APPOINTING HEARING OFFICER;** **NOTICE OF PREHEARING CONFERENCE**

The Director of the Idaho Department of Water Resources ("Department") finds, concludes, and orders as follows:

FINDINGS OF FACT

1) On July 19, 2023, the Director issued the *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("*Methodology Order*"). The *Methodology Order* established nine steps for determining material injury to members of the Surface Water Coalition ("SWC").[1]

2) On April 16, 2025, the Director issued the *Final Order Regarding April 2025 Forecast Supply (Methodology Steps 1–3)* ("*April Forecast Supply Order*") predicting an in-season demand shortfall ("IDS") to Twin Falls Canal Company ("TFCC"), a member of the SWC, in the amount of 63,000 acre-feet. *April Forecast Supply Order*, at 3–4. The Director ordered that, by May 1, 2025, ground water users with consumptive water rights "bearing priority dates junior to August 28, 1955, within the Eastern Snake Plain Aquifer area of common ground water supply [("ESPA ACGWS")] shall establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted April IDS of 63,000 acre-feet in accordance with an approved mitigation plan." *Id*. at 6. The Director also ordered that, if such a junior ground water user cannot establish that they can mitigate for their proportionate share of the predicted IDS "in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water user." *Id*.

[1] The SWC is comprised of A&B Irrigation District ("A&B"), American Falls Reservoir District #2, Burley Irrigation District, Milner Irrigation District, Minidoka Irrigation District, North Side Canal Company, and Twin Falls Canal Company.

3) In the *April Forecast Supply Order,* the Director found that A&B Irrigation District ("A&B") must mitigate for its proportionate share of the predicted IDS and determined that A&B's proportionate share was 384 acre-feet. *Id*. at 5 n.8.[2]

4) On April 29, 2025, in response to the *April Forecast Supply Order's* requirement for junior ground water right holders to establish how they will mitigate their proportionate share of the predicted demand shortfall, A&B sent a letter to the Director stating:

> [I]t is the District's intent to continue to curtail the enlargement water rights (2,063 acres) for the 2025 irrigation season. The District will also deliver surface water to an additional 1,510.6 acres that could have been irrigated with some of the District's ground water rights with an April 1, 1962 priority (water right nos. 36-15127A et al.). The District intends to continue to deliver surface water to lands formerly irrigated with groundwater, approximately 3,573.6 in total, with groundwater supplied to certain areas as needed for pipeline operations.
> . . . .
> [T]o the extent that A&B needs to also show that it has 384 acre-feet of storage to delivery to TFCC, that water is expected to be available in its final storage allocation for the 2025 irrigation [sic] (American Falls and Palisades storage space). If necessary, that amount of storage will be available for formal assignment from A&B to TFCC through the Water District 01 rental pool.

Letter from Travis Thompson, attorney for A&B, to Mat Weaver, Department Director (April 29, 2025).

5) On the same day, A&B also filed a petition in this matter requesting a hearing to contest the *April Forecast Supply Order*. *A&B Req. for Hr'g*, at 1 (Apr. 2025). The request was made pursuant to Idaho Code § 42-1701A(3), and seeks to address:

> (1) Whether the order's identified proportionate share (384 acre-feet) of the predicted injury (63,000 acre-feet) to TFCC is calculated correctly based upon A&B's actual diversion and use of water rights that are subject to the identified curtailment date (junior to August 28, 1955).
>
> (2) Whether A&B should be allowed to mitigate for a portion of groundwater right 36-15127A (approximately 508.3 acres) that will be diverted [sic] used during the 2025 irrigation season, as opposed to mitigating for all 1,886.4 acres authorized by the water right.
>
> (3) Whether the steady-state use of the ESPAM 2.2 in identifying A&B's proportionate share is consistent with the transient use of the model in identifying ground water rights subject to curtailment as outlined in the *Sixth Methodology Order*.

[2] The Department-approved mitigation plan submitted in response to the subject delivery call for the benefit of A&B is docketed under No. CM-MP-2015-003.

(4) For other issues and matters that may [sic] discovered in this proceeding.

Id. at 1–2.

6) On May 16, 2025, the Director issued an order curtailing ground water rights junior to August 28, 1955, listing A&B's water right nos. 36-16749, 36-15127A, 36-15192, 36-15193A, 36-15194A, 36-15195A, 36-15196A, 36-15193B, 36-15194B, 36-15195B, and 36-15196B. *Final Order Curtailing Ground Water Rts. Junior to Aug. 28, 1955*, at 4, attach. A, at 1 [hereinafter *May Curtailment Order*]. The order also included the following:

> [O]n or before June 6, 2025, A&B shall provide documentation, to the satisfaction of the Director, that it has secured a lease for the amount of storage water necessary to mitigate for its obligation under its approved mitigation plan. If A&B cannot establish, to the satisfaction of the Director, that it has secured such a lease, the Director will issue an order adding water right no. 36-15127B on the list of water rights subject to curtailment.

May Curtailment Order, at 4.

7) On June 6, 2025, A&B submitted documentation for consideration by the Director to establish that A&B had secured a lease for the amount necessary to mitigate for its proportionate share in accordance with its approved mitigation plan.

8) On July 10, 2025, the Director issued an *Order Revising April 2025 Forecast Supply and Continuing May 16, 2025 Curtailment Order (Methodology Steps 5 & 6)* ("*July As-Applied Order*"). The Director predicted a revised IDS in the amount of 75,300 acre-feet. *July As-Applied Order*, at 8. The Director concluded that A&B's proportionate share of the predicted injury to TFCC is 5,039 acre-feet. *Id*. at 11 n.6. However, the order noted that in response to the *April Forecast Supply Order*, A&B previously demonstrated that it had "already secured 164 acre-feet of storage water for the 2025 irrigation season." *Id*.

9) On July 24, 2025, A&B filed another request for hearing, this time contesting the *July As-Applied Order*. *A&B Req. for Hr'g*, at 1 (July 2025). Again, the request was made pursuant to Idaho Code § 42-1701A(3), listing the following as issues for hearing:

> (1) Whether the order's identified proportionate share (5,039 acre-feet) of the predicted injury (75,300 acre-feet) to TFCC is calculated correctly based upon A&B's actual diversion and use of water rights that are subject to the identified curtailment date (junior to October 11, 1900).
>
> (2) Whether the steady-state use of the ESPAM 2.2 in identifying A&B's proportionate share of the estimated in-season demand shortfall is consistent with the transient use of the model in identifying ground water rights subject to curtailment as outlined in the *Sixth Methodology Order*.

(3) Whether the Director's failure to implement the May 16, 2025 curtailment order in accordance with Idaho law has injured A&B by subjecting its senior water right 36-2080 to curtailment and/or mitigation requirements during the 2025 irrigation season.

(4) For other and further reasons as may be discovered prior to hearing. A&B reserves the right to identify additional issues as necessary in this proceeding.

Id. at 1–2.

10) The issues identified for hearing in A&B's July hearing request relate to, and even mirror at times, the issues identified in its April request. A&B has not previously been afforded an opportunity for a hearing to contest either the *April Forecast Supply Order* or *July As-Applied Order*.

11) Also on July 24, 2025, A&B submitted a *Joint Motion for Order Approving 2025 Stipulation* ("*Joint Motion*"), together with the other members of the SWC. The *Joint Motion* explains that A&B and the other members of the SWC entered into a stipulation, referred to as the "*2025 Stipulation*," to "define A&B's mitigation obligation for the 2025 irrigation season." *Joint Motion*, at 2. The stipulation included a request for the Director to approve the *2025 Stipulation* as "stipulated compliance with [A&B's] approved mitigation plan for the 2025 irrigation season." *Id*.

12) On July 25, 2025, the Director issued an order that approved the *2025 Stipulation*, concluding that "[t]he *2025 Stipulation* between A&B and the other members of the SWC is consistent with A&B's approved *Stipulated Mitigation Plan* in Docket No. CM-MP-2015-003." *Order Approving 2025 Stip. as Compliance with Approved Mitigation Plan*, at 3. Accordingly, in the *Final Order Curtailing Ground Water Rights Junior to October 11, 1900*, also issued July 25, 2025, none of A&B's water rights were included in Attachment A—the list of water rights subject to curtailment.

CONCLUSIONS OF LAW

1) Idaho Code § 42-1701A(3) provides in relevant part:

> Unless the right to a hearing before the director . . . is otherwise provided in by statute, any person aggrieved by any action of the director, including any decision, determination, order or other action . . . who is aggrieved by the action of the director, and who has not previously been afforded an opportunity for a hearing on the matter shall be entitled to a hearing before the director to contest the action.

2) Pursuant to Idaho Code § 42-1701A(3), A&B is entitled to a hearing on the *April Forecast Supply Order* and *July As-Applied Order*, as its petitions were timely and A&B has not previously been afforded an opportunity for hearing on the issues it presented within the

requests. Therefore, the Director should grant both the request for hearing made by A&B in April, and the one filed in July.

3) Considering the long history of litigation stemming from the above-captioned matter and the temporary nature of the *2025 Stipulation*, the Director determines that informal proceedings are unlikely to resolve the issues presented in A&B's requests for hearing. Moreover, since both petitions were filed into the same docket and the issues presented in A&B's hearing requests are related, the Director concludes that it is appropriate to consolidate the proceedings for hearing, set the matter for a prehearing conference, and appoint Gerald F. Schroeder, former Idaho Supreme Court Chief Justice, to serve as the hearing officer.

ORDER

Based upon and consistent with the foregoing, IT IS HEREBY ORDERED that *A&B Irrigation District's Request for Hearing* filed April 29, 2025, and *A&B Irrigation District's Request for Hearing* filed July 24, 2025, are GRANTED. The granting of these requests for hearing does not stay the effectiveness of the *Methodology Order* or any curtailment order.

IT IS FURTHER ORDERED that the contested case proceedings initiated by granting *A&B Irrigation District's Request for Hearing* filed April 29, 2025, and *A&B Irrigation District's Request for Hearing* filed July 24, 2025, are consolidated for hearing pursuant to IDAPA 37.01.01.555.

IT IS FURTHER ORDERED that Gerald F. Schroeder is appointed to serve as hearing officer in this matter and is authorized to preside over the above-consolidated proceedings on behalf of the Department pursuant to IDAPA 37.01.01.410–414 and the provisions of chapter 52, title 67, Idaho Code. Hearing Officer Schroeder's contact information is as follows:

Gerald F. Schroeder
gerald_23107@msn.com

NOTICE OF PREHEARING CONFERENCE

NOTICE IS HEREBY GIVEN that a prehearing conference in this matter will be held on **September 18, 2025, at 1:30 p.m. (MT)**, at the Department's State Office, located at 322 E. Front Street, 6th Floor, Conference Rooms 602C–D, Boise, Idaho. All parties must be represented at the prehearing conference, whether in person or remote. Participants shall come prepared to discuss proposed issues for hearing, scheduling and procedural requests, and any other matters that could aid in the fair and efficient resolution of the contested cases.

To join the conference via computer or smartphone, please click the following Webex link and follow the prompts:
https://idahogov.webex.com/idahogov/j.php?MTID=m8bbd3c8ad9cd3835d0be487bd36d6cd0.

To join the conference via telephone, please dial 1(415) 655-0001 (US Toll) and enter the following meeting access code when prompted: 2869 589 6214.

The conference will be held in accordance with the provisions of Chapter 17, Title 42, and Chapter 52, Title 67, Idaho Code, and the Department's Rules of Procedure, IDAPA 37.01.01. A copy of the Rules of Procedure may be obtained from the Department upon request or at https://adminrules.idaho.gov/rules/current/37/370101.pdf.

The prehearing conference will be conducted in a facility that meets the accessibility requirements of the Americans with Disabilities Act. If you require reasonable accommodation to attend, participate in, or understand the conference, please advise the Department no later than five (5) days before the conference. Inquiries for reasonable accommodations should be directed to Sarah Tschohl, Idaho Department of Water Resources, PO Box 83720, Boise, Idaho 83720-0098, telephone (208) 287-4815, or email sarah.tschohl@idwr.idaho.gov.

DATED this 3rd day of September 2025.

MATHEW WEAVER
Director

CERTIFICATE OF SERVICE

I HEREBY CERTIFY that on this 3rd day of September 2025, the above and foregoing, was served by the method indicated below, and addressed to the following:

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **ORDER REVISING JULY 2025 FORECAST SUPPLY** ***(METHODOLOGY STEPS 7–8)***

The Director of the Idaho Department of Water Resources ("Department") finds, concludes, and orders as follows:

FINDINGS OF FACT

A. Background

1. On July 19, 2023, the Director issued the *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("*Methodology Order*"). The *Methodology Order* established nine steps for determining material injury to members of the Surface Water Coalition ("SWC"). This order applies Steps 7 and 8 of the *Methodology Order*.

2. On April 16, 2025, the Director issued the *Final Order Regarding April 2025 Forecast Supply (Methodology Steps 1–3)* ("*April Forecast Supply Order*"). The *April Forecast Supply Order* predicted a demand shortfall to the SWC of 63,000 acre-feet for the 2025 irrigation season. *April Forecast Supply Order* at 3. At that time, the only member of the SWC predicted to experience material injury during the 2025 irrigation season was Twin Falls Canal Company ("TFCC"). The Director ordered that, by May 1, 2025, ground water users with consumptive water rights "junior to August 28, 1955, within the Eastern Snake Plain Aquifer area of common ground water supply shall establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted April IDS [(in-season demand shortfall)] of 63,000 acre-feet in accordance with an approved mitigation plan." *Id.* at 6. The Director also ordered that, "[i]f a junior ground water user cannot establish . . . that they can mitigate for their proportionate share of the predicted April IDS in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water user." *Id.*

3. On May 16, 2025, the Director issued a *Final Order Curtailing Ground Water Rights Junior to August 28, 1955* ("*First Curtailment Order*"). The Director ordered that:

> [E]ffective May 31, 2025, ground water users holding water rights bearing priority dates junior to August 28, 1955, within the ESPA ACGWS, and listed in Attachment A to this order, shall curtail/refrain from diversion and use of ground

> water pursuant to those water rights unless notified by the Department that the order of curtailment has been modified or rescinded as to their water rights.

First Curtailment Order at 4.

4. On July 10, 2025, the Director issued the *Order Revising April 2025 Forecast Supply and Continuing May 16, 2025 Curtailment Order (Methodology Steps 5 & 6)* ("*July Forecast Supply Order*"), revising the IDS to 75,300 acre-feet. *July Forecast Supply Order* at 8. The Director ordered that:

> On or before July 24, 2025, ground water users holding consumptive water rights bearing priority dates junior to October 11, 1900, within the Eastern Snake Plain Aquifer area of common ground water supply shall establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted IDS of 75,300 acre-feet in accordance with an approved mitigation plan. If a junior ground water user cannot establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted IDS of 75,300 acre-feet in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water user.

Id. at 12 (footnote omitted).

5. Step 7 of the *Methodology Order* requires:

> Shortly before the estimated Time of Need, but following the events described in Steps 5 and 6, the Director will, for each member of the SWC: (1) recalculate RISD [(reasonable in-season demand)]; (2) issue a revised FS [(forecast supply)]; and (3) establish the Time of Need. The revised FS for each SWC entity is the sum of the year-to-date actual natural flow diversions, the forecasted natural flow supply for the remainder of the season, and the storage allocation for each member of the SWC. The forecasted natural flow supply for the remainder of the season will be based on analogous year(s) with similar Blackfoot to Milner reach gains. The storage allocation will be based on the actual preliminary storage allocations issued by the BOR [(United States Bureau of Reclamation)] and Water District 01.
>
> This information will be used to recalculate RISD and adjust the projected IDS for each member of the SWC. RISD will be calculated utilizing the project efficiency, BD [(baseline year demand)], and the cumulative actual CWN [(crop water need)] determined up to that point in the irrigation season. The Director will then issue revised RISD and IDS values.
>
> A transient ESPAM simulation will be run to determine the priority date of water rights that must be curtailed to produce the demand shortfall volume by September 30 of the same year. Curtailment will be simulated within the area of common ground water supply, as described by CM Rule 50.01.

Methodology Order at 44.

6. Effective July 1, 2024, Senate Bill 1341 added a new section to Idaho Code, Idaho Code § 42-233c, which codified the description of the ESPA area of common ground water supply. S.B. 1341, 67th Leg., 2d Reg. Sess. (Idaho 2024). The current area of common ground water supply for the Eastern Snake Plain Aquifer is defined as the aquifer underlying the Eastern Snake River Plain as described in the model calibration report for ESPAM2.2, dated May 2021. I.C. § 42-233c(1).

7. Step 8 of the *Methodology Order* requires:

> At the Time of Need, junior ground water users are required to deliver to each injured member of the SWC the Step 7 revised IDS calculated at the Time of Need. Alternatively, any additional mitigation obligation calculated in Step 6 and Step 7 can be satisfied from each SWC member's reasonable carryover if (a) the reasonable carryover exceeds the additional mitigation obligation, and (b) the junior ground water users secure sufficient water to replace the reasonable carryover pursuant to an approved mitigation plan.
>
> The Director will review, at the end of the season, the volume and efficiencies of application of surface water, the amount of mitigation water delivered by junior ground water users, and may, in the exercise of his professional judgment, readjust the reasonable carryover shortfalls to reflect these considerations.

Methodology Order at 44–45.

B. Climate

8. The April 2025 Joint Forecast prepared by the United States Army Corps of Engineers and the United States Bureau of Reclamation ("BOR") predicted 3,380,000 acre-feet of natural flow at the Heise gage for the period April–July 2025. *April Forecast Supply Order* at 2. The Joint Forecast "is generally as accurate a forecast as is possible using current data gathering and forecasting techniques." *Methodology Order* at 19.

9. The April through July precipitation was below average, while the April through July temperature was above average.[1] The National Weather Service's Twin Falls weather station reported 9%, 38%, 0%, and 68% of normal precipitation in April, May, June, and July, respectively. Twin Falls temperatures were 2.5, 3.8, 3.4, and 2.2 degrees above normal for April, May, June, and July, respectively. According to data measured at the Natural Resources Conservation Service's SNOTEL sites in the Upper Snake River Basin, the basin received 73%, 74%, 19%, and 66% of average precipitation in April, May, June, and July, respectively.[2]

[1] Precipitation and temperature data obtained from the NOAA National Weather Service Preliminary Monthly Climate Data for the Twin Falls weather station (Twin Falls Airport).

[2] Natural Resources Conservation Service's (NRCS) SNOTEL precipitation in the Upper Snake River Basin has been updated by the NRCS since the *Order Revising April 2025 Forecast Supply and Continuing May 16, 2025 Curtailment Order* was issued.

C. Reasonable In-Season Demand

10. RISD is the volume of water that would be required to be diverted at the point of diversion during the year of evaluation to grow the specific crops within the service area of the entity. In April, the demand from the 2018 baseline year (BLY) represents the RISD. During the irrigation season, the RISD for the already expired portion of the irrigation season is recalculated by dividing the actual crop water need (CWN) for each entity by the project efficiency for that entity. For the future remainder of the irrigation season, the RISD is the demand predicted from the 2018 BLY. RISD is calculated on a monthly timestep.

i. Crop Water Need

11. CWN is the project wide volume of irrigation water required for crop growth so crop development is not limited by water availability. CWN is the difference between the fully realized consumptive use associated with crop development, or evapotranspiration, and effective precipitation. CWN is an input variable for calculating RISD for those months of the irrigation season that are complete. Actual RISD for the completed portion of the irrigation season is combined with monthly predicted baseline demands for the remaining months of the irrigation season to calculate a season-total RISD volume. Demand shortfall is then calculated as the difference between the adjusted forecast supply and the RISD. For specifics regarding determination of CWN, see page 15 of the *Methodology Order*.

12. As calculated from the beginning of the irrigation season (April 1), the SWC's volumetric CWN for the current water year through August 15 is 1,083,069 acre-feet. This volume is 110% of the April 1 through August 15 ten-year average CWN (2015-2024) and 106% of the CWN for the (2018) BLY. As calculated from April 1 through August 15, from the year 2000 to now, 2025 has the fourth largest CWN volume of any irrigation season. The following graphs summarize monthly volumetric CWN values.

ii. Extension of BLY

13. The RISD for the future portion of the irrigation season is the August 16–October 31 demand for (2018) BLY. The numeric August 16–October 31 demand values are shown in the table in Finding of Fact 14 below.

iii. Calculation of RISD

14. As calculated from the beginning of the irrigation season (April 1), the SWC's volumetric RISD for 2025 through August 15 is 2,537,439 acre-feet. This volume is 112% of the April 1–August 15 ten-year average RISD (2015-2024) and 105% of the April 1–August 15 demand for the (2018) BLY. As calculated from April 1 to August 15, from the year 2000 until this year, 2025 has the fifth largest RISD volume of any irrigation season. The recalculated RISD on August 15 of the 2025 irrigation season by entity is summarized in column six of the following table:

	April 1–August 15 CWN (AF)	Range of April 1–August 15 Monthly Project Efficiencies	April 1–August 15 RISD (AF)	August 16–October 31 Demand for 2018 BLY (AF)	Recalculated RISD (AF)
A&B	29,276	0.41-0.92	47,932	16,216	64,148
AFRD2	121,490	0.20-0.44	339,309	138,946	478,255
BID	88,126	0.30-0.52	201,896	63,932	265,828
Milner	25,828	0.36-0.68	45,207	16,031	61,238
Minidoka	159,119	0.36-0.65	307,036	86,518	393,554
NSCC	281,341	0.21-0.48	752,214	276,703	1,028,917
TFCC	377,888	0.27-0.59	843,845	330,074	1,173,919

D. Forecast Supply

15. When determined during the irrigation season, the forecast supply (FS) is the sum of the year-to-date actual natural flow diversions, the forecasted natural flow supply for the remainder of the season, and storage allocations for each member of the SWC. *Methodology Order* at 43. Actual natural flow diversions for the already expired portion of the irrigation season are extracted from the Department's water rights accounting program. The forecasted natural flow supply for the remainder of the irrigation season is based on the selection of an analogue year with similar Blackfoot to Milner reach gains. *Id*. at 44. Storage allocations are established by the BOR and Water District 01 ("WD1") after the day of allocation. *Id*.

i. Sum of Actual Natural Flow Diverted

16. Actual natural flow diverted for the period April 1 through August 15 for each SWC member are summarized in the table contained within the Summary of Forecast Supply section in Finding of Fact 21.

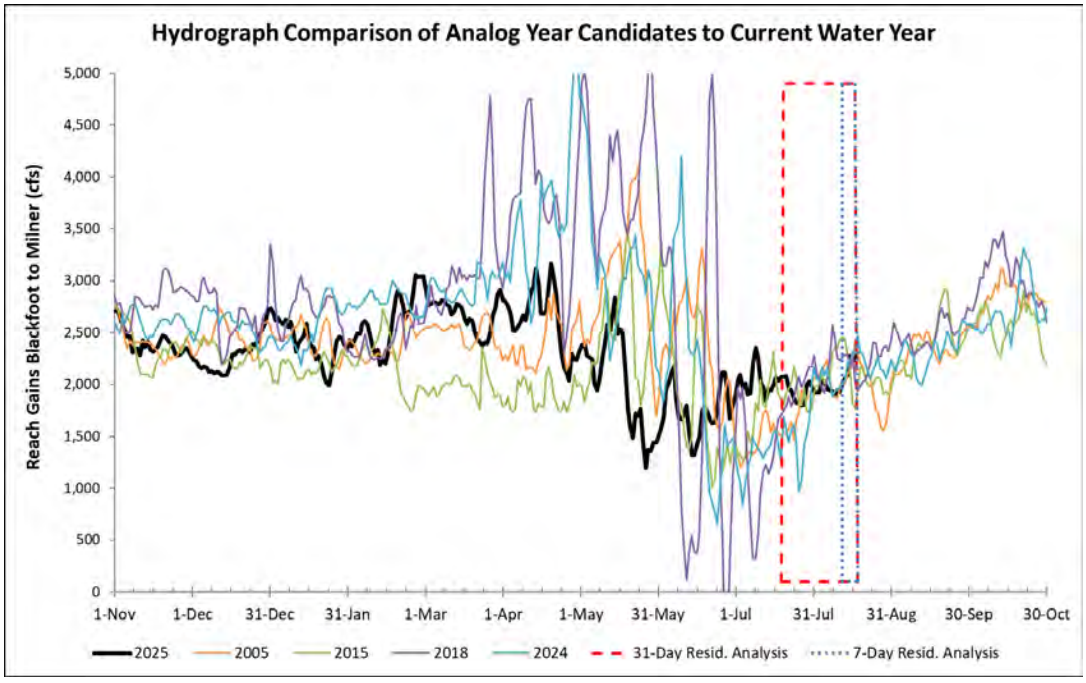
ii. Selection of an Analogous Year to Predict Remaining Natural Flow

17. Natural flow diversions for the remainder of the irrigation season were predicted by choosing an analogue year. The Department used a residual analysis[3] completed on a daily time step to compare the reach gains from July 19 to August 18 for the current water year to historical reach gains for the same period for the 1991–2024 water years. Based on its residual analysis and a qualitative review, the Department selected four candidate years: 2005, 2015, 2018, and 2024. These years represent the four years with the most similar reach gains (i.e., the lowest average residual value over a specified range) over the analysis period and the residuals are summarized in the following table:

Summary of Residual Analysis of Candidate Years

Time Period	2005	2015	2018	2024
7-Day (8/12 – 8/18)	0.2%	1.9%	-0.7%	-2.4%
31-Day (7/19 – 8/18)	3.3%	-2.3%	-4.9%	7.9%

18. The following hydrograph compares the current water year to the four candidate years with the most similar reach gains as determined by the residual analysis and qualitative review. The Department examined natural flow diversions for each of the candidate years and selected 2005 as the analogue year used to predict natural flow diversions for the remainder of the irrigation season. The Department chose 2005 because the residual analysis and qualitative review demonstrated 2005 was most like 2025 conditions when considering the reach gains for the most recent 7-day and 31-day periods.



[3] The daily residual is expressed as a percentage and defined as the difference between the current water year reach gain (CY) and the historical reach gain (HY) divided by the current water year reach gain: R = (CY – HY)/CY.

iii. Storage Allocations

19. Preliminary storage allocation values for each member of the SWC were established by the BOR and WD1 and published in WD1's preliminary Storage Report on July 15, 2025.[4] Storage allocation values for each SWC member are summarized in the table in Finding of Fact 21 below.

iv. Adjustments to Total Supply

20. The natural flow and storage water supplies were both adjusted as shown in the table in Finding of Fact 21 below. Adjustments to natural flow include water delivered to Southwest Irrigation District by BID and Milner, 691 acre-feet and 560 acre-feet, respectively . Adjustments to natural flow also include 1,441 acre-feet and 400 acre-feet of recharge water, delivered by the AFRD2 and BID, respectively, for the Idaho Water Resource Board. The only adjustments made to the stored water supply were for the Minidoka Return Flow Credit.[5] The Department did not adjust SWC water supplies for wheeled storage water published in WD1's weekly reports because wheeled water does not increase the amount of water available for use by the SWC. The Department did not adjust SWC water supplies to account for water supplied to or from the rental pool because these transactions artificially increase or decrease the shortfall obligation.

v. Summary of Forecast Supply

21. The table below contains the individual components of the FS for each of the SWC members.

	April 1–August 15 Natural Flow Diverted (AF)	August 16–October 31 Predicted Natural Diversions Flow (AF)	Natural Flow Adjustment (AF)	Preliminary Storage Allocation (AF)	Minidoka Credit Adjustment (AF)	Forecast Supply (AF)
A&B	9,547	0	0	120,473	0	130,020
AFRD2	90,640	0	(1,441)	383,912	1,000	474,111
BID	123,935	8,282	(1,091)	214,990	5,130	351,246
Milner	14,114	305	(560)	80,506	0	94,365
Minidoka	156,842	10,480	0	338,930	8,370	514,622
NSCC	385,639	54,218	0	798,776	(7,750)	1,230,883
TFCC	626,598	261,530	0	232,941	(6,750)	1,114,319

[4] The preliminary Storage Report may be viewed at: https://www.waterdistrict1.com/media/yxefjahy/2025-07-15-preliminary-storage-report.pdf.

[5] For an explanation of the Minidoka Credit, see pages 126-127 of *Concepts, Practices, and Procedures Used to Distribute Water Within Water District #1*, which can be found at: https://www.waterdistrict1.com/media/uabos05r/wd01-procedures-manual-4-12-2023.pdf

E. Revised Shortfall Prediction

22. Demand Shortfall is calculated as the difference between RISD and the FS.

23. Based on the methods described above, and as summarized in the following table, the Director predicts, at this time, that AFRD2 and TFCC will be materially injured by junior ground water pumping.

	Forecast Supply (AF)	RISD (AF)	Shortfall (AF)
A&B	130,020	64,148	0
AFRD2	474,111	478,255	4,100
BID	351,246	265,828	0
Milner	94,365	61,238	0
Minidoka	514,622	393,554	0
NSCC	1,230,883	1,028,917	0
TFCC	1,114,319	1,173,919	59,600
		Total	63,700

24. The current, predicted shortfall to the SWC's RISD is 63,700 acre-feet.

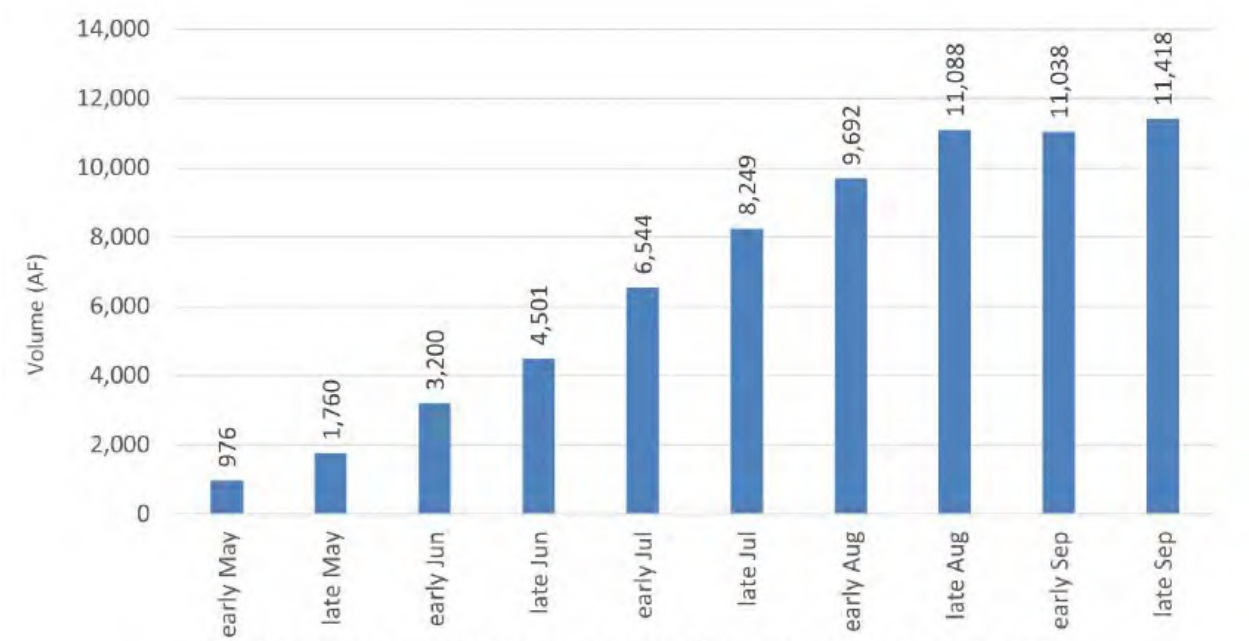
F. Time of Need

25. The Department established the Time of Need by predicting when the remaining storage balance for TFCC was equal to their reasonable carryover volume of 37,400 acre-feet and the remaining storage balance for AFRD2 was equal to their reasonable carryover volume of 16,700 acre-feet. As described above, the Department selected 2005 as the analogue year it used to predict the storage use for TFCC and AFRD2 for the remainder of this season. Anticipating that TFCC's and AFRD2's storage use for the remainder of the 2025 season will be similar to their storage use in 2005, TFCC's Time of Need occurred on August 16, 2025, and AFRD2's Time of Need will occur on September 28, 2025.

G. Priority and Curtailment

26. In April 2025, pursuant to the *Methodology Order*, the Department ran the Eastern Snake Plain Aquifer Model version 2.2 ("ESPAM2.2") to calculate the priority curtailment date, such that the curtailment of all water rights junior to the date within the area of common ground water supply, would produce a volume of water equal to the April IDS in the Snake River between May 1 and September 30. The ESPAM2.2 simulation predicted curtailment of ground water rights bearing priority dates junior to August 28, 1955, would produce the volume of water equal to the predicted April IDS of 63,000 AF in the near Blackfoot to Minidoka reach. *April Forecast Supply Order*, at 4.

27. In the *July Forecast Supply Order*, the Director predicted a demand shortfall to the SWC of 75,300 acre-feet. In July 2025, the Department ran the ESPAM2.2 to simulate the effect of adjusting the curtailment priority date at the end of July. The ESPAM2.2 simulation calculated that the curtailment of ground water rights junior to August 28, 1955, through the end of July followed by curtailment of groundwater rights junior to October 11, 1900,[6] would produce a volume of water of 58,000 AF in the near Blackfoot to Minidoka reach between July 1 and September 30 of this irrigation season. The following figure summarizes the results of the ESPAM2.2 simulation:



Modeled increase in ESPA discharge to near Blackfoot to Minidoka reach resulting from curtailment of ground water junior to August 28, 1955, May-July, and junior to October 11, 1900, beginning at end of July

28. The ESPAM2.2 simulation calculated that the curtailment of ground water rights junior to August 28, 1955, through the end of July followed by curtailment of groundwater rights junior to October 11, 1900, will produce a volume of water of 33,500 AF in the near Blackfoot to Minidoka reach between August 16 and September 30 of this irrigation season.

29. The predicted mid-August through September benefits to the near Blackfoot to Minidoka reach from curtailment of ground water rights bearing priority dates junior to August 28, 1955, through the end of July followed by curtailment of groundwater rights junior to October 11, 1900, are less than the August IDS of 63,700 acre-feet. Continuing the curtailment of ground water rights junior to October 11, 1900, will offset as much of the August IDS as possible.

[6] October 11, 1900, is the priority date equal to TFCC's Water Right No. 1-209, the most senior SWC natural flow water right predicted to be injured.

CONCLUSIONS OF LAW

1. Based on Findings of Fact 8 through 29 above, TFCC and AFRD2 are being materially injured. The updated predicted IDS is 63,700 acre-feet. The predicted shortfall to TFCC is 59,400 acre-feet. The predicted shortfall to AFRD2 is 4,100 acre-feet.

2. Based on current information, the Time of Need for TFCC occurred on August 16, 2025, and the Time of Need for AFRD2 will occur on September 28, 2025.

3. Pursuant to Step 8, at the Time of Need, junior ground water users are required to deliver to each injured member of the SWC the Step 7 revised IDS calculated at the Time of Need. Alternatively, any additional mitigation obligation calculated in Step 6 and Step 7 can be satisfied from each SWC member's reasonable carryover if (a) the reasonable carryover exceeds the additional mitigation obligation, and (b) the junior ground water users secure sufficient water to replace the reasonable carryover pursuant to an approved mitigation plan.

4. Using the ESPAM2.2, the Department has determined that the curtailment of ground water rights bearing priority dates junior to August 28, 1955, through the end of July followed by curtailment of groundwater rights junior to October 11, 1900, would result in a volume of water less than the predicted IDS of 63,700 acre-feet in the near Blackfoot to Minidoka reach between August 16 and September 30 of this irrigation season. Accordingly, continuing the curtailment to include ground water rights junior to October 11, 1900, is necessary for curtailment to offset as much of the IDS as possible.

5. Junior ground water users holding consumptive water rights bearing priority dates junior to October 11, 1900, within the Eastern Snake Plain Aquifer area of common ground water supply must mitigate for their proportionate share of the predicted July IDS in accordance with an approved mitigation plan.[7] For the 2025 irrigation season, there are no junior ground water users mitigating for their proportionate share of the predicted July IDS with a secured volume of water. Accordingly, no junior ground water users are required to deliver to each injured member of the SWC the Step 7 revised IDS calculated at the Time of Need.

[7] There are five approved mitigation plans responding to the SWC delivery call, the SWC stipulates to each: (1) No. CM-MP-2015-003 for the benefit of A&B; (2) No. CM-MP-2010-001 for the benefit of Southwest Irrigation District and Goose Creek Irrigation District (collectively, "SWID"); (3) No. CM-MP-2024-003 for the benefit of the Ground Water Districts; (4) No. CM-MP-2019-001 for the benefit of the Coalition of Cities; and (5) No. CM-MP-2007-001 for the benefit of the Water Mitigation Coalition. Given the nature of A&B's mitigation plan, the Department normally calculates A&B's proportionate share of the predicted IDS. However, A&B and the SWC entered into a stipulation to define A&B's mitigation obligation for the 2025 irrigation season. In the stipulation, A&B agreed to continue its ground water conversions projects and assign and deliver 1,252 acre-feet of storage water to TFCC. The Director has confirmed that 1,252 acre-feet of storage water has been assigned to A&B. Because the SWC agreed that the above actions satisfy A&B's obligation to the SWC for the 2025 irrigation season, A&B does not need to establish that they can mitigate for its proportionate share of the predicted IDS. Due to the nature of the mitigation plans for SWID, the Ground Water Districts, the Coalition of Cities, and the Water Mitigation Coalition, these entities do not need to establish that they can mitigate for their proportionate share of the predicted IDS.

ORDER

Based upon and consistent with the foregoing, IT IS HEREBY ORDERED the Director's revised in-season prediction is an in-season demand shortfall of 63,700 acre-feet.

IT IS FURTHER ORDERED that the July 25, 2025 *Curtailment Order* remains in full force and effect. All ground water users holding water rights listed in Attachment A to the July 25, 2025 *Curtailment Order* bearing priority dates junior to October 11, 1900, shall continue to be curtailed from diversion and use of ground water pursuant to those water rights unless they are mitigating in accordance with an approved mitigation plan or are notified by the Department that the order of curtailment has been modified or rescinded as to their water rights.

Dated this 11th day of September 2025.

MATHEW WEAVER
Director

EXPLANATORY INFORMATION TO ACCOMPANY A FINAL ORDER

(To be used in connection with actions when a hearing was **not** held)

The accompanying document is a "**Final Order**" issued by the Idaho Department of Water Resources ("Department") pursuant to Idaho Code § 67-5246.

PETITION FOR RECONSIDERATION

(*See* Idaho Code § 67-5246(4))

Any party may file a petition for reconsideration of this final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: the petition must be received by the Department within this fourteen (14) day period.** The presiding officer will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law.

REQUEST FOR HEARING

(*See* Idaho Code § 42-1701A(3))

Unless the right to a hearing before the Department or the Water Resource Board is otherwise provided by statute, any person aggrieved by any final decision, determination, order or action of the Director, and who has not previously been afforded an opportunity for a hearing on the matter may request a hearing pursuant to Idaho Code § 42-1701A(3). A written petition to the Director contesting this final order and requesting a hearing must be filed with the Department by any aggrieved person **within fifteen (15) days after service of this final order**.

CERTIFICATE OF SERVICE

(*See* IDAPA 37.01.01.053, 37.01.01.202)

All documents filed with the Department in connection with a petition for reconsideration or a request for hearing of this final order shall be served on all other parties to the proceedings in accordance with Rules of Procedure 53 and 202.

Attorneys for the American Falls-Aberdeen Ground Water District

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **AMERICAN FALLS-ABERDEEN GROUND WATER DISTRICT'S PETITION TO INTERVENE** Exempt from filing fees under I.C. § 67-2301

COMES NOW American Falls-Aberdeen Ground Water District ("AFA"), by and through its undersigned counsel, and, pursuant to IDAPA 37.01.01.350, hereby files this *Petition to Intervene* to become a party to the contested case proceedings that were initiated when the Director of the Idaho Department of Water Resources ("IDWR" or "Department") granted *A&B Irrigation District's Request for Hearing* filed April 29, 2025, and *A&B Irrigation District's Request for Hearing* filed July 24, 2025. *See Order Granting A&B Irrigation District's Requests for Hearing, Consolidating Proceedings for Hearing, and Appointing Hearing Officer; Notice of Prehearing Conference* (Sep. 3, 2025) ("*Order Granting Hearing*"). AFA has a direct and substantial interest in these proceedings because the Director's resolution of one or more of the

identified issues could negatively affect AFA's patrons' future mitigation obligations. Undersigned counsel certify that they have conferred with counsel for A&B Irrigation District ("A&B") on this *Petition to Intervene* and A&B does not oppose AFA's intervention as a party to these consolidated proceedings.

BACKGROUND

1. One of the issues in these consolidated proceedings is: "Whether the steady-state use of the ESPAM 2.2 in identifying A&B's proportionate share of the estimated in-season demand shortfall is consistent with the transient use of the model in identifying ground water rights subject to curtailment as outlined in the *Sixth Methodology Order*." *Order Granting Hearing* at 2-3.[1]
2. AFA is presently protected from curtailment in the instant delivery call matter because it is a party to the *2024 Stipulated Mitigation Plan* (*2024 Plan*) that was approved by the Director in Docket No. CM-MP-2024-003.
3. Under the *2024 Plan,* the participating districts agreed to use steady state modeling to allocate the ground water district's mitigation obligation.
4. The *2024 Stipulated Mitigation Plan* terminates at the end of 2027 and may not automatically renew. *See Joint Motion for Order Approving 2024 Stipulated Mitigation Plan*, Appendix A at ¶ 3.

[1] As the Director explained, only certain mitigation plans require the Director to determine parties' proportionate shares of the estimated in-season demand shortfall. A&B's mitigation plan is one such plan, whereas the *2024 Stipulated Mitigation Plan* is not. *See Order Revising April 2025 Forecast Supply and Continuing May 16, 2025 Curtailment Order (Methodology Steps 5 & 6)*, No. CM-DC-2010-001, at 11 n.6 (July 10, 2025).

5. In the absence of an approved mitigation plan, AFA is likely to be subject to future curtailment based on the modeling method determined by the Director in this proceeding. Because of AFA's geographic location, curtailment based on the use of transient modeling would devastate AFA's members' livelihood as well as the local economy.

STANDARDS FOR INTERVENTION IN IDWR CONTESTED CASES

6. Regarding petitions to intervene, the Department's Rules of Procedure provide: "A person who is not already a party to a contested case and who has a direct and substantial interest in the proceeding may petition for an order granting intervention as a party to the contested case." IDAPA 37.01.01.350 (Rule 350).

7. A petition to intervene is timely if it is filed by the date of the initial prehearing conference. *See* Rule 352.

8. If the timely-filed petition "shows direct and substantial interest in any part of the subject matter of a contested case and does not unduly broaden the issues, the agency shall grant intervention, subject to reasonable conditions, unless the applicant's interest is adequately represented by existing parties." Rule 353.01.

9. AFA's petition is timely because it is filed on or before the date of the initial prehearing conference, which is September 18, 2025. *See Order Granting Hearing* at 5.

10. AFA has a direct and substantial interest in the issues identified in these contested case proceedings, particularly the issue regarding running steady-state simulations, versus transient simulations, to determine proportionate shares of the Surface Water Coalition's estimated in-season demand shortfall. If the Director resolves this issue by deciding that transient simulations should be run, such a decision could negatively affect AFA's mitigation obligations in the foreseeable future.

11. AFA's participation in these proceedings will not unduly broaden the issues, as AFA does not intend to introduce additional issues beyond those listed in A&B's requests for hearing, but reserves the right to do so if the need arises in the course of litigation.

12. Finally, AFA's direct and substantial interest is not adequately represented by existing parties. To the extent they participate in these proceedings, neither Idaho Ground Water Appropriators, Inc. ("IGWA") nor any other Ground Water District ("GWD") adequately represent AFA's interest because their interests may even conflict with AFA's interest. While there is not a live controversy between AFA and IGWA or the other GWDs, a controversy regarding each GWD's respective obligations under future iterations of the *2024 Stipulated Mitigation Plan* could arise depending on the Director's resolution of the aforementioned issue regarding transient versus steady-state simulations. Thus, it is important for AFA to appear in these proceedings individually and protect its own interests.

13. Accordingly, because AFA has a direct and substantial interest in the issues in these proceedings, will not unduly broaden the issues, and is not adequately represented by existing parties, and this *Petition to Intervene* was timely-filed, AFA is entitled to intervene as a party. *See* Rule 353.01.

CONCLUSION

Based on the foregoing, AFA satisfies the requirements for intervention and respectfully requests that this *Petition to Intervene* be granted.

DATED this 17th day of September 2025.

Attorneys for American Falls Reservoir District #2 and Minidoka Irrigation District

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **SURFACE WATER COALITION'S PETITION TO INTERVENE**

COME NOW, American Falls Reservoir District #2, Burley Irrigation District, Milner Irrigation District, Minidoka Irrigation District, North Side Canal Company, and Twin Falls Canal Company (hereinafter collectively referred to as "SWC" or "Coalition"), by and through their undersigned counsel of record, pursuant to Procedural Rules 350 through 354 of the Idaho Department of Water Resources ("Department" or "IDWR"), IDAPA 37.01.01.350 to 354, and hereby petition to intervene in the above-captioned matter.

BACKGROUND

On July 10, 2025, the Director of the Idaho Department of Water Resources issued the *Order Revising April 2025 Forecast Supply and Continuing May 16, 2025 Curtailment Order (Methodology Steps 5&6*) ("*Steps 5/6 Order*"). On July 24, 2025, A&B Irrigation District filed *A&B Irrigation District's Request for Hearing* pursuant to Idaho Code § 42-1701A(3). On September 3, 2025, the Director filed an *Order Granting A&B Irrigation District's Requests for Hearing, Consolidating Proceedings for Hearing, and Appointing Hearing Officer; Notice of Prehearing Conference*. A prehearing conference has been set for September 18, 2025.

STANDARD OF REVIEW

Entities that are "not already a party to a contested case and who ha[ve] a direct and substantial interest in the proceeding may petition for an order granting intervention as a party to the contested case." IDAPA 37.01.01.350. A timely filed petition to intervene showing "a direct and substantial interest in any part of the subject matter of a contested case" that "does not unduly broaden the issues" must be granted "subject to reasonable conditions, unless the applicant's interest is adequately represented by existing parties." IDAPA 37.01.01.353. "Petitions to intervene must be filed at least fourteen (14) days before the date set for formal hearing, or by the date of the initial prehearing conference, whichever is earlier, unless a different time is provided by order or notice." IDAPA 37.01.01.352.

The Department's Rules of Procedure provide the following for intervention in a proceeding:

> Petitions to intervene must comply with Rules 52, 200, and 300. The petition must set forth the name and address of the potential intervenor and must state the direct and substantial interest of the potential intervenor in the proceeding.

IDAPA 37.01.01.351.

ARGUMENT

The SWC's *Petition to Intervene* is timely because no formal hearing has been set or conducted in this matter, the Department has not issued any order or notice establishing a different time for filing a petition to intervene, and the pre-hearing conference has not yet occurred. For the reasons discussed below, the Coalition's intervention should be granted because its members have a direct and substantial interest in the subject matter of this contested case, the SWC's participation will not unduly broaden the issues, and the SWC's interest is not adequately represented by the existing parties.

I. The Coalition's Direct and Substantial Interest.

A. Name and Address

American Falls Reservoir District #2
Kevin Lakey, Manager
409 N. Apple St.
Shoshone, Idaho 83352

Burley Irrigation District

Jerome, Idaho 83338

Milner Irrigation District
Jeff War, Manager
5294 E 3610 N
Murtaugh, Idaho 83344

B. Interest in Proceeding

The SWC members hold both decreed natural flow and storage water rights in the Upper Snake River Basin under which they divert for delivery of water to their respective landowners and shareholders in their projects. These water rights are used by the Coalition's water users to irrigate approximately 600,000 acres in southern Idaho. The hearing is being conducted in the contested case that the Coalition members are participating in as the senior water right holders

that filed the delivery call. The SWC is actively involved in this proceeding to protect their respective senior water rights. *See e.g. United States v. Pioneer Irr. Dist.*, 144 Idaho 106 (2007) ("Irrigation districts act as trustees for the landowners managing the water right, and standing in place of the landowners in cases involving the appropriation of the water"). The water rights represent valuable property right interests that are protected by state law. *See* I.C. § 55-101. The SWC seeks to intervene to protect the interests of its landowners and shareholders that will be impacted by any decision concerning the *Steps 5/6 Order*.

Additionally, the Coalition has an interest in how IDWR recalculates the demand shortfall through the irrigation season and apportions the predicted injury amongst the various junior priority ground water right holders. The Director made certain findings the *Steps 5/6 Order* relative to the water supplies during the 2025 irrigation season and how that injury could or could not be mitigated based upon the water rights subject to curtailment at the time. The issues identified in A&B's petition are relevant to these determinations and the Coalition seeks to participate to provide its position as necessary.

II. The Coalition's Petition Does Not Unduly Broaden the Issues.

The SWC seeks intervention in this matter to protect the members' individual interests, including their respective water rights. To date, the Coalition is unaware of any substantive motions filed and no pre-hearing conferences have been held. As such, the issues to be heard have not yet been fully defined, and the contested case is in the very early stages. Accordingly, the SWC's petition does not unduly broaden the matters currently at issue in this proceeding.

III. The Coalition is Not Adequately Represented by Existing Parties

The other parties that are currently appearing in this matter do not represent the individual Coalition members' interests in this matter. SWC members are separate legal entities

that hold unique natural flow and storage water rights in the Upper Snake River Basin. Although the SWC may have similar interests in certain matters or issues, it is not certain how this case will proceed or what positions will be advanced throughout the proceeding by each individual entity. The petitioner, A&B Irrigation District, though a member of the SWC for purposes of its senior surface water rights, has filed the petition to address issues concerning its groundwater rights. As such, each SWC member has a right to intervene to ensure individual interests and legal rights are adequately protected and represented.

CONCLUSION

The SWC has submitted this timely *Petition to Intervene* in the above-captioned matter so that it may protect the respective individual members' direct and substantial interests. The Coalition has filed this joint petition in the interests of economy but requests the Director recognize each Coalition member's right to participate individually in this proceeding. Since the Petition will not unduly broaden the issues and there is no existing party that adequately represents the Coalition's interests, intervention should be granted.

Attorneys for A&B Irrigation District

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **A&B IRRIGATION DISTRICT'S REQUEST FOR IDWR TO PRODUCE INFORMATION AND IDENTIFY WITNESSES**

COMES NOW, A&B IRRIGATION DISTRICT ("A&B or "District"), by and through counsel of record, and pursuant to the Hearing Officer's request, hereby submits the following request for the Idaho Department of Water Resources ("IDWR") to produce information and identify particular witnesses in this matter:

Information / Documents / Data:

Any and all information, documents, and data relied upon IDWR with respect to the following:

April 16, 2025 Order (Steps 1 – 3)

1) Model simulations and calculations relating to junior ground water users proportionate share of the predicted April In-Season Demand Shortfall (p. 5, ¶ 6, and p. 5, n. 8).

July 16, 2025 Order (Steps 5-6)

1) Model simulations and calculations relating to Findings of Fact 32-33 (pp. 9-10).

2) Model simulations and calculations relating to junior ground water users proportionate share of the predicted April In-Season Demand Shortfall (p. 11, ¶ 7, and p. 11, n. 6).

3) Information, communications, IDWR actions related to enforcement and implementation of May 16, 2025 *Curtailment Order* (p. 12) and model simulations resulting from that curtailment and/or non-curtailment of the affected junior priority ground water rights.

Witnesses:

A&B further requests IDWR to identify witnesses responsible for and involved with the above analysis and identified actions and availability for potential depositions between October 1-31.

Deadline:

In order to comply with the schedule set at the pre-hearing conference and allow sufficient time for review and analysis prior to the disclosure of its expert report and opinions, A&B requests the Hearing Officer to order the above information and list of witnesses be made available to the parties on or before Friday October 10, 2025.

DATED this 19th day of September, 2025.

DEPARTMENT OF WATER RESOURCES

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **STIPULATION TO INTERVENTION**

Idaho Ground Water Appropriators, Inc. ("IGWA") and A&B Irrigation District, by and through their respective counsel, hereby stipulate to IGWA's intervention in the contested case initiated in response to *A&B Irrigation District's Request for Hearing* filed July 24, 2025, in this matter.

IGWA represents the collective interests of North Snake Ground Water District, Magic Valley Ground Water District, Carey Valley Ground Water District, Southwest Irrigation District, American Falls-Aberdeen Ground Water District, Bingham Ground Water District, Bonneville-Jefferson Ground Water District, Jefferson-Clark Ground Water District, Madison Ground Water District, and Henry's Fork Ground Water District. In some cases, individual districts may have interests that diverge from IGWA's membership generally. In such cases, individual districts may participate separately from IGWA, as has occurred here with the interventions of American Falls-Aberdeen Ground Water District and Bonneville Ground Water District. IGWA's participation in this contested case is on an associational basis for its member districts who do not intervene separately in this case.

Dated this 19th day of September, 2025.

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	**Docket No. CM-DC-2010-001** **ORDER ON INTERVENTION, AUTHORIZING DISCOVERY, EMAIL SERVICE, AND SCHEDULING** **ORDER GRANTING MOTION FOR SUBPOENA** **NOTICE OF HEARING**

BACKGROUND

On April 29, 2025, the Idaho Department of Water Resources ("Department") received *A&B Irrigation District's Request for Hearing*. In that request, A&B Irrigation District ("A&B") contested the Director's April 16, 2025 *Final Order Regarding April 2025 Forecast Supply (Methodology Steps 1–3)* ("*April As-Applied Order*"). *A&B Req. for Hr'g*, at 1 (Apr. 2025).

On July 24, 2025, A&B filed another request for hearing, this time contesting the Director's July 10, 2025 *Order Revising April 2025 Forecast Supply and Continuing May 16, 2025 Curtailment Order (Methodology Steps 5 & 6)* ("*July As-Applied Order*"). *A&B Req. for Hr'g*, at 1 (July 2025).

On September 3, 2025, the Director issued an *Order Granting A&B Irrigation District's Requests for Hearing, Consolidating Proceedings for Hearing, and Appointing Hearing Officer; Notice of Prehearing Conference*, scheduling a prehearing conference for September 18, 2025, and appointing former Idaho Supreme Court Justice Gerald F. Schroeder as the hearing officer in this matter.

On September 17, 2025, the Department received petitions to intervene from American Falls-Aberdeen Ground Water District ("American Falls") and the Surface Water Coalition ("SWC") in this matter. No opposition to either petition was filed.

On September 18, 2025, Hearing Officer Schroeder held a prehearing conference. Counsel for A&B, American Falls, SWC, Idaho Ground Water Appropriators ("IGWA"), Bonneville-Jefferson Ground Water District ("Bonneville-Jefferson"), and Coalition of Cities were present. At the conference, Bonneville-Jefferson and the Coalition of Cities each presented an oral motion to intervene in the subject consolidated contested cases. IGWA also stated an intent to intervene. A&B did not oppose the intervention of either Bonneville-Jefferson or the Coalition of Cities; however, A&B did not agree to the intervention of IGWA, stating that there may be an issue of standing so it might object to such a request. Accordingly, during the prehearing conference the Hearing Officer granted intervention to the SWC, American Falls,

Bonneville-Jefferson, and Coalition of Cities, and acknowledged that he would wait for a formal filing before considering IGWA's intervention.

After discussing intervention, the Hearing Officer and the parties discussed authorizing discovery, dates and deadlines for discovery, and a date for the hearing. A request to authorize discovery was made and granted, and the parties agreed to certain scheduling dates and deadlines. In accordance with IDAPA 37.01.01.553, the Hearing Officer reserved the right to exercise his discretion to hold another conference with the parties to formulate or simplify the issues if necessary.

Additionally, during the prehearing conference A&B stated a desire to receive information and a witness list from the Department. Given the Department is not a party to the proceedings, the Hearing Officer requested that A&B formally file a request. A&B filed *A&B Irrigation District's Request for IDWR to Produce Information and Identify Witnesses* ("*A&B Production Request*") on September 19, 2025.

Also on September 19, 2025, IGWA and A&B filed a *Stipulation to Intervention* for IGWA to intervene. No opposition to the stipulation was filed.

Pursuant to IDAPA 37.01.01.514, this order memorializes the rulings made and agreements reached during the prehearing conference. Further, in this order the Hearing Officer will address: (1) the stipulation concerning IGWA's intervention; (2) the request for information and witnesses filed by A&B; and (3) although not previously discussed, the Hearing Officer will exercise his discretion to authorize the Department and the parties to officially serve documents by email.

ANALYSIS

I. IGWA's Petition to Intervene

In the *Stipulation to Intervention*, IGWA states that it represents the collective interests of certain ground water districts and acknowledges that some of its member districts "may have interests that diverge from IGWA's membership generally." *Stipulation to Intervention*, at 2. IGWA clarified that its participation would be "on an associational basis for its member districts who do not intervene separately in this case"—as American Falls and Bonneville-Jefferson have. *Id*. During the prehearing, IGWA also made note of its consistent and longstanding involvement in the SWC delivery call.

The Hearing Officer will consider the *Stipulation to Intervention* as timely, since the issue of IGWA's intervention was initially raised during the prehearing conference and the stipulation was filed a day later, as anticipated. *See* IDAPA 37.01.01.352.

The Department's Rules of Procedure ("Rules") govern proceedings in these consolidated cases. IDAPA 37.01.01.000–.001, .050. Rule 350 states that: "A person who is not already a party to a contested case and who has a direct and substantial interest in the proceeding may petition for an order granting intervention as a party to the contested case." IDAPA 37.01.01.350. When deciding a petition to intervene, Rule 353 provides that:

> If a timely-filed petition to intervene shows direct and substantial interest in any part of the subject matter of a contested case and does not unduly broaden the issues, the agency shall grant intervention, subject to reasonable conditions, unless the applicant's interest is adequately represented by existing parties.

IDAPA 37.01.01.353.01.

Given IGWA has historically represented the interests of certain member districts in the overarching SWC delivery call matter and based on the clarification concerning representation provided in the stipulation, the Hearing Officer concludes that: (1) IGWA has a direct and substantial interest in these consolidated contested cases; (2) IGWA's participation will not unduly broaden the issues; and (3) its interests are not adequately represented by existing parties. For those reasons, coupled with the fact that A&B stipulated to the intervention and no objections were filed, the Hearing Officer will grant intervention to IGWA.

II. Matters of Discovery

As a preliminary matter, the dates and deadlines agreed upon during the prehearing conference are included in the order below, as well as a memorialization of the parties' authorization to conduct discovery.

The Department's Rules allow a hearing officer discretion to authorize discovery and resolve discovery disputes in contested cases. IDAPA 37.01.01.412 (authorizing hearing officers to hear and rule on motions and evidentiary issues, and schedule and compel discovery); IDAPA 37.01.01.521 (authorizing hearing officers to "limit the type and scope of discovery"). A hearing officer properly exercises discretion when the hearing officer: (1) correctly perceives the issue as one of discretion; (2) acts within the boundaries of such discretion; (3) acts consistently with any legal standards applicable to the specific choices before him or her; and (4) reaches a decision by an exercise of reason. *See Lunneborg v. My Fun Life*, 163 Idaho 856, 863, 421 P.3d 187, 194 (2018) (citation omitted) (clarifying the Idaho Supreme Court's four-part standard of review for abuse of discretion by a trial court).

When analyzing issues involving scope of discovery, the Department's Rules direct hearing officers to Rule 26 of the Idaho Rules of Civil Procedure ("I.R.C.P."). IDAPA 37.01.01.520.02. In relevant part, I.R.C.P. 26(b)(1)(A) states:

> [T]he scope of discovery is as follows: Parties may obtain discovery regarding any nonprivileged matter that is relevant to any party's claim or defense . . . . For good cause, the court may order discovery of any matter relevant to the subject matter involved in the action. Relevant information need not be admissible at the trial if the discovery appears reasonably calculated to lead to the discovery of admissible evidence.

Additionally, I.R.C.P. 34 provides guidance on requests for production, and states in relevant part:

> Requests may be served . . . upon any other **party** with or after service of the summons and complaint. **A party may serve on any other party** a request within the scope of Rule 26(b) . . . .

I.R.C.P. 34(a) (emphasis added).

The Department is not a party to these contested cases, but it is undeniable that the agency may have unique and relevant information. *See* IDAPA 37.01.01.600, .602. Therefore, in the interest of judicial economy, the Hearing Officer will treat the *A&B Production Request* as a motion for subpoena to produce documents and information, pursuant to IDAPA 37.01.01.523. The Department's Rules only grant the Hearing Officer the discretion to issue a subpoena in these cases. *Contrast* IDAPA 37.01.01.523 ("The presiding officer may issue subpoenas upon a party's motion or upon its own initiative."), *with* I.R.C.P. 45(a)(3) (authorizing the clerk of the court and "[a]n attorney licensed in Idaho as officer of the court" to "issue and sign a subpoena").

A&B requested that the Department "produce information and identify particular witnesses in this matter" that relate to:

> Any and all information, documents, and data relied upon by [sic] IDWR with respect to the following:
>
> *April 16, 2025 Order (Steps 1 – 3)* [*April As-Applied Order*]
>
> 1) Model simulations and calculations relating to junior ground water users proportionate share of the predicted April In-Season Demand Shortfall (p. 5, ¶ 6, and p. 5, n. 8).
>
> *July 16, 2025 Order (Steps 5-6)* [*July As-Applied Order*]
>
> 1) Model simulations and calculations relating to Findings of Fact 32-33 (pp. 9-10).
>
> 2) Model simulations and calculations relating to junior ground water users proportionate share of the predicted April In-Season Demand Shortfall (p. 11, ¶ 7, and p. 11, n. 6).
>
> 3) Information, communications, IDWR actions related to enforcement and implementation of May 16, 2025 *Curtailment Order* (p. 12) and model simulations resulting from that curtailment and/or non-curtailment of the affected junior priority ground water rights.

A&B Production Request, at 1–2.

For witnesses, A&B requested that the Department "identify witnesses responsible for and involved with the above analysis and identified actions and availability for potential depositions between October 1-31." *Id.* at 2. A&B requested that the Department provide this documentation and witness list to the parties on or before October 10, 2025. *Id.*

The Hearing Officer can find no good cause to limit the scope of the request for documents and information. If the Department believes it necessary, it may timely file a motion to quash for the Hearing Officer's consideration. The Hearing Officer will exercise his discretion to grant A&B's motion and issue a subpoena for production of documents and require the Department to testify concerning the information requested. However, once potential witnesses are identified by the Department, any additional depositions of Department employees that the parties wish to take will require a separate motion for subpoena. Given the condensed schedule in these cases, the extent of the documentation requested, and the agreed upon deposition deadline set at the prehearing conference, the Hearing Officer will exercise his discretion to set the deadline for the Department to provide such documents and any written information to the parties to October 24, 2025. A copy of the issued *Subpoena for Production of Documents and Information—The Department of Water Resources* is attached to this order and provides guidance concerning authorized depositions. As the requesting party, A&B is responsible for service of the issued subpoena.[1]

ORDER

IT IS HEREBY ORDERED that the *American Falls-Aberdeen Ground Water District's Petition to Intervene* is GRANTED.

IT IS FURTHER ORDERED that the *Surface Water Coalition's Petition to Intervene* is GRANTED.

IT IS FURTHER ORDERED that Bonneville-Jefferson Ground Water District and the Coalition of Cities are GRANTED intervention.

IT IS FURTHER ORDERED that the *Stipulation to Intervention* is GRANTED and Idaho Ground Water Appropriators, Inc. is GRANTED intervention.

IT IS FURTHER ORDERED that as of September 18, 2025, and pursuant to IDAPA 37.01.01.521, the parties are authorized to conduct and engage in the methods of discovery listed under IDAPA 37.01.01.520.01. Barring any conflicting discovery procedures or limitations set forth in the Department's Rules of Procedure or an order of the presiding officer, discovery shall conform to Title V of the Idaho Rules of Civil Procedure.

IT IS FURTHER ORDERED that as of October 7, 2025, and pursuant to IDAPA 37.01.01.053.02–03, the Department and the parties are authorized to serve documents by email

[1] To reduce potential confusion, the Hearing Officer confirmed that Garrick Baxter and Meghan Carter, Deputy Attorneys General, will be representing the Department as it relates to information requests and witness testimony. They may be reached by phone at (208) 287-4800 or by email at garrick.baxter@idwr.idaho.gov and meghan.carter@idwr.idaho.gov.

as an alternative to service by mail or personal service. The emails included in the certificate of service below are to be used as the official service emails, unless a notice instructing otherwise is filed with the Department and properly served on the parties.

IT IS FURTHER ORDERED that A&B Irrigation District's motion for subpoena for the Department to produce documents and information is GRANTED.

IT IS FURTHER ORDERED that the following schedule is ADOPTED:

Nov. 7, 2025 Deadline for the parties to file a list of expert witnesses they intend to rely upon at the hearing, including names, addresses, and updated curricula vitarum. However, a curricula vitarum is not required if the expert identified is an employee of the Department.

Deadline for the parties to exchange proposed stipulations of fact and expert reports. Unless the expert identified is an employee of the Department, if a party intends to have an expert testify during the hearing, the expert needs to have authored a disclosed expert report.

Deadline for the parties to serve written discovery requests. If a party feels that additional time for written discovery is necessary, the party may move the Hearing Officer for an extension. Such a motion must explain the additional discovery sought and the reason the discovery could not be conducted prior to the deadline. Any response must be filed within 4 days after service of the motion. Replies are not authorized.

Dec. 5, 2025 Deadline for the parties to respond to written discovery.

Deadline for the parties to exchange rebuttal expert reports, if any. If an updated curricula vitarum for the rebuttal expert witness was not previously disclosed, one shall be provided with their report.

Dec. 19, 2025 Deadline for the parties to complete all depositions.

Jan. 6, 2026 Deadline for the parties to file an index of exhibits and a list of the names and addresses of all witnesses that they may call to testify at the hearing. A short summary of the scope of each witnesses' anticipated testimony shall be included and expert witnesses shall be identified as such. The parties shall use the following reserved exhibit numbers and reach out to Paralegal Sarah Tschohl if additional numbers are needed:

Exhibit Nos.	Assigned Party
1–99	A&B
100–199	SWC
200–299	IGWA
300–399	American Falls

400-499	Bonneville-Jefferson
500-599	Coalition of Cities

Jan. 12, 2026 Deadline for the parties to exchange and submit to the Department an electronic copy (via e-file email, USB thumb drive, or disc(s)) of their pre-marked exhibits. Each exhibit must be an independent file, and all file text must be machine readable. Exhibits shall be pre-marked in the bottom right corner of every page and must include the name of the party proposing the exhibit, the exhibit number, and a page number (each exhibit must start with page 1).

Jan. 14, 2026 Prior to the start of the hearing, the parties shall submit to the Department three physical copies of their pre-marked exhibits. Exhibits shall be organized in binders that are labeled with the party's name and include dividers that identify each exhibit by its number.

NOTICE OF HEARING

NOTICE IS HEREBY GIVEN that Hearing Officer Schroeder will hold a hearing in this matter on **January 14–16, 2026**. Each hearing day will begin at **9:00 a.m. (MT)**. The hearing will take place at the Department's State Office, located at 322 E. Front Street, 6th Floor, Conference Rooms 602B–D, Boise, Idaho. All parties who wish to participate in the hearing and their witnesses shall be present in person.

The hearing will be held in accordance with the provisions of Chapter 17, Title 42, and Chapter 52, Title 67, Idaho Code, and the Department's Rules of Procedure, IDAPA 37.01.01. A copy of the Rules of Procedure may be obtained from the Department upon request or at https://adminrules.idaho.gov/rules/current/37/370101.pdf.

The hearing will be conducted in a facility that meets the accessibility requirements of the Americans with Disabilities Act. If you require reasonable accommodation to attend, participate in, or understand the hearing, please advise the Department no later than five (5) days before the hearing. Inquiries for reasonable accommodations should be directed to Sarah Tschohl, Idaho Department of Water Resources, PO Box 83720, Boise, Idaho 83720-0098, telephone (208) 287-4815, or email sarah.tschohl@idwr.idaho.gov.

DATED this 7th day of October 2025.

GERALD F. SCHROEDER
Hearing Officer

Attorneys for American Falls-Aberdeen Ground Water District

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **AMERICAN FALLS-ABERDEEN GROUND WATER DISTRICT'S MOTION TO RECONSIDER *ORDER GRANTING HEARING* AND VACATE HEARING OR, ALTERNATIVELY, TO CLARIFY THE SCOPE OF HEARING; REQUEST FOR EXPEDITED RULING; BRIEF IN SUPPORT**

COMES NOW American Falls-Aberdeen Ground Water District ("AFA"), by and through undersigned counsel of record, pursuant to Rules 220 and 300 of the Idaho Department of Water Resources' ("IDWR" or "Department") Rules of Procedure,[1] and hereby moves the

[1] Unless stated otherwise, any "Rules" referenced herein are from the Department's Rules of Procedure located at IDAPA 37.01.01.

Additionally, unless stated otherwise, all documents cited herein are available at the webpage for the Surface Water Coalition Delivery Call, IDWR Docket No. CM-DC-2010-001: https://idwr.idaho.gov/legal-actions/delivery-call-actions/swc/ (last visited Nov. 17, 2025).

Director to reconsider the *Order Granting A&B Irrigation District's Requests for Hearing, Consolidating Proceedings for Hearing, and Appointing Hearing Officer; Notice of Prehearing Conference* dated September 3, 2025 ("*Order Granting Hearing*") and vacate the hearing set to commence on January 14, 2026, or, alternatively, to clarify the scope of the hearing. AFA also requests an expedited ruling on this motion.

This Motion is made to the Director rather than the Hearing Officer for two reasons: first, under the Department's Rules, motions to reconsider interlocutory orders must be made to the official who issued the order; second, and more practically, because the *Order Granting Hearing* describes the scope of the Hearing Officer's authority in this matter, the Director is arguably the only official who can either reconsider whether the Order was proper **or** clarify the scope of the hearing. This motion and a brief in support are contained below.

MOTION

I. Reconsideration of the Department's *Order Granting Hearing* and Vacation of the Hearing

AFA moves the Department to reconsider the *Order Granting Hearing* and deny A&B Irrigation District's ("A&B") requests for hearing on two grounds: first, as shown in the table attached hereto as Exhibit 1, five of the six issues raised in A&B's two requests for hearing were previously the subject of a hearing in front of the Department on June 6-9, 2023. Thus, A&B is not entitled to another hearing on these issues under Idaho Code ("I.C.") section 42-1701A(3) and, further, is barred from relitigating them under principles of res judicata.

Second, A&B's one remaining issue (issue no. 3 in the July 24, 2025 *Request for Hearing*) was mooted by A&B's stipulation with the Surface Water Coalition ("SWC") regarding A&B's 2025 mitigation obligation and thus does not warrant a hearing.

Because A&B's requests for hearing should be denied for all issues, AFA requests that the Department vacate the hearing set to commence on January 14, 2026.

II. In the Alternative, Clarify the Scope of Hearing

Alternatively, if the hearing is not vacated, AFA moves the Department to clarify the scope of hearing. Contrary to A&B's requests for hearing, A&B's expert report primarily concerns why the orders applying the *Sixth Methodology Order* are faulty and should be replaced by a Groundwater Management Plan ("GMP"). *See* David Colvin, *A&B Proportionate Share Expert Report* at 3, 4, 6 (Nov. 7, 2025), attached hereto as Exhibit 2. A&B's opportunity to challenge the substance and application of the *Sixth Methodology Order* was during the June 2023 hearing; its effort to litigate whether a GMP should replace the *Sixth Methodology Order* as the mechanism to regulate groundwater use on the Eastern Snake Plain Aquifer Ground Water Management Area ("ESPA-GWMA") is a collateral attack on the *Sixth Methodology Order* and should be rejected. If the Department proceeds with the hearing, the Director should clarify that the scope of hearing is limited to issues related to the Department's determinations of proportionate shares of the predicted in-season demand shortfall through application of the *Sixth Methodology Order* that have not previously been heard, not to testimony and evidence regarding a prospective GMP.

Finally, because upcoming discovery and other prehearing activities could be affected by the Department's ruling on this motion, AFA requests an expedited ruling. *See* Rule 220.02.f.

BRIEF IN SUPPORT

I. Standard of Review

In contested cases, parties may move the Department to review interlocutory orders without any time limitations. *See* Rule 711. Rule 710 defines interlocutory orders:

> Interlocutory orders or intermediate orders are orders that do not decide all previously undecided issues presented in a proceeding, except the presiding officer may by order decide some of the issues presented in a proceeding and provide that the decision on those issues is final and subject to review by reconsideration or exceptions filed with the agency head, or judicial review in district court, but is not final on other issues. Unless an order contains or is accompanied by a document containing one (1) of the paragraphs set forth in Rules 720, 730 or 740 or a paragraph substantially similar, the order is interlocutory. The following orders are always interlocutory: orders joining, consolidating or separating issues, proceedings or parties; orders granting or denying intervention; orders scheduling prehearing conferences, discovery, hearing, oral arguments or deadlines for written submissions; and orders authorizing, compelling or refusing to compel discovery. Interlocutory orders may be reviewed by the presiding officer issuing the order pursuant to Rules 711, 760, and 770.

(Emphasis added.) Upon review, the Department official that issued the interlocutory order may rescind it and issue a substitute order. *See* Rule 711, 760. Additionally, the Department may clarify interlocutory orders. *See* Rule 710, 770.

The *Order Granting Hearing* is an interlocutory order under the definition in Rule 710 and, because there are no time limits on the review of interlocutory orders, this motion is timely.

II. Argument

A. The Director Should Reconsider the *Order Granting Hearing*, Deny A&B's Requests for Hearing, and Vacate the Hearing

In the *Order Granting Hearing*, the Director erred in concluding that A&B is entitled to a hearing under I.C. section 42-1701A(3) because "A&B has not previously been afforded an opportunity for hearing on the issues it presented within the requests." *Order Granting Hearing* at 4-5. To the contrary, A&B participated in a hearing in the captioned matter from June 6-9, 2023, where it presented two issues that are substantively identical to five of the six issues for which A&B seeks a hearing now. *See,* Ex. 1. During the June 2023 hearing, A&B elicited testimony from Department employee Jennifer Sukow related to those issues, including the Department's use of steady-state modeling to determine proportionate shares of predicted in-

season demand shortfalls. *See City of Idaho Falls v. IDWR*, Case No. CV01-23-13238, *Settled Agency Hearing Transcript on Appeal* at 100:23-102:7 (4th Jud. Dist., Ada Cnty., Sep. 28, 2023).[2] Finally, A&B argued these issues in its post-hearing brief, including the assertion that the Department should reduce A&B's proportionate share of any predicted in-season demand shortfalls becaue A&B is no longer irrigating as much land with groundwater as it once was. *See Surface Water Coalition's Post-hearing Brief* at 12 (June 16, 2023).[3] These are the same issues that A&B seeks to litigate now; that it has sought to re-litigate them in the context of the referenced orders issued in 2025 does not cure the defect in their request.

While the Director did not address these issues in the *Post-Hearing Order Regarding Fifth Amended Methodology Order* dated July 19, 2023, A&B elected to not appeal the order. Accordingly, for five of the issues now raised, A&B has "previously been afforded an opportunity for a hearing on the matter," and thus not is entitled to a hearing under I.C. § 42-

[2] "Q. [by Mr. Simpson] And then Mr. Budge was asking you about a calculation that you did with respect to dividing up the IGWA's proportionate share under the Footnote 5, I believe, of the As-Applied Order. Do you recall that testimony? A. [by Ms. Sukow] Yes. Q. I'm not sure if I fully appreciated the calculation you made. But my understanding is that your method that you utilized, and this was your proposed method, acknowledged the long-term impacts of each ground water district on the Blackfoot to Minidoka reach. And then once that percentage was calculated, then it was utilized in the calculation of the responsibility of each ground water district of the total for IGWA; is that correct? A. Well, and again, that was provided as a courtesy, and the Department is not telling them, IGWA what each ground water districts responsibility is. But it is just an apportioning of it based on their long-term impacts." Available at https://idwr.idaho.gov/wp-content/uploads/sites/2/legal/CV01-23-13238/CV01-23-13238-20230928-Settled-Agency-Hearing-Transcript-on-Appeal.pdf (last visited Nov. 17, 2025).

[3] "The April As Applied Order identified A&B's proportionate share of the projected inseason demand shortfall to be 458 acre-feet. . . . This calculation was made using a steady-state run of ESPAM to apportion respective responsibility for the shortfall and mitigation obligation. . . . Since A&B has replaced groundwater with surface water delivery on certain lands, that should be taken into account when analyzing the proportionate share of any in-season demand shortfall predicted for the Surface Water Coalition."

1701A(3).[4] Moreover, A&B should be barred from relitigating these issues under principles of res judicata. *See Markin v. Grohmann*, 153 Idaho 223, 227-28 (2012).[5]

As for the one remaining issue (issue no. 3 in the July 24, 2025 *Request for Hearing*), while A&B may have been entitled to a hearing at the time the *Order Granting Hearing* was issued, the issue became moot by the following week when the Director found, "A&B does not need to establish that they can mitigate for its proportionate share of the predicted IDS." *Order Revising July 2025 Forecast Supply (Methodology Step 7-8)* at 12 n.7 (Sep. 11, 2025).[6] Accordingly, this is a moot issue that does not warrant a hearing.[7]

In sum, all six of the issues that A&B presented in its 2025 requests were litigated in the June 2023 hearing or are now moot. Accordingly, A&B is not entitled to a hearing under I.C. section 42-1701A(3), and the Department should deny the requests and vacate the hearing to conserve judicial resources.

---

[4] Following the *Post-Hearing Order Regarding Fifth Amended Methodology Order*, the Director denied the *City of Pocatello's, City of Idaho Falls', and Coalition of Cities' Request for Hearing and Order Authorizing Discovery* on the same grounds: they "have previously been afforded an opportunity for a hearing on the issues," even though they were requesting a hearing on a different order. *See Order Denying Cities' Motion for Clarification and Reconsideration* at 2-3 (Sep. 25, 2023). On reconsideration, the Director should rule similarly on A&B's requests for hearing, as A&B also seeks a hearing on the same issues in 2025 as they did in 2023, even if it is a different as-applied order.

[5] "The doctrine of res judicata rests upon the ground that the party . . . has litigated, or had an opportunity to litigate the same matter in a former action in a court of competent jurisdiction, and should not be permitted to litigate it again to the harassment and vexation of his opponent. Public policy and the interest of litigants alike require that there be an end to litigation."

[6] A&B was relieved of this obligation because the SWC stipulated to accept 1,252 acre-feet of storage water as satisfactory, which is far less than the 5,039 acre-feet for which the Department determined A&B was responsible in the *Order Revising April 2025 Forecast Supply and Continuing May 16, 2025 Curtailment Order (Methodology Steps 5 & 6)* dated July 10, 2025.

[7] The Department has previously denied requests for hearing on the basis that the issue for which the party sought a hearing "was rendered moot because a mid-season order determined there was no longer an obligation." *Order Denying IGWA's Petition for Review* at 2 (Aug. 23, 2023). On reconsideration, the Director should rule similarly with respect to issue no. 3 in A&B's July 24, 2025 *Request for Hearing*, as A&B's issue was similarly mooted by an as-applied order that found it no longer had an obligation.

B. Alternatively, the Department Should Clarify that the Scope of Hearing Does Not Include Issues Related to the ESPA Ground Water Management Area

If the hearing is not vacated, the Department should clarify that GMP-related testimony and evidence is outside the scope of this hearing. It is apparent from its expert report that A&B desires to use this proceeding as a vehicle to advocate for the adoption of a GMP and/or to propose concepts (e.g., that not all ground water users should be "equally responsible" for mitigating demands shortfalls, and priority should be a factor in how demand shortfalls are apportioned amongst groundwater users[8]) that are inconsistent with the Department's Methodology-administrative framework. If A&B wishes to present testimony and evidence regarding a prospective GMP, they should do so in the appropriate matter (i.e., the ESPA-GWMA matter, IDWR Docket No. AA-GWMA-2016-001[9]) and should be barred from doing so here.

Moreover, A&B's current efforts are a collateral attack on the *Sixth Methodology Order*, which are prohibited under Idaho law. *See Cuevas v. Barraza*, 152 Idaho 890, 894 (2012); *Baird-Sallaz v. Sallaz*, 157 Idaho 342, 346 (2014). The Department applies the *Sixth Methodology Order* on an annual basis to predict/determine the SWC's in-season demand shortfall and accordingly order responsible junior groundwater users to mitigate or face curtailment in order to prevent or remedy the SWC's material injury. By advocating for a GMP that would reduce the mitigation obligation that A&B incurs from the Department's application of the *Sixth Methodology Order*, A&B is presenting arguments and evidence here that it made or

[8] *See* Ex. 2 at 4, 8.

[9] Moreover, A&B had the opportunity to present such concepts during the ESPA-GWMA Advisory Committee meetings in 2023-24. *See* https://idwr.idaho.gov/water-rights/groundwater-management-areas/eastern-snake-plain-aquifer-advisory-committee/ (last visited Nov. 17, 2025).

should have made during the June 2023 hearing, thereby collaterally attacking the *Sixth Methodology Order*.

In sum, to avoid the wasting of resources in discovery and other prehearing activities, the Department should clarify that testimony and evidence regarding a GMP is outside the scope of this hearing.

III. Conclusion

Based on the forgeoing, AFA requests that the Department reconsider the *Order Granting Hearing*, deny A&B's requests and vacate the hearing, or, alternatively, clarify the scope of hearing. Because upcoming discovery and other prehearing activities could be affected by the ruling on this motion, AFA requests an expedited ruling.

Issues Presented by A&B		
May 5, 2023 *Original Request for Hearing*	**April 29, 2025 *Request for Hearing***	**July 24, 2025 *Request for Hearing***
1) Whether the order's identified proportionate share (458 acre-feet) of the predicted injury (75,200 acre-feet) to TFCC is calculated correctly based upon A&B's actual diversion and use of water rights that are subject to the identified curtailment date (junior to December 30, 1953).	1. Whether the order's identified proportionate share (384 acre-feet) of the predicted injury (63,000 acre-feet) to TFCC is calculated correctly based upon A&B's actual diversion and use of water rights that are subject to the identified curtailment date (junior to August 28, 1955).	1. Whether the order's identified proportionate share (5,039 acre-feet) of the predicted injury (75,300 acre-feet) to TFCC is calculated correctly based upon A&B's actual diversion and use of water rights that are subject to the identified curtailment date (junior to October 11, 1900).
2) Whether the steady-state use of the ESPAM 2.2 in identifying A&B's proportionate share is consistent with the transient use of the model in identifying ground water rights subject to curtailment as outlined in the *Fifth Methodology Order*.	2. Whether A&B should be allowed to mitigate for a portion of groundwater right 36-15127A (approximately 508.3 acres) that will be diverted used during the 2025 irrigation season, as opposed to mitigating for all 1,886.4 acres authorized by the water right.[1]	2. Whether the steady-state use of the ESPAM 2.2 in identifying A&B's proportionate share of the estimated in-season demand shortfall is consistent with the transient use of the model in identifying ground water rights subject to curtailment as outlined in the *Sixth Methodology Order*.
Green = Previously Heard in 2023 **Purple = Moot**	3. Whether the steady-state use of the ESPAM 2.2 in identifying A&B's proportionate share is consistent with the transient use of the model in identifying ground water rights subject to curtailment as outlined in the *Sixth Methodology Order*.	3. Whether the Director's failure to implement the May 16, 2025 curtailment order in accordance with Idaho law has injured A&B by subjecting its senior water right 36-2080 to curtailment and/or mitigation requirements during the 2025 irrigation season.

[1] While issue no. 2 in the April 29, 2025 *Request for Hearing* may appear different, it is substantively the same as issue no. 1 in both the April 29, 2025 *Request for Hearing* and July 24, 2025 *Request for Hearing*: whether A&B should be required to mitigate for a water right in whole (based on authorized diversion/use) or in part (based on actual diversion/use).

1. Introduction

This report provides David Colvin's opinions regarding the 2025 implementation of the July 19, 2023 *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* (IDWR, 2023, Methodology Order) issued by the Director of the Idaho Department of Water Resources (IDWR). On September 3, 2025 the Director issued an order granting a hearing (IDWR, 2025f) related to the following topics requested by the A&B Irrigation District (A&B):

1. Whether the order's identified proportionate share (384 acre-feet) of the predicted injury (63,000 acre-feet) to TFCC is calculated correctly based upon A&B's actual diversion and use of water rights that are subject to the identified curtailment date (junior to August 28, 1955).
2. Whether A&B should be allowed to mitigate for a portion of groundwater right 36-15127A (approximately 508.3 acres) that will be diverted [sic] used during the 2025 irrigation season, as opposed to mitigating for all 1,886.4 acres authorized by the water right.
3. Whether the steady-state use of the ESPAM 2.2 in identifying A&B's proportionate share is consistent with the transient use of the model in identifying ground water rights subject to curtailment as outlined in the *Sixth Methodology Order*.

The following report represents the expert opinions of David Colvin, Principal Hydrogeologist and Rocky Mountain Regional Director for LRE Water. Mr. Colvin's curriculum vitae is provided as Attachment A. The next section contains a summary of his opinions and is followed by additional discussion sections. If additional information becomes available, Mr. Colvin reserves the right to alter his opinions regarding A&B's proportionate share.

2. Summary of Opinions

My detailed opinions regarding the A&B proportionate share analysis are summarized below.

- **Opinion 1** - A&B's mitigation plan specifies that storage water is only required to cover the in-season demand shortfall (IDS) beyond the benefits of other mitigation measures.
- **Opinion 2** - According to the terms and conditions of the A&B mitigation plan, they should only have to mitigate for groundwater use on the acres currently being diverted (e.g., approximately 508.3 acres of water right 36-15127A).
- **Opinion 3** - An ESPA Groundwater Management Plan (GMP) could provide coordination of mitigation actions and curtailment, balancing in-season demands with the decades of

historical junior groundwater pumping. A GMP could be structured to allow for transient modeling of the long-term mitigation obligations/actions and the in-season mitigation action benefits to reach gains.

- **Opinion 4** - The IDWR methodology contains logical inconsistencies rooted in problems with attempts to constrain injury determination and defining mitigation requirements within a single irrigation season. ESPA methodology calculation of IDS is caused by decades of junior groundwater pumping, and the mitigation responsibility should consider priority.
- **Opinion 5** - The Methodology order does not specify how to calculate the proportionate amount of mitigation required by each junior groundwater right covered by a mitigation plan. IDWR should calculate proportionate share consistently.
- **Opinion 6** - A&B's mitigation plan is unique and should be treated as such in how IDWR calculates proportionate shares. According to the terms of the plan, consideration should be given to all A&B's mitigation activities.
- **Opinion 7** - There was a time when the ESPA was in balance and groundwater pumping was not reducing the supplies of senior surface water rights and causing in-season demand shortfalls. Because IDWR continued to approve new groundwater rights without consideration of long-term impacts on the connected surface water sources, the system became over-appropriated and junior groundwater pumping began reducing the senior surface water supplies. IDWR should explain how the groundwater rights with a priority date senior to the time of over-appropriation are equally responsible for mitigating the IDS as groundwater rights junior to that time.
- **Opinion 8** - When the IDS was estimated in July, IDWR recognized actual supply and demand conditions and that the May curtailment was not implemented. Partially because no May curtailment was implemented, the July IDS increased.
- **Opinion 9** - If IDWR had implemented the May curtailment, the July IDS would have been less, and the curtailment date could have been more junior. IDWR's lack of curtailment action contributes to a reduction in the availability of groundwater rights junior to 1955.

3. A&B Mitigation Plan

A&B Irrigation District (A&B) developed a mitigation plan to address the depletive effects of its junior priority groundwater rights on the near Blackfoot to Minidoka reach gains (reach gains) of the Snake River. The initial plan (A&B, 2015) was approved by the Director in the Final Order Approving Mitigation Plan issued on December 16, 2015 (IDWR, 2015). A&B and the Surface Water Coalition (SWC) later filed a Stipulated Mitigation Plan, which was approved in January 2025 (IDWR, 2025a), as an amendment to the original plan.

The mitigation actions originally specified in the A&B Mitigation Plan include:

1. Conversion of 1,378 acres (or 1,377.8 acres) from groundwater to surface water irrigation.
2. Development of a second pumping plant and pipeline project to deliver available surface water, supporting future groundwater-to-surface-water conversions.
3. Enrollment of 121 acres in the federal Conservation Reserve Enhancement Program (CREP)[1].
4. Delivery of storage water, using A&B's storage rights in American Falls and Palisades Reservoirs, if the benefits of other conversions and CREP activities do not satisfy the injury caused by A&B's junior priority groundwater rights.

A&B's mitigation plan specifies that storage water is only required to cover the in-season demand shortfall (IDS) beyond the benefits of other mitigation measures:

> *"Finally, A&B holds rights to storage water in American Falls Reservoir (46,826 af) and Palisades Reservoir (90,800 af) and has the ability to participate in Water District 1's Rental Pool. Available storage, if necessary, can be rented and delivered to injured Coalition members to mitigate for any shortfalls caused by the District's junior priority ground water that are subject to curtailment. This action would only be necessary if the benefits of the above conversions and CREP action did not satisfy the injury caused by A&B' s ground water rights that are found to be subject to curtailment."* (A&B, 2015)

A&B's approved mitigation plan includes significant actions related to the conversion of groundwater to surface water. A&B historically mitigates injury to the SWC by curtailing groundwater diversions on approximately 3,574 acres within its irrigation service area and replacing that groundwater use with surface water (soft conversions). However, IDWR requires A&B to demonstrate its ability to mitigate annually for its proportionate share of the predicted IDS.

According to the terms and conditions of the A&B mitigation plan, the district should only have to mitigate for groundwater use on the acres actually being diverted (e.g., approximately 508.3 acres of water right 36-15127A) instead of the full authorized acreage (1,886.4 acres). A&B intends to continue delivering surface water to approximately 3,573.6 acres formerly irrigated with groundwater. IDWR has not demonstrated why it cannot calculate a partial mitigation obligation for only partial use of a groundwater right.

[1] No longer active.

4. Lack of Coordination with other Mitigation Plans

Other stipulated mitigation plans, like those approved for the Ground Water Districts (IGWA), the Coalition of Cities, and the Southwest Irrigation District (SWID) are fundamentally different from A&B's plan. In these other plans, the SWC agreed to junior groundwater users undertaking aquifer mitigation actions (such as recharge, conversions, and voluntary curtailment) every year, regardless of the annual mitigation obligation, in exchange for obtaining safe harbor from the SWC delivery call. Under other agreements, these entities do not need to establish annually that they can mitigate for their proportionate share of the predicted IDS with actions such as reductions in junior groundwater pumping. Unlike IDWR's apportionment of A&B mitigation requirements, IGWA is allowed to determine how to apportion those reductions between their member organizations in a way that is unlikely to accurately represent the reach gain impacts and IDS.

Mitigation plans allow for multi-season accounting of groundwater withdrawals and provide mitigation water supplies over multiple years. However, IDWR is required to administer water rights within each year. This highlights one of the fundamental issues in this hearing, the tension between calculating the reach gain impacts of decades of junior groundwater pumping and requiring mitigation within a single season.

There is no comprehensive coordination between mitigation plans and curtailment. An ESPA Groundwater Management Plan (GMP) would provide this coordination, balancing in-season demands with the decades of historical junior groundwater pumping. A GMP could be structured to allow for transient modeling of the long-term mitigation obligations/actions and the in-season mitigation action benefits to reach gains.

5. Methodology Steps

IDWR annually implements steps supporting the Methodology Order (**Figure 1**). The IDWR methodology contains logical inconsistencies rooted in problems with attempts to constrain injury determination and defining mitigation requirements within a single irrigation season. IDWR calculates the IDS using observed or predicted water supply conditions. These supplies are impacted by long term and in-season pumping. The issue at hand is how to identify which junior groundwater pumping is causing the injury during any given season while considering the groundwater right's priority and location.

In the Sixth Methodology Order, IDWR is directed to use the transient version of the Eastern Snake Plain Aquifer Model (ESPAM) Version 2.2 (IDWR, 2021) for the calculation of what curtailment date will provide enough increased gains to mitigate the IDS within a few months. Because curtailment is a short-term change in the system, the transient model was found to be more appropriate than a steady state model for calculating how reach gains are impacted within a given irrigation season. The Director's order found that only 9% to 15% of the steady state response is predicted to accrue to the near Blackfoot to Minidoka reach between May 1 and September 30 of the same year which would not fully mitigate the IDS. (IDWR, 2023b, Findings of Fact 86)

The Methodology order does not specify how to calculate the proportionate amount of mitigation required by each junior groundwater pumping entity covered by a mitigation plan. IDWR should calculate proportionate share consistently.

IDWR has been using the steady state version of the model to calculate the proportionate share of the IDS each entity is responsible for mitigating. IDWR's rationale for applying the steady state model is that the junior groundwater pumping has been happening for many decades and that it is in approximately equilibrium conditions. (Sukow, 2025) There is no IDWR order specifying that a steady-state model should be used for calculating proportionate shares of IDS mitigation responsibility.

A steady state model is useful in understanding systems that are in equilibrium. However, it does not accurately predict changes in a given irrigation season. Any change to the system at a specific time is best represented with a transient model that shows how that change propagates through the system over time. Mitigation actions and groundwater curtailments represent changes in the ESPA at specific times and are best modeled using transient models. Because the Methodology is limited to each irrigation season, the transient version of the model should be consistently used for implementing the steps and apportioning mitigation obligations that occur during an irrigation season.

Because most ESPA groundwater pumping has been happening for decades, IDWR uses a pre-mitigation, steady-state version of ESPAM to calculate the proportionate share for A&B, assuming the groundwater irrigation for all acres continues to be pumped. A&B's mitigation plan is unique and should be treated as such in how IDWR calculates proportionate shares. According to the terms of the plan, consideration should be given to all of A&B's mitigation activities. Use of the steady-state model does not account for priority between junior ground water rights, and how that should be apportioned.

Relevant issues with using the steady state ESPAM model during the Methodology implementation include:

- The lagged timing of depletive effects from junior groundwater pumping is not represented. All resulting mitigation and curtailment impacts (increased reach gains) are assumed to be instantaneous. This does not reflect the hydrologic reality within a given irrigation season or across multiple years.
- Because the lagged timing is ignored, changes in junior groundwater pumping far from the river are assumed to have immediate impact on reach gains when the reality is that they can take decades to happen.
- Steady state models cannot reflect temporal variations such as seasonal irrigation patterns or reductions to pumping under recent mitigation plans.
- A steady state model cannot differentiate between priority dates and doesn't reflect the evolution of groundwater development through time.

There was a time when the ESPA was in balance and groundwater pumping was not reducing the supplies of senior surface water rights. Because IDWR continued to approve water rights, the system became over-appropriated and junior groundwater pumping began reducing the senior surface water supplies. IDWR should explain how the groundwater rights with a priority date senior to the time of over-appropriation are equally responsible for mitigating the IDS as those groundwater rights junior to that time. It is too late for junior groundwater pumping to offset all depletive impacts in time, location, and amount and so IDWR has chosen to focus on the IDS as calculated for every irrigation season. It stands to reason that all groundwater rights are not equally responsible for the IDS based upon relative priorities.

IDWR's transient ESPAM curtailment modeling should contain the information needed to apportion the mitigation responsibility by priority date and the timing of impact within a given irrigation season.

5.1 2025 Methodology

In the April 2025 Forecast Supply Order (IDWR, 2025c), IDWR estimated that the IDS would be 63,000 AF. They utilized the transient version of ESPAM 2.2 to select a curtailment date of August 28, 1955 (**Table 1**). The majority of irrigation covered by A&B's groundwater rights has a priority date of September 9, 1948, so the A&B proportionate share was calculated to be the relatively small volume of 164 AF (Baxter, 2025). IDWR failed to curtail wells that they should have in May, as required by the methodology when an IDS is identified. (IDWR, 2025e) When the IDS was estimated in July, IDWR recognized actual supply and demand conditions and that the May curtailment was not implemented. Partially because no May curtailment was implemented, the July IDS increased to 75,300 AF (**Table 1**). Mitigating this IDS within a three-month period pushed the curtailment date back to October 11, 1900. This predates all of the A&B priorities and so their proportionate share increased to 5,039 AF. Of the 12,300 AF IDS increase, A&B was

identified as being responsible for 4,875 AF or 40% of the increase. Using a transient ESPAM analysis, we calculated that curtailment of A&B groundwater rights would yield less than 14 AF of in-season reach gain benefit if initiated in August.

If IDWR had implemented the May curtailment, the July IDS would have been less, and the curtailment date could have been more junior. IDWR's lack of curtailment action contributes to a reduction in the availability of groundwater rights junior to 1955. **Figure 2** shows data IDWR provided as back up to their July curtailment date modeling. Annotations have been added to highlight the modeling of different priority dates (1955 versus 1900).

Table 1 - 2025 Methodology Steps, IDS, A&B Proportionate Share, and Curtailment Date

Date	April 16	July 10
Steps	1-3	5 & 6
In-Season Demand Shortfall (IDS)	63,000 AF	75,300 AF
A&B Share	164 AF[1]	5,039 AF
Curtailment Date	8/28/55	10/11/1900

Note: 1- Original calculated proportionate share updated via email (Baxter, 2025)

6. Alternative Calculation of Proportionate Shares

Steady-state modeling does not accurately calculate the impacts of in-season pumping or mitigation. It also oversimplifies calculation of long-term pumping because it assumes that all pumping has been at equilibrium forever and will continue unchanged forever.

An alternative approach to calculating proportionate share (including for A&B) could be devised to accurately estimate the in-season reach gain benefits of curtailment and mitigation actions, while holding junior groundwater pumpers responsible for their depletions, even if located far from the river.

IDWR has already recognized that transient modeling is more accurate for curtailment date identification and that it can be used for estimating the timing, location, and amount of long-term pumping. (Sukow, 2022) A transient model run could be used to estimate the in-season benefits of curtailment, recharge, conversions, and other mitigation activities with consideration of the priority dates of each water right. The actual amount of in-season reach gain benefit for a given priority date can be calculated. If that amount does not fully mitigate the IDS, then a transient or steady state model can be used to calculate the remaining priority date-based mitigation requirement that can only be achieved using direct delivery of storage water.

Using the transient ESPAM, Jennifer Sukow has calculated that the maximum reach gain benefit of curtailment of all groundwater pumping junior to October 1, 1900 is 97,700 AF (Sukow, 2022). Up to that amount of reach gain benefit can be met by any action within approved mitigation plans, including storage delivery. For any IDS identified more than that volume, a transient or steady-state model could be used to calculate the additional amount of mitigation that can only be met by direct delivery of storage water within the irrigation season.

In July 2022, IDWR calculated an IDS of 162,000 AF (IGWA, 2025d). If the transient ESPAM model predicts a maximum of 97,700 AF of curtailment or reduction in pumping benefit during that season, then those junior pumpers identified as contributing to the in-season increase in reach gains should be responsible for that amount of mitigation. Because the full IDS includes another 64,900 AF, that amount of mitigation responsibility could be identified with a transient or steady state model, and only able to be mitigated by delivery of storage water by groundwater rights junior to a specific date. In this case, the curtailment of groundwater pumping junior to November 27, 1984 was calculated to provide 64,647 AF, or nearly the remainder of the entire IDS.

This alternative approach to apportioning mitigation obligations could be recommended to the Director for approval and adoption.

Figures

2023 SWC Methodology
Steps as defined by the Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-season Demand and Reasonable Carryover - July 19, 2023

Key
- Schedule
- Methodology Step
- Step Detail

by April 1

Step 1: SWC submits upcoming irrigated acres

by April 15

Step 2: USBR/USACE Joint Forecast for Heise Gage

- Calculate FS for each SWC entity = natural flow supply + storage allocations
- IDWR compares FS, RISD, & IDS
- Transient ESPAM run to determine curtailment date that meets DS in nrBF-Minidoka reach

May 1

Step 3: Jr GW users secure water to meet April DS

- DS reduced by reasonable carryover shortfall water secured in prior year.
- Water delivery for SWC at Time of Need

As soon as practical

Step 4: Director issues curtailment of junior GW users

- 1) w/o mitigation plans; 2) w/o water secured; 3) fail to comply w/ mitigation plans
- Presumes junior GW users are not already under previous years' curtailment(s)
- If actual SWC natural flow diversion or storage accrual exceeds predictions, Director will revise DS

Within 14 days of WD1 storage allocation

Step 5: Do SWC storage allocations fill?

- Yes: no reasonable carryover shortfall
- No: reasonable carryover provided to SWC
  - Reasonable carryover water made available to SWC (not to exceed storage).

Halfway through irrigation season ~July

Step 6: Recalculate RISD, FS, and the estimated Time of Need

- Utilize YTD actual project efficiency, BD, and CWN

Shortly before Time of Need ~August

Step 7: Recalculate RISD, FS, and the estimated Time of Need

- Forecasted natural supply based on analogous years w/ similar BF to Milner reach gains.

Time of Need

Step 8: Junior GW useres deliver DS

Nov 30

Step 9: Order Establishing Reasonable Carryover

- Dept. determines total actual volumetric demand and total actual CWN
- Analysis of reasonable carryover shortfall
- Selection of future BLY
- Refinement and improvement of method

Dec 14

Jr GW Users establish storage/ mitigation

- Director issues curtailment if mitigation insufficient

Definitions:
- BD - baseline year demand
- BLY - baseline year
- CWN - crop water need
- Day of Allocation - time in the irrigation season when the Water District 01 watermaster is able to issue allocations to storage space holders after the reservoir system has achieved its maximum physical fill, maximum water right accrual, and any excess spill past Milner Dam has ceased.
- IDS - in-season demand shortfall
- FS - forecasted supply, the combination of the forecast of natural flow supply and the storage allocation
- Natural Flow Supply - cumulative flow past the Heise gage from April-July (90-21 avg 3.284 MAF)
- Reasonable Carryover - the difference between a baseline year demand ("BD") and projected typical dry year supply
- Reasonable Carryover Shortfall = Actual Carryover - Reasonable Carryover
- RISD - reasonable in-season demand
- Time of Need - predicted day in which the remaining storage allocation will be equal to reasonable carryover. The Time of Need will not be earlier than the Day of Allocation.

