The Eastern Idaho Water Rights Coalition gave a more thoughtful -- I don't know if it was more thoughtful, but, certainly, a more lengthy response that talked about matching the precision of the model to the precision of the work -- the results needed and pointed out that the precision of the model depends upon the discretization of the question that's being asked. So that's one set of input to that question.

The other is I just looked at -- every version of the model has been, in its day, the best available science. And I looked at the important result of the model for this proceeding, which is the short-term

prediction of accruals to the near Blackfoot to Neeley -- or maybe it was the near Blackfoot to Minidoka reach -- combined reach.

And what I found is the two subsequent best available sciences in that short time period differed by a factor of more than five. That was one.

And then the other is that since ESPAM2.1, the reports have included an R-squared statistic on the ability of the model to meet short-term targets -- the model and its input data to meet short-term targets for each modeled reach. And what I found is that the ESPAM2.2, for the near Blackfoot to Neeley, the R-squared is .42, which means the model is capable of explaining about 42 percent of the variability observed. From Neeley to Minidoka, the R-squared is less than 0.1, which means that it's less -- it explains less than 1 percent of the variability.

So those -- and if you're going to use the model to predict something that's as important as the water supply for the Surface Water Coalition, to me those are frightening degrees of difference from one best available science to the next, and then within the current best available science, a disappointing ability to perform to the very thing that it's being asked to predict.

Q. And is it fair to say that the problem that it's being asked to predict in the context of this water delivery call is short-term problems, in-season demand problems?

A. That's my understanding.

Q. Does the ESPAM have short-term or is it more of a mid- to long-term response time?

A. So the aquifer itself, unless you're talking about a few locations very near the springs or river, if you're talking about the aquifer as a whole, the groundwater irrigated acres as a whole, the response is medium to long to perhaps very long-term.

Q. To your knowledge, does the Fifth Methodology Order specify minimum precision and accuracy criteria for the use of the ESPAM?

A. I couldn't find it.

Q. Is there a metric available that you could measure ESPAM precision and accuracy that you're aware of?

A. Well, so for this particular prediction, which is the one important in this question, the R-squared would be the useful statistic. There are additional modeling statistics that could be reviewed, but that would be a very useful and convenient one.

Q. Okay. And I believe Matt Anders and

Greg Sullivan, and I believe perhaps Sophia did as well, discussed the R-squared values.

Could you just briefly describe your understanding of the R-squared values and how that's important in evaluating this type of model?

A. Yeah. So, you know, fundamentally the R-squared shows how much of the observed variability can be explained by the model and the data, the equation and the data, the process and the data that are being used to estimate whatever the observed thing is. So it's -- R-squared of 42 means 42 percent of the variability is explainable.

Q. What level of precision and accuracy does the ESPAM2.2 have when using it to determine monthly estimations of the effects of the near Blackfoot to Minidoka reach? And you have already said this.

A. Yeah, so that's basically that 42 percent. It can explain 42 percent of that short-term variability.

Q. Do you believe there's a technical basis to set that minimum tolerance level and provide some criteria for that?

A. There are. And I have not explored them exhaustively, but, you know, for different types of data there are different typical thresholds. I would think a .5 would be useful in this, which is lower than the

R-squared for the Twin Falls regression that everyone seems to be concerned about. But I still think in the modeling context that could be a useful criteria.

Q. Do you believe it's a policy question of whether to set that, or is there technical -- is there a technical basis that would inform that policy decision?

A. So it is a policy decision. And, you know, ideally, you would make the decision based upon the gravity of the prediction being made and then you would look to see if the candidate tools are capable of meeting that. I think it would be tempting to do it the other way, "Well, we want to use this tool. Let's set our criterion so this tool passes." I don't like that kind of science.

Q. What kind of technical work could inform the policy decision establishing minimum criteria?

A. So a broader exploration of typical model precision -- you know, again, the technical work, the gravity of this situation -- of this prediction in terms of whether or not the calculated relief will take care of what the Surface Water Coalition needs, the gravity of the much larger effort that has to be made by groundwater users to provide that relief, those together could inform on the one hand what's attainable, on the other hand what would be necessary to justify and to

support the gravity of the decision being made.

Q. I think you touched on or you at least addressed the best available science standard. My question, I guess in follow-up to that, is the best available science standard as you understand it within your range of scientific tolerance, so to speak?

A. Help me understand. I'm not tracking what you're trying to ask.

Q. So is best available science in your work, if you were to make a recommendation as a scientist, is that good enough for you? I think you touched on this.

A. Oh, okay. No, it's not. I think that two things are required: It has to be the best available, and it has to be good enough to address the question at hand, both in its ability to provide an answer and in the gravity of the -- you know, if someone asks me what do you think about "X," I'm really comfortable, and it's just casual conversation shooting from the hip. But if someone's livelihood depends on it, if I get this answer wrong, they won't have enough water to irrigate with. I'm not comfortable shooting from the hip. And that's the kind of process, thought process, I would go through.

The other thing that's important is that paper from Roger Warner, Eastern Idaho Water Rights Coalition,

that I referred to, points out that the precision of the model depends upon the kinds of questions that are being asked. And if you've got a model that cannot answer a very specific question, if you can reformulate the question more broadly, and if that means reformulating the policy or the action that that is informing more broadly, then you can greatly improve your confidence that your results are meaningful and will provide the needed relief.

Q. And I want to talk about that with you, Bryce, because, again, we've identified there's some issues with, you know, the criterion and that.

But can you provide any suggestions on how to improve, I guess it would be, the R-squared value of the ESPAM, things that the Department should look at?

A. Yeah. So Sophia talked about many of her recommendations that have been made in the Eastern Snake Hydrologic Modeling Committee. And, you know, the bottom line is that to get the R-squared value better, the model has to get better. And I agree completely with Ms. Sigstedt that we've put as much lipstick on this single-layer pig as this single-layer pig can wear, and we need to make an advance in our structural representation in our conceptual model before we're going to get to meaningful improvement.

The other thing that Ms. Sigstedt said that I think is very important is that you can overfit a model, and some of that 42 percent of variability that the statistic says the model is able to predict, as Ms. Sigstedt said, it may be getting the right answer for the wrong reason, and it can only get that answer when it's spoon-fed the data that were used to build it. And if you want independent data to actually make a prediction, that 42 percent number may be an overestimate.

But either way, there's ongoing technical work that can be done, it is being done, IDWR is striving hard, and I think there are things that can be done to improve it.

Q. Just briefly, can you explain in your report, you refer to ratios of relief to cost. You touched on this, but can you just kind of summarize that again what you mean by ratios of relief to cost?

A. Yeah. And so I'm not talking about an economic valuation. We've heard that that's not appropriate. But it's clear from a lay reading of not only the conjunctive management rules but the order itself that there is a need to maximize the use of the state's water resources and that there is a need to secure the maximum benefit to the state from its

resources.

And so as a ratio of beneficial use -- for instance, if you had 1 acre that was mischaracterized as being irrigated by surface water, and so you have calculated a shortfall to supply that acre, and in reality that acre didn't need any surface water because it was applied by groundwater, that acre requires -- we've heard 5.8. For simple math, I'll round it to 5 acre-feet of water. We're going to go out on the plain somewhere and curtail groundwater to supply that 5 acre-feet.

But even if we could be 100 percent, if we could have a pipe from the groundwater user to that acre because groundwater users, as Mr. Carlquist testified, divert so much less, now we're going to have to have 2 or 3 acres of groundwater beneficial use to be curtailed to supply this 1 acre of beneficial use that's not needed.

Now we add in the fact that where you are on the plain, only a fraction of your -- of the groundwater pumping that's curtailed or foregone will actually accrue to that reach. On average, across the plain, now you've doubled that 3 acres to 6. There's some place s where you go -- it's an incredibly large number because there's such small effect.

Now, if you add in the fact that now we insist that this entire benefit accrue in this narrow period of time, to get that one -- you know, to get the effect of those 6 acres, we have to curtail ten times as many. So now we're -- we've -- because we've been unable to identify this 1 acre that actually has no need, we've erroneously removed 60 acres of beneficial use.

That's the multiplier effect that I'm talking about, and it applies to any imprecision that causes the calculated shortfall to be larger than the Surface Water Coalition's actual need.

Q. Okay. And did you have time to look into some specific things or adjustments that could be made in the model that could account for or address that issue of ratios of relief to cost?

A. So I did not. Except that conceptually the model can refine what that ratio is, but the ratio exists because of the physical characteristics of the aquifer. It's really independent of modeling. Modeling is only a tool used to estimate the magnitude of that effect.

Q. So it's something you weren't able to get into, but if I under your testimony, the ESPAM is capable of performing such analysis -- or you're capable of --

A. So the aquifer actually causes the effect. The model, within its limits of precision, can estimate those effects.

Is that -- did I answer the right question?

Q. I think that's the answer to the question I meant to ask you.

A. Okay.

Q. I want to talk to you about supplemental water use, and I believe Greg has discussed this, Sophia. I mean, it's been, you know, discussed quite a bit, so I'm just going to kind of move around on a couple of questions throughout here.

But could you turn to page 10 of the Fifth Methodology Order. And in the interest of being concise, could you just -- I'll just note that we're looking at page 10, Finding of Fact No. 23.

A. Yes.

Q. Could you just skim that?

A. Yeah, so -- okay.

So what I read is that there are areas of supplemental groundwater supply. It is allowable to consider that but that the information available to the Department is not sufficient to make that determination.

That's what I read there.

Q. Okay. So is it fair to say that the Fifth

Methodology Order didn't consider supplemental irrigation?

A. Only to the extent to acknowledge that it could be, but did not actually do that.

Q. What implications are there by not considering supplemental irrigation?

A. So it's exactly this multiplier effect, that if a piece of ground actually is not irrigated by surface water, then there's no need to provide surface water to support that acre. And if we erroneously try to support that acre, then depending where on the plain that reduction or curtailment has to take place, we're, you know, perhaps, as much as 60 times the reduction of beneficial use for something that actually is not needed.

Q. I believe it was Greg Sullivan who stated that he believes there's a framework where you could consider supplemental groundwater use.

Do you agree with that statement?