Water Education Colorado
- 2012 Water Leaders Program

Dave is a Principal Hydrogeologist and Senior Project Manager with over 25 years of experience in groundwater hydrology, water resources, and environmental sciences. He serves as the Rocky Mountain Regional Director responsible for managing a diverse group of water resource professionals. Dave supervises teams of diverse subject matter experts and provides technical leadership to solve today's water resource challenges. His technical expertise subject areas include groundwater supply and storage development, groundwater management, groundwater governance/administration, surface water/groundwater interaction, horizontal wells, riverbank filtration (RBF), soil aquifer treatment (SAT), managed aquifer recharge (MAR), aquifer storage and recovery (ASR), aquifer characterization, groundwater modeling, and subsidence caused by groundwater pumping.

FEATURED PROGRAM & PROJECT EXPERIENCE

Salt River Project – Gila River Basin Adjudication, Arizona Superior Court Case W1-103, San Pedro Basin, AZ (2018 – ongoing)

Hydrogeologist providing groundwater analysis and modeling supporting adjudication of water rights in the San Pedro Basin. Tasks include review of groundwater model development, calibration and uncertainty analysis, and trial/litigation support. Provides protection of surface water flows, riparian habitat, and water rights from negative impacts due to groundwater pumping.

Surface Water Coalition, Idaho (2019-ongoing)

Lead Hydrogeologist and Project Manager providing litigation support related to water management of the Eastern Snake Plain Aquifer. Provides protection of surface water flows and senior surface water rights from negative impacts of junior groundwater pumping. Serves on the Eastern Snake Plain Hydrologic Modeling Committee supporting MODFLOW modeling activities related to complex surface water/groundwater management and water rights administration. Also serves as the SWC representative on technical working groups guiding the implementation and adaptation of a settlement agreement between the SWC and Idaho Ground Water Appropriators including monitoring/evaluation of hydrology, pumping reductions, consumptive use and planning for managed aquifer recharge. Provides technical input to the development of a Groundwater Management Area adaptive management plan.

City of Aurora – Horizontal Well Project; Weld County, CO (2019 – ongoing)

Project Manager for feasibility evaluation and planning of two radial collector wells for the City's Prairie Waters System. The project targets increasing system yield while maximizing riverbank filtration water quality improvements. Investigation included hydrogeophysical surveys, exploratory drilling, aquifer testing, and groundwater modeling. Results included siting and design of horizontal wells that maintain the existing system water quality while providing adaptable system operations that can increase yield during drought demands. Currently the Lead Hydrogeologist providing design, construction phase, testing, and permitting services.

Salt River Project – Gila River Basin Adjudication, Arizona Superior Court Case W1-106 Verde River Watershed, AZ (2019 – ongoing)

Project manager and hydrogeologist providing groundwater analysis of Verde River watershed water management impacts to the Verde River. Support includes review and response to subflow administrative procedures.

Salt River Project – Cooperative Agreement No. 1, Big Chino Sub-Basin, AZ (2016 – ongoing)

Project manager and hydrogeologist providing groundwater analysis characterizing water management impacts on flows of the Upper Verde River Springs. Support includes specialized technical consulting, review and oversight of modeling and monitoring programs implemented by a multi stakeholder group seeking science-based resolution of water rights conflict.

City of Northglenn – ASR Feasibility Evaluation and Pilot Testing (2020 – ongoing)

Lead hydrogeologist and Project Manager for feasibility investigation and pilot test system design services. Support includes ASR feasibility data analysis, water quality evaluation, DWR and EPA UIC permitting, pilot system design and test planning. The project will provide pilot storage of the City's fully consumable water rights, providing more surface storage space for other supplies. If recovered water quality is compatible, the pilot system will be converted into permanent infrastructure as the first phase of a larger ASR system.

Riverence Holdings LLC – Snake River Spring Supply Support (2022-ongoing)

Project Manager and lead hydrogeologist supporting multiple fish hatcheries throughout Idaho's Magic Valley. Provides hydrogeologic planning of spring fed aquaculture focusing on upgradient aquifer pumping and recharge impacts on water rights, water quality, and water supply reliability.

Dominion Water and Sanitation District – Groundwater Support; Douglas County, CO (2015-ongoing)

Lead Hydrogeologist providing Denver Basin and South Platte alluvial aquifer groundwater resources planning services including water rights evaluation, water quality assessment, well field yield estimation and project planning. Provides hydrogeologic and contractor management support during Denver Basin well site design, construction, testing, aquifer characterization, and sampling. Additional technical support includes regional groundwater management planning, documentation for County hearings, interactions with local water agencies, and groundwater transaction due diligence.

City of Aurora – Box Elder Basin Aquifer Storage and Recovery (ASR) Feasibility Investigation and Pilot Testing (2018 – Ongoing)

Project Manager and lead hydrogeologist investigating the feasibility of recharging and storing water in the Box Elder alluvial aquifer at the Aurora Center for Renewable Energy (ACRE). Tasks included hydrogeophysical surveys, exploratory drilling/test pits, and infiltration testing. The project identified recharge as a viable option for innovative underground water storage opportunities. Services include recharge source water characterization, water rights and permitting planning, water quality evaluation, groundwater modeling, and pilot system design.

Town of Erie – Water Supply Planning Support (2018 – ongoing)

Lead hydrogeologist and Project Manager providing groundwater support related to water supply planning. Services include aquifer characterization, water quality studies, ASR feasibility analysis, and water rights. Prepared Colorado Water Conservation Board and Division of Local Affairs grant applications to obtain project funding. Provided due diligence review and retrofit design of an existing horizontal well currently being incorporated as expanded supply. Provided feasibility investigation, alternatives analysis, water rights, design, construction procurement/oversight, and testing for a 1,000 foot long horizontal directionally drilled riverbank filtration well.

Town of Castle Rock – Groundwater Support; Douglas County, CO (2015-ongoing)

Project Manager providing comprehensive groundwater support. Projects have included:

- Denver Basin Well Drilling, Testing, and Aquifer Storage and Recovery (ASR) – Support includes Denver Basin ASR planning/permitting, bidding services, contractor management, construction oversight, well/pump design, aquifer testing, and groundwater regulatory support.
- Alluvial Well Field Expansion and Rehabilitation – Project Manager for two projects aimed at improving yields in well fields affected by biofouling and performance issues. Oversaw construction and testing of six horizontal directional drilled (HDD) wells installed to increase yield, performance, and sustainability.

City of Aurora and Town of Castle Rock – Lost Creek Underground Storage Pilot Project; Lost Creek Designated Basin, CO (2017-2018)

Project Manager for aquifer characterization and evaluation of recharge potential for underground water storage pilot project. Obtained grant funding and facilitated multiple stakeholder project planning and implementation. The project identified important field investigation methods and results for storage related aquifer characteristics previously overlooked in desktop studies.

City of Aurora – Prairie Waters North Campus Master Plan; Adams and Weld Counties, CO (2017-2019)

Lead hydrogeologist providing master planning services for approximately 20 MGD expansion of the Prairie Waters Project – North Campus over the next 20 years. Facility expansion included riverbank filtration well field, pipelines, and storage reservoirs. Led facilities operational planning, supported water resource planning, gap analysis, and capital improvements planning.

Denver Water – Aquifer Storage and Recovery (ASR) Pilot Project, City and County of Denver, CO (2016-current)

Groundwater technical support and project management for ASR feasibility investigation. Provided Denver Basin aquifer characterization including exploratory borehole drilling, hydrogeophysical investigation (Nuclear

Magnetic Resonance and conventional methods), and 3-D geologic modeling. Current services include an advisory role for installation of a multi-aquifer Westbay Denver Basin monitoring well.

City of Greeley – ASR Feasibility Evaluation (2019-2021)

Senior Technical Advisor for a project evaluating the feasibility of new and existing ASR projects in multiple bedrock aquifers. Includes evaluation of water quality, aquifer characteristics, well construction/testing, project planning, and regulatory support, including negotiating an EPA UIC Rule Authorization in less than two months.

Project 7 Water Authority – Riverbank Filtration Feasibility Study, Montrose CO (2019-2020)

Project Manager for RBF feasibility study in the Uncompahgre River alluvial aquifer. The study included geophysical surveys, borehole drilling, pumping test analyses, water quality investigation, and groundwater modeling. The project objectives where to characterize vertical and horizontal well field alternatives for maximum yield while providing water quality pre-treatment improvements.

Colorado Water Conservation Board - HB16-1256 South Platte Storage Study; CO (2018)

Lead hydrogeologist providing evaluation of underground water storage options for the Lower South Platte alluvial aquifer. Provided alluvial storage site evaluation, conceptual design, cost estimates, and comparison to surface storage options.

Aurora Prairie Waters Project – North Campus; Weld County, CO (2008)

Supported City of Aurora's Prairie Waters project near the South Platte River, CO. Acted as team liaison for multi-consultant, multi-disciplinary project team. Field investigation and construction tasks included field oversight of drilling, well construction, pump/motor installation, aquifer testing, system start up testing, well field yield optimization, and geotechnical investigations. Support also included the design, construction, and operation of alluvial recharge and riverbank filtration pilot test facilities. Developed and implemented pilot test procedures, including tracer studies to assess flow paths, travel times, and stream/aquifer interaction. MODFLOW modeling support for the Prairie Waters Project included development of regional groundwater model for Colorado Division 1 case 2006CW104. Performed parallel processing model calibration using UCODE. Prepared expert and rebuttal reports, exhibits and materials used in settlement negotiations.

Eagle River Water and Sanitation District and Upper Eagle Regional Water Authority – Groundwater Support; Eagle County, CO (2010-ongoing)

Project Manager and lead Hydrogeologist for alluvial well field groundwater support. Projects have included:

- GWUDI Evaluation – Regulatory support, groundwater modeling and operational monitoring of alluvial well fields in support of CDPHE GWUDI evaluation
- Lake Creek Well Field Planning – Services included groundwater modeling, well drilling, aquifer testing, source water quality characterization, regulatory support for Eagle County 1041, CDPHE, and DWR permitting
- Well field maintenance and rehabilitation support – well rehabilitation in response to well issues including pump issues, casing holes, and water quality contamination

City of Steamboat Springs – Infiltration Gallery System Expansion; Routt County, CO (2018-ongoing)

Project Manager for feasibility evaluation of alluvial groundwater supply expansion alternatives. Expansion options being considered include vertical and horizontal well options. Tasks included exploratory drilling, aquifer testing, groundwater modeling and conceptual expansion system design. Modeling was performed to optimize well siting to maximize yield, maintain water quality, and to minimize pipeline costs.

Texas Water Development Board – Statewide Subsidence Risk Evaluation (2018)

Technical advisor for risk evaluation of subsidence due to groundwater pumping in all Texas major and minor aquifers. The project used well lithology data with model predicted water level declines to create a statewide risk map and prioritized table. Recommended follow up actions for identified areas of risk. The project provided important subsidence risk information for statewide planning and local user considerations.

Village at Taos Ski Valley – Spring Water Supply Expansion; Taos County, NM (2018-ongoing)

Senior Technical Advisor providing groundwater evaluation into the management, protection and expansion of spring water supplies.

City of Phoenix – ASR Tracer Test Design; Maricopa County, AZ (2017)

Provided MT3D groundwater modeling to assist in aquifer characterization, travel time estimates, and the design of an ASR tracer injection test for feasibility. The testing was in support of the Northeast Phoenix Reclaimed Water Recharge and Recovery Study. The system is intended to create a potable water resource through Indirect Potable Reuse (IPR), provide additional non-potable supplies, and to mitigate land subsidence issues.

Groundwater Relief – Kutupalong Refugee Camp Groundwater Supplies; Cox's Bazaar, Bangladesh (2019)

Volunteer hydrogeologist providing well testing and water quality support to field geologists. The project is developing emergency water supplies for nearly 1 million Rohingya refugees who have fled religious persecution in Myanamar.

City of San Angelo – Riverbank Filtration Feasibility Evaluation; Tom Green County, TX (2018)

Provided feasibility evaluation, preliminary siting, design and costs for a potential riverbank filtration (RBF) well field near the Concho River. This information was used to evaluate RBF as an alternative for expansion of the City's water supply.

Tarrant Regional Water District – Cedar Creek Wetlands; Kaufman County, TX (2013)

Project manager and lead Hydrogeologist for riverbank filtration feasibility investigation along the Trinity River. Project tasks include geotechnical, hydrogeologic, and surface geophysical surveys, groundwater modeling, and design, construction and testing of riverbank filtration pilot test sites.

Rangen, Inc. – Water Rights Support; Gooding County, ID (2010-2016)

Expert witness providing testimony and trial support for a water rights hearing (IDWR Case No. CM-DC-2011-004) involving springs and complex surface water/groundwater interaction of the Eastern Snake Plain Aquifer. Represented a fish hatchery reliant on spring flow that was being impacted by groundwater pumping. Served

on the Eastern Snake Plain Hydrologic Modeling Committee supporting MODFLOW modeling activities in the Eastern Snake Plain of Idaho.

Overturf, McGath, and Hull, P.C. – Stewart No. 1 Ditch Company; Pitkin County, CO (2017)

Expert witness support including expert and rebuttal reports, depositions, and settlement negotiations for a civil case involving alleged roadway water damage from ditch operations.

Fredrickson Law Offices – In-Play Golf; Weld County, CO (2017)

Expert witness providing expert and rebuttal reports, depositions, and trial support for a civil case involving alleged water damages from golf course irrigation.

Boulder Valley School District – Douglass Elementary Non-Tributary Determination; Boulder County, CO (2018)

Project Manager for a non-tributary well application in the Boulder Complex Area of the Denver Basin Aquifers. Provided aquifer characterization and regulatory support leading to a non-tributary determination and permit approval.

Boulder County Parks and Recreation – Kenosha Ponds Groundwater Evaluation; Boulder County, CO (2016)

Expert witness providing hydrogeology water rights support for a Boulder County Parks and Recreation augmentation pond. Technical support included expert report writing and trial exhibit preparation for the hydrologic characterization of a recharge pond between two streams where the pond bottom was below the water table.

City of Burkburnett, Texas – Alluvial Well Field Evaluation; Wichita County, TX (2016)

Project Manager and groundwater lead for evaluation of underperforming well fields near the Red River. Wells ranged from 3-50 years old with a variety of issues causing low yields. Project tasks included well operational data integration, analysis, and development of alternatives to improve well yields.

Penrose Water District – Arkansas River Alluvial Well Field; Fremont County, CO (2016)

Groundwater technical management for planning, design, and construction of an alluvial well field for diversion of Arkansas River water rights. Tasks included aquifer characterization, water rights support, groundwater modeling, contractor management, well drilling, construction and testing.

Salt River Project – New River Agua Fria Underground Storage Project; Phoenix, AZ (2013)

Project involved optimization and in-channel expansion design for an existing recharge facility. Support included evaluation of operational data and adaptation of an existing MODFLOW model for operational optimization and feasibility testing.

City of San Marcos, Texas – Well Performance Investigation and Replacement Plan; Hays County, TX (2015)

Project Manager and groundwater lead for investigation into reduced yield problems for a well in the Edwards Aquifer. Well construction and operational data were analyzed to test viability of rehabilitation or equipment replacement. Provided ultimate solution of siting a replacement well in a more productive aquifer area.

Winkler Services – Well Field Siting and Design; Wink County, Texas (2017)
Technical advisor for well field siting in the Pecos Valley Alluvium and Upper Dockum Aquifer. Support included project planning, aquifer characterization, and geologic modeling.

Oakwood Homes – Neighborhood Scale Dewatering Systems and Water Rights; CO (2016)
Project Manager and groundwater lead for planning, design, and permitting of neighborhood scale dewatering systems. Managed project work including groundwater modeling, system design, data analysis, contractor coordination, DWR and CDPHE permitting, and water rights evaluations.

Donala Water and Sanitation District – Reuse Evaluation; El Paso County, CO (2015)
Preliminary feasibility investigation into riverbank filtration alternatives for indirect potable reuse. Evaluated hydrogeologic conditions for permitting, cost, and performance feasibility considerations.

City of Scottsbluff – Well Field Uranium Investigation and Monitoring; Scotts Bluff County, NE (2016)
Technical advisor for a project aimed at reducing uranium concentrations in an alluvial groundwater supply. Provided aquifer characterization and uranium monitoring data analysis.

Confidential Client; Groundwater Supply and Subsidence Analysis; AZ (2010-2011)
Development of regional MODFLOW models used to estimate well field yield and land subsidence due to groundwater pumping in Arizona. Work included statewide study of subsidence-related empirical relationships and prediction methods, aquifer characterization, 3-D geologic and groundwater flow modeling, automated model calibration and predictive uncertainty analysis using PEST, and numerical MODFLOW subsidence modeling.

Confidential Client - Oilfield Produced Water Infiltration Modeling, San Louis Obispo County, CA(2008-2010)
Lead Hydrogeologist for the development of an engineering design MODFLOW-SURFACT model with the goal of infiltrating 13 acre-feet of water per day into the subsurface of a 200 acre alluvial site. Performed model calibration using PEST software in a parallel processing environment utilized 50 geologic conceptualizations for stochastic predictions of system performance.

Colorado Department of Public Health and Environment – Summitville Superfund Site; Summitville, CO (2008)
Provided support for abandoned mine hydrology and geochemistry, field sampling, monitoring and mine facility inspection, and database support. The project goal was to monitor and minimize mine waste impacts on the Alamosa River.

Various Mines – Groundwater Modeling and Analysis; Basin and Range Province; NV (2008-2010)
Provided MODFLOW modeling and water balance studies in support of mine water management and regulatory reporting. Analyses included point flow surface water modeling to evaluate stream gain/loss; detailed water balance quantifications; well inventories and pumping estimates; groundwater underflow assessments.

Miron Construction - Laramie-Fox Hills Well; Hudson, Colorado (2008)
Assisted in design and field engineering for the construction and testing of a 960-foot deep, large capacity, municipal/industrial, Laramie-Fox Hills water supply well at the Hudson Correctional Facility.

Perini/US Army Corps of Engineers – Groundwater System Design and Optimization; Baghdad, Iraq (2007)
MODFLOW modeling support for the U.S. Agency for International Development in Baghdad, Iraq. Developed a numerical groundwater model for the optimization of water supply well locations and pumping operations. Main objectives were to maximize well yields while minimizing differential land subsidence across newly constructed East End Barracks.

Colorado Haiti Project (Volunteer Position); Petit Trou de Nippes, Haiti (2013)
Technical advisor for groundwater development, management, and protection in a rural, developing area of Haiti.

Water For People Groundwater Management Project (Volunteer Position); San Pedro Sula, Honduras (2008)
Technical advisor for development of a scope of work for a participatory groundwater management plan aimed at restoring and protecting an over utilized alluvial aquifer in a developing region.

ASARCO - California Gulch Superfund Site; Leadville, Colorado (2000-2005)
Conducted environmental sampling for the Kids First Program to identify and address sources of lead exposure for children in residential areas. Provided statistical analysis and reporting for evaluation of program effectiveness. Designed sampling plan and performed soil sampling and analysis to delineate extent of metals contamination at the Arkansas Valley Smelter Operable Unit. Provided technical support for hydrogeological and geochemical characterization of the Apache Tailings site; and implemented the surface water and groundwater performance monitoring program to assess the effectiveness of the remedial action. Conducted synoptic surface water flow measurement and water quality sampling.

Asarco - Omaha Lead Site, Omaha, Nebraska (2003)
Assisted in the development of program to identify sources of lead exposure for children in residential areas.

Mine Waste and Tailings Pile Sites, Various Locations (2000-2004)
Performed hydrologic evaluation of remedial alternatives for repository evaluation using Hydrologic Evaluation of Landfill Performance (HELP) model.

Industrial Groundwater Contamination Sites, Various Locations (2000-2005)
Performed groundwater modeling to assist design of groundwater extraction remediation wells using MODFLOW modeling code.

EPA - Vasquez Boulevard and Interstate 70 Superfund Site, Denver, Colorado (2002-2003)
Designed, directed, and performed environmental sampling for project identifying sources of lead and arsenic exposure for children in residential areas.

Hertz Rent-a-Car - Former Underground Storage Tank, Colorado Springs, Colorado (2000-2002)

Project Hydrogeologist and technical lead for the characterization, monitoring, and remediation of hydrocarbon contaminated soils and groundwater at a former underground storage tank site. Performed quarterly monitoring and reporting; developed and implemented an in-situ chemical oxidation remediation program.

R&R Super Service - Former Underground Storage Tank, Arvada, Colorado (2000-2002)

Project Manager and technical lead for the characterization and remediation of soils and groundwater contaminated by petroleum hydrocarbons at a former service station. Responsibilities included client and regulatory interaction; site characterization activities to delineate the nature and extent of contamination in soil and groundwater; modeling of vapor and mass extraction rates using VENT2D; respirometry testing to quantify biodegradation rates in vadose zone soils; startup testing; operating, maintaining, and monitoring of an air sparge/soil vapor extraction system.

City and County of Denver - Former Stapleton International Airport Remediation; Denver, Colorado (1998-2000)

Served as a hydrogeologist conducting field investigations to define nature and extent of hydrocarbon and solvent contamination, contributing to remediation. Field tasks included lithologic logging with a hollow-stem auger and direct-push drilling rigs; soil, groundwater, and soil vapor testing, remediation system construction/operation/maintenance, data evaluation and reporting.

National Park Service – Mt. Rainier National Park, Longmire, Washington (1996-1997)

Biologist and crew leader for aquatic ecosystem studies in Mt. Rainier National Park. Conducted field surveys and sub-alpine wetland monitoring. Performed aquatic field sampling, wetland classification, biological species identification, and aquatic laboratory analyses.

Attorneys for Idaho Ground Water Appropriators, Inc. (IGWA)

STATE OF IDAHO

DEPARTMENT OF WATER RESOURCES

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **IDAHO GROUND WATER APPROPRIATORS, INC.'S MOTION FOR SUMMARY JUDGMENT**

Idaho Ground Water Appropriators, Inc. ("IGWA"), by and through counsel, and pursuant to IDAPA 37.01.01.220.03, hereby moves for summary judgment in response to A&B Irrigation District's ("A&B") requests for hearing filed April 29 and July 24, 2025. This motion is supported by declarations of Sophia Sigstedt and Thomas J. Budge filed herewith. It is also supported by pleadings and orders filed in this contested case and in related contested cases cited in this motion.[1]

[1] All pleadings and orders cited in this motion are part of the agency record in this Docket No. CM-DC-2010-001 unless a citation is given to a different docket. IGWA requests that the hearing officer take official notice pursuant to IDAPA 37.01.01.602 of all pleadings and orders cited in this motion. IDWR's maintains an online repository of contested case pleadings and orders accessible via https://idwr.idaho.gov/legal-actions/administrative-actions/.

Introduction

A&B's hearing request filed April 29, 2025, challenges the *Final Order Regarding April 2025 Forecast Supply* issued April 16, 2025 ("April 2025 As-Applied Order"). (*A&B Irr. District's Req. for Hrg.*, Apr. 29, 2025.) Specifically, A&B requests a hearing to challenge the method used by the Director to calculate A&B's storage water mitigation obligation under the Surface Water Coalition ("SWC") delivery call. *Id*.

A&B's hearing request filed July 24, 2025, challenges the *Order Revising April 2025 Forecast Supply and Continuing May 16, 2025 Curtailment Order* issued on July 10, 2025 ("July 2025 As-Applied Order"). (*A&B Irr. District's Req. for Hrg.*, Jul. 24, 2025.) As with A&B's April hearing request, its July request challenges the method used by the Director to calculate A&B's storage water mitigation obligation under the SWC delivery call. *Id*.

As explained below, the hearing officer should issue summary judgment that A&B is barred by the doctrines of *res judicata*, "law of the case," and *quasi-estoppel* from challenging the method used by the Director to calculate A&B's proportionate storage water obligation.

Relevant Facts & Procedural History

A&B has an approved mitigation plan to protect its groundwater rights from curtailment under the SWC delivery call. A&B's plan was filed with the Department on May 21, 2015. (*A&B Irr. District's Amended Rule 43 Mit. Plan*, Docket No. CM-MP-2015-003 (May 21, 2015).) It proposed to mitigate injury to the SWC by several means, including the delivery of storage water. *Id*. at 3. The Director of the Idaho Department of Water Resources ("IDWR" or "Department") approved the plan on December 16, 2015. (*Final Order Approving Mit. Plan*, Docket No. CM-MP-2015-003 (Dec. 16, 2015).) Neither the plan nor the order approving it specifies how A&B's storage water mitigation obligation would be calculated.

On December 27, 2023, A&B filed a stipulation regarding its approved mitigation plan, which confirms A&B's ability to provide storage water as mitigation. (*Stip. Re. A&B Irr. District's Amended Rule 43 Mit. Plan*, Docket No. CM-MP-2015-003 (Dec. 27, 2023).) The Director issued an order approving the stipulation on January 10, 2025. (*Final Order Approving Amended Mit. Plan*, Docket No. CM-MP-2016-003 (Jan. 10, 2025).) Neither the stipulation nor the order approving it specify how A&B's storage water mitigation obligation would be calculated.

The Director calculates storage water mitigation obligations any time it issues a curtailment order under the SWC delivery call. Curtailment orders are issued when a "demand shortfall" is calculated under the Methodology Order governing the SWC delivery call. Each time the Director applies the Methodology Order, the Director issues which is commonly known as an "As-Applied Order."

When an As-Applied Order calculates a "demand shortfall" to the SWC, the order includes a curtailment date that will be implemented against junior groundwater users who are not protected from curtailment by an approved mitigation plan. For groundwater users authorized to deliver storage water as mitigation, the As-Applied Order also identifies the amount of storage water the groundwater user must provide as mitigation to avoid curtailment, based on their proportionate share of the demand shortfall.

From the time A&B's mitigation plan was first approved in 2015 to the present, the Director has calculated the proportionate storage water mitigation obligations of A&B and other groundwater users, including IGWA's member ground water districts, using a steady-state application of ESPAM. (Sigstedt Decl., ¶¶ 6-7.)

A&B first challenged the Director's calculation of its storage water mitigation obligation in 2016. On April 19, 2016, the Director issued its *Final Order Regarding April 2016 Forecast Supply* ("April 2016 As-Applied Order"), which predicted a demand shortfall of 44,200 acre-feet and calculated A&B's proportionate share as 3,463 acre-feet. A&B challenged this determination by filing *A&B Petition for Reconsideration/Request for Hearing* on May 2, 2016.

On May 11, 2016, the Director issued an *Order on Petition for Reconsideration and Request for Hearing*, finding that A&B's proportionate share should be adjusted downward because the Director had mistakenly considered groundwater use by non-A&B water rights within A&B's service area. A&B did not further challenge the Director's method for calculating A&B's storage water mitigation obligation.

On April 21, 2023, the Director changed the methodology used to administer water rights under the SWC delivery call by issuing the *Fifth Amended Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("Fifth Methodology Order"). Among other things, the Fifth Methodology Order changed the way the Director calculates curtailment dates in response to a demand shortfall, switching from a steady-state to a transient-state application of ESPAM. The Fifth Methodology Order did not

change the way mitigation storage obligations are calculated, which continued to be based on steady-state modeling.

Also on April 21, 2023, the Director issued the *Final Order Regarding April 2023 Forecast Supply* ("April 2023 As-Applied Order"), which calculated A&B's storage water mitigation obligation as 498 acre-feet. (p. 5, fn. 5). Several parties, including A&B, challenged the Fifth Methodology Order and the April 2023 As-Applied Order. A&B submitted a statement of issues for hearing, including: (1) whether A&B's proportionate storage water mitigation obligation calculated in the April 2023 As-Applied Order "is correctly based upon A&B's actual diversion and use of water rights that are subject to the identified curtailment date;" and (2) whether "the steady-state use of the ESPAM 2.2 in identifying A&B's proportionate share is consistent with the transient use of the model" for determining curtailment dates. (*SWC's Req. for Hrg. and Stmt. of Issues* (May 5, 2023, pp. 2-3.))

A hearing was held June 6-9, 2023, after which A&B submitted a post-hearing brief. (*SWC Post-Hrg. Br.*, (June 16, 2023).) Among other things, A&B challenged the method used by the Director to calculate A&B's proportionate share of the "demand shortfall" for the purpose of defining its storage water mitigation obligation. *Id*. at 12. The Director issued a *Post-Hearing Order Regarding Fifth Amended Methodology Order* on July 19, 2023, which did not grant the relief requested by A&B. A&B did not appeal that decision.

On April 18, 2024, the Director issued the *Final Order Regarding April 2024 Forecast Supply* ("April 2024 As-Applied Order"), which calculated A&B's storage water mitigation obligation as 498 acre-feet. (p. 5, fn. 8). The method the Director employed was the same one used in the April 2023 As-Applied Order. (Sigstedt Decl., ¶ 6.) A&B did not challenge the April 2024 As-Applied Order.

On April 16, 2025, the Director issued the April 2025 As-Applied Order, which calculated A&B's storage water mitigation obligation as 384 acre-feet. (p. 5, fn. 8.) This time, A&B challenged the method used by the Director to calculate its storage water mitigation obligation. (*A&B Irr. District's Req. for Hrg.*, (April 29, 2025).) The Director subsequently issued the July 2025 As-Applied Order, and A&B again requested a hearing on the same issues. (*A&B Irr. District's Req for Hrg.* (Jul. 24, 2025).)

Related to the issue of how storage water mitigation obligations are calculated is the 2024 Stipulated Mitigation Plan ("2024 Plan") between the SWC and IGWA's member ground water

districts. A&B is a party to the 2024 Plan, which requires that the storage water mitigation obligations be calculated using steady-state modeling. The 2024 Plan was approved by the Director via the *Amended Final Order Approving Stipulated Mitigation Plan* issued February 7, 2025, in IDWR Docket No. CM-MP-2024-003.

Summary Judgment Standard

Under Department rules of procedure, motions for summary judgment are governed by rule 56 of the Idaho Rules of Civil Procedure. Under I.R.C.P. 56(c), summary judgment is appropriate where there is no genuine issue of material fact and the moving party is entitled to judgment as a matter of law. The Court should liberally construe all facts and draw all reasonable inferences in favor of the nonmoving party. *Iron Eagle Dev., LLC v. Quality Design Sys., Inc.*, 138 Idaho 487, 491 (2003). However, "the mere existence of some alleged factual dispute between the parties will not defeat an otherwise properly supported motion for summary judgment; the requirement is that there be no genuine issue of material fact." *Anderson v. Liberty Lobby, Inc.*, 477 U.S. 242, 247-48 (1986). There must be sufficient evidence provided which would reasonably allow a jury to return a verdict in the favor of the party who is resisting the motion. *Gneiting v. Idaho Asphalt Supply, Inc.*, 130 Idaho 393, 396 (Ct. App. 1997).

Statement of Undisputed Facts

1. The Director has, since 2016, calculated storage water mitigation obligations under the Methodology Order using steady-state applications of ESPAM. (Sigstedt Decl., ¶¶ 6-7.)
2. The Methodology Order was substantially changed in 2023. Based on the new Methodology Order, the Director issued the April 2023 As-Applied Order which predicted a demand shortfall and calculated A&B's proportionate storage water mitigation obligation.
3. A&B challenged the Director's method for calculating A&B's proportionate storage water mitigation obligation in the April 2023 As-Applied Order. The Director rejected A&B's arguments, and A&B declined to appeal it.
4. The April 2024 As-Applied Order predicted a demand shortfall to the SWC and calculated A&B's proportionate storage water mitigation obligation. A&B did not challenge the order.

5. On November 15, 2024, A&B and other parties executed the 2024 Plan, then submitted it to the Director for approval in IDWR Docket No. CM-MP-2024-003. The director approved it via the *Amended Final Order Approving Stipulated Mitigation Plan* issued February 7, 2025, in IDWR Docket No. CM-MP-2024-003.
6. The 2024 Plan expressly states that storage water mitigation obligations among the participating ground water districts should be based on steady-state application of ESPAM.

Argument

As explained below, the doctrines of *res judicata* and "law of the case" preclude A&B from challenging the method by which the Director calculates A&B's proportionate storage water mitigation obligations because A&B could have and did raise these issues previously in this action. In addition, the *quasi-estoppel* doctrine precludes A&B from challenging the Director's use of steady-state modeling to calculate storage water mitigation obligations because A&B agreed to the use of steady-state modeling in the 2024 Plan.

A. *Res Judicata*

Res judicata bars litigation of claims and issues that were or could have been litigated in a prior action. *Ferrell v. Brown*, 111 Idaho 1027, 1030 (Ct.App. 1986). The doctrine covers both claim preclusion and issue preclusion (collateral estoppel). *Elsaesser v. Riverside Farms, Inc*., 170 Idaho 502, 508 (2022). It applies in administrative proceedings as well as judicial proceedings. *Byrd v. Idaho State Bd. of Land Comm'rs*, 169 Idaho 922, 931 (2022).

"Claim preclusion bars a subsequent action between the same parties upon the same claim or upon claims relating to the same cause of action." *Id*. (quoting *Berkshire Invs., LLC v. Taylor*, 153 Idaho 73, 81 (2012)). There are three elements: "(1) the original action ended in final judgment on the merits, (2) the present claim involves the same parties as the original transaction, and (3) the present claim arises out of the same transaction or series of transactions as the original action." *Id*. "When the three elements are established, claim preclusion bars every matter offered and received to sustain or defeat the claim but also as to every matter which might and should have been litigated in the first suit." *Monitor Fin., L.C. v. Wildlife Ridge Estates., LLC*, 164 Idaho 555 (2019) (quoting *Magic Valley Radiology, P.A. v. Kolouch*, 123 Idaho 434, 437 (1993)).

The Department has applied the *res judicata* doctrine in prior contested cases involving the SWC delivery call. For example, in IDWR Docket No. CM-MP-2016-001, IGWA advocated for the use of a three-year baseline to measure compliance with groundwater conservation obligations under what is commonly known as the 2015 Mitigation Plan. The Department denied IGWA's argument based on *res judicata*, stating that "IGWA had an opportunity to request a hearing on the 2022 Compliance Order but failed to timely do so and that IGWA failed to raise the issue at other critical times." (*Order Denying IGWA's Request for Clarification of Order Denying IGWA's Motion to Vacate or Amend 2022 Compliance Order*, IDWR Docket No. CM-MP-2016-001 (May 28, 2024, p. 1.))

Here, A&B seeks to litigate the method used by the Director to calculate A&B's proportionate storage water mitigation obligation to the SWC. As discussed above, the Director has been issuing As-Applied Orders that calculate A&B's proportionate storage water mitigation obligation since 2016. A&B challenged the Director's calculation in 2016 and again in 2023 after the Methodology Order was substantially revised. After the April 2023 As-Applied Order was issued, A&B requested a hearing on the following issues:

1) Whether the order's identified proportionate share (458 acre-feet) of the predicted injury (75,200 acre-feet) to TFCC is calculated correctly based on A&B's actual diversion and use of water rights that are subject to the identified curtailment date (junior to December 30, 1953).

2) Whether the steady-state use of the ESPAM 2.2 in identifying A&B's proportionate share is consistent with the transient use of the model in identifying ground water rights subject to curtailment as outlined in the *Fifth Methodology Order*.

(*Surface Water Coalition's Request for Hearing and Statement of Issues* (May 5, 2023), pp. 2-3.)

An evidentiary hearing was held on issues raised by A&B and others, resulting in a final judgment on the merits. (*Post-Hearing Order Regarding Fifth Methodology Order* (July 19, 2023).) The final order did not change the way A&B's proportionate storage water mitigation obligation is calculated, and A&B declined to appeal that ruling. Further, the same method was used in the April 2024 As-Applied Order, which A&B declined to challenge.

The parties to the April 2023 As-Applied Order and the April 2024 Order are the same parties to the 2025 As-Applied Orders being challenged now by A&B, and A&B's present claims arise out of the same transaction or series of transactions as the original action. Therefore,

the doctrine of claim preclusion prevents A&B from challenging the method used by the Director to calculate its proportionate storage water mitigation obligation.

The doctrine of issue preclusion doctrine also prevents A&B from challenging the method used by the Director to calculate its proportionate storage water mitigation obligation. The elements of issue preclusion are:

> (1) the party against whom the earlier decision was asserted had a full and fair opportunity to litigate the issue decided in the earlier case; (2) the issue decided in the prior litigation was identical to the issue presented in the present action; (3) the issue sought to be precluded was actually decided in the prior litigation; (4) there was a final judgment on the merits in the prior litigation; and (5) the party against whom the issue is asserted was a party or in privity with a party to the litigation.

Elsaesser, 170 Idaho at 509 (quoting *Ticor*, 144 Idaho at 124).

The doctrine of issue preclusion prevents A&B from challenging the method used by the Director to calculate its proportionate storage water mitigation obligation because (1) A&B had a full and fair opportunity to litigate the issue in response to the April 2016 As-Applied Order, the April 2023 As-Applied Order, and the April 2024 As-Applied Order; (2) the issue decided in the prior As-Applied Orders is identical to the issue raised by A&B in the present action; (3) the issue sought to be precluded was actually decided in the prior As-Applied Orders; (4) there was a final judgment on the merits in the prior As-Applied Orders; and (5) A&B was a party to the prior As-Applied Orders.

Therefore, IGWA respectfully requests that the hearing officer grant summary judgment by ruling that the doctrine of *res judicata* bars A&B from challenging the method used by the Director to calculate its proportionate storage water mitigation obligation.

B. Law of the Case

In addition to *res judicata*, the "law of the case" doctrine precludes A&B from raising issues that it did or could have raised previously in the SWC delivery call case. The "law of the case" doctrine "prevents consideration on a subsequent appeal of alleged errors that might have been, but were not, raised in the earlier appeal." *State v. Hawkins*, 155 Idaho 69, 72 (2013). Previously in this case, A&B argued that the "law of the case" doctrine precluded IGWA from

raising issues that had previously been litigated.[2] By the same token, A&B is barred by that doctrine from raising issues that were or could have been litigated in this proceeding.

C. *Quasi-Estoppel*

The Idaho Supreme Court has held repeatedly that "the doctrine of quasi-estoppel prevents a party from asserting a right, to the detriment of another party, which is inconsistent with a position previously taken." *Gomez v. Hurtado*, 174 Idaho 1002, 1014, 554 P.3d 53, 65 (2024) (quoting *Atwood v. Smith*, 143 Idaho 110, 114, 138 P.3d 310, 314 (2006)); see also *Hollingsworth v. Thompson*, 168 Idaho 13, 22-23, 478 P.3d 312, 321-22 (2020); *Trumble v. Farm Bureau Mut. Ins. Co. of Idaho*, 166 Idaho 132, 146, 456 P.3d 201, 215 (2019). *Quasi-estoppel* is "a broadly remedial doctrine, often applied ad hoc to specific fact patterns." *Thomas v. Arkoosh Produce, Inc*., 137 Idaho 352, 357, 48 P.3d 1241, 1246 (2002) The elements are:

1. The offending party took a different position than their original position; and
2. Either (a) the offending party gained an advantage or caused a disadvantage to the other party; (b) the other party was induced to change positions; or (c) it would be unconscionable to permit the offending party to maintain an inconsistent position from one they have already derived a benefit or acquiesced in.

Atwood, 143 Idaho at 114.

Here, A&B agreed in the 2024 Plan that steady-state modeling is the appropriate method for allocating storage water mitigation obligations among groundwater users. This agreement was made more than a year after the Fifth Methodology Order had been issued. Notwithstanding the change in the Fifth Methodology Order from steady-state to transient-state modeling for the purpose of calculating curtailment dates under the Methodology Order, A&B agreed that steady-state modeling is the appropriate method for calculating storage water mitigation obligations. A&B now seeks to argue for transient-state modeling, a position directly contrary to its prior agreement in the 2024 Plan.

A&B gained an advantage and/or derived a benefit by agreeing to the use of steady-state modeling to define storage water mitigation obligations in the 2024 Plan. Without that provision, the ground water districts would not have agreed to the 2024 Plan, and A&B would not be the beneficiary of mitigation provided by the districts under the 2024 Plan.

[2] Surface Water Coalition's Response Brief, Ada Co. Case No. CV01-23-13173 (Jan. 19, 2024) (Excerpt attached as Appx. A, Budge Decl.).

IGWA and its member ground water districts relied on the use of steady-state modeling to define storage water mitigation obligations in the 2024 Plan, and the Director approved the 2024 Plan on that basis. Allowing A&B to change its position would upend the 2024 Plan and the settled expectations of all parties, to the detriment of IGWA and its member ground water districts.

To IGWA's members, A&B's conduct appears to be in bad faith—seeking to retain the benefits of the Plan while attacking its core terms. A&B's challenge here is an indirect attack on the 2024 Plan itself. This is precisely the type of conduct Idaho's *quasi-estoppel* doctrine is designed to prevent.

Conclusion

For the foregoing reasons, IGWA respectfully requests that the Hearing Officer grant summary judgment in favor of IGWA by ruling that A&B is barred by the doctrines of *res judicata*, "law of the case," and *quasi-estoppel* from challenging the method used by the Director to calculate its storage water mitigation obligations under the Methodology Order.

Attorneys for Idaho Ground Water Appropriators, Inc. (IGWA)

STATE OF IDAHO

DEPARTMENT OF WATER RESOURCES

IN THE MATTER OF THE DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY AND FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **DECLARATION OF SOPHIA SIGSTEDT**

I, Sophia Sigstedt, declare the following:

1. I am over the age of 18 and competent to testify. If called upon to testify, I could testify to the following, all of which are within my own personal knowledge or based upon my professional judgment.

2. I am an American Institute of Hydrology Professionally Certified (No. 7015) Hydrogeologist with a specialization in groundwater. I have a master's degree in hydrology from the New Mexico Institute of Mining and Technology. My work includes hydrogeology, water resources engineering, and water resources planning and management. I have directed or contributed to several river-basin-scale water management studies that involved analysis of basin hydrology and water uses and the development of computer models to investigate implications of changes in hydrology, system operations, and water uses. My experience includes historical consumptive use analysis, evaluation of surface and ground water interactions, development of

protective terms and conditions for water users, settlement negotiations and expert witness testimony. I am employed by Lynker, 287 Century Cir #200, Louisville, Colorado.

3. For several years I have worked as a technical consultant for Idaho Ground Water Appropriators, Inc. ("IGWA"). In that capacity, I participate on the Eastern Snake Plain Hydrologic Modeling Committee, the Big Lost Modeling Technical Advisory Committee, and the Swan Falls Technical Working Group, and I have testified as an expert witness in several cases before the Idaho Department of Water Resources ("IDWR" or "Department"). I further provide IGWA with technical assistance on a variety of matters, including the Surface Water Coalition ("SWC") delivery call.

4. I have reviewed the April Background Information that the Department issues with its April As-Applied Orders on its legal action docket (https://idwr.idaho.gov/legal-actions/delivery-call-actions/swc/) in connection with the SWC Delivery Call.

5. I have reviewed the April Background Information associated with the *Final Order Regarding April 2023 Forecast Supply* ("April 2023 As-Applied Order"); *Final Order Regarding April 2024 Forecast Supply* ("April 2024 As-Applied Order"); and *Final Order Regarding April 2025 Forecast Supply* ("April 2025 As-Applied Order").

6. The Department is using the same process in the April 2024 As-Applied Order and April 2025 As-Applied Order as it did in the April 2023 As-Applied Order to determine A&B Irrigation District's proportionate share of the predicted demand shortfall. I understand this process is based on A&B's steady-state impact to the Near Blackfoot to Minidoka reach of the Snake River, not transient-state impacts.

7. Before the *Fifth Amended Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("Fifth Methodology Order") the Department's As-Applied Orders would determine A&B's proportionate share of the predicted demand shortfall based on A&B's steady state impact to the Near Blackfoot to Minidoka reach of the Snake River, not transient state impacts.

I declare under the penalty of perjury pursuant to the law of the State of Idaho that the foregoing is true and correct.

DATED this 18th day of November, 2025.

(See Service Page for Remaining Counsel)

> First, neither section (Art. XV § 4 and § 5) applies to the water user who has appropriated water directly from the water source. . . . Finally, neither section governs conjunctive management. . . . There is nothing in the wording of Article XV, § 7, that indicates that it grants the legislature or the Idaho Water Resource Board the authority to modify that portion of Article XV, § 3, which states, "Priority of appropriation shall give the better right as between those using the water" . . . The policy of securing the maximum use and benefit, and least wasteful use, of the State's water resources applies to both surface and underground waters, and it requires that they be managed conjunctively.

150 Idaho at 805-807, 252 P.3d at 86-88.

Accordingly, any claims of error related to the Director's application of the Ground Water Act or CM Rule 20 should be denied. Those provisions do not apply in the manner IGWA suggests and do not expose any errors in the Director's *Sixth Order* and the continued conjunctive water right administration in this case. Further, the following legal doctrines prohibit IGWA's attempts to re-challenge the methodology and the established burdens of proof and evidentiary standards adopted by the Idaho Supreme Court. *See A&B Irr. Dist.*, 155 Idaho at 655, 315 P.3d at 843.

II. Res Judicata and The Law of the Case Doctrines Preclude IGWA's Alleged Defenses.

IGWA attempts to impermissibly re-litigate certain defenses through its "substantive errors" portion of the opening brief. *See generally IGWA Br.* at 29-31, 36-44. These defenses, having been previously raised and litigated, are barred by both the *res judicata* and "law of the case" doctrines. In other words, IGWA cannot continue to regurgitate defenses that have already been denied by Idaho's judiciary. The Court should reject IGWA's arguments accordingly.

The doctrine of *res judicata* covers both claim preclusion and issue preclusion. *See Monitor Finance, L.C. v. Wildlife Ridge Estates, LLC*, 164 Idaho 555, 560, 433 P.3d 183, 188 (2019). Claim preclusion bars a subsequent action between the same parties upon the same claim or upon claims relating to the same cause of action. *See id.*

The three criteria are: 1) the original action ended in a final judgment on the merits; 2) the present claim involves the same parties; and 3) the present claim arises out of the same transaction or series of transactions as the original action. *See id.* The doctrine exists "to prevent the resurrection of a lawsuit already laid to rest." *See Byrd v. Idaho State Bd. of Land Comm'rs*, 169 Idaho 922, 931, 505 P.3d 708, 717 (2022). Further, the doctrine applies to administrative proceedings as well. *See id.* All three of the criteria are met here and therefore the Court should apply *res judicata* to deny IGWA's present appeal of the agency's alleged "substantive errors."

First, the appeal concerns the same parties, the Coalition, IGWA, and IDWR. Next, the claims arise out of the same transaction, the underlying delivery call proceeding and the Director's methodology for administration. IGWA collaterally attacks the Director's methodology for forecasting water supply, use of irrigated acreage, accounting for supplemental groundwater use, and calculating project efficiency and system improvements. *See IGWA Br.* at 32-39. IGWA also alleges the Director wrongly refused to deny the call on theories of "futile call" and "maximum beneficial use." *See id.* at 39-44. All of these claimed errors and defenses were previously litigated and denied.[23] Moreover, any challenges to the methodology steps and underlying analysis were fully adjudicated in the *382 Decision*. Consequently, the final criteria of a final judgment on the merits is met, and the Court can deny IGWA's appeal of these issues accordingly. There simply is no legal basis to allow IGWA to continue to litigate defenses that have already been denied.

[23] IGWA originally moved for summary judgment on "futile call" and its "maximum use" theories. *See* Addendum C (*Idaho Ground Water Appropriators' Motion for Summary Judgment and Memorandum in Support*, Mar. 23, 2005). The Director denied IGWA's motion. *See* Addendum D (*Order on Petition to Intervene and Denying Motion for Summary Judgment et al.*, Apr. 6, 2005). IGWA did not appeal the Director's decision on these issues, and the resulting order on judicial review and the Supreme Court opinion constitute a final adjudication on the merits of IGWA's claimed defenses. *See Order on Petition for Judicial Review* (Gooding County Dist. Ct., Fifth Jud. Dist., Case No 2008-551); *A&B Irr. Dist. v. IDWR*, 155 Idaho 640, 315 P.3d 828 (2013).

In addition to *res judicata*, the "law of the case" doctrine precludes IGWA from re-raising previously denied defenses and alleged errors in the methodology. The doctrine of "law of the case" is well established in Idaho and provides that "upon an appeal, the Supreme Court, in deciding a case presented states in its opinion a principle or rule of law necessary to the decision, such pronouncement becomes the law of the case, and must be adhered to throughout its subsequent progress both in the trial court and upon subsequent appeal." *Swanson v. Swanson*, 134 Idaho 512, 515, 5 P.3d 973, 976 (2000); *see also*, *South Valley*, 2024 WL 136840, at *15.

Idaho courts have applied the doctrine to preclude re-litigation of issues in cases that did not reach the Supreme Court during the first appeal. *See* 134 Idaho at 516, 5 P.3d at 977. Further, where a district court acts in an appellate capacity and there is no appeal to the Supreme Court, the rulings of the district court "become final rulings in the case, not subject to attack in this appeal, and which stated the law of the case that the magistrate–and even this appellate court–must follow in this appeal." *Id.*; *see also*, 2024 WL 136840, at *15 ("The doctrine prevents relitigating issues decided by a district court acting in its appellate capacity, even when an appeal was not taken to the Supreme Court"). The law of the case doctrine "prevents consideration on a subsequent appeal of alleged errors that might have been, but were not, raised in the earlier appeal." *State v. Hawkins*, 155 Idaho 69, 72, 305 P.3d 513, 516 (2013).

IGWA's claimed defenses of "futile call" and "maximum beneficial use" have been denied and do not preclude the Director's continued conjunctive administration in this matter. IGWA did not appeal those prior denials[24] and the Idaho Supreme Court affirmed the Director's ability to employ an adjustable "methodology" for administration of the call pursuant to the "established evidentiary standards, presumptions, and burdens of proof." *See* 155 Idaho at 648-

[24] *See supra* at 25, n. 23.

53, 315 P.3d at 836-41. Any alleged errors with the methodology framework and analysis were similarly addressed in the *382 Decision*. Consequently, these decisions are "law of the case" and therefore preclude re-litigation IGWA's alleged "substantive errors" and defenses.

Further, whereas this Court previously reviewed the methodology framework and the analyses and calculations used by the Director, IGWA cannot now claim errors related to the "baseline year," "forecast supply," and "system efficiency" issues that were previously litigated. *See IGWA Br.* at 32. The Director has updated the data based upon additional years, and IGWA cannot collaterally attack the underlying technique and analysis now. In short, both the *res judicata* and "law of the case" doctrines bar IGWA's present arguments and the Court should deny its appeal accordingly.

III. Best Science Claims

IGWA casts an overly broad argument that the *Clear Springs* Court "has instructed the Director use the 'best science available'" in support of its claims related to the forecast supply, irrigated acres, and supplemental groundwater. IGWA distorts the Court's evaluation of ESPAM in that case as standing for a new standard that the Director somehow violated.[25] IGWA further alleges the Director abused his discretion by not accepting its proposed changes to technical matters in the methodology. *See IGWA Br.* at 32. IGWA's claim regarding its "more accurate methods" rings hollow, particularly in light of the standard of review under the Idaho APA.

On judicial review, courts cannot substitute their judgment for that of the agency as to the weight of the evidence on questions of fact. *See* I.C. § 67-5279(1); *Byrd v. Idaho State. Bd. of*

[25] The issue in *Clear Springs* concerned the Groundwater Users' claim that the Director failed to take into account a higher level of uncertainty in applying the model. *See* 150 Idaho at 812-15; 252 P.3d at 93-95. The Court found the Groundwater Users "failed to show that the Director abused his discretion in relying upon the model." *Id.* The case did not, as IGWA implies here, create a new standard of review different than what is provided by Idaho's APA. *See* I.C. § 67-5279.

Attorneys for A&B Irrigation District

BEFORE THE DEPARTMENT OF WATER RESOUCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **A&B IRRIGATION DISTRICT'S UNOPPOSED MOTION TO AMEND DEADLINES FOR REBUTTAL EXPERT REPORTS / DEPOSITIONS** **PARTIAL UNOPPOSED MOTION TO MODIFY RESPONSE DEADLINE TO PENDING MOTIONS FILED BY IGWA AND AMERICAN FALLS-ABERDEEN GROUND WATER DISTRICT**

COMES NOW, A&B IRRIGATION DISTRICT, by and through counsel of record, and pursuant to the Department's Rules of Procedure (IDAPA 37.01.01 et seq.) and the previous *Scheduling Order* (Oct. 7, 2025), and hereby moves the Hearing Officer to amend certain deadlines in this case as set forth below. This motion contains two parts: 1) related to the rebuttal expert report and deposition deadline; and 2) related to the motions filed by IGWA and American Falls-Aberdeen (AFA) Ground Water District on November 18, 2025.

Rebuttal Expert Reports / Depositions

In order to accommodate schedules for counsel and the parties' experts, A&B requests the Hearing Officer to amend the deadlines as follows:

Rebuttal Expert Reports	**December 19, 2025**
Deposition Deadline	**January 9, 2026**

Counsel for A&B has contacted counsel for AFA, IGWA, the Coalition of Cities, and Bonneville-Jefferson Ground Water District. All counsel do not oppose the request and have communicated their support for moving the deadlines as set forth above.

IGWA Motion / AFA Motion

IGWA filed a *Motion for Summary Judgment* and AFA filed a *Motion for Reconsideration et al.* on November 18, 2025. Pursuant to the Department's rules, any responses to these motions would be due within 14 days, or on Tuesday December 2, 2025. *See* Rule 220.02.b. A&B seeks to extend the deadline for a response to these motions on the following grounds based upon its counsel's schedule and upcoming conflicts.

First, counsel has three summary judgment motions to brief in litigation in the Kootenai County District Court and the Coeur d'Alene-Spokane River Basin Adjudication (CSRBA) District Court over the next two weeks, including an oral argument set for December 4, 2025. Second, counsel for A&B is preparing for the deposition of IDWR's witness Brian Ragan on Friday November 21, 2025. Next, counsel has a pending discovery response deadline set for December 1, 2025 in mitigation plan case CM-MP-2024-04 (Falls Water Company, Inc.). Third, next week is a holiday week with Thanksgiving falling on Thursday November 27, 2025. Counsel for A&B has plans to travel out of town to spend time with family, including a son, a

niece, and a nephew who will all be back visiting from college November 26th – 29th. Finally, counsel for A&B has an unavoidable conflict with a scheduled out-of-town meeting in another case set for December 2nd. Given these pending scheduling conflicts, and in order to provide sufficient time to prepare and file adequate responses to the IGWA and AFA motions filed just last evening, A&B requests a reasonable seven (7) day extension to the current response deadlines.

Rule of Procedure 220.02.f provides that "modifications to the time limits in this rule may be granted by the presiding officer for good cause shown." *See e.g. Prehn v. Hodge*, 161 Idaho 321, 326 (2016) ("A scheduling order may only be modified for good cause, and this Court will not reverse a district court's decision whether to consider a late-filed motion absent evidence that the district court abused its discretion"). In light of counsel's other litigation commitments and scheduled travel during the week of November 24th described above, the requisite "good cause" exists for the Hearing Officer to exercise his discretion and extend the response deadlines to the motions filed by IGWA and AFA. Stated another way, pressing work commitments and allowing some time to visit family for an important holiday meet the rule's "good cause" standard, particularly when the movants will not be prejudiced by the extension.

Counsel for A&B has conferred with counsel for the other parties to this case, and counsel for IGWA, the Coalition of Cities, and Bonneville-Jefferson Ground Water District have all stipulated to the following deadlines. However, counsel for AFA would not stipulate to this requested extension. Since the motions filed by IGWA and AFA are based on similar legal theories and seek similar relief, A&B submits that the following single response deadline would be the most efficient and appropriate for purposes of the parties' filings and the Hearing Officer's consideration:

Response to IGWA Summary Judgment Motion	**December 9, 2025**
Response to AFA Motion for Reconsideration	**December 9, 2025**

For the reasons set forth above, A&B respectfully requests an order granting this motion to extend the above-referenced deadlines. The motion is based upon the non-opposition of the other parties where noted, and the "good cause" related to A&B's counsel's schedules for other pending litigation matters and travel identified above. No oral argument is requested.

DATED this 19th day of November, 2025.

Attorneys for American Falls-Aberdeen Ground Water District

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **AMERICAN FALLS-ABERDEEN GROUND WATER DISTRICT'S RESPONSE TO A&B IRRIGATION DISTRICT'S PARTIAL UNOPPOSED MOTION TO MODIFY RESPONSE DEADLINE TO PENDING MOTIONS FILED BY IGWA AND AFA**

COMES NOW American Falls-Aberdeen Ground Water District ("AFA"), by and through undersigned counsel of record, pursuant to Rules 220.02.b of the Department's Rules of Procedure, and hereby responds to *A&B Irrigation District's Unopposed Motion to Amend Deadlines for Rebuttal Expert Reports/Depositions; Partial Unopposed Motion to Modify Response Deadline to Pending Motions Filed by IGWA and American Falls-Aberdeen Ground Water District* dated November 19, 2025 ("*A&B Extension Motion*").

AFA opposes the deadline for response briefs to AFA's *Motion to Reconsider Order Granting Hearing and Vacate Hearing or, Alternatively, to Clarify the Scope of the Hearing; Request for Expedited Ruling; Brief in Support* dated November 18, 2025 *("Motion to Reconsider")* proposed in the *A&B Extension Motion* because it would not expedite resolution of the *Motion to Reconsider*. AFA requested expedited ruling on its *Motion to Reconsider* because a prompt ruling would allow the parties to avoid expending substantial resources on discovery and other prehearing matters if, on reconsideration, the Director disposes of some or all issues that A&B presented in this contested case. Moreover, A&B requests a **seven** day extension of the normal response deadline, to December 9, 2025, the same week counsel are working to schedule depositions in this matter.[1] AFA would not oppose a response deadline of November 26, and can promise a prompt reply on December 2. Accordingly, AFA requests that the *A&B Extension Motion* be denied.

Respectfully submitted this 20th day of November 2025.

Sarah A. Klahn, ISB #7928

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **FINAL ORDER ESTABLISHING 2025 REASONABLE CARRYOVER** ***(METHODOLOGY STEP 9)***

FINDINGS OF FACT

1. On July 19, 2023, the Director ("Director") of the Idaho Department of Water Resources ("Department") issued the *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("*Methodology Order*"). The *Methodology Order* establishes nine steps for determining material injury to members of the Surface Water Coalition ("SWC"). This order applies step nine, the final step of the *Methodology Order*, for the 2025 water year.

2. The *Methodology Order* describes step 9 as follows:

> Step 9: Following the end of the irrigation season (on or before November 30), the Department will determine the total actual volumetric demand and total actual [crop water need] for the entire irrigation season. This information will be used for the analysis of reasonable carryover shortfall, selection of future [base line years], and for the refinement and continuing improvement of the method for future use.
>
> On or before November 30, the Department will issue estimates of actual carryover and reasonable carryover shortfall volumes for all members of SWC. These estimates will be based on, but not limited to, the consideration of the best available water diversion and storage data from Water District 01, return flow monitoring, comparative years, and [reasonable in-season demand]. These estimates will establish the obligation of junior ground water users in providing water to the SWC for reasonable carryover shortfall. Fourteen (14) days following the issuance by the Department of reasonable carryover shortfall obligations, junior ground water users will be required to establish, to the satisfaction of the Director, their ability to supply a volume of storage water or to conduct other approved mitigation activities that will provide water to the injured members of the SWC equal to the reasonable carryover shortfall for all injured members of the SWC. If junior ground water users cannot provide this information, the Director will issue an order curtailing junior ground water rights. A transient ESPAM simulation will be run to determine the priority date of water rights that must be curtailed to produce the reasonable

carryover shortfall volume by September 30 of the following year. Curtailment will be simulated within the area of common ground water supply, as described by [Rule 50.01 of the Department's Rules for Conjunctive Management of Surface and Ground Water Resources].[1]

Methodology Order, at 45 (footnote added).

3. The following table summarizes the 2025 irrigation season diversions and crop water need for each SWC entity. All values are reported in acre-feet ("AF"). These values are used to determine entity-specific season-ending reasonable in-season demand ("RISD") values for the in-season demand shortfall table.

Entity	Demand[2]	Crop Water Need
A&B	66,772	33,341
AFRD2	478,369	152,966
BID	282,546	101,624
Milner	68,320	31,448
Minidoka	362,365	188,837
NSCC	1,053,354	353,302
TFCC	1,135,302	462,347

4. The following table summarizes the final calculated 2025 in-season demand shortfall values in AF, if any, for each member of the SWC. The values in this table are different from those in the April 16, 2025 *Final Order Regarding April 2025 Forecast Supply (Methodology Steps 1–3)* ("*April Forecast Supply Order*"), the July 10, 2025 *Order Revising April 2025 Forecast Supply and Continuing May 16, 2025 Curtailment Order (Methodology Steps 5 & 6)* ("*July Order*"), and the September 11, 2025 *Order Revising July 2025 Forecast Supply (Methodology Steps 7–8)* ("*September Order*"). The differences are due to changes in total supply and RISD that reflect diversion and ET data not available when the *April Forecast Supply Order*, the *July Order*, and the *September Order* were issued. The second column of the summary table contains the total natural flow diversions from April 1 to October 31 for each SWC member.[3] The third column summarizes the natural flow adjustments, which include natural flow delivered for recharge[4] and natural flow delivered to Southwest Irrigation District

[1] In 2024, the Idaho Legislature established a new area of common ground water supply boundary for the Eastern Snake Plain Aquifer in Idaho Code § 42-233c. The new boundary is currently the ESPAM2.2 model boundary, but the boundary may be expanded by the Director in the future. I.C. § 42-233c(1)–(2). The Department used the ESPAM2.2 model boundary in the model simulation for this order.

[2] The "Demand" for each SWC entity is equal to each entity's 2025 April–October diversions.

[3] The natural flow diverted was calculated from the preliminary daily water right accounting records located here: https://research.idwr.idaho.gov/apps/Hydrologic/Accounting/.

[4] Natural flow recharge values represent accomplished recharge through the Idaho Water Resource Board's recharge water rights as of October 31, 2025.

("SWID").[5] The fourth column contains the preliminary storage allocations reported from the July 15, 2025 Water District 01 storage report.[6] The fifth column summarizes storage adjustments due to the application of the Minidoka Credit.[7] The sixth column contains the total supply available to each SWC member and is calculated by summing columns two through five. The seventh column contains the calculated RISD. RISD is calculated for each SWC entity using demand, crop water need, and project efficiency. The demand shortfall in the last column is calculated by subtracting the RISD from the total supply. The demand shortfall is zero when the total supply exceeds the RISD. The completed application of the methodology order results in a final net in-season demand shortfall volume of 49,100 AF to TFCC for the 2025 irrigation season.

Entity	Natural Flow Diverted through 10/31	Natural Flow Adjustment	Preliminary Storage Allocation	In-Season Storage Allocation Adjustment	Total Supply	RISD	Demand Shortfall
A&B	9,547	-	120,473	-	130,020	56,868	0
AFRD2	90,666	(1,441)	383,912	1,000	474,137	443,825	0
BID	128,387	(2,197)	214,990	5,130	346,310	240,938	0
Milner	14,687	(1,111)	81,420	-	94,996	57,470	0
Minidoka	162,476	-	338,930	8,370	509,776	376,548	0
NSCC	448,541	(12,466)	798,776	(7,750)	1,227,101	968,232	0
TFCC	880,736	(988)	233,880	(6,750)	1,106,878	1,155,974	49,100

5. The following table summarizes the end of season reasonable carryover shortfall calculation for 2025. All values are reported in AF. The second column of the table contains the preliminary storage allocations reported from the July 15, 2025 Water District 01 storage report. The third column summarizes adjustments for storage water due to the application of the Minidoka Credit. The fourth column contains the total storage water use reported from the October 31, 2025 Water District 01 water right accounting report.[8] The fifth column summarizes adjustments for water delivered through the SWC member's canals for use by non-SWC members.[9] The sixth column contains the actual carryover volumes as defined by the *Methodology Order*, *see Methodology Order*, at 45, and is calculated by subtracting the sum of columns four and five from the sum of columns two and three. The seventh column contains the

[5] Further information regarding these adjustments is provided in Attachment A. *See* "Natural Flow Adjustment" column *infra* Attachment A.

[6] The preliminary storage allocations can be found on Water District 01's website: https://www.waterdistrict1.com/current-data/.

[7] The Minidoka Credit is a long existing exchange of stored water among AFRD2, BID, MID, NSCC, and TFCC that has been incorporated into an agreement of those entities and accepted by the SRBA district court. Further information regarding these adjustments is provided in Attachment A. *See* "In-Season Storage Adjustment" column *infra* Attachment A.

[8] Data retrieved from the preliminary daily water right accounting database between November 5–10, 2025.

[9] Further information regarding these adjustments is provided in Attachment A. *See* "Storage Use Adjustment" column *infra* Attachment A (Storage Use Adjustment values include storage assignments reported on the Water District 01 Rental Pool and Adjustment Worksheet as of November 5, 2025).

reasonable carryover volumes established in the *Methodology Order*. *Methodology Order*, at 31. The reasonable carryover shortfall in the last column is zero when the actual carryover is greater than the reasonable carryover, otherwise it is calculated as the difference between reasonable carryover and the actual carryover volume for each member of the SWC. Completed application of the Methodology determines AFRD2 has a reasonable carryover shortfall of 20,932 AF and TFCC has a reasonable carryover shortfall of 65,824 AF. No other members of the SWC have a reasonable carryover shortfall.

Entity	Preliminary Storage Allocation	In-Season Storage Allocation Adjustment	Storage Use	Storage Use Adjustment	Actual Carryover	Reasonable Carryover	Reasonable Carryover Shortfall
A&B	120,473	-	57,225	0	63,248	22,700	0
AFRD2	383,912	1,000	395,244	(6,100)	(4,232)	16,700	20,932
BID	214,990	5,130	157,262	0	62,858	0	0
Milner	81,420	-	55,878	(1,134)	26,676	16,100	0
Minidoka	338,930	8,370	199,017	(35)	148,318	0	0
NSCC	798,776	(7,750)	630,279	(13,000)	173,747	113,300	0
TFCC	233,880	(6,750)	257,166	(1,612)	(28,424)	37,400	65,824

6. The above determinations are based on water diversion and storage data from Water District 01. Although these preliminary numbers are subject to revision by Water District 01 during its final accounting for 2025, revisions will not become available until after issuance of this order. For this reason, these estimates establish the final obligation of junior ground water users in supplying water to the SWC for reasonable carryover shortfall. The above determination of reasonable carryover shortfall is carried forward from the *Methodology Order* and considers the best available water diversion and storage data, comparative water years, and RISD. *Methodology Order*, at 45.

CONCLUSIONS OF LAW

1. The *Methodology Order* states that, on or before November 30, the Director will estimate the SWC's reasonable carryover shortfall, if any, for 2025. *Id*. If a reasonable carryover shortfall is established, junior-priority ground water users shall have fourteen days to demonstrate, to the satisfaction of the Director, "their ability to supply a volume of storage water or to conduct other approved mitigation activities that will provide water to the injured members of the SWC equal to the reasonable carryover shortfall for all injured members of the SWC." *Id*.

2. The evidentiary standard to apply in conjunctive administration of hydraulically connected water rights is clear and convincing. *A&B Irr. Dist. v. Idaho Dept. of Water Resources*, 153 Idaho 500, 524, 284 P.3d 225, 249 (2012).

3. "Clear and convincing evidence refers to a degree of proof greater than a mere preponderance." *Idaho State Bar v. Topp*, 129 Idaho 414, 416, 925 P.2d 1113, 1115 (1996) (internal quotations removed). "Clear and convincing evidence is generally understood to be '[e]vidence indicating that the thing to be proved is highly probable or reasonably certain.'" *State*

v. Kimball, 145 Idaho 542, 546, 181 P.3d 468, 472 (2008) (citing *In re Adoption of Doe*, 143 Idaho 188, 191, 141 P.3d 1057, 1060 (2006)); *see also Idaho Dept. of Health & Welfare v. Doe*, 150 Idaho 36, 41, 244 P.3d 180, 185 (2010).

4. Consistent with Finding of Fact 5, the Director concludes by clear and convincing evidence there is a 20,932 AF volume of material injury to AFRD2's reasonable carryover and a 65,824 AF volume of material injury to TFCC's reasonable carryover. No other members of the SWC have a reasonable carryover shortfall.

5. Because not all junior ground water users are participants in an approved mitigation plan, the Director must determine a priority date for curtailment that will result in an accumulation of water to the reaches of the Snake River from which the SWC members divert, in an amount equal to the established reasonable carryover shortfall. The water must accrue to the near Blackfoot to Minidoka reach by September 30 of the following year. Using the Eastern Snake Plain Aquifer Model ("ESPAM") Version 2.2, the Director determines curtailment of ground water rights junior to August 15, 1952, is predicted to produce a volume of at least 86,756 AF in the near Blackfoot to Minidoka reach by September 30, 2026.

6. According to the *Methodology Order*, fourteen days following issuance of this order, which establishes the reasonable carryover shortfall obligation, junior ground water users must "establish, to the satisfaction of the Director, their ability to supply a volume of storage water or to conduct other approved mitigation activities that will provide water to the injured members of the SWC equal to the reasonable carryover shortfall for all injured members of the SWC." *Methodology Order*, at 45. Otherwise, "the Director will issue an order curtailing junior ground water rights." *Id*.

ORDER

Based upon the foregoing, IT IS HEREBY ORDERED that, junior ground water users holding consumptive ground water rights within the Eastern Snake Plain Aquifer area of common ground water supply bearing priority dates junior to August 15, 1952, must mitigate for the reasonable carryover shortfall of 86,756 AF in accordance with an approved mitigation plan.[10] If, within fourteen days following issuance of this order, a junior ground water user fails to establish, to the satisfaction of the Director, their ability to mitigate for the reasonable carryover shortfall of 86,756 AF in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water use.

[10] Participants in the mitigation plans approved for the Ground Water Districts, SWID, the Coalition of Cities, and the Water Mitigation Coalition do not need to establish their ability to mitigate for their proportionate share of the reasonable carryover shortfall. However, due to the nature of A&B Irrigation District's approved mitigation plan, A&B must establish to the satisfaction of the Director its ability to mitigate for its proportionate share of the reasonable carryover shortfall, which is 457 AF.

IT IS FURTHER ORDERED that this final order concludes the application of the *Methodology Order* to the climatic, hydrologic, and agronomic facts of the 2025 irrigation season.

DATED this 21st day of November 2025.

MATHEW WEAVER
Director

EXPLANATORY INFORMATION TO ACCOMPANY A FINAL ORDER

(To be used in connection with actions when a hearing was **not** held)

The accompanying document is a "**Final Order**" issued by the Idaho Department of Water Resources ("Department") pursuant to Idaho Code § 67-5246.

PETITION FOR RECONSIDERATION

(*See* Idaho Code § 67-5246(4))

Any party may file a petition for reconsideration of this final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: the petition must be received by the Department within this fourteen (14) day period.** The presiding officer will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law.

REQUEST FOR HEARING

(*See* Idaho Code § 42-1701A(3))

Unless the right to a hearing before the Department or the Water Resource Board is otherwise provided by statute, any person aggrieved by any final decision, determination, order or action of the Director, and who has not previously been afforded an opportunity for a hearing on the matter may request a hearing pursuant to Idaho Code § 42-1701A(3). A written petition to the Director contesting this final order and requesting a hearing must be filed with the Department by any aggrieved person **within fifteen (15) days after service of this final order**.

CERTIFICATE OF SERVICE

(*See* IDAPA 37.01.01.053, 37.01.01.202)

All documents filed with the Department in connection with a petition for reconsideration or a request for hearing of this final order shall be served on all other parties to the proceedings in accordance with Rules of Procedure 53 and 202.

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	**Docket No. CM-DC-2010-001** **ORDER GRANTING A&B'S MOTION TO AMEND DEADLINES; SETTING DEADLINE TO PROVIDE STAFF MEMO**

BACKGROUND

On October 7, 2025, Hearing Officer Schroeder issued an *Order on Intervention, Authorizing Discovery, Email Service, and Scheduling; Order Granting Motion for Subpoena; Notice of Hearing* ("*Scheduling Order*"), establishing a deadline of December 5, 2025 for the exchange of rebuttal expert reports and a deadline of December 19, 2025 for completing all depositions. *Scheduling Order*, at 6.

On November 18, 2025, the Idaho Department of Water Resources ("Department") received *American Falls-Aberdeen Ground Water District's Motion to Reconsider Order Granting Hearing and Vacate Hearing or, Alternatively, to Clarify the Scope of Hearing; Request for Expedited Ruling; Brief in Support* ("*American Falls Motion*"), requesting an expedited ruling from the Director. *American Falls Motion*, at 8. That same day, Idaho Ground Water Appropriators, Inc. ("IGWA") filed its *Motion for Summary Judgment* ("*IGWA Motion*").

On November 19, 2025, A&B Irrigation District ("A&B") filed *A&B Irrigation District's Unopposed Motion to Amend Deadlines for Rebuttal Expert Reports/Depositions; Partial Unopposed Motion to Modify Response Deadline to Pending Motions Filed by IGWA and American Falls-Aberdeen Ground Water District* ("*A&B Motion*"), requesting an extension of both discovery-related deadlines and response deadlines for the *American Falls Motion* and *IGWA Motion*. *A&B Motion*, at 1.

On November 20, 2025, the Department received *American Falls-Aberdeen Ground Water District's Response to A&B Irrigation District's Partial Unopposed Motion to Modify Response Deadline to Pending Motions Filed by IGWA and AFA* ("*American Falls Response*"), arguing that extending the response deadline would preclude an expedited ruling on the *American Falls Motion*. *American Falls Response*, at 2.

ANALYSIS

I. Extending Discovery-Related Deadlines

A&B, American Falls, IGWA, the Coalition of Cities, and Bonneville-Jefferson Ground Water District ("Bonneville-Jefferson") jointly requested an extension of the deadlines associated with rebuttal expert reports and depositions. For good cause shown, the Hearing Officer will exercise his discretion to grant the unopposed portion of the *A&B Motion* and extend the deadlines as requested.

II. Extending Motion Response Deadlines

A&B also requests to extend the deadline for responding to the *American Falls Motion* and the *IGWA Motion* to December 9, 2025. *A&B Motion*, at 4. Counsel for A&B demonstrates that it has several upcoming litigation commitments, discovery deadlines before the Department on several matters, and personal holiday plans. *Id.* at 2–3. IGWA, the Coalition of Cities, and Bonneville-Jefferson all stipulated to this request. *Id.* at 3. However, American Falls declined to stipulate given its interest in receiving an expedited decision on the *American Falls Motion*. *American Falls Response*, at 2.

Rule 220.02.f. of the Department's Rules of Procedure ("Rules") authorizes the hearing officer to modify the time limits for responding to motions "for good cause shown." IDAPA 37.01.01.220.02.f. The Hearing Officer finds good cause here, including the prompt filing of the *A&B Motion* and the significant scheduling constraints outlined in its motion. American Falls' opposition is not persuasive as it does not demonstrate how extending the response deadline one week will impact the expedited consideration of the *American Falls Motion*. Therefore, the Hearing Officer will grant the *A&B Motion* and extend the response deadline to December 9, 2025.

III. Agency Staff Memo

Pursuant to Rule 602, a hearing officer "may ask agency staff to prepare reports or memoranda to be used in deciding a contested case." IDAPA 37.01.01.602. The Hearing Officer finds it appropriate and helpful for the Department staff identified to testify at the hearing to prepare a memorandum outlining the subjects of the staff's expected testimony at the hearing.

ORDER

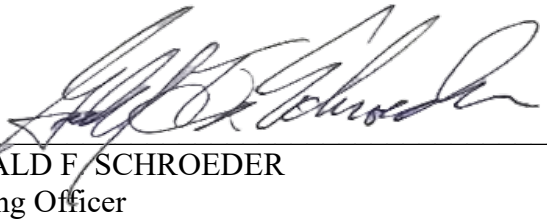
IT IS HEREBY ORDERED that the *A&B Irrigation District's Unopposed Motion to Amend Deadlines for Rebuttal Expert Reports/Depositions; Partial Unopposed Motion to Modify Response Deadline to Pending Motions Filed by IGWA and American Falls-Aberdeen Ground Water District* is GRANTED.

IT IS FURTHER ORDERED that the Department staff identified to testify at the hearing shall file an agency staff memorandum pursuant to IDAPA 37.01.01.602 outlining the subjects of their expected testimony.

IT IS FURTHER ORDERED that the *Scheduling Order* is AMENDED to add or modify the following deadlines:

Dec. 9, 2025	Deadline for A&B to respond to the *American Falls Motion* and *IGWA Motion*.
Dec. 16, 2026	Deadline for the parties to file any reply brief.
Dec. 19, 2025	Deadline for the parties to exchange rebuttal expert reports, if any. If an updated curricula vitarum for the rebuttal expert witness was not previously disclosed, one shall be provided with their report.
Dec. 30, 2026	Deadline for the Department staff to provide an agency staff memorandum explaining what they anticipate testifying about at the hearing.
Jan. 9, 2026	Deadline for the parties to complete all depositions.

DATED this 25th day of November 2025.



GERALD F. SCHROEDER
Hearing Officer

BEFORE THE DEPARTMENT OF WATER RESOUCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **A&B IRRIGATION DISTRICT'S REQUEST FOR HEARING / EVIDENCE OF ABILITY TO MITIGATE** **REQUEST FOR STAY & INFORMAL PROCEEDINGS**

COMES NOW, A&B IRRIGATION DISTRICT ("A&B" or "District"), by and through counsel of record, and hereby requests a hearing in the above-referenced matter pursuant to I.C. § 42-1701A(3) and submits the following list of initial issues regarding the Director's *Final Order Establishing 2025 Reasonable Carryover (Methodology Step 9)* ("Step 9 Order") issued on November 21, 2025. A&B reserves the right to supplement this request as necessary.

1) Whether the "actual carryover" volumes listed for AFRD#2 and TFCC in the Step 9 are correct based upon storage assignments pursuant to other approved mitigation plans.
2) Whether the reasonable carryover shortfall is correct based upon actual carryover volumes for AFRD#2 and TFCC.
3) Whether the order's identified proportionate share (457 acre-feet) of the reasonable carryover shortfall injury (86,756 acre-feet) to AFRD#2 and TFCC is calculated correctly based upon issues #1 and #2 above.
4) Whether the order's identified proportionate share (457 acre-feet) of the reasonable carryover shortfall injury (86,756 acre-feet) to AFRD#2 and TFCC is calculated correctly based upon A&B's actual diversion and use of water rights that are subject to the identified curtailment date (junior to August 15, 1952).
5) Whether A&B should be allowed to mitigate for a portion of groundwater right 36-15127A (approximately 508.3 acres) that was delivered surface water during the 2025 irrigation season, as opposed to mitigating for all 1,886.4 acres authorized by the water right.
6) Whether the steady-state use of the ESPAM 2.2 in identifying A&B's proportionate share is consistent with the transient use of the model in identifying ground water rights subject to curtailment as outlined in the *Sixth Methodology Order*.
7) For other issues and matters that may be discovered in this proceeding.

EVIDENCE OF ABILITY TO MITIGATE

A&B has an approved mitigation plan that acknowledges the District's ability to assign storage water to injured SWC members. *See Final Order Approving Amended Mitigation Plan* at 5 (CM-MP-2015-003) (Jan. 10, 2025). A&B has an estimated 63,248 acre-feet of carryover

storage in its space (American Falls and Palisades Reservoirs). *See* Step 9 Order at 4. In light of the above issues, A&B's prior assignment and TFCC's acceptance of 1,252 acre-feet[1] of mitigation storage during the 2025 irrigation season, and Water District 01's lease application deadline (November 30th), A&B is not submitting an executed lease at this time for the 2025 irrigation season.[2] *See* Procedure 4.3.104; *Water District 1 2025 Rental Pool Procedures*.

REQUEST FOR INFORMAL PROCEEDINGS / STAY

Similar issues to those identified above are presently pending in a contested case set for hearing January 14-16, 2026. *See Order Granting A&B Irrigation District's Request for Hearing* (Sept. 3, 2025); *Order on Intervention et al. / Notice of Hearing* (Oct. 7, 2025). As opposed to having the same issues addressed in multiple contested cases where the results of the prior proceeding and any final order may impact the calculations and proportionate share of the reasonable carryover shortfall assigned to A&B, and assuming A&B's request for hearing is granted, the District would request the Director to stay any formal proceedings.

Moreover, in the interests of efficiency for the parties involved and the agency, A&B requests the opportunity for informal proceedings to address certain procedures regarding the Step 9 Order and its implementation. *See* IDWR Rule of Procedure 100, 101. Notably, A&B has questions about the timing of any storage water assignments with respect to Water District 01's final accounting for the 2025 irrigation season, the storage allocation for 2026, and the

[1] The prior assignment may be sufficient mitigation for purposes of any reasonable carryover injury as to be determined between A&B and TFCC.

[2] A&B acknowledges that the Director may include the District's junior priority water rights on list of rights subject to a forthcoming curtailment order. However, A&B has previously advised the Director about its conversion acres and intent to continue delivering surface water to those acres the following irrigation season, and the Director has accepted that representation. *See Travis L. Thompson December 13, 2024 Letter to Director Mat Weaver.* A&B intends to continue these conversions during the 2026 irrigation season.

implications, if any, of the 2024 reasonable carryover shortfall and its implementation for the present finding. *See Order Revising April 2025 Forecast Supply and Continuing May 16, 2025 Curtailment Order (Methodology Steps 5 & 6)* at 11 ("This year, no water is required to be allocated to the SWC pursuant to Step 5 related to a reasonable carryover shortfall because no junior water users secured water in 2024 to fulfill the carryover shortfall"). A&B requests the opportunity to address these questions with the agency and other parties accordingly.

DATED this 2nd day of December, 2025.

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **FINAL ORDER CURTAILING GROUND WATER RIGHTS JUNIOR TO AUGUST 15, 1952**

The Director of the Idaho Department of Water Resources ("Department") finds, concludes, and orders as follows:

FINDINGS OF FACT

1. On July 19, 2023, the Department issued its *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("*Methodology Order*"). The *Methodology Order* established nine steps for determining material injury to members of the Surface Water Coalition ("SWC").[1]

2. On November 21, 2025, the Director issued the *Final Order Establishing 2025 Reasonable Carryover (Methodology Step 9)* ("*Step 9 Order*"). Therein, the Director concluded there is a 65,824-acre-foot ("AF") volume of material injury to Twin Falls Canal Company's reasonable carryover and a 20,932 AF volume of material injury to AFRD2. *Step 9 Order*, at 5. The Director concluded no other members of the SWC have a reasonable carryover shortfall. *Id*.

3. The Director ordered that within fourteen days of November 21, 2025, "junior ground water users holding consumptive ground water rights within the Eastern Snake Plain Aquifer area of common ground water supply bearing priority dates junior to August 15, 1952, must mitigate for the reasonable carryover shortfall of 86,756 AF in accordance with an approved mitigation plan." *Id*. The Director also ordered that, if such junior ground water users cannot establish that they can mitigate for the reasonable carryover shortfall "in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water use." *Id.*

[1] The SWC is comprised of A&B Irrigation District, American Falls Reservoir District #2, Burley Irrigation District, Milner Irrigation District, Minidoka Irrigation District, North Side Canal Company, and Twin Falls Canal Company.

4. There are currently five approved mitigation plans in place responding to the SWC delivery call:[2]

(1) Docket No. CM-MP-2007-001 for the benefit of J.R. Simplot Company, Basic American Foods, and ConAgra Foods Packaged Foods Company, Inc., d/b/a Lamb-Weston (collectively, the "Water Mitigation Coalition");

(2) Docket No. CM-MP-2010-001 for the benefit of the Southwest Irrigation and Goose Creek Irrigation Districts (collectively, "SWID");

(3) Docket No. CM-MP-2015-003 for the benefit of the A&B Irrigation District ("A&B");

(4) Docket No. CM-MP-2019-001 for the benefit of certain cities commonly referred to as the "Coalition of Cities," the City of Idaho Falls, and the City of Pocatello (collectively, the "Cities").

(5) Docket No. CM-MP-2024-003 for the benefit of Aberdeen-American Falls Ground Water District, Bingham Ground Water District, Bonneville-Jefferson Ground Water District, Carey Valley Ground Water District, Henry's Fork Ground Water District, Jefferson-Clark Ground Water District, Madison Ground Water District, Magic Valley Ground Water District, and North Snake Ground Water District (collectively, the "Ground Water Districts");

5. In the *Step 9 Order*, the Director found that due to the nature of the approved mitigation plans for the Water Mitigation Coalition, SWID, the Cities, and the Ground Water Districts, these entities do not need to establish that they can mitigate for their proportionate share of the reasonable carryover shortfall. *Step 9 Order*, at 5 n.10. However, the Director found that due to the nature of A&B's mitigation plan, A&B must establish to the satisfaction of the Director its ability to mitigate for its proportionate share of the reasonable carryover shortfall, which is 457 AF. *Id.*

6. In response to the *Step 9 Order's* requirement for A&B to establish how it will mitigate its proportionate share of the reasonable carryover shortfall, A&B submitted *A&B Irrigation District's Request for Hearing/Evidence of Ability to Mitigate* ("*Mitigation Response*"). In the *Mitigation Response*, A&B stated that it does not intend to submit a lease demonstrating that it has secured the required storage for the benefit of the injured SWC members at this time. *Mitigation Response* at 3. A&B acknowledged that this may result in the Director including A&B's junior priority water rights in the list of water rights subject to this curtailment order. *Id*.

CONCLUSIONS OF LAW

1. Idaho Code § 42-602 authorizes the Director to supervise water distribution within

[2] In addition, there are currently five mitigation plans pending before the Department that have not been approved: (1) CM-MP-2025-004 (Big Lost River Ground Water District); (2) CM-MP-2025-003 (Bingham); (3) CM-MP-2025-001 (Pancheri); (4) CM-MP-2024-004 (Falls Water Co.); and (5) CM-MP-2024-002 (Falls Irrigation District). Because these plans are unapproved, water users may not rely on them for protection from curtailment at this time. In addition, CM-MP-2025-002 (Simplot) is no longer an effective mitigation plan because it was approved only for the 2025 irrigation season.

water districts:

> The director of the department of water resources shall have direction and control of the distribution of water from all natural water sources within a water district to the canals, ditches, pumps and other facilities diverting therefrom. Distribution of water within water districts created pursuant to section 42-604, Idaho Code, shall be accomplished by watermasters as provided in this chapter and supervised by the director.
>
> The director of the department of water resources shall distribute water in water districts in accordance with the prior appropriation doctrine. The provisions of chapter 6, title 42, Idaho Code, shall apply only to distribution of water within a water district.

2. As explained above, within fourteen days of November 21, 2025, "junior ground water users holding consumptive ground water rights within the Eastern Snake Plain Aquifer area of common ground water supply bearing priority dates junior to August 15, 1952, must mitigate for the reasonable carryover shortfall of 86,756 AF in accordance with an approved mitigation plan." *Step 9 Order*, at 5. If a junior ground water user does not establish that they can mitigate for the reasonable carryover shortfall in accordance with an approved mitigation plan, the ground water user will be subject to this "order curtailing the junior-priority ground water use." *Id.*

3. Due to the nature of the approved mitigation plans for the Water Mitigation Coalition, SWID, the Cities, and the Ground Water Districts, these entities do not need to establish that they can mitigate for their proportionate share of the reasonable carryover shortfall. Junior ground water users entitled to protection under the Water Mitigation Coalition's, SWID's, the Cities', or the Ground Water Districts' approved mitigation plans will not be subject to curtailment related to the reasonable carryover shortfall.

4. A&B has failed to provide timely documentation that it has adequately secured the storage water necessary to mitigate fully for its obligation under its approved mitigation plan. Accordingly, to ensure that A&B's ground water rights junior to August 15, 1952, are curtailed during the 2026 irrigation season, the Director will include A&B's water rights junior to August 15, 1952, on the curtailment list in Attachment A to this order.

5. The Director concludes that junior-priority ground water users who have not established that they can mitigate for the reasonable carryover shortfall in accordance with an approved mitigation plan should be curtailed. Junior-priority ground water users subject to curtailment are listed in Attachment A to this order.[3]

[3] On November 26, 2025, the Director expanded the ESPA ACGWS to include the Little Lost River Tributary basin. The administration of the newly included area of the Little Lost River Tributary Basin will be phased-in to the SWC delivery call proceeding and junior ground water rights newly included in the ESPA ACGWS are not included in the attached curtailment list. The Director anticipates issuing additional orders related to the expansion of the ESPA ACGWS. After that, the Director will issue an order addressing how the water rights in the newly expanded ESPA ACGWS will be phased-in.

ORDER

Based upon and consistent with the foregoing, IT IS HEREBY ORDERED that effective December 8, 2025, ground water users holding water rights bearing priority dates junior to August 15, 1952, within the Eastern Snake Plain Aquifer area of common ground water supply ("ESPA ACGWS") and listed in Attachment A to this order, shall curtail/refrain from diversion and use of ground water pursuant to those water rights unless notified by the Department that the curtailment order has been modified or rescinded as to their water rights.

IT IS FURTHER ORDERED that holders of ground water rights listed in Attachment A to this order, who were not previously listed in Attachment A to the July 25, 2025 Curtailment Order, may seek to participate in an approved mitigation plan through a ground water district and shall have fifteen days from the date of this order to join, solely for mitigation purposes, the ground water district situated nearest the lands to which the water rights are appurtenant. *See* H.B. 737a, 58th Leg., 2d Reg. Sess. (Idaho 2006) (*Act Relating to the Administration of Ground Water Rights Within the Eastern Snake River Plain*); *see also* I.C. § 42-5259. The water rights that have fifteen days to join a ground water district are identified in Attachment A.

IT IS FURTHER ORDERED that watermasters for the water districts within the ESPA ACGWS who regulate ground water are directed to review the water rights listed in Attachment A to this order and begin the curtailment process.

IT IS FURTHER ORDERED that this order applies to consumptive ground water rights, including but not limited to, agricultural, commercial, industrial, and municipal uses. This order excludes ground water rights used for *de minimis* domestic purposes where such domestic use is within the limits of the definition set forth in Idaho Code § 42-111 and ground water rights used for *de minimis* stock watering where such stock watering use is within the limits of the definitions set forth in Idaho Code § 42-1401A(11), pursuant to IDAPA 37.03.11.020.11.

Dated 8th day of December 2025.

EXPLANATORY INFORMATION TO ACCOMPANY A FINAL ORDER

(To be used in connection with actions when a hearing was **not** held)

(Required by Rule of Procedure 740.02)

The accompanying order is a "**Final Order**" issued by the department pursuant to section 67-5246, Idaho Code.

PETITION FOR RECONSIDERATION

Any party may file a petition for reconsideration of a final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: The petition must be received by the Department within this fourteen (14) day period.** The department will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law. See section 67-5246(4), Idaho Code.

REQUEST FOR HEARING

Unless the right to a hearing before the director or the water resource board is otherwise provided by statute, any person who is aggrieved by the action of the director, and who has not previously been afforded an opportunity for a hearing on the matter shall be entitled to a hearing before the director to contest the action. The person shall file with the director, within fifteen (15) days after receipt of written notice of the action issued by the director, or receipt of actual notice, a written petition stating the grounds for contesting the action by the director and requesting a hearing. See section 42-1701A(3), Idaho Code. **Note: The request must be received by the Department within this fifteen (15) day period.**

Attorneys for A&B Irrigation District

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **A&B IRRIGATION DISTRICT'S CONSOLIDATED RESPONSE TO AFA MOTION / IGWA MOTION FOR SUMMARY JUDGMENT**

COMES NOW, A&B IRRIGATION DISTRICT ("A&B or "District"), by and through counsel of record, pursuant to IDAPA 37.01.01.220.02.b[1] and the *Order Granting A&B's Motion to Amend Deadlines* (Nov. 25, 2025), and hereby submits this consolidated response to the *American Falls-Aberdeen Ground Water District's Motion to Reconsider et al.* ("AFA Motion") and the *Idaho Ground Water Appropriators, Inc.'s Motion for Summary Judgment* ("IGWA Motion") filed on November 18, 2025. This response is supported by the *Declaration of Travis L. Thompson* ("*Thompson Dec.*") and exhibits attached thereto. For the reasons set forth below, the Director and/or Hearing Officer should deny the motions.

[1] Citations to the *Rules of Procedure of the Idaho Department of Water Resources and the Water Resource Board* (IDAPA 37.01.01 et seq.) (3-18-22) will hereinafter be referred to shorthand as "Rule."

INTRODUCTION

AFA and IGWA generally ask the Department to vacate and dismiss the upcoming hearing on res judicata grounds. Both parties mistakenly believe the June 2023 hearing decided the questions presently pending before the Hearing Officer. The Director granted A&B's requests for hearing on the April and July 2025 As Applied Orders, and this contested case will provide an opportunity for the parties to exhaust their administrative remedies and create a full record for a decision on these important issues.

Issues regarding mitigation responsibility have been subject to confusion and uncertainty over the past two years, largely due to the actions of the Ground Water Districts. Whereas the agency applied a steady-state model analysis to determine a curtailment priority date and a storage water mitigation obligation from 2016 through 2022, that changed in the spring of 2023 when the Director moved to a "transient" analysis, but only for identifying the curtailment priority date. A&B had successfully implemented a surface water conversion project of 3,573 acres since 2016 and the Director did not require the district to mitigate for groundwater rights covered by those conversions.[2] The earliest groundwater right priority date for curtailment during those first seven years was June 14, 1977. A&B's senior groundwater right 36-2080 with a September 9, 1948 priority date was not subject to the delivery call in any way.

Between 2023 and 2024 the Ground Water Districts filed a flurry of new mitigation plans and proposed to mitigate under the decades-old 2009 Storage Water Plan. The Director concluded the Districts could mitigate under the 2009 Plan, but such mitigation would cover all groundwater users on the ESPA, thereby obviating A&B's obligation altogether. As described below, this was the state of the mitigation questions at the time of the June 2023 hearing. Certain

[2] *See Final Order Curtailing Non-Enlargement Ground Water Rights Junior to April 12, 1994, and Enlargement Ground Water Rights Junior to March 14, 1971* at 4 (June 7, 2019) (CM-DC-2010-001).

districts attempted to mitigate pursuant to a "transient" model analysis, while others tried to parse out their mitigation share through different methods. Eventually the Surface Water Coalition and nine affected Ground Water Districts entered into a new stipulated mitigation plan in the fall of 2024. As the Director continued to issue new As Applied Orders throughout the irrigation season, A&B's 1948 groundwater right was subject to the call for the first time in July 2025. How IDWR determines a proportionate share of the mitigation obligation had not been previously decided or applied to A&B's senior right. A&B exercised its statutory right to request a hearing and the consolidated contested case has been proceeding for several months.

The Department's rules advise that "[e]vidence should be taken by the agency to assist the parties' development of a record, not excluded to frustrate that development." IDAPA 37.01.01.600. The administrative hearing is the vehicle for the agency to develop a complete evidentiary record and hear information related to determining a proportionate share of an identified mitigation obligation. With the recent changes in model use, the new boundary of the area of common ground water supply, and an opportunity to receive additional technical information on alternatives, there is no basis to vacate the hearing and foreclose the opportunity to actually decide the issues presented to the agency.

Finally, due process also requires that A&B receive a hearing on these issues, particularly as they have implicated the district's senior groundwater right 36-2080 for the first time. If a water right, a real property interest, is subject to curtailment and/or a mitigation obligation, due requires an opportunity for a hearing on that agency decision prior to curtailment. *See Clear Springs Foods, Inc. v. Spackman*, 150 Idaho 790, 815, 252 P.3d 71, 96 (2011). For the reasons set forth below, A&B respectfully requests the Hearing Officer to deny the motions filed by AFA and IGWA accordingly.

AFA Motion to Reconsider / Clarify Scope of Hearing

PRESIDING OFFICER / FORMAL PROCEEDINGS

AFA's motion is not filed in compliance with IDWR's Rules and therefore should be denied on procedural grounds. AFA alleged that it has filed its motion with the "Director," not the Hearing Officer assigned to hear this contested case. *See* AFA Motion at 1-2. A&B filed two requests for hearing, one for the April As Applied Order (Steps 1-3) on April 29, 2025, and a second one for the July As Applied Order (Steps 5-6) on July 24, 2025. The Director granted the requests for hearing and found as follows:

> 10) The issues identified for hearing in A&B's July hearing request relate to, and even mirror at times, the issues identified in its April request. A&B has not previously been afforded an opportunity for a hearing to contest either the *April Forecast Supply Order* or the *July As-Applied Order*.

Order Granting A&B Irrigation District's Requests for Hearing at 2 (Sept. 3, 2025).

The Director further consolidated the proceedings, set the matter for a pre-hearing conference, and appointed Gerald F. Schroeder to serve as the hearing officer. The scope of the Hearing Officer's authority was not limited. *See* IDWR Rule 412. Accepting the contested case so designated, AFA voluntarily petitioned to intervene in the contested case on September 17, 2025.[3] AFA was not required to participate in this contested case. *See e.g.*, *Porter as Tr. of Brian L. Porter Revocable Tr. v. Remmich,* 174 Idaho 263, 272, 553 P.3d 925, 934 (2024) (cleaned up) (citations and internal quotation marks omitted) ("Importantly, the landowner, as an intervenor, could not assert any conflicting claims in the second case, *because an intervenor*

[3] A&B stipulated to AFA's intervention on the basis that the District represents ground water right holders subject to the SWC delivery call. A&B would not have stipulated to AFA's intervention had AFA disclosed that it was intervening on the basis to wait several weeks and then ask the Director to vacate the hearing altogether. That issue could have been addressed up front as part of the AFA's grounds for intervention.

takes a case as he finds it. He is not entitled to raise new claims outside the scope of the original parties' pleadings") (emphasis added).[4]

The Hearing Officer held the prehearing conference on September 18, 2025 where AFA's intervention was granted and a discovery and hearing schedule was set. *See Order on Intervention et al.* ("Oct. 7, 2025). AFA did not oppose the Hearing Officer's jurisdiction and fully participated in setting the schedule. Since that time A&B has served discovery requests on various parties, conducted two depositions of IDWR employees, and submitted an expert report. In other words, significant time and resources have been spent in preparation for the hearing previously granted by the Director over three months ago.

IDWR's Rules define the terms related to this matter as follows:

> **09. Hearing Officer**. A hearing officer is a person other than the agency head appointed to preside over a formal proceeding in a contested case on behalf of the agency. . . .
>
> **15. Presiding Officer**. One (1) or more members of the Board, the Director, or duly appointed hearing officer presiding over a formal proceeding as authorized by statute or rule. . . .
>
> **102. FORMAL PROCEEDINGS**. When the agency determines that informal proceedings are unlikely to resolve a contested case, the agency will initiate formal proceedings by issuing a Notice of Prehearing Conference and identifying a presiding officer. Representation of parties and other persons in formal proceedings is governed by Rule 201.02.

IDAPA 37.01.01 (emphasis in original).

[4] Furthermore, "[i]ntervention is not an independent proceeding but an ancillary and supplemental one that, unless otherwise provided for by legislation, must be in subordination to the main proceeding, and, as a general rule, an intervenor is limited to the field of litigation open to the original parties …. [E]ven aside from any such express declaration, the rule is stated to be that one who intervenes in a pending action ordinarily must come into the case as it exists and conform to the pleadings as the intervenor finds them or that an intervenor must take the case as the intervenor finds it. An intervenor is admitted to the proceeding as it stands, and in respect of the pending issues, but is not permitted to enlarge those issues or compel an alteration of the nature of the proceeding…. [T]he intervenor is bound by the previous proceedings and the record of the case at the time of intervention. *See* 59 Am. Jur. 2d Parties § 226 (footnotes omitted).

The present contested case concerning the April and July As Applied Orders is a "formal proceeding" that is presided over by Hearing Officer Schroeder. AFA seeks to side-step the ongoing formal proceeding and have the Director issue a new order despite his previous assignment. A&B submits the contested case is properly before the designated hearing officer, that the scope of his authority is not limited, and that the Director is no longer "presiding" over the matter set for hearing in January. Accordingly, AFA's motion for reconsideration and request to vacate the hearing is procedurally misplaced at this point and should be denied accordingly.

AFA's request to clarify the scope of the hearing should be denied as well. Contrary to AFA's interpretation of the initial expert report, A&B is not attempting to use this proceeding "as a vehicle to advocate for the adoption of a GMP." *See* AFA Motion at 7. The Director previously reviewed A&B's requests for hearing and identified the scope of the consolidated hearing in his *Order Granting A&B Irrigation District's Requests for Hearing* (Sept. 3, 2025). AFA has provided no meritorious basis to reconsider or clarify the scope of the hearing based on its unilateral interpretation of A&B's expert report. If AFA wishes to object to evidence offered at the hearing it will have an opportunity to raise such objections at the appropriate time. Rule 600 (Evaluation of Evidence); Rule 603 (Objections).

Alternatively, if AFA's motion to vacate the hearing is considered for a ruling by the Hearing Officer, A&B submits it should be denied for substantive reasons as well. As set forth below, A&B's requests for hearing are not moot, and should not be barred under res judicata, law of the case, or the quasi-estoppel doctrine.

FACTUAL AND PROCEDURAL BACKGROUND

From 2016 through 2022, the Director applied the *Fourth Amended Methodology Order* to the SWC delivery call every year. The predicted in-season demand shortfall ("IDS"), or predicted material injury, ranged from a low of 0 acre-feet (2017, 2018, 2020) to a high of 170,000 acre-feet (July 2021 Steps 5 & 6 Order).[5] The corresponding curtailment date for affected ground water rights ranged from the most junior date of May 31, 1989 (2022 Step 9 Order) to the most senior date of June 14, 1977 (2021 Steps 5 & 6 Order).

During this time A&B delivered surface water to approximately 3,573 acres that were formerly irrigated with groundwater pursuant to water rights with priorities ranging from April 1, 1962 to April 12, 1994 (enlargement water right priority date condition).[6] *See* I.C. § 42-1426. During this time the Director did not require A&B to mitigate for its groundwater rights that were not used, or for those irrigated lands that had been converted to a surface water supply. *See Final Order Curtailing Non-Enlargement Ground Water Rights Junior to April 12, 1994, and Enlargement Ground Water Rights Junior to March 14, 1971* at 4 (June 7, 2019) ("A&B will not have a mitigation obligation for this year if A&B curtails the enlargement ground water rights and if the priority date for curtailment for 2019 remains junior to A&B's other ground water rights").

[5] Copies of the various orders issued by the Director in the delivery call are available on the IDWR's website: https://idwr.idaho.gov/legal-actions/delivery-call-actions/SWC/.

[6] After completion of its second pumping plant on the Snake River, A&B was able to deliver surface water to additional lands previously only irrigated with groundwater. *See Stipulation Regarding A&B Irrigation District's Amended Mitigation Plan* at 2 (Dec. 27, 2023) ("A&B has curtailed the diversion of groundwater to approximately 3,573.6 acres within the Unit B portion of the irrigation district. A&B has delivered surface water to these 'soft conversion' acres dating back to 1994 (1,378 acres) and 2016 (2,195 acres).