A. Yes, very much.

Q. Have you identified in your report any documents or anything that speaks to -- or provides frameworks for supplemental groundwater use?

A. Yes. There's -- I think I made four references. Three of them are to modeling reports that

provide thumbnail sketches. One of them, I think the most important one, is to a design document that I and Paul Pelot prepared. So this --

Q. Just is that the determination of source irrigation water?

A. Yes. Yes. So that would be --

Q. Exhibit 515, I believe, is what that is.

A. Yes. And I don't think I need to refer to it to just tell you in a nutshell.

So in a nutshell, I spent hours and hours and hours over several years wrestling and refining this because that was my job at Eastern Idaho -- at IWRRI was -- and this is an important part of the water budget, of the -- I think others have talked about the general methods, the general data that are available. I think the important thing that I can add from that exhibit -- whatever the number you said --

Q. 515.

A. Okay. -- is that to refine our understanding, for things we could not tell any other way, we developed a statistically valid sampling of 300 points, which is a pretty robust dataset across the plain. And I trained Mr. Pelot, and we funded him, and he went and looked at these points individually. And the point of that is that was not an onerous task. And we did that, you

know, over -- that part of it we did just over part of a summer.

And so there are robust methods that are available, and there are ways to account for the imprecision of those methods that are protective of the senior right. That's the importance of those four documents.

Q. Okay. Could you just describe a technically defensible adjustment relying on those documents that you can make the ESPAM for supplemental groundwater use?

A. So it would certainly be technically defensible to use the W-I-M-S [sic], Water Measurement Information System, data and any groundwater pumping that was indicated by the WMIS data to occur within the Surface Water Coalition on acres that they have identified could immediately be subtracted defensibly.

And the reason for that is, is that any kind of a failure that could occur with the underlying data in the WMIS -- and I know this from being actively involved in the first three years of the program that the groundwater data go into -- any of those failures will cause the groundwater diversion to be underreported, which would cause an overestimate of calculated shortfall. So that's the first part.

The second part is that the methods outlined

in those documents that we don't want to plow through will tell how to identify and confirm the places of use to which those apply.

Q. Are there any other frameworks or methods that are technically defensible that you can provide at this time?

A. For?

Q. For supplemental groundwater.

A. For supplemental.

Those are the only ones that I can think of right this very minute. I don't think there's anything else in my report. If there is, I apologize.

Q. If you were given more time, would you have been able to explore that issue more thoroughly?

A. Yes.

Q. Is that something you wanted to do?

A. It is something I very much wanted to do.

Q. And due to time constraints, were you barred from being able to perform that further analysis?

A. Yes.

Q. Do you think that impacted your testimony at this hearing?

A. It certainly did.

Q. In what way?

A. I was unable to answer the last question.

Q. Do you anticipate if you would have had time to do the analysis, you could have provided additional frameworks that could be considered for supplemental groundwater use --

A. I, certainly, would have been able to explore what other frameworks there are. You know, I don't know whether that exploration would have led to success.

Q. I think you covered that.

I think you touched on this, but just for clarification, what's the implication of neglecting a single acre of supplemental irrigation within the SWC service area under the Fifth Methodology Order?

THE WITNESS: Are you ready?

COURT REPORTER: Yes.

THE WITNESS: Okay. Approximately, at least within the right number of zeros, 60 acres of needless loss of beneficial use from groundwater.

Q. (BY MR. JOHNS) Does the -- well, let me rephrase it this way: Is it difficult to create the adjustment for supplemental irrigation, in your opinion?

A. No.

Q. And is it your opinion that the Department has sufficient information to create that adjustment and it will be technically defensible?

A. Yes.

Q. Does the admission of supplemental water, as we've been discussing from the Fifth Methodology Order, make it less technically defensible?

A. The omission from -- in my mind, yes, it makes the Fifth Methodology Order, as a whole, less defensible.

Q. So its inclusion would make it more --

A. Yes. Inclusion would make it more defensible because there's an important factor that's obtainable -- that's obtainable and reliable and that has not been considered.

Q. Okay. I want to shift gears and talk about, your report identified a couple of consistency issues, and so I just want to shift gears and talk briefly.

Again, I think this issue has been discussed somewhat ad nauseam, so I don't want to belabor it, but there was some discussion about accruals?

A. Yes.

Q. Do you recall those discussions?

A. Yes.

Q. Do you agree the Fifth Methodology Order does not make adjustments for accruals for target and nontarget reaches?

A. Yes, I agree.

Q. What's your professional reaction to that

admission?

A. It's a surprise because it's an inherent and obvious result of the modeling, number one. And number two, though I'm not a policy expert, I understand enough about what's trying to be achieved here that it's surprising that it's not considered in some fashion.

Q. Does it distort the calculation?

A. It distorts the calculation in every year beyond the first.

Q. Okay. You previously stated the Fifth Methodology Order uses steady state to partition the responsibility for mitigation in lieu of curtailment; is that correct?

A. I meant to say that the -- as I read it, the Fifth Order is silent on the partition, but the As-Applied indicates that it was used that way, which itself is a problem. We have an order that does not describe all the methods that are being used, and that causes me heartburn, because I can't address them technically if they're not described.

Q. So it's your opinion that the way the steady state was used in the As-Applied is not specified in the Fifth Methodology Order?

A. I did not find it in the time that I had to look at it.

Q. Okay. And I believe Greg Sullivan may have addressed this, but for the record, is this approach -- well, I think we covered that already, Bryce.

Could you please turn to page 35 and 36 of the Fifth Methodology Order.

A. I am there.

Q. And could you please skim Conclusion of Law No. 21. Once you've done that, do you have a professional reaction to that conclusion?

A. So this is a conclusion regarding a mitigation plan. My response -- my professional response to this is that it seems to articulate the ability, and not only the ability but perhaps a requirement, to use the modeling tools in a coherent -- in a fashion coherent with both the ability of the tools, the modeling tools, and the ability of the administrative instruments that are used to time frames that match the physical capabilities. And I think it's technically possible to do that.

Q. In your opinion, was that done?

A. In my opinion, it was not done.

Q. Can you please discuss any factors that may affect the precision of estimating the expected relief and the timing of which it will be realized.

A. Yeah. So, primarily, it is the ability of the

model itself to accurately estimate. The finer the time scale or the finer the temporal scale, the less precision the model is able to actually achieve. And that's the primary limitation.

The other limitation is physical. It doesn't matter how much I want to get water from Kilgore to someplace on the Snake River, in a certain time frame, the physical characteristics of the aquifer make that impossible.

Q. You've talked somewhat about some technical work that can be performed, but on this point is there any technical work that could be performed to improve the precision in this regard?

A. So the -- addressing the deficiencies that Ms. Sigstedt talked about with the conceptual model, certainly the layering, I have been in the camp that if you don't have data to support something, don't put it in the model. I think that's, in some cases, short-sighted. But the clear response is then the gravity of these matters for the needs of the Surface Water Coalition mean that a prudent investment would be to acquire the data to allow adequate modeling of some of those additional features that are known to exist.

Q. Were you able to perform some modeling? Will you turn over to page 25.

A. You're in Exhibit 500 now?
Q. Exhibit 500, yeah.
A. Yes.
Q. I'm looking through -- you've got Figures R17, the next page Figure R18, and then a series of figures that go through page 28. It appears you were able to do some modeling?
A. So R17 and R18 are reproduced from old work; they have some bearing. R19 through -- yeah, R19 through R21 were new modeling that was done under my direction by Mr. Kindred of Rocky Mountain Environmental.
Q. And can you please explain what the purpose of these figures is and how they relate to the findings in --
(Speaking simultaneously.)
COURT REPORTER: Okay. Wait. "And how they relate to"?
MR. JOHNS: To the findings in your report. Sorry.
THE WITNESS: So these figures compare the two most recent best available science versions. Specifically, they're those models' indication of responses to the near Blackfoot to Minidoka reach. I think in all cases, the solid bar represents the

ESPAM2.1 results as embodied in the ETRAN 3.3 modeling tool provided by IDWR. The cross-hatched results indicate the results from ESPAM2.2 embodied in the ETRAN 3.4 transfer tool. And they show where they are similar and where they are different.

Q. (BY MR. JOHNS) And what conclusions did you draw from running these analyses from generating these charts?

A. I conclude that if the two successive best available science models differ by this much, it gives us some viewpoint -- some view into the window of how precise can these models be.

Figure R19 is the one that I think is most alarming on a percentage basis. So if we're looking at a five-month period, four months is a third of the year. Five months is pretty close to a third of the year. The first in each graph -- the first bar is the indication of that model's estimate of the response in that first -- so in that period of such concern for us.

So here from -- in Figure R19, this Row 75, Column 57, at that location, the new model, you know, just guessing by how tall those bars are, indicates about a third of the relief that the old model did. And if it's important to get relief to the Surface Water Coalition, that degree of imprecision is alarming.

Q. Are there any -- is there any technical work or any adjustments you could recommend that you haven't discussed already that would improve?

A. Not that hasn't already been discussed.

Q. Would you please turn to page 28 of your report?

A. Yes.

Q. And I'll just summarize. In your report, you state that there's a technical analysis that could be performed to inform a policy decision, answering the question: "Is it fair to the SWC to use the model to estimate timing of accruals in the trimester of curtailment when the two most recent best available science models differ by approximately a factor of six"; correct?

A. Yes.

Q. Okay. What technical work could be used to inform this decision?

A. So much of it has been done, but it would be further exploration of these questions of precision of the model. That's the first piece.

The second piece is relating back to this finding of fact 21, that it appears to be -- there could be an ability to adjust the instruments, perhaps adjust the time frame of consideration of the order to match

the ability of the instruments to provide relief to the calculation or definition of the relief required.

Q. Were you able to perform any technical work in this regard to help inform your testimony?

A. Only these limited figures that are shown here in my report.

Q. Okay. Did time constraints prevent you from performing that work?

A. Yes.

Q. Okay. If you had the time, would you have been able to present that at this hearing?

A. I would have, and it would have been much better, because what I presented is not -- it may be spatially representative, but I don't know that it is, and I would have been able to perform analyses that were spatially representative.

Q. Would you mind turning over to page 29 of your report --

MR. JOHNS: And we're nearing the end here, Director. I think I have this, and then I just have a couple points on rebuttal. We can chug along, or we can take a break.

HEARING OFFICER: We probably should break. We've been here two hours. Let's take a 15-minute break. Back at 3:30.

(Break taken.)

HEARING OFFICER: We are recording.

Further questions, Mr. Johns.

MR. JOHNS: Thank you, Mr. Director. If I may, I just have some quick rebuttal I'd like to ask Mr. Contor from prior witnesses.

Q. (BY MR. JOHNS) Bryce, were you present in the room during the testimony of Jay Barlogi?

A. Yes.

Q. Barlogi, I believe it is?

A. Yeah, I think so.

Q. Do you recall a discussion about variations in irrigated acres?

A. Yes.

Q. On a 40-acre-tract basis, how much is a 5 percent change?

A. It's 2 acres.

Q. You have experience in assessing irrigation in the ground without entering the field?

A. I do, starting with my position at the canal company when I was assigned to prepare the adjudication claims.

And then I worked for the seed company, which we haven't talked about. I needed to assess what was going on in each tract around my seed isolations, not

for irrigation purposes, but it's the same process to assess whether they were growing the same crop as my seed isolation.

Then when I was at IWRRI, I did a lot of windshield surveys to verify irrigated lands data, source data, and methodology.

So I -- and then I did a lot of that, as well, when I was making -- doing subcontract field investigation for water right claims in the Snake River Basin Adjudication.

Q. In your experience, is it easy to detect a 2-acre change in a 40-acre tract without entering the ground or going in the field?

A. If you're specifically looking for that and the topography is right, sometimes you can catch that but not on a casual basis. On a casual basis, I think 2 acres of change in a 40-acre tract could occur and you'd never notice it.

HEARING OFFICER: Hello. We have somebody listening in that's not muted, phone number ends in 38. You're interrupting the hearing. Apparently, they're off.

MS. TSCHOHL: I was able to mute them.

HEARING OFFICER: Okay. Thank you, Sarah.

I don't like that kind of interruption, and if

it continues, I may just exclude people. Okay.

MR. JOHNS: Thank you, Mr. Director.

Q. (BY MR. JOHNS) Bryce, you were also present in the room during Ms. Sukow's testimony; correct?

A. Yes.

Q. Do you recall some of her discussion she had about steady state, and -- just generally, do you recall her discussing steady state analysis?

A. Yes.

Q. Is it true that utilizing a steady state will not result in realization of the predictive down shortfall in that irrigation season?

A. So I think there's some confusion. The modeling won't change when the relief arrives. And so whatever method you use to calculate a curtailment date, when that curtailment is instituted, most of the relief will arrive after the irrigation season.

A steady state calculation, because it's time agnostic, will calculate a different number than would a transient; but in either case, only 9 to 15 percent -- I think is approximately correct -- is what actually would arrive. I don't know if that's the question you were asking.

Q. I believe that's the question I was asking.

Bryce, you were also present during the

testimony of Matt Anders; correct?

A. Yes.

Q. Do you recall Matt Anders making an assertion that -- I believe it was not every drain or return flow from Twin Falls Canal Company is accounted for?

A. I do.

Q. Okay. What impact does neglecting these return flows have on the calculated shortfall in the Fifth Methodology?

A. So if an adjustment for returns were to be made and you omitted a return, that return that got omitted would cause the calculated shortfall to be too large. And so if the data are -- the dataset is incomplete, the data are imperfect, the shortcomings all work to the benefit of the Surface Water Coalition so they are conservative.

Q. Do you have any other comments about Mr. Anders' discussion on missing return flow data?

A. Only that they have the same multiplier effect that any other omission would. So if you -- if, because of omitting return flow calculations, the shortfall was an acre-foot too high, out on the plain somewhere, you'd have, you know, approximately 60 acre-feet of beneficial use that would have to be foregone.

Q. How does the omission of this information

affect the technical defensibility of the Fifth Methodology Order?

A. It's the same as the other. There's a relevant bit of technical information that is available that was not considered, and so it undermines the credibility of the document.

Q. Okay. In your opinion, is there a way to calculate credit for the return flows in calculating shortfall?

A. So I'm very familiar with all the work we did in the modeling process to quantify returns. One of the things I would like to have done would be to understand the full calculation of shortfall. I don't understand it well enough to speak to exactly how that would affect that calculation.

Q. During Matt Anders' testimony, do you recall some discussion about irrigated acreage data?

A. Yes.

Q. Do you have any personal knowledge about irrigated lands data that the Department has?

A. Yeah. So every irrigated lands dataset that was created up through when I left IWRRI in 2010 was under my responsibility, and particularly the transition to the methodology that's now used, it was my responsibility to ensure that that method was adequate

for the modeling purposes. And so at the time it was being developed, I was intimately involved in understanding how it worked in independent verification of it, and so I feel quite comfortable with those irrigated lands datasets.

Q. Do you have any opinions as to their sufficiency for determining the irrigated acreage in the Fifth Methodology?

A. Yes. I think that because of the process, I think they're robust datasets, and I wanted to talk a little bit about that process. We've talked about a suite of polygons, the CLU polygons that were used to identify discrete blocks of land that may have a different irrigation characteristic. And those came from the U.S. Department of Agriculture, but they were hand-modified by IDWR to correspond to aerial imagery to, again, improve that ability.

And then there was a scoring process that used multiple remote sensing data sources for multiple dates during the year to score which of these three categories that it fell into.

And then there was an additional hand-verification process. That's part of the reason this process is so costly. It's probably my fault because I raised the issue. We had a spot out in near

where I lived at the time that it just happened that every time the stinking satellite flew, my neighbor had just cut his hay and his field was showing up as nonirrigated when, in fact, it was. And pursuing that led to this additional level of handwork that I think makes it a very robust dataset.

Q. Would it be technically defensible, in your opinion, to use that data, the irrigated lands dataset, to determine the irrigated acres in the Fifth Methodology Order?

A. Not only defensible, I think it's the best available data that could be used.

Q. What more can you say about the ability of IDWR to apply its methodology to the SWC areas?

A. I think that the areas where IDWR has said it's unable to perform a certain analysis, I think there are robust methods to do that, that when there's uncertainty either the uncertainty inherently cuts in favor of the Surface Water Coalition or that an adjustment can be made.

Q. Okay. I want to shift over. And I think this is -- just have a couple questions left, some for Sophia, and then I think just a few conclusory ones, and then we'll be wrapped up here.

You were present for Ms. Sigstedt's testimony

earlier; correct?

A. I was, yes.

Q. Sophia, so I don't mess it up.

A. Yes.

Q. Do you recall her discussion about the R-squared values?

A. Yes.

Q. Okay. I just want to ask you a couple of questions in follow-up to some things she said.

What are the consequences of the degrading R-squared value that Ms. Sigstedt discussed?

A. So the consequence is that the prediction is less reliable, which could cut either way. Either to make the calculated shortfall inadequate to sustain Surface Water Coalition needs or cause the required mitigation or curtailment to be in excess of what was needed.

Q. And do you agree with Ms. Sophia's statement that there are consequences in neglecting Portneuf and Blackfoot and Henry's Fork?

A. I do, but I think she focused on the potential harm to the Surface Water Coalition. I think an important point is that there will be a year when the snowpack is reversed, that the snowpack above Heise is high, and that forecast is robust, but all the other

areas have reduced snowpack. And in that case, omission of those data will result in a calculated shortfall that is too low.

Q. Do you agree -- there was a discussion that Sophia had about the river package. Do you agree that the river package allows proper representation of the communication between the river and the aquifer -- allows proper representation of the communication between the river and the aquifer, given that it is a layered model?

A. So I believe the discussion was relative to her criticism that the model is not yet a multilayer model. And the river package and the parameters that describe the operation of the river package allow the best representation of the communication between the river and the model cell that hosts it at the top of the aquifer. But the river communicates through that cell, both to the bottom of that cell and then to adjacent cells, and the river package cannot overcome the deficiencies of a single-layer model in representing that broader communication.

Q. Have you noticed any themes from the different witnesses that have been talking about the Fifth Methodology Order with regard to criterion for minimum conservatism?

A. So a recurring theme is that if you have multiple components that are each conservative, that that tends to build and build and build on the conservatism. And so one comment that I have related to that is that there are robust mathematical methods to calculate cumulative effects like that in terms of a statistical distribution. They're well known, and they're not difficult to perform.

The second is that, as we talked earlier about criteria, you know, the -- the qualitative criterion is that it should be conservative. Well, eight times the need is conservative, so is 100.00001 percent of the need conservative. If an objective standard of the appropriate level of conservatism were set, then those calculations could be applied to ascertain whether that appropriate level were achieved. Because if the level of conservatism by this hip-shot method is too low, that harms the Surface Water Coalition. If it's too high, that harms the groundwater users. And I don't think anybody wants to do either of those things.

Q. So when you say that "hip-shot" approach, I mean, are you saying currently there's no way to measure or determine whether IDWR data in the Fifth Methodology Order -- or the 2023 As-Applied met any threshold level of conservatism?

A. I don't see that a threshold was identified, nor do I see any evidence that a calculation was performed to see if the appropriate level was achieved.

Q. Okay. What technical issues may arise from not establishing these criteria?

A. So the technical issue is that these levels of conservatism can propagate more rapidly into higher levels than humans are intuitively able to understand. I do some work for groundwater modeling, and there's a threshold for the probability of a false positive occurring in a single year. And sometimes we miss that criterion by a few points, and we say, ah, you know, we're close, we're close.

But if you calculate those out, in that case, by missing that criterion only by a few points, you've almost guaranteed that in the course of 10 or 20 years you will have a false positive, and the regulatory implication of a false positive can be severe.

Q. Were you able to perform any technical work that would inform some policy decisions or some criterion that could be established in this regard prior to this hearing?

A. I started down that road, and I purged that from my report because I didn't have time to do a good enough job to present it, you know, where it may have a

consequence.

Q. Okay. Is it your belief that the -- that that analysis could have informed the Department on things it could do to establish some criterion?