Moreover, since the Director's curtailment orders never affected A&B's senior groundwater right 36-2080 (Sept. 9, 1948), and A&B's junior rights were part of its surface water conversion deliveries, there was no immediate or actual need to litigate or challenge how the Director apportioned mitigation obligations amongst junior ground water rights across the ESPA. During this time (2016-2022), the Director also approved a variety of stipulated mitigation plans without deciding a contested "mitigation apportionment standard" or how the plans would work together to ensure ground water rights were properly administered as amongst each other.[7] In other words, the priority date of ground water rights was not at issue in the context of how the Department required the various rights to mitigate a "proportionate share" of a predicted injury in a given irrigation season. A&B's surface water conversion program also ensured that it had no mitigation obligation during this time period.

The Director changed his method for identifying a groundwater right curtailment date in the spring of 2023 with the issuance of the *Fifth Amended Methodology Order* (April 21, 2023). In that order the Director adopted a "transient" simulation of ESPAM 2.2 which evaluated the predicted impacts of pumping from groundwater rights and the corresponding responses that would occur in the Near Blackfoot to Minidoka reach of the Snake River during that same irrigation season. The reasons for this change in model use were described as follows:

> 84. Steady-state analysis does not calculate the time to reach steady-state conditions nor describe the seasonal timing of the impacts. . . . The assumption of continuous curtailment does not reflect reality in the SWC Delivery Call. . . . It is important to predict what benefits to the river are realized during the irrigation season in which injury has been determined. A steady-state ESPAM simulation cannot predict what benefits are realized during the irrigation season. In contrast, a transient ESPAM simulation will predict the timing of changes in river reach gains.

[7] *See generally*, https://idwr.idaho.gov/legal-actions/mitigation-plan-actions/swc/. Approved plans included the IGWA 2016 Settlement Mitigation Plan (CM-MP-2016-001); the Coalition of Cities (CM-MP-2016-002; 2019-001); and Southwest Irrigation District's 2018 Mitigation Agreement Plan (CM-MP-2010-001).

* * *

89. Transient simulations are necessary to evaluate the impacts of aquifer stresses applied for short periods of time (i.e. short-term curtailments with varying priority dates). Transient simulations are necessary to simulate the short-term curtailments prescribed in the methodology.

Fifth Amended Methodology Order at 29-31.

The Director sua sponte issued a notice of hearing concurrent with the issuance of the fifth order and the April 2023 As Applied Order. *See Notice of Hearing, Notice of Prehearing Conference, and Order Authorizing Discovery* (April 21, 2023). The scheduled June 2023 hearing specifically addressed the Director's *Fifth Methodology Order* and the *Final Order Regarding April 2023 Forecast Supply* both issued on April 21, 2023. *See id.* The hearing did not, as AFA suggests, specifically address "five of the six issues" raised in A&B's present 2025 requests for hearing. Importantly, the hearing did not address any agency decision related to A&B's senior water right 36-2080 with a September 9, 1948 priority date.

In the *Fifth Methodology Order* the Director adopted a "transient" model analysis for determining a curtailment date of junior priority ground water rights. Issues related to apportionment of the mitigation obligation amongst junior ground water rights were not addressed or explained. Further, the Director limited the scope of topics that IDWR witnesses could provide testimony and evidence on at the June 2023 hearing.

Notably, Jennifer Sukow's testimony was limited to: "steady-state vs. transient modeling / simulations for the Eastern Snake Plain Aquifer Model (ESPAM); calculation of curtailment priority dates for the SWC's delivery call." *See Notice of Materials Department Witnesses May Rely Upon at Hearing and Intent to Take Official Notice* (May 5, 2023).[8]

[8] A&B requested a hearing and identified two issues related to the 2023 April As Applied Order, however no ruling was issued on those issues, and the Director's limitation on the scope of the June hearing was issued that very same day. *See Surface Water Coalition's Request for Hearing and Statement of Issues* at 2-3 (May 5, 2023).

Ms. Sukow had previously addressed this issue in the fall of 2024 with the parties' technical working group, and that presentation did not address apportioning the mitigation obligation amongst junior ground water rights. *See* **Ex. A** to *Thompson Dec.* The issue was limited to what the differences were between using a steady state analysis versus a transient analysis for identifying a curtailment date that would supply the required water to meet the in-season demand shortfall during the irrigation season.

AFA's reference to testimony from Jennifer Sukow at the June 2023 hearing concerned a "courtesy" email and calculation related to the individual ground water districts' share of the predicted in-season demand shortfall. *See* **Ex. B** to *Thompson Dec.* Throughout the spring and early summer of 2023 the Ground Water Districts were attempting to provide storage water mitigation under a variety of mitigation plans, and they were trying to identify the individual district's mitigation responsibilities. *See Order Determining Deficiency in IGWA's Notice of Secured Water* (May 23, 2023) ("*Deficiency Order*"). The Director described what was being attempted that year as follows:

> Since the 2015 Settlement Agreement Mitigation Plan was approved by the Department, IGWA has only mitigated under that plan. This year, IGWA is proposing something new. Certain ground water district members are seeking to mitigate under the 2009 Storage Water Mitigation Plan and other ground water district members are seeking to mitigate under the 2015 Settlement Agreement Mitigation Plan. Instead of relying on one or two mitigation plans for all members, individual ground water districts are seeking to mitigate under different mitigation plans.

Deficiency Order at 2.

Although certain districts were attempting to mitigate under the 2009 Mitigation Plan based upon the proportionate share of storage provided as a "courtesy" in the Garrick Baxter email, others were relying upon their "alleged share" of the 50,000 acre-feet requirement in the

2016 Mitigation Plan. *See Deficiency Order* at 2-3. The Director rejected this novel "hybridization" approach and concluded that IGWA was required to either: 1) supply the entire predicted 2023 in-season demand shortfall under the 2009 Plan, which was 75,200 acre-feet; or 2) the entire 50,000 acre-feet under the 2015 Plan. *See id.* at 5 ("IGWA cannot pick and choose who gets the benefit of storage water if IGWA is not providing storage water amounts equal to the shortfall obligation"); at 7 ("While the 2015 Settlement Agreement Mitigation Plan allows for determining the proportionate share of the reduction obligation of the parties, it does not authorize the 50,000 acre-foot storage volume to be shared proportionately by the parties. To be in compliance with the plan, the entire 50,000 acre-feet must be provided").

Just a few days before the June 2023 hearing, IGWA submitted an *Amended Notice of Mitigation* purporting to mitigate the 2023 injury under the 2009 Plan with copies of storage water leases totaling 77,714 acre-feet. *See IGWA's Amended Notice of Mitigation* (June 1, 2023). Pursuant to the Director's prior order, IGWA would have been required to provide the entire 75,200 acre-feet, in which case A&B would have had no obligation in 2023. Accordingly, given the confusion created by IGWA and the various mitigation plans it was attempting to implement for the various ground water districts, it was not clear whether A&B had to mitigate at all that year, most notably at the time of hearing.[9] The issue concerning the sufficiency of IGWA's mitigation was ultimately never addressed in the context of a contested order as the Director issued the *Notice That Questions Concerning the Sufficiency of IGWA's Mitigation Notices are Moot* (July 20, 2023).

[9] Eventually IGWA supplied sufficient storage water to comply with the 50,000 acre-feet storage assignment required under the 2016 Mitigation Plan. *See* **Ex. C** to *Thompson Dec.*

Moreover, at the start of the June 2023 hearing the scope of Ms. Sukow's topics and testimony was described as follows:

> Q. [BY MR. WOOD] And you were aware that on May 5th, 2023, the Director issued a notice advising the parties of two topic areas that you might testify about today?
>
> A. [BY MS. SUKOW] Yes.
>
> Q. And those two topic areas are the following: the first is steady state modeling versus transient state modeling, simulations for the ESPA. And the second is calculations of curtailment priority dates for the Surface Water Coalition's delivery call. Does that sound correct?
>
> A. Yes.

June 2023 Hearing Tr. 38:16 – 39:1. [10]

With respect to the calculations performed, and how the predicted demand shortfall might be divided up between the districts, Ms. Sukow specifically explained the following at the June 2023 hearing:

> Q. [MR. BUDGE] And under this approach to allocating that predicted demand shortfall. Some ground water districts such as North Snake would have to provide more water as mitigation than the Coalition would receive from curtailment. And other ground water districts would have to provide less water as mitigation than the Coalition would receive from curtailment?
>
> A. [MS. SUKOW] I don't think that's true as far as the Department's concerned. IGWA's proportionate share is 63,645 acre-feet. And the Department, I don't think, has a say in how you decide to split that up. You asked us to provide a breakdown, and I did it by this method. And Garrick sent it to you as a courtesy. But we are not telling you that that's how you have to split up the proportionate share.
>
> Q. Yeah, and I appreciate that. And I don't actually even mean to be critical of the method. It's just one method; right? It's not the only method. And I just wanted to highlight under this method in the proportionate mitigation obligations don't match up with the transient modeled reach gains?

[10] *See* copy of June 2023 hearing transcript at *https://idwr.idaho.gov/wp-content/uploads/sites/2/legal/CV01-23-13238/CV01-23-13238-20230928-Settled-Agency-Hearing-Transcript-on-Appeal.pdf*

A. No, they do not.

* * *

Q. [MR. SIMPSON] I'm not sure if I fully appreciated the calculation you made. But my understanding is that your method that you utilized, and this was your proposed method, acknowledged the long-term impacts of each ground water district on the Blackfoot to Minidoka reach. And then once the percentage was calculated, then it was utilized in the calculation of the responsibility of each ground water district of the total for IGWA; is that correct?

A. Well, and again, that was provided as a courtesy, and the Department is not telling them, IGWA what each ground water districts responsibility is. But it is just an apportioning based on their long-term impacts.

June 2023 Hearing Tr. 86:17 – 87:12; 101:4-17.

In this context, the above testimony shows that IDWR's method for apportioning the mitigation obligation was not an issue that was actually litigated between various ground water users on the ESPA. It was obvious that IDWR was not making any formal decisions or ordering IGWA to use a certain method to apportion that obligation. Stated another way, although the ground water districts were divided at that time as to how each was going to mitigate in 2023, IDWR did not decide any contested issues concerning an apportionment methodology. How A&B's obligation, if any, would or would not be addressed in the context of this uncertainty was also not resolved.

As to the issue that was litigated and decided, the Director adopted the transient analysis in the *Fifth Methodology Order*, and following the June 2023 hearing, affirmed its use in the *Sixth Amended Methodology Order* as well. Contemporaneous with the issuance of the *Sixth Methodology Order* the Director issued the *Post-Hearing Order Regarding Fifth Amended Methodology Order* (July 19, 2023). As admitted by AFA, the Director did not decide any "proportionate share" methodology in that decision. *See* AFA Motion at 5.

With respect to conjunctive administration during the 2023 irrigation season A&B complied with the April 2023 mitigation obligation[11] and the in-season injury finding was later reduced to zero (0) acre-feet in the 2023 July As Applied Order. *See Order Revising April 2023 Forecast Supply and Amending Curtailment Order (Methodology Steps 5 & 6)* at 9 (July 19, 2023) ("there is no mid-season demand shortfall to the SWC members"). Consequently, A&B did not request any further hearings on the 2023 As Applied Orders. However, the conclusion of the 2023 irrigation season did not answer or foreclose the question of IDWR's apportionment of mitigation obligations going forward.

2024 ushered in even more uncertainty as the various Ground Water Districts filed several new mitigation plans[12] while at the same time attempting to mitigate under both the 2009 Plan and the 2016 Plan again. *See Final Order Regarding April 2024 Forecast Supply* at 5-6, n.8 *(Methodology Steps 1-3)* (Apr. 18, 2024) (Director noting the continued "uncertainty" regarding the status of the mitigation plans and confirming that under the 2009 Plan "IGWA's obligation is

[11] *See A&B Irrigation District's Notice of Communication to Water District 01 Watermaster* (May 5, 2023). Ultimately, the Director did not issue a curtailment order in 2023. *See Notice of Possible Curtailment of Ground Water Rights with Priority Dates Junior to December 30, 1953* (May 1, 2023) ("The Department scheduled a hearing for the parties to the As-Applied Order on June 6-10, 2023. After the hearing the Director will decide whether to issue a curtailment order").

[12] *See generally*, the various mitigation plans filed in late 2023 and early 2024: Madison GWD & Henry's Fork GWD (CM-MP-2023-001); Bonneville-Jefferson GWD (CM-MP-2023-002); Jefferson Clark GWD (CM-MP-2023-003); North Snake GWD (CM-MP-2023-004); Magic Valley GWD (CM-MP-2003-005); Bingham GWD (CM-MP-2024-001). The districts proposed to mitigate under a variety of actions and methods. North Snake and Magic Valley both proposed to mitigate for transient impacts. *See Petition for Approval of MVGWD Mitigation Plan* at 3 ("Mitigation provided by Petitioner under this plan may offset all or part of the volume of water the SWC would receive from curtailment of water rights held by Petitioner's patrons"); *Petition for Approval of NSGWD Mitigation Plan* at 3 ("Mitigation provided by Petitioner under this plan may offset all or part of the volume of water the SWC would receive from curtailment of water rights held by Petitioner's patrons"). Other districts similarly proposed to mitigate their "transient" irrigation season pumping impacts to the Near Blackfoot to Neeley reach as part of their new mitigation plans. *See Petition for Approval of Madison GWD and Henry's Fork GWD Storage Water Mitigation Plan for the Surface Water Coalition* at 3 (CM-MP-2023-001) (Dec. 18, 2023) ("Petitioners may utilize storage to offset all or part of the volume of water the SWC would receive from curtailment of water rights held by Petitioners' patrons"); *Petition for Approval of Jefferson Clark GWD Storage Water Mitigation Plan for the Surface Water Coalition* at 3 (CM-MP-2023-003) (Dec. 20, 2023) ("To provide mitigation under this plan, Petitioners will deliver or assign storage water to the SWC to offset the amount of water the SWC would receive from curtailment of water rights held by Petitioner's patrons").

74,100 acre-feet"). A&B provided notice of its ability to mitigate its share of the predicted in-season demand shortfall, and further advised:

> Finally, although the District [A&B] disagrees with and reserves all rights concerning the *Order* initially allowing IGWA to choose to mitigate under its 2009 Storage Water Mitigation Plan, if IGWA does establish that it has 74,100 acre-feet, then A&B will no longer have any obligation for the 2024 irrigation season.

A&B Irrigation District Letter to the Director (May 1, 2024).

For example, Magic Valley GWD and North Snake GWD filed a joint notice of compliance proposing to mitigate under the 2009 Plan. *See Joint Notice of Compliance* (May 2, 2024). The districts' joint notice identified the schism in IGWA that was occurring at the time: "This Joint Notice is submitted by MV and NS through undersigned counsel because of a current lack of consensus within IGWA's membership frustrating IGWA's ability to submit an entity-wide notice." *See id.* at 2. The districts further represented, that despite proposing to mitigate their proportionate share of the entire 74,200 acre-feet predicted injury in 2024:

> The districts' steady state-based commitments above shall not be construed as an admission or concession that steady state application of ESPAM 2.2 is the appropriate application of the model. Clearly, the Director has determined that transient model simulation/application is the appropriate method of ESPAM 2.2 deployment. . . . Under transient application of the model, MV's proportionate share of the April-predicted IDS would be 25 acre-feet, and NS's proportionate share would be negligible (0.1 acre-feet). Be that as it may, MV and NS are willing to collectively provide 15,590 acre-feet (as opposed to merely 24 acre-feet under transient modelling) for the 2024 irrigation season in a good faith effort to do what they can, the fairest they can in recognition of the lingering effects of legacy pumping.

Joint Notice of Compliance at 3 (May 2, 2024).

Other districts also proposed to mitigate under the 2009 Plan, AFA proposed to mitigate under the 2016 Plan, and certain districts opted to not participate under any approved mitigation plan. The Director summarized the confusing and contradictory filings as follows:

> At the status conference, the Director started by asking each participating ground water district to identify whether, in 2024, they plan to mitigate under IGWA's *2009 Storage Water Mitigation Plan* (CM-MP-2007-001) or IGWA's *2016 Settlement Mitigation Plan*. The Director asked this because many of the mitigation notices submitted by the ground water districts included vague, confusing, or contradictory statements regarding compliance with the approved mitigation plans. Bonneville-Jefferson, Magic Valley, and North Snake indicated that they had secured water for 2024 and would dedicate their secured water towards the mitigation requirements under the *2009 Storage Water Mitigation Plan*. Jefferson-Clark, Henry's Fork, and Madison indicated that they also had secured storage water and would dedicate their secured storage water towards required mitigation activities set forth in either the *2009 Storage Water Mitigation Plan* or the *2016 Settlement Mitigation Plan*. American Falls-Aberdeen indicated that it planned to mitigate under the *2016 Settlement Mitigation Plan* only. Bingham indicated it will not mitigate under any approved mitigation plan. Carey Valley did not participate in the status conference.

Amended Order Determining Deficiency in Notices of Secured Water at 3-4 (May 28, 2024) (CM-DC-2010-001); **Ex. D** to *Thompson Dec.*

Comparing the districts' various storage water leases to the predicted in-season demand shortfall, the Director further concluded:

> The above table shows that the ground water districts have indicated that they have secured 32,876 acre-feet, which is less than the full shortfall obligation of 74,100 acre-feet. . . . The Department has calculated what the revised curtailment date would be if these ground water districts can show, to the satisfaction of the Director, that they have secured 32,876 acre-feet of water. <u>The revised curtailment date for all ground water users would be February 16, 1970.</u>

Id. at 5 (emphasis added); **Ex. D** to *Thompson Dec*.

With that understanding at the end of May 2024, A&B's only water rights subject to curtailment were its enlargement water rights with an effective priority date of April 12, 1994 (enlargement rights). A&B had no way of knowing whether the districts would ultimately secure all 74,100 acre-feet thus eliminating A&B's obligation completely. However, A&B relied upon the Director's above representation and submitted a follow up *Notice of Mitigation Water*. *See Letter from A&B Irrigation District to Director Mat Weaver* (May 30, 2024). A&B submitted a copy of its executed lease for 62 acre-feet to cover its proportionate share of the predicted in-

season demand shortfall in 2024. *See id.* A&B further "reserved all rights" concerning its notice of mitigation and its right to request a hearing pursuant to I.C. § 42-1701A(3). *See id.* at 2.

The Director then issued his *Final Order Curtailing Ground Water Rights Junior to March 31, 1954* (May 30, 2024). That order prompted additional districts to change their position and attempt to comply with the *2016 Settlement Mitigation Plan* for the 2024 irrigation season. *See Joint Notice of Compliance* at 2 (June 5, 2024) ("In response to the Director's Curtailment Order, the Districts [Magic Valley and North Snake] provide notice that they intend to comply with the 2016 Plan for the 2024 irrigation season only").

Eventually, the Surface Water Coalition, all Ground Water Districts, and IGWA reached an interim stipulation for 2024 whereby all districts agreed to comply with the 2016 Plan for the 2024 irrigation season. *See Joint Motion for Order Approving 2024 Stipulation* (June 20, 2024). The Director approved the parties' stipulation to comply with the 2016 Plan. *See Order Approving 2024 Stipulation as Compliance with Approved Mitigation Plan* (June 20, 2024).

The Director later revised the predicted in-season demand shortfall down to 6,800 acre-feet in July. *See Order Revising April 2024 Forecast Supply and Amending Curtailment Order (Methodology Steps 5 & 6)* (July 17, 2024). The Director concluded that "continued curtailment of ground water rights beyond mid-July is unwarranted at this time." *See id.* at 11. Consequently, at that time A&B had no in-season obligation and no reason to challenge the Director's 2024 as-applied orders or any proportionate share methodology that had been used.[13]

[13] In response to the Director's 2024 Step 9 Order and predicted carryover storage shortfall of 44,900 acre-feet, A&B confirmed that it intended to continue to curtail its enlargement water rights (2,063 acres) for the 2025 irrigation season that were subject to the curtailment order. *See Final Order Curtailing Ground Water Rights Junior to January 25, 1970* (December 17, 2024). The Director kept those water rights on the curtailment list and did not require A&B to secure or assign any storage water. *See id.* at 4; *see also*, *Order Revising April 2025 Forecast Supply and Continuing May 16, 2025 Curtailment Order* at 1 *(Methodology Steps 5 & 6)* (July 10, 2025) ("While the SWC's storage allocation did not fill this year, because no water users secured water in 2024 to fulfill this carryover shortfall, there is no volume of water to be made available to the SWC under Step 5").

With the above context it was obvious that the Director's apportionment of any mitigation obligation was not the subject of any prior hearing and had not been resolved through any final order. A&B's 1948 water right had not been implicated in any curtailment orders and the scope of its mitigation obligation was uncertain and constantly changing in the face of the Ground Water Districts' efforts to use a myriad of mitigation plans that may have covered A&B's obligation completely. The misdirection approach left water users uncertain as to what IDWR would finally approve for purposes of mitigation obligations in these years.

Further, the Director's fifth and sixth methodology orders were subject to two petitions for judicial review filed in 2023, wherein the petitioners were asking the district court to set aside those orders in total. *See Idaho Ground Water Appropriators, Inc.'s Opening Brief* at 45 (Fourth Jud. Dist., Ada County Dist. Ct., Case No. CV01-23-13173)[14] (Dec. 8, 2023); *Cities' Opening Brief on Judicial Review, SWC Post-Hearing Order, Fifth Methodology* at 49 (Fourth Jud. Dist., Ada County Dist. Ct., Case No. CV01-23-13238 (Dec. 21, 2023).[15]

The uncertainty and implementation of the various mitigation plans, the pending appeals, and status of the Director' "transient" use of the model were all valid reasons to not pursue additional litigation of any mitigation apportionment methods at the time. Where this question remains unresolved it is important for IDWR to finally address it with a fully developed administrative record. This proceeding provides that forum.

---

[14] The district court entered a *Memorandum Decision and Order* on IGWA's appeal on May 31, 2024. IGWA's petition for rehearing of that decision is presently stayed. *See Order Granting Stipulated Motion for Stay*. Documents in this case are available at: https://idwr.idaho.gov/legal-actions/district-court-actions/igwa-v-idwr-cv01-23-13173/.

[15] The Cities specifically challenged the Director's transient model simulation for identifying a curtailment date. *See Cities' Op. Br.* at 43-45. The district court entered a *Memorandum Decision and Order* on the Cities' appeal on May 31, 2024. The Cities appealed the decision to the Idaho Supreme Court and oral argument was recently heard on October 6, 2025. The complete list of documents does not appear to be uploaded to IDWR's website. Certain documents in this case are available at https://idwr.idaho.gov/legal-actions/district-court-actions/city-of-idaho-falls-v-idwr/

STANDARD OF REVIEW

IDWR's Rules of Procedure authorize the filing of motions for summary judgment. Rule 220.03. Such motions are governed by I.R.C.P. 56, except that the rule's time procedure set forth in subsection (b) does not apply. *See id.*

Summary judgment requires the movant to show that there is no genuine dispute as to any material fact and the movant is entitled to judgment as a matter of law. *See Martin v. Thelma V. Garrett Living Trust*, 170 Idaho 1, 5, 506 P.3d 237, 241 (2022). The burden of proving the absence of material facts is on the moving party and the Department must liberally construe facts in the existing record in favor of the nonmoving party, and draw all reasonable inferences from the record in favor of the nonmoving party. *See id.* When an action is tried before an agency without a jury (in this case the Hearing Officer), the Department can rule upon summary judgment despite the possibility of conflicting inferences arising from undisputed evidentiary facts. *See Nettleton v. Canyon Outdoor Media, LLC*, 163 Idaho 70, 73, 408 P.3d 68, 71 (2017).

Summary judgment is not appropriate in a case where there are disputed issues of material fact. *See American Land Title Co. v. Isaak*, 105 Idaho 600, 601, 671 P.2d 1063, 1-64 (1983) ("It is axiomatic that summary judgment is improperly granted where any genuine issue of material fact remains unresolved"). In this case the parties are scheduled to put on technical evidence related to the Department's apportionment of the mitigation obligations identified in the April and July 2025 As Applied Orders. Initial expert reports were filed last month, rebuttal expert reports are due by December 19th, and the agency staff memorandum is due by December 30th. IGWA has failed to show that the contested case should be dismissed on summary judgment grounds. As set forth below, the Hearing Officer should deny the motion accordingly.

ARGUMENT

I. AFA's Request to Vacate the Hearing and IGWA's Motion for Summary Judgment on Res Judicata Grounds Should be Denied.

AFA alleges the Director erred in granting A&B's requests for hearing on the two 2025 As Applied Orders and that the January 2026 hearing should be vacated. *See* AFA Motion at 4-6. IGWA similarly seeks summary judgment and argues that A&B should be barred from raising its issues on res judicata grounds. *See* IGWA Motion at 6-8.

In general, AFA alleges that the June 2023 hearing on the *Fifth Methodology Order* and the *April 2023 As Applied Order* already addressed A&B's issues and that the doctrine of res judicata should prevent A&B's request for hearing on the two 2025 As Applied Orders. *See id.* IGWA makes a similar argument and claims that an "evidentiary hearing was held on issues raised by A&B and others" in June 2023. *See* IGWA Motion at 7. To the contrary, the Director correctly granted A&B's present requests for hearing, and technical and legal issues regarding IDWR's application of the CM Rules and apportionment of mitigation obligations to affected junior ground water rights should be finally decided on a complete agency record for purposes of certainty and proper administration of approved mitigation plans. In short, res judicata does not bar the present contested case as the mitigation apportionment issue has not been previously decided and A&B's 1948 groundwater right has never been subject to a curtailment order in this delivery call.

Section 42-1701A(3) provides: "any person aggrieved by any action of the director, including any decision, determination, order or other action, . . . who is aggrieved by the action of the director, and who has not previously been afforded an opportunity for a hearing on the matter shall be entitled to a hearing before the director to contest the action." A&B's requests for hearing concern two As Applied Orders issued in 2025. The Director granted these timely

requests for hearing, consolidated the matters, and initiated a formal contested case and appointed a hearing officer. *See Order Granting A&B Irrigation District's Requests for Hearing et al.* (Sept. 3, 2025).

Importantly for purposes of ruling on AFA's and IGWA's motions, A&B's water right 36-2080 has never been subject to curtailment and IDWR has never apportioned a mitigation requirement to that water right until July 2025. Both the Director and Jennifer Sukow confirmed this fact. First, in a July memorandum to Governor Little, Director Weaver described this unique fact relative to the delivery call:

> This action may affect up to 900 water rights, although the final number is still being confirmed. Notably, this will mark the first time water rights with priority dates earlier than 1955 have been subject to curtailment under the SWC delivery call.

Director Weaver July 22, 2025 Memo to Governor Little (emphasis added); **Ex. E** to *Thompson Dec.*

At her deposition taken on October 22, 2025, Ms. Sukow also testified:

> Q. [BY MR. THOMPSON] Do you know if A&B has been required to mitigate for its 1948 priority groundwater right prior to this order?
>
> A. [BY MS. SUKOW] Not that I know of.

J. Sukow Depo. Tr. 70:21-24; **Ex. F** to *Thompson Dec.*

AFA does not dispute A&B's "aggrieved person" status, but argues that the June 2023 hearing precludes the present contested case. AFA argues that A&B should be barred from contesting certain issues that were not previously decided "under principles of res judicata." AFA Motion at 5-6. Although AFA does not address the elements of res judicata, the doctrine is not satisfied regardless if AFA is advocating for either issue or claim preclusion. AFA mistakenly claims that "all six of the issues A&B presented in its 2025 requests were litigated in the June 2023 hearing or are not moot." *Id.* at 6.

IGWA claims that the elements of res judicata are satisfied on the basis that "(1) A&B had a full and fair opportunity to litigate the issue in response to the April 2016 As-Applied Order, the April 2023 As-Applied Order, and the April 2024 As-Applied Order; (2) the issue decided in the prior As-Applied Orders is identical to the issue raised by A&B in the present action; (3) the issue sought to be precluded was actually decided in the prior As-Applied Orders; (4) there was a final judgment on the merits in the prior As-Applied Orders; and (5) A&B was a party to the prior As-Applied Orders." IGWA Motion at 8.

Both AFA and IGWA miss the mark regarding prior IDWR proceedings and final agency orders as to what was actually decided. Furthermore, AFA and IGWA appear to argue that information related to how IDWR makes technical decisions is foreclosed from ever being submitted in response to an As Applied Order as part of the annual conjunctive administration of the SWC delivery call.

First, res judicata encompasses both issue preclusion and claim preclusion. *Byrd v. Idaho State Bd. of Land Commissioners*, 169 Idaho 922, 931, 505 P.3d 708, 717 (2022). The Idaho Supreme Court has confirmed that res judicata can apply to administrative proceedings. *See id.* In *Byrd*, the Court concluded that collateral estoppel did not apply because there was "no record demonstrating any litigation of the parties' littoral rights, much less ownership of the shoreline beyond the iron pins." 160 Idaho at 932, 505 P.3d at 718. Although the applicants had previously received an encroachment permit, their "initial permit issued without a hearing and with only minimal procedures was not a final adjudication of their littoral rights and ownership." *Id.*

Furthermore, "res judicata can apply within the same case to bar relitigation of those issues that were previously decided and are the subject of a final judgment." *Doe I v. John Doe*

(2024-23), 566 P.3d 409, 420 (Idaho 2025) (citing *State v. Wolfe*, 158 Idaho 55, 62, 343 P.3d 497, 504 (2015)) (emphasis added). The key point is that an issue must be actually decided for res judicata to apply. The Idaho Supreme Court has found that res judicata does not bar litigation of issues that were not ripe for adjudication in the prior action. *See Duthie v. Lewiston Gun Club*, 104 Idaho 751, 754, 663 P.2d 287, 290 (1983). In this case A&B's senior water right was never at issue in any prior As Applied Order, hence there was no facts to address what was required for mitigation. *See id.* ("The 'sameness' of a cause of action for purposes of application of the doctrine of res judicata is determined by examining the operative facts underlying the two lawsuits").

The test for res judicata requires a "final judgment on the merits," which is generally defined as "an order or judgment that ends the lawsuit, adjudicates the subject matter of the controversy, and represents a final determination of the rights of the parties." *Snap! Mobile, Inc. v. Vertical Raise, LLC*, 173 Idaho 499, 522, 544 P.3d 714, 737 (2024), *reh'g denied* (Mar. 28, 2024).

> Issue preclusion is found where:
>
> (1) the party against whom the earlier decision was asserted had a full and fair opportunity to litigate the issue decided in the earlier case; (2) the issue decided in the prior litigation was identical to the issue presented in the present action; (3) the issue sought to be precluded was actually decided in the prior litigation; (4) there was a final judgment on the merits in the prior litigation; and (5) the party against whom the issue is asserted was a party or in privity with a party to the litigation.

Id. (emphasis added).

Claim preclusion occurs where a claim could have been brought in the previous action, regardless of whether it was actually brought, where: "(1) the original action ended in final judgment on the merits, (2) the present claim involves the same parties as the original transaction,

and (3) the present claim arises out of the same transaction or series of transactions as the original action." *Elsaesser v. Riverside Farms, Inc.*, 170 Idaho 502, 508, 513 P.3d 438, 444 (2022).

As highlighted above, an issue is not subject to res judicata if it was not actually decided in a final judgment on the merits. *See Snap! Mobile, Inc.*, 173 Idaho at 522, 544 P.3d at 737. Nowhere in any of the Director's prior As-Applied Orders or the methodology orders does the agency explain or address the contested issue of apportioning the mitigation obligation amongst groundwater users. Further, the Director used a steady-state analysis for identifying a curtailment date from 2016 through 2022. The Director also found that A&B did not have to mitigate for its groundwater rights that had been converted to a surface water supply. In addition, the oldest priority for junior ground water rights affected under that method was June 14, 1977, approximately 30 years junior to A&B's most senior ground water right 36-2080.

Unlike the examples offered by AFA and IGWA, the issue of apportioning the mitigation obligation has not been previously heard and decided by the Department.[16] As such, the element of actually deciding the issue through a final judgment for res judicata is not met in this case. In addition, it is clear that the issue of how IDWR apportions the mitigation obligation to satisfy a predicted in-season demand shortfall was not heard at the June 2023 hearing as the Director limited Jennifer Sukow's testimony to the issue of modeling simulations for determining a

[16] AFA points to the Director's *Order Denying Cities' Motion for Clarification and Reconsideration* (Sept. 25, 2023) as a reason to deny A&B's present requests for hearing. *See* AFA Motion at 6, n. 4. However, the Cities' four issues relating to the SWC's water use were all litigated and decided by the Director following the June 2023 hearing. *Compare Order Denying Cities' Motion* (Sept. 25, 2023) at 1-2 (listing four issues) with *Post-Hearing Order Regarding Fifth Amended Methodology Order* at 17-23 (July 19, 2023) (addressing IGWA's and Cities' claims regarding SWC efficiency, irrigated acres, supplemental ground water use). IGWA similarly argues that its example from the 2016 mitigation plan case should apply here as well. *See* IGWA Motion at 7. However, in that proceeding the Director concluded IGWA failed to request a hearing on the *2022 Compliance Order* as required by section 42-1701A(3), and that its attempt to raise its "baseline issue" eight months later, including after the hearing held before Hearing Officer Roger Burdick held in March 2024, was untimely. *See Order Denying IGWA's Motion to Vacate or Amend 2022 Compliance Order* at 6 (CM-MP-2016-001) (May 2, 2024) ("IGWA failed to timely raise the baseline calculation example"). As such the above references are distinguishable and not applicable to the present contested case. The Hearing Officer should reject AFA's and IGWA's arguments accordingly.

curtailment date. Similar to the applicants in *Byrd*, where an agency does not answer a disputed issue in a prior administrative action, collateral estoppel does not apply to preclude a future hearing on the issue. *See* 160 Idaho at 932, 505 P.3d at 718 ("the Department was correct to permit Coffey's objection and conduct a hearing on the dispute").

Finally, from 2023 through 2024 the Ground Water Districts filed numerous mitigation plans and attempted to mitigate through a "hybrid" approach as to previously approved plans. Various districts were proposing to mitigate with a "transient" approach while others were attempting to use the 2009 Storage Plan, which mitigation would have covered all groundwater users, including A&B. This state of mitigation uncertainty clouded what the Department was accepting and approving and what mitigation obligation A&B finally had in those years, if any. Viewed in this context, it is clear that res judicata cannot apply to bar the present contested case addressing A&B's requests for hearing on the 2025 As Applied Orders.

Moreover, due process requires a hearing prior to curtailing a junior groundwater right for the first time, in this case A&B's 1948 water right 36-2080. *See Clear Springs Foods, Inc. v. Spackman*, 150 Idaho 790, 815, 252 P.3d 71, 96 (2011) ("Under these circumstances, the Director abused his discretion by issuing the curtailment orders without prior notice to those affected and an opportunity for hearing"). For these reasons the Hearing Officer should deny AFA's and IGWA's request to vacate and/or dismiss this case on res judicata grounds.

II. A&B's Requested Hearing on the Apportionment Issue is Not Moot.

AFA further claims that issue no. 3 in the July 24, 2025 request for hearing is "moot" because the Director approved an interim stipulation for the 2025 irrigation season between A&B and the Coalition. *See* AFA Motion at 6. The Director approved the stipulation and concluded that "A&B does not need to establish that they can mitigate for its proportionate share

of the predicted IDS" for purposes of the 2025 irrigation season. *See Order Revising July 2025 Forecast Supply (Methodology Steps 7-8)* at 12, n. 7 (Sept. 11, 2025). However, the Director had previously granted A&B's requests for hearing on the April and July As Applied Orders.[17] the issue is not "moot" as the Director recently found that A&B has a mitigation obligation concerning the reasonable carryover shortfall. *See Final Order Establishing Reasonable Carryover (Methodology Step 9)* at 5, n. 10 (November 21, 2025); *see also*, *Final Order Curtailing Ground Water Rights Junior to August 15, 1952* (December 8, 2025).[18] How IDWR apportions mitigation obligations in the context of the SWC delivery call is an issue that has not been previously decided and is likely to arise again in future As Applied Orders. Developing a full administrative record on this issue in the "public interest" and allows parties to exhaust administrative remedies prior to any petitions for judicial review.

The issue is particularly relevant as additional areas have been added to the defined ESPA Area of Common Ground Water Supply effective November 1, 2025, and additional tributary basin areas will likely be added later.[19] *See* Idaho Code § 42-233c; *see also*, *Order*

[17] AFA cites a prior denial of IGWA's petition for review as a basis for the Hearing Officer to conclude the present case is "moot." *See* AFA Motion at 6, n. 7. IGWA had challenged the Director's requirement for IGWA to pay administrative fees to Water District 01 as part of its storage water leases. IGWA was attempting to mitigate under its 2009 Plan early in 2023, but eventually abandoned that theory when it decided to mitigate under the 2016 Plan later that summer. *See* **Ex. C** to *Thompson Dec.* In an exercise of discretion the Director denied IGWA' petition for reconsideration and concluded that "the issue is not likely to evade judicial review" and "there is no substantial interest in having the issue decided now." *See Order Denying IGWA's Petition for Review* at 2. By contrast, there is a "substantial public interest" reason for addressing A&B's issue now as how the Department should apportion a mitigation obligation is a "live" issue with respect the SWC call, and it will arise every time an As Applied Order finds material injury. *See Final Order Establishing Reasonable Carryover (Methodology Step 9)* at 5, n. 10 (November 21, 2025).

[18] A&B requested a hearing on the Step 9 Order and requested the Director to "stay" any formal proceedings pending the resolution of this proceeding. *See A&B Irrigation District's Request for Hearing / Evidence of Ability to Mitigate / Request for Stay & Informal Proceedings* at 3 (Dec. 2, 2025) ("As opposed to having the same issues addressed in multiple contested cases where the results of the prior proceeding and any final order may impact the calculations and proportionate share of the reasonable carryover shortfall assigned to A&B, and assuming A&B's request for hearing is granted, the District would request the Director to stay any formal proceedings").

[19] The Director has initiated the process to expand the ESPA ACGWS in the American Falls, Big Lost, Little Lost, Portneuf, and Raft River Tributary Basins. *See* https://idwr.idaho.gov/legal-actions/administrative-actions/

Regarding Mid-Season Change to Area of Common Ground Water Supply for the Eastern Snake Plain Aquifer; Third Order Amending Curtailment List (June 28, 2024); **Ex. G** to *Thompson Dec.*

With respect to finding a case "moot," the Idaho Supreme Court has commented that "[a] case is considered moot when the issues presented are no longer live or the parties lack a legally cognizable interest in the outcome." *Vanrenselaar v. Batres*, 575 P.3d 866, 885 (Idaho 2025) (citations and internal quotation marks omitted). A&B has a "legally cognizable interest in the outcome" of this proceeding as the Department's mitigation apportionment decision has varied between a few hundred acre-feet to over 5,000 acre-feet this past July. Whereas the SWC and A&B stipulated to an assignment of storage this past summer, the issue is still "live" in the context of future As Applied Orders, including the recently issued 2025 Step 9 Order. Even if the 2025 irrigation season obligation is considered "moot," the Hearing Officer can grant one of the recognized exceptions to allow this case to proceed to an evidentiary hearing.

The Idaho Supreme Court has acknowledged that, even when a case is deemed moot, there are discrete exceptions to overcome mootness:

> This Court has recognized three exceptions to the mootness doctrine: (1) when there is the possibility of collateral legal consequences imposed on the person raising the issue; (2) when the challenged conduct is likely to evade judicial review and thus is capable of repetition; and (3) when an otherwise moot issue raises concerns of substantial public interest.

In re Guardianship of Doe, 157 Idaho 750, 754, 339 P.3d 1154, 1158 (2014) (citations and internal quotation marks omitted).

The *Collateral Legal Consequences* exception is straightforward: the party raising the otherwise-moot issue must show "the possibility of collateral legal consequences" that would flow from the issue. *In re Guardianship of Doe*, 157 Idaho at 754, 339 P.3d at 1158. One of the

few illustrative examples of this exception[20] is found in *Snap! Mobile, Inc. v. Vertical Raise, LLC*, 173 Idaho 499, 544 P.3d 714 (2024), *reh'g denied* (Mar. 28, 2024). In *Snap!*, defendant was subject to an 18-month permanent injunction that (in sum) broadly prohibited defendant from conducting a wide array of business activities. Defendant appealed, arguing the permanent injunction was overbroad. By the time of appeal, the injunction had already expired. Despite being moot, the Idaho Supreme Court addressed the merits of defendant's injunction argument. The court reasoned that defendant's injunction challenge fell within the *collateral legal consequences* exception because defendant was at risk of contempt for possible violations of the injunction. Thus, a judicial determination of the injunction's lawfulness would have collateral legal consequences for defendant.

Here, the apportionment of A&B's mitigation obligation will have collateral legal consequences for A&B with respect to existing (i.e. 2025 Step 9 Order) and future As Applied Orders and injury determinations. Moreover, understanding IDWR's methodology and calculations as it applies amongst junior groundwater users is an important administrative matter that should be decided for purposes of future application, particularly in the context of multiple mitigation plans and their implementation.

Next, for the *capable of repetition yet evading review* exception to apply, the following circumstances must simultaneously exist: "(1) the challenged action is, in its duration, too short to be fully litigated prior to cessation or expiration; and (2) there is a reasonable expectation that the same complaining party will be subject to the same action again." *State v. John Doe* (2022-04), 172 Idaho 386, 392, 533 P.3d 295, 301 (Ct. App. 2023). Here A&B is already subject to another pending decision regarding the apportionment of a mitigation obligation (2025 Step 9

[20] Referring only to examples in the civil context. Most *collateral legal consequences* case involve criminal matters like parole or double jeopardy.

Order). *See also*, *Final Order Curtailing Ground Water Rights Junior to August 15, 1952* (December 8, 2025).

Given the hydrologic conditions experienced in 2025, it is reasonable to expect that a future predicted in-season shortfall will trigger a curtailment date affecting A&B's senior water right 36-2080 again. For example, prior As Applied Orders issued in 2021 and 2022 identified predicted in-season demand shortfalls ranging between 132,100 acre-feet and 170,000 acre-feet. Short water years are certain to occur in the future, it is not a matter of "if" but "when." For that reason, it is "reasonable" for A&B to expect that it will be subject to the same Department apportionment decision related to the mitigation obligation and that the "capable of repetition yet evading review" exception to the mootness doctrine applies.

III. IGWA's "Law of the Case" Argument Does not Apply and Should be Denied.

IGWA also argues that the "law of the case" doctrine precludes A&B from raising the issues identified in its requests for hearing on the two 2025 As Applied Orders. *See* IGWA Motion at 8. IGWA points to no "subsequent appeal" that would apply to an "earlier appeal" to show how the doctrine might apply in this proceeding. On its face IGWA's motion plainly fails the summary judgment standard.

Instead, IGWA only cites to a prior argument raised by the Coalition in the petition for judicial review case that is currently stayed before the Ada County District Court (Case No. CV01-23-13173). *See* IGWA Motion at 9, n. 2. The argument advanced by the Coalition in that appeal related to IGWA's defenses of "futile call" and "maximum beneficial use," defenses that IGWA raised time and time again and the Department had previously rejected.[21] Stated another

[21] *See Opinion Constituting Findings of Fact, Conclusions of Law and Recommendation* at 19, 26 (Apr. 29, 2008) ("Junior water pumping caused material injury to surface water irrigators affecting natural flow and storage rights . . . 5. The Surface Water Coalition made the showing that its members had licensed or decreed water rights and that

way, IGWA alleged that conjunctive administration was precluded altogether based on those defenses. Whereas IGWA attempted to re-raise those defenses in the appeal of the Director's *Sixth Methodology Order*, the Coalition rightfully argued such defenses should be rejected, "again." *See generally*, *IGWA's Opening Br.* at 39-44 (arguments regarding "futile call" and "maximum use" defenses). The district court agreed and affirmed the Director's determination that the delivery call was not futile. *See Memorandum Decision* at 24-26.

Unlike IGWA's alleged defenses, A&B's issues on the apportionment of a mitigation obligation have not been previously decided by the Department or by any court on judicial review. Accordingly, IGWA's "law of the case" argument should be denied.

IV. IGWA's "Quasi-Estoppel" Argument Does not Apply and Should be Denied.

Finally, IGWA turns to an equitable argument and claims that A&B should be estopped from challenging how the Department apportions the mitigation obligation based on the Ground Water Districts' *2024 Stipulated Mitigation Plan*. *See* IGWA Motion at 9-10; *see Gomez v. Hurtado*, 174 Idaho 1002, 1013, 554 P.3d 53, 64 (2024) ("Quasi-estoppel is an equitable remedy"). IGWA claims that because its ground water district members applied a "steady state" modeling analysis to apportion their 75,000 acre-feet (up to 82,500 acre-feet) storage water mitigation obligation, then A&B should also be bound to that analysis for purposes of the present contested case proceeding and its mitigation obligation.

Quasi-estoppel requires the following:

> (1) the offending party took a different position than his or her original position and (2) either (a) the offending party gained an advantage or caused a disadvantage to the other party; (b) the other party was induced to change positions; or (c) it would be unconscionable to permit the offending party to maintain an inconsistent position from one he or she has already derived a benefit or acquiesced in.

---

material injury was occurring."); *see also*, *A&B Irr. Dist. v. IDWR*, 155 Idaho 640, 653, 315 P.3d 828, 841 (2013) (affirming IDWR's use of a "baseline methodology" in the SWC delivery call).

Gomez, 174 Idaho at 1014, 554 P.3d at 65.

The Supreme Court further found that "in order to state a claim for … quasi-estoppel, a plaintiff must at least allege, among other things, a promise or representation by the party to be estopped." *Id.* IGWA's motion fails to prove the above elements.

First, contrary to IGWA's argument, A&B did not agree "that steady-state modeling is the appropriate method for allocating storage water mitigation obligations among groundwater users." *See* IGWA Motion at 9. The 2024 Stipulated Plan had absolutely nothing to do with A&B's groundwater rights and how IDWR would apportion any future mitigation obligation relative to those rights. A&B participated in the stipulation as a member of the "Surface Water Coalition" and the mitigation plan only protected the participating Ground Water Districts. *See Joint Motion for Order Approving 2024 Stipulated Mitigation Plan*, **Ex. H** to *Thompson Dec.* The joint motion plainly stated that it was submitted "to provide safe harbor to groundwater rights held by patrons of the Ground Water Districts and other entities representing groundwater users that participate in and comply with the Plan." *See Joint Motion* at 3. The 2024 Plan was not submitted for A&B's groundwater rights and does not prejudge how IDWR reviews A&B's mitigation plan or evaluates its mitigation obligations. Therefore, IGWA has failed to show that A&B's present position is something different than its original position.

Next, IGWA cannot show that A&B gained some advantage or that the Ground Water Districts were induced to change their original position. While the Ground Water Districts chose to divide up their stipulated storage water obligation based upon a steady-state analysis, that stipulated quantity and formula has no bearing on IDWR's decisions in a contested case or A&B's right to challenge how IDWR apportioned a future mitigation obligation (i.e. as was done with the July As Applied Order regarding A&B's 1948 groundwater right 36-2080). Moreover,

IGWA can point to no "advantage" that A&B gained through the 2024 Stipulated Plan, other than to argue without any supporting evidence that "[w]ithout that provision, the ground water districts would not have agreed to the 2024 Plan." *See* IGWA Motion at 9. The Ground Water Districts have an approved mitigation plan, they are not subject to curtailment, hence they can show no "disadvantage" by operation of the 2024 Plan.

Finally, the Director's approval of the 2024 Plan did not decide any contested storage water apportionment issue. Instead, the Director generally recognized the new mitigation plan was based upon an agreement of the parties and that it included various activities that the ground water users had to implement to receive safe harbor. *See Amended Final Order Approving Stipulated Plan* at 5 (CM-MP-2024-003) (Feb. 7, 2025). The Director did not decide any contested issues or standards, and recognized his ability to consider, as provided by the CM Rules, "'[w]hether the petitioners and respondents have entered into an agreement on an acceptable mitigation plan even through such plan may not otherwise be fully in compliance with these provisions.' IDAPA 37.03.11.043.03(o)." *See id.*

Finally, IGWA resorts to hyperbole in the hopes that its claim will sway the Hearing Officer to grant its motion. A&B's present requests for hearing are not some nefarious "bad faith" effort or "indirect attack on the 2024 Plan."[22] Whereas the Ground Water Districts have an approved mitigation plan and have received safe harbor from the SWC delivery call for the past two years, IGWA can point to no suffered "disadvantage" or "detriment" based upon A&B's present position in this contested case.

[22] IGWA is a not even a party to the 2024 Stipulated Plan and therefore has no basis to argue its interpretation or enforcement for its benefit. *See e.g. American West Enterprises, Inc. v. CNH, LLC*, 155 Idaho 746, 752-53, 316 P.3d 662, 668-69 (2013) ("The third party must show that the contract was made primarily for his benefit, and that it is not sufficient that he be a mere incidental beneficiary. Further, the contract itself must express an intent to benefit the third party").

In short, the equitable doctrine of quasi-estoppel has no application in this case and the Hearing Officer should deny IGWA's motion accordingly.

CONCLUSION

A&B's requests for hearing are properly before the Hearing Officer and should proceed to a full hearing on the merits as scheduled in January. As explained above AFA's and IGWA's attempts to vacate and/or dismiss this proceeding are misplaced and should be denied.

DATED this 9th day of December, 2025.

Attorneys for A&B Irrigation District

BEFORE THE DEPARTMENT OF WATER RESOUCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **DECLARATION OF TRAVIS L. THOMPSON IN SUPPORT OF A&B IRRIGATION DISTRICT'S CONSOLIDATED RESPONSE TO AFA MOTION / IGWA MOTION FOR SUMMARY JUDGMENT**

I, Travis L. Thompson, declare as follows:

1. I am duly licensed to practice law in the State of Idaho, and I am an attorney with the firm of Parsons Behle & Latimer. I am over the age of 18 and make this declaration based upon my personal knowledge. I am an attorney representing A&B Irrigation District in this matter.
2. Attached hereto as **Exhibit A** is a true and correct copy of Jennifer Sukow's November 28, 2022 powerpoint presentation to the SWC methodology technical working group titled *SWC methodology – Calculation of Priority Dates for*

Curtailment of Junior Groundwater Users. This document was admitted as exhibit 905 in the contested case hearing held before the Director from June 6-9, 2023.

3. Attached hereto as **Exhibit B** is a true and correct copy of a May 3, 2023 email from Garrick Baxter to T.J. Budge and the other parties' counsel listed on the certificate of service in IDWR Docket No. CM-DC-2010-001.
4. Attached hereto as **Exhibit C** are true and correct copies of T.J. Budge's July 19, 2023 letter to Kent Fletcher and myself, and Elisheva Patterson's August 3, 2023 letter to Tony Olenichak (Water District 01 Watermaster), documenting IGWA's 2023 storage water assignments to the Surface Water Coalition.
5. Attached hereto as **Exhibit D** is a true and correct copy of the Director's *Amended Order Determining Deficiency in Notices of Secured Water* (May 28, 2024).
6. Attached hereto as **Exhibit E** is a true and correct copy of Director Mat Weaver's July 22, 2025 memorandum to Governor Little. The memo was produced by IDWR in response to the *Subpoena for Production of Documents and Information – the Department of Water Resources* (Oct. 7, 2025) and the *Notice of Deposition Duces Tecum of Brian Ragan* (November 13, 2025).
7. Attached hereto as **Exhibit F** is a true and correct copy of the excerpt of the transcript from the deposition of Jennifer Sukow taken on October 22, 2025.
8. Attached hereto as **Exhibit G** is a true and correct copy of the *Order Regarding Mid-Season Change to Area of Common Ground Water Supply for the Eastern Snake Plain Aquifer; Third Order Amending Curtailment List* (June 28, 2024) (without the attached curtailment list).

9. Attached hereto as **Exhibit H** is a true and correct copy of the *Joint Motion for Order Approving 2024 Stipulated Mitigation Plan* (November 19, 2024) (CM-MP-2024-003).

I declare under penalty of perjury under the laws of the state of Idaho that the foregoing is true and correct to the best of my knowledge.

Exhibit
A

SWC methodology – calculation of priority dates for curtailment of junior groundwater users

Presented to the SWC Methodology Technical Working Group

Jennifer Sukow, P.E., P.G.

November 28, 2022

Methodology reference

- Curtailment date calculation (Step 2) (Page 36 of Methodology)
  - The ESPA Model will be run to determine the curtailment date which will produce a volume of water equal to the DS in the near Blackfoot to Minidoka reach. The model simulation will be run at steady state within the area of common ground water supply as described by CM Rule 50.01.
- Curtailment date calculation (Step 6) (Page 38 of Methodology)
  - Upon a determination of an additional mitigation obligation, junior ground water users will be required to establish, to the satisfaction of the Director, their ability to secure a volume of storage water pursuant to an approved mitigation plan or to conduct other approved mitigation activities that will deliver the additional mitigation obligation water to the injured members of the SWC at the Time of Need. If junior ground water users fail or refuse to submit this information within fourteen (14) days from issuance of a Step 6 order, the Director will issue an order curtailing junior ground water users.[13] The ESPA Model will be run to determine the priority date to produce the necessary additional mitigation obligation volume within the area of common ground water supply, as described by CM Rule 50.01.

Methodology reference

- Curtailment for carryover shortfall (Step 9) (Page 39 of Methodology)
  - Fourteen (14) days following the issuance by the Department of reasonable carryover shortfall obligations, junior ground water users will be required to establish, to the satisfaction of the Director, their ability to supply a volume of storage water or to conduct other approved mitigation activities that will provide water to the injured members of the SWC equal to the reasonable carryover shortfall for all injured members of the SWC. If junior ground water users cannot provide this information, the Director will issue an order curtailing junior ground water rights.

Presentation outline

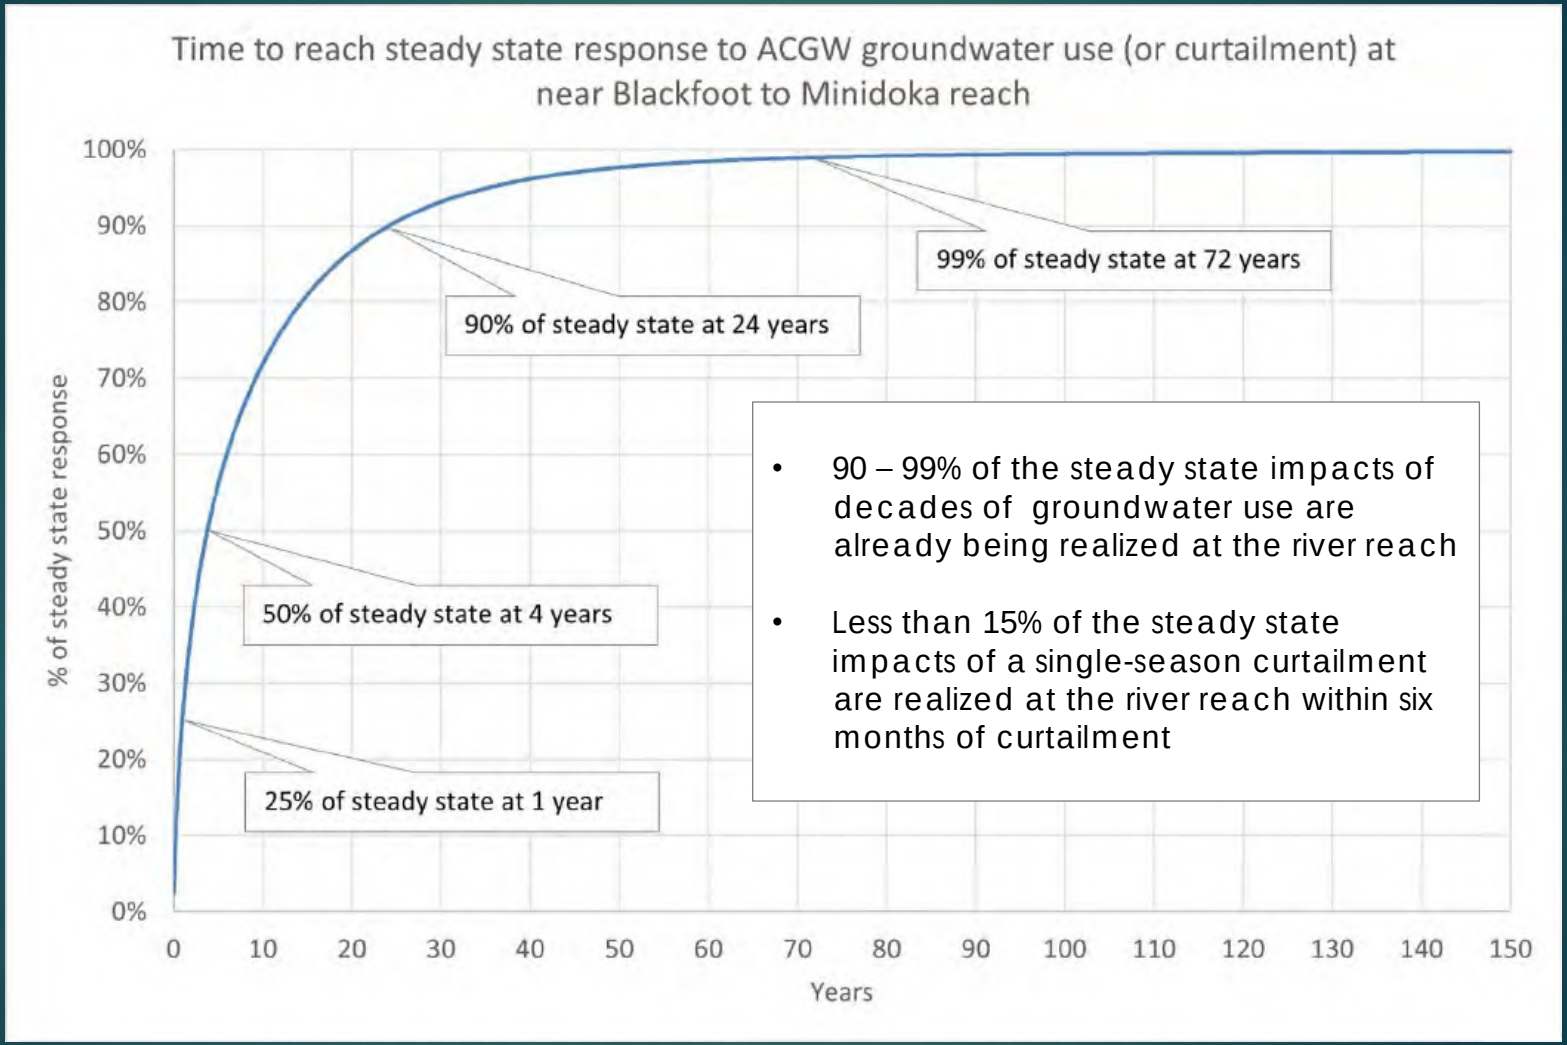
- Steady state vs. transient model simulations
- Transient model results for curtailment priority dates in 2022 orders
- Examples of transient model simulations for calculation of curtailment priority dates
  - Assumptions for transient model simulations
  - Comparison of priority dates and acres curtailed for various shortfall volumes
  - Transient analyses for water years 2021-2022

Steady state vs. transient model simulations

- Merriam-Webster definition of *steady state*
  - a state or condition of a system or process that does not change in time

- Steady state ESPAM simulation for calculation of curtailment priority date
  - Predicts long-term response to continuous curtailment of groundwater use at a constant rate for an infinite number of years
  - Result is a prediction of the long-term average annual impact of curtailment on the near Blackfoot to Minidoka reach
  - Curtailments ordered as prescribed in methodology order are not continuous or long-term
  - Groundwater use does not occur at a constant rate throughout the year

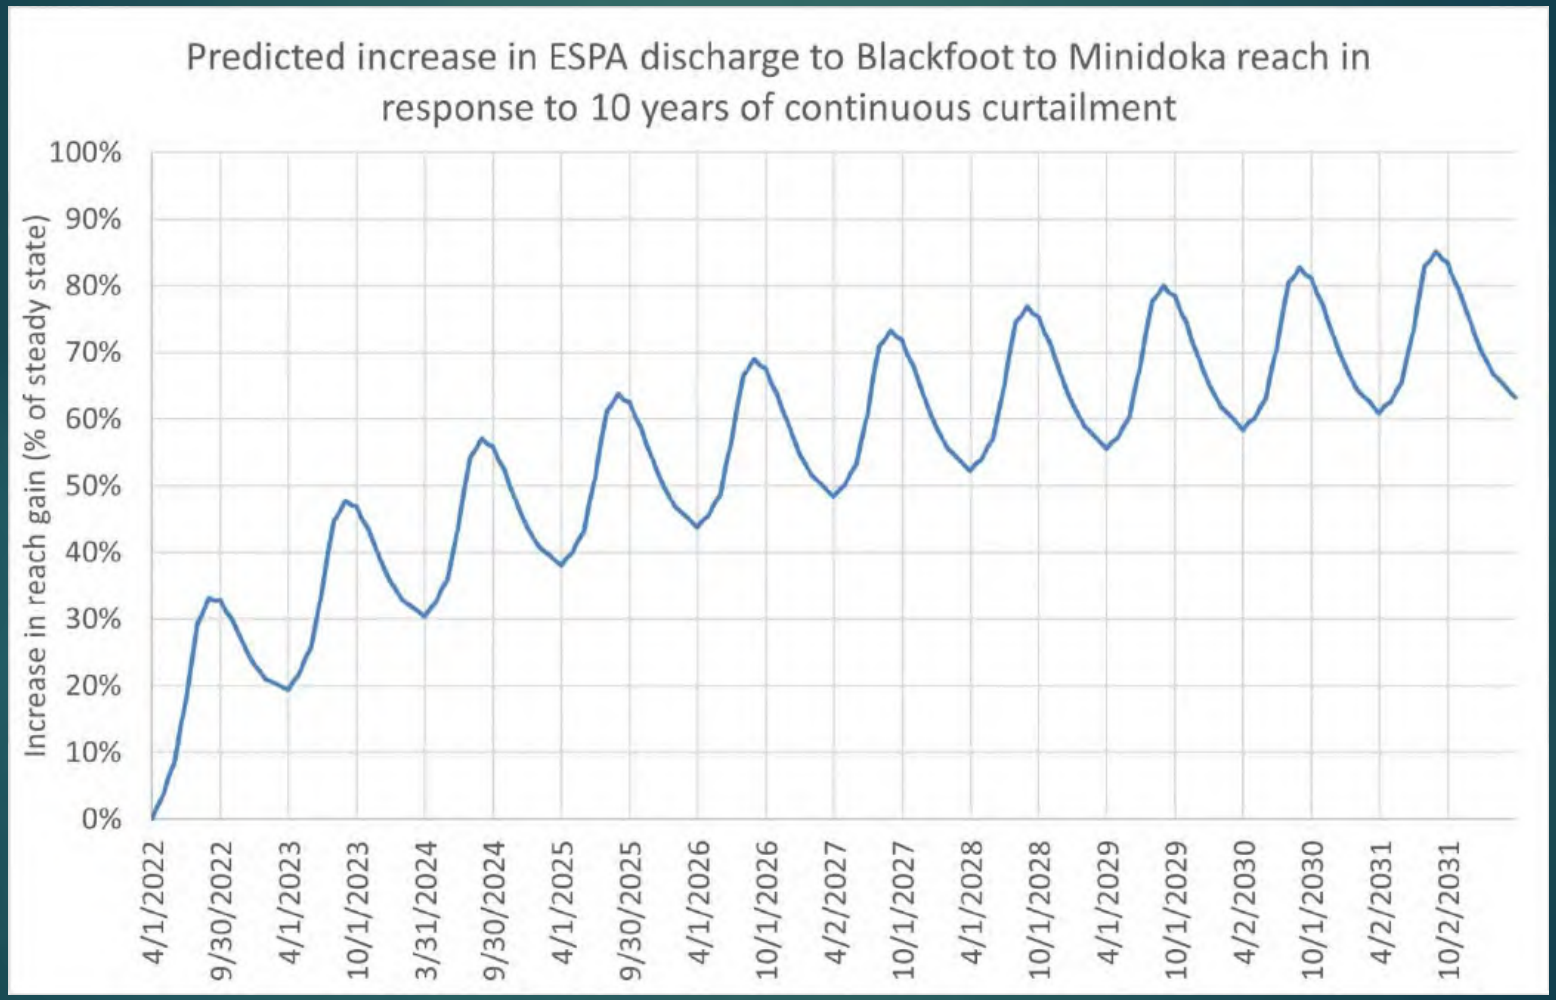
How long does it take to approach steady state conditions?



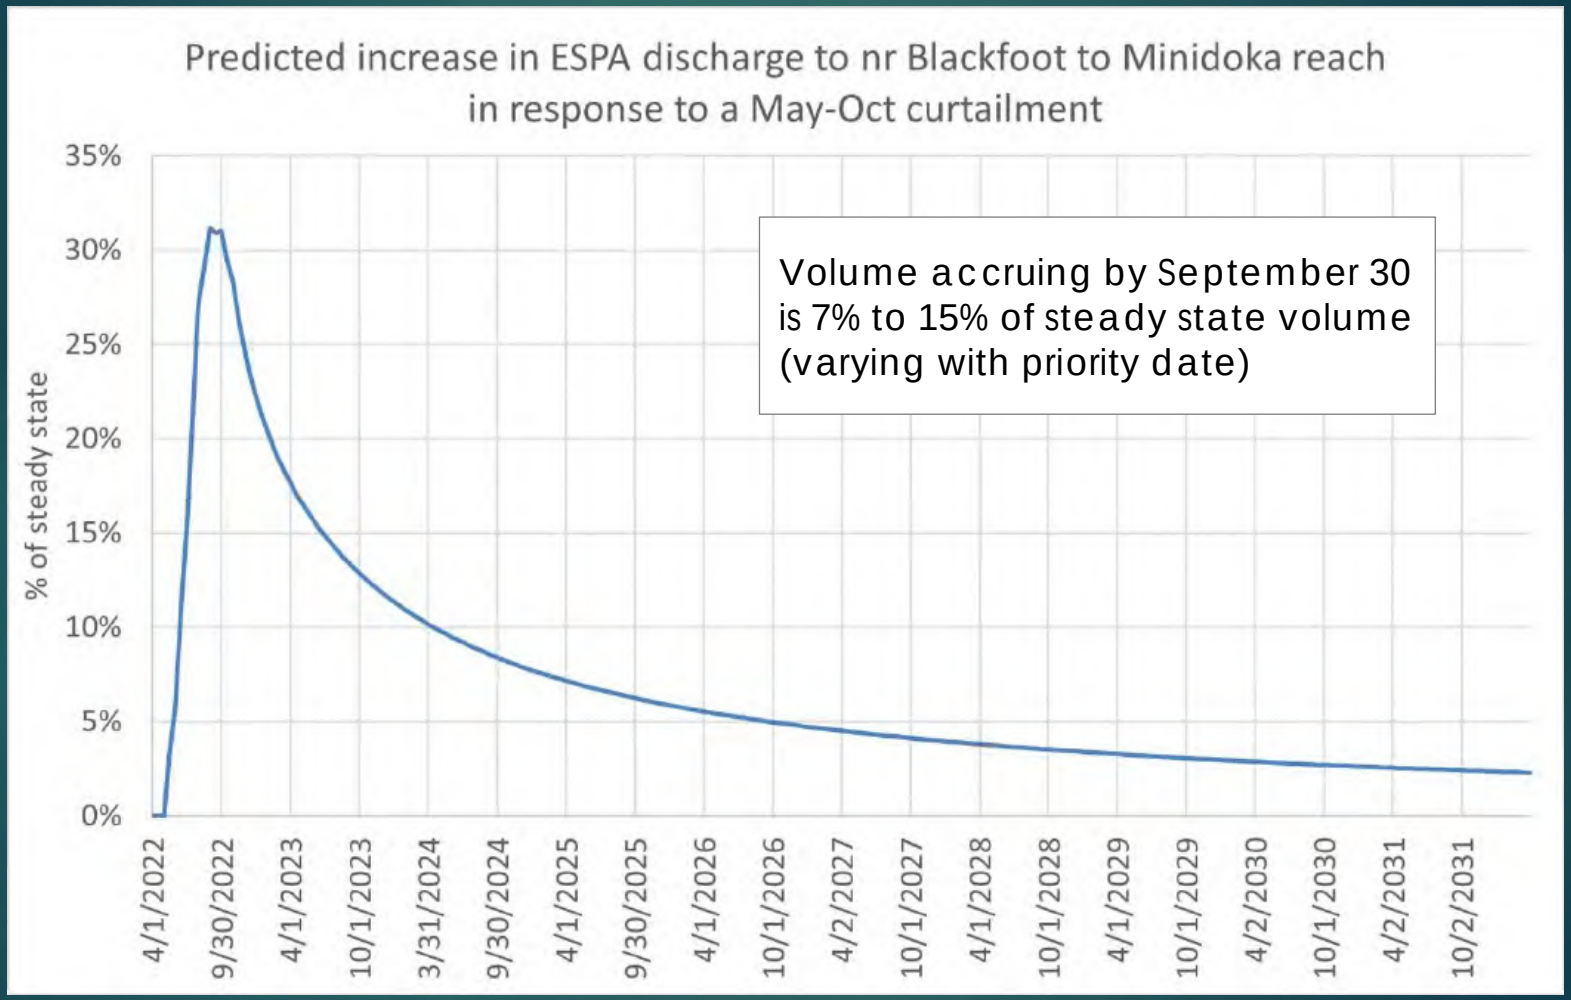
Steady state vs. transient model simulations

- Merriam-Webster definition of *transient*
  - passing especially quickly into and out of existence
- Transient ESPAM simulation for calculation of curtailment priority date
  - Predicts timing and magnitude of response to time-varying changes in aquifer stress resulting from short-term curtailment of groundwater use to address a predicted shortfall
  - Result is a prediction of the timing and magnitude of the response to time-varying curtailment of groundwater use

Steady state vs. transient model simulations



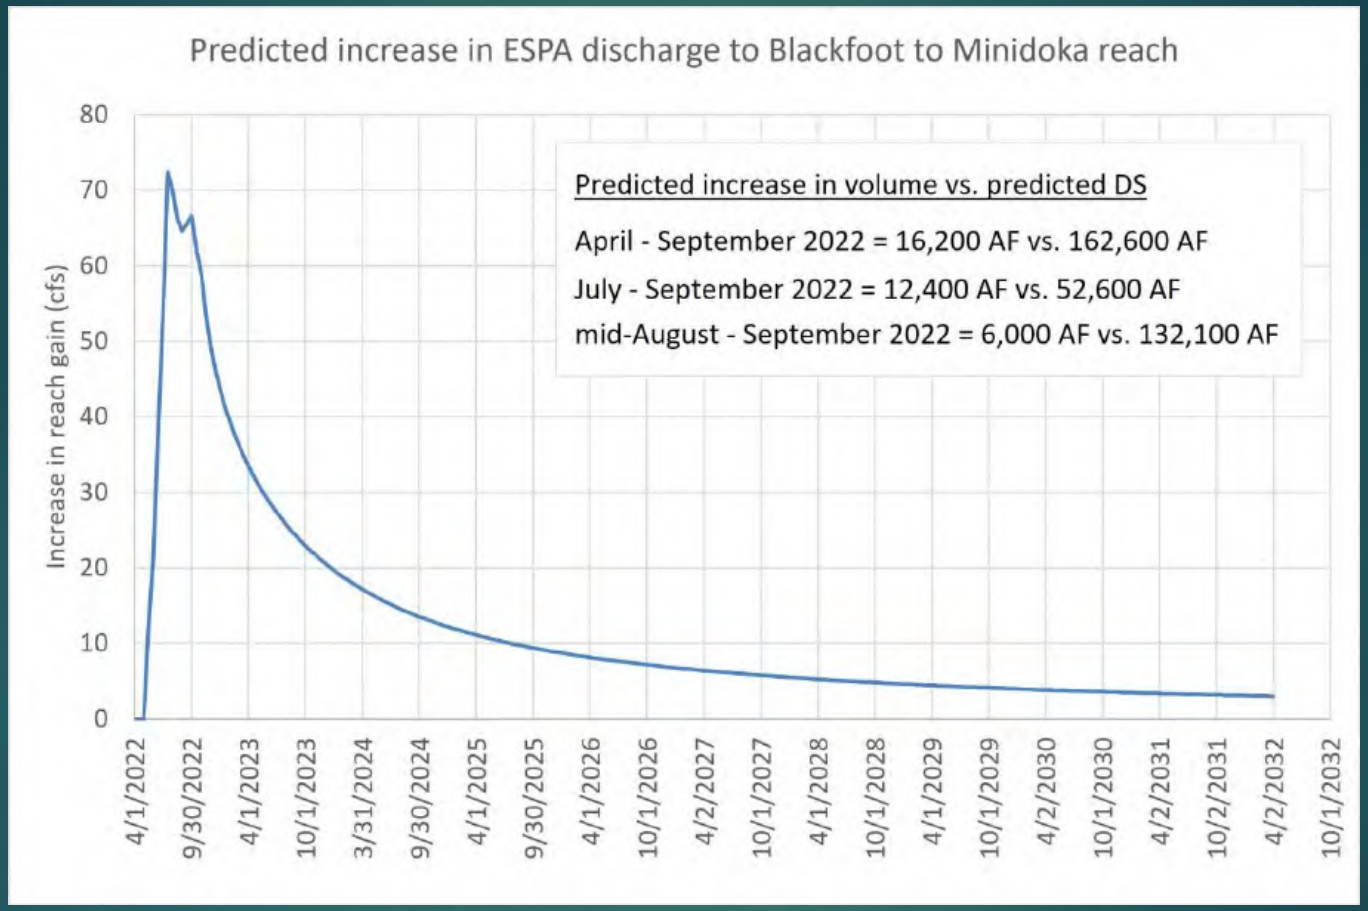
Steady state vs. transient model simulations



Transient simulation of curtailments ordered in 2022

- 2022 curtailments ordered
  - Curtailment priority dates were calculated based on steady state response at near Blackfoot to Minidoka
  - April 1 DS forecast of 162,600 AF → curtailment junior to December 25, 1979 beginning May
  - July 1 DS Forecast of 52,600 AF → curtailment reduced to junior to March 12, 1989 in July
  - Time of Need Forecast of 132,100 AF → curtailment increased to junior to March 25, 1981 in August
- Transient simulation of these curtailment dates was performed to compare volumes predicted to accrue to near Blackfoot to Minidoka during this season with the predicted DS volumes

Transient simulation of curtailments ordered in 2022

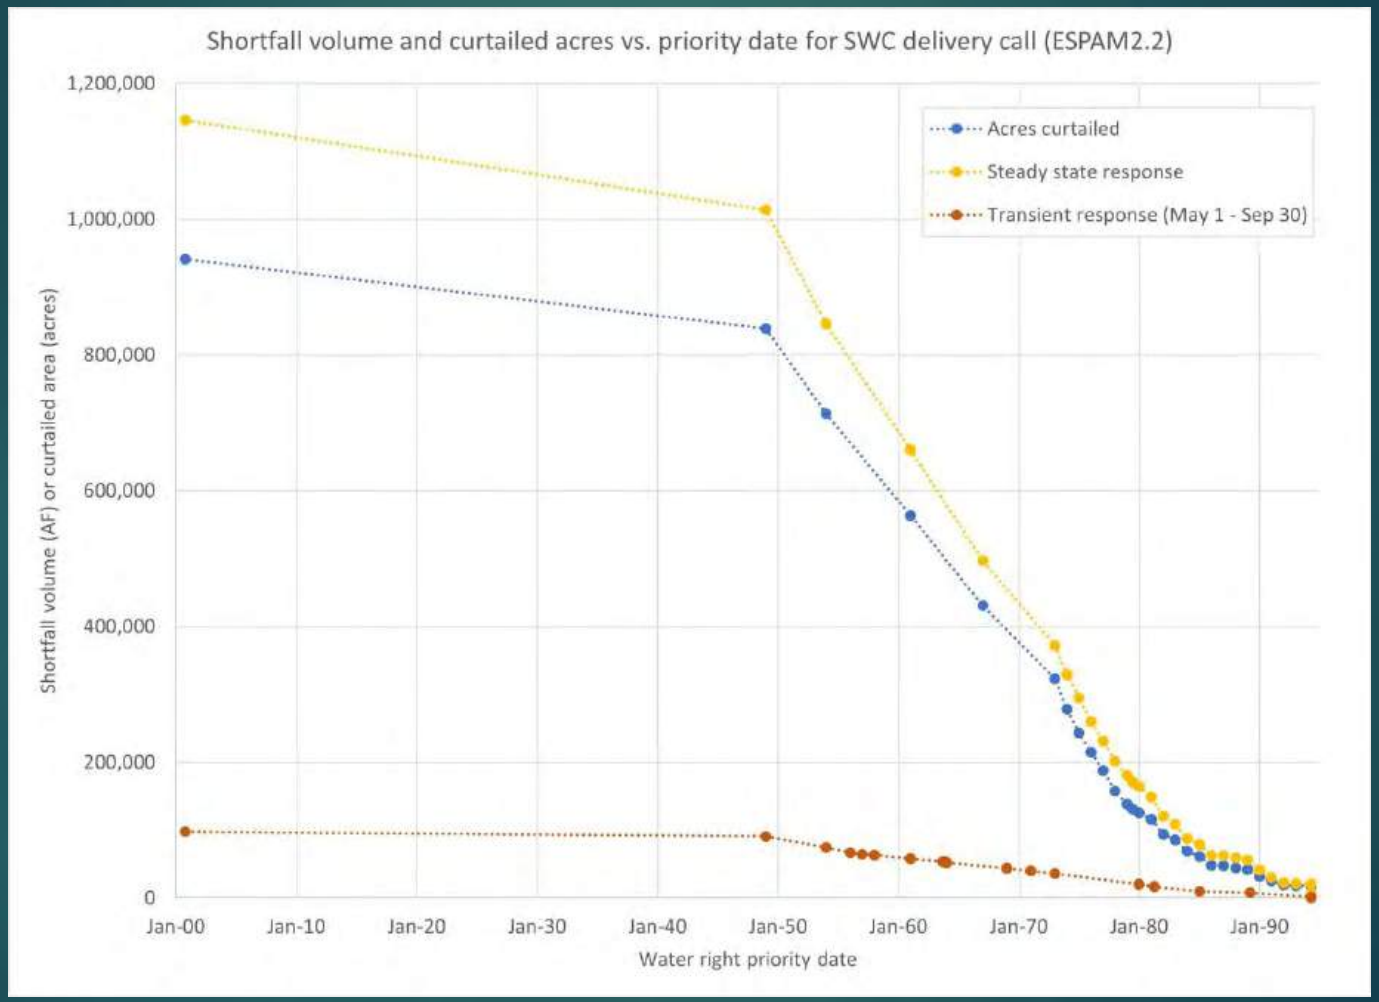


- Volume that would accrue from the ordered curtailments during the period of each shortfall is much less than the predicted shortfall
- Increases in reach gain would continue to accrue in future water years

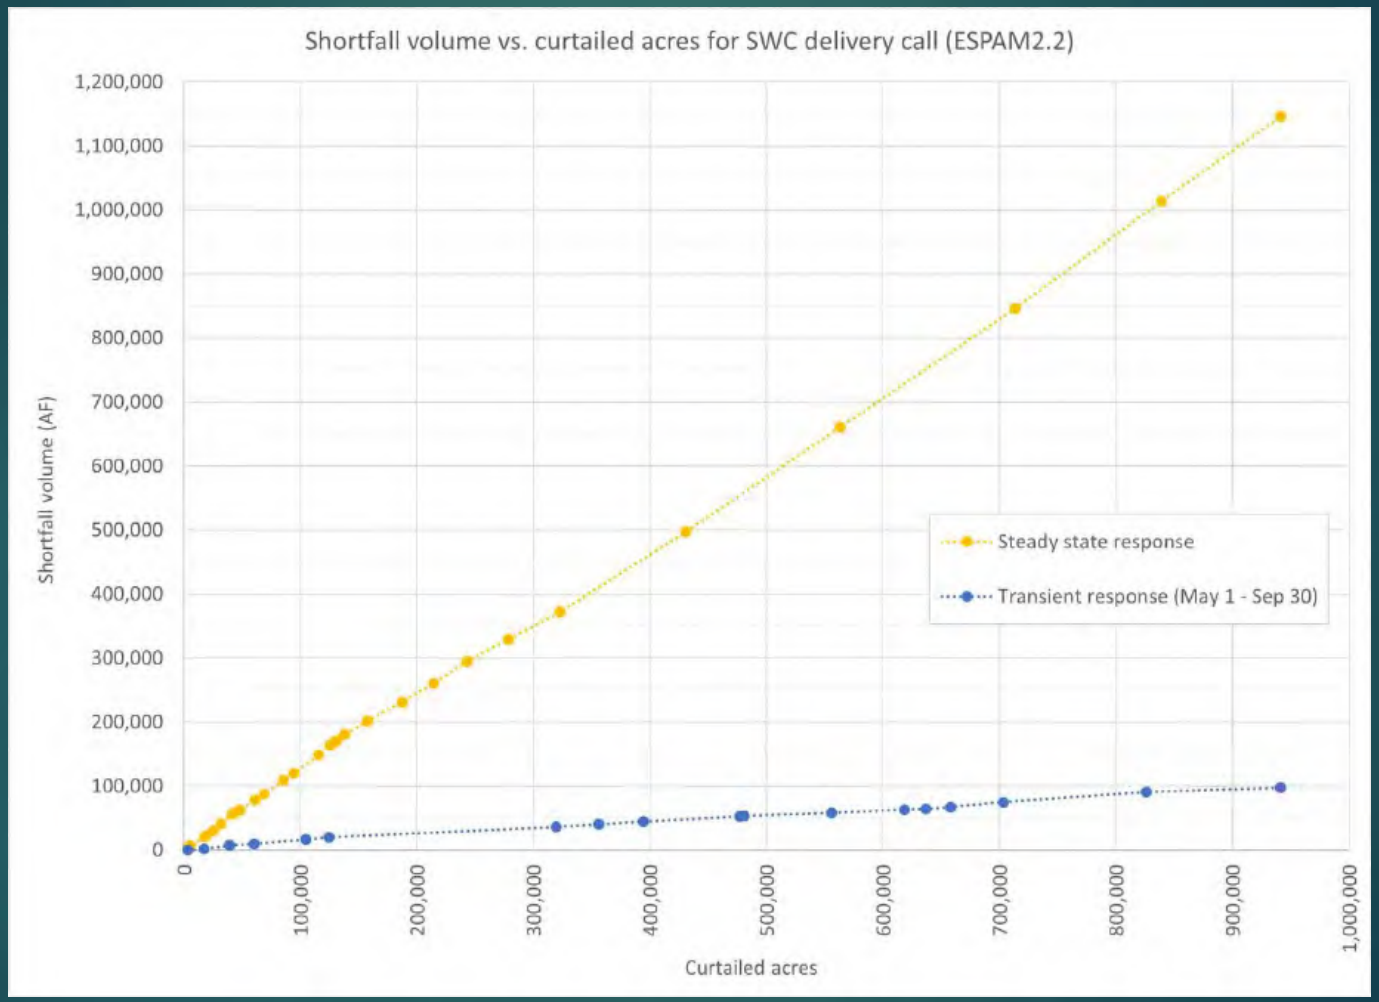
Assumptions for example transient model simulations

- Continue to use methods documented in "Curtailment Scenario" report (Sukow, 2021) https://research.idwr.idaho.gov/files/projects/espam/browse/ESPAM22_Reports/Scenarios/CurtScen22_FinalwApp.pdf
  - Use average monthly ET and precipitation from WY2009-WY2018 instead of average annual values
- Analysis of municipal curtailment continues to use methods described in 2015 IDWR staff memo for Rangen delivery call (Sukow, 2015) https://idwr.idaho.gov/wp-content/uploads/sites/2/legal/CM-MP-2014-007/CM-MP-2014-007-20150123-Staff-Memo-Cities-2nd.pdf
  - Five-year average pumping rates within ACGW are updated each year based on reported annual pumping volumes
- Curtailment for April forecast begins ~ May 1
- Curtailment priority date revision for July forecast goes into effect ~ July 16 if April DS > July DS
- Curtailment priority date revision for July forecast goes into effect ~ August 1 if April DS < July DS
- Curtailment priority date revision for Time of Need (mid-August) forecast goes into effect ~ September 1
- Target for transient calculation is a modeled benefit at near Blackfoot to Minidoka equal to DS volume accruing between DS forecast date and September 30
- Earliest curtailment priority date is junior to October 11, 1900 (TFCC and NSCC natural flow water rights)

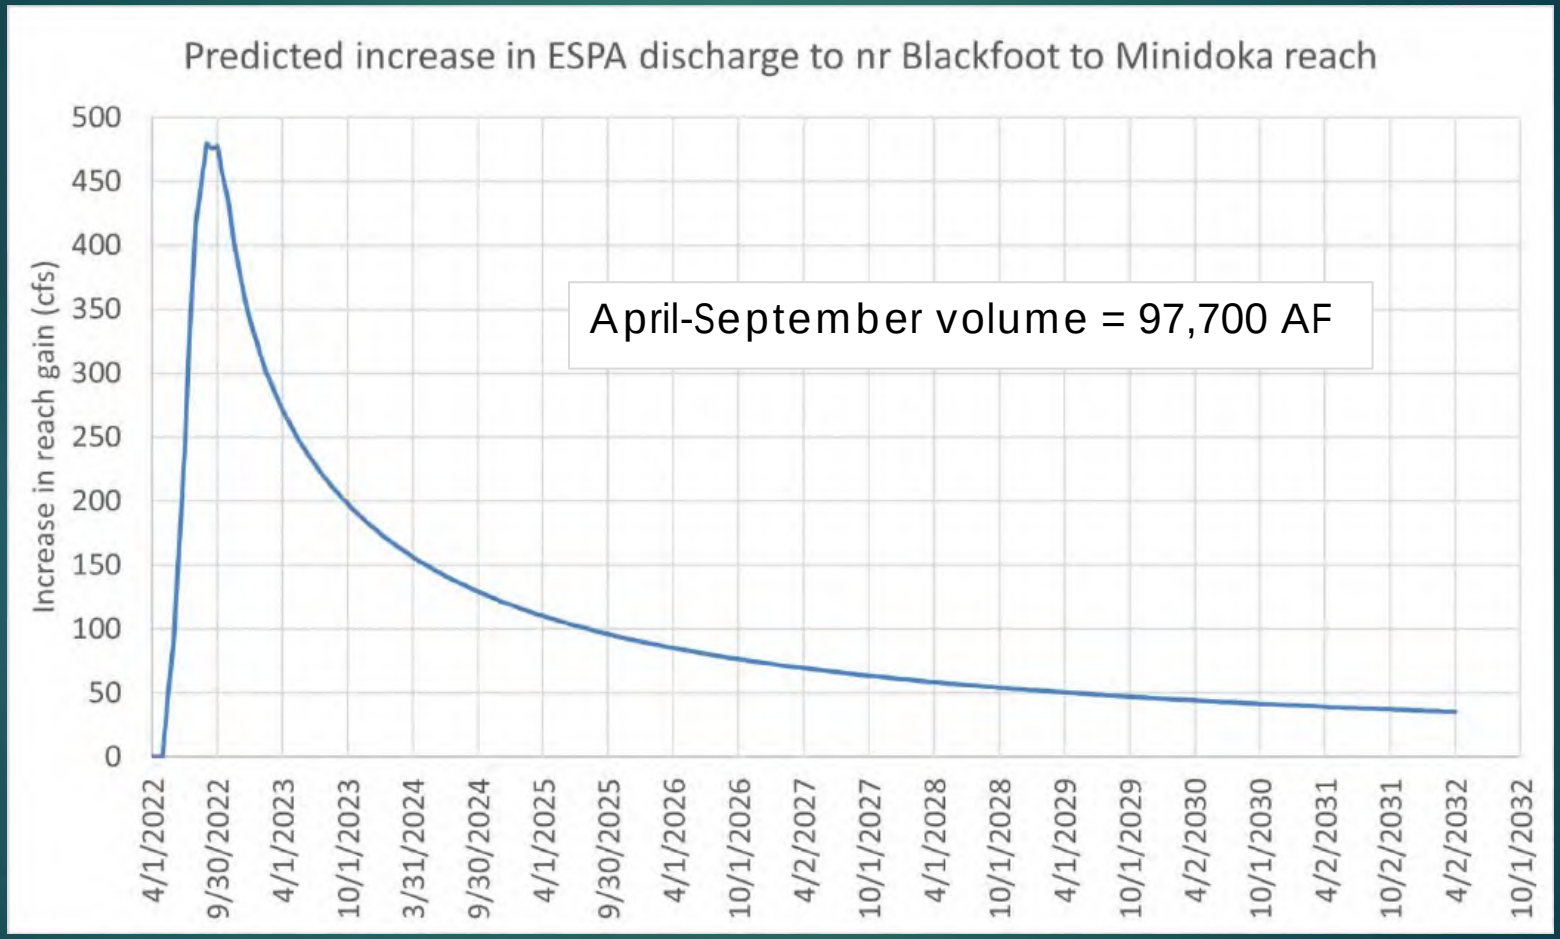
Comparison of priority dates calculated for April DS forecasts (May 1 curtailment)



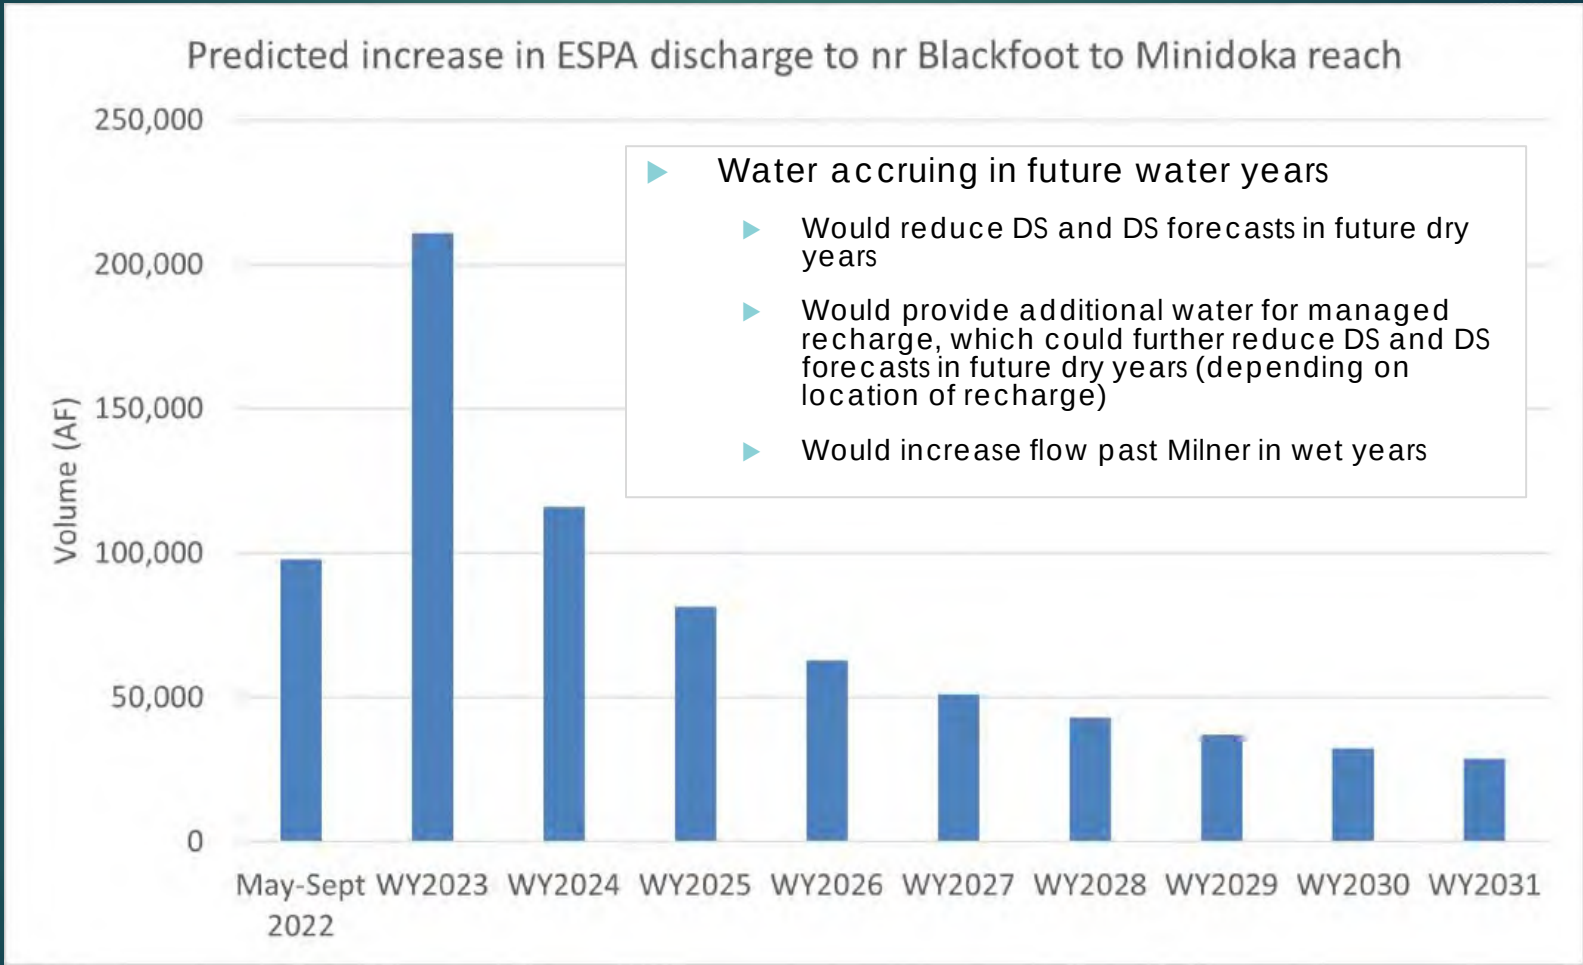
Comparison of priority dates calculated for April DS forecasts (May 1 curtailment)



Predicted response to May 1 curtailment of water rights junior to October 11, 1900



Predicted response to May 1 curtailment of water rights junior to October 11, 1900



Transient analyses for 2021 shortfall volumes

- April DS forecast = 40,500 AF
  - Curtail junior to January 11, 1971 starting May 1
    - May 1 – Sep 30 predicted response = 40,500 AF
- July DS forecast = 170,000 AF
  - Increase curtailment to junior to October 11, 1900 starting August 1
    - Jul 1 – Sep 30 predicted response = 44,400 AF
- Time of Need DS forecast = 142,700 AF
  - Maintain curtailment junior to October 11, 1900
    - Aug 16 – Sep 30 predicted response = 27,400 AF
- Carryover shortfall forecast = 64,600 AF
  - Curtail junior to April 19, 1961 starting January 1
    - Jan 1 – Sep 30 predicted response = 64,700 AF

Transient analysis for 2021 carryover shortfall

- Calculation target is volume accruing between date of curtailment and September 30 of the next irrigation season
- Carryover shortfall forecast = 64,600 AF
  - Curtail junior to April 19, 1961 starting January 1
    - Jan 1 – Sep 30 predicted response = 64,700 AF

Transient analyses for 2022 shortfall volumes

- April DS forecast = 162,600 AF
  - Curtail junior to October 11, 1900 starting May 1
    - May 1 – Sep 30 predicted response = 97,700 AF
- July DS forecast = 52,600 AF
  - Decrease curtailment to junior to March 13, 1981 starting July 16
    - Jul 1 – Sep 30 predicted response = 52,600 AF
- Time of Need DS forecast = 132,100 AF
  - Increase curtailment to junior to October 11, 1900 starting September 1
    - Aug 16 – Sep 30 predicted response = 27,200 AF

Comparison of priority dates calculated using transient and steady state analyses

Forecast	Steady state date	Transient date	Steady state acres	Transient acres
April 1, 2021	1990	1/11/1971	~30,000	357,000
July 1, 2021	7/18/1979	10/11/1900	130,300	941,400
August 15, 2021	1981	10/11/1900	~110,000	941,400
Final net DS	1976	10/11/1900	~200,000	941,400
Carryover 2021	6/29/1985	4/19/1961	55,300	539,700
April 1, 2022	12/25/1979	10/11/1900	124,700	941,400
July 1, 2022	3/12/1989	3/31/1981	39,300	104,700
August 15, 2022	3/25/1981	10/11/1900	105,000	941,400

Range of priority dates using steady state simulations:
1976 – 1990 (30,000 to 200,000 acres)

Range of priority dates using transient simulations:
1900 – 1981 (105,000 to 940,000 acres)

Conclusions

- Steady state simulations are appropriate for evaluating the impact of aquifer stresses that have been applied for decades (i.e. groundwater pumping, continuous curtailment to same date every year)
- Transient simulations are appropriate to evaluate the impacts of aquifer stresses applied for short periods of time (i.e. short-term curtailments with varying priority dates)
- Steady state simulations of continuous curtailment do not simulate the short-term curtailments prescribed in the SWC methodology
- Transient simulations better simulate the short-term curtailments prescribed in the SWC methodology

Conclusions

- Short-term curtailments in response to in-season predictions of DS are inadequate to provide water during the time of need for several of the shortfall volumes predicted in 2021-2022
- Curtailments sufficient to provide water during the time of need would also provide water to reduce shortfalls in future dry years, but would result in additional flow past Milner in future wet years

Subject: Request to delineate proportionate shares of mitigation obligation

TJ,
On March 31, 2023, you submitted a request asking the Director to delineate the ground water districts' respective share of IGWA's mitigation obligation. Below is the requested information using a method that distributes IGWA's proportionate share by ground water district based on information currently available to IDWR regarding the water rights mitigated for by each ground water district. Note that assumptions had to be made for some water rights based on location within or near ground water district boundaries. The Department is providing this information as a courtesy this spring. If this information becomes necessary in the future, the Department expects IGWA to determine the numbers on its own. Please also be aware that there may be a question about whether individual ground water districts can mitigate by providing a volume less than IGWA's proportionate share under the 2009 mitigation plan (Docket No. CM-MP-2009-007). By providing this data, the Director is not deciding this or any other issue related to proportionate shares.

GWD	% of IGWA's proportionate share	Portion of April 2023 predicted demand shortfall	
	%	AF	%
American Falls Aberdeen	33.4%	21,214	28.2%
Bingham	20.9%	13,384	17.8%
Bonneville Jefferson	13.4%	8,469	11.3%
Carey Valley	0.0%	5	0.0%
Henry's Fork	0.2%	90	0.1%
Jefferson Clark	10.8%	6,939	9.2%
Madison	0.0%	4	0.0%
Magic Valley	16.1%	10,277	13.7%
North Snake	5.1%	3,262	4.3%
Sum	100.0%	63,645	84.6%

wkf@pmt.org

Re: 2023 Mitigation

Dear Travis & Kent:

This letter is written in response to your letter dated July 6, 2023.

As discussed in previous letters, IGWA does not believe the 2015 Agreement is workable or enforceable. However, IGWA desires to work cooperatively with the SWC in good faith to resolve past disputes and work toward development of a more effective mitigation framework going forward. Toward that end, IGWA has delivered 30,000 acre-feet under the Settlement Agreement dated September 7, 2022, and IGWA plans to deliver 50,000 acre-feet of storage to the SWC within 21 days of the Date of Allocation consistent with the 2015 Agreement. This should not be interpreted as an acknowledgement that the 2015 Agreement is enforceable, but rather as a good faith gesture.

While the Director's *April 2023 As-Applied Order* predicts a demand shortfall of 75,200 acre-feet, IGWA anticipates that step 7 of the Methodology Order will result in a demand shortfall less than 50,000 acre-feet, and likely 0 acre-feet. Thus, IGWA anticipates that its delivery of 50,000 acre-feet will provide the SWC with more storage than is required under the Methodology Order. To the extent there is a mitigation obligation under the Methodology Order, the 50,000 acre-feet that IGWA plans to deliver within 21 days of the Date of Allocation will be credited towards that obligation.

Sincerely,

T. J. BUDGE

Email: Tony.Olenichak@idwr.idaho.gov

Re: Revised Assignment of 50,000 acre-feet to the Surface Water Coalition

Dear Tony:

On July 10, 2023, T.J. Budge sent you a letter assigning 30,000 acre-feet of storage to the Surface Water Coalition (SWC) on behalf of Idaho Ground Water Appropriators, Inc. (IGWA). On July 21, 2023, I sent you a letter assigning an additional 50,000 acre-feet to the SWC on behalf of IGWA. Upon further review, I have identified a small discrepancy in the assignment volumes set forth in the July 21 letter. In addition, IGWA desires to make a few adjustments to the volumes assigned to the SWC under certain storage leases. Therefore, I am sending this letter to revise IGWA's assignments to the SWC.

As of today, IGWA assigns a total of 80,002 acre-feet of storage to the SWC as set forth in the table attached hereto as Appendix A. I believe all of the lease contracts referenced above have been sent to you previously except for the One-Year Tribal Water Lease Agreement dated July 21, 2023; Harrison Canal Co. Storage Water Lease dated July 21, 2023; Peoples Canal Co., Blackfoot Irrigation Co., Wearyrick Ditch Co., and Palisades Water Users Assoc. Storage Water Leases dated July 24, 2023; and the Corbett Slough Ditch Co. Storage Water Lease dated July 25, 2023, copies of which are enclosed. Enclosed also are the Parsons Ditch Co. and Watson Canal Co. Storage Water Leases dated May 5, 2023, which were previously submitted, but lacking full signatures. If you do not have copies of any of the leases referenced in Appendix A, please let me know and I will send them to you promptly.

I believe all Water District 1 fees associated with these leases have already been paid, which the exception of the fees associated with the lease from Falls Irrigation District which are being paid directly by American Falls-Aberdeen Ground Water District and should be arriving soon at your office. Please let me know if you have any questions regarding Water District 1 fees associated with these leases.

Kent Fletcher, Travis Thompson, or another representative of the SWC will direct you as to which SWC storage accounts this water should be credited.

Thank you for your assistance. If you have any questions, please contact me.

Sincerely,

Elisheva M. Patterson

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **AMENDED ORDER DETERMINING DEFICIENCY IN NOTICES OF SECURED WATER**

BACKGROUND

On July 19, 2023, the Idaho Department of Water Resources ("Department") issued its *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("*Methodology Order*"). The *Methodology Order* established nine steps for determining material injury to members of the Surface Water Coalition ("SWC").