A. Yes.

Q. But you were unable to do that?

A. I was unable.

Q. Time constraints?

A. Time constraints.

Q. Very good.

Is there any other items in your report that you would like to present at this time?

A. Let me just quickly thumb through here. I know that we all have other places we'd rather be.

There is one.

Q. Okay.

A. So there's been discussion about when would the Department have been available to perform analyses on a one-month basis, and there's two sides to that question. When would the model have been capable of performing such analyses. The answer to that question is since 1999. Actually, there's three.

One is when could that have been done with a model that was calculated on at least that time step -- or stress period. And the 1999 model was, the 2005,

2006 models were not. Though they could have been implemented that way, they were not calibrated that way.

The 2013 model was calibrated to one-month stress periods, so that's the answer of when could it have been done. The answer to when would it have been reasonable to do it depends on the criterion of accuracy, which is an administrative decision that can be informed technically that, to my knowledge, has not been made, and so I can't answer that question.

Q. And is that relevant to your discussion about the technical defensibility of moving to transient?

A. Yes. And I think there was some confusion in earlier testimony that may have not been possible until 2021, and the fact is that it's been possible for many years.

MR. JOHNS: At this time I'd like to move to admit Exhibit 500, Bryce's expert report.

HEARING OFFICER: Any objection to the admission of the document marked as Exhibit 500?

Hearing no objection, the document marked as Exhibit 500 is received into evidence.

(Exhibit 500 received.)

MR. JOHNS: Mr. Director, I don't have any further questions at this time. I reserve the right for any redirect.

HEARING OFFICER: Does the groundwater group wish to question Mr. Contor at all?

Mr. Harris?

CROSS-EXAMINATION

QUESTIONS BY MR. HARRIS:

Q. Good afternoon, Bryce. I have just a few questions about one aspect of your testimony here today.

You testified about supplemental groundwater use in the Methodology Order --

A. Yes.

Q. -- do you recall that testimony?

A. Yes.

Q. And as I recall, the Methodology Order doesn't have any supplemental groundwater use in it currently; correct?

A. There's -- the actual process does not consider supplemental groundwater.

Q. But it says that it may consider it?

A. Yes.

Q. And based on your employment with IWRRI, IDWR, and in your private consulting, have you become familiar with GIS programs?

A. Yes.

Q. Could you just describe what those programs

generally entail?

A. So they are computer programs that allow you to display spatial data in its spatial relationship and to produce maps. You can perform analyses. For instance, you could have a spatial representation of evapotranspiration. You could subtract from that a spatial representation of precipitation.

You could find out -- you could -- if IDWR has plotted a point in its data, you could see on a map where that point lies, and you could analyze its inclusion or exclusion or its proximity to any other feature of interest.

Q. And so a GIS shapefile is a polygon that the program creates and then talks to the underlying aerial photo; correct?

A. Yes.

Q. And different shapefiles or polygons or, you know, points, and there's also lines; correct?

A. Correct.

Q. And you're also familiar, through past experience, on how water rights are described?

A. Yes.

Q. And that would include a place of use?

A. Yes.

Q. And in the water right report, it describes it

as the number of acres per quarter quarter; correct?

A. Most do. Some large ones omit that detailed listing.

Q. Right. And so a shapefile -- so, for example, if a water right says there's 30 acres authorized to be irrigated in this 40-acre tract, a shapefile polygon for the place of use would actually depict which 30 of the 40 are authorized; correct?

A. It depends on whether it's a shapefile showing the actual irrigated parcel or if it's showing a permissible place of use. So I've seen water rights where the shapefile draws a boundary, maybe the boundary is 8,000 acres, and then the water right says within this box, you may irrigate 5,000.

Q. Correct. But on a private decreed -- say a groundwater right --

A. Yes.

Q. -- that does not have a permissible place of use, it would depict, in my example, which 30 of the 40 acres --

A. Yes, that's correct.

Q. And so in this case there would be -- if there were groundwater rights within the Twin Falls Canal Company service area, places of use of those water rights would be depicted with shapefiles; correct?

A. Yes.
Q. And would it be difficult, in your view, to do some sort of a clip or an overlap to see where those acres overlap with the, say, 2017 shapefile or any other shapefiles generated by the Department?
A. That would be a very straightforward operation.
Q. In fact, my office did it -- would it surprise you to know it took about an hour to do that?
A. Why so long?
Q. It's not hard to do; right?
A. No.
Q. So at a minimum, you'd have a starting point of which water right places of use overlap with the Twin Falls Canal Company place of use?
A. Yes.
Q. And do you agree that would be a starting point for determining whether there is supplemental irrigation occurring within the Twin Falls Canal Company area?
A. Yes.
MR. HARRIS: I have no further questions. Thank you.
HEARING OFFICER: Other questions from the groundwater group?

Cross-examination for the Surface Water Coalition?

Mr. Thompson?

CROSS-EXAMINATION

QUESTIONS BY MR. THOMPSON:

Q. Good afternoon, Mr. Contor. Travis Thompson for A&B Irrigation District, et al. Just a few questions today, Mr. Contor.

When were you hired by Bonneville-Jefferson Groundwater District?

A. It was probably December or January -- December of 2020 -- well, we've done work for the district in the past, and I don't recall when that was, but I started working in earnest on these issues in December, maybe November of 2022, maybe as late as January of 2023.

Q. And do you know, at least for purposes of the Surface Water Coalition delivery call, did Bonneville-Jefferson Ground Water District use Ms. Sigstedt and Mr. Higgs until that time?

A. I don't know. I know that they have used Mr. Higgs and still do for various functions. I don't know the nature of their relationship with Ms. Sigstedt.

Q. Have they retained any other consultants, to

your knowledge?

A. I think that they have. They're working on some projects unrelated to this that I think they have other folks working on.

Q. Do you know who that is?

A. I don't.

Q. What sort of projects?

A. So one of the project is a --

MR. JOHNS: Objection. I'd like to raise an objection. I think this kind of goes outside the scope of what was presented on direct.

HEARING OFFICER: Well, I think these are preliminary questions about where Mr. Contor has worked and for whom. Those were questions that were asked of him initially. Overruled.

Mr. Thompson.

Q. (BY MR. THOMPSON) I'm just curious. You had a list of four projects that you were tasked to do for this proceeding, and you've referenced they have other consultants, and you're aware of some projects that are being worked on. I'm just curious what those are?

A. So there's a piping project, there is a well design project. I don't think they've hired someone. I made recommendations. My understanding is that Mr. Higgs continues to perform their hydrographer

services. He still performs some analyses for them. Often I will hear somebody did this task, and I don't know whether they did it for Bonneville-Jefferson or if they did it for Idaho Ground Water Appropriators. So that's the extent of my knowledge.

Q. Thank you. Is a diversion volume of 5 acre-feet per acre for a large open canal system in the Snake River Basin reasonable, in your opinion?

A. So it would depend on the system, but it could be.

Q. Is that a common value for canals in Water District 1?

A. I think so.

Q. About 7 acre-feet?

A. I don't think that's unheard of.

Q. How about 10?

A. I don't think that's unheard of.

Q. Are those values reasonable?

A. You know, reasonable depends upon some criterion. And I think -- I haven't been asked to evaluate criteria. You haven't provided me criteria. I think there are criteria under which 10 could be considered reasonable.

Q. And you've testified you're familiar with the groundwater model and its prior versions; is that

correct?
A. Yes.
Q. You worked on water budgets for the model while you were at IWRRI?
A. I did.
Q. And you were -- presented those design documents to the Eastern Snake Plain technical committee; is that correct?
A. Yeah, the ones that I authored, I did.
Q. And you have been using the transfer tool that the Department's created; is that correct?
A. I have been.
Q. And that tool relies upon the model; is that your understanding?
A. Yes.
Q. And that tool looks at impacts to river reaches?
A. Well, so years ago, I was severely chastised for using the word "impact" because it has legal meanings. I would say that that transfer tool estimates effects or accruals.
Q. A response from a change in an aquifer condition resulting to the river, would that be --
A. So if a volume of water is put into the aquifer or removed from the aquifer, the tool estimates

when and where that would be expressed at the river or -- at the parts of the river and springs that are represented in the model.

Q. And has that been an acceptable use of the model?

A. Well, again, it has been accepted -- I've never liked it, but it has been accepted.

Q. And do you use for it for clients in transfer application?

A. I have.

Q. Has that been approved by the Department?

A. Yes.

Q. So you indicate in your report that the 1999 version of the model was created to be, quote, a planning and management tool; is that correct?

A. Yes.

Q. And I think you testified earlier with Mr. Johns that you stated management could be administration?

A. That's my opinion. That's not what was stated in those documents.

Q. So is the term "management" similar to administration?

A. I don't think so. I think they are different, but it's been my experience that, in Idaho, we use the

word "management" when we mean "administration."

Q. And the Department's conjunctive management rules use the word "management"; is that correct?

A. They do.

Q. So would you agree that the Department has used the ESPAM model for conjunctive administration for over a decade?

A. Yes.

Q. Would you agree that Idaho courts have approved the Director's use of the model for that purpose?

A. Yes.

Q. Would you agree that ESPAM2.2, which I think is the most current version of the model, can be used to represent temporary curtailment of groundwater rights?

A. Yes.

Q. And is that what is referred to as the transient use of the model?

A. Yes.

Q. Looking at specific reaches -- and you're familiar with how that model is calibrated to different reaches; is that correct?

A. Yes.

Q. -- would you agree that it's better calibrated to the near Blackfoot to Neeley reach compared to the

Neeley to Minidoka reach?

A. Yes.

Q. Would you agree that in the near Blackfoot to Neeley reach, that contains the majority of the springs and aquifer discharge --

A. Yes.

Q. -- between those two reaches?

So you talked about the R-squared values for those two reaches in that calibration document.

A. Yes.

Q. And it's in your report; is that correct?

A. Yes.

Q. Would you agree that those reaches' calibration values are within the range of values for upriver reaches as well?

A. So I looked at that, and I can't remember the result. I think that the Neeley to Minidoka is amongst the worst, but it's a small discharge. I think that the near Blackfoot to Neeley is neither the best nor the worst, but that may be incorrect. I, again, was constrained by time. I wish I could have done a better job.

Q. Let's turn to your Exhibit 512 when you get a second. It will be page 125.

A. Okay. I need a different book.

Okay. I have 512 here.

Q. I'm looking at page 125 of 190.

A. Oh, it's double-sided. That confuses me. Okay. Here we are.

HEARING OFFICER: Let me find that. And it's page what, 125?

MR. THOMPSON: 125. I think they're Bates-stamped on the bottom.

Q. (BY MR. THOMPSON) Mr. Contor, I believe these pages show the different river reaches -- I'll say above Milner and the different R-squared values assigned for the observed and model results; is that correct?

A. Yeah, starting with page 125 and then continuing for a few pages, yes.

Q. I guess my question was the near Blackfoot to Neeley within those range of values represented by those different reaches?

A. Yeah. And so we can look -- so Ashton to Rexburg is .16, so it's above that; Heise to Shelley is .61, so it's below that; Shelley to near Blackfoot is .21, so it's above that; near Blackfoot to Neeley, 42, as we discussed; Neeley to Minidoka, .0079.

So I -- without the specifics, my representation, I think, was correct that it's neither the best nor the worst. The near Blackfoot to Neeley is

neither the best nor the worst.

Q. And you testified you recommended a .5 R-squared value would be useful; is that correct?

A. That was an initial starting point. The actual determination of the threshold is administrative, but from a technical basis, that's a useful starting point.

Q. And has a certain criteria been evaluated by the modeling committee?

A. Not that I know of.

Q. Is it true they've accepted this model and the R-squared values for these various reaches?

A. So there's a long answer and a short answer. The short answer is that the committee, some of us with some reluctance, agreed to endorse ESPAM2.2 as a replacement for ESPAM2.1, acknowledging -- all of us acknowledging that there are things that we wish we could do better.

Q. So you talked about some comparisons of the two versions and that some versions varied by a factor of 5. Was that just for specific cells?

A. So if you look at the response from one cell to the reach, that was the analysis I performed. I did not have time to perform a regional analysis. But the way the model is configured, adjacent cells will have

similar results, and as you broaden that circle, the variability between the cells increases. But, yes, that was -- I performed that analysis on -- well, I had that analysis performed, and I reviewed it on just a small number of single cells.

Q. So has 2.2 been accepted as a better representation of aquifer changes and river responses?

A. I think it's been accepted that it should be moved forward because it ought to be better. And I think there are people who believe that it is better. In the particular case of near Blackfoot to Neeley, the R-squared value is better. To the extent that that reflects, as Sophia said, answering the -- getting the right result for the right reasons, then it appears to be better.

Q. And that work continues today on the model; is that correct?

A. Yes.

Q. Is it your opinion that a model should only be used when a, quote, ratio of relief to cost is considered?

A. It's my opinion that any tool should be -- when any tool is deployed, the gravity of the use of that tool should be weighed in terms of the precision of that tool. If I'm tapping on the carburetor of a

motorcycle, a crescent wrench is acceptable. If I have the opportunity to touch a million-dollar Ferrari, I would not tap on the carburetor with a crescent wrench.

Q. Is that, essentially, a cost-benefit analysis of what is more efficient?

A. It is a recognition of the principle that benefit -- it's a recognition of the principle that some calculations have tremendous gravity, both for the party seeking relief and the party being required to provide relief. And if you have a tool that doesn't work very good, it's sobering to pull the trigger and wonder where the bullet's going to hit.

Q. What type of gravity are you referring to?

A. I'm talking about the Surface Water Coalition in some years being indicated to be short by, perhaps, a quarter-million acre-feet of water. That's a serious block of water and could have serious consequences to folks needing that water and not receiving it.

Q. So you referenced the -- I guess -- the efficiency or how to use water that using 2 acre-feet may not be as efficient as 1 acre-foot?

Is that --

A. So I didn't mean to say that. I -- do you want a long answer, or do you want a short answer?

Q. Well, I think you have the general idea that,

hey, if we use groundwater more efficiently or for more acres, we shouldn't curtail -- we shouldn't curtail a lot of groundwater to produce less surface water; is that generally correct?

A. That wasn't what I meant to say.

Q. Okay. I must have misunderstood it, then.

So you're not advocating that water users should just abandon surface water systems and go to groundwater; that's not what you're saying?

A. No.

COURT REPORTER: Okay. Wait. Can you repeat your question?

Q. (BY MR. THOMPSON) You are not suggesting that surface water users abandon their surface water supplies and just transition to groundwater?

A. No.

Q. A few questions about supplemental groundwater use you talked about with Mr. Johns.

Your opinion -- your report identifies that measurement of groundwater use today is more reliable than it was in the early 2000s; is that correct?

A. Yes.

Q. And do you know when groundwater pumping data is available during the irrigation season?

A. So my understanding is that an individual

grower or a hydrographer can go to a meter at any time and read it, that it's recorded -- or reported annually, which is very compatible with the transit time of the effects of groundwater pumping.

Q. Could that be made available on a daily basis?

A. I suppose that it could. I suppose that every turnout of the Twin Falls Canal Company could be made available on a minute-by-minute basis. I don't know the purpose, but yes, it could be done.

Q. Weekly? Monthly? Would that be --

A. It could be done.

Q. Are you part of the technical modeling committee?

A. I'm part of the Eastern Snake Hydrologic Modeling Committee. I am not part of the technical working group for the Surface Water Coalition/Idaho Ground Water Appropriators agreement.

Q. And I'll correct my question. I was referring to the Eastern Snake Plain Modeling Committee.

A. Yes, I'm a member of that.

Q. And have there been suggestions in those meetings to update the model with measured pumping data?

A. There have been discussions. I don't know that -- suggestions -- maybe suggestions, but certainly discussions.

Q. Do you know why that hasn't been adopted?
A. I don't know all the reasons.
Q. Would that sort of data make it more reliable?
A. From the context of groundwater modeling, probably not.
Q. Is the priority date of a supplemental well an appropriate consideration?
A. I think so.
Q. Would you agree if that well was subject to a curtailment, that would affect its availability?
A. I think it would, and I think the WMIS data would reflect that.
COURT REPORTER: The what?
THE WITNESS: W-M-I-S. I'm sorry.
Q. (BY MR. THOMPSON) So going back to the ETRAN model, you've used that in your report, and I understand that to be just a comparison between two versions of the model.
You were using two versions of the ETRAN tool; is that correct?
A. That's what I did in the report, yes.
Q. And it provides for transient responses from the aquifer to the river; is that correct?
A. Yes.
Q. And it's true that wells near the river will

have their responses realized sooner than wells located farther away; is that correct?

A. Yes.

Q. That's what your analysis showed?

A. It did show that. That wasn't the purpose for the analysis, but that's one of the implications of the results.

Q. You talked about the Fifth Order and your -- you testified you did not have time to confirm the estimates identified in the Fifth Order relating to the steady state use of the model for the May to September accrual.

Do you recall that?

A. So I think it was the transient model that was used to estimate those accruals, but I did not have time to repeat those runs.

Q. I think there was a 9 to 15 percent number identified by the Department?

A. Yes.

Q. And you could replicate that if you wanted to; is that correct?

A. If I had time, I could.

Q. Do you have any reason to question that modeling run or those results?

A. No.

Q. But it's your opinion that the modeling runs should be consistent both for determining the curtailment date and then for apportioning mitigation responsibility?

A. Yes.

Q. So in looking at the two types of uses of the model, would a steady state curtailment run produce the demand shortfall in the same irrigation season if direct mitigation is not provided?

A. Not if it was as is currently done on a single-event basis. But for many curtailments, neither would a transient analysis.

Q. And that would depend on the location of the well being curtailed?

A. It would depend on the quantity of relief needed by the Surface Water Coalition.

Q. And the Department's order identified a December 30th, 1953, priority date --

A. For this particular shortfall.

MR. THOMPSON: That's all the questions I have. Thank you.

HEARING OFFICER: Further cross-examination?

MR. FLETCHER: I don't have any further.

HEARING OFFICER: Mr. Fletcher? Mr. Simpson? Redirect?

MR. JOHNS: Just briefly.

REDIRECT EXAMINATION

QUESTIONS BY MR. JOHNS:

Q. Bryce, Mr. Thompson asked you if the courts have approved the model, to your knowledge.

Do you remember that question?

A. Yes.

Q. Do you know if the courts have approved the model since its implemented transient analysis, as used in the Fifth Methodology Order?

A. I do not know.

Q. So to your knowledge, that hasn't been approved yet?

A. To my knowledge, it has not. And I do not know if ESPAM2.2 has been tested in the court.

MR. JOHNS: Nothing else. Thanks.

HEARING OFFICER: Okay. I assume, based on the short questions, there's no recross-exam.

Surface Water Coalition?

All right. Thank you, Mr. Contor.

All right. Let's just go off the record for a minute.

(Exhibit 366 marked.)

HEARING OFFICER: Mr. Harris, you may question

Mr. Olenichak.

Pardon me. Oh, I do need to swear him in.

So, Tony, I'll have to rely on your representation that you're standing. Raise your right hand, please.

Is somebody clairvoyant out there?

ANTHONY OLENICHAK,

called by the City of Idaho Falls, having been first duly sworn to tell the truth relating to said cause, testified remotely as follows:

HEARING OFFICER: Thank you. Please be seated, if you're not already.

Mr. Harris?

DIRECT EXAMINATION

QUESTIONS BY MR. HARRIS:

Q. Tony, can you please say and spell your name for the record.

A. Yes. Tony, T-o-n-y, Olenichak, O-l-e-n-i-c-h-a-k.

Q. Could you describe your educational background after high school.

A. I spent two years at the University of

Maryland in their biological science program and four years at Utah State University, where I obtained a master of science degree in watershed science in 1983.

Q. And what is your current occupation?

A. I am both watermaster and program manager for Water District No. 1.

Q. And how long have you held that position?

A. I've been watermaster for the past four years. For the past 17 years, I've been program manager, according to the IDWR employee records.