Step 3 of the Methodology Order states that by May 1, or within 14 days from issuance of the final order predicting a shortfall, "whichever is later in time, junior ground water users with approved mitigation plans for delivery of water must secure, to the satisfaction of the Director, a volume of water equal to their proportionate share" of any predicted shortfall unless the forecast is revised. *Methodology Order* ¶ 4 at 42. Step 3 further states that "[t]he secured water will not be required to be delivered to the injured members of the SWC until the Time of Need." *Id.*

On April 18, 2024, the Director issued the *Final Order Regarding April 2024 Forecast Supply (Methodology Steps 1–3)* ("*April As-Applied Order*"), in which the Director determined the predicted shortfall obligation for junior ground water users for 2024. The Director concluded that Twin Falls Canal Company ("TFCC") is the only entity with a predicted in-season demand shortfall ("IDS") for 2024 and the IDS is 74,100 acre-feet. *April As-Applied Order*, at 4. The Director ordered that:

> On or before May 2, 2024, ground water users holding consumptive water rights bearing priority dates junior to March 31, 1954, within the Eastern Snake Plain Aquifer area of common ground water supply shall establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted April IDS of 74,100 acre-feet in accordance with an approved mitigation plan.

Id. at 6. The Director also ordered that, if such a junior ground water user cannot establish "they can mitigate for their proportionate share of the predicted April IDS in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water user." *Id.*

Historically, the Idaho Ground Water Appropriators, Inc. ("IGWA"), acting on behalf of its member ground water districts, filed a notice of mitigation with the Department to establish that the ground water districts can mitigate for their proportionate share of the predicted IDS in accordance with an approved mitigation plan. However, this year, individual ground water districts submitted their own mitigation notices.[1]

On May 2, 2024, Bonneville-Jefferson Ground Water District ("Bonneville-Jefferson") and Jefferson-Clark Ground Water District ("Jefferson-Clark") each individually filed mitigation notices. *BJGWD's Notice of Mitigation in Resp. to April 2024 As-Applied Order (Methodology Steps 1-3)* [hereinafter *BJGWD's Notice*]; Letter from Jerry Rigby, attorney for Jefferson-Clark, to Mathew Weaver, Department Director (Regarding mitigation water obligations of Jefferson-Clark).

Also on May 2, Magic Valley Ground Water District ("Magic Valley") and North Snake Ground Water District ("North Snake") jointly filed a mitigation notice and Henry's Fork Ground Water District ("Henry's Fork") and Madison Ground Water District ("Madison") jointly filed a mitigation notice. *Joint Notice of Compliance—Magic Valley Ground Water Dist.& North Snake Ground Water Dist.'s 2024 Irrigation Season Mitigation Commitments* [hereinafter *MVNS's Notice*]; Letter from Jerry Rigby, attorney for Henry's Fork and Madison, to Mathew Weaver, Department Director (Regarding mitigation water obligations of Henry's Fork and Madison).

On May 3, 2024, Bingham Ground Water District ("Bingham") filed a mitigation notice. *Notice of Bingham Ground Water District 2024 Mitigation*. On the same day, Carey Valley Ground Water District ("Carey Valley") submitted a letter proposing a "mitigation plan for 2024 . . . ." Letter from Leta Hansen, Chairman of Carey Valley, to Mathew Weaver, Department Director. While the letter was framed as a "mitigation plan," the Director will consider it a mitigation notice.

Also on May 3, the Director held a status conference to discuss the status of IGWA's mitigation plans and IGWA's mitigation efforts for this irrigation season. *Am. Notice of Status Conf.*, at 1.

On May 6, 2024, American Falls-Aberdeen Ground Water District ("American Falls-Aberdeen") filed a mitigation notice. Letter from Sarah Klahn, attorney for American Falls-Aberdeen, to Mathew Weaver, Department Director [hereinafter AFA Mitigation Notice] (Regarding Case Nos.CM-DC-2010-001 and CM-MP-2016-001).

On May 8, 2024, the Department received a letter from IGWA regarding ground water district compliance with IGWA's *2016 Settlement Mitigation Plan* (CM-MP- 2016-001). In the letter, IGWA clarifies its intent to comply with certain elements of the plan regarding its 2021 performance. Letter from T.J. Budge, attorney for IGWA, to Mathew Weaver, Department

[1] The Department received *IGWA's Request for Mitigation Credit for Aquifer Enhancement Activities (2024)* on May 2, 2024. This request will be addressed by the Director is a separate order.

Director (Regarding Case Nos. CM-DC-2010-001, CM-MP-2016-001, and Sept. 7, 2022 Settlement Agreement between IGWA and SWC).

On May 10, 2024, the Director issued the *Order Determining Deficiency in Notices of Secured Water* ("*Order Determining Deficiency*").

On May 14, 2024, IGWA submitted *IGWA's Conditional Notice of Mitigation Compliance; Petition for Reconsideration; and Request for Expedited Decision* ("*IGWA Second Petition for Reconsideration*") in which IGWA asked the Director to reconsider the Director's conclusion in the *Order Determining Deficiency* that under the *2009 Storage Water Mitigation Plan* IGWA must mitigate for all ground water users. *IGWA Second Petition for Reconsideration*, at 2–3. On the same day, Bingham filed a *Brief in Support of IGWA's Conditional Notice of Mitigation Compliance; Petition for Reconsideration; and Request for Expedited Decision* ("*Bingham's Brief*"), in which Bingham took issue with the Director's use of the term "free rider" in the *Order Determining Deficiency*. *Bingham's Brief*, at 1–2.

On May 17, 2024, American Falls-Aberdeen filed a *Motion for Reconsideration of Order Determining Deficiency in Notices of Secured Water* ("*AFA's Motion for Reconsideration*") in which it also sought reconsideration of the *Order Determining Deficiency*. American Falls-Aberdeen argued that the Director requiring "evidence [that] it has secured storage water to satisfy the entire 50,000 acre-feet ("50kaf") delivery obligation . . . . is inconsistent with the plain language of the underlying settlement that was adopted as the *2016 Plan* and with the Department's prior interpretations of the ground water districts' obligations under the *2016 Plan*." *AFA's Motion for Reconsideration*, at 1. American Falls-Aberdeen argued that the *2016 Settlement Mitigation Plan* does not require the ground water districts to deliver the 50,000 acre-feet until 21 days after the day of allocation and that "[t]he Director has no legal basis to impose this proof-of-secured-water requirement on AFA or any district complying with, and seek safe harbor under, the 2016 Plan." *Id.* at 3, 5. American Falls-Aberdeen also argued that the parties to the 2016 plan must resolve disputes through the steering committee before bringing issues of breach to the Director. *Id.* at 4. American Falls-Aberdeen requested the Director reconsider the *Order Determining Deficiency* to remove any obligation on behalf of the ground water districts to provide proof that 50,000 acre-feet of storage water has been secured under the *2016 Settlement Mitigation Plan*. *AFA's Motion for Reconsideration*, at 5–7.

On May 28, 2024, the Director issued an order denying *IGWA's Second Petition for Reconsideration*. *Order Denying IGWA's Second Petition for Reconsideration; Order Determining Deficiency in IGWA's May 17, 2024 Notice of Storage Water Leases*, at 8. On the same day, the Director issued an *Order Granting Upper Valley Districts Limited Intervention and AFA's Motion for Reconsideration*, in which the Director agreed with the arguments in *AFA's Motion for Reconsideration* and agreed to issue this *Amended Order Determining Deficiency in Notices of Secure Water* with changes shown in strikeout/underline.

ANALYSIS

At the status conference, the Director started by asking each participating ground water district to identify whether, in 2024, they plan to mitigate under IGWA's *2009 Storage Water*

Mitigation Plan (CM-MP-2009-007) or IGWA's *2016 Settlement Mitigation Plan*. The Director asked this because many of the mitigation notices submitted by the ground water districts included vague, confusing, or contradictory statements regarding compliance with the approved mitigation plans. Bonneville-Jefferson, Magic Valley, and North Snake indicated that they had secured water for 2024 and would dedicate their secured water towards the mitigation requirements under the *2009 Storage Water Mitigation Plan*. Jefferson-Clark, Henry's Fork, and Madison indicated that they also had secured storage water and would dedicate their secured storage water towards required mitigation activities set forth in either the *2009 Storage Water Mitigation Plan* or the *2016 Settlement Mitigation Plan*. American Falls-Aberdeen indicated that it planned to mitigate under the *2016 Settlement Mitigation Plan* only. Bingham indicated it will not mitigate under any approved mitigation plan. Carey Valley did not participate in the status conference.

At the status conference, questions arose regarding whether the ground water districts storage water obligations were additive between the 2009 and 2016 plans, and if and how the ground water district's secured storage water could count towards compliance with either plan. In response, the Director indicated that the ground water districts obligations were not additive between the 2009 and 2016 plans. However, the Director clarified that the ground water districts can apply their secured storage water to either plan, but not both.

This order evaluates whether the ground water districts that seek protection under the *2009 Storage Water Mitigation Plan* and the *2016 Settlement Mitigation Plan* are entitled to protection under their chosen mitigation plan, evaluates the mitigation notices submitted by the ground water districts, and evaluates whether each ground water district has shown, to the satisfaction of the Director, that they have secured the required storage water. The order also discusses Bingham and Carey Valley's decisions not to mitigate under either plan.

1. Mitigation Pursuant to IGWA's *2009 Storage Water Mitigation Plan*

a. The May 3, 2024 Status Conference

At the status conference, Jefferson-Clark, Henry's Fork, Madison, Magic Valley, North Snake, and Bonneville-Jefferson indicated that in 2024, they plan to mitigate using IGWA's *2009 Storage Water Mitigation Plan*. In response to a question about the status of the *2009 Storage Water Mitigation Plan*, the Director recognized that a recent decision by Hearing Officer Roger Burdick in another matter created a question of whether the ground water districts can still use the *2009 Storage Water Mitigation Plan*. The Director concluded that the Hearing Officer's decision was still pending, and the issue had not yet been presented to him for consideration so he would consider the *2009 Storage Water Mitigation Plan* available for use at this time. The Director also stated that he reviewed former Director Spackman's 2023 *Order Determining Deficiency in IGWA's Notice of Secured Water* and agreed with two key conclusions reached in that order related to the *2009 Storage Water Mitigation Plan*. First, that the plain language of the *2009 Storage Water Mitigation Plan* "clearly states" that IGWA will mitigate for all ground water users, not just its members and non-member participants. *Order Determining Deficiency in IGWA's Notice of Secured Water*, at 4. Second, that "IGWA cannot pick and choose who gets the benefit of storage water if IGWA is not providing storage water amounts equal to the

shortfall obligation." *Id.* at 5. The Director reiterated that regarding the *2009 Storage Water Mitigation Plan*, if ground water districts submit adequate contracts to establish that they have secured storage water and the amount secured is less than the shortfall obligation, the Director will credit the contracted volume against the overall obligation, thus reducing the overall obligation for all ground water users.

At the status conference, the ground water districts seeking to use the *2009 Storage Water Mitigation Plan* claimed that they secured the following volumes of water for use in 2024:

Ground Water Districts (GWD)	**GWD Volume of Secured Water (acre-feet)**
Aberdeen-American Falls GWD	0
Bingham GWD	0
Bonneville-Jefferson GWD	8,928
Carey Valley GWD	0
Jefferson-Clark GWD	6,858
Henry's Fork GWD	1,500
Madison GWD	
Magic Valley GWD	11,925
North Snake GWD	3,665
Total	32,876
2009 Mitigation Plan Secured Storage Water Obligation	74,100
Deficiency in the Amount of Secured Storage Water	41,224

The above table shows that the ground water districts have indicated that they have secured 32,876 acre-feet, which is less than the full shortfall obligation of 74,100 acre-feet. Because the amount secured is less than the shortfall obligation, the Director will credit the volume against the overall obligation, thus reducing the overall obligation for all ground water users, if the ground water districts are able to show, to the satisfaction of the Director, that they have secured 32,876 acre-feet of water. The Department has calculated what the revised curtailment date would be if these ground water districts can show, to the satisfaction of the Director, that they have secured 32,876 acre-feet of water. The revised curtailment date for all ground water users would be February 16, 1970. However, to reemphasize the point, this is contingent upon the Director concluding in subsection 1.b. below that the ground water districts provide sufficient evidence that they have secured 32,876 acre-feet of storage water.

b. Sufficency of Mitigation Notices

Mitigation notices must show that the water user has secured, to the satisfaction of the Director, the storage water needed to mitigate. The ground water districts are required to provide the Director with legally enforceable contracts, options, or similar documentation to establish

that they have secured the water necessary to meet the mitigation obligation. *See Order on Pet. for Judicial Review*, at 19, *A&B Irrigation Dist. v. Tuthill*, No. CV-2008-551 (Gooding Cnty. Dist. Ct. Idaho July 24, 2009). Below, the Director reviews the mitigation notices submitted by the ground water districts and determines whether they have complied with these requirements.

i) Bonneville-Jefferson's Mitigation Notice

In its May 2 mitigation notice, Bonneville-Jefferson states that it "will mitigate this season by providing its proportionate share of the IDS from the leases attached hereafter as Exhibit 'A'." *BJGWD's Notice*, at 2. Unfortunately, the leases included as Exhibit A are all leases entered into by IGWA, not Bonneville-Jefferson. It is unclear whether Bonneville-Jefferson has the authority to submit IGWA's leases to the Director for the benefit of Bonneville-Jefferson. Furthermore, even if Bonneville-Jefferson is authorized to lease water under IGWA's leases, Department records do not show that Bonneville-Jefferson has sought or received approval from Water District 01 for any lease. Without approval by Water District 01 and payment of the required fees, Bonneville-Jefferson has not demonstrated to the satisfaction of the director that it has secured the volume of water reported in its May 2 mitigation notice. As indicated in Subsection 1.c. below, Bonneville-Jefferson will have until May 17, 2024, to resolve these issues.

ii) Jefferson-Clark's Mitigation Notice

At the status conference and in its May 2 mitigation notice, Jefferson-Clark indicated that it would mitigate under the *2009 Storage Water Mitigation Plan* for 2024 and that it has secured 6,858 acre-feet of storage water. Unfortunately, Jefferson-Clark did not include contracts, leases, options, or similar documentation to establish that it had secured the water necessary to meet or offset the obligation. Furthermore, the Department records do not show that Jefferson-Clark sought or received approval from Water District 01 for any lease. Without approval by Water District 01 and payment of the required fees, Jefferson-Clark has not demonstrated to the satisfaction of the Director that it has secured the volume of water reported in its May 2 mitigation notice. As indicated in Subsection 1.c. below, Jefferson-Clark will have until May 17, 2024, to resolve these issues.

iii) Henry's Fork and Madison's Mitigation Notice

At the status conference and in its May 2 mitigation notice, Henry's Fork and Madison indicate that they will mitigate under the *2009 Storage Water Mitigation Plan* for 2024 and that they have secured 1,500 acre-feet of storage water. Unfortunately, Henry's Fork and Madison did not include contracts, leases, options, or similar documentation to establish that they have secured the water necessary to meet the obligation. Furthermore, the Department records do not show that Henry's Fork and Madison sought or received approval from Water District 01 for any lease. Without approval by Water District 01 and payment of the required fees, Henry's Fork and Madison have not demonstrated to the satisfaction of the Director that they have secured the water reported in their May 2 mitigation notice. As indicated in Subsection 1.c. below, Henry's Fork and Madison will have until May 17, 2024, to resolve these issues.

iv) Magic Valley and North Snake's Mitigation Notice

Magic Valley and North Snake's May 2 mitigation notice indicates that they will collectively provide 15,590 acre-feet of storage water to the SWC pursuant to the *2009 Storage Water Mitigation Plan*. *MVNS's Notice*, at 2. Unfortunately, Magic Valley and North Snake did not include contracts, leases, options, or similar documentation to establish that they had secured the water necessary to meet the obligation. Furthermore, the Department records do not show that Magic Valley and North Snake sought or received approval from Water District 01 for any lease. Without approval by Water District 01 and payment of the required fees, Magic Valley and North Snake have not demonstrated to the satisfaction of the Director that they have secured the water reported in their May 2 notice. As indicated in Subsection 1.c. below, Magic Valley and North Snake will have until May 17, 2024, to resolve these issues.

c. Conclusion Regarding *2009 Storage Water Mitigation Plan*

While certain ground water districts indicate their intent to mitigate under the *2009 Storage Water Mitigation Plan*, they have failed to show, to the satisfaction of the Director, that they have secured the storage water needed to mitigate in full or in part. The Director will extend the deadline for the ground water districts to submit information to establish, to his satisfaction, that they can mitigate for all or part of the predicted April IDS of 74,100 acre-feet. The ground water districts have until May 17, 2024, to submit the appropriate documentation and to pay any fees required by Water District 01. If appropriate documentation is submitted and fees paid by this deadline, the Director will adjust the curtailment date accordingly.

2. Mitigation Using IGWA's *2016 Settlement Mitigation Plan*

At the status conference and in its mitigation notice, American Falls-Aberdeen indicates that it intends to mitigate under the *2016 Settlement Mitigation Plan*. At the status conference, Jefferson-Clark, Henry's Fork, and Madison also indicated that they would dedicate their secured storage water towards the *2016 Settlement Mitigation Plan* if that would result in their compliance with the plan. The *2016 Settlement Mitigation Plan* allows individual ground water districts to mitigate for their proportionate share of the 240,000-acre-foot reduction obligation set forth in the plan. It also requires that the ground water districts annually provide 50,000 acre-feet of storage water though private leases to the SWC 21 days after the day of allocation. ~~While the *2016 Settlement Mitigation Plan* allows for determining the proportionate share of the reduction obligation of the parties, it does not authorize the proportionate sharing of the 50,000-acre-foot storage volume by the parties. As a result of the plain language of the plan, for any ground water district to be in compliance with the plan, the entire 50,000 acre-feet must be provided.~~

a. The 2021 Breach

Ground water districts were found to have breached the *2016 Settlement Mitigation Plan* in 2021. *Am. Final Order Regarding Compliance with Approved Mitigation Plan*, at 16–17, *In re IGWA's Settlement Agreement Mitigation Plan*, No. CM-MP-2016-001 (Idaho Dept. of Water Res. Apr. 24, 2023) [hereinafter *Compliance Order*]. In his April 24, 2023 *Compliance Order*, the Director approved a one-year settlement agreement to remedy the 2021 breach. *Id.* at 20. In

the settlement agreement, the parties agreed that "IGWA will collectively provide to the SWC an additional 30,000 acre-feet of storage water in 2023 and an additional 15,000 acre-feet of storage water in 2024 within 10 days after the Date of Allocation of such year. Such amounts will be in addition to the long-term obligations set forth in section 3 of the Settlement Agreement and approved Mitigation Plan." *Settlement Agreement*, at 2, No. CM-MP-2016-001 (Sept. 7, 2022).

The first question that arises in evaluating whether any ground water district is complying with the *2016 Settlement Mitigation Plan* is addressing compliance with the agreed upon cure of IGWA's 2021 breach. It is the Director's understanding that the ground water districts provided the required 30,000 acre-feet of storage in 2023. In its May 6 mitigation notice, American Falls-Aberdeen states that it "has entered into a lease with the Shoshone-Bannock Tribe for approximately 11,000 acre feet of water." AFA Mitigation Notice, at 1. American Falls-Aberdeen states it plans to provide its share of the 15,000-acre-foot obligation under the 2021 Breach Order, approximately 2,900 acre-feet, to the SWC using this lease. *Id.* In its May 8 letter to the Director, IGWA confirms that it will "deliver the balance of the 15,000 acre-feet." The obligation to supply the water does not accrue until ten days after the day of allocation. *Settlement Agreement*, at 2.

So long as the entire 15,000-acre-foot obligation is provided to the SWC within ten days following the forthcoming day of allocation, the 2021 breach has been remedied.

b. The 2022 Breach

American Falls-Aberdeen and certain other ground water districts were found to have breached the *2016 Settlement Mitigation Plan* in 2022. *Final Order Regarding IGWA's 2022 Mitigation Plan Compliance*, at 9, No. CM-MP-2016-001 (Aug. 2, 2023). The following table summarizes the volume of the individual ground water district's breaches.

Ground Water Districts (GWD)	**2022 Deficiency in GWD Compliance with 2016 Mitigation Plan (acre-feet)**
Aberdeen-American Falls GWD	1,352
Bingham GWD	32,476
Bonneville-Jefferson GWD	5,204
Carey Valley GWD	0
Jefferson-Clark GWD	18,605
Henry's Fork GWD	0
Madison GWD	0
Magic Valley GWD	0
North Snake GWD	0

Id at 8.

American Falls-Aberdeen subsequently entered into an agreement with the SWC and mitigated for their breach. *Notice of Satisfaction of American Falls-Aberdeen Ground Water District 2022 Mitigation Obligation*, No. CM-MP-2016-001 (Nov. 7, 2023). American Falls-Aberdeen has remedied their 2022 breach.

c. The Sentinel Well Benchmark

The ground water districts also failed to achieve the 2023 sentinel well benchmark established by the *2016 Settlement Mitigation Plan*. On May 3, 2024, the Director issued an order determining the additional actions that ground water districts that are signatories to the 2016 settlement agreement must take as part of ongoing adaptive management requirements to ensure they comply with the plan. The Director ordered ground water districts to:

> increase their proportionate share of the total annual ground water use reduction of 240,000 acre-feet by an additional 5% (12,000 acre-feet) during the 2024 irrigation season. The [ground water districts] will increase their proportionate share of the total annual ground water use reduction of 240,000 acre-feet by an additional 12,000 acre-feet each year thereafter until the 2023 benchmark is achieved

Final Order Specifying Additional Actions, at 5, No. CM-MP-2016-001 (May 3, 2024).

In its May 6 mitigation notice, American Falls-Aberdeen confirmed that it intends to "satisfy all its obligations under the *2016 Settlement Mitigation Plan*," including the "adaptive management" obligations prescribed by the Director in his *Final Order Specifying Additional Actions* in CM-MP-2016-001. AFA Mitigation Notice, at 1.

d. 50,000 Acre-Feet of Storage Water

As discussed above, the *2016 Settlement Mitigation Plan* requires the ground water districts to provide the SWC with 50,000 acre-feet of storage water annually. Under the plain language of the *2016 Settlement Mitigation Plan*, the 50,000-acre-foot obligation does not come due until 21 days after the day of allocation. *Settlement Agreement* at 2, ¶ 3.b.i. Furthermore, the *2016 Settlement Mitigation Plan* does not require documentation of securing the water. Therefore, American Falls-Aberdeen's safe harbor from curtailment is not contingent on American Falls-Aberdeen providing proof it has secure 50,000 acre-feet of storage water at this time. In addition, the *2016 Settlement Mitigation Plan* specifically spells out a dispute resolution process if the Districts breach the 50,000-acre-foot obligation. *Id.* at ¶ 2c. Only if that dispute resolution process fails does the Director get involved. *Id.* Since there is no requirement for American Falls-Aberdeen to provide proof that it has secured water at this time and because the steering committee has not referred an allegation of breach of the 50,000-acre-foot obligation to the Director, the Director concludes that American Fals-Aberdeen is in compliance with the requirements of the *2016 Settlement Mitigation Plan's* requirements related to the 50,000 acre-feet of storage water. ~~At the status conference, the Director reiterated that he would adopt former Director Spackman's reasoning regarding the *2016 Settlement Mitigation Plan* and that to comply with the plan, the entire 50,000-acre-foot obligation must be provided (not just a proportionate share). In other words, were American Falls-Aberdeen the only ground water~~

district seeking protection under the *2016 Settlement Mitigation Plan*, it would have to secure and deliver the full 50,000 acre-feet to remain in compliance. In its May 6 mitigation notice, American Falls-Aberdeen does not explicitly state how much water it has secured towards this obligation. However, it reports having secured 11,000 acre-feet of storage water, of which it will credit approximately 2,900 acre-feet towards its 2021 breach obligations. The director interprets American Falls-Aberdeen's notices and statements to imply it has secured 8,100 acre-feet towards the 50,000-acre-foot storage water obligation.

In addition to American Falls-Aberdeen, at the status conference, Jefferson Clark, Henry's Fork, and Madison also indicated they would count their secured storage water towards the *2016 Settlement Mitigation Plan* if that would result in their compliance with the plan.

Based on the ground water district's mitigation notices and comments at the status conference, the following table summarizes the potential volumes of water secured to comply with the *2016 Settlement Mitigation Plan*:

Ground Water Districts (GWD)	**GWD Volume of Secured Water (acre-feet)**
Aberdeen-American Falls GWD	8,100
Bingham GWD	0
Bonneville-Jefferson GWD	0
Carey Valley GWD	0
Jefferson-Clark GWD	6,858
Henry's Fork GWD	1,500
Madison GWD	
Magic Valley GWD	0
North Snake GWD	0
Total	16,458
2016 Mitigation Plan Secured Storage Water Obligation	50,000
Deficiency in the Amount of Secured Storage Water	33,542

e. Conclusion Regarding *2016 Settlement Mitigation Plan*

Based on the above discussion previous summary table, the Director concludes that ground water districts that (1) did not breach the *2016 Settlement Mitigation Plan* in 2022 or who did breach and have remedied their breach, and (2) agree to the "additional actions" required in the *Final Order Specifying Additional Actions* in CM-MP-2016-001, are in compliance with the 2016 plan and entitled to protection under the plan. At this time, American Falls-Aberdeen is the only ground water district that has told the Director that it continues to uphold and seek protection under the *2016 Settlement Mitigation Plan* and has demonstrated that it continues to

comply with all elements of the plan. ~~the ground water districts are short of the 50,000-acre-foot obligation by approximately 33,542 acre-feet. Because the ground water districts have not met the full 50,000-acre-foot obligation, no ground water district can be protected by the *2016 Settlement Mitigation Plan*. As a result of this determination, the Director will give the ground water districts until May 17, 2024, to demonstrate to his satisfaction that they have contracted for the total required storage of 50,000 acre-feet to qualify for protection. The Director will also require confirmation from the Tribes that the water has been paid for and is available for use as mitigation.~~

3. Ground Water Districts Planning to Use Neither the *2009 Storage Water Mitigation Plan* nor the *2016 Settlement Mitigation Plan*.[2]

At the status conference, Bingham indicated that it had secured 8,590 acre-feet of water for the coming irrigation season but that it did not intend to mitigate under either the *2009 Storage Water Mitigation Plan* or the *2016 Settlement Mitigation Plan*. While Bingham stated in its mitigation notice that there "does not appear to be an option for mitigation" under the *2009 Storage Water Mitigation Plan* for this year, *Notice of Bingham Ground Water District 2024 Mitigation*, at 3, the Director made clear at the status conference he would consider mitigation proposals under the *2009 Storage Water Mitigation Plan* for 2024. Still, when pressed at the status conference, counsel for Bingham indicated that Bingham would not apply its storage water towards its mitigation obligations under either of the approved mitigation plans. It is surprising that ~~Why~~ a ground water district would secure storage water but then refuse to claim protection from curtailment under an approved mitigation plan ~~is surprising~~. While the 8,590 acre-feet of water the district has already secured would not make up the current shortfalls under either approved mitigation plan, under the 2009 Storage Delivery Plan, it would nonetheless advance the priority date and reduce the number of its ground water users subject to curtailment. Furthermore, if the other ground water districts contribute storage under the *2009 Storage Water Mitigation Plan* but Bingham does not, ~~this makes Bingham a free rider in this year's delivery call proceedings because~~ some of its members will nonetheless benefit, by avoiding curtailment through the actions of other ground water districts contributing storage water while Bingham undertakes no commensurate actions. Regardless, if the Bingham Ground Water District Board Members do not want to contribute the water they have already secured, ~~would rather free ride under the *2009 Storage Water Delivery Plan* and not~~ to increase the number of its members protected from curtailment, that is its choice. The Director cannot force the district to obligate its secured storage water to maximize the protection of its users.

In its mitigation notice, Bingham expresses frustration about its inability to seek protection under a new mitigation plan that it filed in January of 2024. The new mitigation plan was only for the benefit of Bingham Ground Water District. *Pet. for Approval of Bingham Ground Water District's Mitigation Plan for the Surface Water Coalition*, No. CM-MP-2024-001 (Jan. 2, 2024). Several other ground water districts also submitted individual mitigation plans at about the same time. The plans were advertised, and they were protested by numerous entities. The Director appointed an independent hearing officer, Gerald F. Schroeder, to hear the contested cases on behalf of the Department. It is the Director's understanding that some of the

[2] The changes in this section are made in response to *Bingham's Brief* in which Bingham took issue with the use of the term "free rider."

parties to those contested cases sought to stay the new mitigation plan proceedings until an order was issued by the Director related to the proceeding before Hearing Officer Burdick. Others, including Bingham, did not want to stay the proceedings. It is the Director's understanding that Hearing Officer Schroeder heard arguments on both sides and concluded that it was best to wait for Hearing Officer Burdick's order before scheduling a hearing. While the Director understands Bingham's desire to move forward to hearing, Hearing Officer Schroeder considered the arguments raised by those who wanted to move forward and concluded that it was most appropriate to wait. The Director will not second guess the hearing officer's approach.

Carey Valley did not participate in the May 3, 2024 status conference. Its mitigation notice does not mention securing storage under the *2009 Storage Water Mitigation Plan* or the *2016 Settlement Mitigation Plan*. The Director concludes that Carey Valley has not secured any storage water and as a result does not seek protection under either mitigation plan in 2024.

ORDER

Based on and consistent with the foregoing, IT IS HEREBY ORDERED that the mitigation notices filed by Bonneville-Jefferson, Jefferson-Clark, Magic Valley, North Snake, Henry's Fork, Madison, Bingham, and Carey Valley~~, and American Falls-Aberdeen~~ ground water districts are deficient and fail to demonstrate that they are operating in accordance with an approved mitigation plan. American Falls-Aberdeen Ground Water District has demonstrated that it is operating in accordance with an approved mitigation plan. ~~The Director will give the ground water districts until May 17, 2024, to submit additional notice that demonstrates to the satisfaction of the director that they have secured storage water in compliance with either the *2009 Storage Water Delivery Plan* or the *2016 Settlement Mitigation Plan*.~~

Dated this 28th day of May 2024.

MATHEW WEAVER
Director

EXPLANATORY INFORMATION TO ACCOMPANY A FINAL ORDER

(To be used in connection with actions when a hearing was **not** held)

(Required by Rule of Procedure 740.02)

The accompanying order is a "**Final Order**" issued by the department pursuant to section 67-5246, Idaho Code.

PETITION FOR RECONSIDERATION

Any party may file a petition for reconsideration of a final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: The petition must be received by the Department within this fourteen (14) day period.** The department will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law. See section 67-5246(4), Idaho Code.

REQUEST FOR HEARING

Unless the right to a hearing before the director or the water resource board is otherwise provided by statute, any person who is aggrieved by the action of the director, and who has not previously been afforded an opportunity for a hearing on the matter shall be entitled to a hearing before the director to contest the action. The person shall file with the director, within fifteen (15) days after receipt of written notice of the action issued by the director, or receipt of actual notice, a written petition stating the grounds for contesting the action by the director and requesting a hearing. See section 42-1701A(3), Idaho Code. **Note: The request must be received by the Department within this fifteen (15) day period.**

APPEAL OF FINAL ORDER TO DISTRICT COURT

Pursuant to sections 67-5270 and 67-5272, Idaho Code, any party aggrieved by a final order or orders previously issued in a matter before the department may appeal the final order and all previously issued orders in the matter to district court by filing a petition in the district court of the county in which:

i. A hearing was held,
ii. The final agency action was taken,
iii. The party seeking review of the order resides, or
iv. The real property or personal property that was the subject of the agency action is located.

The appeal must be filed within twenty-eight (28) days of: a) the service date of the final order, b) the service date of an order denying petition for reconsideration, or c) the failure within twenty-one (21) days to grant or deny a petition for reconsideration, whichever is later. See section 67-5273, Idaho Code. The filing of an appeal to district court does not in itself stay the effectiveness or enforcement of the order under appeal.

Re: Update on SWC Delivery Call and Curtailment Actions

As part of the ongoing Surface Water Coalition (SWC) conjunctive administration delivery call, I issued an order on April 16, 2025, notifying water users that the Twin Falls Canal Company could face a projected shortfall of 63,000 acre-feet during the 2025 irrigation season. Consequently, on May 16, I issued a curtailment order affecting approximately 667 ground water rights junior to August 28, 1955.

In the months following, the Department, in coordination with staff from Water Districts 36A, 100, 110, 120, and 130, worked to contact affected water users and ensure they either:

1. Join a ground water district and seek protection under the 2024 Settlement Mitigation Plan,
2. Limit their water use to the domestic exemption levels, or
3. Cease water use (curtail).

By early July, approximately one-third of the curtailed water rights had been addressed.

On July 10, 2025, I issued a revised order increasing the estimated shortfall to 75,300 acre-feet. In response, I will issue a second curtailment order this Friday, July 25, expanding the curtailment to include all water rights junior to October 11, 1900. This action may affect up to 900 water rights, although the final number is still being confirmed. Notably, this will mark the first time water rights with priority dates earlier than 1955 have been subject to curtailment under the SWC delivery call.

Today, I met with Department and water district staff responsible for administering the curtailments and emphasized that ensuring compliance with these orders is our highest priority. I am willing to redirect people within the agency to ensure adequate resources are in place to administer the delivery call effectively. Over the past week, we have inspected every irrigated tract of 40 acres or more to verify compliance. Beginning next week, we will expand inspections to include water rights subject to the upcoming curtailment.

Moving forward, we will prioritize encouraging and assisting curtailed water users in joining existing, approved mitigation plans wherever feasible. For those unwilling or unable to join a ground water district, we will coordinate with the respective water districts to implement curtailment. In addition, we will initiate formal enforcement actions against users who fail to comply with curtailment orders.

We are also preparing a summary report on all curtailed water rights. This report will be published on the Department's website to inform the public of our ongoing efforts and progress.

DEPOSITION OF JENNIFER SUKOW

OCTOBER 22, 2025

EPORTED BY:

ONICA M. FUHS, CSR NO. 471

OTARY PUBLIC

THE DEPOSITION OF JENNIFER SUKOW was taken on behalf of A&B Irrigation District at the offices of the Idaho Department of Water Resources, 322 E. Front Street, Boise, Idaho, commencing at 9:05 a.m. on October 22, 2025, before Monica M. Fuhs, Certified Shorthand Reporter and Notary Public within and for the State of Idaho, in the above-entitled matter.

Q. But that could be determined using a similar analysis of what you did in April; is that right?
A. Yeah, you could take that percentage of steady state chart and you could, you know, pick the appropriate time frame and multiply the percentage by the steady state volume. And then you would need to do the same thing for the -- well, because of the change in priority date you actually would probably need to run them. No, you could do it. Your consultant could do it.
Q. Understand.
A. You have to account the 1955 is, you know, for a different time period than the 1900. But you could do it just from that transient curve that is in the April. You could also just run it as a transient, too.
Q. So you would agree that curtailing all 66.712 acres as of August 1 would not result in 5.039 acre feet showing up in the near Blackfoot to Minidoka reach between August 1 and September 30; is that correct?
A. Yeah, that's correct.
Q. Do you know if A&B has been required to mitigate for its 1948 priority groundwater right prior to this order?
A. Not that I know of.
Q. So is it fair the department did not perform

any sort of calculations to determine a percentage of mitigation from just being subject to curtailment for part of the year as opposed to the entire year?
A. Yeah, that's true. I didn't account for that at all.
Q. So all of the proportionate share analysis was steady state assuming it was subject to curtailment for the whole year? Or it wouldn't change; is that right?
A. I mean, it just that it is subject to curtailment as of the July order. And the July order has a new predicted in-season demand shortfall. So we are just kind of starting over with the calculation of proportionate shares of that predicted demand shortfall.
Q. I want to go back to Exhibit 17. The July order. This bar chart on page ten. And just so I'm clear again. Once we get to early August you didn't try to then take the difference between what would show up from curtailment from '55, what would show up from 1900, and then try and identify some share different than you had done before; is that correct?
A. No, that was not something we considered.
(Exhibit 19 marked.)
Q. (BY MR. THOMPSON) Jennifer, can you identify Exhibit 19, please?
A. This is the list of A&B's water rights. And

then the total number of acres that are junior to October 11, 1900.
Q. Similar to the other spreadsheet from April, but this just includes the 1948 right; is that right?
A. Yeah. I mean, it is the same list of rights. It is just when I sum up how many acres are junior it is just using a different priority date.
(Exhibit 20 marked.)
Q. (BY MR. THOMPSON) Could you identify Exhibit 20, please?
A. This is again because A&B chose to leave some of the water rights on the curtailment list and not mitigate for them. This is a table with a proportionate share of the July in-season demand shortfall calculated for each individual A&B water right.
Q. So this is looking at the new 1900 curtailment date and identifying a proportionate share for all of A&B's water rights compared to all of the other pumping on that list?
A. Well, no, that was in Exhibit 18 where I calculated the proportionate share.
Q. I'm sorry. Exhibit 20 shows the proportionate of each individual water right of that 5.039 number that is contributed to those --
A. Yes.

(Exhibit 21 marked.)
Q. (BY MR. THOMPSON) Jennifer, do you recognize Exhibit 21?
A. I mean, I'm aware it exists. But I don't think I've reviewed or contributed to this order at all.
Q. So were you aware -- I guess this is a curtailment order with a list of water rights scheduled to curtail May 31. Were you aware of that?
A. Again, I'm aware they issued a curtailment order. I don't know the dates.
Q. Did anybody at the department provide you with any information about water rights being curtailed in 2025?
A. I have seen the summaries they have been posting on our website about the number of water rights that they determined didn't need to be curtailed because they were participating in a mitigation plan or whatever. And the number that were curtailed. But I don't have any information about which water rights those were.
Q. So for your July analysis where you were looking at a new curtailment date identifying what that demand shortfall was to -- identifying a curtailment date to try and make up that demand shortfall for the rest of 2025 you were not provided with any information

Exhibit G

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **ORDER REGARDING MID-SEASON CHANGE TO AREA OF COMMON GROUND WATER SUPPLY FOR THE EASTERN SNAKE PLAIN AQUIFER; THIRD ORDER AMENDING CURTAILMENT LIST**

BACKGROUND

During the 2024 legislative session, the Idaho Legislature passed, and the Governor signed into law, Senate Bill 1341. This bill codifies the boundary of the Eastern Snake Plain Aquifer Area of Common Ground Water Supply ("ESPA Area of Common Ground Water"), replacing the boundary found in Rule 50 of the Department's *Rules for Conjunctive Management of Surface and Ground Water Resources* ("CM Rules"). IDAPA 37.03.11.050. The ESPA Area of Common Ground Water is the administrative boundary for the Surface Water Coalition ("SWC") delivery call proceeding (Docket No. CM-DC-2010-001), the proceeding in which this order is being issued.[1]

This order is necessary because Senate Bill 1341 becomes effective July 1, 2024, which is the middle of the 2024 irrigation season. There currently is a curtailment order in effect in the SWC delivery call proceeding, curtailing ground water rights junior to March 31, 1954. *See Final Order Curtailing Ground Water Rights Junior to March 31, 1954* (May 30, 2024) [hereinafter "*Curtailment Order*"]; *Order Am. Curtailment List* (June 6, 2024); *2d Order Am. Curtailment List* (June 20, 2024). Because the administrative boundary is changing mid-season, ground water rights that were not previously included in administration in the SWC delivery call will be included within the ESPA Area of Common Ground Water on July 1, 2024, and will be subject to administration in the SWC proceeding. Furthermore, some ground water rights that were previously subject to curtailment in the SWC delivery call will now be outside the ESPA Area of Common Ground Water on July 1, 2024, and will be excluded from administration in the SWC proceeding. The Director must now decide how to address the mid-season adjustment to the ESPA Area of Common Ground Water.

ANALYSIS

Senate Bill 1341 adds a new section to Idaho Code, Idaho Code § 42-233c. This new code section states in relevant part:

[1] Steps 2, 6, 7, and 9 of the *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("*Sixth Methodology Order*") contemplate that "[c]urtailment will be simulated within the area of common ground water supply as described by CM Rule 50.01." *Sixth Methodology Order*, at 42, 44, 45.

> The area having a common ground water supply for the eastern Snake plain aquifer, as that term is used in the administration of water rights pursuant to the rules for the conjunctive management of surface and ground water resources, is the aquifer underlying the eastern Snake river plain as described in model calibration report, eastern Snake plain aquifer model version 2.2. of May 2021.

2024 Idaho Sess. Laws ch. 110 § 1 (emphasis added).

In contrast, in Rule 50 of the CM Rules, the Department defined the ESPA Area of Common Ground Water as:

> The area of coverage of this rule is the aquifer underlying the Eastern Snake River Plain as the aquifer is defined in the report, Hydrology and Digital Simulation of the Regional Aquifer System, Eastern Snake River Plain, Idaho, USGS Professional Paper 1408-F, 1992 excluding areas south of the Snake River and west of the line separating Sections 34 and 35, Township 10 South, Range 20 East, Boise Meridian.

IDAPA 37.03.11.050.01.

Administrative rulemaking is a statutory grant of authority by the legislative branch to the executive branch. *Idaho State Athletic Comm'n by & through Stoddard v. Off. of the Admin. Rules Coordinator*, 173 Idaho 310, 542 P.3d 718, 730 (2024). For over thirty years, and as recently as this year, the Idaho Supreme Court has held that administrative rules "'do not rise to the level of statutory law' and are 'less than the equivalent of statutory law.'" *Blasch v. HP, Inc.*, 545 P.3d 581, 589 (Idaho 2024) (quoting *Idaho State Athletic Comm'n*, 542 P.3d at 732). Because administrative rules are "lesser than" statutes, no administrative rule can override a conflicting statute. *See id.*

Therefore, when the Idaho Legislature passed Senate Bill 1341, and redefined the ESPA Area of Common Ground Water, the Legislature effectively overruled the Department's Rule 50 definition.

This redefinition causes the current administrative boundary for the SWC delivery call to both expand and contract. In other words, some ground water rights not previously subject to administration in the SWC delivery call will become subject to administration after July 1, 2024, and some ground water rights previously subject to administration in the SWC delivery call will no longer be subject to administration.

I. *Ground water rights newly included in the ESPA Area of Common Ground Water as of July 1, 2024, will be phased-in to the SWC delivery call proceeding and will not be curtailed in 2024.*

When the ESPA Area of Common Ground Water is redefined as the ESPA model 2.2 boundary on July 1, 2024, 1,818 ground water rights previously not subject to administration in the SWC delivery call will become subject to administration. As discussed above, there is an ongoing curtailment order in the SWC delivery call. Pursuant to the curtailment order, certain water rights junior to March 31, 1954, are curtailed. *Curtailment Order*, at 9.

Under CM Rule 40, when a delivery call is made by a senior-priority water right holder, and the Director finds material injury is occurring, the Director shall either:

a. Regulate the diversion and use of water in accordance with the priorities of rights of the various surface or ground water users whose rights are included within the district, provided, that regulation of junior-priority ground water diversion and use where the material injury is delayed or long range may, by order of the Director, be phased-in over not more than a five-year (5) period to lessen the economic impact of immediate and complete curtailment; or

b. Allow out-of-priority diversion of water by junior-priority ground water users pursuant to a mitigation plan that has been approved by the Director.

IDAPA 37.03.11.040.01.a–b.

The water rights that are newly included in the ESPA Area of Common Ground Water that are junior to March 31, 1954, are listed in Attachment A to this order. The holders of ground water rights listed in Attachment A do not yet have a Department-approved mitigation plan. Therefore, these newly included water rights junior to March 31, 1954, would be curtailed under the current *Curtailment Order* on July 1, 2024. *See* IDAPA 37.03.11.040.01.a.

However, the Director finds that the material injury caused by the diversion and use of water under these newly included ground water rights is delayed or long range. The Director also finds that the economic impact of immediate and complete curtailment would be severe. The newly included ground water rights authorize many different beneficial uses, including irrigation, commercial, industrial, municipal, and domestic. However, the vast majority of both the number of water rights and the volume of ground water used are for irrigation. The Department has observed that the period necessary to submit, review, publish, and issue an order regarding a mitigation plan can vary greatly. Approval of an unprotested mitigation plan can occur as quickly as several months. Whereas a protested mitigation plan that is subject to a contested case proceeding and appeal process can take more than a year to resolve. The Director concludes that priority administration of these newly included ground water rights should be phased-in to provide the affected water users a reasonable time to implement a mitigation plan "to lessen the economic impact of immediate and complete curtailment." IDAPA 37.03.11.040.01.a. Accordingly, the water rights junior to March 31, 1954, listed in Attachment A will not be subject to immediate curtailment this irrigation season. All water rights that are newly included in the ESPA Area of Common Ground Water are on notice that they will be subject to administration effective November 1, 2025.

II. Ground water rights newly excluded from the ESPA Area of Common Ground Water as of July 1, 2024, should be removed from the SWC delivery call curtailment list.

When the ESPA Area of Common Ground Water boundary is redefined on July 1, 2024, some ground water rights previously within the ESPA Area of Common Ground Water boundary will now be outside the boundary and will no longer be subject to administration in the SWC delivery call. Accordingly, effective July 1, 2024, the newly excluded water rights junior to March 31, 1954, should be removed from the curtailment list. These water rights are listed in Attachment B to this order. A new list of curtailed water rights will be issued with this order as Attachment C with the water rights listed in Attachment B removed.[2]

---

[2] Additionally, having received communications from Bonneville-Jefferson and American Falls-Aberdeen ground water districts that the following water rights are in good standing with the districts and protected by their approved mitigation plan, the Department has removed the following water rights from the curtailment list: 25-10794, 25-11143, 25-12186, 25-13978, 25-14165, 25-14170, 25-14234, 25-14235, 25-14287, 25-14304, 25-14313, 25-14327, 25-14389, 25-14394, 25-14457, 25-14468, 25-14478, 25-14482, 25-14490, 25-14491, 25-2119, 25-4048,

ORDER

Based upon and consistent with the foregoing, IT IS HEREBY ORDERED that ground water rights newly included in the ESPA Area of Common Ground Water as of July 1, 2024, that are junior to March 31, 1954, will be phased-in to the SWC delivery call proceeding and will not be curtailed in 2024. A list of these rights is included as Attachment A to this order. All water rights that are newly included in the ESPA Area of Common Ground Water are subject to administration effective November 1, 2025.

IT IS FURTHER ORDERED that effective July 1, 2024, the water rights listed in Attachment B to this order are no longer subject to curtailment in association with the SWC delivery call proceeding. Effective July 1, 2024, all other ground water rights listed in Attachment C continue to be curtailed consistent with the timeframes listed in the May 30, 2024 *Final Order Curtailing Ground Water Rights Junior to March 31, 1954.*

Dated this 28th day of June 2024.

MATHEW WEAVER
Director

25-7002, 25-7036, 25-7073D, 25-7086, 25-7186, 25-7471, 25-7473, 35-13542, 35-14266, 35-14667, 35-14668, 35-14669, 35-14670, 35-14671, 35-14673, 35-14674, 35-14675, 35-14676, 35-14678, 35-14679, 35-14681, 35-14682, 35-14694, 35-14695, 35-14696, 35-14697, 35-14698, 35-14731, 35-14732, 35-14739, 35-14744, 35-14769, 35-14770, 35-14777, 35-14778, 35-14779, 35-14780, 35-14781, 35-14782, 35-14783, 35-14784, 35-14785, 35-14788, 35-14789, 35-14790, 35-14791, 35-14792, 35-14793, 35-14796, 35-14867, 35-7593B, 35-7640, 29-13829, 29-7539, 35-14736, 35-14815, 35-14836. Water right 36-15565 is also being removed from the curtailment list because it is for a use that meets the definition of domestic under Idaho Code § 42-111(a).

DEPARTMENT OF WATER RESOURCES

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-MP-2024-003
IN THE MATTER OF THE SURFACE WATER COALITIONS' AND THE GROUND WATER DISTRICTS' 2024 STIPULATED MITIGATION PLAN	**JOINT MOTION FOR ORDER APPROVING 2024 STIPULATED MITIGATION PLAN**

Twin Falls Canal Company, North Side Canal Company, American Falls Reservoir District No. 2, Milner Irrigation District, Burley Irrigation District, A&B Irrigation District, and Minidoka Irrigation District (collectively, the "Surface Water Coalition"), and North Snake Ground Water District, Magic Valley Ground Water District, Carey Valley Ground Water District, Aberdeen-American Falls Ground Water District, Bingham Ground Water District, Bonneville-Jefferson Ground Water District, Jefferson-Clark Ground Water District, Madison Ground Water District, and Henry's Fork Ground Water District (collectively, the "Ground Water Districts"), through counsel, jointly move the director pursuant to rule 220 of the Rules of Procedure of the Idaho Department of Water Resources and rule 43 of the Rules for Conjunctive Management of Surface and Ground Water Resources for an order approving the 2024 Stipulated Mitigation Plan attached hereto as Appendix A (the "Plan").

Pursuant to Conjunctive Management Rule 43.01.a, the names and addresses of the entities submitting the Plan are:

- North Snake Ground Water District
  214 E. Yakima St., Suite A
  Jerome, Idaho 83338

- Magic Valley Ground Water District
  P.O. Box 430
  Paul, Idaho 83347

- Carey Valley Ground Water District
  P.O. Box 261
  Carey, Idaho 83320

- Aberdeen-American Falls Ground Water District
  P.O. Box 70
  American Falls, Idaho 83211

- Bingham Ground Water District
  P.O. Box 1268
  Blackfoot, Idaho 83221

- Bonneville-Jefferson Ground Water District
  P.O. Box 51121
  Idaho Falls, Idaho 83405

- Jefferson-Clark Ground Water District
  P.O. Box 118
  Terreton, Idaho 83450-0118

- Madison Ground Water District
  P.O. Box 15
  St. Anthony, Idaho 83445

- Henry's Fork Ground Water District
  P.O. Box 15
  St. Anthony, Idaho 83445

Pursuant to Conjunctive Management Rule 43.01.b, the Plan is designed to mitigate material injury to water rights held by members of the Surface Water Coalition, and to provide safe harbor to groundwater rights held by patrons of the Ground Water Districts and other entities representing groundwater users that participate in and comply with the Plan.

Pursuant to Conjunctive Management Rule 43.01.c, sections 4 and 6 of the Plan identify the water supply proposed to be used for mitigation and any circumstances or limitations on availability of such supplies.

Pursuant to Conjunctive Management Rule 43.01.d, the Plan includes information that will allow the Director to evaluate the factors set forth in Conjunctive Management Rule 43.03. The

Plan is submitted pursuant to stipulation of the Ground Water Districts and the Surface Water Coalition in accordance with Conjunctive Management Rule 43.03.o, as set forth in section 11 of the Plan.

RESPECTFULL SUBMITTED the 19th day of November, 2024.

APPENDIX A

2024 STIPULATED MITIGATION PLAN

This 2024 Stipulated Mitigation Plan ("Plan") is entered into between the parties defined in section 1. The parties agree as follows:

1. Parties. The parties to this Plan are (a) the members of the SWC, (b) ground water districts that sign this Plan by November 14, 2024, pursuant to section 2, and (c) ground water districts and other entities representing groundwater users that subsequently participate in this Plan pursuant to section 10. Parties may be referred to individually in this Plan as a "party."

1.1 Surface Water Coalition. The members of the SWC are A&B Irrigation District, American Falls Reservoir District No. 2, Burley Irrigation District, Milner Irrigation District, Minidoka Irrigation District, North Side Canal Company, and Twin Falls Canal Company (individually, a "SWC member," collectively, the "SWC"). Each SWC member is a party to this Plan.

1.2 Ground Water Districts. The ground water districts initially invited to participate in this Plan are Aberdeen-American Falls Ground Water District, Bingham Ground Water District, Bonneville-Jefferson Ground Water District, Carey Valley Ground Water District, Henry's Fork Ground Water District, Jefferson-Clark Ground Water District, Madison Ground Water District, Magic Valley Ground Water District, and North Snake Ground Water District. Only those ground water districts who sign this Plan by November 14, 2024, pursuant to section 2, or who participate in this Plan pursuant to section 10, are parties to this Plan. Ground water districts and other entities who participate in this Plan are referred to herein individually as "District" and collectively as the "Districts." Any ground water district who does not sign this Plan by November 14, 2024, or who does not participate in this Plan pursuant to section 10, shall not be a party to this Plan, shall not be bound by the terms of this Plan, and shall not benefit from this Plan. The failure of any ground water district to participate in this Plan shall not alter the proportionate obligations of any District.

2. Approval Process and Effective Date. This Plan shall be submitted to the boards of the SWC and the ground water districts identified in sections 1.1 and 1.2 for review by November 1, 2024. Ground water districts that elect to participate in this Plan pursuant to section 1.2 will have until November 14, 2024, to sign this Plan. The SWC will have until November 15, 2024, to sign this Plan. This Plan shall be effective once it is signed by all members of the SWC and at least five of the nine ground water districts identified in section 1.2. The SWC shall not enter into a separate stipulated mitigation plan or agreement with any ground water district that does not participate in this Plan during the term of this Plan.

3. Term.

3.1 Initial Term. The initial term of this Plan is four years, beginning January 1, 2024, and ending December 31, 2027. Compliance with section 4 (groundwater conservation) shall begin January 1, 2024. Compliance with all other sections shall begin November 1, 2024.

3.2 Renewal Terms. This Plan shall automatically renew for successive four-year terms unless a party provides written notice of termination to the other parties by September 15 prior to the end of the term then in effect, in which case this Plan will terminate at the end of such term.

4. Groundwater Conservation. During the term of this Plan, each District will conserve, at a minimum, the volume of groundwater set forth in the "Conservation Obligation" column in Appendix A, on an average annual basis over four-year periods, as measured from the District's baseline groundwater diversion set forth in Appendix A.

4.1 Compliance Periods. Groundwater conservation shall be measured over four-year periods known as "compliance periods." Each four-year term of this Plan is a compliance period; thus, the first compliance period is 2024-2027, the second compliance period is 2028-2031, and so on until Plan termination.

4.2 District Conservation Obligations. As of November 15, 2024, the conservation obligations of the Districts collectively total 205,000 acre-feet annually as initially shown in Appendix A. The Districts' collective conservation of 205,000 acre-feet equates to a total annual divertible volume of 1,590,034 acre-feet as initially shown in Appendix A. Each District's proportionate share of the annual divertible volume is also set forth in Appendix A. Appendix A will be updated annually by the Districts to reflect additions and removals of groundwater rights participating in this Plan through the Districts. Groundwater rights added to a District after November 15, 2024, shall proportionately increase the District's baseline diversion volume, annual conservation obligation, annual divertible volume, and compliance period allocation in Appendix A, and groundwater rights removed from a District after November 15, 2024, shall proportionately decrease the District's baseline diversion volume, annual conservation obligation, annual divertible volume, and compliance period allocation in Appendix A. If a groundwater right is added to or removed from a District for only part of a compliance period, the adjustment to the District's baseline diversion volume, annual conservation obligation, annual divertible volume, and compliance period allocation shall be prorated based on the portion of the compliance period in which the groundwater right participates in this Plan.

4.3 Compliance Period Allocations. At the beginning of each compliance period, each District will be allocated a volume of water that may be diverted during that four-year period, calculated by multiplying the District's annual divertible volume by four, plus surplus allocation carried over from the prior compliance period in accordance with section 4.7, if any. The Districts' four-year compliance period allocations are set forth in Appendix A. Districts are not restricted to the use of one-fourth of their compliance period allocation during each year of the compliance period; rather, Districts may divert more or less than one-fourth of their compliance period allocation in any given year so long as the total amount diverted during a compliance period does not exceed the District's total compliance period allocation. Each District shall independently comply with its individual compliance period allocation in accordance with sections 4.4 and 4.5.

4.4 Patron Allocations. Each District will apportion its compliance period allocation to the District's patrons in the form of a diversion allocation in accordance with Idaho Code § 42-5244A. Districts may allow patrons with multiple groundwater rights to pool their individual water right allocations for purposes of compliance. Districts may also allow patrons to exchange or transfer patron allocations within the District, so long as such patrons do not divert water in excess of the maximum rate or volume authorized under their water rights. District patrons may use their diversion allocation over a compliance period as they choose; however, when a District patron depletes their allocation, that patron will not receive any additional allocation until the next compliance period starts, unless the patron acquires additional allocation from (a) other patrons within the District in accordance with this section 4.4, or (b) the District as a result of managed aquifer recharge in accordance with section 4.5. If a District patron diverts more than their allocation and does not acquire additional allocation, the provisions of section 9.1 apply.

4.5 District Aquifer Recharge. Districts may supplement their compliance period allocation by performing managed aquifer recharge in accordance with standards set forth in Appendix C and with section 4 of the Memorandum of Agreement executed contemporaneously with this Plan. Credit for the managed aquifer recharge shall be determined as follows:

4.5.1 In-District Site. Recharge accomplished at a site within the boundaries of the District performing the recharge or at a site within 12 miles of the boundary of the

District ("In-District Site") will count 1:1 as a reduction in groundwater use within the District performing the recharge.

4.5.2 Out-of-District Site. Recharge performed at a site other than an In-District Site ("Out-of-District Site") will be modeled using the current version of the Eastern Snake Plain Aquifer ("ESPA") Model to quantify the steady-state impact to the Near Blackfoot to Minidoka reach of the Snake River. The impact of recharging the same volume of water at the In-District Site nearest to the Near Blackfoot to Minidoka reach will also be modeled using the ESPA Model to quantify the steady-state impact to the Near Blackfoot to Minidoka reach. The modeled steady-state impact of recharge at the Out-of-District Site will be divided by the modeled steady-state impact of recharge at the In-District Site. If the calculated ratio is less than two (the steady-state impact of recharge at the Out-of-District site is less than twice the steady-state impact of recharge at the In-District Site), the credit towards reduction in groundwater use will be equal to the calculated ratio multiplied by the volume of water recharged. If the calculated ratio is greater than two (the steady-state impact of recharge at the Out-of-District Site is greater than twice the steady-state impact of recharge at the In-District Site), the credit towards reduction in groundwater use will be limited to twice the volume of water recharged.

4.6 Measurement.

4.6.1 Groundwater. Measurement and reporting of non-irrigation diversions will occur on an annual basis. The Districts will develop and implement methods to read irrigation diversions monthly. Irrigation diversions shall be read from June to October, with the June reading including diversions from the start of the irrigation season. The Districts will have functioning programs by the start of the 2026 irrigation season to read irrigation diversions monthly. The Districts' methods may include telemetry, self-reporting with photo evidence, or other reliable techniques to report water diversions. Measurements shall be made available to the appropriate watermaster and the watermaster will make the measurement data publicly available upon request.

4.6.2 Surface Water. The SWC will continue to support the measurement and reporting of the SWC's surface water diversion by Water District 1 and the measurement and reporting of the SWC's return flows by the Idaho Department of Water Resources ("Department").

4.6.3 Reach Gains. Reach gains to the Near Blackfoot to Minidoka reach of the Snake River shall be measured based on calendar year reach gains from the ESPA as reported by the Department to the Idaho Water Resource Board.

4.7 Conservation Carryover. If a District has remaining allocation (*i.e.* the District performs surplus groundwater conservation) at the end of the first compliance period (2024-2027), the surplus will be carried over to the second compliance period (2028-2031). At the annual meeting held in 2031 pursuant to section 7, the parties shall commence discussions to determine the minimum reach gain conditions and other water supply factors that must be maintained to allow surplus allocation to be carried over from one compliance period to the next, which determination shall be documented by a written amendment to this Plan executed by the parties by September 15, 2031.

4.8 Annual Report. By February 15 annually, the Districts will submit a report to the SWC and the Department documenting the Districts' compliance with section 4 during the previous calendar year.

5. Reach Gain Mitigation Fund. The parties understand that the Idaho Water Resource Board ("Board") will contribute $5,000,000 to develop projects that will target and maximize benefits to the reach gains in the Near Blackfoot to Minidoka reach. The projects will be selected by the Board with input from the parties as to the criteria for ranking proposed projects. The Board will make the final decision on projects. Beginning in 2035, the Districts will collectively deposit $250,000 annually into a bank account maintained by the Districts to fund development and implementation of projects designed to further increase reach gains to the Near Blackfoot to Minidoka reach of the Snake River. If, during the second compliance period (2028-2031) or any subsequent compliance period, the average annual reach gains to the Near Blackfoot to Minidoka reach of the Snake River for that compliance period drops below the 2023 reach gains, the Districts will then deposit $500,000 annually, until average annual reach gains over the most recent compliance period equal or exceed the 2023 reach gains. Each District shall be independently responsible to deposit its proportionate share of the $250,000 or $500,000 in proportion to its respective steady-state impacts to the Near Blackfoot to Minidoka reach of the Snake River under the current version of the Model (ESPAM 2.2) as set forth in Appendix B.

6. Storage Water Component. The Districts will collectively secure the volume of storage water required by section 6.1 to meet irrigation needs and carryover storage of the SWC in accordance with section 6.4.

6.1 Storage Water Volume. The Districts will secure 75,000 acre-feet of storage water for the 2025 and 2026 irrigation seasons. In 2027, the maximum volume of storage water the Districts are required to secure is capped at 82,500 acre-feet. If reach gains to the Near Blackfoot to Minidoka reach of the Snake River in 2026 are greater than 2023 reach gains, the Districts will secure 75,000 acre-feet of storage for the 2027 irrigation season. If reach gains to the Near Blackfoot to Minidoka reach of the Snake River in 2026 are less than or equal to 2023 reach gains, the Districts will secure 82,500 acre-feet of storage for the 2027 irrigation season. At the annual meeting held in 2027 pursuant to section 7, the parties shall commence discussions to determine the amount of storage the Districts will be required to secure in 2028 and subsequent years, which determination shall be documented by a written amendment to this Plan executed by the parties by September 15, 2027.

6.2 Storage Water Allocation. Each District will secure its proportionate share of the storage water required by section 6.1 based on their respective steady-state impact to the Near Blackfoot to Minidoka reach of the Snake River as defined by the current version of the ESPA Model. The Districts' respective steady-state impacts under the current version of the Model (ESPAM 2.2) are set forth in Appendix B. If the Districts' respective steady-state impacts set forth in Appendix B change due to Model updates adopted by the Department, or due to changes in the universe of water rights participating in this Plan (e.g., additions or removals of groundwater participating in this Plan through the Districts), the parties will revise Appendix B to reflect the most up-to-date calculation of their respective steady-state impacts. If additional organized groundwater groups join this Plan as contemplated in section 10, they will provide a proportionate share of the storage water required by this section 6.1, thereby reducing the proportionate obligations of the Districts, and the parties will revise Appendix B to reflect the most up-to-date calculation of the proportionate shares of the Districts and additional organized groundwater groups participating in this Plan.

6.3 Acquisition of Storage. Within twenty-one (21) days after the Water District 1 "day of allocation," the Districts will secure, to the satisfaction of the Department, leases or options to lease the volume of storage water required by section 6.1, or demonstrate the ability to supply water under alternative

mitigation actions pursuant to section 6.7. Within seven (7) days thereafter, the Districts will supply copies of such agreements to the SWC.

6.4 Delivery of Storage. If the Water District 1 storage water account of any SWC member drops below the reasonable carryover volume listed in Appendix D between the Water District 1 day of allocation and November 10, the SWC member may draw on the secured storage for in-season irrigation needs and to maintain its reasonable carryover volume by notifying the Districts no later than November 15, and the Districts shall assign storage to such SWC member in the amount needed to maintain its reasonably carryover volume, up to the maximum volume required by section 6.1. The SWC shall not draw down their storage water accounts unnecessarily.

6.5 SWC Lease Adjustment. If a SWC member requesting delivery of storage water pursuant to section 6.4 leases storage water to another person or entity during an irrigation season, other than to the U.S. Bureau of Reclamation for flow augmentation as assigned by Water District 1 or as required rentals by Water District 1 to participate in the rental pool, such water shall be deducted from the volume of storage water the Districts are required to deliver to that SWC member under section 6.4.

6.6 2024 Storage Delivery. The Districts supplied 60,000 acre-feet of storage to the SWC for mitigation purposes pursuant to the *2024 Stipulation* dated June 24, 2024. Any portion of such storage that is not diverted by the SWC during the 2024 irrigation season or delivered to maintain reasonable carryover shall revert to the Districts.

6.7 Alternative Mitigation Actions. The Districts may take alternative actions to deliver water to the SWC, including but not limited to acquiring natural flow, in lieu of securing and delivering storage water. To the extent alternative actions deliver water to the SWC in accordance with state law (including Water District 1 procedures), they shall offset the amount of storage water the District implementing such alternative actions is required to secure under section 6.1 or deliver under section 6.4.

7. Oversight Committee. There will be an oversight committee ("Committee") established to review implementation of this Plan. The Committee shall be made up of the chairs (or their designees) of each party. Additional groundwater groups who join this Plan pursuant to section 10 will have a position on the Committee. Committee meetings will be co-chaired by one representative of the SWC and one representative of the Districts. By February 15 annually, the Committee shall meet to review (a) the annual report submitted by the Districts in accordance with section 4.8; (b) carryover storage from the prior irrigation season; (c) the reach gains to the Near Blackfoot to Minidoka reach of the Snake River; (d) the delivery of storage water to the SWC pursuant to section 6; (e) progress of any alternative mitigation actions taken pursuant to section 6.7; (f) progress of the Board's managed recharge program and the Cooperative Cloud Seeding Program; (g) changes to Appendix A pursuant to section 4.2; and (h) additional groundwater users joining this Plan pursuant to section 10 and the corresponding adjustment to Appendix B. The Committee is advisory in nature, has no authority to bind any party, but may submit recommendations to the Department upon unanimous agreement of Committee members.

8. Safe Harbor. Districts and their patrons that comply with this Plan shall receive safe harbor from the SWC delivery call (IDWR Docket No. CM-DC-2010-001) during the term of this Plan.

9. Enforcement. Each District is independently responsible for complying with its proportionate obligations under sections 4, 5 and 6. If a District does not comply, such non-compliance shall not adversely affect any other District that is in compliance with its proportionate obligations under this Plan.

9.1 Groundwater Conservation. If a District patron fails to comply with their patron allocation, the District shall report the patron to the Department for enforcement under Idaho Code § 42-5244B. Non-compliance shall result in curtailment by the Department, pursuant to Idaho Code § 42-5244B. District

patrons are independently responsible to comply with their respective patron allocations, such that non-compliance by one patron shall not adversely affect any other patron that is in compliance with its patron allocation. If a District reports a non-compliant patron to the Department for enforcement, that patron's allocation under section 4.4 will be deducted from the District's compliance period allocation under section 4.3, and the non-compliant patron's diversions will be deducted from a District's diversions when the District documents compliance under section 4.8, until the non-compliance is remedied. Non-compliant patrons subject to enforcement under this section 9.1 shall not be considered a participant in this Plan until the non-compliance is remedied.

9.2 Storage Water. If a District fails to secure its proportionate share of storage water in accordance with section 6.3, or deliver its proportionate share of storage water in accordance with section 6.4 or deliver water under alternative mitigation actions in accordance with section 6.7, the non-compliant District shall lose safe harbor under section 8, and patrons of the non-compliant District shall be subject to administration pursuant to Conjunctive Management Rule 40.05 unless and until such non-compliance is remedied.

9.3 Reach Gain Mitigation Fund. If a District fails to contribute its proportionate share of funding for projects to improve Near Blackfoot to Minidoka reach gains in accordance with section 5, patrons of the non-compliant District shall be subject to administration pursuant to Conjunctive Management Rule 40.05 until such non-compliance is remedied.

10. Additional Organized Ground Water Groups May Join Plan. Ground water districts or other entities representing groundwater users brought into the area of common ground water supply through the passage of Senate Bill 1341 (2024) or brought in through expansion of the area of common ground water supply as allowed by Senate Bill 1341 (2024) may seek to join this Plan. Upon the written consent of all parties, which consent shall not be unreasonably withheld, the parties and the entity joining this Plan shall execute an addendum to this Plan whereby the joining entity agrees to (a) perform groundwater conservation equivalent to the Districts, which conservation shall be in addition to the 205,000 acre-feet required under section 4; (b) contribute pro rata toward the reach gain fund under section 5; (c) contribute pro rata toward the storage water obligation under section 6, which shall proportionately reduce the storage obligation of the Districts; (d) perform such other obligations as may reasonably be required as a consequence of joining this Plan; and (e) consent to be bound by all other terms of this Plan on the same terms and conditions as the Districts.

11. Mitigation Plan Approval. Within ten (10) days after the Effective Date, the parties will submit this Plan to the Department for approval as a stipulated mitigation plan under rule 43 of the Conjunctive Management Rules. Upon approval, this Plan shall (a) supersede and replace the stipulated mitigation plan previously approved in IDWR Docket No. CM-MP-2016-001, and such plan, together with the agreements upon which it is predicated,[1] shall be null and void; (b) supersede and replace the mitigation plans previously approved in IDWR Docket Nos. CM-MP-2009-006 and CM-MP-2009-007, which shall be null and void. The parties acknowledge that all terms of the *2024 Stipulation* dated June 19, 2024, have been satisfied except for the groundwater conservation obligation in paragraph 5 which is superseded and replaced by section 4 of this Plan.

12. Miscellaneous.

[1] The mitigation plan approved in IDWR Docket No. CM-MP-2016-001 is predicated upon the *Settlement Agreement Entered Into June 30, 2015 Between Participating Members of the Surface Water Coalition and Participating Members of Idaho Ground Water Appropriators, Inc.*, which was amended and clarified by the *Agreement* dated October 7, 2015, the *Addendum to Settlement Agreement* dated October 19, 2015, and the *Second Addendum to Settlement Agreement* dated December 14, 2016.

12.1 Amendment. This Plan may be amended only by a written instrument signed by all parties and approved by the Department.

12.2 Notices. Notices required or permitted to be given to any party under this Plan shall be in writing and shall be effective (a) when personally delivered, (b) three days after mailing via U.S. Postal Service certified mail, (c) upon delivery by a reputable overnight courier, or (d) upon delivery via email to an authorized representative of the party. Notices sent by email shall be deemed received when the designated recipient acknowledges receipt via reply email.

12.3 Appendices. All appendices cited in, and attached to, this Plan are incorporated into this Plan by reference as if set forth fully herein.

12.4 Counterparts. This Plan may be executed in counterparts which, when taken together, shall constitute one and the same document.

12.5 Digital Signatures. Digital and scanned signatures to this Plan shall be valid and effective to bind the party so signing.

APPENDIX C

Managed Aquifer Recharge Standards

1. Natural flow water rights used for recharge must have "recharge" listed as an authorized beneficial use.
2. Water must be recharged in the calendar year of the irrigation season in which mitigation credit is claimed.
3. In-canal recharge will be accounted for in accordance with Idaho Water Resource Board standards taking into consideration historical diversion rates.
4. The following information must be provided by the entity conducting the recharge:
   - 4.1 Water source.
   - 4.2 Water right number or storage spaceholder providing storage.
   - 4.3 If storage water is leased, a copy of the lease contract.
   - 4.4 Copy of the recharge contract with the entity that performed the recharge.
   - 4.5 Location(s) where recharge occurred.
   - 4.6 Dates recharge was performed.
   - 4.7 Total volume recharged at each recharge site.
   - 4.8 Daily or weekly measurement data supporting the total volume recharged.
   - 4.9 Description of measurement device and accuracy

APPENDIX D

Reasonable Carryover Volumes

SWC Member	Carryover Volume
A&B Irrigation District	22,700
American Falls Reservoir Dist. #2	16,700
Burley Irrigation District	0
Milner Irrigation District	16,100
Minidoka Irrigation District	0
North Side Canal Company	113,300
Twin Falls Canal Company	37,400

Attorneys for American Falls-Aberdeen Ground Water District

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **AMERICAN FALLS-ABERDEEN GROUND WATER DISTRICT'S REPLY IN SUPPORT OF MOTION TO RECONSIDER *ORDER GRANTING HEARING* AND VACATE HEARING OR, ALTERNATIVELY, TO CLARIFY THE SCOPE OF HEARING; REQUEST FOR EXPEDITED RULING**

COMES NOW American Falls-Aberdeen Ground Water District ("AFA"), by and through undersigned counsel of record, pursuant to Rule 220.02.c of the Department's Rules of Procedure,[1] and hereby files this reply brief to support AFA's *Motion to Reconsider* Order Granting Hearing *and Vacate Hearing or, Alternatively, to Clarify the Scope of Hearing* dated

[1] Unless stated otherwise, any "Rules" referenced herein are from the Department's Rules of Procedure located at IDAPA 37.01.01.

November 18, 2025 ("*Motion*"), and to specifically address arguments made in A&B Irrigation District's ("A&B") *Consolidated Response to AFA Motion/IGWA Motion for Summary Judgment* ("*Response*") dated December 9, 2026. AFA also renews its request for an expedited ruling on the *Motion*.

INTRODUCTION

The *Motion* requests that the Director reconsider the *Order Granting A&B Irrigation District's Requests for Hearing, Consolidating Proceedings for Hearing, and Appointing Hearing Officer; Notice of Prehearing Conference* dated September 3, 2025 ("*Order Granting Hearing*") and vacate the hearing set to commence on January 14, 2026, or, alternatively, to clarify the scope of the hearing. The *Motion* was made pursuant to Rules 710, 711, 760, and 770, which collectively authorize parties to request reconsideration of an interlocutory order and authorize the issuing officer to clarify, amend, or rescind the order and substitute a new order for it.

In the *Response*, A&B did not dispute the *Order Granting Hearing* is an interlocutory order or that these Rules apply to AFA's requests. A&B did, however, dispute that the issues presented in its requests for hearing are barred by res judicata and/or mootness doctrines.

As explained in the *Motion,* and below, A&B was afforded the opportunity to be heard in June 2023, and was in fact heard, on five of the six issues that A&B now seeks to litigate. Thus, A&B is not entitled to a hearing under Idaho Code ("I.C.") section 42-1701A(3) and, moreover, is barred from litigating the issues now. The sixth and final issue was not litigated in 2023, however, a decision on that issue would be purely advisory and provide no discernable relief to A&B given to A&B's stipulation with the Surface Water Coalition ("SWC") in July 2025.

ARGUMENT

I. The *Motion* is Properly Addressed to the Director

A&B erroneously argues the *Motion* should be denied on procedural grounds because AFA "voluntarily petitioned to intervene" in, and the Director is no longer "presiding" over, this matter that is set for hearing in January 2026. *See Response* at 4-6.

First, that AFA intervened, even though it "was not required to participate in this contested case," is of no moment. *Id.* at 4. AFA's intervention was granted because it has a direct and substantial interest in the proceeding—an order that resolves issues pertaining to the method by which the Department determines proportionate shares of predicted in-season demand shortfalls implicates more than the rights and obligations of A&B, it implicates the rights and obligations of ground water users across the Eastern Snake Plain Aquifer, and particularly those of AFA's members given their proximity to the Near Blackfoot to Minidoka Reach of the Snake River. Now that AFA intervened, nothing prevents it from seeking disposition of the issues in this case before a hearing is held.

Second, AFA is not only a party to this proceeding but also to the underlying matter: the SWC delivery call, IDWR Docket No. CM-DC-2010-001. The Director undoubtedly "presides" over the "ongoing" SWC delivery call and issued the *Order Granting Hearing*. Thus, it is appropriate for the Director to reconsider his interlocutory order and, upon determining that A&B is barred from litigating the issues within, substitute a new order for it that denies A&B's requests for hearing and vacates the hearing. *See* Rules 710, 711, 760.

II. A&B Was Heard on Five of the Six Presented Issues at the June 2023 Hearing

A&B defends its attempt to re-litigate five of the six issues presented in its requests for hearing in 2025 by arguing that the 2023 hearing did not address these issues or, more narrowly,

did not address these issues with respect to A&B's water right 36-2080. Neither argument holds water.

First, as shown in Ex. 1 to the *Motion*, the issues that A&B presented in the 2023 hearing proceedings are substantively similar, if not identical, to the issues it seeks to litigate now. A&B explicitly sought a hearing on these issues in the *Surface Water Coalition's Request for Hearing and Statement of Issues* dated May 5, 2023. That same day, the Department issued a *Notice of Materials Department Witnesses May Rely Upon at Hearing and Intent to Take Official Notice* ("Notice") that, on page 2, included the following:

> **B. Topics Ms. Sukow may testify about at the hearing:**
>
> - Steady-state vs. transient modeling / simulations for the Eastern Snake Plain Aquifer Model (ESPAM).
> - Calculation of curtailment priority dates for the SWC's delivery call.

Thus, A&B misrepresents the scope of the 2023 hearing and the effect of the *Notice* by combining these two topics as if they are one (*see Response* at 9-10) and suggesting that Ms. Sukow was limited to testifying about the second topic. *Id.* at 24-25. A&B even cites to excerpts from the 2023 hearing transcript where Mr. Simpson, counsel for the SWC (of which A&B is a member), cross-examined Ms. Sukow about how the Department determines proportionate shares of predicted in-season demand shortfall (*id.* at 12-13), yet conveniently omits the parts of the transcript that are problematic for A&B.[2] Moreover, A&B does not respond to the fact that it submitted argument on these issues in post-hearing briefing. *See Motion* at 5 n.3.

[2] The problematic part of the transcript is cited and quoted in the *Motion* at 5 n.2.

Second, A&B argues that, even if there was testimony and argument on these issues in the 2023 hearing, it was not centered around water right 36-2080 because the right, which has a 1948 priority date, was not subject to curtailment from the *Final Order Regarding April 2023 Forecast Supply (Methodology Steps 1-3)* dated April 21, 2023, since that order set a 1953 curtailment date. *See Response* at 9, 21, 24. A&B acknowledges, however, that prior to the adoption of the *Sixth Methodology Order*, the Department had never curtailed water rights senior to 1977, and that the Director's decision to determine curtailment dates using transient modeling is the reason that more senior rights are now subject to curtailment. *See id.* at 2.

Moreover, in the 2023 hearing, A&B (as a member of the SWC) endorsed transient modeling as the basis for determining curtailment dates (*see Surface Water Coalition's Post-hearing Brief* at 6-8 (June 16, 2023) ("*SWC Post-Hearing Brief*")) even though A&B was aware that its 1948 water right would now be vulnerable to curtailment. *See, e.g.*, *Declaration of Travis L. Thompson in Support of A&B Irrigation District's Consolidated Response to AFA Motion/IGWA Motion for Summary Judgment* ("*Thomspon Decl.*"), Ex. A, at 12-20 (November 28, 2022 J. Sukow presentation showing that, if the predicted in-season demand shortfall exceeds 97,900 acre-feet—which occurred in 2021 and 2022—all rights junior to 1900 are subject to curtailment). In its own words, A&B knew or should have known that "it [was] not a matter of 'if' but 'when'" water right 36-2080 would be subject to curtailment. *Response* at 29.

In 2023, A&B also knew that the Department determined A&B's proportionate shares of the predicted in-season demand shortfall by using steady-state analysis and calculating A&B's impacts based on the total acres authorized to be irrigated with ground water rather than some portion thereof. *See SWC Post-Hearing Brief* at 12; *see also A&B Irrigation District's Petition for Reconsideration and Request for Hearing Re: April 2016 As Applied Order* (May 2, 2016)

(disputing A&B's "proportionate share" of the predicted in-season demand shortfall); *A&B Irrigation District's Notice of Withdrawal of Request for Hearing (Denial of request regarding aquifer actions)* (July 1, 2016) (withdrawing prior request for hearing "regarding the issue of the Director's denial of 'A&B's request to reduce its proportionate share of the predicted [Demand Shortfall] due to the effects of A&B's enrollment of acres into CREP and its conversions.'"). A&B has not alleged a change in the Department's method between 2023, or even 2016, and now. Rather, A&B merely argues that res judicata does not bar it from litigating the same issues now that it did in 2023 because water right 36-2080 was not subject to curtailment that year, thus the issue was "not ripe for adjudication" during the 2023 hearing. *Response* at 23.

In other words and as described above, at the 2023 hearing A&B:

- Knew the method by which the Department determines A&B's proportionate shares of the predicted in-season demand shortfall;
- Knew the Director's move to transient modeling to determine curtailment dates meant it was only a matter of time before water right 36-2080 would be subject to curtailment;
- Elicited testimony from Ms. Sukow regarding this subject matter; and
- Submitted argument, which was rejected, as to why the Department needs to change the method by which it determines A&B's proportionate share.

The issues on which A&B seeks to be heard in this case were just as ripe then as they are now, precluding A&B from relitigating them. *See Berkshire Invs., Ltd. Liab. Co. v. Taylor*, 153 Idaho 73 (2012) (affirming district court's dismissal of claims based on its "finding that they were barred by res judicata because they were (1) actually litigated in the prior case . . . or (2) could have been raised in that case," and rejecting appellant's argument that a ripeness exception

applies because appellants knew of the conduct on which the claims were based at the time of the prior case, and thus "should have been raised").

That the Director did not address A&B's argument in the *Post-Hearing Order Regarding Fifth Amended Methodology Order* (Jul. 19, 2023) is inconsequential, as A&B elected to not appeal the order, and cannot circumvent claim preclusion now. *See McQuillen v. Ammon*, 113 Idaho 719, 721 (1987) (holding appellant was precluded from litigating an issue that he had not appealed in prior case because "the doctrine of *res judicata* applies not only as to all matters decided, but also as to 'every matter which might and should have been litigated in the first suit'") (quoting *Duthie v. Lewiston Gun Club*, 104 Idaho 751, 753 (1983); *id.* ("If a litigant chooses not to continue to assert his rights after an intermediate tribunal has decided against him, he has concluded his litigation as effectively as though he had proceeded through the highest tribunal available to him") (quoting *Angel v. Bullington*, 330 U.S. 183, 189 (1947));

> Claim preclusion bars a subsequent action between the same parties upon the same claim or upon claims 'relating to the same cause of action . . . which might have been made.' There are three requirements for claim preclusion to bar a subsequent action: (1) same parties, (2) same claim, and (3) final judgment. Additionally, this Court has interpreted claim preclusion to hinge on whether the matter 'might and should have been litigated in the first suit.'

Kootenai Elec. Coop., Inc. v. Lamar Corp., 148 Idaho 116, 120 (2009) (citations omitted); *Burns v. Baldwin*, 138 Idaho 480, 485-86 (2003) (holding a party "cannot take advantage of his own failure to raise issues in the proper forum" when "the opportunity was given to fully and fairly litigate the issue," and "a party cannot escape the requirements of full faith and credit and res judicata by asserting its own failure to raise matters clearly within the scope of a prior proceeding") (quoting *Underwriters Nat'l Assurance Co. v. North Carolina Life & Accident & Health Ins. Guaranty Ass'n*, 455 U.S. 691, 710 (1982)).

In sum, A&B was afforded an opportunity for hearing in 2023, and was in fact heard, on five of the six issues that A&B again presented in 2025. The issues were ripe for adjudication in 2023 even though water right 36-2080 was not subject to curtailment that year. Accordingly, A&B is not entitled to a hearing on these issues under I.C. section 42-1701A(3) and is barred from relitigating them.

III. A Decision on the Sixth Issue Would be Purely Advisory and Provide no Relief

The sixth and final issue on which A&B sought a hearing this year, issue no. 3 in the July 24, 2025 *Request for Hearing*, is different from the rest. *See Motion*, Ex. 1. While it may not have arisen in 2023, so res judicata does not apply, it is non-justiciable on mootness grounds.

The issue is: "Whether the Director's failure to implement the May 16, 2025 curtailment order in accordance with Idaho law has injured A&B by subjecting its senior water right 36-2080 to curtailment and/or mitigation requirements during the 2025 irrigation season." *A&B Irrigation District's Request for Hearing* at 2 (Jul. 24, 2025). That same day, A&B and the SWC filed a *Joint Motion for Order Approving 2025 Stipulation* that required A&B to deliver 1,252 acre-feet to the SWC. The Director approved the stipulation the next day. *Order Approving 2025 Stipulation as Compliance with Approved Mitigation Plan* (Jul. 25, 2025). On September 11, 2025, eight days after issuing the *Order Granting Hearing*, the Director issued an order that found, because of the A&B/SWC stipulation, "A&B does not need to establish that they can mitigate for its proportionate share of the predicted IDS." *Order Revising July 2025 Forecast Supply (Methodology Steps 7-8)* at 12 n.7.

Thus, A&B was not curtailed in 2025 and was not required to deliver the 5,039 acre-feet that the Director determined it was obliged to deliver earlier in the season. *See Order Revising April 2025 Forecast Supply and Continuing May 16, 2025 Curtailment Order (Methodology*

Steps 5 & 6) at 11 n.6 (July 10, 2025). Yet, A&B argues that the issue is not moot, or altneratively, several exceptions to the mootness doctrine apply. *Response* at 25-29. Not so. First, A&B does not show the issue is "live" because it fails to explain the alleged nexus between the Department's alleged non-curtailment in spring 2025 and its grievances with the Step 9 Order, or how the changes to the Area of Common Ground Water Supply boundary are relevant to this sixth issue.

Further, A&B does not substantiate its assertion that it has or will suffer "collateral legal consequences" if the issue is not heard at the January 2026 hearing. Nor is there a "substantial public interest" in the sixth issue, as A&B is the only entity with an active approved mitigation that requires the Department to determine the entity's proportionate share of the predicted in-season demand shortfall (*see, e.g.*, Final Order Regarding April 2025 Forecast Supply (Methodology Steps 1–3) at 5 n.8; *cf. Motion*, Ex. 2, at 4, 7 (A&B's expert calling its mitigation plan "unique")), and is the only entity that is simultaneously calling for curtailment and subject to curtailment. Finally, A&B has not shown that there is any risk that the Department's alleged non-curtailment is "capable of repetition yet evading review." Conversely, the Department demonstrated a vigorous and thorough effort to curtail all subject ground water users in summer 2025[3] and there is no reason to belive these efforts are short-lived.

In sum, reslution of the sixth issue in A&B's favor would not result in any relief and would consistute a purely advisory decision, thus the issue is non-justiciable due to mootness. *See Secol v. Fall River Med., P.L.L.C.*, 168 Idaho 339, 371 (2021) ("It is well-established that this Court does not decide moot cases. . . . The mootness doctrine applies when 'a favorable

[3] *See, e.g.*, the Department's webpage displaying its summary of enforcement actions, available at https://idwr.idaho.gov/legal-actions/delivery-call-actions/swc/2024-surface-water-coalition-delivery-call/ (last visited Dec. 10, 2025).

judicial decision would not result in any relief.'") (citation omitted); *Taylor v. AIA Servs. Corp.*, 151 Idaho 552, 569 (2011) (declining to issue "purely advisory opinions").

IV. Due Process Does Not Require that A&B Receive a Hearing

In a last ditch effort to keep the hearing intact, A&B argues that due process requires that A&B receive a hearing since water right 36-2080 is now subject to curtailment for the first time. *Response* at 3, 25. However, A&B has been a party to the SWC delivery call proceedings since 2005 and participated in numerous hearings along the way, including the 2023 hearing that involved five of the six issues that A&B seeks to relitigate. Moreover, A&B is among the SWC members urging the Department to curtail ground water users, and, ironically, resisted other ground water users' due process claims vis-à-vis the 2023 hearing. *See Surface Water Coalition's Response Brief*, Case No. CV01-23-13173, at 11-19 (Ada Cnty. Dist. Ct., Jan. 19, 2024).[4] Finally, A&B was not curtailed in 2025, and there is no indication that water right 36-2080 will be subject to curtailment in 2026. No process is currently due to A&B, so vacating the hearing will not result in any violation.

CONCLUSION

Based on the foregoing, AFA requests that the Director, who issued the *Order Granting Hearing*, rescind the order and substitute a new order for it that vacates the hearing or, alternatively, clarifies the scope of hearing. Further, to minimize waste of the parties' and the Department's resources in prehearing activities, AFA respectfully requests that a ruling on the *Motion* be issued as expeditiously as possible.

Attorneys for IGWA

STATE OF IDAHO

DEPARTMENT OF WATER RESOURCES

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **IGWA'S REPLY BRIEF**

Idaho Ground Water Appropriators, Inc. ("IGWA"), through counsel, submits this brief in reply to *A&B Irrigation District's Consolidated Response to AFA Motion / IGWA Motion for Summary Judgment* ("A&B's Response Brief") filed December 9, 2025, in this matter. This brief is supported by pleadings and orders filed previously in this Docket.[1]

Introduction

A&B's Response Brief does not effectively counter the arguments set forth in *IGWA's Motion for Summary Judgment* ("IGWA's Motion"), which clearly demonstrate that the doctrines of *res judicata* and "law of the case" preclude A&B from challenging the method by which the Director calculates storage water mitigation obligations, and that the doctrine of *quasi-*

[1] All pleadings and orders cited in this brief are part of the agency record in this Docket No. CM-DC-2010-001 unless a citation is given to a different docket. IGWA requests that the hearing officer take official notice pursuant to IDAPA 37.01.01.602 of all pleadings and orders cited in this brief. IDWR's maintains an online repository of contested case pleadings and orders accessible via https://idwr.idaho.gov/legal-actions/administrative-actions/.

estoppel bars A&B's challenge to the Director's use of steady-state modeling to calculate storage water mitigation obligations. Therefore, IGWA will not burden the hearing officer by reiterating the facts and arguments set forth in IGWA's Motion. Rather, this reply brief highlights the key failings in A&B's Response Brief and the ways in which A&B's arguments contradict positions it previously took in this case.

1. The doctrines of *res judicata* and "law of the case" foreclose A&B's attempt to re-litigate the method used to calculate storage water mitigation obligations.

A&B argues that since its 1948 priority groundwater right was curtailed for the first time in 2025, it is entitled to challenge the method the Director uses to calculate storage water mitigation obligations. (A&B's Resp. Br., p. 2.) A&B's argument fails for two reasons.

First, the method used by the Director to calculate storage water obligations applies across-the-board to all groundwater rights. If A&B did not want the method to apply to its water rights, A&B had a duty to challenge the method when it was first developed and applied.

Second, the Director has applied the method to A&B for many years. A&B owns a whole portfolio of groundwater rights, of which its 1948 priority right is but one. The following is a summary of A&B's groundwater rights:[2]

WR#	Basis	Priority Date	Div. Rate (cfs)	Source	Water Use
36-15127A	Decreed	4/1/1962	31.12	Ground Water	Irrigation
36-15127B	Decreed	4/1/1984	28.89	Ground Water	Irrigation
36-15192	Decreed	4/1/1962	0.6	Ground Water	Irrigation
36-15193A	Decreed	4/1/1962	0.21	Ground Water	Irrigation
36-15193B	Decreed	4/1/1965	0.31	Ground Water	Irrigation
36-15194A	Decreed	4/1/1962	0.23	Ground Water	Irrigation
36-15194B	Decreed	4/1/1968	2.51	Ground Water	Irrigation
36-15195A	Decreed	4/1/1962	0.87	Ground Water	Irrigation
36-15195B	Decreed	4/1/1978	2.24	Ground Water	Irrigation
36-15196A	Decreed	4/1/1962	0.29	Ground Water	Irrigation
36-15196B	Decreed	4/1/1981	0.08	Ground Water	Irrigation
36-16749	Decreed	4/1/1956	0.45	Ground Water	Irrigation

[2] A&B's water right information was obtained via a search of IDWR's online water rights database on December 13, 2025, via URL https://research.idwr.idaho.gov/apps/waterrights/wrajsearch/wradjsearch.aspx. IGWA requests that the hearing officer take official notice of these records pursuant to IDAPA 37.01.01.602.

A&B's water rights have been curtailed several times, and each time the Director calculated a storage water mitigation obligation for A&B. As noted in IGWA's Motion, the Director first calculated A&B's storage water mitigation obligation in 2016, which A&B challenged. (IGWA's Motion, p. 3.) When the Methodology Order was changed in 2023, the Director again calculated storage water mitigation obligations, which A&B challenged.

The method used by the Director to calculate A&B's storage water mitigation obligation in 2025 is the same method the Director has applied since 2016. A&B does not get a second bite at the apply simply because the method now reaches one more A&B right. Idaho's *res judicata* doctrine bars claims and defenses that were, or could have been, raised in earlier proceedings, and "law of the case" bars re-litigating issues previously decided. *See Monitor Finance, L.C. v. Wildlife Ridge Estates, LLC*, 164 Idaho 555, 560, 433 P.3d 183, 188 (2019).

2. Judicial estoppel bars A&B's inconsistent positions.

Apart from *res judicata* and "law of the case," A&B's current position is barred by judicial estoppel. Judicial estoppel an equitable doctrine invoked to protect the integrity of judicial proceedings by "preclude[ing] a party from advantageously taking one position, then subsequently seeking a second position that is incompatible with the first." *McCallister v. Dixon*, 154 Idaho 891, 894, 303 P.3d 578, 581 (2013). The doctrine applies where the party taking the inconsistent position "did have, or was chargeable with, full knowledge of the attendant facts prior to adopting the initial position." *Heinze v. Bauer*, 145 Idaho 232, 236, 178 P.3d 597, 601 (2008).

A&B has on several occasions, in this very case, urged the Director to deny "second hearings" and resist perpetual re-litigation, including:

- SWC's Response to Cities' Request for Hearing (Aug. 22, 2023): "The statute only allows an aggrieved person to have a hearing on a director's action or order when that person 'has not previously been afforded an opportunity for hearing on the matter.' … Since the Cities had an opportunity for a hearing on their issues, Idaho law does not afford them a right to a 'second' hearing." (p. 4-5; excerpt attached as Appendix A.)
- SWC Response to Cities' Motion for Clarification and Reconsideration (Sept. 19, 2023): "[T]he Director's methodology … may be updated at some point in time, [but] that does not mean the prior contested cases resulting in 'final orders' … are continuing ad infinitum … Such a scenario has no basis in statute or rule and would be unduly

burdensome and mire the parties in endless litigation expense." (p. 3; excerpt attached as Appendix B.)

- SWC Response Brief (Jan. 19, 2024): "The doctrine of res judicata covers both claim preclusion and issue preclusion. … All three of the criteria are met here and therefore the Court should apply res judicata to deny IGWA's present appeal of the agency's alleged 'substantive errors.' … There simply is no legal basis to allow IGWA to continue to litigate defenses that have already been denied." (p. 24-25; excerpt attached as Appendix C.)

Judicial estoppel prevents A&B from this type of "shifting of positions to suit the exigencies of a particular action." *Med. Recovery Servs., LLC v. Eddins*, 169 Idaho 236, 243, 494 P.3d 784, 791 (2021) (quoting Lawrence v. Hutchinson, 146 Idaho 892, 900, 204 P.3d 532, 540 (Ct. App. 2009)).

3. *Quasi-estoppel* bars A&B's attack on steady-state modeling for the purpose of calculating proportionate storage water mitigation obligations.

In response to IGWA's *quasi-estoppel* argument, A&B argues that method by which the storage water obligations of the ground water districts are calculated was the "choice" of the districts, and that "A&B did not agree that steady-state modeling is the appropriate method for allocating storage water mitigation obligations among groundwater users." (A&B Resp., p. 31.) Not so. The parties' prior mitigation plan—the so-called 2015 plan—failed due to certain key terms not being clearly defined, including the mitigation obligations of the ground water districts. This was remedied in the 2024 Stipulated Mitigation Plan which explicitly requires that storage water mitigation obligations be calculated "based on their respective steady-state impact to the Near Blackfoot to Minidoka reach of the Snake River as defined by the current version of the ESPA Model." (Joint Mot. for Order Approving 2025 Stip. Mit. Plan, IDWR Docket No. CM-MP-2024-003 (Nov. 19, 2024), Appx. A, p, 3, § 6.2 (excerpt attached as Appendix D.) This was not simply a decision of the ground water districts; it is—unlike the 2024 plan—a material term of the agreement. The 2024 Plan would not have been signed had mitigation obligations been based on transient-state modeling.

A&B now seeks to have its storage water mitigation obligation calculated under transient-state modeling, which is more favorable to A&B. This is precisely the type of double standard the *quasi-estoppel* doctrine is designed to prevent.

Conclusion

For the reasons above, IGWA respectfully asks the hearing officer to grant *IGWA's Motion for Summary Judgment* and deny A&B's request to re-litigate the Director's use of steady-state modeling to calculate storage-water mitigation obligations.

Dated this 16th day of December, 2025.

Attorneys for American Falls Reservoir District #2 and Minidoka Irrigation District

BEFORE THE DEPARTMENT OF WATER RESOUCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **SURFACE WATER COALITION'S RESPONSE TO CITIES' REQUEST FOR HEARING AND ORDER AUTHORIZING DISCOVERY**

COME NOW, A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, and TWIN FALLS CANAL COMPANY ("Surface Water Coalition" or "Coalition"), by and through counsel of record, and hereby respond to the *City of Pocatello's, City of Idaho Falls', and Coalition of Cities' Request for Hearing and Order Authorizing Discovery* ("Request") filed on August 3,

ARGUMENT

I. IDWR Already Provided a Hearing on the Cities' Issues and the Statute Does Not Provide for a Second Hearing.

The Cities have erroneously petitioned for an administrative hearing on the Sixth Methodology Order pursuant to Idaho Code § 42-1701A(3). The statute only allows an aggrieved person to have a hearing on a director's action or order when that person "has not previously been afforded an opportunity for hearing on the matter." *See* I.C. § 42-1701A(3). The Cities do not fall into that category. Instead, IDWR provided the Cities with an opportunity for hearing on the issues listed in their recent *Request for Hearing* June 6-9, 2023. Issues related to the SWC's reasonable use of water, irrigated acres, supplemental groundwater, and enlargement rights were all subject to the hearing on the Fifth Amended Methodology Order held before the Director this past June. The Director specifically addressed these issues in the Post-Hearing Order. *See Post-Hearing Order* at 17-23. Although the Cities may disagree with the Director's decision, their remedy is not a "second" administrative hearing. Since the Cities had an opportunity for a hearing on their issues, Idaho law does not afford them a right to a "second" hearing. The Cities' request should be denied accordingly.

Moreover, the Sixth Methodology Order was issued as a "final" agency order. Pursuant to section 42-1701A(4) the Cities' statutory remedy is judicial review of that order. Idaho's APA provides the right to ask for reconsideration and/or appeal that decision to district court. The Cities did not ask for reconsideration and have yet to appeal the Sixth Methodology Order, however IGWA did ask for judicial review. *See IGWA's Petition for Judicial Review* (Ada County Dist. Ct., Fourth Jud. Dist., Case No. CV01-23-13713, Aug. 16, 2023). Since the Director's Sixth Methodology Order is on appeal to the district court it is not subject to any

further administrative process or hearing, unless ordered by the court. *See* I.R.C.P. 84. The Cities' request for a "second" hearing should be denied accordingly.

II. The Sixth Methodology Order Updates the Fifth Methodology Order Based on Information Produced at Hearing.

Notwithstanding the Sixth Methodology Order was issued as a "final" agency order subject to reconsideration and/or judicial review, the Director updated the Fifth Order based upon information produced at hearing. In other words, the issues that the Cities seek to address with a hearing on the Sixth Methodology Order were already addressed in the June hearing. There is nothing new in the final order that would warrant an additional administrative hearing. The Cities' request in this regard is unduly burdensome and would cost the parties and agency time and additional resources without any legal basis.

Notably, the Director stated "[t]his Sixth Methodology Order relies on the same data included in the Fifth Methodology Order." *See* Sixth Methodology Order at 8, n. 8, at 9, n. 9, at 10, n .10, at 15, n. 13, at 24, n. 18, at 26, n. 20, at 28-29, n. 21 (emphasis added). All of this information was available to the Cities as of April 21, 2023. However, the Director did identify certain limited corrections to the Fifth Methodology Order:

> As discussed in footnote 12, during the June 2023 Hearing the Department identified an error in AFRD's 2018 diversion data. Hr'g T. vol. IV, at 173-74. This correction was resolved in his Sixth Methodology Order, which relies on the updated data. The updated data did not result in an appreciable increase in 2018's diversion value.

Sixth Methodology Order at 12, n. 11.

> In this Sixth Methodology Order, AFRD2's 2018 diversion value has been increased by 5,000 acre-feet. This increase was necessary to remedy the error committed by Department staff in calculating AFRD2's 2018 adjusted diversion value for the Fifth Methodology Order, which was identified during the June 6 Hearing.

Id. at 13, n. 12.

Attorneys for American Falls Reservoir District #2 and Minidoka Irrigation District

BEFORE THE DEPARTMENT OF WATER RESOUCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **SURFACE WATER COALITION'S RESPONSE TO CITIES' MOTION FOR CLARIFICATION AND RECONSIDERATION**

COME NOW, A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, and TWIN FALLS CANAL COMPANY ("Surface Water Coalition" or "Coalition"), by and through counsel of record, and hereby respond to the *Motion for Clarification and Reconsideration of Denial of*

on the Sixth Methodology Order that fully addressed all of the information either presented at or before the administrative hearing. As such, the Director properly denied the requested hearing. *See Order Denying Request for Hearing and Motion Authorizing Discovery* at 2-3.

Moreover, the Cities have appealed the Director's *Post-Hearing Order* that addresses the issues raised on the Fifth Methodology Order, including the updated data the Director included in the Sixth Methodology Order. Although the Cities had a right to appeal the Sixth Methodology Order they failed to do so. Regardless, all of the Cities except Idaho Falls have appeared in IGWA's appeal of the Sixth Methodology Order.[2] Consequently, there is nothing to clarify and the petitions for judicial appeal will proceed pursuant to Idaho's civil rules.

II. The Director Properly Denied the Cities' Request for Discovery.

The Cities have also requested the Director to reconsider the denial of their motion to authorize discovery. *See* Motion at 2-3. Since the request for hearing was denied, the request to authorize discovery was properly denied as well. The Cities misconstrue this matter as a "continuing contested case" with no end. Motion at 2. Although the Director's methodology regarding the SWC delivery call may be updated at some point in time, that does not mean the prior contested cases resulting in "final orders" that have been appealed or are currently on appeal to the District Court are continuing *ad infinitum* as the Cities suggest. To find otherwise would keep the parties in a perpetual state of discovery, motion practice, and litigation, without any culminating hearing or end.[3] Such a scenario has no basis in statute or rule and would be unduly burdensome and mire the parties in endless litigation expense.

[2] Whether the City of Idaho Falls will file a notice of appearance is unknown. If the cases are ultimately consolidated it may not matter as all parties will be participating.

[3] It is curious why the Cities seem determined to re-litigate prior contested cases and outcomes in the face of their approved mitigation plan for the SWC delivery call and safe harbor from curtailment pursuant to the CM Rules. The request for discovery is unwarranted and would be overly burdensome in the context of what has already

APPENDIX C

IN THE DISTRICT COURT OF THE FOURTH JUDICIAL DISTRICT OF THE STATE OF IDAHO, IN AND FOR THE COUNTY OF ADA

IDAHO GROUND WATER APPROPRIATORS, INC.,

Petitioner,

vs.