Q. What does Water District 1 do?

A. Water District 1 measures the natural flow in the river reaches within the district each day and allocates to the various reservoir and diversion and water rights the amounts that they're allocated to their diversions for each day of the irrigation season.

Q. What area of Idaho does Water District 1 cover?

A. It covers the Snake River and its tributaries above Blackfoot in Idaho, in addition to the Snake River main stem diversions from Blackfoot to Milner Dam.

Q. Does Water District 1 track fill of the Upper Snake Reservoir system?

A. Yes, with the exception of the reservoirs in the Blackfoot and Portneuf Basins.

Q. Prior to your election as the watermaster for Water District 1, what positions did you hold within Water District 1?

A. I was program manager from 2006 to 2019, and hydrologist from 1990 to 2005.

Q. Are you familiar with the April joint forecast issued by the United States Bureau of Reclamation and the United States Army Corps of Engineers for the unregulated flow at the Heise Gage?

A. Yes.

Q. Could you briefly describe what the forecast consists of and what data that forecast considers?

A. Well, it's changed over the years. Initially I think it only included the snow water equivalent content at certain snow survey sites upstream from Heise. Now I think it includes other factors, such as soil moisture and precipitation. But it's, essentially, the same as forecasting the unregulated flow that arises upstream from the USGS Heise station.

Q. And Heise is located near the city of Ririe, Idaho; correct?

A. Yes, just upstream from just about all the major diversions in Water District 1 on the Snake River.

Q. And the snowpack that is discussed in that forecast is measured by SNOTEL sites that are maintained

by the NRCS; correct?

A. Yes.

Q. And on the Water District 1 website, you have links to that data; correct?

A. Yes.

Q. Okay. And do you know how those SNOTEL sites measure and account for snowpack?

A. Yeah. They simply weigh the snow that's on top of what they call a "snow pillow," and by measuring the weight of the snow, you can determine the quantity of water in snow.

Q. Tony, I'm going to have you look at a map that I emailed you earlier today. It's the Mountain Snow Water Equivalent map. It's been marked here as Exhibit 366.

For the record, it is actually already in the administrative record. It was contained on page 7 of a motion for continuance that was filed on April 28th, 2023.

Tony, have you seen that sort of document before?

A. Yes. And also what I mostly view as the one that's issued by the NRCS, but they are, essentially, the same. I think the one done by IDWR brings up the snow and the subbasins above Heise also.

Q. So what, generally, does this map depict?
A. Well, it depicts the percentage of the median snowpack in various basins in the Upper Snake River Basin and across Idaho.
Q. And it's also a helpful reference for different basins. What basins directly contribute to the water supply of the Surface Water Coalition entities?
A. All the basins that are tributary to the Snake River above Milner Dam.
Q. And that would include the Henry's Fork (Teton) Basin depicted on that map; is that right?
A. Yes.
Q. And the Snake Basin above Palisades, Willow, Blackfoot, and Portneuf; is that right?
A. Yeah, I think they identify the Snake River above Heise instead of Snake River above Palisades.
Q. Okay. And in looking at this map, does water from the Henry's Fork (Teton) Basin come in below the Heise Gage?
A. Yes.
Q. How about from the Willow Creek drainage?
A. That also comes in below the Heise Gage.
Q. And the same for Blackfoot?
A. Yes.

Q. And finally, the Portneuf?
A. Yes. They're all tributary below the Heise Gage.
Q. And based on this map, as of April 3rd, the snowpack was 124 percent of average in the Henry's Fork (Teton), 120 percent for the Snake above Palisades, 178 percent for Willow Creek, 186 percent for Blackfoot, and 216 percent for the Portneuf; is that correct?
A. Yeah. I don't have the map in front of me, but, yeah, that seems like what I have seen in the past.
Q. And I believe you testified before, but I want to be clear, does the April joint forecast explicitly consider the water supply from the Henry's Fork, Willow, Blackfoot, and Portneuf drainages or does it not consider them?
A. No, the April joint forecast is only for the watershed above the Snake River at the Heise Gage.
Q. Okay. I have just a few more questions.
In your position as the watermaster, what have you observed this year in terms of water supply to the Coalition members as a result of the significantly above-average snowpack and runoff from the lower part of the basin?
A. Yeah, the advantage to the water rights in the Water District 1 from the runoff in those lower

watersheds, that supplies a greater amount of natural flow to those Surface Water Coalition canals that are further down on the -- on our distribution system, so they don't need to draw from the natural flow that arises in the upstream areas above Blackfoot, and so that allows us to store more water to the junior priority reservoirs upstream and -- instead of passing that natural flow down to the senior priority diversions downstream.

Q. So would you say this year that there was an unusually high amount of runoff from those drainages?

A. Yes. The further south you go into the Portneuf, the Blackfoot, and Willow Creek drainages, they had a higher percentage above median values for the April 1st runoff forecast than those areas further upstream above Palisades.

Q. Did that runoff also free up other natural flow rights in the basin?

A. Yes. What it allowed us to do is probably store more water into the reservoir water rights instead of having delivered that natural flow to senior priority irrigation diversions. That was helped not only by the snowpack but also the spring rains that we received over the last couple of months.

Q. Great. I want to ask you just a couple more

questions about storage allocation.

Are you generally familiar with the storage space held by members of the Surface Water Coalition?

A. Yes.

Q. And of the Coalition members, how about the Twin Falls Canal Company?

A. Yes.

Q. Do you know, approximately, how much storage space they have and in which two reservoirs?

A. Yeah. The two reservoirs they have space are in Jackson and American Falls, approximately 250,000 acre-feet.

Q. In the As-Applied Order that is part of what we're discussing today, the Director found material injury to the Twin Falls Canal Company in the amount of 75,200 acre-feet, and of that amount, 13,324 acre-feet was predicted of space that would not fill.

As of today, has all of Twin Falls Canal Company's storage space filled?

A. Yes.

Q. Is it possible that that fill determination could be affected by a flood control spill from Jackson Lake?

A. Yes. In the big runoff years, the Bureau of Reclamation sometimes has to evacuate previously stored

water out of Jackson for flood control, and if it's lost out of the system, that can result in a reduction from a full allocation to the space holders, Twin Falls Canal. But that seems unlikely at this point in time but could change if we get a lot of rain here over the next couple of weeks.

Q. Great.

MR. HARRIS: Director, that's all the questions I have. I would move to admit Exhibit 366 into the administrative record.

HEARING OFFICER: Any objection to the snow water equivalent map marked as Exhibit 366? Any objection to its admission?

Hearing none, the document marked as Exhibit 366 is received into evidence.

(Exhibit 366 received.)

MR. HARRIS: That's all the questions I have.

Thank you, Tony.

HEARING OFFICER: Any cross-examination by the Surface Water Coalition?

Mr. Budge?

MR. BUDGE: Yes. IGWA also identified Tony as a witness, so perhaps I'll just do my direct examination and the Coalition can handle their cross in one fell swoop.

HEARING OFFICER: Okay.

DIRECT EXAMINATION

QUESTIONS BY MR. BUDGE:

Q. Good afternoon, Tony. I don't know if you can see me or not, but this TJ Budge. How are you?

A. Yes, I can see you. Thank you, TJ.

Q. Okay. I just got a couple questions.

The first one follows up on Mr. Harris's questions about the storage water supplies. I understand as your duties -- among your duties as Water District 1 watermaster, you oversee the Upper Snake River storage water system?

A. Yes. We keep track of the amount of natural flow that accrues to those reservoir water rights.

Q. And are rentals or leases of storage water handled through your office?

A. Yes.

Q. You're generally familiar with how the transactions of storage water in the Upper Snake River Basin are handled from year to year?

A. Yes.

Q. Are you familiar with the 2004 Nez Perce water rights agreement?

A. Somewhat, yes, I'm familiar with it.

Q. Are you aware that storage water is frequently leased out of the Upper Snake River Reservoir system to meet some flow augmentation requirements under that Nez Perce agreement?

A. Yes.

Q. Do I understand correctly that participation in rentals of storage for flow augmentation under that agreement is a voluntary program?

A. Yes.

Q. And do members of the Surface Water Coalition frequently participate in renting storage water?

A. Yes.

Q. And I believe those who do participate in that program receive rent on the storage water they lease?

A. If you mean payment, yes.

Q. Okay. That's all I had on that topic.

The other topic that I wish to ask you about is just about the application of the futile call doctrine in the Teton River Basin?

I understand that water distribution in the Teton River Basin falls under your jurisdiction as the Water District 1 watermaster?

A. Yes.

Q. Are you familiar with the application of the futile call doctrine in the Teton River Basin?

A. Yes.

Q. Could you explain how that works?

A. Yes. If you look at the Teton Basin as a whole, the lower part of the basin, the downstream part of the basin was developed earlier than the upper part of the basin. So the Teton River, typically towards midsummer/end of the summer, can cut down to the 1885, 1884 priorities, and so the entire flow or natural flow in the Teton Basin was used up after those years.

As the upper part of the basin was settled and they developed water rights on the tributaries that fed the Teton River, they had -- they were later in time, had later priorities than the diversions off the Teton River downstream. But those tributaries that they diverted water from, typically in midseason, even when there's no diversions from them, that water and those tributaries doesn't reach the main stem of the Teton River.

So you have a situation where this irrigation that was developed in the Upper Teton Basin on these tributaries, when they go out of priority on the main stem of the Teton River if we shut off all those diversions on the tributary and the water still doesn't reach the channel of the Teton River, we say it's futile for the lower senior priority diversions to call for

curtailment of those junior priority water rights on those tributaries when shutting off those junior priorities won't make a difference to the water physically reaching the Teton River channel.

Q. Thanks, Tony. That's very helpful.

Just for clarification. When you refer to the Upper Teton Basin, you're referring to that area in the Driggs-Tetonia area?

A. Yes. That whole upper valley before the river reaches the canyon where it narrows down.

Q. And then when you refer to the Lower Teton Basin, is that down in the, you know, Teton-Sugar City area?

A. Yes. It's where the water emerges out of the canyon there and into the valley there in Newdale, Teton, Rexburg, Sugar City, that whole area.

Q. Okay. And then you mentioned that the call becomes futile once the tributary doesn't reach the main stem. You're referring to the surface water connection between the tributary and the main stem of the Teton?

A. Yes.

Q. And how do you know when the tributaries disconnect?

A. It is visual. You get to a point -- well, over the years, the deputy watermaster in that area

responsible for regulating the diversion usually has a sense of when he shuts off all the diversions, water won't reach the Teton River. And so at that point the tributary is on a different priority system than the Teton River.

If that judgment is contested, then we actually go through and do a process where we shut off all the diversions on that tributary and let the water run for a certain amount of days. Sometimes it's been three days in the past, it's been as long as five days, and after that three- or five-day period, if the water still hasn't reached the Teton River from that tributary, then we call a futile call, and then we start turning on diversions on that tributary according to priority until all of the water is diverted.

Q. When the tributaries don't reach, is that because the water is just sinking into the ground?

A. Yes. At some point, usually further upstream on the tributary in the higher elevations above your irrigation land, you'll see water -- plenty of water in those tributaries. And then as it moves further downstream into the valley before it reaches the Teton River, it just completely sinks into the ground.

Q. Do you have any idea where it goes once it sinks?

A. I don't.
Q. Are there a lot of springs along the main stem of the Teton River in that upper basin that feed the river?
A. Yes, there are some springs.
Q. Is it your understanding that the water that seeps into the ground from those tributaries accrues to the Teton River downstream through a spring in flow?
A. Yes, that's certainly likely.
Q. Just one last question, Tony. Did you contribute in any way to the development of the Fifth Methodology Order?
A. No.
Q. You weren't asked any questions by folks at the Boise office as they were developing that?
A. No. I think the only time we get questions concerning the data that goes into that concerns our storage carryover numbers. [Unintelligible.]
COURT REPORTER: Wait. Excuse me. Hold on. Wait.
HEARING OFFICER: Tony, the court reporter.
COURT REPORTER: I'm sorry, but I missed some of your answer a while back. So I can read what I have, and then I need you to go from there.
"Answer: No. I think the only time we get

questions concerning the data that goes into that concerns our storage carryover numbers."

THE WITNESS: I'm having trouble hearing you. You need to get closer to the microphone.

COURT REPORTER: Okay. So: "Answer: No. I think the only time we get questions concerning the data that goes into that concerns our storage carryover numbers."

THE WITNESS: Yes.

COURT REPORTER: And then can you keep going from there.

THE WITNESS: They may have asked some other questions about storage allocations or water delivery to that effect, but as far as how the model works, you know, what equations are incorporated into it and what the output is, no, they don't share that information with us.

MR. BUDGE: I don't have any further questions.

HEARING OFFICER: Thank you, Mr. Budge.

Any cross-examination, Surface Water Coalition?

Mr. Thompson, if you'll come forward.

///

///

CROSS-EXAMINATION

QUESTIONS BY MR. THOMPSON:

Q. Hi, Tony. This is Travis Thompson for A&B Irrigation District, et al.

Can you hear me?

A. Yes, I can. Thank you.

Q. You talked about, with Mr. Harris, the joint Heise forecast. Is that something you look at every year?

A. Yes. We use that to determine how much flow augmentation volume is available to the Bureau each year.

Q. And do they issue that forecast monthly?

A. No. They do it annually, usually the week following April 1st.

Q. So the Bureau doesn't revise that in May?

A. Well, they -- well, yes, but that's not the April 1st forecast; that's the May forecast.

Q. That was my question. They do it monthly for a period of time starting in January?

A. Yeah. I have heard, yeah, but I don't pay any attention, usually, to those forecasts. It's only the April 1st forecast that I use in my job.

Q. So you didn't look at the May forecast to see if it went down or not compared to April?

A. I did not.
Q. Mr. Budge asked you questions about the rental pool and the Nez Perce agreement.
Do you recall those?
A. Yes.
Q. And under the rental pool procedures, do space holders have the ability to opt out of that rental pool?
A. Yes.
Q. In the context of the Surface Water Coalition, if they are injured and were to receive a storage mitigation assignment, could they receive that if they were not a participant in the common pool?
A. I don't know the answer to that question.
Q. Do the current procedures address that?
A. Well, to receive water, I don't think you need to be a participant. But to supply water, you do need to be a participant.
Q. So it's your testimony if somebody were to opt out of the rental pool, they could still receive a storage assignment if it was for mitigation purposes; is that true?
A. Yes.
Q. I think we emailed you a PDF. Do you have a copy of that, Tony?
A. A TDF? What's --

Q. A PDF file. I'm sorry.
A. Oh, PDF file. Thank you. Yeah, the watermaster report?
Q. Yes.
MR. THOMPSON: I'm just going to mark that as Exhibit 8.
(Exhibit 8 marked.)
Q. (BY MR. THOMPSON) And I'll represent to you, Tony, it's an excerpt from the 2011 annual report.
Have you had a chance to look at that?
A. Yes.
Q. And are you familiar with that document?
A. Yes.
Q. And can you identify it for the record?
A. It's an excerpt from the 2011 annual report of Water District 1 prepared by watermaster Lyle Swank.
Q. And does the water district keep this kind of information since that time?
A. Yes.
Q. And is that published?
A. Yes.
Q. And can you generally describe what those tables depict?
A. Those tables depict the amount diverted by each for diversions that are in our water right

accounting program.

Q. And are you familiar with the various canals and pumps listed in this exhibit?

A. Yes.

Q. And recognize that every year is different, but generally do these canals convert similar amounts every year?

A. Yes. Somewhat it varies just a little bit by water supply. Sometimes they're limited by water supply, and sometimes they're not.

Q. Do large open canal systems represented on this exhibit have different diversion needs compared to individual pumps?

A. Yes.

Q. Would that be reflected on the acre-feet per acre diverted column?

A. The acre-feet per acre diverted is simply the calculation of the volume that was diverted at the head of the canal and the amount of acres that the Water District 1 had on record at one point that the canal irrigated. But the problem with that acre-foot per acre diverted is we didn't know in any of these years these annual books were published the actual amount of acres that were being irrigated by the diversion.

Q. So the service area lists a number that may or

may not reflect the actual irrigated acres in a given year?

A. Right. That's the number that represents the maximum number of acres that could be irrigated by the diversion, but not, necessarily, the number of irrigated acres during that year.

Q. Based on your experience as watermaster, are any of these values unreasonable for the canals listed?

MR. HARRIS: Objection.

THE WITNESS: No. But at some point in the future years, we stopped listing those acres because --

MR. HARRIS: I'd like to lodge an objection.

THE WITNESS: -- because it gave some people the impression that those were the actual amount of acres being irrigated --

HEARING OFFICER: Just a moment, Tony. Sorry. Okay, Mr. Harris.

MR. HARRIS: We called Tony as a fact witness to talk about the contribution of the natural flow from those lower drainages. We did not identify him as an expert to talk about rate-per-acre diversions or anything like that. So I think this goes beyond the scope of my examination.

HEARING OFFICER: That's true, Mr. Harris. Do you want me to allow the Surface Water Coalition to call

Tony as their own witness down the road if they choose to do that to explore this?

MR. FLETCHER: We'd do it today as soon as he's done here.

MR. HARRIS: I don't believe they identified him, but maybe I'm mistaken.

MR. FLETCHER: You did.

HEARING OFFICER: Well, I'm not restricting testimony.

MR. HARRIS: Okay.

HEARING OFFICER: Overruled.

MR. THOMPSON: Tony, thank you. That's all the questions I have.

MS. McHUGH: I have a quick question.

MR. FLETCHER: I just have a question.

Did his last answer get on the record, Mr. Olenichak's last answer?

HEARING OFFICER: I didn't hear it.

COURT REPORTER: Well, it's kind of chopped up with speaking in between trying to interrupt him. So not --

MR. FLETCHER: To clear that up, can you ask that question so it's on the record.

Q. (BY MR. THOMPSON) Tony, I think we were talking about the acre-foot diverted of the service

area, recognizing that these service area number of acres list a potential maximum number of acres within these canals. And I was asking you if there's any contention that any of these diversion rates are unreasonable by these canals.

A. Yeah. And again, my answer was that the service areas, it may be the maximum service area of the canal but not, necessarily, the number of irrigated acres. And that acre-foot-per-acre-diverted number that you see in the far-right column is based on the assumption that all those acres are being irrigated by the volume that was diverted and the acre-feet in the first column, and that may not, necessarily, be the case if the canal was irrigating less acres than the maximum that was listed on this table.

Q. So that could change the acre-foot-per-acre calculation; is that correct?

A. Correct.

Q. I guess in your experience with the values represented in this exhibit, do you believe any of those are unreasonable?

A. I don't know how to answer that.

MR. BUDGE: Objection.

HEARING OFFICER: Tony, this is difficult. We've got another objection.

The basis for the objection?

MR. BUDGE: Well, it calls for a legal conclusion. But I think Tony explained that he doesn't -- he can't answer that question, so he recognized it as such.

HEARING OFFICER: Okay. I want the answer on the record again, because I had to interrupt the testimony to address the objection.

So ask it again, Mr. Thompson, and let's get his answer.

Q. (BY MR. THOMPSON) And, Tony, this table shows total volumes diverted by canals all throughout Water District 1.

Do you have any reason to contend any of these values are unreasonable?

A. The volumes are accurate. The service area probably represents the maximum number of acres that can be irrigated, but not, necessarily, the actual number of acres that were irrigated in this particular year. And therefore, since the total diverted was divided into the service area acres that were listed, the acre-foot per acre diverted in that last column may not be accurate since we don't know for certain the number of acres that were actually irrigated in this particular year. And in future years, we stopped listing this acre-foot acre

diverted for that reason.

Q. Yeah. I don't know if you answered my question, Tony.

I guess the volumes represented, they all vary. I think they go from like 1 to above 10.

Do you have any reason to believe any of those values are unreasonable for those canals listed?

A. No.

Q. Thank you.

MR. FLETCHER: Do you want to admit that exhibit?

MR. THOMPSON: Yeah.

I'd move to admit Exhibit 8.

HEARING OFFICER: Any objection to receiving Exhibit 8 into evidence?

Hearing no objection, the document marked as Exhibit 8 is received into evidence.