THE IDAHO DEPARTMENT OF WATER RESOURCES, and GARY SPACKMAN, in his capacity as Director of the Idaho Department of Water Resources,

Respondents,

and

AMERICAN FALLS RESERVOIR DISTRICT #2, MINIDOKA IRRIGATION DISTRICT, A&B IRRIGATION DISTRICT, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, TWIN FALLS CANAL COMPANY, CITY OF POCATELLO, CITY OF BLISS, CITY OF BURLEY, CITY OF CAREY, CITY OF DECLO, CITY OF DIETRICH, CITY OF GOODING, CITY OF HAZELTON, CITY OF HEYBURN, CITY OF JEROME, CITY OF PAUL, CITY OF RICHFIELD, CITY OF RUPERT, CITY OF SHOSHONE, CITY OF WENDELL, BONNEVILLE-JEFFERSON GROUND WATER DISTRICT, and BINGHAM GROUND WATER DISTRICT,

Intervenors.

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY AND FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN

Case No. CV01-23-13173

> First, neither section (Art. XV § 4 and § 5) applies to the water user who has appropriated water directly from the water source. . . . Finally, neither section governs conjunctive management. . . . There is nothing in the wording of Article XV, § 7, that indicates that it grants the legislature or the Idaho Water Resource Board the authority to modify that portion of Article XV, § 3, which states, "Priority of appropriation shall give the better right as between those using the water" . . . The policy of securing the maximum use and benefit, and least wasteful use, of the State's water resources applies to both surface and underground waters, and it requires that they be managed conjunctively.

150 Idaho at 805-807, 252 P.3d at 86-88.

Accordingly, any claims of error related to the Director's application of the Ground Water Act or CM Rule 20 should be denied. Those provisions do not apply in the manner IGWA suggests and do not expose any errors in the Director's *Sixth Order* and the continued conjunctive water right administration in this case. Further, the following legal doctrines prohibit IGWA's attempts to re-challenge the methodology and the established burdens of proof and evidentiary standards adopted by the Idaho Supreme Court. *See A&B Irr. Dist.*, 155 Idaho at 655, 315 P.3d at 843.

II. Res Judicata and The Law of the Case Doctrines Preclude IGWA's Alleged Defenses.

IGWA attempts to impermissibly re-litigate certain defenses through its "substantive errors" portion of the opening brief. *See generally IGWA Br.* at 29-31, 36-44. These defenses, having been previously raised and litigated, are barred by both the *res judicata* and "law of the case" doctrines. In other words, IGWA cannot continue to regurgitate defenses that have already been denied by Idaho's judiciary. The Court should reject IGWA's arguments accordingly.

The doctrine of *res judicata* covers both claim preclusion and issue preclusion. *See Monitor Finance, L.C. v. Wildlife Ridge Estates, LLC*, 164 Idaho 555, 560, 433 P.3d 183, 188 (2019). Claim preclusion bars a subsequent action between the same parties upon the same claim or upon claims relating to the same cause of action. *See id.*

The three criteria are: 1) the original action ended in a final judgment on the merits; 2) the present claim involves the same parties; and 3) the present claim arises out of the same transaction or series of transactions as the original action. *See id.* The doctrine exists "to prevent the resurrection of a lawsuit already laid to rest." *See Byrd v. Idaho State Bd. of Land Comm'rs*, 169 Idaho 922, 931, 505 P.3d 708, 717 (2022). Further, the doctrine applies to administrative proceedings as well. *See id.* All three of the criteria are met here and therefore the Court should apply *res judicata* to deny IGWA's present appeal of the agency's alleged "substantive errors."

First, the appeal concerns the same parties, the Coalition, IGWA, and IDWR. Next, the claims arise out of the same transaction, the underlying delivery call proceeding and the Director's methodology for administration. IGWA collaterally attacks the Director's methodology for forecasting water supply, use of irrigated acreage, accounting for supplemental groundwater use, and calculating project efficiency and system improvements. *See IGWA Br.* at 32-39. IGWA also alleges the Director wrongly refused to deny the call on theories of "futile call" and "maximum beneficial use." *See id.* at 39-44. All of these claimed errors and defenses were previously litigated and denied.[23] Moreover, any challenges to the methodology steps and underlying analysis were fully adjudicated in the *382 Decision*. Consequently, the final criteria of a final judgment on the merits is met, and the Court can deny IGWA's appeal of these issues accordingly. There simply is no legal basis to allow IGWA to continue to litigate defenses that have already been denied.

[23] IGWA originally moved for summary judgment on "futile call" and its "maximum use" theories. *See* Addendum C (*Idaho Ground Water Appropriators' Motion for Summary Judgment and Memorandum in Support*, Mar. 23, 2005). The Director denied IGWA's motion. *See* Addendum D (*Order on Petition to Intervene and Denying Motion for Summary Judgment et al.*, Apr. 6, 2005). IGWA did not appeal the Director's decision on these issues, and the resulting order on judicial review and the Supreme Court opinion constitute a final adjudication on the merits of IGWA's claimed defenses. *See Order on Petition for Judicial Review* (Gooding County Dist. Ct., Fifth Jud. Dist., Case No 2008-551); *A&B Irr. Dist. v. IDWR*, 155 Idaho 640, 315 P.3d 828 (2013).

APPENDIX D

STATE OF IDAHO

DEPARTMENT OF WATER RESOURCES

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-MP-2024-003
IN THE MATTER OF THE SURFACE WATER COALITIONS' AND THE GROUND WATER DISTRICTS' 2024 STIPULATED MITIGATION PLAN	**JOINT MOTION FOR ORDER APPROVING 2024 STIPULATED MITIGATION PLAN**

Twin Falls Canal Company, North Side Canal Company, American Falls Reservoir District No. 2, Milner Irrigation District, Burley Irrigation District, A&B Irrigation District, and Minidoka Irrigation District (collectively, the "Surface Water Coalition"), and North Snake Ground Water District, Magic Valley Ground Water District, Carey Valley Ground Water District, Aberdeen-American Falls Ground Water District, Bingham Ground Water District, Bonneville-Jefferson Ground Water District, Jefferson-Clark Ground Water District, Madison Ground Water District, and Henry's Fork Ground Water District (collectively, the "Ground Water Districts"), through counsel, jointly move the director pursuant to rule 220 of the Rules of Procedure of the Idaho Department of Water Resources and rule 43 of the Rules for Conjunctive Management of Surface and Ground Water Resources for an order approving the 2024 Stipulated Mitigation Plan attached hereto as Appendix A (the "Plan").

Pursuant to Conjunctive Management Rule 43.01.a, the names and addresses of the entities submitting the Plan are:

- North Snake Ground Water District
  214 E. Yakima St., Suite A
  Jerome, Idaho 83338

4.8 Annual Report. By February 15 annually, the Districts will submit a report to the SWC and the Department documenting the Districts' compliance with section 4 during the previous calendar year.

5. Reach Gain Mitigation Fund. The parties understand that the Idaho Water Resource Board ("Board") will contribute $5,000,000 to develop projects that will target and maximize benefits to the reach gains in the Near Blackfoot to Minidoka reach. The projects will be selected by the Board with input from the parties as to the criteria for ranking proposed projects. The Board will make the final decision on projects. Beginning in 2035, the Districts will collectively deposit $250,000 annually into a bank account maintained by the Districts to fund development and implementation of projects designed to further increase reach gains to the Near Blackfoot to Minidoka reach of the Snake River. If, during the second compliance period (2028-2031) or any subsequent compliance period, the average annual reach gains to the Near Blackfoot to Minidoka reach of the Snake River for that compliance period drops below the 2023 reach gains, the Districts will then deposit $500,000 annually, until average annual reach gains over the most recent compliance period equal or exceed the 2023 reach gains. Each District shall be independently responsible to deposit its proportionate share of the $250,000 or $500,000 in proportion to its respective steady-state impacts to the Near Blackfoot to Minidoka reach of the Snake River under the current version of the Model (ESPAM 2.2) as set forth in Appendix B.

6. Storage Water Component. The Districts will collectively secure the volume of storage water required by section 6.1 to meet irrigation needs and carryover storage of the SWC in accordance with section 6.4.

6.1 Storage Water Volume. The Districts will secure 75,000 acre-feet of storage water for the 2025 and 2026 irrigation seasons. In 2027, the maximum volume of storage water the Districts are required to secure is capped at 82,500 acre-feet. If reach gains to the Near Blackfoot to Minidoka reach of the Snake River in 2026 are greater than 2023 reach gains, the Districts will secure 75,000 acre-feet of storage for the 2027 irrigation season. If reach gains to the Near Blackfoot to Minidoka reach of the Snake River in 2026 are less than or equal to 2023 reach gains, the Districts will secure 82,500 acre-feet of storage for the 2027 irrigation season. At the annual meeting held in 2027 pursuant to section 7, the parties shall commence discussions to determine the amount of storage the Districts will be required to secure in 2028 and subsequent years, which determination shall be documented by a written amendment to this Plan executed by the parties by September 15, 2027.

6.2 Storage Water Allocation. Each District will secure its proportionate share of the storage water required by section 6.1 based on their respective steady-state impact to the Near Blackfoot to Minidoka reach of the Snake River as defined by the current version of the ESPA Model. The Districts' respective steady-state impacts under the current version of the Model (ESPAM 2.2) are set forth in Appendix B. If the Districts' respective steady-state impacts set forth in Appendix B change due to Model updates adopted by the Department, or due to changes in the universe of water rights participating in this Plan (e.g., additions or removals of groundwater participating in this Plan through the Districts), the parties will revise Appendix B to reflect the most up-to-date calculation of their respective steady-state impacts. If additional organized groundwater groups join this Plan as contemplated in section 10, they will provide a proportionate share of the storage water required by this section 6.1, thereby reducing the proportionate obligations of the Districts, and the parties will revise Appendix B to reflect the most up-to-date calculation of the proportionate shares of the Districts and additional organized groundwater groups participating in this Plan.

6.3 Acquisition of Storage. Within twenty-one (21) days after the Water District 1 "day of allocation," the Districts will secure, to the satisfaction of the Department, leases or options to lease the volume of storage water required by section 6.1, or demonstrate the ability to supply water under alternative

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	**Docket No. CM-DC-2010-001** **ORDER DENYING AMERICAN FALLS-ABERDEEN GROUND WATER DISTRICT'S MOTION TO RECONSIDER ORDER GRANTING HEARING**

BACKGROUND

On July 19, 2023, the Director of the Idaho Department of Water Resources ("Department") issued the *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("*Sixth Methodology Order*"). That order establishes nine steps for determining material injury to members of the Surface Water Coalition ("SWC").

On April 16, 2025, the Director issued the *Final Order Regarding April 2025 Forecast Supply (Methodology Steps 1–3)* ("*April Forecast Supply Order*"), finding that A&B Irrigation District ("A&B") must mitigate for its proportionate share (384 acre-feet) of the predicted in season demand shortfall (63,000 acre-feet) to Twin Falls Canal Company ("TFCC"). *April Forecast Supply Order*, at 5 n.8

On April 29, 2025, A&B filed a request for hearing to contest the *April Forecast Supply Order* and identified the following issues for hearing:

> (1) Whether the order identified proportionate share (384 acre-feet) of the predicted injury (63,000 acre-feet) to TFCC is calculated correctly based upon A&B's actual diversion and use of water rights that are subject to the identified curtailment date (junior to August 28, 1955).
> (2) Whether A&B should be allowed to mitigate for a portion of groundwater right 36-15127A (approximately 508.3 acres) that will be diverted [sic] used during the 2025 irrigation season, as opposed to mitigating for all 1,886.4 acres authorized by the water right.
> (3) Whether the steady-state use of the ESPAM 2.2 in identifying A&B's proportionate share is consistent with the transient use of the model in identifying ground water rights subject to curtailment as outlined in the *Sixth Methodology Order*.
> (4) For other issues and matters that may [sic] discovered in this proceeding.

A&B Req. for Hr'g, at 1–2 (Apr. 2025).

On May 16, 2025, the Director issued the *Final Order Curtailing Ground Water Rights Junior to August 28, 1955* ("*May Curtailment Order*"), including several of A&B's ground water rights subject to curtailment. *May Curtailment Order*, at 4, attach. A, at 1.

On July 10, 2025, the Director issued an *Order Revising April 2025 Forecast Supply and Continuing May 16, 2025 Curtailment Order (Methodology Steps 5 & 6)* ("*July As-Applied Order*"). In that order, the Director revised the predicted in-season demand shortfall, concluding that A&B's proportionate share of the predicted injury to TFCC is 5,039 acre-feet. *July As-Applied Order*, at 11 n.6.

On July 24, 2025, A&B filed another request for hearing, this time contesting the *July As-Applied Order*, and identified substantively similar issues to the April request and added the following issue:

> Whether the Director's failure to implement the May 16, 2025 curtailment order in accordance with Idaho law has injured A&B by subjecting its senior water right 36-2080 to curtailment and/or mitigation requirements during the 2025 irrigation season.

A&B Req. for Hr'g, at 1–2 (July 2025).

On September 3, 2025, the Director issued an *Order Granting A&B Irrigation District's Requests for Hearing, Consolidating Proceedings for Hearing, and Appointing Hearing Officer; Notice of Prehearing Conference* ("*Order Granting Hearing*"). In that order, the Director consolidated both A&B's hearing requests and concluded that "A&B has not previously been afforded an opportunity for a hearing to contest either the *April Forecast Supply Order* or *July As-Applied Order*." *Order Granting Hearing*, at 4. The Director also appointed former Idaho Supreme Court Chief Justice, Gerald Schroeder, as the hearing officer in this matter. *Id.* at 5.

On September 11, 2025, the Director issued the *Order Revising July 2025 Forecast Supply (Methodology Step 7-8)* ("*September Order*"), concluding that A&B satisfied its storage water delivery obligation, so it no longer needed to "establish that they can mitigate for its proportionate share of the predicted [in-season demand shortfall]." *September Order*, at 12 n.7.

On November 18, 2025, the Director received a motion from American Falls-Aberdeen Ground Water District ("AFA") asking him to reconsider his *Order Granting Hearing*. *See American Falls-Aberdeen Ground Water District's Motion to Reconsider Order Granting Hearing and Vacate Hearing or, Alternatively, to Clarify the Scope of Hearing; Request for Expedited Ruling; Brief in Support*, at 1–2 [hereinafter *AFA Motion*]. AFA requests that the Director reconsider the *Order Granting Hearing* and deny both of A&B's hearing requests because A&B is barred from relitigating issues that were already subject to a prior Department hearing and that one issue is moot based on the conclusions in the *September Order*. *Id.* at 2. In the alternative, AFA asks the Director to clarify the scope of the hearing to exclude the Hearing Officer's consideration of issues involving a ground water management area or plan. *Id.* at 3.

On November 18, 2025, Idaho Ground Water Appropriators, Inc. ("IGWA") also filed a motion for summary judgment with Hearing Officer Schroeder that contained substantively similar arguments as the *AFA Motion* regarding *res judicata. Idaho Ground Water Appropriator's, Inc.'s Mot. for Summ. J.*, at 6–7 [hereinafter *IGWA Motion*].

Pursuant to A&B's request to extend response deadlines to both the *AFA Motion* and the *IGWA Motion*, Hearing Officer Schroeder issued an order extending the deadline for A&B to respond to both motions to December 9, 2025, and any reply briefs to December 16, 2025. *Order Granting A&B's Motion to Amend Deadlines; Setting Deadline to Provide Staff Memo*, at 3 (Nov. 25, 2025).

On December 9, 2025, the Department received *A&B Irrigation District's Consolidated Response to AFA Motion / IGWA Motion for Summary Judgment* ("*A&B Response*"). A&B argued that the *AFA Motion* was procedurally misplaced since there is a hearing officer assigned to this matter who has the authority to consider such a motion. *A&B Response*, at 5–6. AFA filed its reply on December 12, 2025.

ANALYSIS

I. The Director will not review the *Order Granting Hearing* because a hearing officer has already been assigned to this matter.

The *Order Granting Hearing* was not issued as a recommended, preliminary, or final order as defined in Rules 720, 730, or 740 of the Department's Rules of Procedure (IDAPA 37.01.01). Therefore, that order is not subject to a petition for reconsideration. However, the Director will treat the *American Falls Motion* as a petition to review an interlocutory order under Rule 711. IDAPA 37.01.01.711.

AFA argues that A&B has already been afforded an opportunity for a hearing on the issues it now raises because it presented two issues at the June 2023 hearing that are substantively identical to five of the six issues for which it now seeks a hearing. *AFA Motion*, at 4. In addition, AFA argues that the remaining issue—Director's implementation of the *May Curtailment Order*—became moot when the Director issued the *September Order* finding that A&B did not need to "mitigate for its proportionate share of the predicted [in-season demand shortfall]." *Id.* at 6 (quoting *September Order*, at 12 n.7).

Pursuant to Rule 102, the Director may appoint a hearing officer to preside over a formal proceeding. IDAPA 37.01.01.102. After receiving A&B's hearing requests, the Director concluded that A&B has not previously had an opportunity to contest either the *April Forecast Supply Order* or the *July As-Applied Order*, and that formal proceedings are necessary because informal proceedings are unlikely to resolve A&B's issues. *Order Granting Hearing*, at 4–5. The Director acknowledges that A&B has raised the proportionate share calculation issue in the past. *See AFA Motion*, at 4–5.

However, the Director appointed Hearing Officer Schroeder to preside over this matter and consider the issues A&B has presented. *Id.* at 5. The arguments raised by AFA are similar to

the issues raised by the *IGWA Motion*. The Director is confident that Hearing Officer Schroeder can address these issues and that it is most appropriate for these issues to be considered within the context of the administrative proceeding before the Hearing Officer. Therefore, the Director will deny the *AFA Motion* and will leave it for Hearing Officer Schroeder to consider the issues raised in the *AFA Motion* and reply.

II. The Hearing Officer, not the Director, has the authority to clarify the scope of the hearing at this stage in the proceeding.

In the alternative, AFA asks the Director to clarify that any testimony or evidence pertaining to a ground water management area or related ground water management plan is outside the scope of the hearing. *AFA Motion*, at 7.

A hearing officer is authorized to exclude evidence that is irrelevant. IDAPA 37.01.01.600. The Director is not the hearing officer on this matter. Accordingly, Hearing Officer Schroeder is the one with authority to decide whether evidence is outside the scope of the hearing. Therefore, the Director will deny this alternative motion.

ORDER

IT IS HEREBY ORDERED that *American Falls-Aberdeen Ground Water District Motion to Reconsider Order Granting Hearing and Vacate Hearing or, Alternatively, to Clarify the Scope of Hearing; Request for Expedited Ruling; Brief in Support* is DENIED.

DATED this 22nd day of December 2025.

Subject: Agency staff memorandum for A&B Irrigation District hearing regarding the April 2025 and July 2025 As-Applied Orders for the Surface Water Coalition delivery call

Background and purpose

A&B Irrigation District (A&B) has contested the April[1] and July 2025[2] As-Applied Orders for the Surface Water Coalition (SWC) delivery call. Issues contested by A&B include:

- IDWR's calculation of A&B's proportionate share of the predicted in-season demand shortfall (IDS) for mitigation purposes,
- IDWR's position that historic and ongoing soft conversions do not offset A&B's proportionate share of the shortfall,
- IDWR's refusal to allow A&B to mitigate for a portion of a water right while placing the remainder of the water right on the curtailment list, and
- IDWR's implementation of the May 16, 2025 curtailment order and the effects of the implementation on the July 2025 IDS volume and July 2025 curtailment priority date.

I was identified by IDWR as a witness available to testify regarding Eastern Snake Plain Aquifer Model (ESPAM) simulations used to calculate the priority dates for curtailment and A&B's

[1] IDWR, 2025a. *Final Order Regarding April 2025 Forecast Supply (Methodology Steps 1-3)*. Docket No. CM-DC-2010-001, April 16, 2025, 6 p., https://idwr.idaho.gov/wp-content/uploads/sites/2/legal/CM-DC-2010-001/CM-DC-2010-001-20250416-Final-Order-Regarding-April-2025-Forecast-Supply-Methodology-Steps-1-3.pdf.

[2] IDWR, 2025b. *Order Revising April 2025 Forecast Supply and Continuing May 16, 2025 Curtailment Order Methodology Steps 5 & 6)*. Docket No. CM-DC-2010-001, July 10, 2025, 12 p., https://idwr.idaho.gov/wp-content/uploads/sites/2/legal/CM-DC-2010-001/CM-DC-2010-001-20250710-Order-Revising-April-2025-Forecast-Supply-Method.-Steps-5-6-July-2025-As-Applied.pdf.

proportionate share of the IDS for the April and July 2025 As-Applied Orders. I did not participate in IDWR's implementation of the May 16, 2025 curtailment order. IDWR identified Brian Ragan as a witness available to testify regarding implementation of the May 16, 2025 curtailment order. I was deposed by A&B on October 22, 2025, and identified as a witness by A&B on November 7, 2025. On November 25, 2025, Hearing Officer Gerald F. Schroeder ordered IDWR witnesses to provide "*an agency staff memorandum explaining what they anticipate testifying about at the hearing*."

This memorandum covers topics I anticipate testifying about at the hearing, based on the issues identified in A&B's hearing requests, topics addressed in my deposition on October 22, 2025, and topics addressed in expert reports filed on November 7, 2025 by LRE Water (Colvin, 2025a)[3] and Spronk Water Engineers (Sullivan and Horesh, 2025a)[4] and rebuttal expert reports filed on December 19, 2025 by LRE Water (Colvin, 2025b)[5], Spronk Water Engineers (Sullivan and Horesh, 2025b)[6], and Linker (Sigstedt, 2025)[7]. This memorandum does not cover what other agency staff may anticipate testifying about at the hearing.

Calculation of curtailment priority dates for in-season As-Applied Orders in the SWC delivery call

In-season As-Applied Orders are issued as described in the current version of the SWC Methodology Order[8] (Methodology). IDWR hydrologists calculate the predicted water supply and water demand using procedures described in the Methodology. If the predicted water supply for each member of the SWC is greater than the predicted water demand, the IDS is zero and IDWR's Director (Director) does not order a curtailment of junior groundwater use. No ESPAM modeling is needed if the IDS is zero.

[8] IDWR, 2023a. *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover*. Docket No. CM-DC-2010-001, July 19, 2023, 45 p., https://idwr.idaho.gov/wp-content/uploads/sites/2/legal/CM-DC-2010-001/CM-DC-2010-001-20230719-Sixth-Final-Order-Regarding-Methodology.pdf.

If the predicted water supply for any member of the SWC is less than the predicted water demand, the difference is the predicted IDS. The Methodology requires the Director to order a curtailment of junior groundwater use to remedy the predicted IDS.

Depending on the volume of the IDS and the timing of the curtailment, curtailing all junior groundwater use might not be necessary to produce the IDS volume and the Director will limit the number of junior groundwater users curtailed based on effective[9] water right priority dates. In other cases, curtailing all junior groundwater use may be insufficient to produce the full IDS volume during this irrigation season. The current version of ESPAM (ESPAM2.2) is used to calculate a priority date for curtailment. The question the Director needs the model to answer is "What subset of junior groundwater users must be curtailed to produce a volume of water equal to the IDS in the near Blackfoot to Minidoka reach by September 30 of this irrigation season?" Because the question asked of the model involves the response to a short-term action within a specific timeframe, a transient model run must be performed.

In the case of the April 2025 As-Applied Order, which predicted an IDS of approximately 63,000 acre-feet (AF) occurring over the irrigation season, curtailing all groundwater use junior to October 11, 1900, would produce more than the IDS volume and was not necessary. The Director limited the curtailment to water rights junior to August 28, 1955, based on an ESPAM2.2 calculation of how much water is predicted to accrue to the near Blackfoot to Minidoka reach between May 1 and September 30, 2025.

In the case of the July 2025 As-Applied Order, which predicted an IDS of approximately 75,300 AF occurring between July 1 and the end of the irrigation season, increasing the curtailment to include all groundwater use junior to October 11, 1900, was insufficient to produce the full IDS volume by September 30, 2025. The Director increased the curtailment to include use junior to October 11, 1900, to produce as much as possible of the July IDS volume.

Calculation of proportionate shares of the IDS for mitigation by direct delivery of storage water

As of April 2025, there were five approved mitigation plans responding to the SWC delivery call, (1) No. CM-MP-2015-003 for the benefit of A&B; (2) No. CM-MP-2010-001 for the benefit of Southwest Irrigation District and Goose Creek Irrigation District (collectively, "SWID"); (3) No. CM-MP-2024-003 for the benefit of the Ground Water Districts; (4) No. CM-MP-2019-001 for

[9] Water rights with enlargement conditions have an effective priority date of April 12, 1994 relative to non-enlargement water rights.

the benefit of the Coalition of Cities; and (5) No. CM-MP-2007-001 for the benefit of the Water Mitigation Coalition.[10]

Most plans include some aquifer enhancement projects (groundwater to surface water conversions, voluntary idling of irrigated acres, managed recharge) but recognize that these projects are insufficient to offset the full impact of groundwater use on aquifer discharge to the near Blackfoot to Minidoka reach and are insufficient to mitigate injury to the SWC's water supply in some years. Therefore, the mitigation plans also include direct delivery of storage water or monetary compensation to mitigate the injury that occurs in some years even though the aquifer enhancement projects are ongoing.

Because the effects of historic and ongoing aquifer enhancement projects are included in the data used in the Methodology to calculate the SWC members' Forecast Supply (FS), the IDS is a calculation of the predicted injury to the SWC's water supply that remains to be mitigated by direct delivery of storage water or other means.[11] The benefit of aquifer enhancement projects is that they reduce the frequency of shortfalls and the volume of the IDS. If the aquifer enhancement projects had not been implemented, the IDS (the remaining mitigation required) in the April and July 2025 As-Applied Orders would have been larger.

Because the groundwater users are mitigating under separate plans, IDWR needs to apportion the IDS among the mitigation plans to identify the proportionate share of the IDS for plans that include direct delivery of storage water to the SWC in an amount based on IDWR's calculation of injury. As of the 2025 irrigation season, A&B's mitigation plan is the only plan that includes actions that are dependent on IDWR's calculation of their proportionate share of the injury to the SWC. Other mitigation plans include negotiated terms that make the volume and timing of storage water delivery or monetary compensation independent of IDWR's calculation of their proportionate share of the IDS.

---

[10] IDWR, 2025a. *Final Order Regarding April 2025 Forecast Supply (Methodology Steps 1-3)*. Docket No. CM-DC-2010-001, April 16, 2025, 6 p., https://idwr.idaho.gov/wp-content/uploads/sites/2/legal/CM-DC-2010-001/CM-DC-2010-001-20250416-Final-Order-Regarding-April-2025-Forecast-Supply-Methodology-Steps-1-3.pdf.

[11] IDWR, 2024a, *Final Order Denying IGWA's Request for Mitigation Credit for Aquifer Enhancement Activities (2024)*. CM-DC-2010-001, CM-MP-2009-006, May 15, 2024, p. 4-6, https://idwr.idaho.gov/wp-content/uploads/sites/2/legal/CM-DC-2010-001/CM-DC-2010-001-20240515-Final-Order-Denying-IGWAs-Request-for-Mitigation-Credit-for-Aquifer-Enhancement-Activities-2024.pdf.

The IDS is an injury resulting from reduced aquifer discharge to the near Blackfoot to Minidoka reach caused by the cumulative impacts of decades of groundwater use. The long-term response at the near Blackfoot to Minidoka reach to groundwater withdrawals at locations across the ESPA is shown in Figure 1 as a fraction of the annual average volume of groundwater withdrawn. While users closer to the reach generally have a higher percentage of impact to the reach, users more distant from the reach also have significant impacts. The modeled cumulative long-term impact on aquifer discharge to the near Blackfoot to Minidoka reach resulting from groundwater withdrawals at the locations of A&B's points of diversion ranges from 36 to 53% of the volume withdrawn (Figure 1), averaging 48%.

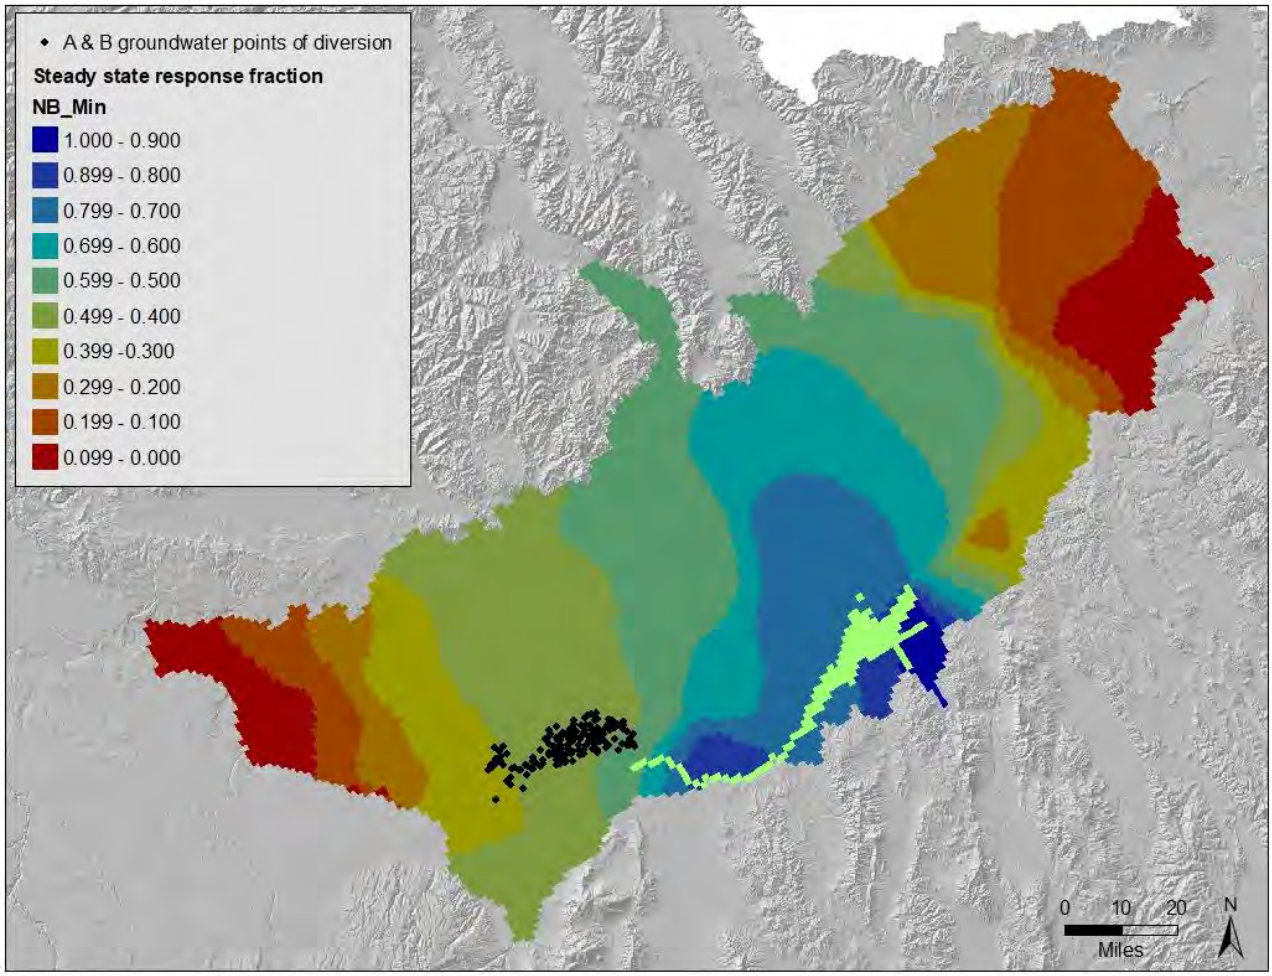

Figure 1. Long-term response at the near Blackfoot to Minidoka reach

Figure 2 illustrates the timing of the cumulative impacts of groundwater withdrawals within A&B as a percentage of the long-term average annual impact. Based on water right priority dates, A&B's water rights were developed between approximately 40 and 75 years ago. ESPAM2.2 simulations indicate after 40 years of pumping, the cumulative impact has reached approximately 93% of the long-term impact rate and after 75 years of pumping, the cumulative impact has reached approximately 98% of the long-term impact rate. The cumulative impacts of decades of A&B's groundwater use contributed to reduced aquifer discharge to the near Blackfoot to Minidoka reach during 2025. This reduced aquifer discharge results in a reduction of natural flow available for delivery to senior surface water rights.

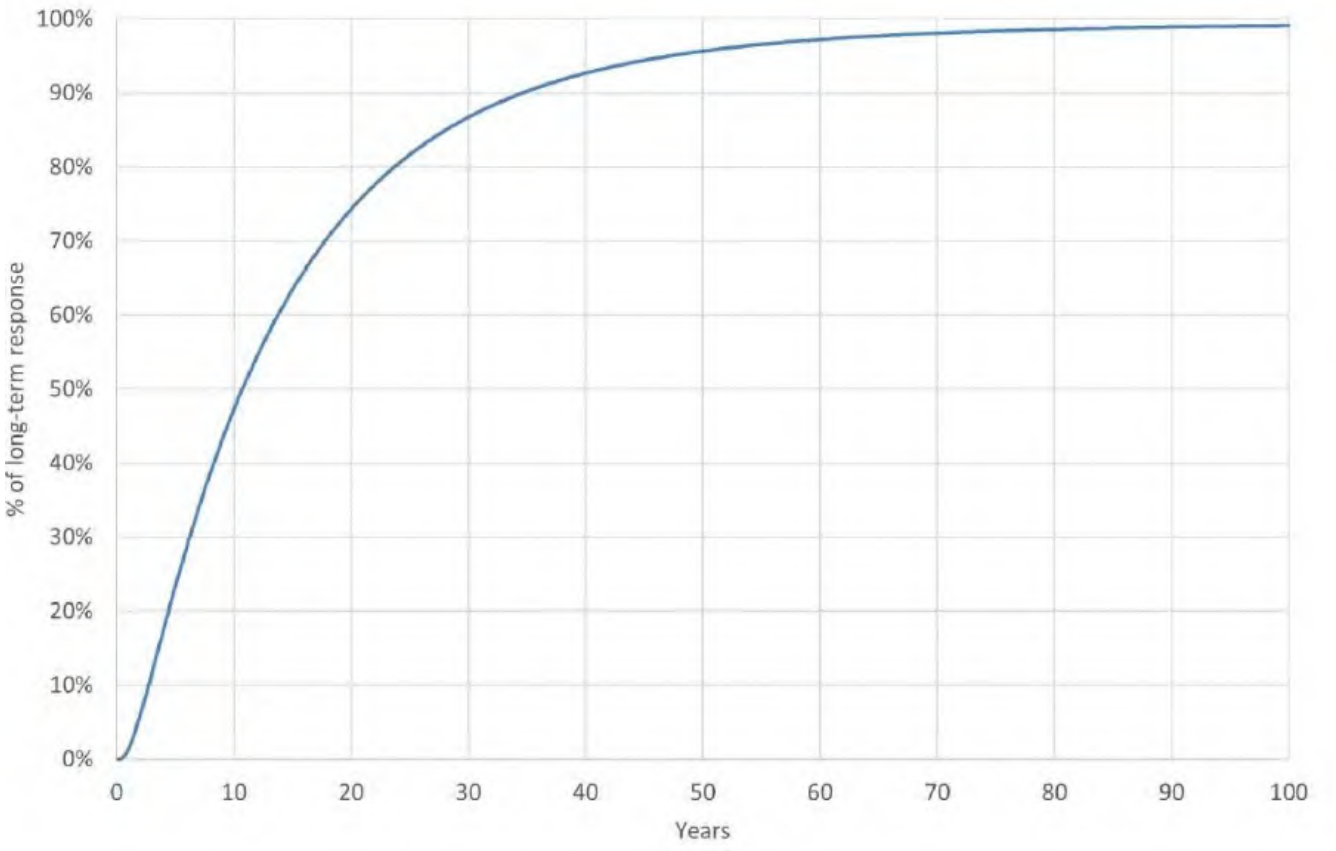

Figure 2. Years of A&B pumping required to reach long-term response rate at the near Blackfoot to Minidoka reach

Because the IDS is the result of the long-term cumulative impact of decades of pumping, ESPAM2.2 simulations used to calculate proportionate shares of the IDS for mitigation purposes are designed to answer the question, "What is the proportionate long-term impact of the junior groundwater use subject to curtailment and covered by this mitigation plan on aquifer discharge to the near Blackfoot to Minidoka reach?" Because the answer sought is based on long-term average annual impacts, either steady-state or transient model simulations could be employed to answer this question. In cases where either type of simulation is capable of answering the question, a steady-state model simulation is more efficient because model run times are faster and model file sizes are smaller.

For the April and July 2025 As-Applied Orders, A&B's proportionate share of the IDS was calculated by:

1. simulating the long-term average annual impact of groundwater use junior to the curtailment priority date within the ESPA area of common groundwater supply,
2. simulating the long-term average annual impact of A&B's water rights junior to the curtailment priority date,
3. calculating A&B's impact as a percentage of the total impact, and
4. multiplying A&B's percentage by the IDS volume.

Response to LRE Water expert report

The expert report prepared by LRE Water on behalf of A&B includes nine opinions from David Colvin, P.G., regarding the A&B proportionate share analysis.

Colvin Opinion 1 – "A&B's mitigation plan specifies that storage water is only required to cover the in-season demand shortfall (IDS) beyond the benefits of other mitigation measures."

The *"other mitigation measure"* specified in A&B's 2023 stipulated mitigation plan is soft conversion of irrigation water supply from groundwater to surface water.[12] A&B reported soft conversion of 1,378 acres in their 2015 mitigation plan. A&B has increased its capacity to deliver surface water to lands historically irrigated with groundwater and currently reports 3,573.6 acres of soft conversions. Soft conversions benefit the Eastern Snake Plain Aquifer water budget by reducing groundwater withdrawals to meet the consumptive demand of irrigated crops.

[12] A&B Irrigation District, 2023, *Stipulation Regarding A&B irrigation District's Amended Rule 43 Mitigation Plan*. CM-MP-2015-003, December 27, 2023, p. 3, https://idwr.idaho.gov/wp-content/uploads/sites/2/legal/CM-MP-2015-003/CM-MP-2015-003-20231227-Stipulation-Regarding-AB-Irrigation-Districts-Amended-Rule-43-Mitigation-Plan.pdf.

To the extent that historic and ongoing soft conversions benefit the ESPA water budget and the current year's water supply for SWC members, these benefits are included in the Forecast Supply (FS)[13] in the April 2025 and July 2025 AS-Applied Orders. Because the in-season demand shortfall (IDS) is calculated as the difference between the reasonable in-season demand (RISD) and the FS, the IDS is not mitigated by the soft conversions. The predicted IDS is a shortfall that is predicted to occur even after the effects of the soft conversions. The benefits of the soft conversions to near Blackfoot to Minidoka reach gains result in a larger FS and a smaller predicted IDS. The predicted IDS would be larger without the benefits of the soft conversions.

The Director has previously responded to this question regarding the benefits of aquifer enhancement mitigation projects and the predicted IDS for the Surface Water Coalition (SWC) delivery call. In 2016, the Director concluded,

> "*The predicted DS is the shortfall predicted after the benefits of ongoing aquifer enhancement activities performed by A&B and other entities have already been realized. In other words, the predicted DS already accounts for the benefits of ongoing aquifer enhancement activities performed by A&B and other entities. At this time, the Director will not reduce the predicted DS, or any entity's proportionate share thereof, because of the effects of aquifer enhancement activities. However, the Director will construe A&B's request to account for predicted responses to the Near Blackfoot to Minidoka reaches of the Snake River resulting from its aquifer enhancement activities and to reduce its proportionate share accordingly as a motion pursuant to the Department's Rule of Procedure 260 requesting the agency to take action in a contested case."*[14]

In 2024, the Director provided the following analysis describing how the regression models used to predict the IDS already account for the benefits of aquifer enhancement activities included in mitigation plans.

> *"The current methodology uses updated predictive models to forecast natural flow supply for the SWC. Because the Eastern Snake Plain Aquifer provides reach gains to the Snake River that sustain natural flow during late summer, the prediction of*

[13]The FS in the April 2025 order includes the predicted natural flow supply and the predicted storage allocation for each SWC member. The FS includes natural flow diverted through June 30, the predicted natural flow supply for the remainder of the irrigation season, and the preliminary storage allocation for each SWC member.

[14] IDWR, 2016. *Order Determining Deficiency in A&B Irrigation District's Notice of Mitigation*, CM-DC-2010-001, CM-MP-2015-003, May 11, 2016, p. 3, https://idwr.idaho.gov/wp-content/uploads/sites/2/legal/CM-DC-2010-001/CM-DC-2010-001-20160511-Order-Determining-Deficiency-in-AB-Irrigation-Districts-Notice-of-Mitigation.pdf.

natural flow supply for some of the SWC members was improved by incorporating parameters representing the status of the aquifer into the predictive models. See Third Amended Methodology Order, at 16–18. The parameters selected included flows at Box Canyon, flows at Spring Creek, and depth to water at Well 05S2E27ABA1 [05S 31E 27ABA1]. *See id.; Sixth Amended Methodology Order, at 19–21.*

The April Forecast Supply prediction for five of the SWC members, including TFCC, incorporates November-March flows at Box Canyon into a multi-linear regression to predict natural flow diversions during the upcoming irrigation season. Third Amended Methodology Order, at 16. The current Sixth Amended Methodology Order continues this practice. April 2024 As-Applied Order, at 3. The multi-linear regressions used to predict natural flow supply are updated yearly to include recent data.

The July Forecast Supply prediction for TFCC incorporates January–May flows at Spring Creek into a multi-linear regression to predict natural flow diversions during the remainder of the irrigation season. Third Amended Methodology Order, at 18. The July Forecast Supply prediction for three other members of the SWC incorporates depth to water at Well 05S2E27ABA1 [05S 31E 27ABA1] *into a multi-linear regression to predict natural flow diversions during the remainder of the irrigation season. Id. The current Sixth Amended Methodology Order continues this practice. Sixth Amended Methodology Order, at 21. The multi-linear regressions used to predict natural flow supply are updated yearly to include recent data.*

Because the parameters representing the aquifer's ability to sustain natural flow during late summer are included in the improved predictions of natural flow supply for several members of the SWC, the predicted IDS already accounts for the impacts of mitigation activities. Mitigation activities benefit the ground water users by reducing the predicted shortfall volume calculated by the current methodology. In the 2024 April Forecast Supply calculation, every 1,000 acre-feet of additional flow at Box Canyon increased the predicted natural flow supply for the SWC members by a total of 21,506 acre-feet, including an increase of 7,027 acre-feet per 1,000 acre-feet in the predicted natural flow supply for TFCC. See April 2024 As-Applied Order, Attach. A. The benefits of mitigation activities are accounted for in the predicted natural flow supply, which was subtracted from the baseline demand to calculate the IDS. Awarding the additional mitigation credit request by IGWA would double-count the benefits of mitigation.

The benefits of ongoing mitigation will also be accounted for in the July Forecast Supply prediction. Any benefits of mitigation to reach gains occurring between April and June will be accounted for in the natural flow diverted. Benefits of mitigation yet to accrue to reach gains will be accounted for in the predicted natural flow diversions for the remainder of the irrigation season. In the 2023 July Forecast Supply, every 1,000 acre-feet of additional flow at Spring Creek increased the predicted natural flow diversions for TFCC by 3,214 acre-feet. See Order Revising April 2023 Forecast Supply and Amending Curtailment Order (Methodology Steps 5 & 6), No. CM-DC-2010-001 (July 19, 2023) (Supp. 2023 July Background Information). Every foot of increase in water level at Well 05S2E27ABA1 [05S 31E 27ABA1] *increased the predicted natural flow diversions for three other members of the SWC by a total of 45,065 acrefeet. Id. Regression coefficients for the July 2024 Forecast Supply will be updated to account for recent data but are expected to be similar."*[15]

In 2024, the Director found,

"The regression models used to predict in-season demand shortfall already account for the benefits of the enhancement activities performed by IGWA…. The predicted IDS is the shortfall predicted after the benefits of ongoing aquifer enhancement activities performed by the ground water Districts have already been realized. In other words, the predicted IDS already accounts for the benefits of ongoing aquifer enhancement activities performed by the Districts. Essentially, the predicted IDS would be higher if the aquifer enhancement activities had not occurred…. Therefore, the Director will not reduce the predicted demand shortfall, or any entity's proportionate share thereof, because the models used to predict in-season demand shortfall already account for the benefits of the enhancement activities performed by IGWA."[15]

[15]IDWR, 2024a, *Final Order Denying IGWA's Request for Mitigation Credit for Aquifer Enhancement Activities (2024)*. CM-DC-2010-001, CM-MP-2009-006, May 15, 2024, p. 4-6, https://idwr.idaho.gov/wp-content/uploads/sites/2/legal/CM-DC-2010-001/CM-DC-2010-001-20240515-Final-Order-Denying-IGWAs-Request-for-Mitigation-Credit-for-Aquifer-Enhancement-Activities-2024.pdf.

Colvin Opinion 2 – "According to the terms and conditions of the A&B mitigation plan, they should only have to mitigate for groundwater use on the acres currently being diverted (e.g., approximately 508.3 acres of water right 36-15127A)."

While the LRE Water expert report asserts A&B "*intends to continue delivering surface water to approximately 3,573.6 acres formerly irrigation with groundwater*"[16], A&B describes these acres as "*soft conversions*"[17] which means that A&B retains the physical ability and the legal right to deliver groundwater to these acres (in the absence of a curtailment order). A&B has not provided evidence showing it has relinquished the physical ability to deliver groundwater to these acres, nor has it transferred the nature of use of any portion of its groundwater rights from irrigation to mitigation. Because these acres are soft conversions, the Director has required any of A&B's groundwater rights authorizing irrigation of the converted acres to be either fully mitigated or be included on the curtailment list so the Watermaster has the authority to curtail delivery of groundwater to the converted acres.

The LRE Water expert report also comments, "*IDWR has not demonstrated why it cannot calculate a partial mitigation obligation for only partial use of a groundwater right*".[18] In 2024 and 2025, the Director allowed A&B to provide less than the full volume of A&B's proportionate share and select which water rights to mitigate for and which to leave on the curtailment list. The Director decided not to allow A&B to mitigate for a partial water right while leaving a partial water right on the curtailment list. This was an administrative decision that is independent from the ability to "*calculate a partial mitigation obligation for only partial use of a groundwater right.*"

Colvin Opinion 3 – "An ESPA Groundwater Management Plan (GMP) could provide coordination of mitigation actions and curtailment, balancing in-season demands with the decades of historical junior groundwater pumping. A GMP could be structured to allow for transient modeling of the long-term mitigation obligations/actions and the in-season mitigation action benefits to reach gains."

Development of a GMP is outside the scope of this proceeding.

---

[16] Colvin, D., 2025a, *A&B Proportionate Share Expert Report, Docket No. CM-DC-2010-001*, LRE Water, prepared for A&B Irrigation District, November 2025, p. 5.

[17] A&B Irrigation District, 2023, *Stipulation Regarding A&B irrigation District's Amended Rule 43 Mitigation Plan*. CM-MP-2015-003, December 27, 2023, p. 2, https://idwr.idaho.gov/wp-content/uploads/sites/2/legal/CM-MP-2015-003/CM-MP-2015-003-20231227-Stipulation-Regarding-AB-Irrigation-Districts-Amended-Rule-43-Mitigation-Plan.pdf.

[18] Colvin, D., 2025a, *A&B Proportionate Share Expert Report, Docket No. CM-DC-2010-001*, LRE Water, prepared for A&B Irrigation District, November 2025, p. 5.

Colvin Opinion 4 – "The IDWR methodology contains logical inconsistencies rooted in problems with attempts to constrain injury determination and defining mitigation requirements within a single irrigation season. ESPA methodology calculation of IDS is caused by decades of junior groundwater pumping, and the mitigation responsibility should consider priority."

The Methodology is confined to determining injury within a single irrigation season because of high variability in the SWC members' water supply. In some years, there is an ample supply of water from snowmelt runoff and the SWC members have no water supply shortfalls. In other years, ESPA discharge to the near Blackfoot to Minidoka reach of the Snake River is a larger fraction of the SWC members' water supply and shortfalls occur because of reduced ESPA discharge. Within years with shortfalls to the SWC members' water supply, there are significant variations in the shortfall volume. The Methodology was developed to adapt the curtailment of groundwater use or alternative mitigation with replacement water to the variations in water supply and predicted shortfalls to the SWC members.

Because the Methodology responds to this variability in water supply, the volume of groundwater use that would need to be curtailed to alleviate the IDS cannot reasonably be predicted in advance of the April 1 water supply forecast and curtailment cannot be reasonably implemented before May. Thus, the Methodology specifies the priority date for curtailment of groundwater use will be determined using a transient ESPAM simulation to calculate the curtailment priority date predicted to produce a volume of water equal to the IDS in the near Blackfoot to Minidoka reach between May 1 and September 30 of the current year.

Neither transient nor steady-state ESPAM simulations inherently consider water right priority dates. Consideration of water right priority dates is implemented by including or excluding the impacts of water right use in an input file to a ESPAM simulation. Input files compiled based on water right priority dates can be input into either a transient or a steady-state simulation. In the 2025 As-Applied Orders, the relative priority of junior groundwater rights was considered when compiling the input file for the ESPAM simulation used to calculate the curtailment priority date for each As-Applied Order. All groundwater rights junior to the calculated curtailment priority date were included when compiling input files for ESPAM simulations used to calculate proportionate shares for mitigation of the IDS with replacement water.

Colvin Opinion 5 – "The Methodology order does not specify how to calculate the proportionate amount of mitigation required by each junior groundwater right covered by a mitigation plan. IDWR should calculate proportionate share consistently."

While the Methodology order does not specify how to calculate a groundwater user's proportionate share of an IDS, the method used to calculate A&B's proportionate share for the April 2025 and

July 2025 orders is consistent with guidance provided by the post-hearing order and the Methodology order. In the post-hearing order, the Director contemplated arguments requesting a futile call determination and implementation of a trim line based on the timing of response to a single-season of curtailment.

> *"If the Director were to determine that curtailment of some ground water rights would not immediately accrue water to the senior priority surface water rights, even though the cumulative impact is significant, and that the delivery call is futile because there is no immediate benefit for the surface water rights, the holders of junior priority ground water rights could recurringly avoid curtailment. Avoiding obligation because of delayed cumulative impact is contrary to the intent of the CM* [Conjunctive Management] *Rules. The Director concludes the delivery call is not futile."*[19]

> *"The spatial distribution of long-term impacts of Ground Water Users on aquifer discharge to the near Blackfoot to Minidoka reach is documented in the record. In Ms. Sigstedt's expert report, Figure 3-6 shows the steady state response function, which is the long-term impact of pumping on the near Blackfoot to Minidoka reach as a percentage of the volume of ground water used. Ex. 837 at 38. Figure 3-6 shows that Ground Water Users on both sides of the Great Rift (the boundary applied to the Rangen delivery call trim line) have significant long-term impacts on aquifer discharge to the nB-Min reach. As a result, the Director concludes that a trimline is not appropriate."*[20]

These statements provide guidance that mitigation obligations should be calculated based on the long-term cumulative impacts of groundwater use. If mitigation obligations for replacement water were determined based on the short-term response to curtailment between May 1 and September 30 of this irrigation season, it would effectively implement a trimline or futile call because groundwater users with significant long-term impacts to the near Blackfoot to Minidoka reach would have minimal mitigation obligations. Most of the burden of mitigation for the long-term impacts of groundwater users more distant from the reach would be shifted to groundwater users located closer to the reach, effectively implementing a trimline. In years with IDS volumes larger than the volume that can be delivered through the reach by in-season curtailment, the resulting total mitigation volume would be less than the shortfall volume and would fail to fully mitigate

[19] IDWR, 2023b. *Post-Hearing Order Regarding Fifth Amended Methodology Order*, July 19, 2023, Docket No. CM-DC-2010-001, p. 26, https://idwr.idaho.gov/wp-content/uploads/sites/2/legal/CM-DC-2010-001/CM-DC-2010-001-20230719-Post-Hearing-Order-Regarding-Fifth-Amended-Methodology-Order.pdf.

[20] IDWR, 2023b. p. 27.

the injury to the senior surface water users, effectively implementing a futile call for a portion of the seniors' shortfall.

The Methodology order clarifies that a steady-state ESPAM simulation is an appropriate analysis for evaluating the long-term cumulative impacts of groundwater use.

> *"Steady-state simulations are appropriate for evaluating the average annual impact of aquifer stresses that have been, or will be, applied for decades (i.e., ground water pumping year after year…"*[21]

The effect of calculating mitigation obligations for replacement water based on the short-term response to in-season curtailments is illustrated in Table 1, which shows the modeled long-term average annual impact of A&B's junior groundwater use on the near Blackfoot to Minidoka reach, A&B's proportionate share calculated for the April and July 2025 orders, and an alternate proportionate share calculated based on the short-term impact of curtailing A&B's junior groundwater use. If the short-term impact of curtailing A&B's junior groundwater use was used to calculate the proportionate share, A&B would avoid most of their mitigation obligation to the senior water users because of delayed cumulative impact.

Table 1. Comparison of proportionate share calculation method results

Order	Priority date	Cumulative impact on nr Blackfoot to Minidoka reach	Proportionate share of IDS	Alternate share calculation method
April 2025	junior to 8/28/1955	10,600 AF/yr	384 AF (0.6%)	1.2 AF (0.002%)
July 2025	junior to 10/11/1900	82,200 AF/yr	5,039 AF (6.7%)	1.8 AF (0.002 %)

If A&B's proportionate share were calculated using this alternate method, 383 AF of their mitigation obligation calculated for the April 2025 order would be shifted to other groundwater users located closer to the near Blackfoot to Minidoka reach and 5,037 AF of their July 2025 mitigation obligation would be shifted to a combination of other groundwater users and

[21] IDWR, 2023a. *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover*. Docket No. CM-DC-2010-001, July 19, 2023, p. 33, https://idwr.idaho.gov/wp-content/uploads/sites/2/legal/CM-DC-2010-001/CM-DC-2010-001-20230719-Sixth-Final-Order-Regarding-Methodology.pdf.

unmitigated injury to the senior SWC water users.[22] This alternate method for calculating proportionate shares of the predicted shortfall was rejected because Director Spackman concluded the results of using this method would be contrary to the intent of the CM Rules.

The discussion of Methodology steps in the LRE Water expert report states, "*Use of the steady-state model does not account for priority between junior ground water rights, and how that should be apportioned*" and, "*the transient version of the model should be consistently used for implementing the steps and apportioning mitigation obligations that occur during an irrigation season.*"[23] As discussed previous in response to Colvin Opinion 4, neither transient nor steady-state ESPAM simulations inherently consider water right priority dates. Using the transient analysis (the alternate share calculation method in Table 1) does not account for the relative priority between the junior groundwater rights subject to curtailment. This method apportions the obligation solely based on which water users have the largest short-term impact to the near Blackfoot to Minidoka reach. Using this method would result in more senior groundwater users located closer to the near Blackfoot to Minidoka reach having to mitigate for a larger fraction of their long-term impact on the reach than a more junior groundwater user located more distant from the reach.

The LRE Water expert report also proposes a modification to the alternate approach for calculating proportionate shares when the IDS exceeds the volume that can be produced in-season by a single season of curtailment.[24] The proposed method would use the same transient simulation time discretization used to calculate the priority date for curtailment to calculate proportionate shares up to the volume that would be produced in-season. The remainder of the IDS would be apportioned among water users junior to a later priority date calculated using a steady-state or long-term transient simulation to produce the remainder of the IDS. While this approach would avoid shifting the impacts of groundwater use to unmitigated injury to the senior SWC water users, there are multiple pitfalls to this approach. This approach continues to shift a significant portion of the mitigation obligation for the long-term impacts of groundwater use from users distant from the reach to users closer to the reach. This approach would also result in many water users with later priority dates being required to mitigate for a volume exceeding their long-term average annual impact. In the example provided in the LRE water report, groundwater users with rights junior to November 27, 1984 would be assigned a portion of the IDS equal to their long-term impact plus the volume of their impacts that accrue to the reach during the first irrigation season.

---

[22] If this alternate method had been used in the July 2025 order to calculate proportionate shares of the IDS for all groundwater users, the total mitigation obligation of all junior groundwater users would have been 17,224 AF less than the predicted injury to the senior SWC water users.

[23] Colvin, D., 2025a. *A&B Proportionate Share Expert Report, Docket No. CM-DC-2010-001*, LRE Water, prepared for A&B Irrigation District, November 2025, p. 7.

[24] Colvin, D., 2025a. p. 9-10.

For water users located very close to the reach, the calculated mitigation volume would be substantially larger than their long-term impact. This approach would still require groundwater users with earlier priority dates located close to the reach to mitigate a substantial fraction of their long-term impacts to the reach, while groundwater users with earlier priority dates located distant from the reach would mitigate for very little of their long-term impacts to the reach.

Colvin Opinion 6 – "A&B's mitigation plan is unique and should be treated as such in how IDWR calculates proportionate shares. According to the terms of the plan, consideration should be given to all A&B's mitigation activities."

Other stipulated mitigation plans are similar to A&B's mitigation plan in that the groundwater users have agreed to undertake aquifer enhancement projects (such as soft conversions, managed recharge, idling irrigated acres) regardless of the IDS or carryover shortfall calculated in any given year. Other stipulated mitigation plans also include direct delivery of storage water or monetary compensation to the SWC as a component of their mitigation plans to mitigate for injury beyond what is mitigated by their aquifer enhancement projects. One significant difference between A&B's mitigation plan and the other mitigation plans is that the volume of storage water or monetary compensation delivered to the SWC by other groundwater users is stipulated to be independent of IDWR's calculation of a proportionate share of the IDS or carryover shortfall in the other mitigation plans, while A&B's mitigation plan stipulates,

> *"A&B also holds rights to storage water in American Falls Reservoir (46,826 at) and Palisades Reservoir (90,800 at) and has the ability to participate in Water District 01 's Rental Pool. Available storage can be delivered to injured Coalition members to mitigate for any shortfalls caused by the District's junior priority ground water that are subject to curtailment beyond what may not be covered by the "soft conversions" described above. This action would only be necessary if the benefits of the above conversions do not satisfy the injury caused by A&B's ground water rights that are found to be subject to curtailment in any given year."*[25]

Unlike the other stipulated mitigation plans, A&B's mitigation plan specifies that delivery of storage will be dependent on the Director's determination of injury in any given year.

[25] A&B Irrigation District, 2023, *Stipulation Regarding A&B irrigation District's Amended Rule 43 Mitigation Plan*. CM-MP-2015-003, December 27, 2023, p. 2-3, https://idwr.idaho.gov/wp-content/uploads/sites/2/legal/CM-MP-2015-003/CM-MP-2015-003-20231227-Stipulation-Regarding-AB-Irrigation-Districts-Amended-Rule-43-Mitigation-Plan.pdf.

"*Unlike the SWID Mitigation Plan, the A&B Mitigation Plan does not provide safe harbor for specific activities. Instead, A&B's plan requires that A&B "mitigate for any shortfalls caused by" A&B's junior ground water diversions. A&B Mitigation Plan, at 3. Under its plan, A&B may undertake a series of different mitigation activities, and if those activities do not offset their depletive effect on the SWC, A&B has committed to provide storage water to make up the difference. Id. This has not changed in the Stipulated Mitigation Plan."*[26]

"In the SWC delivery call, the mitigation obligation owed by ground water users can vary from year to year and within an irrigation season depending on current water supply and crop need requirements. Only by applying current water supply and crop need requirements and the methodology order process can the Department determine A&B's proportionate share of any obligation, and whether A&B must provide storage water to offset the depletive effects of its pumping on the SWC."[26]

As previously noted in response to Colvin Opinion 1, to the extent that historic and ongoing soft conversions benefit the ESPA water budget and the current year's aquifer discharge to the near Blackfoot to Minidoka reach, these benefits are included in the Forecast Supply (FS)[27] in the April 2025 and July 2025 orders. Because the in-season demand shortfall (IDS) is calculated as the difference between the reasonable in-season demand (RISD) and the FS, the IDS is not mitigated by the soft conversions. The predicted IDS is a shortfall that is predicted to occur even after the effects of the soft conversions. The benefits of the soft conversions to near Blackfoot to Minidoka reach gains result in a larger FS and a smaller predicted IDS. The predicted IDS would be larger without the benefits of the soft conversions. Therefore, A&B's proportionate share of the IDS is a proportion of the calculated injury to the SWC that has not been mitigated by soft conversions or other aquifer enhancement projects. The IDS and A&B's proportionate share are already reduced as a result of the benefits of A&B's soft conversions and other aquifer enhancement activities.

---

[26] IDWR, 2025c. *Final Order Approving Amended Mitigation Plan*, Docket No. CM-MP-2015-003, p. 4-5, https://idwr.idaho.gov/wp-content/uploads/sites/2/legal/CM-MP-2015-003/CM-MP-2015-003-20250110-Final-Order-Approving-Amended-Mitigation-Plan.pdf.

[27] The FS in the April 2025 order includes the predicted natural flow supply and the predicted storage allocation for each SWC member. The FS includes natural flow diverted through June 30, the predicted natural flow supply for the remainder of the irrigation season, and the preliminary storage allocation for each SWC member.

Colvin Opinion 7 - There was a time when the ESPA was in balance and groundwater pumping was not reducing the supplies of senior surface water rights and causing in-season demand shortfalls. Because IDWR continued to approve new groundwater rights without consideration of long-term impacts on the connected surface water sources, the system became over-appropriated and junior groundwater pumping began reducing the senior surface water supplies. IDWR should explain how the groundwater rights with a priority date senior to the time of over-appropriation are equally responsible for mitigating the IDS as groundwater rights junior to that time.

I disagree with the statement, "*There was a time when the ESPA was in balance and groundwater pumping was not reducing the supplies of senior surface water rights and causing in-season demand shortfalls."* Based on water right priority dates, groundwater rights were developed beginning prior to 1900. Moratoriums on the approval of new groundwater rights for consumptive uses have been in place for the ESPA since 1992[28]. There is no evidence that the ESPA water budget was in balance during this development period. The cumulative ESPA storage change calculated by Kjelstrom (year)[29] for 1912-1980 and McVay (1980-2025)[30] indicates continual imbalances in aquifer recharge and discharge throughout the period of groundwater development (Figure 3).

Prior to about 1950, ESPA recharge generally exceeded ESPA discharge, largely because of recharge incidental to very inefficient surface water irrigation practices. Since 1950, ESPA recharge has, on average, been less than ESPA discharge, largely because increases in the efficiency of surface water conveyance and irrigation practices resulted in a decrease in ESPA recharge while the development of groundwater pumping resulted in an increase in ESPA discharge. Improvements to irrigation technology and crop changes have also resulted in an increase in crop yields and evapotranspiration for both groundwater and surface water irrigated lands, further contributing to the imbalance in ESPA recharge and discharge. In the future, continued improvement in surface water conveyance and irrigation efficiency may continue to reduce ESPA recharge.

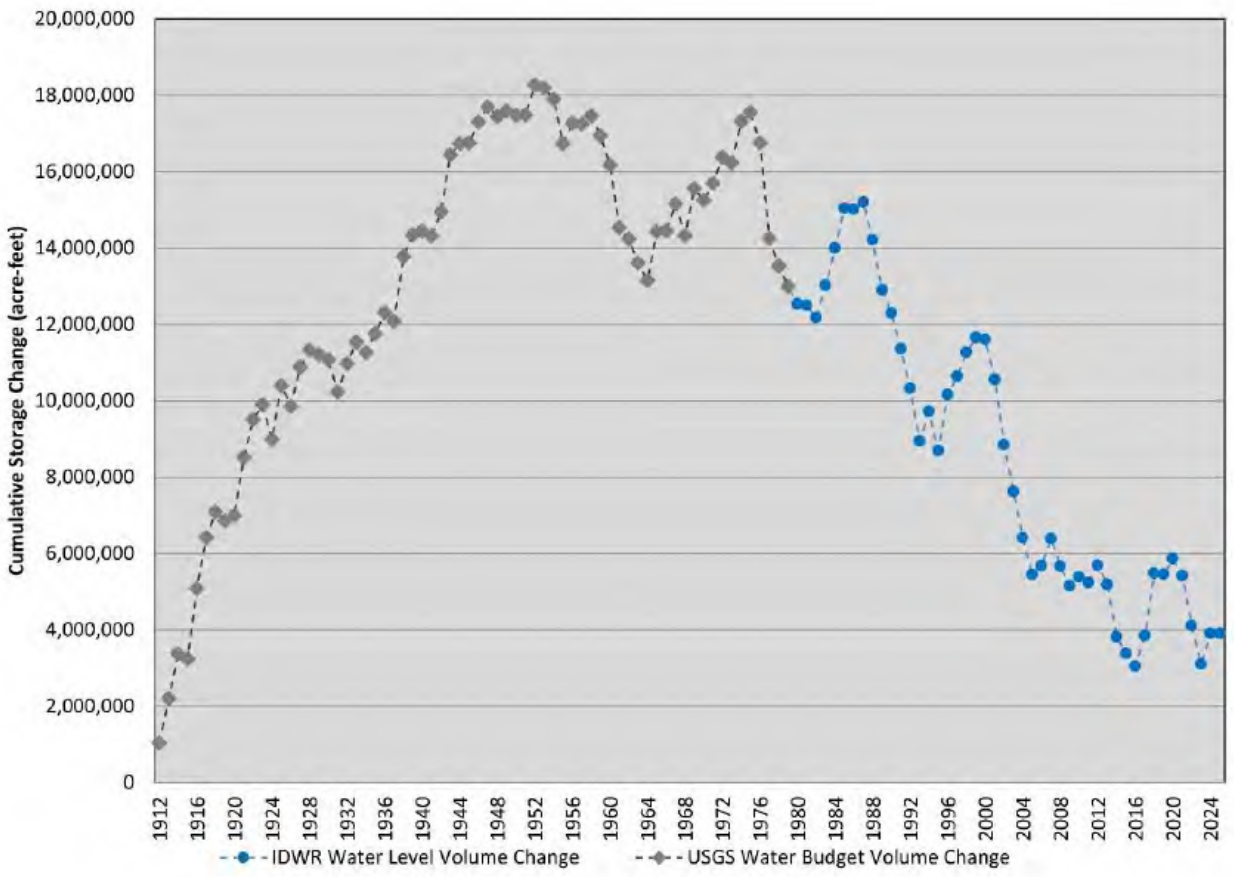

Figure 3. Cumulative change in ESPA storage volume since spring 1912

With respect to the SWC delivery call, the water supply is variable, and shortfalls do not occur every year. The Director has the authority to respond by curtailing junior water use or requiring compliance with an approved mitigation plan during times when shortfalls to the SWC members' water supply are predicted by applying the Methodology.

With respect to the SWC delivery call, all groundwater users with priority dates junior to October 11, 1900 are junior groundwater users and are potentially subject to the delivery call in years when an IDS or carryover shortfall is calculated. IDWR's Director accounts for priority date differences between the groundwater users when determining the subset of junior water users that is subject to curtailment in response to a specific IDS or carryover shortfall calculation. Once the subset of junior water users that is subject to curtailment is identified, those junior users are afforded the opportunity to continue out-of-priority diversions by participating in an approved mitigation plan. Proportionate mitigation obligations for providing replacement water pursuant to specific mitigation plans are calculated based on the long-term impacts of all junior users subject to curtailment.

Colvin Opinion 8 - When the IDS was estimated in July, IDWR recognized actual supply and demand conditions and that the May curtailment was not implemented. Partially because no May curtailment was implemented, the July IDS increased.

I disagree with the statement, "*IDWR recognized…that the May curtailment was not implemented.*" IDWR's Director issued an order on May 16, 2025, curtailing unmitigated groundwater rights junior to August 28, 1955, effective May 31, 2025. IDWR Compliance Section staff worked with ESPA Water District Watermasters to implement the May curtailment order. I do acknowledge that the May curtailment order was not effective until May 31, 2025, so any potential benefits of curtailing between May 1 and May 31 were not realized.

On July 25, 2025, the Director issued an order curtailing unmitigated groundwater rights junior to October 11, 1900, effective July 25, 2025. IDWR Compliance Section staff worked with ESPA Water District Watermasters to implement the July curtailment order.

Because unmitigated water rights represent a small fraction of ESPA groundwater use, the benefits of the curtailments are relatively small. I performed ESPAM2.2 simulations to estimate the following impacts on the near Blackfoot to Minidoka reach related to the implementation of the May and July 2025 curtailment orders. Compliance data used to generate input for the model simulations were provisional data provided by Brian Ragan on November 26, 2025. Only unmitigated water rights that do not meet the domestic exemption limits of Idaho Code 42-111 were subject to the curtailment orders. ESPAM2.2 simulations were performed to evaluate:

- impacts of groundwater use by seven entities who received notices of violation (NOVs) for continued use of junior water rights,
- potential impacts of potential continued use of junior water rights classified as "investigation ongoing,"
- benefits of curtailment of junior water rights classified as "curtailed by user" beginning in June, and
- impacts of May groundwater use by water rights junior to August 28, 1955.

Model simulation results are summarized in Table 2. The lack of curtailment during May is estimated to have contributed 7 AF to the July IDS. This is not a significant component of the 75,254 AF July IDS. If the July 2025 IDS had been 7 AF lower, the priority date for the July curtailment order would still have been junior October 11, 1900 and A&B's proportionate share would have been reduced by less than 1 AF.

Table 2. Estimated impact of 2025 curtailment implementation on near Blackfoot to Minidoka reach gains

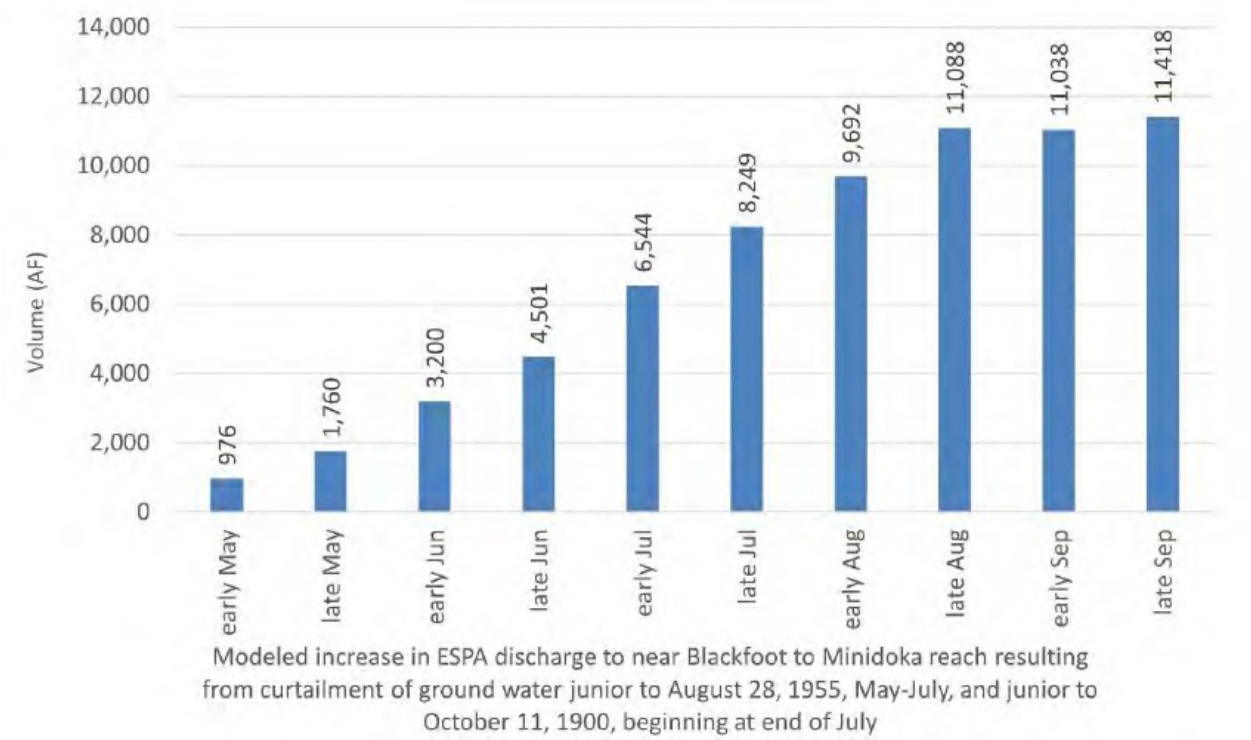
Group	Estimated acres junior to 8/28/1955	Estimated acres junior to 10/11/1900	Estimated consumptive use junior to 8/28/1955 (AF)	Estimated consumptive use junior to 10/11/1900 (AF)	Modeled impact through Jun 30 (AF)
NOVs	221	293	415	473	-20
Investigation ongoing	39	164	77	160	-3
Curtailed by user	-1,890	-4,538	-2,310	-5,901	5
May use of water rights curtailed by user	1,890	NA[31]	528	NA[31]	-7

Colvin Opinion 9 - If IDWR had implemented the May curtailment, the July IDS would have been less, and the curtailment date could have been more junior. IDWR's lack of curtailment action contributes to a reduction in the availability of groundwater rights junior to 1955.

As stated in the July 2025 order, the July IDS was large enough that increasing the curtailment to include all groundwater use junior to the SWC's injured natural flow water right was insufficient to produce a modeled volume of water equal to the July IDS by September 30, 2025.

> *"In July 2025, the Department ran the ESPAM2.2 to simulate the effect of adjusting the curtailment priority date at the end of July. The ESPAM2.2 simulation calculated that the curtailment of ground water rights junior to August 28, 1955, through the end of July followed by curtailment of groundwater rights junior to October 11, 1900, will produce a volume of water of 58,000 AF in the near Blackfoot to Minidoka reach between July 1 and September 30 of this irrigation season. The following figure summarizes the results of the ESPAM2.2 simulation:*

[31] Not applicable for evaluating the impacts of the May 31, 2025 effective date of the May 2025 curtailment.



The predicted July through September benefits to the near Blackfoot to Minidoka reach from curtailment of ground water rights bearing priority dates junior to August 28, 1955, through the end of July followed by curtailment of groundwater rights junior to October 11, 1900, are less than the July IDS of 75,300 acre-feet. Increasing the curtailment to include ground water rights junior to October 11, 1900, will offset as much of the July IDS as possible."[32]

Decreasing the July IDS by the 7 AF estimated impact of the May pumping of water users who curtailed in June (Table 2) would not have changed the priority date for the July 2025 curtailment order. The July 2025 IDS would have to be reduced by more than 17,000 AF to result in calculation of a later priority date.

[32] IDWR, 2025b. *Order Revising April 2025 Forecast Supply and Continuing May 16, 2025 Curtailment Order Methodology Steps 5 & 6).* Docket No. CM-DC-2010-001, July 10, 2025, p. 9-10, https://idwr.idaho.gov/wp-content/uploads/sites/2/legal/CM-DC-2010-001/CM-DC-2010-001-20250710-Order-Revising-April-2025-Forecast-Supply-Method.-Steps-5-6-July-2025-As-Applied.pdf.

Response to Spronk Water Engineers expert report

The expert report prepared by Spronk Water Engineers on behalf of Aberdeen – American Falls Ground Water District includes eight opinions from Gregory K. Sullivan, P.E. and Nathan Horesh, regarding the A&B proportionate share analysis.

Sullivan and Horesh Opinion 1 - Determination of the curtailment date and proportional allocation of the Shortfall to junior groundwater users are two separate issues. It is not essential that the same type of modeling (i.e., steady-state, or transient) be employed in the analyses for both processes.

I concur with this opinion. The time discretization of each ESPAM2.2 simulation is designed to answer a specific question. For determination of the curtailment priority date, the Director's question is, "What subset of junior groundwater users must be curtailed to produce a volume of water equal to the IDS in the near Blackfoot to Minidoka reach by September 30 of this irrigation season?" For determination of a proportionate share of the IDS for mitigation purposes, the Director's question is, "What is the proportionate long-term impact of the junior groundwater use subject to curtailment and covered by this mitigation plan on aquifer discharge to the near Blackfoot to Minidoka reach?" Different questions require use of different time discretization. This is reflected in the modeling approach IDWR used to answer each question.

Sullivan and Horesh Opinion 2 - There is no dispute that current depletions to the Snake River in the Near Blackfoot to Minidoka Reach from ESPA pumping result from pumping that occurred over many years and that ESPAM 2.2 is the best available tool to estimate the timing, location, and amount of Snake River depletions from ESPA pumping.

I concur with this opinion.

Sullivan and Horesh Opinion 3 - Proportionate allocation of the SWC Shortfall using ESPAM 2.2 transient runs would fail to consider the depletive effect that pumping in years prior to the current year have on Snake River flows. Transient modeling would only consider the effect that pumping during the current year is having on flows in the Near Blackfoot to Minidoka Reach.

Transient runs could be performed with a time discretization that would consider the depletive effect that pumping in years prior to the current year have on Snake River flows. Because pumping has been occurring for decades, the results would be nearly identical to the results obtained from the steady-state analysis, which provides a more efficient method for evaluating long-term impacts. Assuming this opinion is intended to pertain to a transient run with the same time discretization used to calculate the in-season response to a single-season of curtailment, I concur

with this opinion. A short-term transient simulation would fail to consider the long-term cumulative impacts of pumping on this year's streamflow and would transfer the mitigation obligations of users located more distant from the near Blackfoot to Minidoka reach to users located closer to the reach.

Sullivan and Horesh Opinion 4 - IDWR's use of steady-state runs of ESPAM 2.2 to proportionately allocate the SWC Shortfall, including the amount allocated to A&B, is appropriate because doing so acknowledges that the computed SWC Shortfalls in the current year result from impacts to Snake River flows in the Near Blackfoot to Minidoka Reach caused by present and past ESPA groundwater pumping.

I concur with this opinion.

Sullivan and Horesh Opinion 5 - Reliance on ESPAM 2.2 transient runs to proportionately allocate the SWC Shortfall would penalize groundwater users that are located in close proximity to the Near Blackfoot to Minidoka Reach of the Snake River because curtailment of their pumping would have a more immediate effect on that reach of the Snake River compared to groundwater users located more distant from the reach. Penalizing groundwater users located close the Near Blackfoot to Minidoka Reach is improper since impacts from pumping impacts to the river reach from groundwater users near and far have reached near steady-state.

I concur with this opinion, again assuming the opinion is intended to pertain to a short-term transient simulation with the same time discretization used to calculate the in-season response to a single-season of curtailment.

Sullivan and Horesh Opinion 6 - The effect of proximity to the Near Blackfoot to Minidoka Reach is illustrated in ***Figure 5.1****. The graph on the left shows the transient effect of pumping at different locations ranging from 10 miles to 45 miles from the Snake River in and near the AFA District. The inset map on the right shows the locations where pumping was simulated. The cumulative response of pumping 10 miles from the river reaches 90% of the steady-state response in approximately 12 years. At greater distances from the river, the transient response is slower with 90% of the steady-state response reached in about 25 years at a location 25 miles from the river and in about 33 years at a location 45 miles from the river.*

I have not verified the results of the model simulations presented in this opinion. The results appear to be reasonable.

Sullivan and Horesh Opinion 7 - Use of transient run results from ESPAM 2.2 from the first year of curtailment to allocate the SWC Shortfall volumes would disproportionately assign a greater portion of the SWC Shortfall to groundwater users located relatively close to the Near Blackfoot to Minidoka Reach with little or none of the SWC Shortfall assigned to groundwater users located distant from the reach.

I concur with this opinion.

Sullivan and Horesh Opinion 8 - We reserve the right to revise and supplement the foregoing opinions regarding use of transient runs of ESPAM 2.2 to apportion the SWC Shortfall among groundwater users with groundwater rights that are junior to the priority date of curtailment after A&B reveals the details of its opposition to IDWR's use of steady-state runs to apportion the SWC Shortfalls.

I have no comment on this opinion.

On page 8 of the Spronk Water Engineers' expert report, Sullivan and Horesh state, "*The J.R. Simplot Company ("Simplot") obtained approval of a mitigation plan to mitigate impacts to the TFCC from up to 704 AF of pumping under two groundwater rights during the 2025 irrigation season. The mitigation obligation will be computed based on Simplot's proportionate share of injury to the TFCC.*" I would like to clarify, that while I was asked to calculate a proportionate share of injury to the SWC during the Director's review of Simplot's mitigation plan, the plan does not state that the mitigation obligation will be computed based on a proportionate share. Simplot's 2025 mitigation plan provided storage water in considerable excess of the calculated proportionate share, in an amount equal to the maximum authorized diversion volume for the two water rights covered by the mitigation plan.

> *"To mitigate any impacts on the Snake River that may result from the applicant diverting water during the 2025 irrigation season pursuant to IDWR Water Right Nos. 29-7089 and 29-2515, 704 acre feet of groundwater stored in Palisades Reservoir will be credited to the storage accounts of the Twin Falls Canal Company for use as needed. The applicant will the divert no more than 704 acre feet during the 2025 irrigation season from the point of diversion authorized under IDWR Water Right Nos. 2-7089* [29-7089] *and 29-2515."*[33]

[33] Simplot, 2025. *Application for Approval of Mitigation Plan (J.R. Simplot Company)*. In the Matter of the Request of Administration in Water District 120 and the Request for Delivery of Water to Senior Surface Water Rights by the SWC. Response to LRE Water rebuttal report

The rebuttal report prepared by LRE Water on behalf of A&B includes six opinions from David Colvin, P.G., regarding the A&B proportionate share analysis.

Colvin Rebuttal Opinion 1 – "The A&B mitigation plan is unique in that their storage water delivery requirement is reduced by the historical impacts of surface water conversion and CREP activities."

As discussed previously in response to Colvin Opinions 1 and 6 from the first LRE Water expert report, the benefits of historic and ongoing surface water conversion and CREP activities are already included in the Forecast Supply (FS) and the IDS is the predicted injury that has not been mitigated by aquifer enhancement activities. A&B's proportionate share of the IDS is the remaining injury to be mitigated by A&B's delivery of storage water. Reducing A&B's storage delivery requirement by the impacts of surface water conversions and CREP would double-count the benefits of those mitigation actions.

Colvin Rebuttal Opinion 2 – "Surface water conversion and CREP are changes to the "equilibrium assumption" of groundwater pumping in the ESPA, which is cited as justification of steady state modeling. A&B's conversion and CREP changes to the equilibrium simplification need to be evaluated with a transient model."

Because the impacts of conversions and CREP are already accounted for in the calculation of the predicted FS and IDS, it is not necessary to evaluate the benefits of these activities with ESPAM. Reducing A&B's proportionate share of the IDS by the impacts of surface water conversions and CREP would double-count the benefits of those mitigation actions.

Colvin Rebuttal Opinion 3 – "IDWR should evaluate the A&B stipulated mitigation plan consistent with the terms of the plan."

As discussed previously in response to Colvin Opinion 6 from the first LRE Water expert report, IDWR's calculation of a proportionate share for A&B is consistent with the Director's evaluation of the plan's terms as described in the Final Order Approving Mitigation Plan.

Colvin Rebuttal Opinion 4 – "Mitigation plans should ideally address short-term in-season demand shortfalls (IDS) and long-term increases in aquifer storage."

CM Rule 43 includes factors to be considered by the Director in the evaluation of mitigation plans. The Director applied CM Rule 43 when reviewing and approving mitigation plans for the SWC

delivery call. Which factors mitigation plans *"should ideally address"* is not within the scope of this proceeding.

Colvin Rebuttal Opinion 5 – "Administering mitigation plans and curtailment to address IDS faces challenges, including the fair treatment and coordination of differences between stipulated mitigation plans. A Groundwater Management Plan (GMP) could be developed to coordinate consistent aquifer conservation standards that address short-term IDS and long-term aquifer storage recovery that will help mitigate future IDS."

Development of a GMP is outside the scope of this proceeding.

Colvin Rebuttal Opinion 6 – "If the proportionate share calculation is not changed, the benefits of A&B's mitigation actions (conversions, CREP) should reduce their proportionate share, consistent with their mitigation plan. A transient run of their mitigation actions is the appropriate method for calculating the mitigation action benefits. Our modeling calculations show that according to the terms of the A&B mitigation plan, their proportionate share should be reduced by 1,118.4 acre-feet (af), the impact of their conversion acres in the 2025 irrigation season."

As discussed previously in response to Colvin Opinions 1 and 6 from the first LRE Water expert report, the benefits of historic and ongoing surface water conversion and CREP activities are already included in the Forecast Supply (FS) and the IDS is the predicted injury that has not been mitigated by aquifer enhancement activities. A&B's proportionate share of the IDS is the remaining injury to be mitigated by A&B's delivery of storage water. Reducing A&B's proportionate share by the impacts of surface water conversions and CREP would double-count the benefits of those mitigation actions.

Response to Spronk Water Engineers rebuttal report

The Spronk Water Engineers rebuttal report responds to opinions offered in the LRE Water expert report. I disagree with the comments on page 10 and 13 which suggest that ESPAM modeling should be used for "*identification of which groundwater users are causing the projected shortage(s) to the SWC member(s)*" and state, *"the first 40,000 AF of shortage is caused by groundwater rights junior to 1990, the next 120,000 AF of shortage by groundwater rights between 1990 and 1980, the next 270,000 AF of shortage by groundwater rights between 1980 and 1970, etc".*

The Methodology requires the Director to evaluate whether there is a predicted shortfall to the senior SWC members' surface water supply for the current season and to curtail junior

groundwater rights as needed to address the predicted shortfall for the current season. In years where there is not a predicted shortfall, the Director does not curtail junior groundwater users. Use of ESPAM modeling to calculate a priority date for which the junior long-term average annual impacts are equal to the IDS was rejected by Director Spackman in the 2023 Post-Hearing Order[34] and is not part of the Methodology for addressing the SWC delivery call.

Response to Lynker rebuttal report

The Lynker rebuttal report responds to opinions offered in the LRE Water expert report. I have no comments on the Lynker rebuttal report.

Summary of IDWR staff opinions

In conclusion, I offer the following opinions regarding the calculation of proportionate shares of IDS and carryover shortfall volumes for As-Applied Orders in the SWC Delivery Call and other issues raised by A&B.

1. ESPAM2.2 simulations performed for the As-Applied Orders are designed to answer specific questions. Simulations used to calculate a priority date for curtailment are designed to answer the question, "What subset of junior groundwater users must be curtailed to produce a volume of water equal to the IDS in the near Blackfoot to Minidoka reach by September 30 of this irrigation season?" Simulations used to calculate proportionate shares of the IDS for mitigation by direct delivery of storage water are designed to answer the question, "What is the proportionate long-term impact of the junior groundwater use subject to curtailment and covered by this mitigation plan on aquifer discharge to the near Blackfoot to Minidoka reach?"

2. Steady-state ESPAM2.2 simulations are the most efficient method for calculating proportionate shares based on the cumulative impacts to the near Blackfoot to Minidoka reach resulting from long-term groundwater use pursuant to groundwater rights determined to be subject to curtailment.

[34] IDWR, 2023b. *Post-Hearing Order Regarding Fifth Amended Methodology Order*, July 19, 2023, Docket No. CM-DC-2010-001, p. 25, https://idwr.idaho.gov/wp-content/uploads/sites/2/legal/CM-DC-2010-001/CM-DC-2010-001-20230719-Post-Hearing-Order-Regarding-Fifth-Amended-Methodology-Order.pdf.

3. Calculating proportionate shares based on the long-term impacts of groundwater use pursuant to groundwater rights determined to be subject to curtailment is consistent with Director Spackman's conclusions that avoiding obligation because of delayed impact is contrary to the CM rules, the delivery call is not futile, and a trimline is not appropriate.

4. Calculating proportionate shares based on the short-term impacts of a single in-season curtailment would shift much of the burden of mitigation for the long-term impacts of groundwater use at locations distant from the reach to water users located closer to the reach. This approach does not account for relative water right priority between the juniors.

5. The alternative method for calculating proportionate shares suggested in the LRE Water expert report would shift much of the burden of mitigation for the long-term impacts of groundwater use at locations distant from the reach to water users located closer to the reach and would at times require some junior users located close to the reach to provide a mitigation volume greater than their average annual impact on the reach.

6. The apportionment of storage acquisition obligations between AFAGWD and other participants (GWDs) in the 2024 Ground Water District Mitigation Plan is a negotiated apportionment that was not prescribed by IDWR. However, the GWDs apparently agreed to apportion the storage acquisition based on their long-term impacts to the near Blackfoot to Minidoka reach calculated using steady-state ESPAM2.2 simulations. If the GWDs were to decide to apportion the storage acquisition based on the short-term impacts of a single-season curtailment, it is my opinion that AFAGWD would bear more than their fair share of the mitigation obligation while other GWDs would avoid some portion of their mitigation obligations because of delayed impact. This would be counter to Director Spackman's conclusion that avoiding obligation because of delayed impact is contrary to the CM rules.

7. The effects of historic and ongoing aquifer enhancement projects, including A&B's soft conversions, are accounted for in the calculation of the FS and IDS. The effects of the historic and ongoing aquifer enhancement projects are not sufficient to mitigate the injury to the SWC in some years. The IDS is a calculation of the remaining unmitigated injury.

8. The benefit of historic and ongoing aquifer enhancement projects, including A&B's soft conversions, is a reduction in the frequency and volume of IDS and carryover shortfalls. If the aquifer enhancement projects had not been implemented, the 2025 IDS volumes would have been higher.

9. The impact on the July 2025 IDS resulting from junior groundwater use not being curtailed until May 31, 2025, is estimated to be approximately seven acre-feet. A seven acre-foot decrease in the July 2025 IDS would not have changed the priority date for the July 2025 curtailment and would have reduced A&B's proportionate share by less than one acre-foot.

Staff Memorandum

To: Hearing Officer Gerald F. Schroeder
From: Brian Ragan, Analyst 4
Re: Request for Staff Memorandum
Date: December 30, 2025

Background

In your November 25, 2025 *Order Granting A&B's Motion to Amend Deadlines; Setting Deadline to Provide Staff Memo*, you asked Department staff "identified to testify at the hearing" to "file an agency staff memorandum … outlining the subjects of their expected testimony." The one issue identified in A&B's request for hearing which I have knowledge of relates to the Department's implementation of the May 16, 2025 curtailment order.

Subjects of Expected Testimony from Brian Ragan

1. Explain the Department's implementation of the May 16, 2025 curtailment order. This may include the following topics:
    a. How the Department created the list of ground water rights subject to the May curtailment order.
    b. How the Department's water rights database and data fields show inclusion in a water district, administration of that right by the water district, and mitigation plan affiliation for each water right.
    c. How the Department obtained information about mitigation plan affiliation for water rights subject to the May curtailment order.
    d. How the Department informed the water district watermasters of the May curtailment order.
    e. How the watermasters were instructed to initiate the curtailment process and tracked and reported their efforts to curtail ground water rights subject to the May curtailment order.
    f. How the Department generates a bi-weekly curtailment status summary report for posting to the Department's website.
    g. The Department's implementation efforts related to other curtailment orders.
    h. Internal coordination and implementation efforts of the May/July 2025 curtailment orders.

Attorneys for American Falls-Aberdeen Ground Water District

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **AMERICAN FALLS-ABERDEEN GROUND WATER DISTRICT'S UNOPPOSED MOTION FOR ADDITIONAL PREHEARING CONFERENCE**

COMES NOW American Falls-Aberdeen Ground Water District ("AFA"), by and through undersigned counsel of record, pursuant to Rule 220 of the Department's Rules of Procedure,[1] and hereby moves the Hearing Officer to convene a prehearing conference pursuant to Rules 412.01.e and 511. AFA conferred with the parties to this matter, including IDWR, and all parties consented to the filing of this motion.

[1] Unless stated otherwise, any "Rules" referenced herein are from the Department's Rules of Procedure located at IDAPA 37.01.01.

The parties seek resolution of the following issues by the Hearing Officer:

- Whether the Hearing Officer would like trial briefs;
- Whether AFA's Board President may testify remotely by zoom. All other AFA witnesses will be live;
- Whether the Department will present Ms. Sukow as a witness;
- Whether the Hearing Officer anticipates ruling on the pending motions in advance of trial;
- The order of presentation of the party's cases;
- Other procedural issues the parties may raise during the conference.

Resolution of these issues will simplify and expedite this proceeding set to commence on January 14, 2026. *See* Rule 510.

It appears that all parties, including IDWR representatives, would be available for a prehearing on the afternoons of January 5 at 3:00 or later, January 6 any time, or January 7, and possibly on other dates and times that the Hearing Officer might specify.

Accordingly, AFA respectfully requests that the Hearing Officer notice a prehearing conference at his earliest convenience. AFA anticipates the conference will take roughly one hour.

DATED this 31st day of December 2025.

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	**Docket No. CM-DC-2010-001** **ORDER DENYING IDAHO GROUND WATER APPROPRIATORS, INC.'S MOTION FOR SUMMARY JUDGMENT**

Idaho Ground Water Appropriators, Inc. has moved for summary judgment in response to A&B Irrigation District's requests for hearing filed April 21 and July 24, 2025. Hearing has been set on the A&B requests which challenge the *Final Order Regarding April 2025 Forecast Supply* issued April 16, 2025. A&B challenges the method used by the Director to calculate A&B's storage water mitigation obligation under the Surface Water Coalition ("SWC") delivery call. The motion for summary judgment relies upon the record in this case and related contested cases, as well as Declarations submitted by Sophia Sigstedt and Thomas J. Budge which support the claim that positions taken by A&B in the past foreclose it from making the challenge in this proceeding. There is an extensive record that relates to the present proceeding.

BACKGROUND

On April 19, 2016, the Director of the Idaho Department of Water Resources ("Department") issued the *Fourth Amended Final Order Regarding Methodology For Determining Material Injury To Reasonable In-Season Demand And Reasonable Carryover* and the *Final Order Regarding April 2016 Forecast Supply (Methodology Steps 1 – 3)*. Following the issuance of those orders, A&B requested a hearing on May 2, 2016 and raised the following issue:

> To the extent the Director denies the above request for reconsideration to identify an accurate "proportionate share" regarding A&B's junior priority ground water rights with respect to the predicted demand shortfall, including appropriately identifying all hydraulically connected junior ground water rights, A&B requests a hearing on the same pursuant to Idaho Code§ 42- 170A(3).

A&B Irrigation District's Petition for Reconsideration and Request for Hearing Re: April 2016 As Applied Order, at 4 (May 2, 2016) [hereinafter *2016 Request*].

On April 21, 2023, the Director amended the methodology and issued the *Fifth Amended Final Order Regarding Methodology For Determining Material Injury To Reasonable In-Season*

Demand And Reasonable Carryover ("*Fifth Methodology Order*") which established nine steps for determining material injury to members of the SWC.[1] That same day, the Director issued the *Final Order Regarding April 2023 Forecast Supply Methodology Steps 1-3* ("*2023 April Forecast*") and a *Notice of Hearing, Notice of Prehearing Conference, and Order Authorizing Discovery* ("*2023 Notice*").

On May 5, 2023, the Department received the *Surface Water Coalition's Request For Hearing And Statement Of Issues* ("*2023 SWC Request*"). That request identified several issues for hearing, and among those issues, A&B specifically asked the Director to consider:

> (1) Whether the [*2023 April Forecast*] identified proportionate share (458 acre-feet) of the predicted injury (75,200 acre-feet) to TFCC is calculated correctly based upon A&B's actual diversion and use of water rights that are subject to the identified curtailment date (junior to December 30, 1953); and
> (2) Whether the steady-state use of the ESPAM 2.2 in identifying A&B's proportionate share is consistent with the transient use of the model in identifying ground water rights subject to curtailment as outlined in the *Fifth Methodology Order*.

2023 SWC Request, at 2–3.

The Director held a hearing on the *Fifth Methodology Order* and the *2023 April Forecast o*n June 6–9, followed by a *Post-Hearing Order Regarding Fifth Amended Methodology Order* ("*Post-Hearing Order*") and the *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("*Sixth Methodology Order*") issued on July 19, 2023.

On November 19, 2024, the Department received a *Joint Motion for Order Approving 2024 Stipulated Mitigation Plan* ("*2024 Plan*") from the SWC and various Ground Water Districts.[2] The Director issued an amended approval of the plan on February 7, 2025.

Pursuant to the *Sixth Methodology Order*, the Director issued the *Final Order Regarding April 2025 Forecast Supply (Methodology Steps 1–3)* ("*April Forecast Supply Order*") on April 16, 2025, finding that A&B must mitigate for its proportionate share of the predicted in season demand shortfall. *April Forecast Supply Order*, at 5 n.8

On April 29, 2025, A&B filed a request for hearing contesting the *April Forecast Supply Order* and identifying the following issues for hearing:

---

[1] The SWC is comprised of A&B Irrigation District, American Falls Reservoir District #2, Burley Irrigation District, Milner Irrigation District, Minidoka Irrigation District, North Side Canal Company, and Twin Falls Canal Company ("TFCC").

[2] The Ground Water Districts are comprised of North Snake Ground Water District, Magic Valley Ground Water District, Carey Valley Ground Water District, Aberdeen-American Falls Ground Water District, Bingham Ground Water District, Bonneville-Jefferson Ground Water District, Jefferson-Clark Ground Water District, Madison Ground Water District, and Henry's Fork Ground Water District.

(1) Whether the [*April Forecast Supply Order*] identified proportionate share (384 acre-feet) of the predicted injury (63,000 acre-feet) to TFCC is calculated correctly based upon A&B's actual diversion and use of water rights that are subject to the identified curtailment date (junior to August 28, 1955).
(2) Whether A&B should be allowed to mitigate for a portion of groundwater right 36-15127A (approximately 508.3 acres) that will be diverted [sic] used during the 2025 irrigation season, as opposed to mitigating for all 1,886.4 acres authorized by the water right.
(3) Whether the steady-state use of the ESPAM 2.2 in identifying A&B's proportionate share is consistent with the transient use of the model in identifying ground water rights subject to curtailment as outlined in the *Sixth Methodology Order*.
(4) For other issues and matters that may [sic] discovered in this proceeding.

A&B Req. for Hr'g, at 1–2 (Apr. 2025) [hereinafter *April Hearing Request*].

On May 16, 2025, the Director issued the *Final Order Curtailing Ground Water Rights Junior to August 28, 1955* ("*May Curtailment Order*"), including several of A&B's ground water rights subject to curtailment. *May Curtailment Order*, at 4, attach. A, at 1.

On July 10, 2025, the Director issued an *Order Revising April 2025 Forecast Supply and Continuing May 16, 2025 Curtailment Order (Methodology Steps 5 & 6)* ("*July As-Applied Order*") which revised the predicted in-season demand shortfall and updated A&B's proportionate share of the predicted injury to 5,039 acre-feet. *July As-Applied Order*, at 11 n.6.

On July 24, 2025, A&B filed another request for hearing, this time contesting the *July As-Applied Order* and identifying similar issues to the April request including:

(1) Whether the [*July As-Applied Order*] identified proportionate share (5,039 acre-feet) of the predicted injury (75,300 acre-feet) to TFCC is calculated correctly based upon A&B's actual diversion and use of water rights that are subject to the identified curtailment date (junior to October 11, 1900).
(2) Whether the steady-state use of the ESPAM 2.2 in identifying A&B's proportionate share of the estimated in-season demand shortfall is consistent with the transient use of the model in identifying ground water rights subject to curtailment as outlined in the *Sixth Methodology Order*.
(3) Whether the Director's failure to implement the [*May Curtailment Order*] in accordance with Idaho law has injured A&B by subjecting its senior water right 36-2080 to curtailment and/or mitigation requirements during the 2025 irrigation season.
(4) For other and further reasons as may be discovered prior to hearing. A&B reserves the right to identify additional issues as necessary in this proceeding.

A&B Req. for Hr'g, at 1–2 (July 2025) [hereinafter *July Hearing Request*].

On September 3, 2025, the Director issued an *Order Granting A&B Irrigation District's Requests for Hearing, Consolidating Proceedings for Hearing, and Appointing Hearing Officer; Notice Of Prehearing Conference* ("*Order Granting Hearing*"). The Director found that the issues identified in both of A&B's hearing requests relate to or mirror each other and that "A&B has not previously been afforded an opportunity for a hearing to contest either the *April Forecast Supply Order* or *July As-Applied Order*." *Order Granting Hearing*, at 4.

On September 11, 2025, the Director issued the *Order Revising July 2025 Forecast Supply (Methodology Step 7-8)* ("*September Order*"). The Director found that A&B satisfied its proportionate share obligation by delivering storage water to TFCC pursuant to a stipulation with the SWC and that A&B no longer needed to establish it could mitigate its proportionate share obligation. *September Order*, at 12 n.7.

On November 18, 2025, American Falls-Aberdeen Ground Water District ("AFA") filed a *Motion to Reconsider Order Granting Hearing and Vacate Hearing or, Alternatively, to Clarify the Scope of Hearing; Request for Expedited Ruling; Brief in Support* ("*AFA Motion*") with the Director. AFA requests that the Director reconsider the *Order Granting Hearing* and deny both of A&B's hearing requests because A&B is barred from relitigating issues that were already subject to a prior Department hearing and that one issue is moot. *AFA Motion*, at 2. In the alternative, AFA asks the Director to clarify the scope of the hearing to limit the Hearing Officer's consideration to issues related to calculating the in-season demand shortfall and to exclude issues involving a ground water management area or plan. *Id.* at 3. On that same date, the Hearing Officer received *Idaho Ground Water Appropriators, Inc.'s Motion for Summary Judgment* ("*IGWA Motion*"). IGWA argued that doctrines of *res judicata*, law of the case, and *quasi-estoppel* prevent A&B from now challenging how the Director calculates its proportionate share obligation. *IGWA Motion*, at 2.

Pursuant to A&B's request to extend response deadlines, the Hearing Officer issued an order extending the deadline for A&B to respond to the *AFA Motion* and the *IGWA Motion* to December 9, 2025. *Order Granting A&B's Motion to Amend Deadlines; Setting Deadline to Provide Staff Memo*, at 3 (Nov. 25, 2025).

On December 9, 2025, the Department received *A&B Irrigation District's Consolidated Response to AFA Motion / IGWA Motion for Summary Judgment* ("*A&B Response*"). A&B argues that it is not barred from litigating the issues raised because there was never a final judgment on the merits of those issues resulting from the 2023 hearing and that due process guarantees it a right to a hearing since its senior ground water right has never been curtailed prior to this year. *A&B Response*, at 3, 24.

On December 12, 2025, the Department received the *American Falls-Aberdeen Ground Water District's Reply in Support of Motion to Reconsider Order Granting Hearing and Vacate Hearing or, Alternatively, to Clarify the Scope of Hearing; Request for Expedited Ruling* ("*AFA Reply*"), arguing that A&B cannot now raise due process arguments in this SWC delivery call proceeding.

On December 16, 2025, the Hearing Officer received *IGWA's Reply Brief* ("*IGWA Reply*"), reiterating its arguments raised in the *IGWA Motion* and arguing that judicial estoppel also precludes A&B from raising the same arguments now.

On December 22, 2025, the Director issued an *Order Denying American Falls-Aberdeen Ground Water District's Motion to Reconsider Order Granting Hearing* ("*Order Denying AFA Motion*"). The Director concluded that he would not consider the issues raised by AFA because there has been a hearing officer already assigned to this matter. *Order Denying AFA Motion*, at 3–4. In addition, the Director authorized the Hearing Officer to consider any arguments raised by AFA in its motion and reply. *Id.* at 4.

FINDINGS OF FACT

1. On May 2, 2016, A&B raised similar issues to what it raised in 2023 and now regarding how its proportionate share of the mitigation obligation is calculated when the Director implements the methodology. *Compare 2016 Request*, at 4; *with 2023 SWC Request*, at 2–3; *April Hearing Request*, at 1–2; *July Hearing Request*, at 1–2.

2. On April 21, 2023, the Director revised the methodology that was in place from 2016 to 2022 when he issued the *Fifth Methodology Order*. *Fifth Methodology Order*, at 1–2. The Director changed the method for calculating curtailment dates by adopting a transient use of the ESPAM 2.2 model. *Id.* at 36.

3. Also on April 21, 2023, the Director issued the *2023 April Forecast* which identified A&B's proportionate share of the predicted in-season demand shortfall to be 458 acre-feet. *2023 April Forecast*, at 5.

4. Also on April 21, 2023, the Director anticipated that several parties associated with the SWC delivery call proceeding would request a hearing on the *Fifth Methodology Order*, so the Director issued the *2023 Notice* to preemptively schedule a hearing on that order. *2023 Notice*, at 1.

5. Following the issuance of those orders, several parties filed issue statements to be considered at the 2023 hearing, including the following issue statements filed by A&B:

> 1) Whether the order's identified proportionate share (458 acre-feet) of the predicted injury (75,200 acre-feet) to TFCC is calculated correctly based upon A&B's actual diversion and use of water rights that are subject to the identified curtailment date (junior to December 30, 1953); and
>
> 2) Whether the steady-state use of the ESPAM 2.2 in identifying A&B's proportionate share is consistent with the transient use of the model in identifying ground water rights subject to curtailment as outlined in the *Fifth Methodology Order*.

2023 SWC Request, at 2–3.

6. On June 6–9, 2023, the Director held a hearing on the matter on the various issues raised by the parties.

7. On July 19, 2023, the Director issued the *Post-Hearing Order* and the *Sixth Methodology Order*.

8. Following the hearing, the Director concluded that the transient model simulation is the appropriate method to calculate the curtailment dates. *Sixth Methodology Order*, at 38, 42, 44; *Post-Hearing Order*, at 25. Those orders did not address the issues raised by A&B.

9. On February 7, 2025, the Director issued an amended approval of the SWC and Ground Water Districts' *2024 Plan*.

10. In the *2024 Plan*, the Ground Water Districts agreed that "[e]ach District will secure its proportionate share of the storage water required [volume] based on their respective steady-state impact to the Near Blackfoot to Minidoka reach of the Snake River as defined by the current version of the ESPA Model." *2024 Plan*, at 4.

11. A&B is a signatory to the *2024 Plan* as a surface water user. *Id.* at 1.

12. In implementing the *Sixth Methodology Order*, the Director issued the *April Forecast Supply Order* and found that A&B's mitigation obligation for its proportionate share of the predicted in-season demand shortfall to TFCC is 384 acre-feet. *April Forecast Supply Order*, at 5 n.8.

13. In the *July As-Applied Order*, the Director found that A&B's mitigation obligation was 5,039 acre-feet.

14. In consolidating and simplifying, the *April Hearing Request* and the *July Hearing Request*, A&B raised similar issues to what it raised in the *2023 SWC Request*. *Compare April Hearing Request*, at 1–2; *July Hearing Request*, at 1–2; *with 2023 SWC Request*, at 2–3.

15. On September 11, 2025, the Director issued the *September Order*, concluding that:

> Given the nature of A&B's mitigation plan, the Department normally calculates A&B's proportionate share of the predicted IDS. However, A&B and the SWC entered into a stipulation to define A&B's mitigation obligation for the 2025 irrigation season. In the stipulation, A&B agreed to continue its ground water conversions projects and assign and deliver 1,252 acre-feet of storage water to TFCC. The Director has confirmed that 1,252 acre-feet of storage water has been assigned to A&B. Because the SWC agreed that the above actions satisfy A&B's obligation to the SWC for the 2025 irrigation season, A&B does not need to establish that they can mitigate for its proportionate share of the predicted IDS.

September Order, at 12 n.7.

LEGAL STANDARD

The Department's Rules of Procedure ("Rules"), IDAPA 37.01.01, govern the pending motion in this case. Rule 220.03 authorizes motions for summary judgment and states that "Rule 56(a), (c), (d), (e), and (f) of the Idaho Rules of Procedure, apply to such motions before the agency." IDAPA 37.01.01.220.03.

Summary judgment is appropriate "if the pleadings, depositions, and admissions on file, together with the affidavits, if any, show that there is no genuine issue as to any material fact and that the moving party is entitled to a judgment as a matter of law." *Lee v. Litster*, 161 Idaho 546, 549, 388 P.3d 61, 64 (2017) (quoting I.R.C.P. 56(c)). The moving party bears the burden of establishing the absence of a genuine issue of material fact belongs to the moving party. *Smith v. Meridian Joint Sch. Dist. No. 2*, 128 Idaho 714, 719, 918 P.2d 583, 588 (1996).

If the movant meets its burden, the movant is entitled to summary judgment unless the nonmovant presents "specific facts that demonstrate the existence of a genuine issue for trial"—a "mere scintilla of evidence" or "slightest doubt as to the facts" will not do. *Haight v. Idaho Dep't of Transp.*, 163 Idaho 383, 387, 414 P.3d 205, 209 (2018). "Disputed facts should be construed in favor of the non-moving party, and all reasonable inferences that can be drawn from the record are to be drawn in favor of the non-moving party." *Major v. Sec. Equip. Corp.*, 155 Idaho 199, 202, 307 P.3d 1225, 1228 (2013). "If the evidence reveals no disputed issues of material fact, then only a question of law remains . . . ." *Lee*, 161 Idaho at 549, 388 P.3d at 64 (quoting *Lapham v. Stewart*, 137 Idaho 582, 585, 51 P.3d 396, 399 (2002)).

ANALYSIS

I. The Hearing Officer takes official notice of the pleadings and orders raised in the *AFA Motion* and the *IGWA Motion* that pertain to the SWC delivery call proceeding.

Pursuant to Rule 602 of the Department's Rules of Procedure, a Hearing Officer is authorized to take official notice of specific facts or materials. IDAPA 37.01.01.602. Given the historical context in which the SWC delivery call operates, and the fact that the parties have been the same over the decades, it is proper to take official notice of the pleadings and orders cited within the *AFA Motion*, the *IGWA Motion*, the *A&B Response*, and the various reply briefs. This includes the *2024 Plan* as it relates to the SWC delivery call proceeding where the parties are substantially similar.

II. A&B is not barred from litigating the issues it raised under the res judicata doctrine because there has not been a final judgment on the merits of its issues.

In Idaho, res judicata applies in administrative proceedings. *Sagewillow, Inc. v. Idaho Dept. of Water Res.*, 138 Idaho 831,844 (2023). The purpose of res judicata is to prevent relitigation leading to inconsistent results, to serve the public interest and protect courts against

repetitious litigation, and to protect private interests from repeat claims. *Ticor Title Co. v. Stanion*, 144 Idaho 119, 123 (2007). Res judicata covers both claim preclusion and issue preclusion (i.e., collateral estoppel). *Id.*

A. Claim preclusion does not apply because there has never been a final judgment on the merits on the issues A&B raised in 2023.

IGWA claims that A&B raised issues pertaining to how the Director calculates its proportionate share of the storage water mitigation obligation to the SWC. *IGWA Motion*, at 7. Specifically, IGWA claims that A&B is barred from relitigating the issues under claim preclusion because (a) the same parties exist in the delivery call proceeding, (b) the methodology as-applied orders are the same transaction or occurrence, and (c) the 2023 hearing resulted in a final judgment on the merits on the issues A&B raised as well as other issues raised. *Id.*

A&B argues that the issues it raised in 2023 are not subject to res judicata because "it was not actually decided in a final judgment on the merits." *A&B Response*, at 24. Specifically, A&B argues that the Director's as-applied orders for implementing the *Sixth Methodology Order* do not address how ground water users' mitigation obligations are apportioned. *Id.*

Claim preclusion prohibits a claim in a subsequent action when: "(1) the original action ended in final judgment on the merits, (2) the present claim involves the same parties as the original transaction, and (3) the present claim arises out of the same transaction or series of transactions as the original action." *Elsaesser v. Riverside Farms, Inc.*, 170 Idaho 502, 508 (2022) (quoting *Berkshire Invs., LLC v. Taylor*, 153 Idaho 73, 81 (2012)). The second and third elements are not at issue here as the parties in this matter have been the same or similar since the SWC delivery call commenced two decades ago, and A&B's claims arise out of the same delivery call proceeding. As to the first element, a final judgment on the merits exists:

> in an action between the same parties upon the same claim or demand, the former adjudication concludes parties and privies not only as to every matter offered and received to sustain or defeat the claim but also as to every matter which might and should have been litigated in the first suit.

Ticor Title, 144 Idaho at 126 (quoting *Farmers Nat. Bank v. Shirey*, 126 Idaho 63, 70 (1994)) (alteration in original). The test does not require "the precise point or question in [the subsequent] action" to be "finally resolved and decided in the [prior] action." *Farmers Nat. Bank*, 126 Idaho at 70.

The Director did not decide or resolve the issues A&B raised for the 2023 hearing in his *Post-Hearing Order* or the *Sixth Methodology Order*. The purpose of the hearing was to determine the appropriate model simulation for calculating the curtailment date, and the issue of how A&B's proportionate share of the mitigation obligation was not discussed during the hearing. Accordingly, there was not a final judgment on the merits in 2023 discussing how A&B's proportionate share was calculated. Therefore, claim preclusion does not bar A&B from raising the issues again now.

B. Issue preclusion does not bar A&B from raising the issues now because the issues were never actually decided in 2023.

IGWA argues that A&B is barred from relitigating the issues under the doctrine of issue preclusion because the Director's issuance of the as-applied orders following the 2023 hearing actually decided the issues A&B raised by calculating A&B's proportionate share of the mitigation obligation. A&B responds that issue preclusion does not apply in an administrative action when an agency fails to answer a disputed issue in a previous action.

Issue preclusion bars a party from relitigating issues when:

> (1) the party against whom the earlier decision was asserted had a full and fair opportunity to litigate the issue decided in the earlier case; (2) the issue decided in the prior litigation was identical to the issue presented in the present action; (3) the issue sought to be precluded was actually decided in the prior litigation; (4) there was a final judgment on the merits in the prior litigation; and (5) the party against whom the issue is asserted was a party or in privity with a party to the litigation.

Elsaesser, 170 at 509 (quoting *Ticor Title*, 144 Idaho at 124).

A&B raised substantively similar issues in 2016 and 2023, and the parties are the same in this SWC delivery call proceeding. There were discussions and statements made that support the request for summary judgment, but there was not a final judgment on the merits in 2023 involving these issues, and those issues that IGWA and AFA now seek to preclude have never actually been decided in previous litigation. Accordingly, issue preclusion does not bar A&B from litigating these issues now.

III. The law of the case doctrine does not apply because there has never been a decision on the issues raised.

IGWA argues that the law of the case doctrine bars A&B "from raising issues that were or could have been litigated in this proceeding." A&B responds that IGWA inappropriately raised this issue because there has been no other appeal for judicial review on how ground water users' mitigation obligations are apportioned. *A&B Response*, at 29–30.

The law of the case doctrine functions like stare decisis and "exists to avoid relitigating issues that have already been decided." *Safaris Unlimited, LLC v. Jones*, 169 Idaho 644, 650–51 2021 (citing *Regan v. Owen*, 163 Idaho 359, 362 (2018)). The law of the case doctrine applies:

> When "an appellate court states a principle of law in deciding a case, that rule becomes the law of the case and is controlling both in the lower court and on subsequent appeals as long as the facts are substantially the same." Decisions on issues during one stage of the proceeding become precedent for later stages of the same litigation.

Id. at 651 (quoting *Swanson v. Swanson*, 134 Idaho 512, 516 (2000)).

The law of the case doctrine does not apply because there has never been a decision on the issues A&B raised in 2023, so no principle of law deciding those issues applies. Accordingly, the issues are not barred from litigation under the law of the case doctrine.

IV. A&B is not barred from raising the issues under quasi-estoppel because A&B as a surface user under the *2024 Plan* did not agree to calculate its storage water obligation as a ground water user under the plan.

IGWA argues that the quasi-estoppel doctrine bars A&B from asserting a right that is inconsistent with a previous position it has taken. IGWA asserts that as a signatory to the *2024 Plan*, A&B cannot now argue that transient state modeling is more appropriate to measure storage water mitigation obligations because the *2024 Plan* applies steady-state modeling to allocate those obligations. A&B responds that its ground water rights and how its mitigation obligations are apportioned have nothing to do with the *2024 Plan*. Further, it participated in the plan as a SWC member. Consequently, the mitigation plan only protected the participating Ground Water Districts which did not include it.

The quasi-estoppel doctrine functions to "prevent[] a party from asserting a right, to the detriment of another party, which is inconsistent with a position previously taken." *Gomez v. Hurtado*, 174 Idaho 1002, 1014 (2024) (quoting *Atwood v. Smith*, 143 Idaho 110, 114 (2006)). Quasi-estoppel applies when:

> (1) the offending party took a different position than his or her original position[;] and
> (2) either (a) the offending party gained an advantage or caused a disadvantage to the other party; (b) the other party was induced to change positions; or (c) it would be unconscionable to permit the offending party to maintain an inconsistent position from one he or she has already derived a benefit or acquiesced in.

Id. (quoting *Atwood*, 143 Idaho at 114).

The Ground Water Districts agreed to use steady-state modeling to calculate their share of the storage water obligations. *2024 Agreement*, at 4. Although A&B signed the *2024 Plan* as a surface water user, it did not agree to calculate its own ground water uses in the same manner as the other signatory Ground Water Districts. *Id.* at 1. The *2024 Plan* does not address how A&B calculates its storage water obligations as a ground water user. Accordingly, the issues A&B raises now are not inconsistent with the *2024 Plan*, so the issues are not barred from litigation under the quasi-estoppel doctrine.

V. The issue of how the Director implements the curtailment orders is not moot because it is a matter of substantial public interest.

AFA argues that the issue A&B raised regarding the Director's implementation of the *May Curtailment Order* is moot because the *September Order* relieved A&B from its obligation

to establish it could mitigate for its proportionate share of the shortfall. A&B responds that the issue is not moot because (a) it has a legally cognizable interest in the matter due to how A&B's mitigation obligation fluctuates throughout the year, and (b) the issue is capable of repetition yet evades review given the as-applied orders change throughout the irrigation season and renew each year.

"A case is moot if it presents no justiciable controversy and a judicial determination will have no practical effect upon the outcome." *In re Guardianship of Doe*, 157 Idaho 750, 754 (2014) (quoting *Goodson v. Nez Perce Bd. of Cnty. Comm'rs*, 133 Idaho 851, 853 (2000)). There are three exceptions to the mootness doctrine:

> (1) when there is the possibility of collateral legal consequences imposed on the person raising the issue; (2) when the challenged conduct is likely to evade judicial review and thus is capable of repetition; and (3) when an otherwise moot issue raises concerns of substantial public interest.

Id. (quoting *Ameritel Inns, Inc. v. Greater Boise Auditorium Dist.*, 141 Idaho 849, 851–52 (2005)). A matter is capable of repetition yet evades review when "(1) the challenged action was in its duration too short to be fully litigated prior to its cessation or expiration, and (2) there was a reasonable expectation that the same complaining party would be subject to the same action again." *Mitchell v. Ramlow*, 174 Idaho 723, 727 (2024) (quoting *Murphy v. Hunt*, 455 U.S. 478, 482 (1983)).

The *September Order* relieved A&B of its obligation to establish that it could mitigate for its proportionate share of the predicted shortfall because A&B stipulated with the SWC to accept a certain amount of storage water to satisfy its obligation for the 2025 irrigation season only. *September Order*, at 12. It is not clear whether that issue is evading review because there may not be another stipulation in future seasons, so A&B is not precluded from raising the issue again.

A&B argues that "understanding [the Department's] methodology and calculations as it applies amongst junior groundwater users is an important administrative matter that should be decided for purposes of future application." *A&B Response*, at 28. Although the issue is capable of repetition and likely does not evade review, how the Department calculates the mitigation obligations and how it implements the curtailment order raises a substantial public interest given the methodology resets every irrigation season. Accordingly, the issue is not moot because it raises a substantial public interest for interested parties to have a decision on this issue.

VI. It is not necessary to address A&B's due process argument.

A&B argues that its "water right 36-2080 has never been subject to curtailment and [the Department] has never apportioned a mitigation requirement to that water right until July 2025." *A&B Response*, at 21. As a result, A&B argues that "due process requires a hearing prior to curtailing a junior groundwater right for the first time, in this case A&B's 1948 water right 36-2080." *A&B Response*, at 25 (emphasis in original) (citing *Clear Springs Foods, Inc. v. Spackman*, 150 Idaho 790, 815 (2011)).

A hearing will be held which satisfies A&B's concerns. The relevance and effect upon water right 36-2080 will be addressed.

VII. The doctrine of judicial estoppel does not bar A&B from raising the issues because it has not deliberately shifted positions.

IGWA argues that judicial estoppel bars A&B from raising the issues because it has on several occasions asked the Director to resist perpetual relitigation. The purpose of judicial estoppel is "to prevent abuse of the judicial process by deliberate shifting of positions to suit the exigencies of a particular action." *Heinze v. Bauer*, 145 Idaho 232, 235 (2008). There has never been a decision on the issues A&B raised in 2023, and A&B is not requesting a second hearing on the decisions that the Director made following the issuance of the *Sixth Methodology Order*. Accordingly, judicial estoppel does not bar A&B from raising the issues now.

Conclusions of Law

The *IGWA Motion* is denied, and this matter will continue forth at the hearing scheduled for January 14 through 16, 2025 on the issues that A&B raised in its *April Hearing Request* and *July Hearing Request*.

ORDER

IT IS HEREBY ORDERED that the *Idaho Ground Water Appropriators, Inc.'s Motion for Summary Judgment* is DENIED.

DATED this 2nd day of January 2026.

GERALD F. SCHROEDER
Hearing Officer

CERTIFICATE OF SERVICE

I HEREBY CERTIFY that on this 2nd day of January 2026, the above and foregoing, was served by the method indicated below, and addressed to the following:

Sara Ajeti
Deputy Attorney General

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **ORDER GRANTING ADDITIONAL PREHEARING CONFERENCE**

BACKGROUND

On December 31, 2025, the Hearing Officer received *American Falls-Aberdeen Ground Water District's Unopposed Motion for Additional Prehearing Conference* ("*Motion*"). The parties agreed to and requested an additional prehearing conference to address:

- Whether the Hearing Officer would like trial briefs;
- Whether AFA's Board President may testify remotely by zoom. All other AFA witnesses will be live;
- Whether the Department will present Ms. Sukow as a witness;
- Whether the Hearing Officer anticipates ruling on the pending motions in advance of trial;
- The order of presentation of the party's cases;
- Other procedural issues the parties may raise during the conference.

Motion, at 2. Accordingly, the Hearing Officer is exercising his discretion to hold another prehearing conference in this matter to discuss these issues.

ORDER

IT IS HEREBY ORDERED that *American Falls-Aberdeen Ground Water District's Unopposed Motion for Additional Prehearing Conference* is GRANTED.

NOTICE OF ADDITIONAL PREHEARING CONFERENCE

NOTICE IS HEREBY GIVEN that a prehearing conference in this matter will be held on **January 5, 2026, at 3:30 p.m. (MT)**, at the Department's State Office, located at 322 E. Front Street, 6th Floor, Conference Room 648A, Boise, Idaho. All parties must be represented at the prehearing conference, whether in person or remote. Participants shall come prepared to discuss the issues identified in the *Motion*, listed above, and any other matters that could aid in the fair and efficient resolution of the contested cases.

To join the conference via computer or smartphone, please click the following Webex link and follow the prompts: https://idahogov.webex.com/idahogov/j.php?MTID=mf1f0ae026874ef8f698c1958499d88c6.

To join the conference via telephone, please dial 1(415) 655-0001 (US Toll) and enter the following meeting access code when prompted: 2630 746 6957.

The conference will be held in accordance with the provisions of Chapter 17, Title 42, and Chapter 52, Title 67, Idaho Code, and the Department's Rules of Procedure, IDAPA 37.01.01. A copy of the Rules of Procedure may be obtained from the Department upon request or at https://adminrules.idaho.gov/rules/current/37/370101.pdf.

The prehearing conference will be conducted in a facility that meets the accessibility requirements of the Americans with Disabilities Act. If you require reasonable accommodation to attend, participate in, or understand the conference, please advise the Department no later than 10 a.m. (MT) on the day of the conference. Inquiries for reasonable accommodations should be directed to Sarah Tschohl, telephone (208) 287-4815, or email sarah.tschohl@idwr.idaho.gov.

DATED this 2nd day of January 2026.

GERALD F. SCHROEDER
Hearing Officer

Attorneys for Idaho Ground Water Appropriators, Inc. (IGWA)

STATE OF IDAHO

DEPARTMENT OF WATER RESOURCES

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **IDAHO GROUND WATER APPROPRIATORS, INC.'S PETITION FOR RECONSIDERATION**

Idaho Ground Water Appropriators, Inc. ("IGWA"), by and through counsel, respectfully petitions for reconsideration of the *Order Denying IGWA's Motion for Summary Judgment* ("Order") dated January 2, 2026, pursuant to rule 710 of the rules of procedure of the Idaho Department of Water Resources.

IGWA appreciates the Hearing Officer's careful review of the record and the applicable legal standards. However, IGWA respectfully submits that the Order's analysis of claim preclusion does not reflect Idaho Supreme Court precedent.

The Order concludes that claim preclusion does not apply because "there has never been a final judgment on the merits on the issues A&B raised in 2023." (Order, p. 8.) It further states, "[t]he Director did not decide or resolve the issues A&B raised for the 2023 hearing in his *Post-Hearing Order* or the *Sixth Methodology Order*." *Id*. The premise of the Order is that claim preclusion applies only to issues that are explicitly discussed in the Director's decision.

The doctrine of claim preclusion is broader. It bars litigation not only of matters actually litigated, but also "every matter which might and should have been litigated in the first suit." *Ticor Title Co. v. Stanion*, 144 Idaho 119, 126 (2007); *Farmers Nat. Bank v. Shirey*, 126 Idaho 63, 70 (1994). The determining factor is whether the litigant "had a full and fair opportunity to litigate the issue decided in the earlier case." *Elsaesser v. Riverside Farms, Inc.*, 170 Idaho 502, 509 (2022) (quoting *Ticor Title Co. v. Stanion*, 144 Idaho 119, 124 (2007)).

The issue of how storage water mitigation obligations are calculated was decided when the Director performed the calculation and assigned storage water obligations in the As-Applied Orders. Whether or not the As-Applied Orders elaborate on the formula used to make the calculation, the calculation was made, and A&B was required to provide the required storage volume or suffer curtailment. If A&B disagreed with the calculation, A&B had a duty under Idaho Code § 42-1701A(3) to challenge it. Which is exactly what A&B did.

On May 2, 2016, after the Director issued the April 2016 As-Applied Order, A&B filed *A&B Petition for Reconsideration and Request for Hearing Re: April As-Applied Order* to "request[] reconsideration of the Director's calculation that A&B's 'proportionate share of the predicted DS of 44,200 acre-feet is 3,463 acre-feet.'" (P. 2.)

On May 5, 2023, after the Director issued the April 2023 As-Applied Order, A&B filed *Surface Water Coalition's Request for Hearing and Statement of Issues* to challenge whether A&B's storage obligation "is correctly based upon A&B's actual diversion and use of water rights that are subject to the identified curtailment date," and whether "the steady-state use of the ESPAM 2.2 in identifying A&B's proportionate share is consistent with the transient use of the model." (P. 2-3.)

A&B obviously had a full and fair opportunity to litigate the issue of how storage water obligations are calculated because it raised the issue. The Order acknowledges this, stating: "A&B raised substantively similar issues 2016 and again in 2023." (Order, p. 9.)

Since the method by which storage water obligations are calculated was decided when the Director performed the calculation and assigned storage water obligations in the 2016 and 2023 As-Applied Orders, and since A&B had a full and fair opportunity to challenge that decision, it matters not whether the Director substantively discussed A&B's arguments in the *Post-Hearing Order* or the *Sixth Methodology Order*.

If A&B believed that, after raising the issue, the Director failed to adequately explain or justify his decision, A&B could have appealed the *Post-Hearing Order* or the *Sixth Methodology Order*. What A&B cannot do is raise the issue, go through a lengthy and expensive evidentiary hearing on every issue that might or should have been raised, and then two years later seek to relitigate the same issue that A&B raised in 2023. This is precisely what claim preclusion bars.

Therefore, IGWA respectfully requests that the Hearing Officer reconsider the Order, and grant summary judgment in favor of IGWA, barring A&B from relitigating the method by which the Director calculates A&B's proportionate storage water mitigation obligation.

Granting this petition would serve the interests of judicial economy and administrative efficiency. The doctrine of claim preclusion exists not only to protect parties from repeated litigation, but also to conserve the resources of the parties by preventing unnecessary re-litigation of issues that have already been, or could have been, resolved. Allowing A&B to relitigate issues it previously raised would result in duplicative proceedings, increased costs, and unnecessary consumption of the parties' time and resources. Applying claim preclusion here would streamline the hearing, focus the parties' efforts on any genuinely new issues, and promote the orderly and efficient administration of justice.

With the hearing scheduled to begin January 14, 2026, and considering that the issue raised in this petition is straight-forward and has been thoroughly brief already, IGWA respectfully requests that written comment on this petition pursuant to IDAPA 37.01.01.711 be allowed until no later than Wednesday, January 7, 2026, and a decision be entered by Friday, January 9, 2026.

RESPECTFULLY SUBMITTED this 5th day of January, 2026.

RACINE OLSON, PLLP

Attorneys for American Falls-Aberdeen Ground Water District

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **AMERICAN FALLS-ABERDEEN GROUND WATER DISTRICT'S JOINDER IN SUPPORT OF IDAHO GROUND WATER APPROPRIATORS, INC.'S PETITION FOR RECONSIDERATION**

COMES NOW American Falls-Aberdeen Ground Water District ("AFA"), by and through its undersigned counsel, and hereby joins in support of *Idaho Ground Water Appropriators, Inc.'s Petition for Reconsideration* filed in this matter on January 5, 2026.

Additionally, AFA adds that *Berkshire Invs., Ltd. Liab. Co. v. Taylor*, 153 Idaho 73 (2012), a case cited by the Hearing Officer (*see Order Denying Idaho Ground Water Appropriators, Inc.'s Motion for Summary Judgment* at 8 (Jan. 2, 2026)), directly applies to this proceeding and precludes A&B from relitigating the issues that it raised, elicited testimony on,

and argued about to the Department in June 2023 and could have appealed to the District Court, but chose to not do so. The relevant provisions from *Berkshire Invs.*, which relies on *Ticor Title Co. v. Stanion*, 144 Idaho 119 (2007), also cited by the Hearing Officer (*see Order* at 8-9), include:

> Judge Greenwood dismissed the Mailes' numerous claims on summary judgment, finding that they were barred by *res judicata* because they were (1) actually litigated in the prior case before Judge Wilper, or (2) could have been raised in that case. . . .
>
> …
>
> [C]laim preclusion "bars a subsequent action between the same parties upon the same claim or upon claims 'relating to the same cause of action.'" [Citation.] Under this doctrine, a claim is also precluded if it could have been brought in the previous action, regardless of whether it was actually brought, where: (1) the original action ended in final judgment on the merits, (2) the present claim involves the same parties as the original action, and (2) the present claim arises out of the same transaction or series of transactions as the original action. *Ticor Title Co. v. Stanion*, 144 Idaho 119, 125-27, 157 P.3d 613, 618-20 (2007).
>
> …
>
> Here, the Mailes have asked Judge Greenwood—and now this Court—to breathe new life into a lawsuit already laid to rest. However, the doctrine of *res judicata* exists to prevent exactly the type of resurrection they seek. . . .
>
> …
>
> Further, the underlying issue pervading the present case is also identical to that in the Mailes' original action. Although the Mailes attempt to repackage it in terms of fraud, perjury, negligence, and even racketeering, the central issue underlying all of their claims is the interpretation of the Disclaimer and its effect on the Taylors' beneficial status. . . . Because that issue was actually decided by this Court and Judge Wilper's final judgment on the merits was affirmed, all of the elements of issue preclusion are satisfied and apply to preclude the Mailes' claims.
>
> The Mailes' action is also barred by claim preclusion. First, as indicated above, the prior case ended in a final judgment on the merits, which was affirmed by this Court, and involved the same parties (and their privies) as the present case. Secondly, all of the claims in the present case arise out of the same transaction as did the original action—the sale of the real property to the Mailes. As indicated above, such claims are barred by *res judicata* whether actually raised in the prior

litigation or not. *Ticor Title Co*., 144 Idaho at 125-27, 157 P.3d at 618-20. As the district court noted, the Mailes' claims for quiet title, tortious interference with contract, tortious interference with a prospective business advantage, equitable estoppel, and quasi-estoppel were all actually raised in the prior case. Thus, they are now barred from being raised a second time.

Likewise, the balance of the Mailes' claims—abuse of process, negligence, negligence *per se*, gross negligence, and violation of Idaho Code chapter 18, title 78—also stem from that transaction and the subsequent lawsuit over that transaction. Thus, they are similarly barred. The Mailes argue that those claims were not ripe until the alleged misrepresentation resulted in Judge Wilper's adverse judgment. However, all of the conduct on which those claims are based—the execution of the Disclaimer, the filing of the Taylors' petition for appointment as trustees, and the filing of the amended complaint—occurred and was made known to the Mailes while *Taylor I* was pending, before Judge Wilper even proceeded to the merits of the case. Accordingly, any claim arising from that conduct ripened at that time and should have been raised. Indeed, as indicated above, the issue underlying those claims *was* raised to this Court and decided in favor of the Taylors.

…

The Mailes had their day in court, and Judge Greenwood was correct in denying them another.

Berkshire Invs., 153 Idaho at 80-83 (underlines added).

DATED this 5th day of January 2026.

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	**Docket No. CM-DC-2010-001** **PRELIMINARY ORDER GRANTING IGWA'S PETITION FOR RECONSIDERATION AND GRANTING IGWA'S MOTION FOR SUMMARY JUDGMENT**

BACKGROUND

This matter is on review following *IGWA's Petition for Reconsideration* ("*Petition*") of the *Order Denying IGWA's Motion for Summary Judgment* ("*Order*"). American Falls-Aberdeen Ground Water District has joined in support of the *Petition*. A&B Irrigation District ("A&B") and any other interested parties were offered the opportunity to submit additional briefing and elected to rely on the prior briefing. The *Petition* calls into question whether there were orders applying the methodology at issue which were appealable but not appealed, thereby precluding A&B from challenging the methodology utilized by the Department in determining A&B's mitigation obligation. The *Petition* presents authority and arguments that require re-examination of the preclusive effect of Department decisions.

The Department's Rules of Procedure authorize the filing of motions for summary judgment. IDAPA 37.01.01.220.03. A&B's initial petition requesting hearing challenges the method used by the Director to calculate A&B's mitigation obligation under the SWC delivery call. An administrative decision is appealable to the district court and ultimately to the Idaho Supreme Court. The record established in the administrative agency is the basis upon which a court decision will be made which will affirm the agency action unless that action was in violation of constitutional or statutory provisions, in excess of statutory authority, not supported by substantial evidence on the record, or arbitrary, capricious or an abuse of discretion. I.C. § 67-5279(3); *see Dupont v. Idaho State Bd. of Land Comm'rs*, 134 Idaho 618, 621 (2000); *Erickson v. Idaho Bd. of Licensure of Pro. Engineers & Pro. Land Surveyors*, 165 Idaho 644, 647 (2019). The opportunity to assert an issue is not open ended.

There have been proceedings in which the methodology at issue has been applied in final as-applied orders. That issue has not been appealed, although it was before the participants in this on-going litigation.

The detailed procedural background and findings of fact set forth in the *Order* apply here and are incorporated by reference.

LEGAL STANDARDS

Rule 220.03 authorizes the filing of motions for summary judgment in which the rules of civil procedure apply. Summary judgment is appropriate "if the pleadings, depositions, and admissions on file, together with the affidavits, if any, show that there is no genuine issue as to any material fact and that the moving party is entitled to a judgment as a matter of law." *Lee v. Litster*, 161 Idaho 546, 549 (2017) (quoting I.R.C.P. 56(c)). "If the evidence reveals no disputed issues of material fact, then only a question of law remains . . . ." *Id.*

ANALYSIS

IGWA maintains that claim preclusion bars A&B from raising the issues addressed in its petition because it had a full and fair opportunity to litigate how its proportionate share of the mitigation obligation is calculated during the 2023 methodology hearing. A&B argues that res judicata does not apply because the Director did not decide the mitigation obligation apportionment issue in a final judgment on the merits.

Claim preclusion prohibits a claim in a subsequent action when: "(1) the original action ended in final judgment on the merits, (2) the present claim involves the same parties as the original transaction, and (3) the present claim arises out of the same transaction or series of transactions as the original action." *Elsaesser v. Riverside Farms, Inc.*, 170 Idaho 502, 508 (2022) (quoting *Berkshire Invs., LLC v. Taylor*, 153 Idaho 73, 81 (2012)). Once these elements are met, "claim preclusion bars 'every matter offered and received to sustain or defeat the claim *but also as to every matter which might and should have been litigated* in the first suit.'" *Monitor Fin., L.C. v. Wildlife Ridge Ests., LLC*, 164 Idaho 555, 561 (2019) (quoting *Magic Valley Radiology, P.A. v. Kolouch*, 123 Idaho 434, 437 (1993)) (alteration in original).

The only disputed element[1] of claim preclusion is whether there was a final judgment on the merits. A final judgment does not require "the precise point or question in [the subsequent] action" to be "finally resolved and decided in the [prior] action." *Farmers Nat. Bank v. Shirey*, 126 Idaho 63, 70 (1994). Rather, the relevant inquiry is whether the party had a full and fair opportunity to litigate the issue. *Berkshire*, 153 Idaho at 82.

There is no dispute that A&B raised the same issues during the 2023 administrative proceeding. However, A&B did not develop the administrative record necessary to support those issues. In its post-hearing brief, A&B acknowledged that the Department calculated its proportionate share of the mitigation obligation using the steady-state method, but it did not develop any substantive argument beyond requesting consideration of acres that had transitioned from groundwater to surface water irrigation. *Surface Water Coalition Post-Hearing Brief*, at 12 (June 16, 2023). It is also undisputed that the Director did not address A&B's proportionate share issues in either the *Post-Hearing Order* or the *Sixth Methodology Order*. If A&B believed the Director erred by failing to address the issues, its remedy was to seek judicial review—similar to

[1] The first two elements are satisfied because the parties have remained the same, or have been similar, for the duration of the SWC delivery call proceeding, and A&B's issues relate to the methodology order applied in the delivery call proceeding.

how the Coalition of Cities sought judicial review of the *Post-Hearing Order*. *See City of Idaho Falls v. Idaho Dep't of Water Res.*, Docket No. 52102 (Dec. 31, 2025).

The 2023 hearing involved extensive testimony regarding transient and steady-state modeling for determining injury and calculating curtailment dates. When the Director amended the methodology order, he had no obligation to reexamine or modify the modeling used to calculate the proportionate share mitigation obligations in the absence of an administrative record supporting such a review. The responsibility to raise and pursue those issues rested with A&B. To the extent A&B objected to the implementation of the steps in the methodology order, such as adding senior groundwater rights to future curtailment lists, it had an opportunity to litigate those issues during the 2023 hearing as well.

A&B now challenges the method used by the Director to calculate A&B's mitigation obligation under the SWC delivery call. There has been a succession of proceedings in which the methodology at issue has been applied in final as-applied orders. The mitigation obligation issue has not been appealed, although it was clearly before the participants in this ongoing litigation. The method to calculate the mitigation obligation has been utilized in ongoing proceedings and has not been appealed. A&B had an obligation to develop the administrative record for the Director to consider the issues it raised in 2023, but A&B's failure to litigate the issues fully or seek judicial review precludes it from relitigating the matter now. Because A&B raised the issues in 2023, did not develop them in the administrative process to litigate them fully, and did not seek judicial review of the resulting orders from the 2023 hearing, all three elements of claim preclusion are satisfied. A&B is barred from relitigating these issues in this proceeding.

A&B raised a due process issue in its briefing. The order under review did not address this argument beyond determining it was moot. The record is clear that A&B had the opportunity to address its claims in earlier proceedings. There is no due process violation.

CONCLUSIONS OF LAW

The doctrine of claim preclusion bars A&B from raising the issues it raised in 2023 again in this proceeding. Accordingly, IGWA's motion for summary judgment is granted, and the hearing set for January 14 through 16, 2026, is vacated.

ORDER

IT IS HEREBY ORDERED that *Idaho Ground Water Appropriators, Inc.'s Petition for Reconsideration* and *Motion for Summary Judgment* is GRANTED.

IT IS FURTHER ORDERED that the hearing scheduled for January 14 through 16, 2026 in this matter is VACATED.

DATED this 8th day of January 2026.

GERALD F. SCHROEDER
Hearing Officer

CERTIFICATE OF SERVICE

I HEREBY CERTIFY that on this 8th day of January 2026, the above and foregoing, was served by the method indicated below, and addressed to the following:

EXPLANATORY INFORMATION TO ACCOMPANY A PRELIMINARY ORDER

(To be used in connection with actions when a hearing was **not** held.)

The accompanying document is a "**Preliminary Order**" issued by the Idaho Department of Water Resources ("Department") pursuant to Idaho Code § 67-5243. **This preliminary order can and will become a final order without further action of the Department, unless a party petitions for reconsideration, petitions for review, or requests a hearing as further described below:**

PETITION FOR RECONSIDERATION

(*See* Idaho Code § 67-5243(3))

Any party may file a petition for reconsideration of this preliminary order with the Department within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: the petition must be received by the Department within this fourteen (14) day period.** The presiding officer will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law.

PETITION FOR REVIEW (EXCEPTIONS)

(*See* Idaho Code § 67-5245)

Within fourteen (14) days after: (a) the service date of this preliminary order, (b) the service date of a denial of a petition for reconsideration of this preliminary order, or (c) the failure within twenty-one (21) days of the presiding officer to act on a petition for reconsideration of this preliminary order, any party may petition the Director in writing to review any part of this preliminary order by filing exceptions, and any supporting brief, with the Department.[1] Any parties opposing the exceptions shall have fourteen (14) days from the service date of the exceptions to file a brief. If the Director determines that oral argument is to be heard, the Director will provide reasonable notice to the parties of the place, date, and hour for the argument.

The Director will issue a final order on exceptions within fifty-six (56) days of receipt of the written briefs or oral argument, whichever is later, unless extended for good cause. The Director may remand the matter for or hold an evidentiary hearing if further factual development of the record is necessary before issuing a final order.

REQUEST FOR HEARING

(*See* Idaho Code § 42-1701A(3))

Unless a right to a hearing before the Department or the Water Resource Board is otherwise provided by statute, any person aggrieved by any final decision, determination, order or action of the Director of the Department and who has not previously been afforded an opportunity for a hearing on the matter may request a hearing pursuant to Idaho Code § 42-1701A(3). A written petition to the Director contesting the preliminary order and requesting a hearing must be filed with the Department

[1] The Director may decide to review this preliminary order upon his own motion. Should the Director decide to do so, the Director will provide written notice to the parties within the period the parties are allowed to petition the director for review of the preliminary order.

by any aggrieved person **within fifteen (15) days after service of this preliminary order**.

CERTIFICATE OF SERVICE

(*See* IDAPA 37.01.01.053, 37.01.01.202)

All documents filed with the Department in connection with a petition for reconsideration, petition for review, or a request for hearing of this preliminary order shall be served on all other parties to the proceedings in accordance with Rules of Procedure 53 and 202.

Attorneys for A&B Irrigation District

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **A&B IRRIGATION DISTRICT'S EXCEPTIONS TO PRELIMINARY ORDER**

COMES NOW, A&B IRRIGATION DISTRICT ("A&B or "District"), by and through counsel of record, pursuant to Idaho Code § 67-5245 and IDAPA 37.01.01.730.02.c[1], and hereby submits the following *Exceptions to Preliminary Order* in this matter. For the reasons set forth below, the Director should reverse the Hearing Officer's *Preliminary Order Granting IGWA's Petition for Reconsideration and Granting IGWA's Motion for Summary Judgment* ("*Prelim. Order*") and reschedule the administrative hearing.

[1] Citations to the *Rules of Procedure of the Idaho Department of Water Resources and the Water Resource Board* (IDAPA 37.01.01 et seq.) (3-18-22) will hereinafter be referred to shorthand as "Rule."

PROCEDURAL BACKGROUND

The Director summarized the facts related to the 2025 As Applied Orders and A&B's requests for hearing in the *Order Granting A&B Irrigation District's Request for Hearing, Consolidating Proceedings for Hearing, and Appointing Hearing Officer* (Sept. 3, 2025). In a nutshell, the July 2025 As Applied Order was the first time A&B's senior groundwater right 36-2080 (Sept. 9, 1948 priority date) has ever been subject to curtailment or a mitigation obligation in response to the SWC delivery call. Exercising its statutory right to request a hearing under section 42-1701A(3), A&B filed a petition, and the Director granted the same.

Following the pre-hearing conference, the parties participated in discovery, filed expert reports, and various motions.[2] On November 18, 2025 IGWA filed a motion for summary judgment requesting the Hearing Officer to rule that A&B is barred by the doctrine of res judicata from "challenging the method used by the Director to calculate its storage water mitigation obligations under the Methodology Order." *IGWA Motion* at 10. A&B filed its *Consolidated Response to AFA Motion / IGWA Motion for Summary Judgment* ("*A&B Resp.*") on December 9, 2025.[3] The Hearing Officer initially denied IGWA's motion, finding there was no final judgment on the merits and that the issue raised by A&B was not moot because it "raises a substantial public interest for interested parties to have a decision on this issue." *See Order Denying Idaho Ground Water Appropriators, Inc.'s Motion for Summary Judgment* at 8-11 (*"SJ Order*"). IGWA requested reconsideration and the Hearing Officer reversed his prior decision and granted IGWA's motion. *See Prelim. Order* at 3.

[2] American Falls-Aberdeen Ground Water District ("AFA") requested the Director to reconsider the order granting the request for hearing. The Director denied AFA's motion. *See Order Denying American Falls-Aberdeen Ground Water District's Motion to Reconsider Order Granting Hearing* (Dec. 22, 2025).

[3] A&B incorporates its response and arguments as though fully set forth herein.

STANDARD OF REVIEW

Idaho's Administrative Procedure Act ("APA") authorizes the Director to review preliminary orders issued by hearing officers. *See* I.C. § 67-5245. Parties are provided fourteen (14) days from the date of the order to file a petition for review and exceptions. *See* I.C. § 67-5245(2)(3); Rule 730.02.c. Opposing parties have fourteen (14) days to respond to any exceptions and the Director may schedule oral argument before issuing a final order. *See* I.C. § 67-5245(6); Rule 730.02.d, e.

Summary judgment requires the movant to show that there is no genuine dispute as to any material fact and the movant is entitled to judgment as a matter of law. *See Martin v. Thelma V. Garrett Living Trust*, 170 Idaho 1, 5, 506 P.3d 237, 241 (2022). The burden of proving the absence of material facts is on the moving party and the Department must liberally construe facts in the existing record in favor of the nonmoving party and draw all reasonable inferences from the record in favor of the nonmoving party. *See id.* When an action is tried before an agency without a jury, the Department can rule upon summary judgment despite the possibility of conflicting inferences arising from undisputed evidentiary facts. *See Nettleton v. Canyon Outdoor Media, LLC*, 163 Idaho 70, 73, 408 P.3d 68, 71 (2017).

Summary judgment is not appropriate in a case where there are disputed issues of material fact. *See American Land Title Co. v. Isaak*, 105 Idaho 600, 601, 671 P.2d 1063, 1064 (1983). This case concerns the mixed legal and technical question related to the Director's apportionment of a storage mitigation water obligation amongst junior priority ground water rights in 2025. The Hearing Officer erroneously granted IGWA's motion for summary judgment and A&B respectfully requests the Director to reverse for the reasons set forth below.

ARGUMENT

The context of A&B's prior requests for hearing and the various issues at play in 2023 is important for the Director's consideration. First, the apportionment of a storage water obligation to mitigate an in-season demand shortfall has never been the subject of a formal order from the Department. The issue has also never been heard or actually decided by the agency. Where IDWR previously used a steady-state application of ESPAM to identify a priority date for curtailment prior to 2023, that decision only affected groundwater rights with priorities junior to June 14, 1977.[4] IDWR changed to a transient state application of ESPA to identify a priority date for curtailment in the spring of 2023. The former Director changed his application of ESPAM to ensure that if curtailment was required, the predicted shortfall or injury would be remedied within the same irrigation season. Still, that decision did not impact any groundwater rights prior to December 30, 1953, that is until July 2025.

Although A&B requested a hearing on the April 2023 As Applied Order, the Director never formally granted that request or determined that the District's distinct issues would be heard. Instead, the Director scheduled a hearing on his own volition.[5] *See Notice of Hearing, Notice of Prehearing Conference, and Order Authorizing Discovery* (April 21, 2023). Jennifer Sukow's testimony was further limited to the change in model application for calculating a

[4] The highest predicted in-season shortfall occurred in the July 20, 2021 *Order Revising April Forecast Supply (Methodology Step 6*). That order predicted an in-season demand shortfall of 170,000 acre-feet, which only subjected rights junior to June 14, 1977 to curtailment or a mitigation obligation. A&B did not have to establish that it had to mitigate for any proportionate share predicted in that order. *See July 2021 Order* at 10, n. 3. All other predicted in-season demand shortfalls in the SWC delivery call impacted rights junior to June 19, 1977. Although the Director found a final demand shortfall of 246,100 acre-feet in the fall of 2021, no curtailment date or proportionate share of mitigation was ever determined in relation to that quantity. *See Final Order Establishing 2021 Reasonable Carryover (Methodology Step 9)* (Dec. 21, 2021).

[5] The April 2023 As Applied Order predicted an in-season demand shortfall of 75,200 acre-feet, implicating ground water rights junior to December 30, 1953. A&B's junior water rights subject to that order only affected 535 acres as it had previously converted the remaining 3,573 acres under those rights or portions thereof (36-15127A et al.) to a surface water supply beginning in 1995 and 2016.

curtailment priority date, not any issues related to apportioning a storage water mitigation obligation. *See Notice of Materials Department Witnesses May Rely Upon at Hearing and Intent to Take Official Notice* (May 5, 2023). The predicted in-season injury in 2023 was later reduced to "0 acre-feet" in July, and the state of what A&B was required to mitigate in 2024 was cast into uncertainty by the actions of the Ground Water Districts and their attempts to mitigate under numerous different plans over the course of several months. *See A&B Resp.* at 14-17.

A&B therefore had no reason to pursue any challenges against the Director's As Applied Orders in those years or request hearings that were unnecessary, particularly as they would have applied to water rights converted to a surface water supply that carried no mitigation obligation or curtailment impact. That all changed in 2025 when the July As Applied Order impacted A&B's senior groundwater right no. 36-2080. Where the Director concluded that A&B had to either curtail all 62,604 acres under its 1948 water right or mitigate its proportionate share of the storage obligation for the first time in the history of the SWC delivery call, the time was ripe to challenge that decision and have a full administrative hearing to create a record on the issue.

As explained below, A&B takes exception to the Hearing Officer's decision to grant IGWA's motion for summary judgment. The Director should reverse the Hearing Officer and either remand the proceeding for the previously scheduled hearing or preside over the hearing as authorized by Idaho law. *See* I.C. § 67-5245(6)(b), (c).

I. Res Judicata Does Not Bar A&B's Request for Hearing or the Director's Decision to Hold a Hearing and Receive Evidence Concerning the Proportionate Share Calculation for Storage Mitigation.

IGWA alleges that res judicata precludes "A&B from challenging the method by which the Director calculates A&B's proportionate storage water mitigation obligations because A&B could have and did raise these issues previously in this action." *IGWA's Motion for Summary*

Judgment at 6. The Hearing Officer summarized the elements of the defense as follows:

> Claim preclusion prohibits a claim in a subsequent action when: "(1) the original action ended in a final judgment on the merits, (2) the present claim involves the same parties as the original transaction, and (3) the present claim arises out of the same transaction or series of transactions as the original action." *Elsaesser v. Riverside Farms, Inc.*, 170 Idaho 502, 508 (2022) (quoting *Berkshire Invs., LLC v. Taylor*, 153 Idaho 73, 81 (2012)). Once these elements are met, "claim preclusion bars 'every matter offered and received to sustain or defeat the claim *but also every matter which might and should have been litigated* in the first suit." *Monitor Fin., L.C. v. Wildlife Ridge Ests., LLC*, 164 Idaho 555, 561 (2019) (quoting *Magic Valley Radiology, P.A. v. Kolouch*, 123 Idaho 434, 437 (1993) (alteration in original).

Prelim. Order at 2.

The Hearing Officer initially concluded there was no prior final judgment on the merits and therefore IGWA's motion should be denied. *See SJ Order* at 7-9. On reconsideration, the Hearing Officer reversed course and concluded that a final decision on the issue was not required and that "the relevant inquiry is whether the party had a full and fair opportunity to litigate the issue."[6] *Prelim. Order* at 2. Contrary to the Hearing Officer's conclusion, A&B has had no such opportunity, particularly since its 1948 water right has never been subject to curtailment or a defined mitigation obligation.[7]

---

[6] The Hearing Officer relied upon this statement from *Berkshire Invs., LLC v. Taylor*, 153 Idaho 73, 82, 278 P.3d 943, 952 (2012), a case where the Idaho Supreme Court found the elements of issue preclusion applied because all of the Appellant's claims "hinge on a single issue that we already disposed of in *Taylor II* – whether the Disclaimer in fact divested the Taylors of standing to challenge the real estate transaction as beneficiaries." The Court found that it was "undisputed" that the Disclaimer "was raised as an issue to this Court and expressly resolved." 153 Idaho at 82, 278 P.3d at 952. The facts before the Director in this case are readily distinguishable as application of the curtailment order or a mitigation obligation to A&B's senior water right was not an "issue" previously raised or "expressly decided" by IDWR. Accordingly, the context of the Court's findings in *Berkshire* are unique and do not extend to the facts in this case.

[7] A&B's water rights are individual property right interests. *See* I.C. § 55-101; *see also*, *Eagle Creek Irr. Co. Inc. v. A.C. & C.E. Investments, Inc.*, 165 Idaho 467, 476, 447 P.3d 915, 924 (2019); *Clear Springs Foods. Inc. v. Spackman*, 150 Idaho 790, 707, 252 P.3d 71, 78 (2011) ("When one has legally acquired a water right, he has a property right that cannot be taken from him for public or private use except by due process of law and upon just compensation being paid therefor").

The Hearing Officer relied upon the fact A&B had requested a hearing on application of the proportionate share calculation to its water rights[8] junior to December 30, 1953 in 2023 to bar A&B's July 2025 request for hearing, which for the first time included water right no. 36-2080. *See id.* at 2. A&B's issues as they related to its junior water rights were not actually heard at the June 2023 hearing or determined by the Director, yet the Hearing Officer maintains that A&B should have appealed the Director's *Post-Hearing Order* or the *Sixth Methodology Order*. *See id.* The Hearing Officer is mistaken on both points.

First, an appeal of the *Post-Hearing Order* would have been denied as a fruitless exercise. *See City of Idaho Falls et al. v. IDWR*, 2025 WL 3771308, at *4-5 (Idaho 2025). The Supreme Court plainly held that the *Post-Hearing Order* was not an "operative order" that could be appealed. *Id.* Accordingly, that is not a valid reason to bar A&B's present request for hearing.

Next, the *Sixth Methodology Order* does not set out the procedure for determining a proportionate share of a storage mitigation obligation. Instead, the order only addressed how the model would be used to determine a curtailment priority date, the issue actually litigated and heard at the June 2023 hearing. *See Sixth Methodology Order* at 31-33, 42-45. The Hearing Officer believes that it was A&B's obligation to appeal the Director's decision not to include findings and a determination on an issue that was not actually heard. *See Prelim. Order* at 3. However, the remedy for any appeal would have been a remand to the agency to develop the missing record, the exact position the parties have been diligently progressing toward over the past six months. *See* I.C. § 67-5279(2).

[8] The only water rights subject to curtailment or a mitigation obligation pursuant to the April 2023 As Applied Order were the following: 36-16749, 36-15127A, 36-15192, 36-15193A, 36-15194A, 36-15195A, 36-15196A, 36-15193B, 36-15194B, 36-15195B, 36-15196B, and 36-15127B. A&B's senior water right 36-2080 was not subject to any order by the Director in 2023 or 2024.

The Hearing Officer completely overlooks the fact that the July 2025 As Applied Order directly impacted A&B's senior right 36-2080 and that the District had a statutory right to seek relief before the agency on that final order. *See Explanatory Information to Accompany Final Order* attached to *Order Revising April 2025 Forecast Supply and Continuing May 16, 2025 Curtailment Order (Methodology Steps 5 & 6)*; *see also*, I.C. § 42-1701A(3). A&B was required to request a hearing and could not have simply appealed the order to district court. *See* I.C. § 42-5271(1).

To that end, the *Prelim. Order* fails to address a key limitation to claim preclusion: lack of ripeness. The Idaho Supreme Court has long recognized that claim preclusion is "not applicable where matters raised in the second suit were not ripe for adjudication in the prior action." *See Bell Rapids Mut. Irr. Co. v. Hausner*, 126 Idaho 752, 753-54, 890 P.2d 338, 339-40 (1995) (quoting *Diamond v. Farmers Grp.*, Inc., 119 Idaho 146, 149, 804 P.2d 319, 322 (1990), which, in turn, cites *Duthie v. Lewiston* Gun Club, 104 Idaho 751, 663 P.2d 287 (1983)). This limitation was not addressed by the Hearing Officer even though it was raised in A&B's response brief. *See A&B Resp.* at 23. Because the *Prelim. Order* does not address lack of ripeness and because lack of ripeness precludes a finding a of claim preclusion, A&B respectfully takes exception with the Hearing Officer's decision.

"Ripeness asks whether there is any need for court action at the present time. The purpose of the ripeness requirement is to prevent courts from entangling themselves in *purely abstract disagreements*." *Roy v. Idaho Dep't of Health & Welfare*, 174 Idaho 375, 382, 555 P.3d 676, 683 (2024) (citations and internal quotation marks omitted) (italics in original). A case is ripe for adjudication when it poses "more than a theoretical or potential controversy." *Id.* A claim is considered to have been ripe in the "first/prior suit" only if all of the conduct that formed the

basis of the claim occurred or was known to the plaintiff before the court proceeded to the merits of the first suit. *See Berkshire Invs., LLC*, 153 Idaho at 83, 278 P.3d at 953 ("[A]ll of the conduct on which those claims are based … occurred and was made known to [plaintiffs] while [the first suit] was pending, before Judge Wilper even proceeded to the merits of the case. Accordingly, any claim arising from that conduct ripened at that time and should have been raised."); *see also, generally, Sadid v. Vailas*, 936 F. Supp. 2d 1207, 1219–21 (D. Idaho 2013) (examining, *inter alia*, *Berkshire* to identify governing contours of Idaho's ripeness doctrine).

Here, the *Prelim. Order* avers that A&B's present claim of injury to its senior water right—water right no. 36-2080—could have been raised in the 2023 proceedings. But the Hearing Officer fails to acknowledge that A&B's senior water right was *not actually subject to curtailment or any mitigation obligation* in 2023. The present injury-in-fact to the senior water right is the basis of A&B's July 2025 *Request for Hearing* and that was not known to A&B until the July 2025 As Applied Order was issued. Put another way, the conduct underlying A&B's *Request for Hearing* (an order of curtailment and mitigation obligation) was not known to A&B—and could not have been known, because it had not yet occurred—at the time the Department was evaluating challenges to the *Fifth Methodology Order* and the April 2023 As Applied Order. And such harm could not have been reasonably foreseen, a fact borne out by the fluxes in the mitigation framework from 2023 to 2025 (e.g., multiple mitigation plans filed by groundwater districts, ongoing uncertainty in the implementation and approval of mitigation plans, indeterminate mitigation obligations).

Indeed, if A&B had raised the specter of future curtailment to its senior water right as a claim in 2023, such claim would have been built on multi-layered a foundation of "what ifs" and hypothetical scenarios. This would have epitomized "a theoretical or potential controversy." *Roy*,

174 Idaho at 382, 555 P.3d at 683. Further, depending upon future water supply conditions it is possible that A&B's senior water right may have never been subject to curtailment or a storage mitigation obligation.

Because A&B's present claim challenging the curtailment of its senior water right was not ripe in 2023, the issue of claim preclusion falls to the wayside and cannot serve as a basis for granting IGWA's *Motion for Summary Judgment*. A&B respectfully takes exception with the *Prelim. Order* and asks the Director to reverse the Hearing Officer accordingly.

Even notwithstanding lack of ripeness, the claim preclusion analysis in the *Prelim. Order* contains material errors in that it applied the improper evaluation for claim preclusion. Under the applicable principles of claim preclusion, A&B's *Request for Hearing* is plainly not barred by *res judicata*.

In the claim preclusion analysis, the *Prelim. Order* provides that "the relevant inquiry is whether the party had a full and fair opportunity to litigate the issue." *Prelim. Order* at 2 (citing *Berkshire Invs., LLC*, 153 Idaho at 82). But this is not so. The "full and fair opportunity" inquiry is one of the enumerated factors for determining *issue preclusion*, not claim preclusion. *See, e.g.*, *Carter v. Gateway Parks, LLC*, 168 Idaho 428, 440, 483 P.3d 971, 983 (2020) ("To successfully assert issue preclusion as a bar to relitigation of a claim, one must show … the party against whom the earlier decision was asserted had a full and fair opportunity to litigate the issue decided in the earlier case…."); *Peterson v. Priv. Wilderness, LLC*, 152 Idaho 691, 695, 273 P.3d 1284, 1288 (2012); *Kootenai Elec. Co-op., Inc. v. Lamar Corp.*, 148 Idaho 116, 120, 219 P.3d 440, 444 (2009) (same). IGWA's motion fails the issue preclusion analysis as the Hearing Officer already concluded that "those issues that IGWA and AFA now seek to preclude have never actually been decided in previous litigation." *SJ Order* at 9.

The Hearing Officer did not reconsider that finding, thus collateral estoppel or issue preclusion does not apply in this case. *See Berkshire Invs., LLC*, 153 Idaho at 81, 278 P.3d at 951 ("Collateral estoppel bars relitigation of an issue previously determined when: (1) the party against whom the earlier decision was asserted had a full and fair opportunity to litigate the issue decided in the earlier case; (2) the issued decided in the prior litigation was identical to the issue presented in the present action; (3) the issue sought to be precluded was actually decided in the prior litigation; (4) there was a final judgment on the merits in the prior litigation; and (5) the party against whom the issue is asserted was a party or in privity with a party to the litigation").

The proper inquiry for claim preclusion is whether the claim "might and should have been litigated in the first suit." *Ticor Title Co. v. Stanion*, 144 Idaho 119, 126, 157 P.3d 613, 620 (2007). The Idaho Supreme Court evaluates claims that "might and should have been litigated" under the "transactional approach" from the Restatement (Second) of Judgments § 24:

> As we said in *Joyce v. Murphy Land & Irrigation Co.*, 35 Idaho 549, 553, 208 P. 241, 242–43 (1922), "[T]he former adjudication concludes parties and privies not only as to every matter offered and received to sustain or defeat the claim, but also as to every matter which might and should have been litigated in the first suit." The prior adjudication "extinguishes all claims arising out of the same transaction or series of transactions out of which the cause of action arose." *Diamond v. Farmers Group, Inc.*, 119 Idaho 146, 150, 804 P.2d 319, 323 (1990). The determination of whether a group of facts constitutes a "transaction" is to be made "pragmatically, giving weight to such considerations as **whether the facts are related in time, space, origin, or motivation, whether they form a convenient trial unit, and whether their treatment as a unit conforms to the parties' expectations or business understanding or usage**." Restatement (Second) of Judgments § 24 (1982).

Andrus v. Nicholson, 145 Idaho 774, 777, 186 P.3d 630, 633 (2008) (emphasis added).

The Idaho Supreme Court further described the test for claim and issue preclusion in *Farmers Nat. Bank v. Shirey*, 126 Idaho 63, 878 P.2d 762 (1994):

> Justice Budge distinguished cases where the issue arises upon the same claim or demand from those based upon a different claim or demand. In the former, in an action between the same parties upon the same claim or demand, the *Joyce* rule

> applies. In the second type, an action between the same parties upon a different claim or demand, the *Marshall* rule applies, and the judgment in the prior action operates as an estoppel only as to those precise matters which were in fact decided.

126 Idaho at 70, 878 P.2d at 769.

A&B's present claim is not barred by claim preclusion for the same reasons that it was unripe in 2023. Again, the crux of A&B's present claim is that its senior water right is actually subject to a curtailment—something did not happen in 2023 or the intervening period. The curtailment originated in a July 2025 order that was (obviously) not in existence in 2023. Absent an actual curtailment or order requiring a defined storage water mitigation obligation, A&B had no concrete motivation for bringing a claim in defense of its senior water right. Moreover, this is not a case involving the same property right interests. *See e.g. Monitor Finance, L.C. v. Wildlife Ridge Estates, LLC*, 164 Idaho 555, 561, 433 P.3d 183, 189 (2019) ("In the original action, Wildlife LLC sought to quiet title to the identical property encumbered by the deed of trust given by M&S to the Beneficiaries. Hence the present claim arises out of the same transaction as the original action").

Under the "transactional approach," A&B's present claim bears no temporal, motivational, or origin-of-claim connection to the matters adjudicated in 2023. Again, the issue was not actually heard or decided by the Director at the June 2023 hearing. Further, A&B's senior water right was not even implicated at that time. For these reasons, A&B respectfully takes exception to the Hearing Officer's finding of claim preclusion and requests the Director to reverse the decision.

Moreover, even if the Director finds that the res judicata doctrine applies, exceptions have been recognized, including specifically in IDWR administrative proceedings. In *Sagewillow, Inc. v. IDWR*, 138 Idaho 831, 70 P.3d 669 (2003), the applicant Sagewillow argued

that res judicata and collateral estoppel prevented the Department from declaring that its water right had been forfeited since the agency had approved a prior transfer. *See* 138 Idaho at 844, 70 P.3d at 682. The Court described previously recognized exceptions to res judicata as follows:

> For policy reasons, however, we have recognized certain exceptions to the rule stated in *Joyce*. *Heaney v. Bd. of Trustees of Garden Valley School Dist. No. 71*, 98 Idaho 900, 575 P.2d 498 (1978) (although former school superintendent could have joined his claim for damages for breach of contract with his petition in earlier action for writ of mandamus to compel reinstatement, his failure to do so did not bar his damages claim); *Duthie v. Lewiston Gun Club*, 104 Idaho 751, 663 (1983) (where gun club's lawsuit to recover damages in trespass based upon homeowner's connection to gun club's waterline was dismissed upon a finding that gun club had granted homeowner a license to do so, and homeowner subsequently brought a lawsuit against the gun club because it later cut and capped the waterline, the judgment in the first lawsuit did not preclude litigation in the second lawsuit of the issue of whether the license was revocable because that issue was not ripe for trial until the license was actually revoked); *Nash v. Overholser*, 114 Idaho 461, 757 P.2d 1180 (1988) (although tort action against spouse for assault and battery could have been brought in divorce proceeding, judgment in divorce action did not bar later tort action because mandatory joinder of tort claims with equitable divorce proceedings may be undesirable, as well as unfair).

138 Idaho at 844-45, 70 P.3d at 682-83.

The Court then concluded that res judicata did not apply to IDWR's forfeiture finding on the basis that "if forfeiture or abandonment is not actually raised as an issue in a proceeding to transfer the point of diversion or place of use of a water right, the final order in the transfer proceeding is not res judicata on the issue of whether the water right at issue had been forfeited or abandoned." *Id.* Similarly, there is no basis for the Department to conclude that the 2023 orders, including the *Sixth Methodology Order*, operate to bar A&B's challenge to the July 2025 As Applied Order as to curtailment or the storage water mitigation obligation assigned to A&B's senior water right. *See also*, *Bell Rapids Mutual Irr. Co.*, 126 Idaho 752, 890 P.2d 338 (Irrigation company's unsuccessful lawsuit to collect assessments from 1988-1991 did not bar company's subsequent claim and case to collect assessments levied in 1992).

Furthermore, the Hearing Officer initially recognized that it was in the public interest to have the issue fully heard by the agency, and such a finding further warrants application of an exception to res judicata in this case. *See SJ Order* at 11 ("how the Department calculates the mitigation obligations and how it implements the curtailment order raises a substantial public interest given the methodology resets every irrigation season").

Receiving evidence on IDWR's apportionment of the mitigation obligation, and how that relates to its identification of a curtailment priority date, is an important issue that should be analyzed by the Director with a complete administrative record. A&B filed a proper petition to exhaust its administrative remedies and at a minimum the Director can find that an exception to res judicata exists to reverse the Hearing Officer's decision and hold the hearing that was initially granted.

A&B respectfully requests the Director to reverse the *Prelim. Order* and find that res judicata does not bar the District's requests for hearing.

II. The Director Should Reverse the Hearing Officer's Decision on Due Process Grounds.

The Hearing Officer did not specifically address A&B's due process argument other than to generally conclude "A&B had the opportunity to address its claims in earlier proceedings."[9] *Prelim. Order* at 3. The Director should reverse this finding upon a thorough due process analysis. Such a determination warrants denying IGWA's motion for summary judgment.

The United States and Idaho Constitutions prevent state deprivations of "life, liberty, or property, without due process of law. U.S. Const., Amend XIV, § 1; Idaho Const., Art. 1, § 13; *see Manwaring Investments, L.C. v. City of Blackfoot*, 162 Idaho 763, 773, 405 P.3d 22, 32

[9] The Hearing Officer initially found it was not necessary to address A&B's due process arguments on the basis that "[a] hearing will be held which satisfies A&B's concerns." *See SJ Order* at 11-12.

(2017). Due process has a procedural and substantive component. *See id.* Under the two-step analysis a decision-maker must determine whether an individual's threatened interest is a liberty or property interest under the Fourteenth Amendment, and next what process is due. *See South Valley Ground Water Dist. v. IDWR*, 173 Idaho 762, 794, 548 P.3d 734, 766 (2024).

The Idaho Supreme Court described the due process standard as follows:

> The Fourteenth Amendment of the U.S. Constitution guarantees procedural due process of law. The minimal requirements of procedural due process relate to notice and hearing in the deprivation of a significant life, liberty, or property interest. A procedural due process inquiry is focused on determining whether the procedure employed is fair. Due process is not a rigid doctrine; rather, it calls for such procedural protections as are warranted by a particular situation. The procedure required is merely that to ensure that a person is not arbitrarily deprived of his or her rights. **The opportunity to be heard must occur at a meaningful time and in a meaningful manner.**

Doe I v. John Doe (2024-23), 175 Idaho 412, 566 P.3d 409, 429–30 (2025) (emphasis added).

Water rights in Idaho are real property interests. *See* I.C. § 55-101. The Idaho Supreme Court has specifically explained:

> We agree that **individual water rights** are real property rights which must be afforded the protection of due process of law before they may be taken by the state.

Nettleton v. Higginson, 98 Idaho 87, 90, 558 P.2d 1048, 1051 (1977) (emphasis added); *see also*, *In re Idaho Dept. of Water Resources Amended Final Order Creating Water Dist. No. 170*, 148 Idaho 200, 213, 220 P.3d 318, 331 (2009).

In the context of conjunctive administration cases, the Court has specifically found:

> Whether or not curtailment of water use can be ordered without prior notice or an opportunity for a hearing depends upon whether the three requirements are met under the circumstances of a particular delivery call or curtailment. *See Nettleton v. Higginson,* 98 Idaho 87, 92, 558 P.2d 1048, 1053 (1977) ("We find the above three requirements to be met in the *present case* ...."). (Emphasis added.) In the instant case, the record does not show that there was a special need for very prompt action without notice and an opportunity for a hearing. The groundwater pumping did not cause a sudden loss of water discharge from the springs. The flow from the springs at issue had been gradually declining over a number of years. Curtailment would not quickly restore the spring flows.

> The Director found that "[t]he effects of curtailment may be years to be realized." **Under these circumstances, the Director abused his discretion by issuing the curtailment orders without prior notice to those affected and an opportunity for a hearing**.
>
> However, that does not invalidate the curtailment orders that are the subject of this appeal. The Groundwater Users were given notice and a hearing before the Director issued his final order, and it is that order which is the subject of this appeal. That they may have initially been denied due process with respect to the curtailment orders issued in May and July 2005 does not invalidate the final order issued in July 2008 after the hearing.

Clear Springs Foods, Inc. v. Spackman, 150 Idaho 790, 815–16, 252 P.3d 71, 96–97 (2011) (emphasis added).

Providing a hearing on the challenged agency action is a common thread in the above-referenced cases.[10] In this case due process required IDWR to provide A&B with an opportunity for a hearing "at a meaningful time and in a meaningful manner" prior to curtailment or implementation of a required storage water mitigation obligation flowing from the July 2025 As Applied Order. The Director granted A&B's request for hearing. *See Order Granting A&B Irrigation District's Requests for Hearing* (Sept. 3, 2025). However, in order to satisfy the District's right to due process, an actual hearing must be held. *See e.g. City of Boise v. Industrial Com'n*, 129 Idaho 906, 910, 935 P.2d 169, 173 (1997) ("Procedural due process is an essential requirement of the administrative process . . .").

The Hearing Officer's decision to grant IGWA's motion and vacate the scheduled hearing, on the mistaken grounds of res judicata, violated A&B's constitutional right to a hearing. *See Prelim. Order* at 3. The Hearing Officer's reason that "A&B had the opportunity to address its claims in earlier proceedings" is incorrect. Again, at most, that basis would only

[10] The Idaho APA sets for the procedures required for a hearing that comport with due process. *See* I.C. § 67-5242.

apply to A&B's junior priority water rights, not its senior water right 36-2080.[11] Whereas the Idaho Supreme Court has expressly recognized that "individual" water rights are distinct property right interests protected by due process, the Hearing Officer had no legal basis to infer the 2023 hearing provided a hearing "at a meaningful time and a meaningful manner" as to A&B's senior water right.[12] *See Nettleton*, 98 Idaho at 90, 558 P.2d at 1051.

Although the June 2023 hearing involved the same parties, including A&B, that does not absolve the fact that the relevant agency orders had no application to water right 36-2080. The scope of the hearing did not address A&B's issue, and its senior 1948 water right not implicated in any way at that time. Accordingly, A&B had no basis to challenge IDWR's application of a proposed curtailment or mitigation obligation assigned to its senior water right. Any such request would have been "speculative," creating a "hypothetical" record that may have never been realized.

Clearly, the June 2023 hearing did not constitute a hearing "at a meaningful time and a meaningful manner" that would satisfy A&B's right to due process. The Hearing Officer's decision should be reversed for this reason as well.

[11] Since the Director never granted A&B's 2023 request for hearing, limited the scope of testimony of IDWR witnesses, and never received evidence on the issue, A&B submits that no hearing has been held on the issue as it relates to any of A&B's water rights. *See A&B Resp.* at 8-18. The fact that the Ground Water Districts were attempting, and initially allowed, to mitigate under a variety of mitigation plans clouded what IDWR would actually require A&B to mitigate for in 2023 and 2024 as well. *See id.* This overarching confusion, coupled with the fact A&B ultimately did not have a mitigation obligation in 2023 lends support to the fact there was no reason to pursue the issue to hearing at that time.

[12] For example, if a person owned separate parcels of property and requested approval for a land use change on one, the local government's decision as to that particular parcel would not be dispositive or preclude the person's proposed change or right to due process and a hearing on the other parcel.

III. If the Director Affirms the Preliminary Order he Should Consider Initiating a Proceeding to Address the Question for All Interested Parties.

If the Director affirms the Hearing Officer he should consider initiating a contested case to take evidence and evaluate what should be the proper and lawful standard for apportioning a storage water mitigation obligation to satisfy an in-season demand shortfall. *See* I.C. § 67-5240; Rule 104. The agency has previously initiated proceedings involving water right administration and accounting matters applicable to a broad swath of water users. *See e.g.*, *Notice of Administrative Proceeding, Pre-Hearing Conference, and Hearing* (Docket No. AA-WRA-2021-001) (May 4, 2021); *Notice of Contested Case and Formal Proceedings, and Notice of Status Conference* (Accounting for Federal On-Stream Reservoirs WD1) (Oct. 22, 2013); *Notice of Contested Case and Formal Proceedings, and Notice of Status Conference* (Accounting for Federal On-Stream Reservoirs WD63) (Oct. 22, 2013); *Notice of Intent to Issue License* (Water Right Permit No. 01-7011) (Sept. 5, 2007).

The agency currently has several pending mitigation plans filed by various groundwater users across the ESPA, and it is likely additional plans may be forthcoming with additional areas included within the ESPA area of common ground water supply. *See* I.C. § 42-233C. Providing any and all affected water users with a comprehensive and efficient forum to address this issue rather than piece-meal in multiple contested cases would be in the interests of the agency and water users.

As such, the Director should consider such an option in the event the *Prelim. Order* is affirmed. Although IGWA and AFA would presumably prefer to avoid the merits of this issue (even though it implicates their members' senior groundwater rights), it is an important matter for IDWR to finally address, particularly where changes have been made by prior Directors and having a full understanding of how all groundwater rights, both senior and junior, should be

properly administered moving forward is in the public interest. The Director, in an exercise of discretion, could initiate and hold such a proceeding to provide clarify and certainty for all water rights subject to the SWC delivery call.

CONCLUSION

The Hearing Officer misapplied the res judicata doctrine in reversing his initial summary judgment decision. A&B's issue related to the proportionate share of a mitigation obligation has never actually been heard or decided by the agency. In addition, the District's senior water right 36-2080, a separate and individual property right interest, has never been subject to curtailment or a mitigation obligation until the Director issued the July 2025 As Applied Order. For these reasons, as well as the paramount due process protections described above, the Director should reverse the *Prelim. Order* and remand or hold the administrative hearing as required by law.

A&B respectfully requests the Director to grant its exceptions.

DATED this 22nd day of January, 2026.

STATE OF IDAHO

DEPARTMENT OF WATER RESOURCES

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **IGWA'S RESPONSE TO A&B IRRIGATION DISTRICT'S EXCEPTIONS TO PRELIMINARY ORDER**

Idaho Ground Water Appropriators, Inc. ("IGWA"), through counsel, submits this brief in response to *A&B Irrigation District's Exceptions to Preliminary Order* ("A&B's Exceptions") filed January 22, 2026, in this matter. This brief is supported by pleadings and orders filed previously in this docket.

Introduction

A&B's Exceptions present this case as though the Department has never formally determined A&B's storage water mitigation obligations and as though A&B has never had an opportunity to litigate the method used to calculate those obligations. The administrative record proves otherwise.

For nearly a decade, the Department has issued as-applied orders calculating Demand Shortfall and assigning A&B a specific, enforceable storage water mitigation obligation. That occurred in 2016, in 2023, and again in 2024, each time using the same method A&B seeks to

challenge now. A&B understood that its proportionate share had been determined; it actively responded to those determinations by providing mitigation or by seeking agency review.

In 2023, A&B placed the storage apportionment method at issue, participated in a multi-day evidentiary hearing, and submitted briefing challenging the method's legality. The Director rejected A&B's position, and A&B chose not to appeal.

Nothing about the method changed in 2025. The set of water rights subject to curtailment expanded, but there was no change to the method used to calculate storage water obligations. The Director applied the same method in 2025 as he applied in 2016, 2023, and 2024. Idaho law does not permit a party to relitigate the same method every time it applies to a new water right.

A&B's attempts to avoid *res judicata* by invoking ripeness, due process, and distinctions between individual water rights fail as a matter of law. The hearing officer correctly concluded that A&B is barred from relitigating issues that were, or should have been, fully litigated years ago. Therefore, the Preliminary Order should be affirmed.

1. *Res judicata* bars A&B's challenge to the storage mitigation method applied in the 2025 As-Applied Orders.

A&B's principal argument rests on the premise that the Department has never formally decided how storage water mitigation obligations are apportioned and that the issue has never been heard. Both premises are incorrect.

a. The apportionment of storage water mitigation has been the subject of formal Department orders.

A&B asserts that "the apportionment of a storage water obligation to mitigate an in-season demand shortfall has never been the subject of a formal order from the Department." (A&B's Exceptions, p. 4.) That assertion is contradicted by the record.

As IGWA previously demonstrated, in 2016 the Director issued an as-applied order predicting a demand shortfall of 44,200 acre-feet and calculating a 3,463 acre-feet storage water mitigation obligation for A&B. (*Final Order Re April 2016 Forecast Supply*, Apr. 19, 2016, p. 5, fn. 4.) A&B challenged that calculation by petitioning for reconsideration. (*A&B Pet. for Recons./Req. for Hrg.*, May 2, 2016.) The Director partially granted relief by correcting the acreage use to calculate A&B's obligation. (*Order on Pet. for Recons. and Req. for Hrg.*, May 11, 2016.) Thus, contrary to A&B's assertion, the calculation of storage water obligations was the subject of a formal order from the Department.

The same occurred in 2023 when the director issued an as-applied order calculating a demand shortfall and assigning A&B a 498 acre-foot storage water mitigation obligation. (*Final Order Re April 2023 Forecast Supply*, Apr. 21, 2023, p. 5, fn. 5.) That was a final order, enforceable through curtailment.

These were formal agency orders applying a defined method to impose concrete obligations on A&B. A&B's statement to the contrary cannot be reconciled with the Department's own orders or A&B's response to them.

b. The storage mitigation method was decided when the Director performed and assigned the calculations.

A&B's related assertion that the issue "has never been heard or actually decided by the agency" misunderstands the nature of administrative decision making. (A&B's Exceptions, p. 4.)

The issue of how storage water obligations are calculated is decided when the Director performs the calculation and assigns a specific obligation in an as-applied order. Whether the order recounts the formula at length is immaterial; the determination is made when the obligation is imposed and backed by the threat of curtailment.

A&B's own conduct confirms this understanding. In 2016 and again in 2023, A&B challenged and, ultimately, complied with the assigned obligations. That conduct demonstrates that A&B knew its proportionate share had been determined.

c. A&B litigated the issue in the 2023 evidentiary hearing.

A&B contends that although it requested a hearing on the *April 2023 As-Applied Order*, the Director never formally granted the request or determined that A&B's distinct issues would be heard. (A&B's Exceptions, pp. 4-5.) The record shows otherwise.

In May 2023, A&B submitted a statement of issues challenging whether its proportionate storage water obligation was correctly calculated and whether the use of steady state modeling to determine A&B's share was legally appropriate. (*SWC's Req. for Hrg. and Stmt. of Issues*, May 5, 2023, pp. 2-3.) A four-day evidentiary hearing followed in June 2023. After the hearing, A&B filed a post-hearing brief again challenging the method used to calculate its proportionate share of the demand shortfall for storage mitigation purposes. (*SWC Post-Hrg. Br.*, June 16, 2023.) The Director then issued a post-hearing decision that did not grant the relief A&B requested. (*Post-Hrg. Order Re Fifth Amended Methodology Order*, July 19, 2023.) A&B did not appeal.

That sequence reflects full litigation of the issue, not its absence. A&B cannot now recast an unfavorable outcome and a decision not to appeal as a lack of opportunity to be heard.

The point is reinforced by the *April 2024 As-Applied Order*, which again calculated A&B's storage water mitigation obligation at 498 acre-feet using the same method applied in 2023. (*Final Order Re April 2024 Forecast Supply*, Apr. 18, 2024, p. 5, fn. 8.) A&B did not challenge that order either.

d. Nothing changed in 2025 about the storage mitigation method.

A&B argues that everything changed in 2025 because the As-Applied Order affected its senior groundwater right no. 36-2080. (A&B's Exceptions, p. 5.) What changed was only the number of water rights subject to curtailment, not the method by which storage mitigation obligations are calculated.

The Director applied the same method in 2025 that he applied to A&B in 2016, 2023, and 2024. The fact that the curtailment reached a more senior A&B water right does not mean A&B lacked a full and fair opportunity to challenge the method previously, when its other water rights were required to provide mitigation or face curtailment.

Under A&B's approach, the same party could relitigate the same method repeatedly as progressively senior rights are curtailed. The doctrine of *res judicata* exists to prevent exactly that result.

e. The as-applied orders issued in 2016, 2023 and 2024 were "operative."

A&B argues, citing *City of Idaho Falls et al. v. IDWR*, 2025 WL 3771308, at *4-5 (Idaho 2025), that it should be excused from appealing the As-Applied Orders because the *Post-Hearing Order* was not the "operative order" that could be appealed. (A&B's Exceptions, p. 7.) This argument is misplaced.

In *City of Idaho Falls*, the Supreme Court ruled that the appellants' challenge of the *Fifth Methodology Order* was ineffectual because it had been superseded by the *Sixth Methodology Order*. *Id*. By contrast, A&B is challenging as-applied orders that were not superseded.

f. The issue was ripe when A&B's rights were subject to curtailment in 2016 and 2023.

A&B further argues that the storage mitigation method was not ripe for review because only some of its rights were subject to curtailment in earlier years. (A&B's Exceptions, pp. 8-10.) Again, that argument fails.

The issue was ripe because A&B's water rights were in fact subject to curtailment and A&B was assigned defined, enforceable storage water obligations. The controversy was not hypothetical; it required A&B to act.

Ripeness does not require that every water right owned by a party be affected before a challenge may be brought. A&B's own challenges and compliance in 2016 and 2023 demonstrate that the issue was ripe well before 2025.

2. A&B's due process argument fails.

A&B contends that summary judgment violates due process because its 1948 water right was not subject to curtailment in 2023. (A&B's Exceptions, p. 14-17.) Due process requires notice and an opportunity to be heard at a meaningful time and in a meaningful manner, not a rehearing each time an existing method applies to an additional asset.

In 2023, A&B received notice, participated in a multi-day evidentiary hearing, presented argument, submitted post-hearing briefing, and obtained a final agency decision. That process satisfied due process requirements. A&B's preference to relitigate the same method when its impacts extend to other water rights does not create a constitutional deficiency.

3. The Director should reject A&B's call for a new Department initiated proceeding.

A&B asks the Director to initiate a new proceeding to litigate storage mitigation apportionment on a prospective basis. That request should be denied.

Res judicata applies with equal force to efforts to revive settled issues through new procedural vehicles. The questions A&B asks the Director to address now are the same questions A&B raised, or should have raised, and fully litigated in 2023. Launching a new proceeding would undermine finality and reward strategic delay.

Conclusion

The storage mitigation method A&B challenges has been repeatedly applied, formally ordered, and actually adjudicated. A&B raised the issue, participated in a full evidentiary hearing, and declined to appeal. Nothing about the method changed in 2025.

The hearing officer correctly applied *res judicata* and properly granted summary judgment. Therefore, the Director should deny A&B's Exceptions and affirm the Preliminary Order.

Dated this 3rd day of February, 2026.

Attorneys for American Falls-Aberdeen Ground Water District

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **AMERICAN FALLS-ABERDEEN GROUND WATER DISTRICT'S RESPONSE TO A&B IRRIGATION DISTRICT'S EXCEPTIONS TO PRELIMINARY ORDER**

COMES NOW American Falls-Aberdeen Ground Water District ("AFA"), by and through its undersigned counsel, pursuant to Rule 730.02.d of the Rules of Procedure[1] of the Idaho Department of Water Resources ("IDWR" or "Department"), and hereby responds to *A&B Irrigation District's Exceptions to Preliminary Order* ("*Exceptions*") dated January 22, 2026.

[1] Unless stated otherwise, any "Rules" referenced herein are from the Department's Rules of Procedure located at IDAPA 37.01.01.

AFA supports the *Preliminary Order Granting IGWA's Petition for Reconsideration and Granting IGWA's Motion for Summary Judgment* ("*Prelim. Order*") issued by the Hearing Officer, Hon. Gerald F. Schroeder (J., Ret.), on January 8, 2026, and, for the reasons set forth below, respectfully requests that the Director issue a final order adopting or affirming the same.

INTRODUCTION / SUMMARY OF ARGUMENT

The Hearing Officer correctly held the legal doctrine of res judicata bars A&B Irrigation District ("A&B") from relitigating the method by which the Department determines a ground water user's proportionate share of the predicted in-season demand shortfall (the "proportionate share" issues). *Prelim. Order* at 2-3. A&B's proportionate share issues were among the issues litigated at the hearing held in the captioned matter from June 6-9, 2023 (the "2023 hearing"). A&B's issues not only "*might and should have been litigated*" in the 2023 hearing, *Elsaesser v. Riverside Farms, Inc.*, 170 Idaho 502, 508 (2022) (emphasis in original), they *were litigated* in that hearing. Additionally, the Director has ruled on proportionate share issues on two other occasions, in 2016 and in 2024 in matters in which A&B was a participant. *Notice of Compliance with Order to Provide Staff Memo* (Dec. 30, 2025) at 8-10 ("*Sukow Memo*"). The Idaho legislature has also recognized that res judicata constrains the Department's authority to hold a hearing in this matter—under Idaho Code ("I.C.") § 42-1701A(3), A&B is not entitled to a hearing because A&B has "previously been afforded an opportunity for a hearing on the matter[.]"

A&B's 36-2080 water right, along with all of A&B's other water rights, is subject to the agency's proportionate share methods because of its unusual mitigation plan, under which it agreed to provide its proportionate share of the Demand Shortfall. Moreover, it has been subject to administration by the Department's proportionate share methods since A&B's mitigation plan

was adopted nearly 10 years ago; the Department's adoption of the transient method for determining curtailment (endorsed by A&B) in 2023 made the chance of such administration more likely. Nonetheless, A&B takes exception to the *Prelim. Order*, and argues it deserves a hearing on the grounds that 36-2080 (with a 1948 priority date), was not at risk of curtailment in 2023, so the "issues" were not "ripe" at the 2023 hearing. A&B's theory should be rejected, as it is a distortion of Idaho's doctrine of res judicata which if adopted would allow water users to avoid theories of preclusion through clever scoping of what was "at issue" in a prior proceeding.

A&B also seeks reversal of the *Prelim. Order* on the basis of due process violations. However, A&B has had all the process it is due during the 2023 (and 2016 and 2024) hearings referenced above. It has not shown that res judicata does not apply in this instance, and so due process is not a defense.

The Director should adopt or affirm the *Prelim. Order*.[2]

BACKGROUND

I. Timeline and Procedural Posture

a. Timeline associated with A&B's efforts to get a hearing in 2026.

Date	Event
April 16, 2025	Director issues the Final Order Regarding April 2025 Forecast Supply (Methodology Steps 1–3) ("Steps 1-3 Order")
April 29, 2025	A&B files a *Request for Hearing*
May 16, 2025	Director issues the *Final Order Curtailing Ground Water Rights Junior to August 28, 1955*
July 10, 2025	Director issues the *Order Revising April 2025 Forecast Supply and Continuing May 16, 2025 Curtailment Order (Methodology Steps 5 & 6)* ("*Steps 5-6 Order*")

[2] AFA incorporates as though fully set forth herein the arguments made in its *Motion to Reconsider Order Granting Hearing and Vacate Hearing or, alternatively, to Clarify the Scope of Hearing; Request for Expedited Ruling; Brief in Support* (Nov. 18, 2025) ("*AFA Motion*"); its *Reply in Support of Motion to Reconsider Order Granting Hearing and Vacate Hearing or, alternatively, to Clarify the Scope of Hearing; Request for Expedited Ruling* (Dec. 12, 2025) ("*AFA Reply*"); and its *Joinder in Support of Idaho Groundwater Appropriators, Inc.'s Petition for Reconsideration* (Jan. 5, 2026) ("*AFA Joinder*").

July 24, 2025	A&B files another *Request for Hearing*
July 24, 2025	A&B and the SWC file a *Joint Motion for Order Approving 2025 Stipulation*
July 25, 2025	Director issues the *Order Approving 2025 Stipulation as Compliance with Approved Mitigation Plan*
July 25, 2025	Director issues the *Final Order Curtailing Ground Water Rights Junior to October 11, 1900*
September 3, 2025	Director issues the *Order Granting A&B Irrigation District's Requests for Hearing, Consolidating Proceedings for Hearing, and Appointing Hearing Officer; Notice of Prehearing Conference*
September 11, 2025	Director issues the *Order Revising July 2025 Forecast Supply (Methodology Step 7-8)* ("*Steps 7-8 Order*")
September 17, 2025	AFA files a *Petition to Intervene*
October 7, 2025	Hearing Officer issues the *Order on Intervention, Authorizing Discovery, Email Service, and Scheduling; Order Granting Motion for Subpoena; Notice of Hearing*
November 18, 2025	IGWA files its *Motion for Summary Judgment* ("*IGWA Motion*") with the Hearing Officer
November 18, 2025	AFA files its *Motion* with the Director
December 9, 2025	A&B files *A&B's Consolidated Response to AFA Motion / IGWA Motion for Summary Judgment* ("*A&B Response*")
December 12, 2025	AFA files its *Reply*
December 16, 2025	IGWA files its *Reply Brief* ("*IGWA Reply*")
December 22, 2025	Director issues the *Order Denying AFA Ground Water District's Motion to Reconsider Order Granting Hearing* ("*Order Denying AFA Motion*")
December 30, 2025	IDWR files its *Sukow Memo*
January 2, 2026	Hearing Officer issues the *Order Denying Idaho Ground Water Appropriators, Inc.'s Motion for Summary Judgment* ("*Order Denying IGWA Motion*")
January 5, 2026	IGWA files its *Petition for Reconsideration* ("*IGWA Petition*")

January 5, 2026	AFA files its *Joinder*
January 8, 2026	Hearing Officer issues the *Prelim. Order*
January 22, 2026	A&B files its *Exceptions*

b. Procedural Posture

On September 3, 2025, the Director granted A&B's requests for hearing and appointed the Hearing Officer. On October 7, 2025, the Hearing Officer granted AFA's and other parties' intervention and authorized discovery. During discovery, AFA and IGWA realized that the issues in this proceeding were all too familiar—A&B was attempting to relitigate matters that were at issue in the hearing held from June 6-9, 2023.

Accordingly, on November 18, 2025, AFA and IGWA filed separate motions that sought the same relief: summary disposition of A&B's claims and vacation of the hearing set for January 12-14, 2026. On December 22, 2025, the Director declined to rule on the merits of the *AFA Motion* because he concluded it was "most appropriate" for the Hearing Officer to address the arguments, and he was "confident" that the Hearing Officer could do so. *Order Denying AFA Motion* at 3-4. In that order, the Director "acknowledge[d] that A&B has raised the proportionate share calculation issue in the past." *Id.* at 3. The Director also noted the similarities between the *AFA Motion* and the *IGWA Motion*, and left it for the Hearing Officer to consider the arguments in the *AFA Motion* and *AFA Reply*. *Id.* at 4.

On January 2, 2026, the Hearing Officer issued the *Order Denying IGWA Motion*. While acknowledging the issues A&B raised in this proceeding were litigated in the 2023 hearing, the Hearing Officer held claim preclusion did not apply here because there was not a "final judgment on the merits" in the 2023 hearing with respect to proportionate share issues, since the Director

did not resolve them in the July 19, 2023 *Post-Hearing Order* or *Sixth Methodology Order*. *Order Denying IGWA Motion* at 8. This was a misapplication of Idaho law.

On January 5, 2026, IGWA filed its *Petition* seeking reconsideration and AFA filed a *Joinder* to show the Hearing Officer that there was a final judgment on the merits in the 2023 hearing (the *Post-Hearing Order*), and, under the Idaho authorities cited by the Hearing Officer, the final judgment need not have resolved A&B's issues to be preclusive.[3] *See Order Denying IGWA Motion* at 8 ("The test does not require 'the precise point or question in [the subsequent] action' to be 'finally resolved and decided in the [prior] action.'") (quoting *Farmers Nat. Bank v. Shirey*, 126 Idaho 63, 70 (1994)). IGWA and AFA also showed that, if A&B was aggrieved by the *Post-Hearing Order* because it did not resolve these issues, A&B was obliged to appeal the order. *See IGWA Petition* at 3; *AFA Reply* at 7 (quoting *McQuillen v. Ammon*, 113 Idaho 719, 721 (1987)).

On January 8, 2026, upon reconsideration, the Hearing Officer corrected the error regarding the first element of claim preclusion (regarding final judgment) and, since the Hearing Officer already held that the second and third elements were satisfied (*see Order Denying IGWA Motion* at 8), granted the *IGWA Motion* and vacated the hearing. *Prelim. Order* at 3.

On January 22, 2026, A&B filed its exceptions to the *Prelim. Order*. AFA responds to A&B's arguments below.

ARGUMENT

I. The Hearing Officer Correctly Held that Claim Preclusion Bars A&B From Relitigating Proportionate Share Issues

a. The Issues "*Might and Should Have Been Litigated*" in the 2023 Hearing, and A&B's Failure to Seek Judicial Review Precludes Relitigation of the Issues

[3] A&B's counsel informed the Hearing Officer and the parties at the January 5, 2026 prehearing conference that A&B would stand on its prior briefing and forgo a response to IGWA's *Petition* and AFA's *Joinder*.

The Idaho Supreme Court has described claim preclusion and defined its elements as follows:

> Claim preclusion bars a subsequent action between the same parties upon the same claim or upon claims relating to the same cause of action. There are three elements to a claim preclusion defense:
>
> > Under this doctrine, a claim is also precluded if it could have been brought in the previous action, regardless of whether it was actually brought, where: (1) the original action ended in final judgment on the merits, (2) the present claim involves the same parties as the original transaction, and (3) the present claim arises out of the same transaction or series of transactions as the original action.
>
> When the three elements are established, claim preclusion bars every matter offered and received to sustain or defeat the claim *but also as to every matter which might and should have been litigated in the first suit*.

Elsaesser, 170 Idaho at 508 (emphasis in original) (citations and quotations omitted). The Court continued:

> Claim preclusion does not require resolution on the precise point or question in the present suit that was resolved in the first one. Rather, it looks to the transaction underlying the prior action[.]
>
> …
>
> To determine what constitutes a transaction, the court looks to such considerations as whether the facts are related in time, space, origin, or motivation, whether they form a convenient trial unit, and whether their treatment as a unit conforms to the parties' expectations or business understanding or usage. Claim preclusion may apply even when there is not a substantial overlap between the theories advanced in support of a claim, or in the evidence relating to those theories.

Id. (citations and quotations omitted).

The Hearing Officer correctly held that the "second and third elements are not as issue here[,]" *Order Denying IGWA Motion* at 8, so the "only disputed element . . . is whether there was a final judgment on the merits." *Prelim. Order* at 2. Upon reconsideration, the Hearing Officer correctly held that this first element is also satisfied because, at the 2023 hearing, A&B

raised, analyzed, elicited testimony on, and argued about proportionate share issues, and "A&B's failure to litigate the issues fully or seek judicial review precludes it from relitigating the matter now." *Prelim. Order* at 2-3; *accord McQuillen*, 113 Idaho at 721 ("If a litigant chooses not to continue to assert his rights after an intermediate tribunal has decided against him, he has concluded his litigation as effectively as though he had proceeded through the highest tribunal available to him") (quoting *Angel v. Bullington*, 330 U.S. 183, 189 (1947)).

The law is clear—A&B's issues need not have been specifically resolved in the *Post-Hearing Order* or *Sixth Methodology Order* for claim preclusion to apply. *Elsaesser*, 170 Idaho at 508. Nor does it matter whether A&B's issues were "actually heard" (although the record shows they were). *A&B Exceptions* at 7, 12. What matters is whether the proportionate share issues "*might and should have been litigated*" in the 2023 hearing. *Elsaesser*, 170 Idaho at 508 (emphasis in original). The issues indeed should have been litigated then, as described below.

b. The Director Should Reject A&B's Arguments that Res Judicata Does Not Apply

A review of the 2023 and 2016 proceedings demonstrates that the elements of res judicata are met, and Hearing Officer properly determined that res judicata does apply.

i. The 2023 Hearing Proceeding

These documents identified below show proportionate share issues were "actually heard" at the 2023 hearing, and in a "meaningful manner." *A&B Exceptions* at 7, 12, 15-17.

- the subject of an email from IDWR's attorney to multiple attorneys (May 3, 2023);[4]
- raised in the SWC's *Request for Hearing and Statement of Issues* (May 5, 2023);[5]

[4] *See Declaration of Travis L. Thompson in Support of A&B Response*, Ex. B (Dec. 9, 2025).

[5] *See City of Idaho Falls v. IDWR*, Case No. CV01-23-13238, *Settled Agency Hearing Record on Appeal* at 0264-65 (4th Jud. Dist., Ada Cnty., Sep. 28, 2023), available at https://idwr.idaho.gov/wp-

- analyzed in the *Groundwater Expert Report – 2023 Methodology* (May 30, 2023);[6]
- testified about by Jennifer Sukow at the hearing (June 6, 2023);[7] and
- argued about in the SWC's *Post-Hearing Brief* (June 16, 2023).[8]

The Director did not resolve these issues in the *Post-Hearing Order* nor the *Sixth Methodology Order*. A&B did not appeal either order, however, like IGWA did.

ii. The 2016 and 2024 Rulings

In addition to the 2023 hearing, parties have raised, and the Director has ruled on, proportionate share issues in both 2016 and 2024. On May 2, 2016, A&B filed a *Notice of Mitigation* that asked the Director to adjust his proportionate share determination for A&B based on A&B's aquifer enhancement activities (i.e., enrollment of acres in CREP and conversions). The Director denied A&B's request based, at least in part, on the following:

> The predicted DS is the shortfall predicted after the benefits of ongoing aquifer enhancement activities performed by A&B and other entities have already been realized. In other words, the predicted DS already accounts for the benefits of ongoing aquifer enhancement activities performed by A&B and other entities. At this time, the Director will not reduce the predicted DS, or any entity's proportionate share thereof, because of the effects of aquifer enhancement activities. However, the Director will construe A&B's request to account for predicted responses to the Near Blackfoot to Minidoka reaches of the Snake River resulting from its aquifer enhancement activities and to reduce its proportionate share accordingly as a motion pursuant to the Department's Rule of Procedure 260 requesting the agency to take action in a contested case.

content/uploads/sites/2/legal/CV01-23-13238/CV01-23-13238-20230928-Settled-Agency-Record-on-Appeal.pdf (last visited Jan. 30, 2026).

[6] *See id.* at 1209-10, 1214-15 (this expert report was co-authored by David Colvin, who authored A&B's expert reports in this proceeding).

[7] *See City of Idaho Falls v. IDWR*, Case No. CV01-23-13238, *Settled Agency Hearing Transcript on Appeal* at 100:23-102:7 (4th Jud. Dist., Ada Cnty., Sep. 28, 2023) (this testimony was elicited by Mr. Simpson, A&B's attorney in the 2023 hearing, on cross-examination), available at https://idwr.idaho.gov/wp-content/uploads/sites/2/legal/CV01-23-13238/CV01-23-13238-20230928-Settled-Agency-Hearing-Transcript-on-Appeal.pdf (last visited Jan. 30, 2026).

[8] *See Settled Agency Hearing Record on Appeal*, *supra* n.5, at 0935.

Order Determining Deficiency in A&B Irrigation District's Notice of Mitigation at 3 (May 11, 2016) ("*A&B Deficiency Order*"); *see also Sukow Memo* at 8 (quoting same). A&B requested a hearing but later elected to withdraw it. *See A&B Irrigation District's Notice of Withdrawal of Request for Hearing (Denial of Request Regarding Aquifer Actions)* (Jul. 1, 2016); *Order Granting A&B's Requests to Withdraw Request for Hearings Re: Credit for Aquifer Enhancement Activities and Standard of Mitigation* (Sep. 2, 2016).

On May 2, 2024, IGWA filed a *Request for Mitigation Credit for Aquifer Enhancement Activities (2024)* that was "like the mitigation credit request that was denied in the *A&B Deficiency Order*." *Final Order Denying IGWA's Request for Mitigation Credit for Aquifer Enhancement Activities (2024)* at 6 (May 15, 2024). In denying IGWA's request, the Director stated:

> The regression models used to predict in-season demand shortfall already account for the benefits of the enhancement activities performed by IGWA. . . . The predicted IDS is the shortfall predicted after the benefits of ongoing aquifer enhancement activities performed by the ground water Districts have already been realized. In other words, the predicted IDS already accounts for the benefits of ongoing aquifer enhancement activities performed by the Districts. Essentially, the predicted IDS would be higher if the aquifer enhancement activities had not occurred. . . . Therefore, the Director will not reduce the predicted demand shortfall, or any entity's proportionate share thereof, because the models used to predict in-season demand shortfall already account for the benefits of the enhancement activities performed by IGWA.

Id. at 4, 6; *see also Sukow Memo* at 10 (quoting same).

As noted in the *Sukow Memo*, the quoted conclusions address at least some of the issues that A&B seeks to relitigate here—whether A&B's proportionate share in 2025 should be adjusted based on, *inter alia*, A&B's aquifer enhancement activities. *See A&B Request for Hearing* at 1-2 (Apr. 29, 2025); *A&B Request for Hearing* at 1-2 (Jul. 24, 2025); *A&B Expert*

Rebuttal Report at 4-5 (Dec. 19, 2025) (purporting to quantify the benefits to the aquifer from A&B's soft conversions and enrollment in CREP).

iii. A&B's arguments that the issues were not "ripe" during the 2023 hearing should be rejected

A&B argues the 2023 hearing was not the right time or place to litigate proportionate share issues, asserting that its May 5, 2023 request for hearing was not formally granted and the scope of the hearing with respect to modeling was limited to determining curtailment dates (as opposed to determining proportionate shares). *A&B Exceptions* at 4-5, 17 n.11. First, there was no need for the Director to issue an order granting A&B's 2023 hearing request, as a hearing had already been set—a fact A&B acknowledges. *Id.* at 4. Second, A&B mischaracterizes the scope of the hearing, as the Director did not preclude Ms. Sukow from testifying about proportionate share issues (*see AFA Reply* at 4) and Ms. Sukow testified to such matters, including on cross-examination by A&B's counsel. *Id.*; *AFA Motion* at 4-5. These arguments should be rejected.

A&B further argues proportionate share issues were not "ripe" at the 2023 hearing because its 1948 water right was not at risk of curtailment at that time. This too should be rejected. At the 2023 hearing, A&B knew of the Department's method to determine proportionate shares. See *Declaration of Travis L. Thompson in Support of A&B Response*, Ex. B (May 3, 2023 email from G. Baxter to T. Budge et al.); *A&B Deficiency Order*. A&B was also fully aware at the 2023 hearing that it was a not a matter of if, but when, its 1948 water right would be at risk of curtailment due to the Department's switch to using transient modeling simulations to determine curtailment dates. *See AFA Reply* at 5-6 (discussing November 28, 2022 presentation showing that, if the demand shortfall exceeds 97,900 AF—which occurred in 2021 and 2022—all rights junior to 1900 are subject to curtailment). Notwithstanding, A&B

endorsed the Department's switch to transient modeling. *Id.* at 5 (citing *SWC's Post-hearing Brief* at 6-8 (June 16, 2023)).

Thus, A&B had all the "motivation" it needed to litigate proportionate share issues at the 2023 hearing, and it was a reasonable "expectation" that A&B would foreclose its chance to litigate them if it did not appeal the *Post-Hearing Order* or *Sixth Methodology Order*. *Elsaesser*, 170 Idaho at 508. The proportionate share issues were ripe in 2023, and A&B knew its 1948 water right would be at risk of curtailment in a future year, so no exception to the res judicata doctrine applies in this case. *See Berkshire Invs., Ltd. Liab. Co. v. Taylor*, 153 Idaho 73 (2012) (affirming district court's finding that claims "were barred by res judicata because they were (1) actually litigated in the prior case . . . or (2) could have been raised in that case," and rejecting appellant's argument that a ripeness exception applies because appellants knew of the conduct on which the claims were based at the time of the prior case, and thus "should have been raised").

Finally, A&B argues that it was not required to seek judicial review after the 2023 hearing because "the *Post-Hearing Order* was not an 'operative order' that could be appealed." *A&B Exceptions* at 7 (citing *City of Idaho Falls et al. v. IDWR*, 2025 WL 3771308, at *4-5 (Idaho 2025)). First, this argument takes the Idaho Supreme Court's statement out of context, as the court was focused on whether the *Sixth Methodology Order* was instead "the operative order" between the two orders. *Idaho Falls* at *8. Moreover, the Cities have sought rehearing in that case, so the ruling is not yet final. Second, to the extent the Court determines the Cities' appeal of the *Post-Hearing Order* was futile, A&B could have appealed the *Sixth Methodology Order*, like IGWA did[9], and raised issues about the Department's proportionate share methods. A&B did not.

[9] *See* Case No. CV01-23-13173 (4th Jud. Dist., Ada Cnty.).

In sum, the Hearing Officer correctly held that claim preclusion applies here. The proportionate share issues were ripe and should have been litigated, and, contrary to A&B's contention, those issues were "actually heard" at the 2023 hearing. A&B's failure to seek judicial review of the final orders following the 2023 hearing, even though the proportionate share issues were not resolved within, precludes A&B from relitigating them now.

c. Even if the Hearing Officer Conflated Claim Preclusion with Issue Preclusion, the Error was Harmless and the Director Should Affirm the *Prelim. Order* Regardless

A&B argues the *Prelim. Order* "contains material errors" because the Hearing Officer analyzed issue preclusion when discussing claim preclusion. *A&B Exceptions* at 10. While the Hearing Officer included statements about parties having an "opportunity to litigate" the issues, *Prelim. Order* at 2-3, the Hearing Officer correctly concluded that the "doctrine of claim preclusion bars A&B from raising the issues it raised in 2023 again in this proceeding." *Id.* at 3. As shown above, A&B *actually litigated* proportionate share issues at the 2023 hearing. Thus, regardless of whether the "full and fair opportunity to litigate," or "should have . . . litigated" standard applies, A&B easily meets it. *Id.* at 2.

Accordingly, any error in the Hearing Officer's analysis was harmless because it does not affect the result—a conclusion that claim preclusion applies in this proceeding—and does not warrant reversal of the *Prelim. Order*. *See Taylor v. AIA Servs. Corp.*, 151 Idaho 552, 559 (2011) ("This Court will not reverse the trial court if an alleged error is harmless. . . . [I]f an error did not affect a party's substantial rights or the error did not affect the result of the trial, the error is harmless and not grounds for reversal."). Additionally, the Director should affirm the *Prelim. Order* if there are any grounds to do so. *See Syringa Networks, Ltd. Liab. Co. v. Idaho Dep't of Admin.*, 159 Idaho 813, 827 (2016) (citations and quotations omitted) ("[I]t is well-settled that where an order of a lower court is correct, but based on an erroneous theory, the order will

be affirmed upon the correct theory. The Court will uphold the decision of a trial court if any alternative legal basis can be found to support it.").

d. The Director Should Reject A&B's Due Process Arguments

In addition to arguing res judicata does not apply, A&B alleges its rights to due process will be violated if a hearing is not held in this proceeding. *A&B Exceptions* at 14-17. These arguments rely on the false premise that res judicata does not apply because A&B's 1948 water right was not at risk of curtailment in 2023, discussed above. There is no due process violation for the Director to remedy here.

For the same reasons that proportionate share issues were "ripe" in the 2023 hearing, so too did A&B have a "meaningful" opportunity to litigate the issues at that time. The issues that A&B seeks to litigate now are virtually identical to those that A&B litigated in the 2023 hearing and had the opportunity to litigate in 2016. *See A&B Deficiency Order*. A&B has not shown that there is any difference in the issues simply because its 1948 water right became at risk of curtailment in 2025, nor has A&B alleged any change in the Department's method to determine proportionate shares between 2023, or even 2016, and now. *See AFA Reply* at 6. To grant a hearing every time a party requests a hearing, and allow it to relitigate issues previously raised and litigated, on the basis that one of the party's several water rights became at risk of curtailment would subject the Department and other parties to repetitious litigation, precisely what res judicata is designed to prevent. *Taylor*, 157 Idaho at 330-31; *Kootenai Elec.*, 148 Idaho at 122. Moreover, A&B's due process claims are rife with hypocrisy, as A&B is a member of the SWC that is urging the Department to vigorously regulate ground water pumping across the ESPA, and A&B also resisted the notion that the 2023 hearing violated the due process rights of

ground water users. *See Surface Water Coalition's Response Brief*, Case No. CV01-23-13173, at 11-19 (Ada Cnty. Dist. Ct., Jan. 19, 2024).[10]

II. The Director Should Reject A&B's Request to Initiate a New Contested Case to Review These Issues

In a last ditch effort to revive the its arguments about the Department's proportionate share methods, A&B requests in the alternative that the Director, in an exercise of discretion, initiate a new contested case to review A&B's issues. *A&B Exceptions* at 18-19. A&B contends that it is appropriate to do so for "matters applicable to a broad swath of water users." *Id.* at 18. As AFA explained in its *Reply* at page 9, however, there is not a substantial public interest in relitigating these issues because, *inter alia*, A&B is the only entity with an active approved mitigation plan that requires the Department to determine their proportionate share. *See, e.g.*, *Steps 1–3 Order* at 5 n.8; *A&B Expert Report* at 4, 7 (Nov. 7, 2025) (A&B's expert calling the district's mitigation plan "unique"). The Director should deny A&B's alternative request to initiate a new contested case.

CONCLUSION

The doctrine of res judicata has two "fundamental purposes": it (1) "serves the public interest in protecting the courts against the burdens of repetitious litigation," and (2) "advances the private interest in repose from the harassment of repetitive claims." *Taylor v. Riley*, 157 Idaho 323, 330-31 (2014); *Kootenai Elec. Coop., Inc. v. Lamar Corp.*, 148 Idaho 116, 122 (2009) ("A primary purpose of the res judicata doctrine is to prevent" a party from "obtain[ing] a further bite at the apple."). The Hearing Officer correctly concluded that res judicata (claim preclusion) applies in this proceeding. The Director should reject A&B's arguments, which it

[10] Available at https://idwr.idaho.gov/wp-content/uploads/sites/2/legal/CV01-23-13173/CV01-23-13173-20240119-Surface-Water-Coalitions-Response-Brief.pdf (last visited Feb. 2, 2026).

presented to the Hearing Officer and is now rehashing, that the doctrine does not apply and that its due process rights will be violated if the hearing remains vacated. The Director should issue a final order affirming or adopting the *Prelim. Order*.

DATED this 5th day of February 2026.

Maximilian C. Bricker, ISB #12283

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	**Docket No. CM-DC-2010-001** **ORDER EXTENDING DEADLINE TO ISSUE FINAL ORDER**

BACKGROUND

On April 29, 2025, A&B Irrigation District ("A&B") filed a request for hearing contesting the *Final Order Regarding April 2025 Forecast Supply (Methodology Steps 1–3)*. Then, on July 24, 2025, A&B filed another request for hearing contesting the *Order Revising April 2025 Forecast Supply and Continuing May 16, 2025 Curtailment Order (Methodology Steps 5 & 6)*. Both requests for hearing raised similar issues generally pertaining to how A&B's proportionate share obligation is calculated in the methodology as-applied orders.

On September 3, 2025, the Director granted A&B's requests for hearing and appointed a hearing officer to the matter. The Surface Water Coalition, American-Falls Aberdeen Ground Water District ("AFA"), Bonneville-Jefferson Ground Water District, Coalition of Cities, and the Idaho Ground Water Appropriators, Inc. ("IGWA") intervened.

On January 2, 2026, Hearing Officer Schroeder denied IGWA's motion for summary judgment, concluding that res judicata did not bar A&B from raising the issues again because the Director did not resolve those issues when A&B raised them in 2023. *Order Denying Idaho Ground Water Appropriators, Inc.'s Motion for Summary Judgment*, at 8.

On January 8, 2026, the Hearing Officer issued a preliminary order granting reconsideration and concluding that claim preclusion bars A&B from relitigating the issues that it had the opportunity to litigate in 2023. *Preliminary Order Granting IGWA's Petition for Reconsideration and Granting IGWA's Motion for Summary Judgment*, at 3 [hereinafter *Preliminary Order*].

On January 22, 2026, the Director timely received *A&B Irrigation District's Exceptions to Preliminary Order* ("*Exceptions*"). A&B asks the Director to reverse the Hearing Officer's *Preliminary Order* and either remand the matter for further hearing or preside over the hearing himself. A&B argues that claim preclusion does not bar A&B from litigating these issues now and that due process entitles it to a hearing. *Exceptions*, at 5, 17.

On February 3, 2026, IGWA filed a response to the *Exceptions*. Then on February 5, 2026, AFA filed a response to the *Exceptions*. *See American Falls-Aberdeen Ground Water District's Response to A&B Irrigation District's Exceptions to Preliminary Order* [hereinafter *AFA Response*].

ANALYSIS

The Department's Rule of Procedure 730.02.e requires the Director to issue a final order within 56 days of receipt of written briefs or oral argument regarding exceptions to a preliminary order, "whichever is later, unless extended for good cause." IDAPA 37.01.01.730.02.e. The last responsive brief filed in this contested case was the *AFA Response* filed on February 5, 2026. Therefore, the Director is required to issue a final order by April 2, 2026, unless "good cause" is shown to extend the deadline. *Id.*

Good cause exists to extend the deadline for the Director to issue a final order. The *Exceptions* and both responses raise legal issues that require careful consideration and extensive legal research. Additional time is needed prior to issuing a final order. Accordingly, the Director will extend the deadline for issuing a final order to April 17, 2026.

ORDER

IT IS HEREBY ORDERED that the deadline for the Director to issue a final order is EXTENDED to April 17, 2026.

DATED this 1st day of April 2026.

MATHEW WEAVER
Director

Sara Ajeti
Deputy Attorney General

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	**Docket No. CM-DC-2010-001** **FINAL ORDER DENYING A&B IRRIGATION DISTRICT'S EXCEPTIONS TO PRELIMINARY ORDER**

BACKGROUND

I. 2023 Procedural History

On April 21, 2023, the Director of the Idaho Department of Water Resources ("Department") issued the *Fifth Amended Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("*Fifth Methodology Order*") which established nine steps for determining material injury to members of the Surface Water Coalition ("SWC").[1] That same day, the Director issued the *Final Order Regarding April 2023 Forecast Supply Methodology Steps 1-3* ("*2023 April As-Applied Order*") and a *Notice of Hearing, Notice of Prehearing Conference, and Order Authorizing Discovery* ("*2023 Notice*"), anticipating the parties associated with the underlying SWC delivery call proceeding would file requests for hearing.[2]

On April 28, 2023, the Director held a prehearing conference. During that conference, the Director requested the parties to identify issues and file issue statements to be considered at the hearing. *Prehr'g Conf. Audio*, at 26:35–27:03 (Apr. 23, 2023).

On May 5, 2023, the Department received the *Surface Water Coalition's Request for Hearing and Statement of Issues* ("*2023 SWC Request*"). That request identified several issues for hearing, and among those issues, A&B Irrigation District ("A&B") specifically asked the Director to consider:

> (1) Whether the [*2023 April As-Applied Order*] identified proportionate share (458 acre-feet) of the predicted injury (75,200 acre-feet) to TFCC is calculated

[1] The SWC is comprised of A&B Irrigation District, American Falls Reservoir District #2, Burley Irrigation District, Milner Irrigation District, Minidoka Irrigation District, North Side Canal Company, and Twin Falls Canal Company ("TFCC").

[2] The SWC delivery call proceeding has an extensive history, and all documents referred to in this order can be found on the Department's webpage for this proceeding. *See* Surface Water Coalition Delivery Call, Docket No. CM-DC-2010-001 https://idwr.idaho.gov/legal-actions/delivery-call-actions/swc/.

correctly based upon A&B's actual diversion and use of water rights that are subject to the identified curtailment date (junior to December 30, 1953); and

(2) Whether the steady-state use of the ESPAM 2.2 in identifying A&B's proportionate share is consistent with the transient use of the model in identifying ground water rights subject to curtailment as outlined in the *Fifth Methodology Order*.

2023 SWC Request, at 2–3.

On May 5, 2023, the Director issued a *Notice of Materials Department Witnesses May Rely Upon at Hearing and Intent to Take Official Notice* ("*2023 Notice of Materials*"). In that notice, the Director identified topics that Department employee, Jennifer Sukow, may testify about at the hearing, including:

- Steady-state vs. transient modeling / simulations for the Eastern Snake Plain Aquifer Model (ESPAM).
- Calculation of curtailment priority dates for the SWC's delivery call.

2023 Notice of Materials, at 2.

On May 23, 2023, the Director granted the parties' requests for hearing, including the *2023 SWC Request*. *Order Granting Reqs. for Hr'g*, at 2.

On June 6–9, 2023, the Director held a hearing on the *Fifth Methodology Order* and the *2023 April As-Applied Order*.

On June 16, 2023, the Department received the *Surface Water Coalition's Post-Hearing Brief* ("*2023 SWC Post-Hearing Brief*"). In that brief, A&B identified that the *2023 April As-Applied Order* calculated A&B's proportionate share of the projected in-season demand shortfall ("IDS") using the steady-state ESPAM model. *2023 SWC Post-Hearing Brief*, at 12. A&B argued that its groundwater to surface water conversions should be taken into consideration when calculating its proportionate share of the IDS. *Id.*

On July 19, 2023, the Director issued the *Post-Hearing Order Regarding Fifth Amended Methodology Order* ("*Post-Hearing Order*") and the *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("*Sixth Methodology Order*").

II. 2025 Procedural History

On April 16, 2025, pursuant to the *Sixth Methodology Order*, the Director issued the *Final Order Regarding April 2025 Forecast Supply (Methodology Steps 1–3)* ("*April Forecast Supply Order*"), finding that A&B must mitigate for its proportionate share of the predicted IDS. *April Forecast Supply Order*, at 5 n.8.

On April 29, 2025, A&B filed a request for hearing, contesting the *April Forecast Supply Order* and identifying the following issues for hearing:

> (1) Whether the [*April Forecast Supply Order*] identified proportionate share (384 acre-feet) of the predicted injury (63,000 acre-feet) to TFCC is calculated correctly based upon A&B's actual diversion and use of water rights that are subject to the identified curtailment date (junior to August 28, 1955).
> (2) Whether A&B should be allowed to mitigate for a portion of groundwater right 36-15127A (approximately 508.3 acres) that will be diverted used [sic] during the 2025 irrigation season, as opposed to mitigating for all 1,886.4 acres authorized by the water right.
> (3) Whether the steady-state use of the ESPAM 2.2 in identifying A&B's proportionate share is consistent with the transient use of the model in identifying ground water rights subject to curtailment as outlined in the *Sixth Methodology Order*.
> (4) For other issues and matters that may discovered [sic] in this proceeding.

A&B Req. for Hr'g, at 1–2 (Apr. 2025) [hereinafter *April Hearing Request*].

On May 16, 2025, the Director issued the *Final Order Curtailing Ground Water Rights Junior to August 28, 1955* ("*May Curtailment Order*"). Several of A&B's ground water rights[3] subject to curtailment were included on the curtailment list accompanying the order. *May Curtailment Order*, at 4, attach. A, at 1.

On July 10, 2025, the Director issued an *Order Revising April 2025 Forecast Supply and Continuing May 16, 2025 Curtailment Order (Methodology Steps 5 & 6)* ("*July As-Applied Order*") which revised the predicted IDS and updated A&B's proportionate share of the predicted injury. *July As-Applied Order*, at 11 n.6.

On July 24, 2025, A&B filed another request for hearing, this time contesting the *July As-Applied Order* and identifying similar issues to the April request including:

> (1) Whether the [*July As-Applied Order*] identified proportionate share (5,039 acre-feet) of the predicted injury (75,300 acre-feet) to TFCC is calculated correctly based upon A&B's actual diversion and use of water rights that are subject to the identified curtailment date (junior to October 11, 1900).
> (2) Whether the steady-state use of the ESPAM 2.2 in identifying A&B's proportionate share of the estimated in-season demand shortfall is consistent with the transient use of the model in identifying ground water rights subject to curtailment as outlined in the *Sixth Methodology Order*.
> (3) Whether the Director's failure to implement the [*May Curtailment Order*] in accordance with Idaho law has injured A&B by subjecting its senior water right

[3] These include ground water right nos. 36-16749, 36-15127A, 36-15192, 36-15193A, 36-15194A, 36-15195A, 36-15196A, 36-15193B, 36-15194B, 36-15195B, 36-15196B. *May Curtailment Order*, at 4, attach. A, at 1.

36-2080 to curtailment and/or mitigation requirements during the 2025 irrigation season.

(4) For other and further reasons as may be discovered prior to hearing. A&B reserves the right to identify additional issues as necessary in this proceeding.

A&B Req. for Hr'g, at 1–2 (July 2025) [hereinafter *July Hearing Request*].

On September 3, 2025, the Director issued an *Order Granting A&B Irrigation District's Requests for Hearing, Consolidating Proceedings for Hearing, and Appointing Hearing Officer; Notice of Prehearing Conference* ("*Order Granting Hearing*"), assigning former Supreme Court Chief Justice, Gerald Schroeder, as the hearing officer in this matter. *Order Granting Hearing*, at 5. The Director also found that the issues identified in both of A&B's hearing requests relate to or mirror each other and that "A&B has not previously been afforded an opportunity for a hearing to contest either the *April Forecast Supply Order* or *July As-Applied Order*." *Id.* at 4.

III. Following *Order Granting Hearing* Procedural History

On September 18, 2025, Hearing Officer Schroeder held a prehearing conference in this matter. Following that conference, he issued an order granting intervention to the SWC, American Falls-Aberdeen Ground Water District ("AFA"), the Bonneville-Jefferson Ground Water District, the Coalition of Cities ("Cities"),[4] and the Idaho Ground Water Appropriators, Inc. ("IGWA"). *Order on Intervention, Authorizing Discovery, Email Service, and Scheduling; Order Granting Motion for Subpoena; Notice of Hearing*, at 5 (Oct. 7, 2025).

On November 18, 2025, the Hearing Officer received *Idaho Ground Water Appropriators, Inc.'s Motion for Summary Judgment* ("*IGWA Motion*"), arguing that res judicata and other related legal defenses bar A&B from now challenging how the Director calculates its proportionate share obligation. *IGWA Motion*, at 2. On that same date, AFA filed a *Motion to Reconsider Order Granting Hearing and Vacate Hearing or, Alternatively, to Clarify the Scope of Hearing; Request for Expedited Ruling; Brief in Support* ("*AFA Motion*") with the Director, requesting the Director to reconsider the *Order Granting Hearing* and to deny both of A&B's hearing requests. *AFA Motion*, at 2.

On December 9, 2025, the Department received *A&B Irrigation District's Consolidated Response to AFA Motion / IGWA Motion for Summary Judgment* ("*A&B Response*").[5] A&B argued that it was not barred from litigating the issues raised because no final judgment on the merits of those issues resulted from the 2023 hearing, and that due process guarantees it the right to a hearing since its senior ground water right had never been curtailed prior to the 2025 irrigation season. *A&B Response*, at 3, 24. Following that response, the Director and the Hearing Officer received timely reply briefs from both AFA and IGWA.

[4] The Cities are comprised of the Cities of Bliss, Burley, Carey, Declo, Dietrich, Gooding, Hazelton, Heyburn, Idaho Falls, Jerome, Paul, Pocatello, Richfield, Rupert, Shoshone, and Wendell.

[5] A&B timely filed its response in accordance with Hearing Officer Schroeder's approval of A&B's motion to extend the response deadlines. *Order Granting A&B's Motion to Amend Deadlines; Setting Deadline to Provide Staff Memo*, at 2–3.

On December 22, 2025, the Director denied the *AFA Motion*, declined to address AFA's arguments since a hearing officer was assigned to the matter, and authorized the hearing officer to consider any of AFA's arguments in its motion and reply. *Order Denying American Falls-Aberdeen Ground Water District's Motion to Reconsider Order Granting Hearing*, at 3–4.

On January 2, 2026, the Hearing Officer issued an *Order Denying Idaho Ground Water Appropriators, Inc.'s Motion for Summary Judgment* ("*Order Denying IGWA Motion*"). The Hearing Officer concluded that res judicata did not bar A&B from raising the issues again because the Director did not resolve those issues when A&B raised them in 2023. *Order Denying IGWA Motion*, at 8.

On January 5, 2026, the Hearing Officer received *Idaho Ground Water Appropriators, Inc.'s Petition for Reconsideration* ("*IGWA Reconsideration Petition*"), arguing that claim preclusion barred A&B from raising the issues again in 2025 because claim preclusion applies to "every issue that might or should have been raised." *IGWA Reconsideration Petition*, at 3. That same day, AFA filed a joinder in support of reconsideration.

On January 8, 2026, the Hearing Officer issued a *Preliminary Order Granting IGWA's Petition for Reconsideration and Granting IGWA's Motion for Summary Judgment* ("*Preliminary Order*"), concluding that A&B had the opportunity to litigate these issues during the 2023 proceeding, and therefore claim preclusion bars A&B from relitigating them now. *Preliminary Order*, at 3.

On January 22, 2026, the Director timely received *A&B Irrigation District's Exceptions to Preliminary Order* ("*Exceptions*"). A&B asks the Director to reverse the Hearing Officer's *Preliminary Order* and either remand the matter for further hearing or preside over the hearing himself. A&B argues that claim preclusion does not preclude A&B from litigating these issues now and that due process entitles it to a hearing. *Exceptions*, at 5, 17.

On February 3, 2026, the Director received *IGWA's Response to A&B Irrigation District's Exceptions to Preliminary Order* ("*IGWA Response*"). IGWA asks the Director to affirm the *Preliminary Order*, asserting that res judicata applies because A&B raised the issue and participated in the 2023 hearing process without appealing any orders that resulted from that proceeding. *IGWA Response*, at 5.

On February 5, 2026, the Director received *American Falls-Aberdeen Ground Water District's Response to A&B Irrigation District's Exceptions to Preliminary Order* ("*AFA Response*"). AFA asks the Director to affirm the *Preliminary Order*, asserting that res judicata applies and precludes A&B from relitigating the issues now, and that due process does not entitle it to a hearing now since claim preclusion applies. *AFA Response*, at 15–16.

EXCEPTIONS

A&B asks the Director to reverse the Hearing Officer's *Preliminary Order* and to remand the proceeding to the previously scheduled hearing or preside over the hearing himself. *Exceptions*, at 5. A&B argues that claim preclusion does not preclude it from litigating the

proportionate share calculation issues now, and that due process entitles it to a hearing because its senior water right has never been subject to curtailment or a mitigation obligation before. *Id.* at 4, 17. In the alternative, if the Director affirms the *Preliminary Order*, A&B asks the Director to initiate proceedings to address these issues for interested parties as a matter of public interest. *Id.* at 18–19.

After careful consideration of the record, the Director concludes that the *Preliminary Order* should be affirmed for four reasons. First, A&B is precluded from relitigating these issues under claim preclusion because it should have fully litigated them in 2023 when it raised them. Second, no exceptions to claim preclusion apply. Third, A&B is not entitled to additional due process because it raised the issue in 2023. Fourth, A&B is the only party with an interest in this proceeding, as it has the only approved mitigation plan that requires the Department to calculate, consider, and enforce its proportionate share obligation in an as-applied step of the methodology order. Each reason is addressed in turn.

I. Claim preclusion bars A&B from relitigating the proportionate share issues raised during the 2023 proceeding.

In Idaho, res judicata applies in administrative proceedings. *Sagewillow, Inc. v. Idaho Dept. of Water Res.*, 138 Idaho 831,844 (2023). The purpose of res judicata is to prevent relitigation leading to inconsistent results, to serve the public interest and protect courts against repetitious litigation, and to protect private interests from repeat claims. *Ticor Title Co. v. Stanion*, 144 Idaho 119, 123 (2007). Res judicata covers both claim preclusion and issue preclusion (i.e., collateral estoppel). *Id.* Issue preclusion does not apply here, so this order will only address claim preclusion.

Claim preclusion prohibits a claim in a subsequent action when: "(1) the original action ended in final judgment on the merits, (2) the present claim involves the same parties as the original transaction, and (3) the present claim arises out of the same transaction or series of transactions as the original action." *Elsaesser v. Riverside Farms, Inc.*, 170 Idaho 502, 508 (2022) (quoting *Berkshire Invs., LLC v. Taylor*, 153 Idaho 73, 81 (2012)). To simplify, claim preclusion prohibits subsequent actions when three elements are met: (1) same parties, (2) same claim, and (3) there is a previous final judgment on the merits. *Ticor Title*, 144 Idaho at 124. The same parties element is satisfied because the SWC delivery call proceeding has been ongoing for decades with the same surface and ground water entities participating throughout. The same claim and previous final judgment elements will each be addressed in turn.

A. A&B challenged the same proportionate share calculation issue during the 2023 hearing.

The same claim test is met when "the present claim arises out of the same transaction or series of transactions as the original action." *Elsaesser*, 170 Idaho at 508. This transactional approach standard is broad and applies without "substantial overlap between the theories advanced in support of a claim, or in the evidence relating to those theories." *Ticor Title*, 144 Idaho at 126. The approach looks to "whether the facts are related in time, space, origin, or

motivation, whether they form a convenient trial unit, and whether their treatment as a unit conforms to the parties' expectations or business understanding or usage." *Id.*

A&B's current challenge to the proportionate share calculation issue arises from the same transaction as the 2023 proceeding. Both stem from the Department's administration of the SWC delivery call under the same version of the methodology orders, which govern how material injury, demand shortfalls, mitigation obligations, and curtailment priority dates are calculated. *Sixth Methodology Order*, at 1. After modifying that framework in 2023, the Director held a hearing to receive evidence on the Department's application of ESPAM modeling[6] among other issues. *Id.* at 2. A&B raised the proportionate share calculation issue both prior to and after the 2023 hearing. *2023 SWC Request*, at 2–3; *2023 SWC Post-Hearing Brief*, at 12. A&B now raises that same issue again in 2025. *See April Hearing Request*, at 1–2; *July Hearing Request*, at 1–2. It would have been practical and efficient to rely on overlapping facts, witnesses, and technical modeling evidence to be a part of one trial in 2023 to address the proportionate share calculation issue then. Accordingly, the current challenge bears a clear temporal and motivational connection to the 2023 proceeding.

A&B's attempt to distinguish the current claim based on the absence of actual curtailment to its senior water right in 2023 misses the mark. *See Exceptions*, at 12 ("Absent an actual curtailment or order requiring a defined storage water mitigation obligation, A&B had no concrete motivation for bringing a claim in defense of its senior water right."). The operative issue is not the priority date of the rights but how the Department calculates A&B's proportionate share under Step 3 of the Methodology Order. That issue was squarely raised in A&B's prior request for hearing, which was granted by the Director, briefed, and discussed in Ms. Sukow's testimony.[7] A&B is now attempting to recast the issue at an artificially narrow level by focusing on priority of the rights. But that distinction does not alter the underlying question: how is A&B's proportionate share calculated. The method is the same regardless of whether the right is a senior or junior water right. Accordingly, A&B's argument is simply an effort to relitigate the issue it had a chance to litigate in 2023. Therefore, the same claim element is met.

B. The 2023 hearing resulted in a final judgment on the merits.

The final judgment element of claim preclusion "does not require that the precise point or question in the present action be finally resolved in the prior proceeding." *Ticor Title*, 144 Idaho

[6] A&B argues that the scope of Ms. Sukow's testimony was limited to solely calculating the curtailment date. *Exceptions*, at 4–5. But that position is not supported by the record. Her testimony included ESPAM steady state vs. transient modeling simulations. *2023 Notice of Materials*, at 2. During the hearing, she even testified on proportionate share calculation modeling for IGWA. *See*, *e.g., AFA Motion*, at 5 n.2 ("Q. And then Mr. Budge was asking you about a calculation that you did with respect to dividing up the IGWA's proportionate share . . of the As-Applied Order . . . A. . . . it is just an apportioning of it based on their long-term impacts.") (quoting *City of Idaho Falls v. Idaho Dep't of Water Res.*, Case No. CV01-23-13238, *Settled Agency Hearing Transcript on Appeal*, at 100:23-102:7 (4th Jud. Dist., Ada Cnty., Sep. 28, 2023).

[7] *See Order Granting Reqs. for Hr'g*, at 2 (2023) (granting the *2023 SWC Request*); *2023 SWC Post-Hearing Brief*, at 12 (discussing the proportionate share table in the background information of the *2023 April As-Applied Order*); *see*, *e.g., AFA Motion*, at 5 n.2 (referencing Ms. Sukow's 2023 hearing testimony).

at 126. Instead, the relevant inquiry mirrors the same claim element and considers whether "the former adjudication concludes parties and privies not only as to every matter offered and received to sustain or defeat the claim but also as to every matter which might and should have been litigated in the first suit." *Id.* (citation omitted).

Following the 2023 hearing, the Director issued both the *Post-Hearing Order* and the *Sixth Methodology Order*. Those orders constituted a final agency action subject to judicial review pursuant to Idaho Code § 42-1701A(4). During the 2023 hearing, A&B challenged the Department's use of steady-state modeling when calculating proportionate share obligations, which were reflected through briefing, expert reports, and testimony as established above. If A&B believed the Director failed to resolve or adequately address its modeling arguments concerning proportionate share calculations, *Exceptions*, at 4, its remedy was to seek judicial review of the relevant final order.

In addition, even A&B previously took the position that challenges to the *Sixth Methodology Order* were barred by res judicata where the issues had been raised and addressed during the hearing, and that the appropriate statutory remedy was judicial review under Section 42-1701A(4). *See IGWA's Reply Brief*, at 3.[8] Having acknowledged that appropriate remedy, A&B cannot now avoid it.

Idaho Code § 42-1701A(4) establishes a defined procedural path for challenging final agency actions. A party may not decline to pursue judicial review of an allegedly incomplete order because it had "no concrete motivation" to challenge it at that time and later attempt to relitigate issues arising from the same administrative proceeding. If A&B believed the Director's 2023 orders failed to address its proportionate share arguments, that alleged omission was itself a basis for timely judicial review. Even A&B concedes that had it appealed a 2023 order for failing to address the proportionate share issue, the proper remedy "would have been a remand to the agency to develop the missing record," which is "the exact position the parties have been diligently progressing toward over the past six months." *Exceptions*, at 7. In other words, A&B acknowledges that it could have invoked judicial review and obtained a remand to further develop the record at that time.

Finally, A&B argues that it could not have appealed the *Post-Hearing Order* because the Idaho Supreme Court held that order was not the "operative order" to seek judicial review. *Exceptions*, at 7 (citing *City of Idaho Falls et al. v. Idaho Dep't of Water Res.*, 2026 WL 517848, at *4 (Idaho 2026) (substitute opinion)). However, A&B's proportionate share calculation issues here and in 2023 were not the same as the Cities' issues that failed to appeal the correct order. In addition, A&B could have appealed both orders and raised these issues like IGWA did in appealing both orders. *See IGWA's Pet. for Judicial Review*, *Idaho Ground Water Appropriators, Inc. v. Idaho Dep't of Water Res.*, No. CV01-23-13173 (Aug. 16, 2023).

[8] IGWA excerpted a similar argument raised by the SWC, including A&B, opposing the Cities' request for hearing because the proper remedy was to seek judicial review of a final order. *Surface Water Coalition's Response to Cities' Request for Hearing and Order Authorizing Discovery*, at 4 (Aug. 22, 2023).

Accordingly, because A&B did not pursue the appropriate and available remedy, and claim preclusion applies to those matters that "might and should have been litigated" in the first action, the final judgment element is satisfied.[9] Therefore, all three claim preclusion elements are satisfied, thereby barring A&B from attempting to relitigate the issues now.

II. No exceptions to claim preclusion apply in this proceeding.

A&B argues that two exceptions to claim preclusion apply in this matter: (1) not raised as an issue in the 2023 proceeding and (2) ripeness. *Exceptions*, at 8, 13. Neither exception applies here.

First, A&B argues that under *Sagewillow* it could not challenge the proportionate share calculation issue in 2023 because its senior rights were not subject to curtailment and it did not have a storage water mitigation obligation assigned to a senior right. *Exceptions*, at 13.

In *Sagewillow*, the Department approved a transfer application in 1992. 138 Idaho at 835. Two years later, after Sagewillow filed more transfer applications that were protested, the Department voided the earlier approval because certain water rights under the first transfer application were partially forfeited. *Id.* The Court held "that if forfeiture or abandonment is not actually raised as an issue in a proceeding to transfer the point of diversion or place of use of a water right, the final order in the transfer proceeding is not [claim preclusion] on the issue of whether the water right at issue had been forfeited or abandoned." *Id.* at 845. The Court reasoned that, when evaluating a transfer application under Idaho Code § 42-222(1), the Department is not required to evaluate for forfeiture unless the issue is raised by a third party. *Id.* In other words, under claim preclusion, the Department is not precluded from addressing forfeiture in a subsequent transfer proceeding when it was not raised in the first proceeding.

The narrow exception outlined in *Sagewillow* does not apply here. Unlike *Sagewillow*, A&B raised the proportionate share calculation issue in the 2023 proceeding. Further, unlike forfeiture in a transfer proceeding, which the Department does not need to evaluate unless raised, the Director calculates proportionate share obligations as part of implementing the methodology order annually. Once the Director amended the methodology, held a hearing to address modeling, and A&B challenged modeling associated with proportionate share calculations, the issue was before the Department in 2023. Accordingly, the *Sagewillow* exception does not apply.

Second, A&B argues that its claims were not ripe in 2023 because there was no actual curtailment or defined mitigation obligation to its 1948 water right at that time.[10] *Exceptions*, at 8–9 (referencing *Berkshire Invs.*, 153 Idaho at 83). "Ripeness asks whether there is any need for

[9] A&B argues that the Hearing Officer erred by applying the full and fair opportunity element in finding that claim preclusion barred A&B from relitigating the issues now. *Exceptions*, at 10. Even if the Hearing Officer's analysis is incorrect by considering the full and fair opportunity element, the error is harmless because claim preclusion still bars A&B from litigating the proportionate share issues now.

[10] A&B claims the Hearing Officer erred for failing to address ripeness because it was raised in its response brief. *Exceptions*, at 8. In its 34-page brief, A&B made one minor reference to ripeness when it stated: "The Idaho Supreme Court has found that res judicata does not bar litigation of issues that were not ripe for adjudication in the prior action." *A&B Response Brief*, at 23.

court action at the present time" and is designed "to prevent courts from entangling themselves in *purely abstract disagreements*." *Roy v. Idaho Dep't of Health & Welfare*, 174 Idaho 375, 382 (2024) (citations and internal quotations omitted) (emphasis in original).

In *Berkshire Investments*, the Idaho Supreme Court grappled with three separate appeals arising from a real estate transaction. 153 Idaho at 77. In the first action, the petitioners sought to rescind the sale of real property on the basis of breach of fiduciary duty and professional malpractice. *Id.* at 78. In the third action,[11] the petitioners sought to set aside a previous judgment on the basis of fraudulent misrepresentation and negligence of the same real estate transaction. *Id.* at 79, 83. The Court held that the negligence claims in the third action were ripe during the first action because "all of the conduct on which those claims are based" including executing the agreement, appointing trustees, and filing the amended complaint "occurred and was made known" while the first action was pending before the merits were even decided upon. *Id.* at 83. Accordingly, the Court concluded that "any claim arising from that conduct ripened at that time and should have been raised" in the first action. *Id.*

The same reasoning applies here. In 2023, A&B had a proportionate share mitigation obligation. *2023 April As-Applied Order*, at 5 n.5. The methodology's as-applied steps occur annually and rely on modeling to calculate proportionate share obligations. *Id.* at 5. Waiting for a specific curtailment order does not transform an existing modeling calculation into a newly ripened claim. As AFA indicated, "it was not a matter of if, but when, its 1948 water right would be at risk of curtailment" when switching to the transient model. *AFA Response*, at 11. Like *Berkshire Investments*, all conduct underlying A&B's current challenge occurred and was known during the 2023 proceeding, and A&B should have litigated the issue then when the parties were prepared to present evidence and the Department's expert was prepared to testify about the modeling. Accordingly, the proportionate share calculation issue was ripe for review in 2023.

Therefore, neither *Sagewillow* nor ripeness defeats claim preclusion from applying in this matter.

III. A&B is not denied due process because it already had an opportunity to challenge the modeling used to calculate proportionate share obligations during the 2023 proceeding.

A&B argues that because its senior 1948 groundwater right has never been curtailed before and was not subject to a mitigation obligation in 2023, due process entitles it to a hearing since water rights are real property rights. *Exceptions*, at 15. This is an oversimplification of water rights administration under the SWC delivery call proceeding.

The SWC delivery call has been ongoing for decades. During that time, the Director has conjunctively administered surface and ground water through successive iterations of a methodology order. *See Post-Hearing Order*, at 1–3 (summarizing the history of the SWC delivery call). When the Director amended the methodology in 2023 and addressed the use of

[11] The second action related to a standing issue and is not pertinent to this analysis. *Berkshire Investments*, 153 Idaho at 79.

transient rather than steady-state modeling to determine the curtailment date, A&B knew or reasonably should have known that the change could result in curtailment dates impacting more senior ground water rights. Now asserting that 2023 was not the appropriate time to challenge the modeling used to calculate its proportionate share obligation simply because it did not have a water right subject to curtailment is disingenuous. Accordingly, A&B could have challenged the modeling associated with calculating proportionate share obligations during the 2023 proceeding. Therefore, A&B already had a hearing on the matter.

IV. The Director will not initiate a new proceeding because only A&B's approved mitigation plan requires its proportionate share obligation in the as-applied orders.

A&B alternatively requests that, if the Director affirms the *Preliminary Order*, he should initiate "a contested case to take evidence and evaluate what should be the proper and lawful standard for apportioning a storage water mitigation obligation to satisfy an in-season demand shortfall." *Exceptions*, at 18. A&B asserts that because several mitigation plans are pending before the Department, a comprehensive forum to address this issue would serve the interests of all parties. *Id.*

As explained above, claim preclusion bars A&B from relitigating the proportionate share calculation issue at this stage. A&B challenged that issue during the 2023 hearing and failed to fully litigate the issue or seek judicial review following the issuance of the final orders. As a result, A&B cannot now ask the Director to reopen the issue in a new contested case.

Further, there are currently only five approved mitigation plans under the SWC delivery call—including A&B's plan. *April As-Applied Order*, at 5 n.8. A&B's mitigation plan requires the Department to calculate its proportionate share of the predicted IDS. *Id.* Meanwhile, other entities' approved mitigation plans "do not need to establish that they can mitigate for their proportionate share of the predicted IDS." *Id.* If A&B believed the standard for calculating proportionate share obligations required further evidentiary development, the appropriate time to raise the issue was during the 2023 hearing or during the course of its own mitigation plan action.[12]

Finally, the existence of other pending mitigation plans does not justify initiating a new contested case to revisit the issues. Each mitigation plan proceeds in its own action, where parties may raise issues relevant to those plans. The Director will not initiate a new contested case now because A&B failed to fully litigate the issues in 2023. Accordingly, A&B's alternative request to initiate a new contested case is denied.

CONCLUSIONS OF LAW

The Director concludes that A&B's *Exceptions* should be denied because (1) A&B fails to establish why claim preclusion does not bar it from relitigating the same issues now as it could have fully litigated in 2023; (2) due process does not entitle A&B to a hearing now since it

[12] *See* Surface Water Coalition Mitigation Plan Actions: A&B Irrigation, Docket No. CM-MP-2015-003 https://idwr.idaho.gov/legal-actions/mitigation-plan-actions/SWC/ABI/.

already had an opportunity for a hearing; and (3) A&B is not entitled to additional proceedings because it could have challenged the issue during the 2023 hearing or its own mitigation plan action.

ORDER

IT IS HEREBY ORDERED that *A&B Irrigation District's Exceptions to Preliminary Order* is DENIED.

DATED this 17th day of April 2026.

MATHEW WEAVER
Director

CERTIFICATE OF SERVICE

I HEREBY CERTIFY that on this 17th day of April 2026, the above and foregoing, was served by the method indicated below, and addressed to the following:

EXPLANATORY INFORMATION TO ACCOMPANY A FINAL ORDER

(To be used in connection with actions when a hearing was held or actions that are decided on summary judgment)

The accompanying document is a "**Final Order"** issued by the Idaho Department of Water Resources ("Department") pursuant to Idaho Code § 67-5246. The following statements describe the procedures and time limits for seeking reconsideration or other administrative relief as required by Idaho Code § 67-5248.

PETITION FOR RECONSIDERATION

(*See* Idaho Code § 67-5246(4))

Any party may file a petition for reconsideration of this final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: the petition must be received by the Department within this fourteen (14) day period.** The presiding officer will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law.

APPEAL TO DISTRICT COURT

(*See* Idaho Code §§ 67-5270 through 67-5279)

Within twenty-eight (28) days after: (a) the service date of this final order, (b) the service date of a denial of a petition for reconsideration of this final order, or (c) the failure within twenty-one (21) days of the presiding officer to act on a petition for reconsideration of this final order, any party may file a petition for judicial review of this final order with a district court. Filing an appeal to a district court does not in itself stay the effectiveness or enforcement of the final order appealed.

CERTIFICATE OF SERVICE

(*See* IDAPA 37.01.01.053, 37.01.01.202; I.R.C.P. 84)

All documents filed with the Department in connection with a petition for reconsideration or served on the Department in connection with an appeal of this final order shall be served on all parties to the proceeding in accordance with Rules 53 and 202 of the Department's Rules of Procedure or Idaho Rule of Civil Procedure 84.

Attorney for Respondent

IN THE DISTRICT COURT OF THE FIFTH JUDICIAL DISTRICT OF THE STATE OF IDAHO, IN AND FOR THE COUNTY OF MINIDOKA

A&B IRRIGATION DISTRICT, Petitioner, vs. THE IDAHO DEPARTMENT OF WATER RESOURCES, and MATHEW WEAVER in his capacity as the Director of the Idaho Department of Water Resources, Respondents.	Case No. CV34-26-00462 **NOTICE OF LODGING THE AGENCY RECORD WITH THE AGENCY**
IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY AND FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT NO. 2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, NORTHSIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	

TO: THE DISTRICT COURT AND THE PARTIES OF RECORD

In accordance with I.R.C.P. 84(j), YOU ARE HEREBY NOTIFIED that the agency record, having been prepared pursuant to Idaho Code § 67-5249 and I.R.C.P. 84(f), is lodged with the Idaho Department of Water Resources for the purpose of settlement.

A copy of the agency record filed with the Department has been uploaded to the Department's website. The parties may visit https://idwr.idaho.gov/court-action/abi-v-idwr-2026/ and follow their browser's document download procedure to obtain a copy of the agency record after clicking on the PDF titled "Agency Record on Appeal."

The parties have fourteen (14) days from the date of this notice to file any objections to the record. The agency's decision on any objection timely filed along with all evidence, exhibits, and written presentations on the objection shall be determined by the agency within fourteen (14) days and included in the record. If no objections are filed within that time, the record shall be deemed settled. Subsequently, the agency will lodge the settled record with the District Court pursuant to I.R.C.P. 84(k) and the Court's May 14, 2026 *Procedural Order*.

DATED this 21st day of May 2026.

Attorneys for A&B Irrigation District

IN THE DISTRICT COURT OF THE FIFTH JUDICIAL DISTRICT

OF THE STATE OF IDAHO, IN AND FOR THE COUNTY OF MINIDOKA

A&B IRRIGATION DISTRICT Petitioner, vs. IDAHO DEPARTMENT OF WATER RESOURCES, and MATHEW WEAVER, in his capacity as Director of the Idaho Department of Water Resources, Respondents.	**Case No. CV34-26-00462** **A&B IRRIGATION DISTRICT'S OBJECTION TO THE AGENCY RECORD**
IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY AND FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT NO. 2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY.	

COMES NOW, the Petitioner, A&B Irrigation District ("A&B" or "District"), by and through its undersigned counsel of record, and hereby files this *Objection to the Agency Record* pursuant to Civil Rule 84(j). On May 21, 2026, the Idaho Department of Water Resources ("Department") filed its *Notice of Lodging the Agency Record with the Agency* (the "agency record"). The agency record currently consists of documents contained at pages 1-2902, exhibits, and transcripts of the hearing in this matter. A&B submits that the record, as lodged by the Department, is in error as described below and should be corrected.

I. Documents Missing from the Agency Record

The following documents are missing from the record and should be included in proper sequence, by date:

1. Fifth Amended Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover, and Background Information (April 21, 2023)

2. Final Order Regarding April 2023 Forecast Supply (Methodology Steps 1-3), April 21, 2023 and April Background Information (April 24, 2023)

3. IGWA's Amended Notice of Mitigation (June 1, 2023)

4. Surface Water Coalition's Response to IGWA's Amended Notice of Mitigation (June 5, 2023)

5. Order Revising April 2023 Forecast Supply and Amending Curtailment Order (Methodology Steps 5 & 6), and Background Information (July 19, 2023)

6. Post-Hearing Order Regarding Fifth Amended Methodology Order, and Background Information (July 19, 2023)

7. Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover, and Background Information (July 19, 2023)

8. Surface Water Coalition's Petition for Reconsideration & Clarification; Request for Enforcement of Orders Approving 2016 Stipulated Plan (July 31, 2023)

9. Order Granting Petition for Reconsideration / Clarification in Part and Denying Request for Enforcement (August 11, 2023)

10. Order Denying Request for Hearing and Motion to Authorize Discovery (August 23, 2023)

11. Order Denying IGWA's Petition for Review (August 23, 2023)

12. Surface Water Coalition's Response to Cities' Request for Hearing and Order Authorizing Discovery (August 22, 2023)

13. IGWA's Response to Surface Water Coalition's Petition for Reconsideration and Request for Hearing (August 22, 2023)

14. Order Revising July 2023 Forecast Supply (Methodology Step 7-8), and Background Information (August 31, 2023)

15. Motion for Clarification and Reconsideration of Denial of Request for Hearing and to Engage in Discovery (September 5, 2023)

16. Order Denying Cities' Motion for Clarification and Reconsideration (September 25, 2023)

17. Final Order Establishing 2023 Reasonable Carryover (Methodology Step 9), and Background Information (November 30, 2023)

18. Final Order Regarding April 2024 Forecast Supply (Methodology Steps 1-3), and Background Information (April 18, 2024)

19. Falls Irrigation District Letter to Water District 01 Watermaster (April 30, 2024)

20. Joint Notice of Compliance – Magic Valley Ground Water District & North Snake Ground Water District's 2024 Irrigation Season Mitigation Commitments (May 2, 2024)

21. Declaration of Sophia Sigstedt (May 2, 2024)

22. IGWA's Request for Mitigation Credit for Aquifer Enhancement Activities (2024) (May 2, 2024)

23. IGWA's Petition for Reconsideration of Final Order Regarding April 2024 Forecast Supply (May 2, 2024)

24. BJGWD's Notice of Mitigation in Response to April 2024 As-Applied Order (Methodology Steps 1-3) (May 2, 2024)

25. Letter from IGWA to the Director (May 8, 2024)

26. Final Order Denying IGWA's Petition for Reconsideration of April As-Applied Order (May 10, 2024)

27. Order Determining Deficiency in Notices of Secured Water (May 10, 2024)

28. Final Order Denying IGWA's Request for Mitigation Credit for Aquifer Enhancement Activities (2024) (May 15, 2024)

29. IGWA's Notice of Storage Water Leases (May 17, 2024)

30. Surface Water Coalition's Response to American Falls-Aberdeen Ground Water District's Motion for Reconsideration (May 17, 2024)

31. SWC's Response to IGWA's Conditional Notice of Mitigation Compliance / Petition for Reconsideration (May 23, 2024)

32. Upper Valley Ground Water District's Response in Opposition to American Falls-Aberdeen Ground Water District's Motion for Reconsideration (May 24, 2024)

33. BGWD's Response to AFA's Motion for Reconsideration of Order Determining Deficiency in Notices of Secured Water (May 24, 2024)

34. Joinder in Support of Upper Valley Ground Water District's Response in Opposition to American Falls-Aberdeen Ground Water District's Motion for Reconsideration – Bonneville-Jefferson Ground Water District (May 24, 2024)

Attorneys for American Falls-Aberdeen Ground Water District

IN THE DISTRICT COURT OF THE FIFTH JUDICIAL DISTRICT

OF THE STATE OF IDAHO, IN AND FOR THE COUNTY OF MINIDOKA

A&B IRRIGATION DISTRICT

Petitioner,

vs.

IDAHO DEPARTMENT OF WATER RESOURCES, and MATHEW WEAVER, in his capacity as Director of the Idaho Department of Water Resources,

Respondents,

and

AMERICAN FALLS-ABERDEEN GROUND WATER DISTRICT, IDAHO GROUND WATER APPROPRIATORS, INC., CITY OF BLISS, CITY OF BURLEY, CITY OF CAREY, CITY OF DECLO, CITY OF DIETRICH, CITY OF GOODING, CITY OF HAZELTON, CITY OF HEYBURN, CITY OF JEROME, CITY OF PAUL, CITY OF RICHFIELD, CITY OF RUPERT, CITY OF SHOSHONE, AND CITY OF WENDELL,

Intervenors.

Case No. CV34-26-00462
IDWR Docket No. CM-DC-2010-001

AMERICAN FALLS-ABERDEEN GROUND WATER DISTRICT'S OBJECTION TO AGENCY RECORD

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY AND FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT NO. 2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY.

COMES NOW American Falls-Aberdeen Ground Water District ("AFA"), by and through its counsel of record, pursuant to I.R.C.P. 84(j) and the *Procedural Order* dated May 14, 2026, and hereby objects to the *Agency Record on Appeal* lodged by the Idaho Department of Water Resources ("Department") in the captioned case on May 21, 2026. Specifically, as described below, AFA requests that the Department add ten (10) documents to the record that AFA cited in briefing in the administrative contested case proceedings below.

The Department included many documents in the record that were filed in the Department's docket for the Surface Water Coalition ("SWC") Delivery Call many years prior to the commencement of the instant case in 2025. Based on a discussion with Department counsel, AFA understands that the Department included these documents (which extend as far back as 2008) in the record because the Hearing Officer took official notice of all documents cited in the parties' summary judgment briefs, which were filed between November 18, 2025, and December 16, 2025. *See* R. 2810.

However, it appears that four (4) documents cited in AFA's *Motion to Reconsider Order Granting Hearing and Vacate Hearing or, Alternatively, to Clarify the Scope of Hearing; Request for Expedited Ruling; Brief in Support* (Nov. 18, 2025) ("*AFA Motion*") and AFA's *Reply in Support of Motion to Reconsider Order Granting Hearing and Vacate Hearing or,*

Alternatively, to Clarify the Scope of Hearing; Request for Expedited Ruling (Dec. 12, 2025) ("*AFA Reply*") that the Hearing Officer also took judicial notice of were omitted from the record. Accordingly, AFA requests that the following documents from the SWC Delivery Call matter be added to the record:

Document	Location of Citation
1. *Order Denying Cities' Motion for Clarification and Reconsideration* (Sep. 25, 2023)	*AFA Motion* at 6 n.4 (R. 2443)
2. *Order Denying IGWA's Petition for Review* (Aug. 23, 2023)	*AFA Motion* at 6 n.7 (R. 2443)
3. *Joint Motion for Order Approving 2025 Stipulation* (Jul. 24, 2025)	*AFA Reply* at 8 (R. 2734)
4. *Order Approving 2025 Stipulation as Compliance with Approved Mitigation Plan* (Jul. 25, 2025)	*AFA Reply* at 8 (R. 2734)

Additionally, six (6) other documents from the SWC Delivery Call matter that AFA cited in its *Response to A&B Irrigation District's Exceptions to Preliminary Order* (Feb. 5, 2026) ("*AFA Response*") appear to have been omitted from the record. While the Director did not take official notice of all such documents cited in the parties' briefing like the Hearing Officer did, these documents should be added to the record for the reasons stated by the Hearing Officer—they provide important historical context for a delivery call that is over two decades in the making. *See* R. 2810. Further, many of these documents were also cited in the *Notice of Compliance with Order to Provide Staff Memo* (Dec. 30, 2025). Finally, the documents aided the Department in resolving the contested case matter on *res judicata* grounds because they demonstrate that A&B Irrigation District had previously litigated the issues. They may similarly aid the district court in resolving the issues on appeal.

Accordingly, AFA requests that the following documents also be added to the record:

Document	Location of Citation
1. *Groundwater Expert Report – 2023 Methodology* (May 30, 2023)[1]	*AFA Response* at 9 (R. 2873)
2. *A&B Irrigation District's Notice of Mitigation* (May 2, 2016)	*AFA Response* at 9 (R. 2873)
3. *Order Determining Deficiency in A&B Irrigation District's Notice of Mitigation* (May 11, 2016)	*AFA Response* at 10 (R. 2874)
4. *Order Granting A&B's Requests to Withdraw Request for Hearings Re: Credit for Aquifer Enhancement Activities and Standard of Mitigation* (Sep. 2, 2016)	*AFA Response* at 10 (R. 2874)
5. *IGWA's Request for Mitigation Credit for Aquifer Enhancement Activities (2024)* (May 2, 2024)	*AFA Response* at 10 (R. 2874)
6. *Final Order Denying IGWA's Request for Mitigation Credit for Aquifer Enhancement Activities (2024)* (May 15, 2024)	*AFA Response* at 10 (R. 2874)

In conclusion, AFA respectfully requests that the ten (10) documents identified above be added to the agency record to ensure the district court has a complete record when conducting judicial review of the Department's *Final Order Denying A&B Irrigation District's Exceptions to Preliminary Order* (Apr. 17, 2026).

Attorney for Respondents

IN THE DISTRICT COURT OF THE FIFTH JUDICIAL DISTRICT OF THE STATE OF IDAHO, IN AND FOR THE COUNTY OF MINIDOKA

A&B IRRIGATION DISTRICT, Petitioner, vs. THE IDAHO DEPARTMENT OF WATER RESOURCES, and MATHEW WEAVER in his capacity as the Director of the Idaho Department of Water Resources, Respondents, and IDAHO GROUND WATER APPROPRIATORS, INC., AMERICAN FALLS-ABERDEEN GROUND WATER DISTRICT, CITY OF BLISS, CITY OF BURLEY, CITY OF CAREY, CITY OF DECLO, CITY OF DIETRICH, CITY OF GOODING, CITY OF HAZELTON, CITY OF HEYBURN, CITY OF JEROME, CITY OF PAUL, CITY OF RICHFIELD, CITY OF RUPERT, CITY OF SHOSHONE, CITY OF WENDELL, Intervenors.	Case No. CV34-26-00462 **AGENCY DECISION ON OBJECTIONS AND ORDER SETTLING THE AGENCY RECORD**
IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY AND FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT NO. 2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, NORTHSIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	

On May 21, 2026, the Idaho Department of Water Resources ("Department") served its *Notice of Lodging the Agency Record with the Agency* ("*Notice*") in this matter pursuant to I.R.C.P. 84(j)(1). The *Notice* gave the parties fourteen (14) days from the date of the *Notice* to file any objection to the agency record. On June 3, 2026, A&B Irrigation District ("A&B") filed *A&B Irrigation District's Objection to the Agency Record* ("*A&B Objection*")[1] and on June 4, 2026, American Falls-Aberdeen Ground Water District ("AFA") filed *American Falls-Aberdeen Ground Water District's Objection to Agency Record* ("*AFA Objection*"). In accordance with I.R.C.P. 84(j) and the Court's May 14, 2026 *Procedural Order*, the following constitutes the Department's decision on objections to the agency record and order settling the agency record.

In considering A&B's and AFA's objections, the Department refers to Idaho Code § 67-5249(3) which governs the contents of an agency record on appeal; it states:

> The record shall include:
> (a) The recording of the hearing;
> (b) All notices of the hearing and other conferences conducted by the presiding officer;
> (c) All prehearing orders;
> (d) All motions, pleadings, briefs, petitions, requests, and intermediate rulings;
> (e) All evidence received or considered;
> (f) A statement of all matters officially noticed and any related notices;
> (g) All offers of proof and objections and rulings thereon;
> (h) All proposed findings and requested orders;
> (i) Any transcript of the hearing, if prepared;
> (j) Staff memoranda or data submitted to the presiding officer or the agency head in connection with the consideration of the proceeding;
> (k) Any recommended order, preliminary order, final order, or order on reconsideration; and
> (l) All matters placed on the record after an ex parte communication pursuant to section 67-5253, Idaho Code.

[1] Idaho Appellate Rule 20 requires that "[a]t the time of the filing of any other document in the appellate process, the party filing the same shall serve a copy thereof upon all other parties to the action who are parties to the appeal, or who were parties in the proceeding below and who could be affected by the appeal . . . ." While A&B's objection was filed on June 3, 2026, it was served via iCourt on the Department two days later, on June 5, 2026. The Department will still consider the objection.

I. BACKGROUND

The agency record was prepared in connection with a request for judicial review of the Director's April 17, 2026 *Final Order Denying A&B Irrigation District's Exceptions to Preliminary Order* ("*Final Order*"). *Not. of Appeal & Pet. for Jud. Rev.* ¶ 10. The *Final Order* resolved the contested cases initiated by the filing of A&B's April 29, 2025 and July 24, 2025 petitions for hearing, which were consolidated for hearing. *See* R. 2384, 2888–91; *see also* R. 2333–36, 2376–79. Prior to the Director's review and issuance of the *Final Order* on exceptions, the Hearing Officer assigned to the matter issued an *Order Denying Idaho Ground Water Appropriators, Inc's Motion for Summary Judgment* ("*Order Denying IGWA Motion*"). R. 2890. Within that order, the Hearing Officer took "official notice of the pleadings and orders cited within the *AFA Motion*, the *IGWA Motion*, the *A&B Response*, and the various reply briefs. This includes the *2024 Plan* as it relates to the SWC delivery call proceeding where the parties are substantially similar." R. 2810. Those officially noticed documents have been included in the agency record on appeal. On reconsideration of the *Order Denying IGWA Motion*, the Hearing Officer subsequently issued his *Preliminary Order Granting IGWA's Petition for Reconsideration and Granting IGWA's Motion for Summary Judgment*, which the Director ultimately reviewed on exceptions. R. 2890. No administrative hearing was held by the Hearing Officer or the Director. *See* R. 2889–91.

II. AFA OBJECTION

The *AFA Objection* is broken into two grouped requests. First, AFA objects that the agency record is missing four documents officially noticed by the Hearing Officer:

1. *Order Denying Cities' Motion for Clarification and Reconsideration*, dated September 25, 2023;
2. *Order Denying IGWA's Petition for Review*, dated August 23, 2023;
3. *Joint Motion for Order Approving 2025 Stipulation*, dated July 24, 2025; and

4. *Order Approving 2025 Stipulation as Compliance with Approved Mitigation Plan*, dated July 25, 2025.

AFA Objection at 3. Upon review, the Director finds that all four documents were officially noticed by the Hearing Officer in his *Order Denying IGWA Motion*. *See* R. 2810, 2443, 2734. However, the first document is not missing as it is already included in the record in two locations. *See* R. 1710–16, 1731–37. This objection is overruled as it concerns the *Order Denying Cities' Motion for Clarification and Reconsideration* and sustained as it concerns the remaining three documents. The other three documents will be added to the record.

Second, AFA objects to the omission of six additional documents:

1. Groundwater Expert Report – 2023 Methodology, dated May 30, 2023;
2. *A&B Irrigation District's Notice of Mitigation*, dated May 2, 2016;
3. *Order Determining Deficiency in A&B Irrigation District's Notice of Mitigation*, dated May 11, 2016;
4. *Order Granting A&B's Requests to Withdraw Request for Hearings Re: Credit for Aquifer Enhancement Activities and Standard of Mitigation*, dated September 2, 2016;
5. *IGWA's Request for Mitigation Credit for Aquifer Enhancement Activities (2024)*, dated May 2, 2024; and
6. *Final Order Denying IGWA's Request for Mitigation Credit for Aquifer Enhancement Activities (2024)*, dated May 15, 2024.

AFA Objection at 3–4. AFA admits that the six additional documents were not officially noticed by the Hearing Officer or the Director, however, it argues that the documents provide "important historical context" and were relied upon in its February 5, 2026 *Response to A&B Irrigation District's Exceptions to Preliminary Order*. *Id.* at 3. The Director finds that all six documents were cited in AFA's response on exceptions, R. 2873–74, which the Director considered before issuing his *Final Order* currently on appeal. In the interest of ensuring a complete record that encompasses all evidence considered, this objection is sustained. These documents will be added to the record.

III. A&B OBJECTION

The *A&B Objection* lists 112 documents A&B suggests are "missing" and concludes with a statement that the Department "should correct the errors." *A&B Objection* at 2–9. Due to the large volume of allegedly missing documents, the Director has grouped the documents to reduce repetitive findings and decisions. Within the groupings, the documents maintain their original list numbers assigned in the *A&B Objection*.

A. Documents Already in the Agency Record

Upon review of the agency record, the Director finds that the documents listed below are already included in the record.[2] They are not missing. Therefore, A&B's objections concerning the following documents are overruled:

1. *Fifth Amended Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover*, and Background Information, dated April 21, 2023. **R. 168–214**.

2. *Final Order Regarding April 2023 Forecast Supply (Methodology Steps 1-3)*, dated April 21, 2023, and April Background Information. **R. 154–167**.

3. *IGWA's Amended Notice of Mitigation*, dated June 1, 2023. **R. 276–348**.

5. *Order Revising April 2023 Forecast Supply and Amending Curtailment Order (Methodology Steps 5 & 6)* and Background Information, dated July 19, 2023. **R. 401–413**.

6. *Post-Hearing Order Regarding Fifth Amended Methodology Order* and Background Information, dated July 19, 2023. **R. 367–400**.

[2] For those documents listed by A&B that include "and Background Information," no background information is currently in the agency record or will be added. As an initial matter, A&B requested "Background Information" for several documents for which the Department does not generate background information. Nevertheless, of the methodology step orders listed by A&B for which the Department does generate background information files—the files are not missing and are properly excluded from the agency record. The files do not satisfy the requirements of Idaho Code § 67-5249(3). The files were not officially noticed by the Hearing Officer, *see* R. 2810, or cited in the *Final Order* or any of the briefing on exceptions. Further, A&B has provided no argument explaining why the inclusion of the files would be consistent with Idaho Code § 67-5249(3). Therefore, all objections concerning missing background information are overruled.

7. *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* and Background Information, dated July 19, 2023. **R. 414–463**.

12. *Surface Water Coalition's Response to Cities' Request for Hearing and Order Authorizing Discovery*, dated August 22, 2023. **R. 471–479**.

15. *Motion for Clarification and Reconsideration of Denial of Request for Hearing and to Engage in Discovery*, dated September 5, 2023. **R. 1699–1703, 1718–22**.

16. *Order Denying Cities' Motion for Clarification and Reconsideration*, dated September 25, 2023. **R. 1710–16, 1731–37**.

17. *Final Order Establishing 2023 Reasonable Carryover (Methodology Step 9)* and Background Information, dated November 30, 2023. **R. 1739–48**.

18. *Final Order Regarding April 2024 Forecast Supply (Methodology Steps 1-3)* and Background Information, dated April 18, 2024. **R. 1906–19**.

20. *Joint Notice of Compliance—Magic Valley Ground Water District & North Snake Ground Water District's 2024 Irrigation Season Mitigation Commitments*, dated May 2, 2024. **R. 1932–42**.

44. *Final Order Curtailing Ground Water Rights Junior to March 31, 1954* and Background Information, dated May 30, 2024. **R. 1971–2163**.

47. *Order Approving 2024 Stipulation as Compliance with Approved Mitigation Plan* and Background Information, dated June 20, 2024. **R. 2217–28**.

50. *Order Regarding Mid-Season Change to Area of Common Ground Water Supply for Eastern Snake Plain Aquifer; Third Order Amending Curtailment List* and Background Information, dated June 28, 2024. **R. 2687–93**.

51. *Order Revising April 2024 Forecast Supply and Amending Curtailment Order (Methodology Steps 5 & 6)* and Background Information, dated July 17, 2024. **R. 2233–48**.

52. *Final Order Curtailing Ground Water Rights Junior to January 25, 1970* and Background Information, dated December 17, 2024. **R. 2281–2300**.

59. *Final Order Regarding April 2025 Forecast Supply (Methodology Steps 1-3)* and Background Information, dated April 16, 2025. **R. 2319–32**.

62. *Final Order Curtailing Ground Water Rights Junior to August 28, 1955* and Background Information, dated May 16, 2025. **R. 2337–59**.

63. *Order Revising April 2025 Forecast Supply and Continuing May 16, 2025 Curtailment Order (Methodology Steps 5 & 6)* and Background Information, dated July 10, 2025. **R. 2360–75**.

71. *Order Revising July 2025 Forecast Supply (Methodology Steps 7-8)* and Background Information, dated September 11, 2025. **R. 2388–2403**.

73. *Order on Intervention, Authorizing Discovery, Email Service, and Scheduling; Order Granting Motion for Subpoena; Notice of Hearing*, dated October 7, 2025. **R. 2428–37**.

81. A&B Proportionate Share Expert Report Docket No. CM-DC-2010-001, dated November 7, 2025. **R. 2451–77**.

90. *American Falls-Aberdeen Ground Water District's Motion to Reconsider Order Granting Hearing and Vacate Hearing*, dated November 18, 2025. **R. 2438–77**.

92. *Final Order Establishing 2025 Reasonable Carryover (Methodology Step 9)* and Background Information, dated November 21, 2025. **R. 2520–29**.

100. *Final Order Curtailing Ground Water Rights Junior to August 15, 1952* and Background Information, dated December 8, 2025. **R. 2540–94**.

B. Duplicate AFA Objections

The Director finds that A&B and AFA both objected to the omission of the below-listed documents from the agency record. For the reasons stated above in the Director's review of the *AFA Objection*, the documents will be added to the record. Therefore, further review of A&B's objections to the following documents is moot:

11. *Order Denying IGWA's Petition for Review*, dated August 23, 2023

22. *IGWA's Request for Mitigation Credit for Aquifer Enhancement Activities (2024)*, dated May 2, 2024

28. *Final Order Denying IGWA's Request for Mitigation Credit for Aquifer Enhancement Activities (2024)*, dated May 15, 2024

65. *Joint Motion for Order Approving 2025 Stipulation*, dated July 24, 2025

66. *Order Approving 2025 Stipulation as Compliance with Approved Mitigation Plan* and Background Information,[3] dated July 25, 2025

C. Duplicate A&B Objections

The Director finds that within the *A&B Objection*, A&B objected to the omission of four separate documents, two times each. Reviewing duplicate objections is unnecessary. Therefore, the following duplicate objections are overruled:

56. *Order Revising April 2024 Forecast Supply and Amending Curtailment Order (Methodology Steps 5 &6)*, dated January 3, 2025

Same as Objection 51, except this objection lists an incorrect document date.

68. *Final Order Curtailing Ground Water Right Junior to October 11, 1900*, dated July 25, 2025

Same as Objection 67.

69. *Order Approving 2025 Stipulation as Compliance with Approved Mitigation Plan*, dated July 25, 2025

Same as Objection 66.

84. *IGWA's Expert Witness Disclosure*, dated November 7, 2025

Same as Objection 80.

D. Documents Not Filed or Issued in the Consolidated Contested Cases

The documents listed below are not missing and are properly excluded from the agency record. They do not satisfy the requirements of Idaho Code § 67-5249(3). The documents listed below were not issued or filed in the consolidated contested cases which the *Final Order* resolved. Additionally, they were not officially noticed by the Hearing Officer, *see* R. 2810, or cited in the *Final Order* or any of the briefing on exceptions. Further, A&B has provided no

[3] The Director's prior decision concerning requests for the inclusion of "Background Information" still applies here. *See* discussion *supra* note 2.

argument explaining why the inclusion of the documents would be consistent with Idaho Code § 67-5249(3). Therefore, all objections concerning the following documents are overruled:

4. *Surface Water Coalition's Response to IGWA's Amended Notice of Mitigation,* dated June 5, 2023

8. *Surface Water Coalition's Petition for Reconsideration & Clarification; Request for Enforcement of Orders Approving 2016 Stipulated Plan*, dated July 31, 2023

9. *Order Granting Petition for Reconsideration / Clarification in Part and Denying Request for Enforcement*, dated August 11, 2023

10. *Order Denying Request for Hearing and Motion to Authorize Discovery*, dated August 23, 2023

13. *IGWA's Response to Surface Water Coalition's Petition for Reconsideration and Request for Hearing*, dated August 22, 2023

14. *Order Revising July 2023 Forecast Supply, dated Methodology Step 7-8* and Background Information, dated August 31, 2023

19. Falls Irrigation District Letter to Water District 01 Watermaster, dated April 30, 2024

21. *Declaration of Sophia Sigstedt*, dated May 2, 2024

23. *IGWA's Petition for Reconsideration of Final Order Regarding April 2024 Forecast Supply*, dated May 2, 2024

24. *BJGWD's Notice of Mitigation in Response to April 2024 As-Applied Order, dated Methodology Steps 1-3*, dated May 2, 2024

25. Letter from IGWA to the Director, dated May 8, 2024

26. *Final Order Denying IGWA's Petition for Reconsideration of April As-Applied Order*, dated May 10, 2024

27. *Order Determining Deficiency in Notices of Secured Water*, dated May 10, 2024

29. *IGWA's Notice of Storage Water Leases*, dated May 17, 2024

30. *Surface Water Coalition's Response to American Falls-Aberdeen Ground Water District's Motion for Reconsideration,* dated May 17, 2024

31. *SWC's Response to IGWA's Conditional Notice of Mitigation Compliance / Petition for Reconsideration*, dated May 23, 2024

32. *Upper Valley Ground Water District's Response in Opposition to American Falls-Aberdeen Ground Water District's Motion for Reconsideration*, dated May 24, 2024

33. *BGWD's Response to AFA's Motion for Reconsideration of Order Determining Deficiency in Notices of Secured Water*, dated May 24, 2024

34. *Joinder in Support of Upper Valley Ground Water District's Response in Opposition to American Falls-Aberdeen Ground Water District's Motion for Reconsideration – Bonneville-Jefferson Ground Water District*, dated May 24, 2024

35. *Response to American Falls-Aberdeen Ground Water District's Motion for Reconsideration of Order Determining Deficiency in Notices of Secured Water – Magic Valley Ground Water District and North Snake Ground Water District*, dated May 24, 2024

36. *AFA's Response and Opposition to UVGWD's Petition to Intervene for Limited Purpose*, dated May 24, 2024

37. *AFA's Reply to UVGWD's Response in Opposition to AFA's Motion for Reconsideration of Order Determining Deficiency in Notices of Secured Water*, dated May 24, 2024

38. *AFA's Joinder in Support of SWC's Response to IGWA's Conditional Notice of Mitigation Compliance / Petition for Reconsideration*, dated May 24, 2024

39. *IGWA's Reply to SWC's Response to IGWA's Conditional Notice of Mitigation Compliance / Petition for Reconsideration*, dated May 24, 2024

40. *Order Granting Upper Valley District's Limited Intervention and AFA's Motion for Reconsideration*, dated May 28, 2024

41. *Bingham Ground Water District, Bonneville Jefferson Ground Water District, and Jefferson Clark Ground Water District Amended Notice of Mitigation Compliance*, dated May 29, 2024

42. *Notice of Compliance; Request for Clarification – Magic Valley Ground Water District and North Snake Ground Water District*, dated May 29, 2024

43. *Notice of Intended Compliance with 2016 Mitigation Plan by Henry's Fork Ground Water District and Madison Ground Water District*, dated May 29, 2024

45. *Order Amending Curtailment List* and Background Information, dated June 6, 2024

46. *Notice of Falls Irrigation District's Joinder and Participation in American Falls-Aberdeen Ground Water District's Mitigation Plan in 2024*, dated June 7, 2024

48. *Second Order Amending Curtailment List* and Background Information, dated June 20, 2024

52. *Order Granting Joint Motion to Extend Stay*, dated October 4, 2024

53. *Final Order Establishing 2024 Reasonable Carryover (Methodology Step 9)* and Background Information, dated November 29, 2024

55. *Order Granting Stipulated Motion to Extend Stay* and Background Information, dated December 23, 2024

57. 2025 Step 1 Methodology Order Responses

58. Joint Forecast – USBR & USACE, dated April 2, 2025

61. *Cities Joint Request for Hearing on Final Order Regarding April 2025 Forecast Supply (Methodology Steps 1-3)*, dated April 30, 2025

64. *SWC's Request for Hearing on Steps 5/6 Order*, dated July 24, 2025

70. *Order Denying Surface Water Coalition's Request for Hearing on Steps 5/6 Order*, dated September 3, 2025

72. *Amended Notice of Additional Non-Signatory Cities Participating in the Cities' Joint Mitigation Plan in 2025*, dated October 3, 2025

74. *Second Amended Notice of Additional Non-Signatory Cities Participating in the Cities' Joint Mitigation Plan in 2025*, dated October 7, 2025

111. *Order Phasing in Administration of Ground Water Rights Recently Included in the ESPA ACGWS*, dated February 2, 2026

112. *Notice of Appeal and Petition for Judicial Review of Agency Action*, dated May 13, 2026[4]

E. Discovery, Expert Testimony, and Miscellaneous Notice Documents

The documents listed below are not missing and are properly excluded from the agency record. The documents do not satisfy the requirements of Idaho Code § 67-5249(3). Concerning

[4] The subject petition for judicial review was filed in the Court and not with the Department. Its inclusion in the agency record is not necessary or required pursuant to Idaho Code § 67-5249(3) or I.R.C.P. 84.

witness and exhibit disclosures and notices (other than notices of hearings, conferences, or officially noticed documents), Idaho Code § 67-5249(3) does not automatically include them in the record on appeal. A&B has provided no argument explaining why the inclusion of the documents would be consistent with Idaho Code § 67-5249(3). When it comes to evidence, since no administrative hearing was held, opportunities were limited for the Hearing Officer or the Director to officially receive or have cause to consider evidence like expert reports, deposition transcripts and exhibits, or discovery responses. In addition, pursuant to IDAPA 37.01.01.525, "[p]arties shall not serve the presiding officer copies of discovery responses unless it is part of a motion to compel discovery." No motions to compel discovery were filed. Finally, none of the documents listed below were officially noticed by the Hearing Officer, *see* R. 2810, or cited in the *Final Order* or any of the briefing on exceptions. Consequently, said expert report, deposition transcript and exhibit, and discovery response documents were not received on record or considered by the Hearing Officer or Director. Because A&B has provided no argument explaining why the inclusion of the documents would be consistent with Idaho Code § 67-5249(3), all objections concerning the following documents are overruled and the documents will not be included in the record:

75. *Notice of Deposition Duces Tecum of Jennifer Sukow*, dated and associated exhibits for the Deposition, dated October 15, 2025

76. Jennifer Sukow Deposition & Exhibits, dated October 22, 2025[5]

77. *A&B Irrigation District's First Set of Discovery Requests,* dated October 22, 2025

78. *A&B Irrigation District's Expert Witness List,* dated November 7, 2025

79. *A&B Irrigation District's Notice of Service*, dated November 7, 2025

80. *IGWA's Expert Witness Disclosure*, dated November 7, 2025

[5] The agency record does include the excerpts from Ms. Sukow's deposition that were attached to Mr. Thompson's declaration filed in support of the *A&B Response.* R. 2683–85.

82. *American Falls-Aberdeen Ground Water District's Disclosure of Expert Witness & Notice of Service of Expert Report*, dated November 7, 2025

83. Expert Report for Aberdeen-American Falls Ground Water District – A&B's Requests for Hearing – SWC Delivery Call, dated November 7, 2025

85. *A&B Irrigation District's First Set of Discovery Requests to American Falls-Aberdeen Ground Water District*, dated November 7, 2025

86. *A&B Irrigation District's First Set of Discovery Requests to Bonneville-Jefferson Ground Water District*, dated November 7, 2025

87. *A&B Irrigation District's First Set of Discovery Requests to IGWA*, dated November 7, 2025

88. Greg Sullivan Deposition & Exhibits, dated November 11–12, 2025

89. *Notice of Deposition Duces Tecum of Brian Ragan*, dated November 13, 2025

91. Brian Ragan Deposition and Exhibits, dated November 21, 2025

93. *Notice of Deposition Duces Tecum of D. Colvin, P.G.*, dated December 2, 2025

94. *Notice of Deposition Duces Tecum of Gregory K. Sullivan*, dated December 3, 2025

95. *Notice of Change of Firm*, dated December 4, 2025

96. *IGWA's Answers to A&B Irrigation District's First Set of Discovery Requests to IGWA*, dated December 5, 2025

97. *Notice of Service of IGWA's Response to A&B Irrigation District's First Set of Discovery Requests to IGWA*, dated December 5, 2025

98. *Coalition of Cities Answers to A&B Irrigation District's First Set of Discovery Requests*, dated December 8, 2025

99. *Notice of Service of Coalition of Cities Answers to A&B Irrigation District's First Set of Discovery Requests*, dated December 8, 2025

101. *American Falls-Aberdeen Ground Water District's Responses to A&B Irrigation District's First Set of Discovery Requests*, dated December 10, 2025

102. *Notice of Service of American Falls-Aberdeen Ground Water District's Responses to A&B Irrigation District's First Discovery Requests*, dated December 10, 2025

103. Dave Colvin Deposition and Exhibits, dated December 11, 2025

104. *Notice of Withdrawal of Counsel*, December 12, 2025

105. *A&B Irrigation District's Notice of Service*, dated December 19, 2025

106. *Notice of Service American Falls-Aberdeen Ground Water District's Rebuttal Expert Report*, dated December 19, 2025

107. A&B Proportionate Share Rebuttal Report Docket No. CM-DC-2010-001, dated December 19, 2025

108. Rebuttal Expert Report for American Falls – Aberdeen Ground Water District – A&B Requests for Hearing, dated December 19, 2025

109. Review of A&B Proportionate Share Expert Report Docket No. CM-DC-2010-001 By LRE, dated December 19, 2025

110. *Coalition of Cities Notice of Intent to Participate*, dated December 22, 2025

F. Documents Missing from the Agency Record

For the reasons provided below, A&B's objections concerning the following documents are sustained and will be included in the record:

49. *Joint Motion for Order Approving 2024 Stipulation*, dated June 20, 2024

Upon review of the agency record, the Director finds that this document was officially noticed by the Hearing Officer in his *Order Denying IGWA Motion*, *see* R. 2810, 2611, and omitted from the record. This objection is sustained.

60. Response to the Department's April 2025 Forecast Supply Order Letter, dated April 29, 2025

Upon review, the Director finds that this document was cited in the September 3, 2025 *Order Granting A&B Irrigation District's Requests for Hearing, Consolidating Proceedings for Hearing, and Appointing Hearing Officer; Notice of Prehearing Conference. See* R. 2381. Given the foundational nature of the September 3, 2025 order and in the interest of ensuring a complete record that encompasses all evidence considered, this objection is sustained.

67. *Final Order Curtailing Ground Water Rights Junior to October 11, 1900* and Background Information, dated July 25, 2025

Upon review, the Director finds that this document was cited in the September 3, 2025 *Order Granting A&B Irrigation District's Requests for Hearing, Consolidating Proceedings for Hearing, and Appointing Hearing Officer; Notice of Prehearing Conference. See* R. 2383. Given the foundational nature of the September 3, 2025 order and in the interest of ensuring a complete record that encompasses all evidence considered, this objection is sustained as it concerns the curtailment order. The Director's prior decision concerning requests for the inclusion of "Background Information" still applies here. *See* discussion *supra* note 2.

IV. ORDER

IT IS HEREBY ORDERED that *A&B Irrigation District's Objection to the Agency Record* and *American Falls-Aberdeen Ground Water District's Objection to Agency Record* are sustained in part and overruled in part, consistent with the foregoing. The Department shall include in the agency record on appeal the documents for which the objections were sustained.

IT IS FURTHER ORDERED that pursuant to I.R.C.P. 84(j)(3), *A&B Irrigation District's Objection to the Agency Record*, *American Falls-Aberdeen Ground Water District's Objection to Agency Record*, and this order shall be included in the agency record.

IT IS FURTHER ORDERED that with the additions to the record ordered above, the agency record is now deemed settled. In accordance with the Court's May 14, 2026 *Procedural Order*, the Department shall lodge the settled agency record on appeal with the Court no later than June 25, 2026.

DATED this 17th day of June 2026.

MATHEW WEAVER, Director
Idaho Department of Water Resources

Attorneys for A&B Irrigation District

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 Docket No. CM-MP-2015-003 **A&B IRRIGATION DISTRICT'S NOTICE OF MITIGATION**

COMES NOW, A&B Irrigation District (hereafter referred to as "A&B" or "District"), by and through counsel of record, and hereby provides its notice of mitigation in response to the Director's request in the *Final Order Regarding April 2016 Forecast Supply (Methodology Steps 1 – 3)* ("*April Order*") issued on April 19, 2016. A&B reserves all rights with respect to the Director's calculations and ordered mitigation. *See A&B Irrigation District's Petition for Reconsideration / Request for Hearing Re: April 2016 As Applied Order.*

2016 MITIGATION ACTIONS

A&B filed and received approval of its mitigation plan for the Surface Water Coalition delivery call last year. *See Final Order Approving Mitigation Plan* (Dec. 16, 2015). A&B provides notice to the Director of the following mitigation actions for 2016:

1) CREP

A&B landowners enrolled 98 acres into the federal conservation reserve enhancement program (CREP). IDWR estimated that ceasing groundwater withdrawals for these lands results in a response of 103 acre-feet to the Near Blackfoot to Minidoka reaches of the Snake River. *See March 29, 2016 Post Audit Memo (Rangen Call) (Jennifer Sukow).* The Director should consider and account for this mitigation action in regards to A&B's "proportionate share" of the predicted in-season demand shortfall to TFCC.

2) Prior Conversion Lands

As detailed in its mitigation plan, A&B previously converted 1,378 acres under senior water right 36-2080 from a groundwater to a surface water supply. *See* Ex. A (lands colored "green" and identified as "mid 1990s conversion"). IDWR estimated that ceasing groundwater withdrawals and delivering surface water to these lands results in a response of 1,409 acre-feet to the Near Blackfoot to Minidoka reaches of the Snake River. *See March 29, 2016 Post Audit Memo (Rangen Call) (Jennifer Sukow).* The Director should consider and account for this mitigation action in regards to A&B's "proportionate share" of the predicted in-season demand shortfall to TFCC.

3) Additional Pumping Plant #2 Conversion Lands

As detailed in the mitigation plan, A&B noted its intention to convert an additional 1,478.5 acres to a surface water supply to be served by the new Unit A Pumping Plant #2 Project

when it had available water. *See Mitigation Plan* at 3. The new pipeline project is complete and A&B is capable of and will deliver surface water to these lands for the 2016 irrigation season. *See* Ex. A (lands colored "blue" identified as "soft conversions"). In addition, A&B has the ability to temporarily deliver surface water to an additional 535.1 acres irrigated with groundwater. *See* Ex. A (colored "tan" and identified as "intermittent soft conversions"). A&B will likely be able to deliver surface water to all or part of these lands in the shoulder months (or parts thereof) of April, May, September, and October. A&B does not have the information yet to determine what the estimated response of these conversions will be on the Near Blackfoot to Minidoka reaches of the Snake River. With the attached map IDWR should be able to run ESPAM 2.1 and make initial estimates. Further, A&B will supply the necessary information regarding surface water deliveries to these lands during the 2016 irrigation season. The Director should consider and account for this mitigation action in regards to A&B's "proportionate share" of the predicted in-season demand shortfall to TFCC.

4) Storage Water

To the extent the above mitigation actions do not cover A&B's "proportionate share" of the predicted demand shortfall to TFCC, A&B has available storage water from its own space in American Falls and Palisades Reservoirs, as well as access to the Water District 01 Rental Pool, and likely some portion of the storage water provided to the SWC by IGWA, the Processors, and the Cities. Accordingly, A&B has available storage water to deliver for mitigation purposes.

CONCLUSION

A&B is undertaking various mitigation actions in 2016 to mitigate for its "proportionate share" of the predicted in-season demand shortfall to TFCC. A&B requests the Director to account for the predicted responses to the Near Blackfoot to Minidoka reaches of the Snake

River resulting from these actions and adjust the "proportionate share" determination accordingly.

In the event A&B still has an outstanding obligation that is not mitigated for, A&B will have available storage water to provide to injured Coalition members if needed.[1] A&B requests the Director accept this *Notice of Mitigation* and remove A&B's affected groundwater rights from any curtailment order.

DATED this 7th day of May, 2016.

BARKER ROSHOLT & SIMPSON LLP

Travis L. Thompson

Attorneys for A&B Irrigation District

[1] A&B also has the ability to enter into a stipulation with the Coalition for purposes of its 2016 mitigation obligation.

CERTIFICATE OF SERVICE

I hereby certify that on this 2nd day of May, 2016, I served a true and correct copy of the foregoing *A&B Irrigation District's Notice of Mitigation* on the following by the method indicated:

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY **IN THE MATTER OF THE MITIGATION PLAN FILED BY A&B IRRIGATION DISTRICT FOR THE DISTRIBUTION OF WATER TO WATER RIGHTS HELD BY THE SURFACE WATER COALITION**	**CM-DC-2010-001** **CM-MP-2015-003** **ORDER DETERMINING DEFICIENCY IN A&B IRRIGATION DISTRICT'S NOTICE OF MITIGATION**

FINDINGS OF FACT

1. On April 19, 2016, the Director ("Director") of the Idaho Department of Water Resources ("Department") issued the *Fourth Amended Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("Methodology Order"). The Methodology Order established nine steps for determining material injury to members of the Surface Water Coalition ("SWC").[1]

2. On April 19, 2016, the Director issued the *Final Order Regarding April Forecast Supply (Methodology Steps 1-3)* ("As-Applied Order"), which applied steps 1, 2, and 3 of the Methodology Order. The Director predicted an in-season demand shortfall ("DS") of 44,200 acre-feet. *As-Applied Order* at 3-4. The Director ordered that, by May 3, 2016, ground water users with consumptive water rights "junior to February 8, 1989, within the Eastern Snake Plain Aquifer area of common ground water supply shall establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted DS of 44,200 acre-feet in accordance with an approved mitigation plan." *Id.* at 6. The Director also ordered that, if such a junior ground water user cannot establish they can mitigate for their proportionate share of the

[1] The SWC is comprised of A&B District, American Falls Reservoir District #2, Burley Irrigation District, Milner Irrigation District, Minidoka Irrigation District, North Side Canal Company, and Twin Falls Canal Company.

predicted DS "in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water user." *Id.*

3. In the As-Applied Order, the Director noted that A&B Irrigation District ("A&B") has an approved mitigation plan in place for its ground water rights (filed in Docket No. CM-MP-2015-003) and determined that A&B's "proportionate share of the predicted DS of 44,200 acre-feet is 3,463 acre-feet." *Id.* at 5, n.4.

4. On May 2, 2016, A&B submitted to the Department *A&B Irrigation District's Petition for Reconsideration and Request for Hearing Re: April 2016 As Applied Order.* The Director subsequently issued an *Order on Petition for Reconsideration and Request for Hearing* ("Order on Petition") granting A&B's request to re-calculate its proportionate share as set forth in the As-Applied Order. The Director determined A&B's proportionate share of the predicted DS is 2,122 acre-feet, not 3,463 acre-feet. *Order on Petition* at 2.

5. On May 2, 2016, A&B submitted to the Department *A&B Irrigation District's Notice of Mitigation* ("Notice"), identifying "various mitigation actions" to "mitigate for its 'proportionate share' of the predicted in-season [DS]." *Notice* at 2-3. A&B states that: (a) its landowners enrolled 98 acres into the federal conservation reserve enhancement program ("CREP"), which the Department previously estimated resulted in a response of 103 acre-feet to the Near Blackfoot to Minidoka reaches of the Snake River; (b) A&B previously converted 1,378 acres under senior water right no. 36-2080 from a ground water to surface water supply, which the Department previously estimated resulted in a response of 1,409 acre-feet to the Near Blackfoot to Minidoka reaches of the Snake River; (c) A&B is "capable of" delivering surface water to 1,478.5 acres of land and an additional 535.1 acres of land irrigated with ground water, "will likely be able to deliver surface water to all or part of these lands in the shoulder months," but "does not have the information yet to determine what the estimated response of these conversions will be in the Near Blackfoot to Minidoka reaches of the Snake River," and (d) "A&B has available storage water from its own space in American Falls and Palisades Reservoirs, as well as access to the Water District 01 Rental Pool, and likely some portion of the storage water provided to the SWC by the [Idaho Ground Water Appropriator's, Inc.], the Processors, and the Cities." *Id.*

6. A&B "requests the Director to account for the predicted responses to the Near Blackfoot to Minidoka reaches of the Snake River resulting from these actions and adjust the 'proportionate share' determination accordingly." *Notice* at 3-4. A&B states: "In the event A&B still has an outstanding obligation that is not mitigated for, A&B will have available storage water to provide to injured [SWC] members if needed." *Id.* at 4. "A&B requests the Director accept" its Notice "and remove A&B's affected groundwater rights from any curtailment order." *Id.*

CONCLUSIONS OF LAW

1. Idaho Code § 42-602 authorizes the Director to supervise water distribution within water districts:

> The director of the department of water resources shall have direction and control of the distribution of water from all natural water sources within a water district to the canals, ditches, pumps and other facilities diverting therefrom. Distribution of water within water districts created pursuant to section 42-604, Idaho Code, shall be accomplished by watermasters as provided in this chapter and supervised by the director. The director of the department of water resources shall distribute water in water districts in accordance with the prior appropriation doctrine. The provisions of chapter 6, title 42, Idaho Code, shall apply only to distribution of water within a water district.

2. By May 3, 2016, ground water users with consumptive water rights "junior to February 8, 1989, within the Eastern Snake Plain Aquifer area of common ground water supply" had to "establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted DS of 44,200 acre-feet in accordance with an approved mitigation plan." *As-Applied Order* at 6. Junior ground water users unable to establish they can mitigate for their proportionate share of the predicted DS in accordance with an approved mitigation plan will be subject to an order curtailing the junior-priority ground water use. *Id.*

3. A&B requests the Director account for predicted responses "to the Near Blackfoot to Minidoka reaches of the Snake River resulting from [its aquifer enhancement activities, i.e. enrollment of acres in CREP and conversions] and adjust the 'proportionate share' determination accordingly." *Notice* at 3-4.

4. The predicted DS is the shortfall predicted after the benefits of ongoing aquifer enhancement activities performed by A&B and other entities have already been realized. In other words, the predicted DS already accounts for the benefits of ongoing aquifer enhancement activities performed by A&B and other entities. At this time, the Director will not reduce the predicted DS, or any entity's proportionate share thereof, because of the effects of aquifer enhancement activities. However, the Director will construe A&B's request to account for predicted responses to the Near Blackfoot to Minidoka reaches of the Snake River resulting from its aquifer enhancement activities and to reduce its proportionate share accordingly as a motion pursuant to the Department's Rule of Procedure 260 requesting the agency to take action in a contested case. *See* IDAPA 37.01.01.260. Pursuant to the Department's Rule of Procedure 563, the Director will set and hear oral argument on the issue of whether A&B's proportionate share should be reduced because of its aquifer enhancement activities.

5. With respect to A&B's notice that it "will have available storage water to provide to injured [SWC] members if needed," A&B must "provide the Director with legally enforceable contracts, options or similar documentation to establish that it has secured the water necessary to" mitigate for its proportionate share of the predicted DS. *See Order Determining Deficiency*

in IGWA's Notice of Secured Water; Curtailing Ground Water Rights Junior to July 1, 1985, Docket No. CM-DC-2010-001 (Jan. 10, 2014).

6. A&B's statements that it "has available storage water from its own space in American Falls and Palisades Reservoirs, as well as access to the Water District 01 Rental Pool, and likely some portion of the storage water provided to the SWC by the [Idaho Ground Water Appropriator's, Inc.], the Processors, and the Cities," are insufficient documentation to establish, to the satisfaction of the Director, that A&B can mitigate for its proportionate share of the predicted DS (2,122 acre-feet).

7. Because A&B owns storage water in American Falls and Palisades Reservoirs, A&B does not need to contract for water. To establish to the satisfaction of the Director that A&B will have available storage water to mitigate for A&B's proportionate share of the predicted DS, A&B must document that it has communicated to the watermaster its written commitment of 2,122 acre-feet of storage water to be deducted from A&B's 2016 storage allocation and to be controlled, assigned, and delivered by the watermaster to mitigate injury to other members of the SWC.

ORDER

Based upon and consistent with the foregoing, IT IS HEREBY ORDERED that the Notice submitted by A&B is insufficient to satisfy the Director that A&B can mitigate for its proportionate share of the predicted DS (2,122 acre-feet). Therefore, consistent with the As-Applied Order, A&B's affected ground water rights will be subject to an order issued by the Director curtailing junior-priority ground water users.

IT IS FURTHER ORDERED that, pursuant to the Department's Rule of Procedure 563, the Director will set and hear oral argument on the issue of whether A&B's proportionate share of the predicted DS should be reduced because of its aquifer enhancement activities. The setting of this hearing will not stay the effectiveness of the Methodology Order or As-Applied Order. The Director will shortly issue a subsequent order scheduling a pre-hearing conference.

IT IS FURTHER ORDERED that, if by **May 13, 2016**, A&B submits to the Department adequate documentation establishing it has secured the water necessary to mitigate for its proportionate share of the predicted DS (2,122 acre-feet), A&B's affected ground water rights will not be subject to the Director's curtailment order.

Dated this 11th day of May 2016.

Deborah J. Gibson

Deborah Gibson
Administrative Assistant to the Director

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 Docket No. CM-MP-2015-003 **ORDER GRANTING A&B'S REQUESTS TO WITHDRAW REQUESTS FOR HEARINGS RE: CREDIT FOR AQUIFER ENHANCEMENT ACTIVITIES AND STANDARD OF MITIGATION**
IN THE MATTER OF THE MITIGATION PLAN FILED BY A&B IRRIGATION DISTRICT FOR THE DISTRIBUTION OF WATER TO WATER RIGHTS HELD BY THE SURFACE WATER COALITION	

BACKGROUND

On April 19, 2016, the Director ("Director") of the Idaho Department of Water Resources ("Department") issued the *Final Order Regarding April Forecast Supply (Methodology Steps 1-3)* ("April Forecast Supply Order"), which applied steps 1, 2, and 3 of the Methodology Order. The Director predicted an in-season demand shortfall ("DS") of 44,200 acre-feet. *April Forecast Supply Order* at 3-4.

On May 2, 2016, A&B Irrigation District ("A&B") submitted to the Department *A&B Irrigation District's Notice of Mitigation* ("Notice"), identifying "various mitigation actions" to "mitigate for its 'proportionate share' of the predicted in-season [DS]." *Notice* at 2-3.

On May 11, 2016, the Director issued an *Order Determining Deficiency in A&B Irrigation District's Notice of Mitigation* ("Deficiency Order"). The Director denied A&B's request to reduce its proportionate share of the predicted DS "because of the effects of aquifer enhancement activities," but decided to set and hear oral argument on the issue pursuant to the Department's Rule of Procedure 563. *Deficiency Order* at 3. On May 12, the Director issued an order scheduling a pre-hearing conference on the issue for May 19, 2016.

On May 13, 2016, A&B submitted to the Department *A&B Irrigation District's Notice of Communication to Water District 01 Watermaster/Request for Hearing* ("Request for Hearing"). A&B asserted the Deficiency Order "created a new standard regarding mitigation that has not been previously applied to other affected junior ground water right holders" and requested a hearing pursuant to Idaho Code § 42-1701A(3). *Request for Hearing* at 2.

On May 19, 2016, the Director held a pre-hearing conference. Counsel for A&B requested the Director stay the hearing on the issue of whether A&B's proportionate share of the predicted DS should be reduced because of the effects of aquifer enhancement activities. The Director subsequently issued an order granting A&B's request to stay the hearing on the issue.

On May 24 2016, the Director issued an order granting A&B's request for hearing on the issue of whether the Deficiency Order created a new standard of mitigation and scheduled a pre-hearing conference for June 30, 2016.

On June 14, 2016, A&B submitted a letter to the Director stating "it has elected to not deliver groundwater pursuant to its enlargement water rights that are subject to the [April Forecast Supply Order]" and requesting the Director "rescind any mitigation obligation attributed to [A&B]."

On June 30, 2016, the Director issued a response to A&B's June 14, 2016, letter stating that A&B will not have a mitigation obligation for this year if A&B curtails the enlargement ground water rights and if the priority date for curtailment for 2016 remains junior to A&B's other ground water rights.

On July 1, 2016, A&B filed *A&B Irrigation District's Notice of Withdrawal of Request for Hearing* withdrawing its request for hearing on the issue of whether A&B's proportionate share of the predicted DS should be reduced because of the effects of aquifer enhancement activities. On July 1, 2016, A&B also filed *A&B Irrigation District's Notice of Withdrawal of Request for Hearing* withdrawing its request for hearing on the issue of whether the Deficiency Order created a new standard of mitigation. The Department received no opposition to A&B's requests to withdraw its requests for hearing.

ORDER

IT IS HEREBY ORDERED that A&B's request to withdraw its request for hearing on the issue of whether A&B's proportionate share of the predicted DS should be reduced because of the effects of aquifer enhancement activities is GRANTED.

IT IS FURTHER ORDERED that A&B's request to withdraw its request for hearing on the issue of whether the Deficiency Order created a new standard of mitigation is GRANTED.

DATED this 2nd day of September 2016.

GARY SPACKMAN
Director

Deborah J. Gibson

Deborah Gibson
Admin. Assistant for the Director

EXPLANATORY INFORMATION TO ACCOMPANY A FINAL ORDER

(To be used in connection with actions when a hearing was not held)

(Required by Rule of Procedure 740.02)

The accompanying order is a "**Final Order**" issued by the department pursuant to section 67-5246, Idaho Code.

PETITION FOR RECONSIDERATION

Any party may file a petition for reconsideration of a final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: The petition must be received by the Department within this fourteen (14) day period.** The department will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law. See section 67-5246(4), Idaho Code.

REQUEST FOR HEARING

Unless the right to a hearing before the director or the water resource board is otherwise provided by statute, any person who is aggrieved by the action of the director, and who has not previously been afforded an opportunity for a hearing on the matter shall be entitled to a hearing before the director to contest the action. The person shall file with the director, within fifteen (15) days after receipt of written notice of the action issued by the director, or receipt of actual notice, a written petition stating the grounds for contesting the action by the director and requesting a hearing. See section 42-1701A(3), Idaho Code. **Note: The request must be received by the Department within this fifteen (15) day period.**

APPEAL OF FINAL ORDER TO DISTRICT COURT

Pursuant to sections 67-5270 and 67-5272, Idaho Code, any party aggrieved by a final order or orders previously issued in a matter before the department may appeal the final order and all previously issued orders in the matter to district court by filing a petition in the district court of the county in which:

i. A hearing was held,
ii. The final agency action was taken,
iii. The party seeking review of the order resides, or
iv. The real property or personal property that was the subject of the agency action is located.

The appeal must be filed within twenty-eight (28) days of: a) the service date of the final order, b) the service date of an order denying petition for reconsideration, or c) the failure within twenty-one (21) days to grant or deny a petition for reconsideration, whichever is later. See section 67-5273, Idaho Code. The filing of an appeal to district court does not in itself stay the effectiveness or enforcement of the order under appeal.

Docket No. CM-DC-2010-001

FIFTH AMENDED FINAL ORDER REGARDING METHODOLOGY FOR DETERMINING MATERIAL INJURY TO REASONABLE IN-SEASON DEMAND AND REASONABLE CARRYOVER

Surface Water Coalition Expert Report

May 2023

Authors
David C. Colvin, P.G.
Erick Powell, Ph.D., P.E.

1. Introduction

This report presents the opinions of David Colvin and Erick Powell. We are groundwater experts who have been retained by the Surface Water Coalition (SWC) for issues being addressed in Docket CM-DC-2010-001. David Colvin is the primary author of this report, has 27 years of experience and is licensed as a Professional Geologist in Idaho. Erick Powell is a supporting author, has 17 years of experience and is licensed by the State as a Professional Engineer. Our resumes are included as Attachment A and B, respectively. We are basing our opinions on the information available at this time and reserve the right to alter our opinions should new or different information become available in the future.

On April 21, 2023, the Director of the Idaho Department of Water Resources (IDWR) issued the Fifth Amended Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover (IDWR, 2023a, "Fifth Methodology Order") and the Final Order Regarding April 2023 Forecast Supply (IDWR, 2023b, "2023 As-Applied Order"). In the Fifth Methodology Order, the Director restated the nine steps prescribed by the methodology with updates to various aspects of the prediction of forecasted supply (FS), estimates of reasonable in-season demand (RISD), determination of the in-season demand shortfall (IDS), and determination of curtailment requirements. The Fifth Methodology Order requires curtailment for junior groundwater rights that:

- Do not have approved mitigation plans;
- Fail to secure the required water consistent with their approved mitigation plans; or
- Otherwise fail to comply with their approved mitigation plans.

The As-Applied Order predicts a 75,200 acre-foot (AF) IDS for the 2023 irrigation season, which will result in mitigation requirements or curtailment for groundwater rights with priority dates junior to December 30, 1953. Additional details of the IDS are presented as proportionate shares associated with various water user entities.

Summary of Opinions

Below is a summary of our opinions related to the information presented in the the Fifth Methodology Order and the 2023 As-Applied Order. Additional discussion is in the pages that follow.

1. The Eastern Snake Plain Aquifer Model (ESPAM) Version 2.2 is widely accepted as the best available scientific tool for evaluating regional Easter Snake Plain Aquifer (ESPA) hydrology, specifically the reach gain/loss impacts of curtailing groundwater pumping.
2. The use of the steady-state version of ESPAM is inappropriate for determining the priority date of a curtailment intended to mitigate in-season demand shortfalls (IDS), as required by the methodology. The steady-state version of ESPAM 2.2 has been demonstrated to overestimate the curtailment in-season benefits by more than an order of magnitude.

3. The transient superposition version of ESPAM 2.2 is the appropriate model type for calculating the in-season Snake River near Blackfoot to Minidoka reach gain benefits of curtailing junior groundwater pumping.
4. Regardless of the prior modeling approaches required, the Fifth Methodology Order correctly requires that transient modeling has to be used to calculate the in-season benefits of groundwater curtailment.
5. Transient groundwater modeling of the ESPA has been common practice for over a decade and is routinely utilized for evaluating the transient impacts of groundwater pumping on Snake River gains/losses.
6. The 2023 As-Applied Order utilizes a steady-state model to calculate the proportionate share of IDS that various entities are responsible for mitigating. These proportionate share amounts can only be met by direct delivery of surface water and are not relevant to understanding the benefits of groundwater curtailment.

2. Discussion of Opinions

a. ESPAM introduction

Groundwater modeling prescribed in the steps in the Fifth Methodology Order utilizes the Eastern Snake Plain Aquifer Model (ESPAM), originally known as the Enhanced Snake Plain Aquifer Model. ESPAM was developed and is maintained by IDWR staff. ESPAM development and updates are guided by the input of the Eastern Snake Hydrologic Modeling Committee (ESHMC), a multi-stakeholder group of scientists and engineers representing federal/state agencies and water users across the ESPA. (Sukow, 2021a)

ESPAM 2.2 is supported by the ESHMC and broader scientific community as representing the best available science for regional hydrologic analysis of the ESPA. The latest version of the model is ESPAM 2.2 which received approval from the ESHMC in 2021 and has been adopted for regional aquifer management planning and water rights analyses.

ESPAM 2.2 is an appropriate and reliable tool for the evaluation of regional hydrologic conditions and scenarios within the ESPA. Its use at local scales must be evaluated on a site-by-site basis to confirm that regional model generalizations, simplifications, and assumptions are appropriate for the local scale of the specific model scenarios being run. (Sukow, 2021a)

After transient calibration, IDWR created steady-state and transient superposition versions of ESPAM 2.2 for predictive analyses. Superposition models are generally created to represent hydrologic interactions within the aquifer in a way that allows for the isolation of model inputs so that their impacts are not conflated with other changes in the system. (Sukow, 2021c) IDWR ran scenarios using a previous version of ESPAM comparing the transient superposition model to the fully populated model that represents monthly inputs for the calibration period. The transient

superposition model showed minimal differences compared to the fully populated model. (Sukow, 2012)

Steady-state models depict equilibrium conditions with no change through time. They are best used to evaluate the ultimate impact of a change, without regard to time. The steady-state superposition version of ESPAM 2.2 consists of a single stress period with average hydrologic inputs.

Transient models allow model inputs and outputs to vary with time and can represent changing hydrologic conditions. The transient superposition version of ESPAM 2.2 has monthly stress periods with average hydrologic inputs from the calibration period of 1980 to 2018. This model allows for many years of predictive calculations while representing the seasonal fluctuations in hydrologic model inputs and outputs. (Sukow, 2021c)

b. ESPAM Curtailment Analysis

During the development of ESPAM 2.2, IDWR utilized the superposition versions of the model to calculate the impacts of various curtailment dates as a demonstration of appropriate model use for regional hydrologic analysis. The curtailment analyses calculated the changes to spring flow and Snake River gains/losses due to the curtailment of groundwater pumping for five different priority dates. The ESHMC reviewed these model runs and approved the associated report in 2021 (Sukow, 2021c).

OPINION #1: ESPAM 2.2 is widely accepted as the best available scientific tool for evaluating regional ESPA hydrology, specifically the reach gain/loss impacts of curtailing groundwater pumping.

c. Methodology Technical Working Group

During November and December of 2022, IDWR convened a Technical Working Group (TWG) to provide input on potential changes to the Fourth Methodology Order (IDWR, 2016). The TWG consisted of technical experts and legal representatives for the SWC, IGWA, and other stakeholders. IDWR presented various potential changes to the methodology, including a November 28, 2022 presentation comparing the steady-state and transient superposition versions of ESPAM 2.2 for curtailment analysis. (Sukow, 2022)

In this presentation, Jennifer Sukow (IDWR) used 2022 curtailments ordered under the methodology to demonstrate the differences between transient model calculations for in-year, in-season increases for the Snake River near Blackfoot to Minidoka (nBF-M) reach gains compared to steady-state model calculations representing ultimate reach gains without regard to any realistic time frame.

Utilizing the steps detailed in the Fourth Methodology Order, the April Demand Shortfall forecast

was predicted to be 162,600 AF. As prescribed by the Fourth Methodology Order, the steady-state simulation of curtailment to December 25, 1979 resulted in an increase in nBF-M reach gains sufficient to mitigate the 162,600 AF Demand Shortfall. The use of the steady state model essentially represented the reach gain impacts over infinite time.

The same curtailment date used in the transient model resulted in an increase of only 16,200 AF of nBF-M reach gains from May through September 2022. This result is less than 10% of the April 2022 Demand Shortfall.

This pattern of steady-state responses significantly over-estimating the in-season benefits of curtailment is also demonstrated at other curtailment dates, as shown in **Figure 1** below.

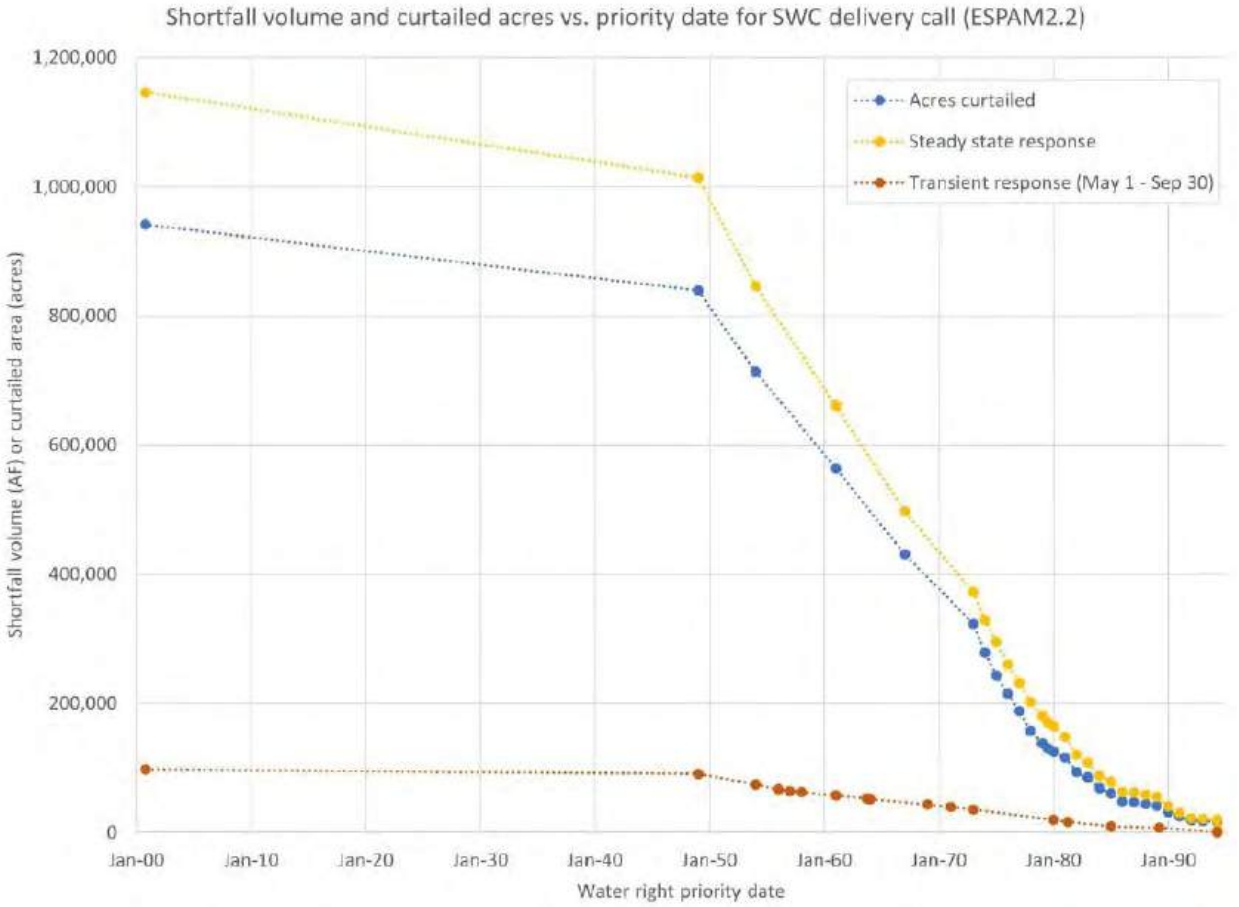

Figure 1 - Steady-State and Transient Model Response for Different Priority Dates (adapted from Sukow, 2022)

In her presentation slides, Ms. Sukow concluded the following:

- *"Steady state simulations are appropriate for evaluating the impact of aquifer stresses that have been applied for decades (i.e. groundwater pumping, continuous curtailment to same date every year)*

- *Transient simulations are appropriate to evaluate the impacts of aquifer stresses applied for short periods of time (i.e. short term curtailments with varying priority dates)*
- *Steady state simulations of continuous curtailment do not simulate the short term curtailments prescribed in the SWC methodology*
- *Transient simulations better simulate the short term curtailments prescribed in the SWC methodology"*

We agree with these conclusions.

OPINION #2: The use of the steady-state version of ESPAM is inappropriate for determining the priority date of a curtailment intended to mitigate In-season Demand Shortfalls (IDS), as required by the methodology. The steady-state version of ESPAM 2.2 has been demonstrated to over-estimate the curtailment benefits by more than an order of magnitude.

OPINION #3: The transient superposition version of ESPAM 2.2 is the appropriate model type for calculating the in-season Snake River near Blackfoot to Minidoka reach gain benefits of curtailing junior groundwater pumping.

d. Fifth Methodology Order Groundwater Modeling Topics

On April 21, 2023, the Director of IDWR issued the Fifth Methodology Order (IDWR, 2023a). The Fifth Methodology Order Conclusions of Law provide the legal requirements that must be met by the Methodology steps to protect the senior priority surface water rights in time, place, and quantity. Any identified Demand Shortfall must be mitigated in-season. If curtailment of junior groundwater pumping is the mitigation method, the short term results of curtailment need to be predicted in-season, within months of implementation.

The in-season time considerations of the Fifth Methodology Order are a critical consideration of the supporting modeling steps, and why a transient model must be used. Findings of Fact #84 provides a clear description of why a steady state model is inappropriate for the Methodology requirements of determining the in-season reach gain impacts of curtailment. Findings of Fact #89 justifies the use of a transient model.

The steady-state model curtailment results have been clearly demonstrated to be in grievous error. No credible scientific assertion can justify the use of steady-state model to meet the requirements of the Methodology because a steady-state model cannot calculate in-season curtailment benefits. The Fifth Methodology Order's transient modeling requirement is a much more accurate representation of reality.

OPINION #4: Regardless of the prior modeling approaches required, the Fifth Methodology Order correctly requires that transient modeling has to be used to calculate the in-season benefits of groundwater curtailment.

Transient groundwater modeling is not a novel idea, having been implemented by IDWR and the water user community routinely for a decade or more. ESPAM 2.1 was approved in 2013 with a calibrated transient version utilizing monthly stress periods, similar to ESPAM 2.2. Since at least 2013, the transient version of ESPAM has been used by IDWR and the water user community to evaluate the impacts of transferring ESPA groundwater rights (IDWR, 2022). In these transfer modeling scenarios, ESPAM is used to calculate the transient impacts to Snake River reach gains/loses, similar to the curtailment benefit analyses described above.

IDWR has also developed a groundwater model for the Big Wood River alluvial aquifer system. In the 2021 administrative hearing, use of the transient version of the model was required for evaluation of in-season changes to pumping stresses.

OPINION #5: Transient groundwater modeling of the ESPA has been common practice for over a decade and is routinely utilized for evaluating the transient impacts of groundwater pumping on Snake River gains/losses.

e. 2023 As-Applied Order Groundwater Modeling Topics

On April 21, 2023, the Director of IDWR issued the 2023 As-Applied Order (IDWR, 2023b). The 2023 As-Applied Order determined a SWC forecasted supply with a 75,200 AF IDS. Utilizing the transient modeling analysis prescribed in the Fifth Methodology Order, a curtailment date of December 31, 1953 was identified as providing an increase in nBF-M gains sufficient to mitigate the IDS.

The 2023 As-Applied Order also presents a steady-state analysis of the proportionate share of the IDS. The analysis intended to associate the percentage of the IDS that water user entities were responsible for, thereby identifying the amount of IDS they are responsible for mitigating. The rationale for this approach is that the IDS represents the legacy impacts of many decades of groundwater pumping. The use of the steady-state version of ESPAM 2.2 is premised on the assumption that the aquifer, groundwater pumping, and other hydrologic model inputs are all at equilibrium conditions. While this is not accurate or true, it may be an acceptable simplification of the system because it likely does not lead to unacceptable errors when calculating the proportionate shares of specific water user entities.

IDWR's use of the steady-state model to represent decades of legacy pumping impacts highlights the multi-year challenge of protecting senior SWC water rights.

However, the proportionate share mitigation requirements identified needs to be limited to mitigation with direct delivery of surface water. Because the proportionate shares are determined using a steady-state model, they have no bearing on IDS mitigation with groundwater curtailment of the various water user entities.

OPINION #6: The 2023 As-Applied Order utilizes a steady-state model to calculate the proportionate share of IDS that various entities are responsible for mitigating. These proportionate share amounts can only be met by direct delivery of surface water and are not relevant to understanding the benefits of groundwater curtailment.

3. Groundwater Modeling Summary

Both the Fifth Methodology Order and 2023 As-Applied Order appropriately utilize the best available tool for evaluating ESPA hydrology, ESPAM 2.2. The evaluation of curtailment benefits requires the use of a transient model because of the in-season mitigation or curtailment requirements of the Fifth Methodology Order. The steady-state version of ESPAM 2.2 grossly exaggerates the benefits of curtailment for in-season mitigation and is inappropriate for determining a curtailment priority date. Because it uses the steady-state version of ESPAM 2.2, the proportionate share analysis presented in the 2023 As-Applied Order can only be used to determine the amount of surface water a water user entity could provide as mitigation of their portion of the IDS. The proportionate share analysis has no relevance to evaluating groundwater curtailment benefits.

National Groundwater Association

Dave is a Principal Hydrogeologist and Senior Project Manager with over 25 years of experience in groundwater hydrology, water resources, and environmental sciences. He supervises teams of diverse subject matter experts and provides technical leadership to solve today's water resource challenges. Dave serves as the Groundwater Team Leader responsible for managing staff, resources, projects and clients for a group of hydrogeologists. His technical expertise subject areas include water supply development, groundwater management, groundwater governance/administration, surface water/groundwater interaction, riverbank filtration (RBF), soil aquifer treatment (SAT), managed aquifer recharge (MAR), aquifer storage and recovery (ASR), aquifer characterization, groundwater modeling, and subsidence caused by groundwater pumping.

FEATURED PROGRAM & PROJECT EXPERIENCE

Surface Water Coalition, Idaho (2019-ongoing)

Lead Hydrogeologist and Project Manager providing litigation support related to water management of the Eastern Snake Plain Aquifer. Provides protection of surface water flows and senior surface water rights from negative impacts due to junior groundwater pumping. Serves on the Eastern Snake Plain Hydrologic Modeling Committee supporting MODFLOW modeling activities related to complex surface water/groundwater management and water rights administration. Also serves as the SWC representative on technical working groups guiding the implementation and adaptation of a settlement agreement between the SWC and Idaho Ground Water Appropriators including monitoring/evaluation of hydrology, pumping reductions, consumptive use and planning for managed aquifer recharge.

Salt River Project – Gila River Basin Adjudication, Arizona Superior Court Case W1-103, San Pedro Basin, AZ (2018 – ongoing)

Hydrogeologist providing groundwater analysis and modeling supporting adjudication of water rights in the San Pedro Basin. Tasks include oversight of groundwater model development, calibration and uncertainty analysis, and trial/litigation support. Provides protection of surface water flows, riparian habitat, and water rights from negative impacts due to groundwater pumping.

City of Aurora – Horizontal Well Project; Weld County, CO (2019 – ongoing)

Project Manager for feasibility evaluation and planning of two radial collector wells for the City's Prairie Waters System. The project targets increasing system yield while maximizing riverbank filtration water quality improvements. Investigation included hydrogeophysical surveys, exploratory drilling, aquifer testing, and groundwater modeling. Results included design of horizontal wells that maintain the existing system water quality while providing adaptable system operations that can increase yield during drought demands. Currently the Lead Hydrogeologist providing design phase services.

City of Northglenn – ASR Feasibility Evaluation and Pilot Testing (2020 – ongoing)

Lead hydrogeologist and Project Manager for feasibility investigation and pilot test system design services. Support includes ASR feasibility data analysis, water quality evaluation, DWR and EPA UIC permitting, pilot system design and test planning. The project will provide pilot storage of the City's fully consumable water rights, providing more surface storage space for other supplies. If recovered water quality is compatible, the pilot system will be converted into permanent infrastructure as the first phase of a larger ASR system.

Riverence Holdings LLC – Snake River Spring Supply Support (2022-ongoing)

Project Manager and lead hydrogeologist supporting multiple fish hatcheries throughout Idaho's Magic Valley. Provides hydrogeologic planning of spring fed aquaculture focusing on upgradient aquifer pumping and recharge impacts on water rights, water quality, and water supply reliability.

City of Aurora – Box Elder Basin Aquifer Storage and Recover (ASR) Feasibility Investigation and Pilot Testing (2018 – Ongoing)

Project Manager and lead hydrogeologist investigating the feasibility of recharging and storing water in the Box Elder alluvial aquifer at the Aurora Center for Renewable Energy (ACRE). Tasks included hydrogeophysical surveys, exploratory drilling/test pits, and infiltration testing. The project identified recharge as a viable option for innovative storage opportunities and has moved into a pilot test planning phase. Current services include recharge source water characterization, water rights and permitting planning, water quality evaluation, groundwater modeling, and pilot system design.

Dominion Water and Sanitation District – Groundwater Support; Douglas County, CO (2015-ongoing)

Lead Hydrogeologist providing Denver Basin and South Platte alluvial aquifer groundwater resources planning services including water rights evaluation, water quality assessment, well field yield estimation and project planning. Provided hydrogeologic and contractor management support during Denver Basin well site design, construction, testing, aquifer characterization, and sampling. Additional technical support included documentation for County hearings, interactions with local water agencies, and groundwater transaction due diligence.

Town of Erie – Water Supply Planning Support (2018 – ongoing)

Lead hydrogeologist and Project Manager providing groundwater support related to water supply planning. Services include aquifer characterization, water quality studies, horizontal directionally drilled well field design, ASR feasibility analysis, and water rights. Prepared Colorado Water Conservation Board and Division of Local Affairs grant applications to obtain project funding. The project will provide a 3,000 GPM expansion of the Town's water supplies.

Town of Castle Rock – Groundwater Support; Douglas County, CO (2015-ongoing)

Project Manager providing comprehensive groundwater support. Projects have included:

- Denver Basin Well Drilling, Testing, and Aquifer Storage and Recovery (ASR) – Support includes Denver Basin ASR planning/permitting, bidding services, contractor management, construction oversight, well/pump design, aquifer testing, and groundwater regulatory support.
- Alluvial Well Field Expansion and Rehabilitation – Project Manager for two projects aimed at improving yields in well fields affected by biofouling and performance issues. Oversaw construction and testing of six horizontal directional drilled (HDD) wells installed to increase yield, performance, and sustainability.
- City of Aurora and Town of Castle Rock – Lost Creek Underground Storage Pilot Project; Lost Creek Designated Basin, CO (2017-2018)
- Project Manager for aquifer characterization and evaluation of recharge potential for underground water storage pilot project. Obtained grant funding and facilitated multiple stakeholder project planning and implementation. The project identified important field investigation methods and results for storage related aquifer characteristics previously overlooked in desktop studies.

City of Aurora – Prairie Waters North Campus Master Plan; Adams and Weld Counties, CO (2017-2019)

Lead hydrogeologist providing master planning services for approximately 20 MGD expansion of the Prairie Waters Project – North Campus over the next 20 years. Facility expansion included riverbank filtration well field, pipelines, and storage reservoirs. Led facilities operational planning, supported water resource planning, gap analysis, and capital improvements planning.

Denver Water – Aquifer Storage and Recovery (ASR) Pilot Project, City and County of Denver, CO (2016-current)

Groundwater technical support and project management for ASR feasibility investigation. Provided Denver Basin aquifer characterization including exploratory borehole drilling, hydrogeophysical investigation (Nuclear Magnetic Resonance and conventional methods), and 3-D geologic modeling. Current services include an advisory role for installation of a multi-aquifer Westbay Denver Basin monitoring well.

City of Greeley – ASR Feasibility Evaluation (2019-2021)

Senior Technical Advisor for a project evaluating the feasibility of new and existing ASR projects in multiple bedrock aquifers. Includes evaluation of water quality, aquifer characteristics, well construction/testing, project planning, and regulatory support, including negotiating an EPA UIC Rule Authorization in less than two months.

Colorado Water Conservation Board - HB16-1256 South Platte Storage Study; CO (2018)

Lead hydrogeologist providing evaluation of underground water storage options for the Lower South Platte alluvial aquifer. Provided alluvial storage site evaluation, conceptual design, cost estimates, and comparison to surface storage options.

Aurora Prairie Waters Project – North Campus; Weld County, CO (2008)

Supported City of Aurora's Prairie Waters project near the South Platte River, CO. Acted as team liaison for multi-consultant, multi-disciplinary project team. Field investigation and construction tasks included field

oversight of drilling, well construction, pump/motor installation, aquifer testing, system start up testing, well field yield optimization, and geotechnical investigations. Support also included the design, construction, and operation of alluvial recharge and riverbank filtration pilot test facilities. Developed and implemented pilot test procedures, including tracer studies to assess flow paths, travel times, and stream/aquifer interaction. MODFLOW modeling support for the Prairie Waters Project included development of regional groundwater model for Colorado Division 1 case 2006CW104. Performed parallel processing model calibration using UCODE. Prepared expert and rebuttal reports, exhibits and materials used in settlement negotiations.

Eagle River Water and Sanitation District and Upper Eagle Regional Water Authority – Groundwater Support; Eagle County, CO (2010-ongoing)

Project Manager and lead Hydrogeologist for alluvial well field groundwater support. Projects have included:

- GWUDI Evaluation – Regulatory support, groundwater modeling and operational monitoring of alluvial well fields in support of CDPHE GWUDI evaluation
- Lake Creek Well Field Planning – Services included groundwater modeling, well drilling, aquifer testing, source water quality characterization, regulatory support for Eagle County 1041, CDPHE, and DWR permitting
- Well field maintenance and rehabilitation support – well rehabilitation in response to well issues including pump issues, casing holes, and water quality contamination

Dominion Water and Sanitation District – Groundwater Support; Douglas County, CO (2015-ongoing)

Denver Basin groundwater supply planning services including water rights evaluation, water quality assessment, well field yield estimation and project planning. Technical support included documentation for County hearings, interactions with local water agencies, and groundwater sale transactions.

City of Steamboat Springs – Infiltration Gallery System Expansion; Routt County, CO (2018-ongoing)

Project Manager for feasibility evaluation of alluvial groundwater supply expansion alternatives. Expansion options being considered include vertical and horizontal well options. Tasks included exploratory drilling, aquifer testing, groundwater modeling and conceptual expansion system design. Modeling was performed to optimize well siting to maximize yield, maintain water quality, and to minimize pipeline costs.

Texas Water Development Board – Statewide Subsidence Risk Evaluation (2018)

Technical advisor for risk evaluation of subsidence due to groundwater pumping in all Texas major and minor aquifers. The project used well lithology data with model predicted water level declines to create a statewide risk map and prioritized table. Recommended follow up actions for identified areas of risk. The project provided important subsidence risk information for statewide planning and local user considerations.

Village at Taos Ski Valley – Spring Water Supply Expansion; Taos County, NM (2018-ongoing)

Senior Technical Advisor providing groundwater evaluation into the management, protection and expansion of spring water supplies.

City of Phoenix – ASR Tracer Test Design; Maricopa County, AZ (2017)

Provided MT3D groundwater modeling to assist in aquifer characterization, travel time estimates, and the design of an ASR tracer injection test for feasibility. The testing was in support of the Northeast Phoenix Reclaimed Water Recharge and Recovery Study. The system is intended to create a potable water resource through Indirect Potable Reuse (IPR), provide additional non-potable supplies, and to mitigate land subsidence issues.

Groundwater Relief – Kutupalong Refugee Camp Groundwater Supplies; Cox's Bazaar, Bangladesh (2019)

Volunteer hydrogeologist providing well testing and water quality support to field geologists. The project is developing emergency water supplies for nearly 1 million Rohingya refugees who have fled religious persecution in Myanamar.

City of San Angelo – Riverbank Filtration Feasibility Evaluation; Tom Green County, TX (2018)

Provided feasibility evaluation, preliminary siting, design and costs for a potential riverbank filtration (RBF) well field near the Concho River. This information was used to evaluate RBF as an alternative for expansion of the City's water supply.

Tarrant Regional Water District – Cedar Creek Wetlands; Kaufman County, TX (2013)

Project manager and lead Hydrogeologist for riverbank filtration feasibility investigation along the Trinity River. Project tasks include geotechnical, hydrogeologic, and surface geophysical surveys, groundwater modeling, and design, construction and testing of riverbank filtration pilot test sites.

Rangen, Inc. – Water Rights Support; Gooding County, ID (2010-2016)

Expert witness providing testimony and trial support for a water rights hearing (IDWR Case No. CM-DC-2011-004) involving springs and complex surface water/groundwater interaction of the Eastern Snake Plain Aquifer. Represented a fish hatchery reliant on spring flow that was being impacted by groundwater pumping. Served on the Eastern Snake Plain Hydrologic Modeling Committee supporting MODFLOW modeling activities in the Eastern Snake Plain of Idaho.

Overturf, McGath, and Hull, P.C. – Stewart No. 1 Ditch Company; Pitkin County, CO (2017)

Expert witness support including expert and rebuttal reports, depositions, and settlement negotiations for a civil case involving alleged roadway water damage from ditch operations.

Fredrickson Law Offices – In-Play Golf; Weld County, CO (2017)

Expert witness providing expert and rebuttal reports, depositions, and trial support for a civil case involving alleged water damages from golf course irrigation.

Boulder Valley School District – Douglass Elementary Non-Tributary Well Support; Boulder County, CO (2018)

Project Manager for a non-tributary well application in the Boulder Complex Area of the Denver Basin Aquifers. Provided aquifer characterization and regulatory support leading to a non-tributary determination and permit approval.

Boulder County Parks and Recreation – Kenosha Ponds Groundwater Evaluation; Boulder County, CO (2016)
Expert witness providing hydrogeology water rights support for a Boulder County Parks and Recreation augmentation pond. Technical support included expert report writing and trial exhibit preparation for the hydrologic characterization of a recharge pond between two streams where the pond bottom was below the water table.

City of Burkburnett, Texas – Alluvial Well Field Evaluation; Wichita County, TX (2016)
Project Manager and groundwater lead for evaluation of underperforming well fields near the Red River. Wells ranged from 3-50 years old with a variety of issues causing low yields. Project tasks included well operational data integration, analysis, and development of alternatives to improve well yields.

Penrose Water District – Arkansas River Alluvial Well Field; Fremont County, CO (2016)
Groundwater technical management for planning, design, and construction of an alluvial well field for diversion of Arkansas River water rights. Tasks included aquifer characterization, water rights support, groundwater modeling, contractor management, well drilling, construction and testing.

Salt River Project – New River Agua Fria Underground Storage Project; Phoenix, AZ (2013)
Project involved optimization and in-channel expansion design for an existing recharge facility. Support included evaluation of operational data and adaptation of an existing MODFLOW model for operational optimization and feasibility testing.

City of San Marcos, Texas – Well Performance Investigation and Replacement Plan; Hays County, TX (2015)
Project Manager and groundwater lead for investigation into reduced yield problems for a well in the Edwards Aquifer. Well construction and operational data were analyzed to test viability of rehabilitation or equipment replacement. Provided ultimate solution of siting a replacement well in a more productive aquifer area.

Oakwood Homes – Neighborhood Scale Dewatering Systems and Water Rights; CO (2016)
Project Manager and groundwater lead for planning, design, and permitting of neighborhood scale dewatering systems. Managed project work including groundwater modeling, system design, data analysis, contractor coordination, DWR and CDPHE permitting, and water rights evaluations.

Winkler Services – Well Field Siting and Design; Wink County, Texas (2017)
Technical advisor for well field siting in the Pecos Valley Alluvium and Upper Dockum Aquifer. Support included project planning, aquifer characterization, and geologic modeling.

Donala Water and Sanitation District – Reuse Evaluation; El Paso County, CO (2015)
Preliminary feasibility investigation into riverbank filtration alternatives for indirect potable reuse. Evaluated hydrogeologic conditions for permitting, cost, and performance feasibility considerations.

Confidential Client; Groundwater Supply and Subsidence Analysis; AZ (2011)
Development of regional MODFLOW models used to estimate well field yield and land subsidence due to groundwater pumping in Arizona. Work included statewide study of subsidence-related empirical

relationships and prediction methods, aquifer characterization, 3-D geologic and groundwater flow modeling, automated model calibration and predictive uncertainty analysis using PEST, and numerical MODFLOW subsidence modeling.

City of Scottsbluff – Well Field Uranium Investigation and Monitoring; Scotts Bluff County, NE (2016)

Technical advisor for a project aimed at reducing uranium concentrations in an alluvial groundwater supply. Provided aquifer characterization and uranium monitoring data analysis.

Confidential Client - Oilfield Produced Water Infiltration Modeling, San Louis Obispo County, CA(2010)

Lead Hydrogeologist for the development of an engineering design MODFLOW-SURFACT model with the goal of infiltrating 13 acre-feet of water per day into the subsurface of a 200 acre alluvial site. Performed model calibration using PEST software in a parallel processing environment utilized 50 geologic conceptualizations for stochastic predictions of system performance.

CDPHE – Summitville Superfund Site; Summitville, CO (2008)

Provided support for abandoned mine hydrology and geochemistry, field sampling, monitoring and mine facility inspection, and database support. The project goal was to monitor and minimize mine waste impacts on the Alamosa River.

Various Mines – Groundwater Modeling and Analysis; Basin and Range Province; NV (2010)

Provided MODFLOW modeling and water balance studies in support of mine water management and regulatory reporting. Analyses included point flow surface water modeling to evaluate stream gain/loss; detailed water balance quantifications; well inventories and pumping estimates; groundwater underflow assessments.

Miron Construction - Laramie-Fox Hills Well; Hudson, Colorado (2008)

Assisted in design and field engineering for the construction and testing of a 960-foot deep, large capacity, municipal/industrial, Laramie-Fox Hills water supply well at the Hudson Correctional Facility.

Perini/US Army Corps of Engineers – Groundwater System Design and Optimization; Baghdad, Iraq (2007)

MODFLOW modeling support for the U.S. Agency for International Development in Baghdad, Iraq. Developed a numerical groundwater model for the optimization of water supply well locations and pumping operations. Main objectives were to maximize well yields while minimizing differential land subsidence across newly constructed East End Barracks.

Colorado Haiti Project (Volunteer Position); Petit Trou de Nippes, Haiti (2013)

Technical advisor for groundwater development, management, and protection in a rural, developing area of Haiti.

Water For People Groundwater Management Project (Volunteer Position); San Pedro Sula, Honduras (2008)

Technical advisor for development of a scope of work for a participatory groundwater management plan aimed at restoring and protecting an over utilized alluvial aquifer in a developing region.

ASARCO - California Gulch Superfund Site; Leadville, Colorado (2000-2005)

Conducted environmental sampling for the Kids First Program to identify and address sources of lead exposure for children in residential areas. Provided statistical analysis and reporting for evaluation of program effectiveness. Designed sampling plan and performed soil sampling and analysis to delineate extent of metals contamination at the Arkansas Valley Smelter Operable Unit. Provided technical support for hydrogeological and geochemical characterization of the Apache Tailings site; and implemented the surface water and groundwater performance monitoring program to assess the effectiveness of the remedial action. Conducted synoptic surface water flow measurement and water quality sampling.

Asarco - Omaha Lead Site, Omaha, Nebraska (2003)

Assisted in the development of program to identify sources of lead exposure for children in residential areas.

Mine Waste and Tailings Pile Sites, Various Locations (2000-2004)

Performed hydrologic evaluation of remedial alternatives for repository evaluation using Hydrologic Evaluation of Landfill Performance (HELP) model.

Industrial Groundwater Contamination Sites, Various Locations (2000-2005)

Performed groundwater modeling to assist design of groundwater extraction remediation wells using MODFLOW modeling code.

EPA - Vasquez Boulevard and Interstate 70 Superfund Site, Denver, Colorado (2002)

Designed, directed, and performed environmental sampling for project intended to identify sources of lead and arsenic exposure for children in residential areas.

Hertz Rent-a-Car - Former Underground Storage Tank, Colorado Springs, Colorado (2002)

Project Hydrogeologist and technical lead for the characterization, monitoring, and remediation of hydrocarbon contaminated soils and groundwater at a former underground storage tank site. Performed quarterly monitoring and reporting; developed and implemented an in-situ chemical oxidation remediation program.

R&R Super Service - Former Underground Storage Tank, Arvada, Colorado (2002)

Project Manager and technical lead for the characterization and remediation of soils and groundwater contaminated by petroleum hydrocarbons at a former service station. Responsibilities included client and regulatory interaction; site characterization activities to delineate the nature and extent of contamination in soil and groundwater; modeling of vapor and mass extraction rates using VENT2D; respirometry testing to quantify biodegradation rates in vadose zone soils; startup testing; operating, maintaining, and monitoring of an air sparge/soil vapor extraction system.

City and County of Denver - Former Stapleton International Airport Remediation; Denver, Colorado (2000)
Served as a hydrogeologist conducting field investigations to define nature and extent of hydrocarbon contamination and to determine remediation. Field tasks included lithologic logging with a hollow-stem auger and direct-push drilling rigs; soil, groundwater, and soil vapor testing, remediation system construction/operation/maintenance, data evaluation and reporting.

National Park Service – Mt. Rainier National Park, Longmire, Washington (1996-1997)
Biologist and crew leader for aquatic ecosystem studies in Mt. Rainier National Park. Conducted field surveys and sub-alpine wetland monitoring. Performed aquatic field sampling, wetland classification, biological species identification, and aquatic laboratory analyses.

G. ERICK POWELL, PH.D., P.E.

Brockway Engineering, PLLC
2016 Washington St N, Suite 4 Twin Falls, Idaho 83301
(208) 736-8543 • erick.powell@brockwayeng.com

Education

Ph.D.	The Ohio State University	Agricultural Engineering	2006
	Advisor: Dr. Andrew D. Ward		
	Title: *Evaluating geomorphology and water quality of channel-forming discharges in Ohio headwater streams*		
MS	Brigham Young University	Civil and Environmental Engineering	2002
	Advisor: Dr. E. James Nelson		
	Title: *Bathymetry delineation and data collection preparing a CE-QUAL-W2 model on Scofield Reservoir, Utah*		
BS	Brigham Young University	Major: Civil and Environmental Engineering Minor: Agronomy	2001

Professional Experience

Project Engineer 2006 - Present
Brockway Engineering, PLLC
Twin Falls, Idaho

Project Engineering on hydrologic and hydraulic engineering design tasks, including: well design, well construction, well testing, water rights, water right transfers, pipeline design, water distribution systems, stream channel evaluation, floodplain assessment, irrigation water demand, and potable water demand.

P.E. Registrations in Idaho (13592), Utah (4859937-2202), Nevada (028772) and Oregon (91026)

Graduate Research Assistant 2002 - 2006
Department of Food, Agricultural, and Biological
Engineering The Ohio State University, Columbus, Ohio

Research consisting of: 1) evaluation of channel forming discharges, 2) two-stage channel design procedures, 3) nutrient performance within two-stage agricultural channels, and 4) theoretical nutrient spiraling under restored riparian projects.

Areas of Expertise

Groundwater modeling, flood plain evaluations, stream bank restoration and protection, surface water quality modeling, and water right transactions. Numerical groundwater flow simulations using FEMWATER, MODFLOW, and Groundwater Modeling System (GMS).

Professional Associations

American Society of Civil Engineers (ASCE)
American Ecological Engineering Society (AEES)
American Society of Agricultural and Biological Engineers (ASABE)
American Society for Engineering Education (ASEE)
Alpha Epsilon (ASABE Honor Society)

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **ORDER DENYING IGWA'S PETITION FOR REVIEW**

BACKGROUND

On July 20, 2023, the Director issued his *Notice that Questions Concerning the Sufficiency of IGWA's Mitigation Notices are Moot* ("Notice"). The Notice concluded that questions concerning the sufficiency of IGWA's mitigation notices are moot, therefore, the Department would not respond to *IGWA's Petition for Reconsideration of Order Determining Deficiency in IGWA's Notice of Secured Water*, filed June 6, 2023, or *IGWA's Amended Notice of Mitigation*, filed June 1, 2023.

On August 3, 2023, the Department received *IGWA's Petition for Reconsideration* ("Petition"). The Petition seeks reconsideration of the Department's Notice, specifically, it asks the Department to "find that the 2009 Storage Water Mitigation Plan does not require payment of Water District 01 fees at the time of the notice of mitigation." *Petition* at 4.

ANALYSIS

The Department's Notice was not issued as a recommended, preliminary, or final order, as defined in the Department's Rules of Procedure 720, 730, or 740, IDAPA 37.01.01. Therefore, the Notice is not subject to a petition for reconsideration. The Department will treat IGWA's Petition as a petition to review an interlocutory order, in accordance with IDAPA 37.01.01.711.[1]

IGWA argues that exceptions to the mootness doctrine apply to the Water District 01 fees question and asks the Director to address the Water District 01 fees now. *Petition* at 4. IGWA argues that

> A ruling on a moot issue may be made when: (1) "there is the possibility of collateral legal consequences imposed on the person raising the issue;" (2) "the challenged conduct is likely to evade judicial review and thus is capable of

[1] IDAPA 37.01.01.711 states in part: "[a]ny party or person affected by an interlocutory order may petition the presiding officer to review the interlocutory order."

> repetition;" and (3) "an otherwise moot issue raises concerns of substantial public interest." *Wylie v. State, Idaho Transp. Bd.*, 151 Idaho 26, 31-32, 253 P.3d 700, 705-06 (2011); *Stephen v. Sallaz & Gatewood, Chtd.*, 150 Idaho 521, 528, 248 P.3d 1256, 1263 (2011). Here, all three exceptions are met. This petition addresses exceptions 2 and 3 as they have the most obvious application.

Id. at 2.

The Director disagrees that the issue is likely to evade judicial review in the future. IGWA argues that its "objection to the new fee payment requirement is rendered moot every time a new As-Applied Order is issued." *Id*. at 3. This is not correct. In this season, the issue was rendered moot because a mid-season order determined that there was no longer an obligation. There is no guarantee that future mid-season orders will result in a determination that there is no longer an obligation. Thus, the issue is not likely to evade judicial review.

With regards to the substantial public interest exception, the Director declines to exercise this exception because there is no substantial interest in having the issue decided now. The subject matter is not likely to evade judicial review and a presiding officer can decline to exercise this exception where the matter will not escape judicial review. *See Freeman v. Idaho Dep't of Correction*, 138 Idaho 872, 877, 71 P.3d 471, 476 (Ct. App. 2003) ("Further, even if Freeman's allegation of constitutional violations involving inmates' meaningful court access issue were deemed to be of substantial public interest, the number of such claims that reach the courts render it unlikely that recurrences of denied meaningful court access will escape judicial review.")

ORDER

IT IS HEREBY ORDERED that the Director DENIES *IGWA's Petition for Reconsideration*.

DATED this 23rd day of August 2023.

GARY SPACKMAN
Director

Attorneys for Idaho Ground Water Appropriators, Inc. (IGWA)

STATE OF IDAHO

DEPARTMENT OF WATER RESOURCES

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 Docket No. CM-MP-2009-006
IN THE MATTER OF IGWA'S MITIGATION PLAN FOR CONVERSIONS, DRY-UPS, AND RECHARGE	**IGWA's Request for Mitigation Credit for Aquifer Enhancement Activities (2024)**

Idaho Ground Water Appropriators, Inc. ("IGWA"), through counsel, hereby requests credit towards the mitigation obligations of North Snake Ground Water District, Carey Valley Ground Water District, Magic Valley Ground Water District, American Falls-Aberdeen Area Ground Water District, Bingham Ground Water District, Bonneville-Jefferson Ground Water District, Jefferson-Clark Ground Water District, Madison Ground Water District, and Henry's Fork Ground Water District (collectively, the "Districts") under the Surface Water Coalition ("SWC") delivery call for the 2024 irrigation season.

On May 14, 2010, the Director issued the *Order Approving Mitigation Plan* in IDWR Docket No. CM-MP-2009-006 which approved IGWA's *Mitigation Plan for Conversions, Dry-Ups, and Recharge* ("Aquifer Enhancement Plan"). The order grants "IGWA and its members [] the right to obtain mitigation credit for the Mitigation Activities that will then be applied in

response to a finding of material injury to senior water rights under the CM Rules." (Order Approving Mit. Plan, p. 1.) The plan authorizes mitigation credit for "1) existing and future conversions of acres irrigated from groundwater to surface water irrigation; 2) dried up acres through the Conservation Reserve Enhancement Program (CREP); AWEP or other voluntary program[s] resulting in the dry-ups of groundwater irrigated acres; and 3) groundwater recharge." *Id*.

From 2016-2023, the Districts implemented conversion projects, conducted managed aquifer recharge, and partially or fully dried up farmland to satisfy their mitigation obligations under the IGWA-SWC Settlement Agreement, which required each District to conserve its proportionate share of 240,000 acre-feet annually. This request for mitigation credit is based on surplus conservation by the Districts during that period. Filed herewith is the Declaration of Sophia Sigstedt. Exhibit B to the Sigstedt Declaration contains a table showing that surplus mitigation from 2016-2023 will provide an additional 5,025 acre-feet of water to the SWC in 2024 via gains to the Near Blackfoot to Minidoka reach of the Snake River.

Therefore, IGWA requests a credit of 5,025 acre-feet towards the collective mitigation obligation of IGWA's members under the Methodology Order, and a recalculation of the curtailment date applicable to IGWA's members as a result of the credit.

RESPECTFULLY SUBMITTED this 2nd day of May, 2024.

RACINE OLSON, PLLP

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket Nos. CM-DC-2010-001 CM-MP-2009-006 **FINAL ORDER DENYING IGWA'S REQUEST FOR MITIGATION CREDIT FOR AQUIFER ENHANCEMENT ACTIVITIES (2024)**
IN THE MATTER OF IGWA'S MITIGATION PLAN FOR CONVERSIONS, DRY-UPS, AND RECHARGE	

BACKGROUND

On October 6, 2009, the Idaho Ground Water Appropriators, Inc. ("IGWA") filed with the Director of the Department of Water Resources ("Department") *IGWA's Mitigation Plan for Conversions, Dry-Ups and Recharge* ("*Plan*"). The *Plan* was filed "on behalf of [IGWA's] Ground Water District Members and other water user members for and on behalf of their respective members and those ground water users who are non-member participants in their mitigation activities . . . . " *Plan*, at 1, No. CM-MP-2009-006.

The *Plan* proposes that the Director authorize any or all of the following mitigation activities:

> 1) existing and future conversions of acres irrigated from groundwater to surface water irrigation; 2) dried up acres through the Conservation Reserve Enhancement Program (CREP); AWEP or other voluntary program[s] resulting in the dry-ups of groundwater irrigated acres; and 3) groundwater recharge.

Plan, at 1–2. Through the *Plan*, IGWA seeks to "obtain mitigation credit in response to findings of material injury in the existing and any future delivery calls placed by Clear Springs Foods, Inc. (Clear Springs), Blue Lakes Trout Farm, Inc. (Blue Lakes), [and] the Surface Water Coalition (SWC) . . . ." *Plan*, at 3.

On April 7, 2010, the Director issued a *Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("*Methodology Order*"). The *Methodology Order* established 10 steps for determining material injury to members of the SWC. *Methodology Order*, 33–36, No. CM-DC-2010-001. In addition, the *Methodology Order* established an in-season demand shortfall ("IDS") prediction method

using linear regression models which only considered the predicted natural flow at Heise to calculate the forecast natural flow supply for each SWC member. *Id.* at 20.

On April 29, 2010, the Director issued an *Order Regarding April 2010 Forecast Supply (Methodology Steps 3 & 4)* ("*April Forecast Supply Order*"). In the *April Forecast Supply Order*, the Director predicted an IDS and gave junior ground water users mitigating using storage water mitigation plans 14 days to establish that they have secured the required amount of storage water or face curtailment. *April Forecast Supply Order*, at 4, No. CM-DC-2010-001.

On May 6, 2010, IGWA filed a petition for reconsideration and request for hearing, which the Director granted on May 10, 2010. On May 14, 2010, the SWC filed a request for hearing.

On May 12, 2010, IGWA filed *IGWA's Request for Mitigation Credit* to offset the mitigation obligations under the SWC Delivery Call. *IGWA's Req. for Mitigation Credit*, at 4, No. CM-MP-2009-006.

On May 14, 2010, the Director issued an *Order Approving Mitigation Plan* and ordered that "[i]f mitigation credit is sought by IGWA, the Director shall determine the appropriate credit, if any, to provide." *Order Approving Mitigation Plan*, at 4.

On May 17, 2010, the Director issued an *Order Approving Mitigation Credits Regarding SWC Delivery Call* where the Director concluded that IGWA's mitigation activities that year would increase gains pursuant to the regression models used in the then-applicable *Methodology Order*. *Order Approving Mitigation Credits Regarding SWC Delivery Call*, at 4, No. CM-MP-2009-006.

On May 17, 2010, the Director also issued an interlocutory *Order Regarding IGWA Mitigation Obligation* ("*2010 Mitigation Obligation Order*"). In that order, the Director adjusted the predicted shortfall obligation from *April Forecast Supply Order* because of new information. *2010 Mitigation Obligation Order*, at 3, No. CM-DC-2010-001. Furthermore, the Director concluded he would stay the curtailment discussed in the *April Forecast Supply Order* pending the outcome of the hearings over IGWA's mitigation plan. *Id.* at 7. Although that order was an interlocutory order staying curtailment until the proceeding was held, the Director described how IGWA could mitigate its predicted shortfall by subtracting any potential approved mitigation credits and recalculating the priority date for curtailing ground water rights. *Id.* at 5.

On May 28, 2010, the SWC requested a hearing on the *Order Approving Mitigation Credits Regarding SWC Delivery Call*. On June 29, 2010, the Director conducted a hearing on the matter.

On July 19, 2010, the Director issued a *Final Order Approving Mitigation Credits Regarding SWC Delivery Call* ("*2010 Order Approving Mitigation Credits*"). In the *2010 Order Approving Mitigation Credits*, the Director granted *IGWA's Request for Mitigation Credit* for the 2010 irrigation season, in response to the SWC delivery call in May 2010. *2010 Order Approving Mitigation Credits*, at 6.

The methodology for the SWC delivery call has been revised several times since April 7, 2010, in response to judicial review and updated technical information. On April 17, 2015, the Director issued the *Third Amended Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("*Third Amended Methodology Order*"), which updated the predictive models used to forecast natural flow supply for the Twin Falls Canal Company ("TFCC") and other members of the SWC. *See Third Amended Methodology Order*, at 16–18, No. CM-DC-2010-001.

On April 30, 2015, IGWA filed *IGWA's Request for Mitigation Credit to the SWC for Aquifer Enhancement Activities (2015)* ("*2015 Request for Mitigation Credits*"), requesting mitigation credit towards its mitigation obligations to the SWC for the 2015 irrigation season. *2015 Request for Mitigation Credits*, at 1.

Following IGWA's submittal of its *2015 Request for Mitigation Credits*, IGWA and the SWC participated in several settlement meetings that resulted in their joint filing of the *Surface Water Coalition and IGWA Stipulation and Joint Motion Regarding April As Applied Order and Third Methodology Order* ("*2015 Joint Stipulation*") on May 8, 2015. Among other things, the *2015 Joint Stipulation* requested that the "Director withdraw the April As-Applied Order and the Third Methodology Order . . . to allow the Parties an opportunity to reach a long-term agreement by July 1, 2015" *2015 Joint Stipulation*, at 3, No. CM-DC-2010-001, CM-MP-2009-007. In response, the Director withdrew the As-Applied and Third Methodology Order and, as a result, never considered or ruled on IGWA's *2015 Request for Mitigation Credits.*

On May 11, 2016, the Director issued an *Order Determining Deficiency in A&B Irrigation District's Notice of Mitigation* ("*A&B Deficiency Order*") denying a similar request for mitigation credit by A&B Irrigation District under mitigation plan CM-MP-2015-003 based on the predictive models established in the *Third Amended Methodology Order*. *A&B Deficiency Order*, at 3.

On July 19, 2023, the Department issued its *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("*Sixth Amended Methodology Order*"). The *Sixth Amended Methodology Order* calculates "material injury to water rights by determining [reasonable in-season demand ("RISD")] and reasonable carryover [to] be based on updated data, the best available science, analytical methods, and the Director's professional judgment as manager of the state's water resources." *Sixth Amended Methodology Order*, at 2, No. CM-DC-2010-001. The *Sixth Amended Methodology Order* authorizes the Director to calculate the IDS and adjust the methodology used to accommodate for the varying climatic changes. *Id.*

On April 18, 2024, the Department issued its *Final Order Regarding April 2024 Forecast Supply (Methodology Steps 1-3)* ("*April 2024 As-Applied Order*") concluding the SWC has a predicted April IDS of 74,100 acre-feet. *April 2024 As-Applied Order*, at 4, No. CM-DC-2010-001. Accordingly, the Director required the Districts[1] to secure their proportionate share for

[1] North Snake Ground Water District, Carey Valley Ground Water District, Magic Valley Ground Water District, American Falls-Aberdeen Area Ground Water District, Bingham Ground Water District, Bonneville-Jefferson

delivery to the injured members of the SWC on or before May 2, 2024. *Id.* at 6. In that order, the Director warned the Districts that failure to comply with the May 2, 2024 deadline would result in an "order curtailing junior-priority ground water user[s]."[2] *Id.*

On May 2, 2024, the Department received *IGWA's Request for Mitigation Credit for Aquifer Enhancement Activities (2024)* ("*Credit Request*"). IGWA filed its *Credit Request* to receive mitigation credit for the material injury predicted to occur to the SWC during the 2024 irrigation season. *Credit Request*, at 1; *see also April 2024 As-Applied Order*, at 6.

IGWA "requests a credit of 5,025 acre-feet towards the collective mitigation obligation of IGWA's members under the Methodology Order, and a recalculation of the curtailment date applicable to IGWA's members as a result of the credit." *Credit Request*, at 2. The request is based on "surplus conservation by the Districts during" 2016–2023. *Id*. IGWA filed a *Declaration of Sophia Sigstedt* concurrently with, and in support of, the *Credit Request*. Ms. Sigstedt's declaration "contains [her] best estimate and opinion of the amount of surplus reach gains for the Near Blackfoot to Minidoka reach of the Snake River which have resulted in 2024 due to past surplus ground water reduction and private recharge activities ("conservation activities") performed by [the Districts]." *Sigstedt Decl.*, at 2.

ANALYSIS

I. The regression models used to predict in-season demand shortfall already account for the benefits of the enhancement activities performed by IGWA.

The Director issued the *April 2024 As-Applied Order* requiring "[j]unior ground water users holding consumptive water rights bearing priority dates junior to March 31, 1954, within the Eastern Snake Plain Aquifer area of ground water supply [to] mitigate for their proportionate share of the predicted April IDS in accordance with an approved mitigation plan" by May 2, 2024. *April 2024 As-Applied Order*, at 5. IGWA's *Credit Request* states that the Districts have "implemented conversion projects, conducted managed aquifer recharge, and partially or fully dried up farmland to satisfy their mitigation obligations" from 2016-2023 under the *Sixth Amended Methodology Order*. *Credit Request*, at 2. Because of its claimed mitigation efforts, IGWA requested a credit for an additional 5,025 acre-feet due to its mitigation efforts to meet IGWA's obligation under the *Sixth Amended Methodology Order* and to recalculate the curtailment date due to the mitigation credit. *Id.*

The predicted IDS is the shortfall predicted after the benefits of ongoing aquifer enhancement activities performed by the ground water Districts have already been realized. In other words, the predicted IDS already accounts for the benefits of ongoing aquifer enhancement activities performed by the Districts. Essentially, the predicted IDS would be higher if the aquifer enhancement activities had not occurred.

Ground Water District, Jefferson-Clark Ground Water District, Madison Ground Water District, and Henry's Fork Ground Water District are collectively known as the "Districts."

[2] The Department subsequently issued an order extending the deadline to May 17, 2024. *See Order Determining Deficiency in Notices of Secured Water*, at 11, No. CM-DC-2010-001 (May 10, 2024).

The current methodology uses updated predictive models to forecast natural flow supply for the SWC. Because the Eastern Snake Plain Aquifer provides reach gains to the Snake River that sustain natural flow during late summer, the prediction of natural flow supply for some of the SWC members was improved by incorporating parameters representing the status of the aquifer into the predictive models. *See Third Amended Methodology Order*, at 16–18. The parameters selected included flows at Box Canyon, flows at Spring Creek, and depth to water at Well 05S2E27ABA1. *See id.*; *Sixth Amended Methodology Order*, at 19–21.

The April Forecast Supply prediction for five of the SWC members, including TFCC, incorporates November-March flows at Box Canyon into a multi-linear regression to predict natural flow diversions during the upcoming irrigation season. *Third Amended Methodology Order*, at 16. The current *Sixth Amended Methodology Order* continues this practice. *April 2024 As-Applied Order*, at 3. The multi-linear regressions used to predict natural flow supply are updated yearly to include recent data.

The July Forecast Supply prediction for TFCC incorporates January–May flows at Spring Creek into a multi-linear regression to predict natural flow diversions during the remainder of the irrigation season. *Third Amended Methodology Order*, at 18. The July Forecast Supply prediction for three other members of the SWC incorporates depth to water at Well 05S2E27ABA1 into a multi-linear regression to predict natural flow diversions during the remainder of the irrigation season. *Id.* The current *Sixth Amended Methodology Order* continues this practice. *Sixth Amended Methodology Order*, at 21. The multi-linear regressions used to predict natural flow supply are updated yearly to include recent data.

Because the parameters representing the aquifer's ability to sustain natural flow during late summer are included in the improved predictions of natural flow supply for several members of the SWC, the predicted IDS already accounts for the impacts of mitigation activities. Mitigation activities benefit the ground water users by reducing the predicted shortfall volume calculated by the current methodology. In the 2024 April Forecast Supply calculation, every 1,000 acre-feet of additional flow at Box Canyon increased the predicted natural flow supply for the SWC members by a total of 21,506 acre-feet, including an increase of 7,027 acre-feet per 1,000 acre-feet in the predicted natural flow supply for TFCC. *See April 2024 As-Applied Order*, Attach. A. The benefits of mitigation activities are accounted for in the predicted natural flow supply, which was subtracted from the baseline demand to calculate the IDS. Awarding the additional mitigation credit request by IGWA would double-count the benefits of mitigation.

The benefits of ongoing mitigation will also be accounted for in the July Forecast Supply prediction. Any benefits of mitigation to reach gains occurring between April and June will be accounted for in the natural flow diverted. Benefits of mitigation yet to accrue to reach gains will be accounted for in the predicted natural flow diversions for the remainder of the irrigation season. In the 2023 July Forecast Supply, every 1,000 acre-feet of additional flow at Spring Creek increased the predicted natural flow diversions for TFCC by 3,214 acre-feet. *See Order Revising April 2023 Forecast Supply and Amending Curtailment Order (Methodology Steps 5 &*

6), No. CM-DC-2010-001 (July 19, 2023) (Supp. 2023 July Background Information, https://idwr.idaho.gov/wp-content/uploads/sites/2/legal/CM-DC-2010-001/2023-July-Background.zip). Every foot of increase in water level at Well 05S2E27ABA1 increased the predicted natural flow diversions for three other members of the SWC by a total of 45,065 acre-feet. *Id.* Regression coefficients for the July 2024 Forecast Supply will be updated to account for recent data but are expected to be similar.

IGWA's request is like the mitigation credit request that was denied in the *A&B Deficiency Order*. In the *A&B Deficiency Order*, the Director rejected A&B's request for mitigation credit because, like here, the calculations used to predict the IDS at that time used similar predictive models and already included consideration of the benefits of ongoing aquifer enhancement activities. *A&B Deficiency Order*, at 1–3. Therefore, the Director will not reduce the predicted demand shortfall, or any entity's proportionate share thereof, because the models used to predict in-season demand shortfall already account for the benefits of the enhancement activities performed by IGWA.

II. IGWA has not submitted sufficient documentation to support a mitigation credit.

Even if it were determined that IGWA's "surplus conservation" actions were not a double-counting of mitigation benefits, IGWA has submitted insufficient information to (1) determine if IGWA's "surplus conservation" actions qualify as mitigation activities authorized under the *Plan* and (2) quantify the benefits of the "surplus conservation" actions to the reach gains of the Near Blackfoot to Minidoka reach of the Snake River.

Mitigation credit approval for conversions requires information regarding each conversion site, such as the Water Management Information System ("WMIS") ground water diversion number(s), the number of acres converted to surface water irrigation, the volume of surface water delivered to the conversion site, and the volume of ground water diverted (if any). Mitigation credit approval for dried-up acres requires information delineating the locations of dried-up acres, such as digital shapefiles. Mitigation credit approval for managed recharge requires information such as documentation specifying the location, volumes, and timing of aquifer recharge.

Neither IGWA's *Credit Request* nor the *Declaration of Sophia Sigstedt* distinguish between mitigation actions authorized by the *Plan* and other mitigation actions that included a reduction in ground water pumping via improvements in irrigation efficiency, delivery efficiency, changes in crop mix, or other means besides conversions and dried-up acres. Instead, the analysis described in the *Declaration of Sophia Sigstedt* includes actions not authorized as mitigation by the *Plan*.

Therefore, because IGWA failed to provide adequate documentation to support its request for mitigation credit under the *Plan's* delineated mitigation activities, which are limited to conversions, dried-up acres, and managed recharge, the Director will deny IGWA's request for credit.

ORDER

IT IS HEREBY ORDERED that *IGWA's Request for Mitigation Credit for Aquifer Enhancement Activities (2024)* is DENIED.

Dated this 15th day of May 2024.

MATHEW WEAVER
Director

CERTIFICATE OF SERVICE

I HEREBY CERTIFY that on this 15th day of May 2024, the above and foregoing, was served by the method indicated below, and addressed to the following:

EXPLANATORY INFORMATION TO ACCOMPANY A FINAL ORDER

(To be used in connection with actions when a hearing was **not** held)

(Required by Rule of Procedure 740.02)

The accompanying order is a "**Final Order**" issued by the department pursuant to section 67-5246, Idaho Code.

PETITION FOR RECONSIDERATION

Any party may file a petition for reconsideration of a final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: The petition must be received by the Department within this fourteen (14) day period.** The department will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law. See section 67-5246(4), Idaho Code.

REQUEST FOR HEARING

Unless the right to a hearing before the director or the water resource board is otherwise provided by statute, any person who is aggrieved by the action of the director, and who has not previously been afforded an opportunity for a hearing on the matter shall be entitled to a hearing before the director to contest the action. The person shall file with the director, within fifteen (15) days after receipt of written notice of the action issued by the director, or receipt of actual notice, a written petition stating the grounds for contesting the action by the director and requesting a hearing. See section 42-1701A(3), Idaho Code. **Note: The request must be received by the Department within this fifteen (15) day period.**

APPEAL OF FINAL ORDER TO DISTRICT COURT

Pursuant to sections 67-5270 and 67-5272, Idaho Code, any party aggrieved by a final order or orders previously issued in a matter before the department may appeal the final order and all previously issued orders in the matter to district court by filing a petition in the district court of the county in which:

i. A hearing was held,
ii. The final agency action was taken,
iii. The party seeking review of the order resides, or
iv. The real property or personal property that was the subject of the agency action is located.

The appeal must be filed within twenty-eight (28) days of: a) the service date of the final order, b) the service date of an order denying petition for reconsideration, or c) the failure within twenty-one (21) days to grant or deny a petition for reconsideration, whichever is later. See section 67-5273, Idaho Code. The filing of an appeal to district court does not in itself stay the effectiveness or enforcement of the order under appeal.

STATE OF IDAHO

DEPARTMENT OF WATER RESOURCES

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 ~~CM-DC-2016-001~~ CM-MP-2016-001 **JOINT MOTION FOR ORDER APPROVING 2024 STIPULATION**
IN THE MATTER OF IGWA'S SETTLEMENT AGREEMENT MITIGATION PLAN	

Idaho Ground Water Appropriators, Inc. ("IGWA"), North Snake Ground Water District, Magic Valley Ground Water District, Carey Valley Ground Water District, Aberdeen-American Falls Ground Water District, Bingham Ground Water District, Bonneville-Jefferson Ground Water District, Jefferson-Clark Ground Water District, Madison Ground Water District, and Henry's Fork Ground Water District (collectively, the "Groundwater Users") and Twin Falls Canal Company, North Side Canal Company, American Falls Reservoir District No. 2, Milner Irrigation District, Burley Irrigation District, A&B Irrigation District, and Minidoka Irrigation District (collectively, the "SWC"), hereby submit this Joint Motion for Order Approving 2024 Stipulation and request the Director issue an order accepting as compliance with the 2016 Plan for the 2024 irrigation season the Groundwater Users and the SWC's 2024 Stipulation.

Relevant Background

The Groundwater Users and the SWC are parties to the *Settlement Agreement Entered Into June 30, 2015 Between Participating Members of the Surface Water Coalition and Participating Members of Idaho Ground Water Appropriators, Inc.* ("2015 Agreement"), amended and clarified by the *Agreement* dated October 7, 2015 ("A&B Agreement"), *Addendum to Settlement Agreement* dated October 19, 2015 ("First Addendum"), and the *Second Addendum to Settlement Agreement* dated December 14, 2016 ("Second Addendum") (collectively, the "Settlement Agreement").

The Idaho Department of Water Resources ("Department") approved the Settlement Agreement as a mitigation plan under rule 43 of the Conjunctive Management Rules pursuant to the *Final Order Approving Stipulated Mitigation Plan* issued May 2, 2016, and the *Final Order Approving Amendment to Stipulated Mitigation Plan* issued May 9, 2017, in IDWR Docket No. CM-MP-2016-001. The Settlement Agreement, addendums, and approved mitigation plan are referred to herein collectively as the "2016 Plan."

Disagreements have arisen between the parties concerning interpretation, implementation, and enforceability of the 2016 Plan, which led to a *Final Order Curtailing Ground Water Rights Junior to March 31, 1954* ("Curtailment Order") issued by the Department on May 30, 2024, in IDWR Docket No. CM-DC-2010-001. The Department issued an *Order Amending Curtailment List* on June 6, 2024, determining that groundwater users within North Snake Ground Water District, Magic Valley Ground Water District, American Falls-Aberdeen Ground Water District, Henry's Fork Ground Water District, and Madison Ground Water District are protected from curtailment by operating in compliance with the 2016 Plan during the 2024 irrigation season; however, disagreement existed as to the apportioning of obligations under the 2016 Plan.

The parties have entered into the *2024 Stipulation* attached hereto as Exhibit A prescribing the mutually agreeable terms by which the Groundwater Users will comply with the 2016 Plan for the 2024 irrigation season.

Request for Order

Pursuant to section 3 of the *2024 Stipulation*, the parties jointly request the Department issue an order accepting the *2024 Stipulation* as compliance with the 2016 Plan for the 2024 irrigation season, and issue an order amending the curtailment list to protect all patrons of the Groundwater Users from curtailment during the 2024 irrigation season under the terms provided in the stipulation.

Exhibit A

2024 STIPULATION

This Stipulation ("2024 Stipulation") is entered into effective June 19, 2024 ("Effective Date") between Idaho Ground Water Appropriators, Inc., North Snake Ground Water District, Magic Valley Ground Water District, Carey Valley Ground Water District, Aberdeen-American Falls Ground Water District, Bingham Ground Water District, Bonneville-Jefferson Ground Water District, Jefferson-Clark Ground Water District, Madison Ground Water District, and Henry's Fork Ground Water District (collectively, the "Groundwater Users") and Twin Falls Canal Company, North Side Canal Company, American Falls Reservoir District No. 2, Milner Irrigation District, Burley Irrigation District, A&B Irrigation District, and Minidoka Irrigation District (collectively, the "SWC"). The Groundwater Users and the SWC may be referred to herein individually as a "party" and collectively as the "parties."

Background

A. The Groundwater Users and the SWC are parties to the *Settlement Agreement Entered Into June 30, 2015 Between Participating Members of the Surface Water Coalition and Participating Members of Idaho Ground Water Appropriators, Inc.* ("2015 Agreement"), as amended and clarified by the *Agreement* dated October 7, 2015 ("A&B Agreement"), *Addendum to Settlement Agreement* dated October 19, 2015 ("First Addendum"), and the *Second Addendum to Settlement Agreement* dated December 14, 2016 ("Second Addendum") (collectively, the "Settlement Agreement").

B. The Groundwater Users and the SWC are also parties to *Settlement Agreement* dated September 7, 2022 ("2021 Remedy Agreement").

C. The Idaho Department of Water Resources ("Department") approved the 2015 Agreement, as amended by the A&B Agreement and the First Addendum, as a mitigation plan under rule 43 of the Conjunctive Management Rules pursuant to the *Final Order Approving Stipulated Mitigation Plan* issued May 2, 2016, in IDWR Docket No. CM-MP-2016-001. The Department approved the Second Addendum as an amendment to the Settlement Agreement pursuant to the *Final Order Approving Amendment to Stipulated Mitigation Plan* issued May 9, 2017. The mitigation plan, addendums, and the Department orders approving the same are referred to herein collectively as the "2016 Plan."

D. Disagreements have arisen between the parties concerning interpretation, implementation, and enforceability of the 2016 Plan, which led to *Final Order Curtailing Ground Water Rights Junior to March 31, 1954* ("Curtailment Order") issued by the Department on May 30, 2024.

E. The Department issued an *Order Amending Curtailment List* on June 6, 2024, determining that groundwater users within North Snake Ground Water District, Magic Valley Ground Water District, American Falls-Aberdeen Ground Water District, Henry's Fork Ground Water District, and Madison Ground Water District are protected from curtailment by operating in compliance with the 2016 Plan during 2024; however, disagreements exist as to the apportioning of obligations under the 2016 Plan.

F. The parties mutually desire to avoid curtailment in 2024 and work cooperatively and collaboratively to determine groundwater management and mitigation measures for 2025 and future years that resolve past disagreements and are mutually beneficial to the parties.

Agreement

Therefore, with the foregoing definitions incorporated herein by reference, and in consideration of the terms, conditions, and obligations set forth below, the parties agree as follows:

1. Effective Date. This 2024 Stipulation shall not be effective unless it is signed by all parties and approved by an order of the Department. Once signed by all parties, the last signature date set forth below shall be entered into the introductory paragraph as the Effective Date.

2. Term. This 2024 Stipulation defines the mitigation obligations of the Groundwater Users for the 2024 irrigation season only.

3. Department Approval. This 2024 Stipulation is conditioned upon and subject to approval by the Department. Within three (3) days after the Effective Date, the parties will jointly submit this 2024 Stipulation to the Department with a request that it be accepted as compliance with the 2016 Plan for the 2024 irrigation season.

4. Status of 2016 Plan. The parties acknowledge that there is ongoing litigation regarding the 2016 Plan. Nothing herein shall be deemed to prejudice any party's rights, claims, or obligations under the 2016 Plan or the ongoing litigation (which the parties agree will be stayed pursuant to section 9 of this 2024 Stipulation). The parties acknowledge the 2015 Settlement Agreement and 2016 Plan is a mitigation plan approved by the Department unless and until it is amended and/or replaced by the parties (and approved by the Department) or declared void by a court of competent jurisdiction.

5. Groundwater Conservation. For the 2024 irrigation season, the ground water districts will collectively conserve 240,000 acre-feet of groundwater as compared to their average annual diversions during the time period 2010-2014. A 205,000 acre-feet portion is allocated among the ground water districts as it has been historically as set forth in Appendix A attached hereto. The remaining 35,000 acre-feet portion is allocated based on steady-state impacts to the Near Blackfoot to Neeley reach of the Snake River as set forth in Appendix A. Each district shall be independently responsible to satisfy its respective groundwater conservation obligations as set forth in Appendix A.

6. Storage Water Delivery. For the 2024 irrigation season, the Groundwater Users will deliver 65,000 acre-feet of storage water to the SWC as set forth in Appendix B. 50,000 acre-feet will be delivered in accordance with the 2016 Plan, and 15,000 acre-feet will be delivered in accordance with the 2021 Remedy Agreement.

7. 2022 Breach Forgiveness. In consideration of reaching an agreement for 2024 mitigation and accommodating continued negotiations, and recognizing conservation actions taken in 2023, SWC forgives any remaining obligations for the outstanding 2022 breach previously found by IDWR for Bingham Ground Water District, Bonneville-Jefferson Ground Water District, and Jefferson-Clark Ground Water District. This provision resolves issue 4 identified in the *Notice of Hearing* issued December 29, 2023, in IDWR Docket No. CM-MP-2016-001 ("What action must be taken by the ground water districts to cure their 2022 breach of the 2016 Mitigation Plan?"). If the stay imposed under section 9 of this 2024 Stipulation is lifted, the parties reserve the right to request issuance of the Hearing Officer's pending recommended order and Director's final order concerning issues 1-3 identified in the *Notice of Hearing*.

8. Cooperative Negotiations. The parties will negotiate cooperatively and in good faith between the Effective Date and October 1, 2024, in an effort to determine groundwater management and mitigation measures for 2025 and future years. Consistent with section 4 above, nothing in this 2024 Stipulation shall be construed as an admission against interest or concession of any position a party may take in such negotiations or in any litigation.

9. Stay of Litigation. To enable the parties to focus their attention on cooperative negotiations in accordance with section 8 of this 2024 Stipulation, the parties will stay all litigation between them related

to the SWC delivery call until October 1, 2024. It is the intent of the parties that the SWC delivery call (IDWR Docket No. CM-DC-2010-001) and the 2016 Plan (IDWR Docket No. CM-MP-2016-003) remain in effect, but litigation related thereto will be stayed. Within 10 days after the Effective Date, the parties will file jointly file stipulate motions to stay litigation until October 1, 2024. The stay of litigation will not preclude any party from making filings needed to satisfy applicable statutes of limitations. A list of the cases to be stayed is set forth in Appendix C attached hereto.

10. Miscellaneous.

10.1 Binding Effect. This 2024 Stipulation shall be binding upon and inure to the benefit of the parties and their respective successors in interest.

10.2 No Third-Party Obligations or Beneficiaries. The obligations and benefits of this 2024 Stipulation apply only to the parties. There are no third-party beneficiaries.

10.3 Counterparts. This 2024 Stipulation may be executed in any number of counterparts (including execution by electronic transmission) with the same effect as if all signing parties had signed the same document. All counterparts shall be construed together and constitute the same document. Signature pages may be detached from the counterparts and attached to a single copy of this 2024 Stipulation to physically form one document.

[End of 2024 Stipulation; signature pages below]

file@idwr.idaho.gov

RE: SWC Delivery Call / Notice of Mitigation Water (*Final Order Regarding April 2025 Forecast Supply (Steps 1-3)*

Dear Director Weaver:

I am writing on behalf of our client the A&B Irrigation District ("A&B" or "District") in response to the *Final Order Regarding April 2025 Forecast Supply* ("*Order*") (April 16, 2025). This letter responds to the request for junior ground water right holders to establish how they will mitigate for their proportionate share of the predicted demand shortfall. *See Order* at 6, ¶ 7.

A&B has an approved mitigation plan regarding the above delivery call and order. I have conferred with manager Justin Temple and it is the District's intent to continue to curtail the enlargement water rights (2,063 acres) for the 2025 irrigation season. The District will also deliver surface water to an additional 1,510.6 acres that could have been irrigated with some of the District's ground water rights with an April 1, 1962 priority (water right nos. 36-15127A et al.). The District intends to continue to deliver surface water to lands formerly irrigated with groundwater, approximately 3,573.6 in total, with groundwater supplied to certain areas as needed for pipeline operations.

Based upon similar prior correspondence on this issue with IDWR it is my understanding that this notice will satisfy the request stated in the *Order*. However, to the extent that A&B needs to also show that it has 384 acre-feet of storage to deliver to TFCC, that water is expected to be available in its final storage allocation for the 2025 irrigation (American Falls and Palisades storage space). If necessary, that amount of storage will be available for formal assignment from A&B to TFCC through the Water District 01 rental pool.

D – 208 . 735 . 2227 | E - tthompson@martenlaw.com | P.O. Box 63, Twin Falls, ID 83303-0063

For your information A&B executed and filed the required private lease form with Water District 01 last year and ultimately that water had to be re-assigned back to A&B prior to the final storage water accounting. We would appreciate your input and dialogue with the watermaster to determine how best to address this issue this year so storage does not have to be assigned and then re-assigned. We believe this may create issues for Water District 01 and its storage accounting. Please advise if you have any questions.

As to IDWR's calculation of the District's proportionate share it is unclear if the Department is assuming full groundwater delivery to those acres covered by water rights junior to August 28, 1955. As noted, the District is delivering surface water to 3,573.6 acres, so if that proportionate share is revised based upon that fact please advise as to any changes. The District is filing a contemporaneous request for hearing on this issue as well.

If you have any questions or need additional information, please contact me at (208) 733-0700.

Sincerely,

Travis Thompson
Partner

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 Docket No. CM-MP-2015-003 **JOINT MOTION FOR ORDER APPROVING 2025 STIPULATION**
IN THE MATTER OF THE MITIGATION PLAN FILED BY A&B IRRIGATION DISTRICT FOR THE DISTRIBUTION OF WATER TO WATER RIGHTS HELD BY THE SURFACE WATER COALITION	

COME NOW, A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, and TWIN FALLS CANAL COMPANY, by and through their undersigned attorneys of record, and jointly

move the Director for an order approving the *2025 Stipulation* attached hereto as Attachment A (the "2025 Stipulation") as stipulated compliance with the District's approved mitigation plan for the 2025 irrigation season.

The parties have entered into the 2025 Stipulation to define A&B's mitigation obligation for the 2025 irrigation season. The stipulated plan complies with CM Rule 43.03.o as the parties have entered into this stipulation for purposes of an acceptable mitigation plan "even though such plan may not otherwise be fully in compliance with these provisions." The SWC stipulates that, in exchange for the mitigation actions taken by A&B, the District's junior priority ground water rights will receive safe harbor from the SWC delivery call during the 2025 irrigation season.

The parties jointly request the Director to issue an order accepting the *2025 Stipulation* for the 2025 irrigation season and issue an order amending the curtailment list to protect the ground water rights of the A&B Irrigation District from curtailment during the 2025 irrigation season pursuant to the terms provided in the stipulation.

DATED this 24th day of July, 2025.

Attachment A

2025 STIPULATION

This Stipulation ("2025 Stipulation") is entered into effective July 24, 2025 between A&B Irrigation District ("A&B" or "District") and American Falls Reservoir District #2, Burley Irrigation District, Milner Irrigation District, Minidoka Irrigation District, North Side Canal Company, and Twin Falls Canal Company (hereinafter collectively "Surface Water Coalition," "SWC," or "Coalition"). A&B and the Coalition may be referred to herein individually as a "party" and collectively as the "parties."

BACKGROUND

A. On December 27, 2023, A&B and the Coalition filed a *Stipulation re: A&B Irrigation District's Amended Mitigation Plan*. The Director issued a *Final Order Approving Amended Mitigation Plan* on January 10, 2025.

B. On April 16, 2025 the Director issued his *Final Order Regarding April 2025 Forecast Supply (Methodology Steps 1 – 3)* predicting a demand shortfall for TFCC in the amount of 63,000 acre-feet. In that decision, the Director concluded A&B's proportionate share of that predicted injury was 384 acre-feet.[1] A&B filed a petition requesting a hearing on the order on April 29, 2025. A&B contests the Department's calculation of A&B's proportionate share of the 2025 predicted demand shortfall. No hearing has been held regarding A&B's petition.

C. On July 10, 2025 the Director issued his *Order Revising April 2025 Forecast Supply and Continuing May 16, 2025 Curtailment Order (Methodology Steps 5 & 6)* ("Steps 5/6 Order"). In that decision, the Director predicted a demand shortfall for TFCC in the amount of 75,300 acre-feet and concluded that A&B's proportionate share of that predicted injury was 5,039 acre-feet. A&B and the SWC have filed petitions requesting a hearing on this order.

D. The parties mutually desire to avoid curtailment of A&B's water rights in 2025 and work cooperatively and collaboratively to determine appropriate mitigation measures for 2026 and future years pursuant to an amended mitigation plan. The parties further seek to address their respective petitions on the Steps 5/6 Order.

AGREEMENT

Therefore, and in consideration of the terms, conditions, and obligations set forth below, the parties agree as follows:

1. Term. This 2025 Stipulation defines the mitigation obligation of A&B for the 2025 irrigation season only.

2. Status of 2015 Amended Plan. The parties acknowledge that there is a pending contested case concerning the Director's determination of A&B's proportionate share of the

[1] IDWR subsequently corrected the proportionate share number to 164 acre-feet after taking into account A&B's conversion acres. *See* Steps 5/6 Order at 11, n. 6.

predicted injury and A&B's mitigation requirement pursuant to its amended mitigation plan, as well as the Director's Steps 5/6 Order and implementation of the continuing curtailment order.

3. Groundwater Conservation. For the 2025 irrigation season, A&B will continue to deliver surface water to approximately 3,576 acres previously irrigated with groundwater. The District has implemented a conversion program since the mid-1990s and has delivered surface water to the above-referenced acres for nearly ten years since the construction and use of its second pumping plant on the Snake River (Pumping Plant #2).

4. Storage Water Delivery. For the 2025 irrigation season, A&B will deliver and assign 1,252 acre-feet to TFCC in accordance with its Amended Mitigation Plan. The storage water will be assigned on or before August 1st from the following sources: 164 acre-feet (private lease from A&B's storage, submitted to Water District 01 on May 28, 205); 1,088 acre-feet (A&B's portion of 7,500 acre-feet of storage assigned to SWC from Water Mitigation Coalition storage). The Coalition expressly stipulates to the above actions by A&B in exchange for A&B receiving safe harbor from the delivery call for its groundwater use pursuant to its water rights for the 2025 irrigation season.

5. Cooperative Negotiations. The parties will negotiate cooperatively and in good faith in an effort to determine A&B's mitigation measures for 2026 and future years. Nothing within this 2025 Stipulation shall be construed as an admission against interest or concession of any position a party may take in such future negotiations or in any litigation concerning the SWC delivery call or A&B's Amended Mitigation Plan.

6. Miscellaneous.

6.1 No Third-Party Obligations or Beneficiaries. The obligations and benefits of this 2025 Stipulation apply only to the parties. There are no third-party beneficiaries.

6.2 Counterparts. This 2025 Stipulation may be executed in any number of counterparts (including execution by electronic submission) with the same effect as if all signing parties had signed the same document. All counterparts shall be construed together and constitute the same document. Signature pages may be detached from the counterparts and attached to a single copy of this 2025 Stipulation to physically form one document.

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 CM-MP-2015-003 **ORDER APPROVING 2025 STIPULATION AS COMPLIANCE WITH APPROVED MITIGATION PLAN**

The Director ("Director") of the Idaho Department of Water Resources ("Department") finds, concludes, and orders as follows:

FINDINGS OF FACT

1. On December 27, 2023, A&B Irrigation District ("A&B") and the other members of the Surface Water Coalition ("SWC")[1] filed a *Stipulation Regarding A&B Irrigation District's Amended Rule 43 Mitigation Plan* ("*Stipulated Mitigation Plan*") with the Department, pursuant to Rule 43 of the Rules for Conjunctive Management of Surface and Ground Water Resources ("CM Rules"), IDAPA 37.03.11.043.

2. On January 10, 2025, the Director issued a *Final Order Approving Amended Mitigation Plan*.

3. On April 16, 2025, the Director issued a *Final Order Regarding April 2025 Forecast Supply (Methodology Steps 1 – 3)* ("*As-Applied Order*") predicting a demand shortfall for Twin Falls Canal Company ("TFCC") in the amount of 63,000 acre-feet. In that order, the Director concluded A&B's proportionate share of that predicted injury was 384 acre-feet. *As-Applied Order*, at 5 n.8. A&B filed a petition requesting a hearing on the *As-Applied Order* on April 29, 2025. A&B contests the Department's calculation of A&B's proportionate share of the 2025 predicted demand shortfall. *A&B Irrigation District's Request for Hearing*, at 1–2. No hearing has been held regarding A&B's request for hearing.

4. On July 10, 2025, the Director issued an *Order Revising April 2025 Forecast Supply and Continuing May 16, 2025 Curtailment Order (Methodology Steps 5 & 6)* ("*Steps 5/6 Order*"). In that order, the Director predicted a demand shortfall for TFCC in the amount of 75,300 acre-feet and

[1] The other members of the SWC are American Falls Reservoir District #2, Burley Irrigation District, Milner Irrigation District, Minidoka Irrigation District, North Side Canal Company, and Twin Falls Canal Company.

concluded that A&B's proportionate share of that predicted injury was 5,039 acre-feet. *Steps 5/6 Order*, at 11 n.6. The *Steps 5/6 Order* stated that by July 24, 2025, ground water users with consumptive water rights "junior to October 11, 1900, within the [ESPA ACGWS]" had to "establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted IDS of 75,300 acre-feet in accordance with an approved mitigation plan." *Id.* at 12.

5. On July 24, 2025, A&B filed a request for hearing on the *Steps 5/6 Order*, again contesting the Department's calculation of A&B's proportionate share of the 2025 predicted demand shortfall. *A&B Irrigation District's Request for Hearing*, at 1–2.

6. Also on July 24, 2025, A&B and the other members of the SWC submitted a *Joint Motion for Order Approving 2025 Stipulation* ("*Joint Motion*"). The motion explains that A&B and the other members of the SWC entered into a stipulation, referred to as the "*2025 Stipulation*," to "define A&B's mitigation obligation for the 2025 irrigation season." *Joint Motion*, at 2. In the stipulation, which is included as Attachment A to the *Joint Motion*, A&B proposes to continue its ground water conversions projects and deliver 1,252 acre-feet of storage water to TFCC (the injured SWC member) in accordance with its approved mitigation plan. *2025 Stipulation*, at 2. A&B and the other members of the SWC request the Director approve the *2025 Stipulation* as "stipulated compliance with [A&B's] approved mitigation plan for the 2025 irrigation season." *Joint Motion*, at 2.

CONCLUSIONS OF LAW

1. Idaho Code § 42-602, addressing the authority of the Director over the supervision of water distribution within water districts, provides:

> The director of the department of water resources shall have direction and control of the distribution of water from all natural water sources within a water district to the canals, ditches, pumps and other facilities diverting therefrom. Distribution of water within water districts created pursuant to section 42-604, Idaho Code, shall be accomplished by watermasters as provided in this chapter and supervised by the director. The director of the department of water resources shall distribute water in water districts in accordance with the prior appropriation doctrine. The provisions of chapter 6, title 42, Idaho Code, shall apply only to distribution of water within a water district.

2. CM Rule 42.02 states: "The holder of a senior-priority surface or ground water right will be prevented from making a delivery call for curtailment of pumping of any well used by the holder of a junior-priority ground water right where use of water under the junior-priority right is covered by an approved and effectively operating mitigation plan." IDAPA 37.03.11.042.02.

3. As explained above, by July 24, 2025, ground water users with consumptive water rights "junior to October 11, 1900, within the [ESPA ACGWS]" had to "establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted

IDS of 75,300 acre-feet in accordance with an approved mitigation plan." *Steps 5/6 Order*, at 12. If a junior ground water user does not establish that they can mitigate for their proportionate share of the predicted July IDS "in accordance with an approved mitigation plan," the ground water user will be subject to the "order curtailing the junior-priority ground water user." *Id.*

4. The *2025 Stipulation* between A&B and the other members of the SWC is consistent with A&B's approved *Stipulated Mitigation Plan* in Docket No. CM-MP-2015-003. The mitigation plan calls for A&B to undertake ground water conversions projects and deliver storage water to any SWC member found to be injured. *Stipulated Mitigation Plan*, at 2. In the *2025 Stipulation*, A&B proposes to continue its ground water conversions projects and deliver 1,252 acre-feet of storage water to TFCC (the injured SWC member). *2025 Stipulation*, at 2. While the amount of storage water to be delivered to TFCC this year is less than what TFCC may otherwise be entitled to, the Director recognizes that there are pending requests for hearing on how the Department calculates A&B's proportionate share of the demand shortfall. The Director has previously accepted single-year stipulations that are consistent with approved mitigation plans. *See Order Approving 2024 Stipulation as Compliance with Approved Mitigation Plan*, Docket No. CM-DC-2010-001 (June 20, 2024). Accordingly, the Director will approve this single-year stipulation.

ORDER

Based upon and consistent with the foregoing, IT IS HEREBY ORDERED that the J*oint Motion for Order Approving 2025 Stipulation* is GRANTED.

DATED this 25th day of July 2025.

MATHEW WEAVER
Director

EXPLANATORY INFORMATION TO ACCOMPANY A FINAL ORDER

(To be used in connection with actions when a hearing was **not** held)

The accompanying document is a "**Final Order**" issued by the Idaho Department of Water Resources ("Department") pursuant to Idaho Code § 67-5246.

PETITION FOR RECONSIDERATION

(*See* Idaho Code § 67-5246(4))

Any party may file a petition for reconsideration of this final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: the petition must be received by the Department within this fourteen (14) day period.** The presiding officer will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law.

REQUEST FOR HEARING

(*See* Idaho Code § 42-1701A(3))

Unless the right to a hearing before the Department or the Water Resource Board is otherwise provided by statute, any person aggrieved by any final decision, determination, order or action of the Director, and who has not previously been afforded an opportunity for a hearing on the matter may request a hearing pursuant to Idaho Code § 42-1701A(3). A written petition to the Director contesting this final order and requesting a hearing must be filed with the Department by any aggrieved person **within fifteen (15) days after service of this final order**.

CERTIFICATE OF SERVICE

(*See* IDAPA 37.01.01.053, 37.01.01.202)

All documents filed with the Department in connection with a petition for reconsideration or a request for hearing of this final order shall be served on all other parties to the proceedings in accordance with Rules of Procedure 53 and 202.

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **FINAL ORDER CURTAILING GROUND WATER RIGHTS JUNIOR TO OCTOBER 11, 1900**

The Director of the Idaho Department of Water Resources ("Department") finds, concludes, and orders as follows:

FINDINGS OF FACT

1. On July 19, 2023, the Director issued the *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("*Methodology Order*").[1] The *Methodology Order* established nine steps for determining material injury to members of the Surface Water Coalition ("SWC").[2]

2. On April 16, 2025, the Director issued his *Final Order Regarding April 2025 Forecast Supply (Methodology Steps 1–3)* ("*April Forecast Supply Order*"). The *April Forecast Supply Order* predicted an in-season demand shortfall ("IDS") to the SWC of 63,000 acre-feet for the 2025 irrigation season. *April Forecast Supply Order*, at 3. At that time, the only member of the SWC predicted to experience material injury during the 2025 irrigation season was Twin Falls Canal Company ("TFCC"). *Id* at 3–4.

3. As a result, the Director ordered that:

> On or before May 1, 2025, ground water users holding consumptive water rights bearing priority dates junior to August 28, 1955, within the Eastern Snake Plain Aquifer area of common ground water supply [("ESPA ACGWS")] shall establish, to the satisfaction of the Director, that they can mitigate for their proportionate

[1] Shortly after the *Methodology Order* was issued, the Idaho Ground Water Appropriators, Inc. ("IGWA") and certain Idaho cities filed petitions for judicial review in Ada County (Nos. CV01-23-13173 and CV01-23-13238). IGWA's petition for judicial review is stayed until December 31, 2027. The cities' petition for judicial review is pending before the Idaho Supreme Court. The filing of a petition for judicial review does not stay the effectiveness of an order. I.C. § 67-5274. No party to the judicial review proceedings has requested a stay of the *Methodology Order*.

[2] The SWC is comprised of A&B Irrigation District, American Falls Reservoir District #2, Burley Irrigation District, Milner Irrigation District, Minidoka Irrigation District, North Side Canal Company, and Twin Falls Canal Company.

> share of the predicted April IDS of 63,000 acre-feet in accordance with an approved mitigation plan. If a junior ground water user cannot establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted April IDS in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water user.

April Forecast Supply Order, at 6.

4. On May 16, 2025, the Director issued a *Final Order Curtailing Ground Water Rights Junior to August 28, 1955* ("*Curtailment Order*"). The Director ordered that:

> [E]ffective May 31, 2025, ground water users holding water rights bearing priority dates junior to August 28, 1955, within the ESPA ACGWS, and listed in Attachment A to this order, shall curtail/refrain from diversion and use of ground water pursuant to those water rights unless notified by the Department that the order of curtailment has been modified or rescinded as to their water rights.

Curtailment Order, at 4.

5. On July 10, 2025, the Director issued the *Order Revising April 2025 Forecast Supply and Continuing May 16, 2025 Curtailment Order (Methodology Steps 5 & 6)* ("*July As-Applied Order*"), which applied steps 5 and 6 of the *Methodology Order*. The Director predicted a revised IDS of 75,300 acre-feet. *July As-Applied Order*, at 8. Once again, he found TFCC to be the only member of the SWC predicted to experience material injury during the 2025 irrigation season, with an estimated Time of Need of August 28, 2025. *Id*. at 8–9.

6. Consequently, the Director ordered that by "July 24, 2025, ground water users holding consumptive water rights bearing priority dates junior to October 11, 1900, within the [ESPA ACGWS] shall establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted IDS of 75,300 acre-feet in accordance with an approved mitigation plan." *Id.* at 12. He ordered that if such a junior ground water user cannot establish that they can mitigate for their proportionate share of the updated predicted IDS "in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water user." *Id.* Additionally, the Director ordered "that the May 16, 2025 *Curtailment Order* remains in full force and effect." *Id*.

7. There are currently five approved mitigation plans in place responding to the SWC delivery call:

(1) Docket No. CM-MP-2010-001 for the benefit of the Southwest Irrigation District and Goose Creek Irrigation District (collectively, "SWID");

(2) Docket No. CM-MP-2019-001 for the benefit of certain cities commonly referred to as the "Coalition of Cities";

(3) Docket No. CM-MP-2015-003 for the benefit of the A&B Irrigation District ("A&B");

(4) Docket No. CM-MP-2007-001 for the benefit of certain entities commonly referred to as the "Water Mitigation Coalition"; and

(5) Docket No. CM-MP-2024-003 for the benefit of certain ground water districts commonly referred to as the "Ground Water Districts."

8. In both the *April Forecast Supply Order* and *July As-Applied Order*, the Director concluded that due to the nature of the approved mitigation plans for SWID, the Coalition of Cities, the Water Mitigation Coalition, and the Ground Water Districts, these entities do not need to establish they can mitigate for their proportionate share of the predicted IDS. *April Forecast Supply Order*, at 5 n.8; *July As-Applied Order*, at 11 n.6.

9. However, in the *July As-Applied Order* the Director concluded that A&B must mitigate for its proportionate share of the predicted July IDS of 75,300 acre-feet and determined that A&B's proportionate share is 5,039 acre-feet. *July As-Applied Order*, at 11 n.6. Although, he did note that in response to the *April Forecast Supply Order*, A&B previously demonstrated that it "already secured 164 acre-feet of storage water for the 2025 irrigation season." *Id*.

10. On July 24, 2025, A&B and the other members of the SWC submitted a *Joint Motion for Order Approving 2025 Stipulation* ("*Joint Motion*"). The motion explains that A&B and the other members of the SWC entered into a stipulation, referred to as the "*2025 Stipulation*," to "define A&B's mitigation obligation for the 2025 irrigation season." *Joint Motion*, at 2. In the stipulation, which is included as Attachment A to the *Joint Motion*, A&B proposes to continue its ground water conversions projects and deliver 1,252 acre-feet of storage water to TFCC (the injured SWC member) in accordance with its approved mitigation plan. *2025 Stipulation*, at 2. A&B and the other members of the SWC request the Director approve the *2025 Stipulation* as "stipulated compliance with [A&B's] approved mitigation plan for the 2025 irrigation season." *Joint Motion*, at 2. In an order issued concurrently with this order, the Director issued his *Order Approving 2025 Stipulation as Compliance with Approved Mitigation Plan*.

CONCLUSIONS OF LAW

1. Idaho Code § 42-602 authorizes the Director to supervise water distribution within water districts:

> The director of the department of water resources shall have direction and control of the distribution of water from all natural water sources within a water district to the canals, ditches, pumps and other facilities diverting therefrom. Distribution of water within water districts created pursuant to section 42-604, Idaho Code, shall be accomplished by watermasters as provided in this chapter and supervised by the director. The director of the department of water resources shall distribute water in water districts in accordance with the prior appropriation doctrine. The provisions of chapter 6, title 42, Idaho Code, shall apply only to distribution of water within a water district.

2. As explained above, by July 24, 2025, ground water users with consumptive water rights "junior to October 11, 1900, within the [ESPA ACGWS]" had to "establish, to the

satisfaction of the Director, that they can mitigate for their proportionate share of the predicted IDS of 75,300 acre-feet in accordance with an approved mitigation plan." *July As-Applied Order*, at 12. If a junior ground water user does not establish that they can mitigate for their proportionate share of the predicted July IDS "in accordance with an approved mitigation plan" the ground water user will be subject to this "order curtailing the junior-priority ground water user." *Id.*

3. Due to the nature of the approved mitigation plans for SWID, the Coalition of Cities, the Water Mitigation Coalition, and the Ground Water Districts, these entities do not need to establish that they can mitigate for their proportionate share of the predicted July IDS. Junior ground water users entitled to the protection of SWID, the Coalition of Cities, the Water Mitigation Coalition, and the Ground Water Districts mitigation plans continue to not be subject to curtailment during the 2025 irrigation season.

4. Under a separate order, the Director approved the *2025 Stipulation* between A&B and the other members of the SWC because it is consistent with A&B's approved mitigation plan in Docket No. CM-MP-2015-003. Accordingly, A&B's water rights will not be subject to curtailment during the 2025 irrigation season.

5. Consistent with the *July As-Applied Orde*r, Idaho Code § 42-602, and decisions of the courts, the Director must order curtailment of junior-priority ground water users that have not established they can mitigate in accordance with an approved mitigation plan. Junior-priority ground water users subject to curtailment are listed in the updated Attachments A to this order.

ORDER

Based upon and consistent with the foregoing, IT IS HEREBY ORDERED that effective July 25, 2025, ground water users holding water rights bearing priority dates junior to October 11, 1900, within the ESPA ACGWS, and listed in Attachment A to this order, shall curtail/refrain from diversion and use of ground water pursuant to those water rights unless notified by the Department that the order of curtailment has been modified or rescinded as to their water rights.

IT IS FURTHER ORDERED that holders of ground water rights listed in Attachment A to this order, who were not previously listed in Attachment A to the May 16, 2025 *Curtailment Order*, may seek to participate in an approved mitigation plan through a ground water district and shall have fifteen days from the date of this order to join, solely for mitigation purposes, the ground water district situated nearest the lands to which the water rights are appurtenant. *See* H.B. 737a, 58th Leg., 2d Reg. Sess. (Idaho 2006) (*Act Relating to the Administration of Ground Water Rights Within the Eastern Snake River Plain*); *see also* I.C. § 42-5259. The water rights that have fifteen days to join a ground water district are identified in Attachment A.

IT IS FURTHER ORDERED that watermasters for the water districts within the ESPA ACGWS who regulate ground water are directed to review the water rights listed in Attachment A to this order and begin the curtailment process.

IT IS FURTHER ORDERED that this order shall apply to consumptive ground water rights, including but not limited to, agricultural, commercial, industrial, and municipal uses. This order excludes ground water rights used for *de minimis* domestic purposes where such domestic use is within the limits of the definition set forth in Idaho Code § 42-111 and ground water rights used for *de minimis* stock watering where such stock watering use is within the limits of the definitions set forth in Idaho Code § 42-1401A(11), pursuant to IDAPA 37.03.11.020.11.

Dated this 25th day of July 2025.

MATHEW WEAVER
Director

EXPLANATORY INFORMATION TO ACCOMPANY A FINAL ORDER

(To be used in connection with actions when a hearing was **not** held)

The accompanying document is a "**Final Order**" issued by the Idaho Department of Water Resources ("Department") pursuant to Idaho Code § 67-5246.

PETITION FOR RECONSIDERATION

(*See* Idaho Code § 67-5246(4))

Any party may file a petition for reconsideration of this final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: the petition must be received by the Department within this fourteen (14) day period.** The presiding officer will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law.

REQUEST FOR HEARING

(*See* Idaho Code § 42-1701A(3))

Unless the right to a hearing before the Department or the Water Resource Board is otherwise provided by statute, any person aggrieved by any final decision, determination, order or action of the Director, and who has not previously been afforded an opportunity for a hearing on the matter may request a hearing pursuant to Idaho Code § 42-1701A(3). A written petition to the Director contesting this final order and requesting a hearing must be filed with the Department by any aggrieved person **within fifteen (15) days after service of this final order**.

CERTIFICATE OF SERVICE

(*See* IDAPA 37.01.01.053, 37.01.01.202)

All documents filed with the Department in connection with a petition for reconsideration or a request for hearing of this final order shall be served on all other parties to the proceedings in accordance with Rules of Procedure 53 and 202.

Attorney for Respondents

IN THE DISTRICT COURT OF THE FIFTH JUDICIAL DISTRICT OF THE STATE OF IDAHO, IN AND FOR THE COUNTY OF MINIDOKA

A&B IRRIGATION DISTRICT, Petitioner, vs. THE IDAHO DEPARTMENT OF WATER RESOURCES, and MATHEW WEAVER in his capacity as the Director of the Idaho Department of Water Resources, Respondents, and IDAHO GROUND WATER APPROPRIATORS, INC., AMERICAN FALLS-ABERDEEN GROUND WATER DISTRICT, CITY OF BLISS, CITY OF BURLEY, CITY OF CAREY, CITY OF DECLO, CITY OF DIETRICH, CITY OF GOODING, CITY OF HAZELTON, CITY OF HEYBURN, CITY OF JEROME, CITY OF PAUL, CITY OF RICHFIELD, CITY OF RUPERT, CITY OF SHOSHONE, CITY OF WENDELL, Intervenors.	Case No. CV34-26-00462 **NOTICE OF LODGING THE SETTLED AGENCY RECORD WITH THE DISTRICT COURT**
IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY AND FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT NO. 2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, NORTHSIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	

On May 21, 2026, the Idaho Department of Water Resources ("Department") served its *Notice of Lodging the Agency Record with the Agency* ("*Notice*") in this matter pursuant to I.R.C.P. 84(j)(1). The *Notice* gave the parties fourteen (14) days from the date of the *Notice* to file any objection to the agency record. On June 3, 2026, A&B Irrigation District filed *A&B Irrigation District's Objection to the Agency Record* and on June 4, 2026, American Falls-Aberdeen Ground Water District filed *American Falls-Aberdeen Ground Water District's Objection to Agency Record*. On June 17, 2026, the Director issued his *Agency Decision on Objections and Order Settling the Agency Record*. The agency record is now deemed settled.

YOU ARE HEREBY NOTIFIED that the settled record is being filed with the District Court, pursuant to I.R.C.P. 84(k) and the Court's May 14, 2026 *Procedural Order*, through iCourt e-filing. A copy of the settled agency record has also been served upon the parties through iCourt serve.

DATED 17th day of June 2026.

STATE OF IDAHO
OFFICE OF THE ATTORNEY GENERAL

GARRICK L. BAXTER
Deputy Attorney General