(Exhibit 8 received.)

HEARING OFFICER: Mr. Fletcher, you have questions?

MR. FLETCHER: I do.

HEARING OFFICER: Would you come to the table. Thank you. I know you like to examine watermasters or former watermasters.

MR. FLETCHER: Yeah. Well, that's -- yeah.

HEARING OFFICER: That's an inside joke.

MR. FLETCHER: Yeah, it is.

CROSS-EXAMINATION

QUESTIONS BY MR. FLETCHER:

Q. Hey, Tony. This is Kent Fletcher. How are you?

A. Good, thank you.

Q. That water that's coming in below Heise flows into the storage system as well as used for natural flow; isn't that correct?

A. Yes.

Q. And that storage system doesn't only benefit the Surface Water Coalition, does it?

A. No, it benefits many.

Q. Now, the storage -- the Surface Water Coalition's source of water is not only storage water; correct?

A. Correct.

Q. It includes natural flow?

A. Yes.

Q. What did you observe prior to -- well, at the end of last irrigation season, what did you observe in the storage system concerning the amount of storage?

A. It was below average. We finished the

irrigation season with less water in the -- remaining in the reservoirs than what's typical.

Q. And what did you observe this winter before runoff started on the inflows into the reservoirs?

A. Well, before the snowmelt started, it was below average, and then, of course, when the snow started melting, we've been above average since that time.

Q. So before the snowmelt started, the flows coming into the river were below average?

A. Yes.

Q. You had mentioned that -- I think you were asked a very generic question about do members of the Surface Water Coalition generally participate in renting storage.

There are many members of the Surface Water Coalition who do not regularly rent storage; isn't that correct?

A. Yes, but the reason I answered the way I did was the rental pool procedures have recently changed where all participating space holders now are responsible for supplying a portion of their storage allocation, if needed, by the common pool.

Q. I see.

And so you were talking about flow

augmentation water?

A. Yes.

Q. But as far as actually renting water to a third party, most of the Surface Water Coalition members do not rent water to third parties; isn't that correct?

A. Well, under the most recent procedures, we have the small pool which is 5,000 acre-feet maximum, very small amount, but under the current procedures, the participants, including the Surface Water Coalition, could provide a small percentage to their storage allocation towards that small rental.

Q. Yeah, that comes out of everybody's storage accounts; correct?

A. Yes.

Q. But I'm talking about private leases. I should have said it better.

Most of these do not -- most of the Surface Water Coalition members do not have private leases; is that correct?

A. Yes. I think the -- yes, I think that is correct.

Q. And the storage you're talking about as far as flow augmentation, that is a result of the Nez Perce agreement?

A. Yes.

Q. And that is to protect the water users from claims of the tribes; is that correct?
A. Yes.
Q. The futile-call scenario that you were talking about on the Teton Basin, that was purely a surface water system; correct?
A. Yes.
Q. And so when you talk about curtailing in-season, you're only dealing with water that would accrue that season; correct? You're not dealing with what would happen from curtailment into future years?
A. I don't understand the question, but...
Q. I don't either, so let me -- in fact, let me just withdraw that question.
I guess the point is that that is a 100 percent surface-water scenario you're talking about?
A. Yes.
Q. And that's true throughout the state, as far as you know, isn't it; that if a senior cannot get his water for whatever reason, he doesn't have a right to call out a junior. Correct?
A. Yes. I think they have the same type of practice in the Big Lost Basin and probably in some other basins around Idaho.
Q. But those calls are not typically made under

the conjunctive management rules, are they?

A. No.

MR. FLETCHER: That's all the questions I have. Thank you.

HEARING OFFICER: Redirect, Mr. Harris?

MR. HARRIS: I do.

MR. FLETCHER: I think Candice has a few.

MS. McHUGH: Can I just -- it's not really redirect, I wanted to clarify something.

Now that Kent asked about recent rentals from this common pool and the small pool, I just wanted to clarify a few things, and then he can redirect. We listed Tony as a witness, but I guess I would cross him on what --

At this point is he your witness? I'm not really sure how that works. I just want to ask a couple clarifying questions, and I'm asking if I can do that.

HEARING OFFICER: What do the parties want me to do?

MR. BUDGE: Well, it's Rob's witness and mine, so anyone else would be crossing, so this would be the time if Ms. McHugh wants to ask questions for cross-examination.

MR. FLETCHER: Yeah. I don't think we have a problem with that as long as if she opens up something

new, I guess we would have the right to address it.

HEARING OFFICER: Well, I have a hard time characterizing these questions as cross-examination, at least technically, but okay.

Ask your questions.

CROSS-EXAMINATION

QUESTIONS BY MS. McHUGH:

Q. Good afternoon, Tony. It's Candice McHugh on behalf of the Coalition of Cities and McCain Foods specifically.

I wanted to ask a question -- just a clarifying question about a statement you made relative to an answer -- I think it was given by -- or in response to an answer by TJ and then Mr. Fletcher expanded upon it. It had to do with the storage assignment for mitigation purposes.

Do you recall testimony relative to how storage is assigned for mitigation purposes?

A. No. The way you're characterizing that, I'm not sure I recall what specific question you're asking me about.

Q. Fair enough.

You said recently that there were some changes made on how water is provided to the small rental pool.

Do you remember that line of questioning of Mr. Fletcher?

A. Yes.

Q. Okay. And can you explain what those changes were?

A. Yes. Prior to the last couple years, we've used what we call "late season fill" to supply common pool rentals which can be comprised of the 5,000 acre-feet or flow augmentation rentals. What that resulted in was some space holders had to provide a higher percentage of their storage allocations towards those rentals than others. And so in the last year or two, we changed the rental pool procedures to spread that obligation out to the small rentals and towards flow augmentation to all participating space holders, so each of those participating space holders supplies the same percentage of their storage allocation towards those rentals.

Q. And if a person went to this small pool, my understanding is they're -- and wanted to rent water from the small pool for mitigation purposes, is there some new rule or is there some procedure that they would have to follow to do that?

A. Yeah, I think the -- this past year, we specifically excluded using the small pool, the

5,000 acre-feet supply, for mitigation purposes. The purpose of the 5,000 acre-feet was to supply to small diversions along the river that would reduce regulation costs incurred by the watermaster.

Q. And members of the Surface Water Coalition, if they were going to receive water from the storage system, would they have to agree to accept that mitigation water, or is there a limitation on their ability to accept that mitigation water?

A. No, I don't think so. If someone purchased some rental water, for example, and said, "I want to supply that to Twin Falls Canal," I would add that to the Twin Falls storage allocation whether they wanted to use it or not.

Q. Okay. So I think I might have misheard earlier. I thought you had said something about they could opt out of having a storage assignment for mitigation purposes. Is that just not correct?

A. No. The opt out part is an option for all space holders to not participate in the rental pool process. And by doing that, they don't have to contribute any of their storage allocation towards these common pool rentals.

MS. McHUGH: Okay. That's all I wanted to ask. Thank you.

HEARING OFFICER: Redirect, Mr. Harris?

REDIRECT EXAMINATION

QUESTIONS BY MR. HARRIS:

Q. Tony, just a couple follow-up questions: Mr. Thompson emailed you the 2011 annual report from Water District 1 or select portions of it.

Do you recall that testimony?

A. Yes.

Q. As a general matter, what was the 2011 water year like?

A. I don't remember.

Q. Was it an above average water year or below average?

A. I don't remember. I don't think it was below average because those always stick in my mind, but whether it was average or above average, I don't remember.

Q. And the canals that are in the select portions here, don't those systems have return or tail-out locations that put water back in the Snake River or other natural streams?

A. Yes, I think many of them do.

Q. But the Twin Falls Canal Company and North Side Canal Company tailwater would come in below Milner

Dam; correct?

A. Correct.

MR. HARRIS: I have no further questions.

HEARING OFFICER: Okay. Mr. Budge, further questions?

MR. BUDGE: You know how much I like to get the last word in.

HEARING OFFICER: Okay.

MR. BUDGE: But I'm going to pass, so we're done.

HEARING OFFICER: Recross?

MR. FLETCHER: I just have a few minor questions since Ms. McHugh wanted to open up the nuances of the common pool and the rental pool rules, so I guess we'll talk about what those restrictions are on that.

HEARING OFFICER: Well, as Mr. Fletcher comes forward, I hope that we don't get into the rental pool procedures, because just an elementary acquaintance with the rental pool procedures might take the next six months.

MR. FLETCHER: Yeah, I'm -- I just want to point out three issues and see if Mr. Olenichak agrees.

///

///

///

RECROSS-EXAMINATION

QUESTIONS BY MR. FLETCHER:

Q. On the common pool that is referred to in the rental pool rules, Tony, how many acre-feet are available in the common pool?

A. Currently, the common pool consists of the pool augmentation water and the 5,000 acre-foot small rental pool.

Q. The flow augmentation water goes out for use by the Bureau for flow augmentation for salmon; isn't that correct?

A. Correct.

Q. None of the flow augmentation water is available to any water user in Water District 1; isn't that correct?

A. Correct.

Q. As far as the other 5,000 acre-feet we're talking about, in order to rent water out of that, you have to be a storage holder; isn't that correct?

A. No, that's not correct.

Q. Okay. Who are the -- what are the limitations on the people who can rent water out of the common pool?

A. Diversion regulated by Water District 1 for less than 100 acre-feet.

Q. So it would have to be a diversion above

Milner, then; correct?

A. Yes.

Q. And the most you can rent out of the common pool is 100 acre-feet; correct?

A. Correct.

Q. And isn't there a limitation in the rental pools that it cannot be used for mitigation?

A. Yes. I think there was a clause added during this past year for groundwater recharge or mitigation.

MR. FLETCHER: Thank you.

HEARING OFFICER: Any more recross?

All right. Thank you, Tony, for hanging in there.

Okay. I guess we're done for the day. We'll start at 9:00 a.m. in the morning again.

I would like to ask before convening tomorrow, Andrea, if you can work with Sarah Tschohl and maybe with Pete, maybe we can get a list of all the exhibits that have been admitted into evidence. Is that possible to distribute to the parties?

And then I think that would be helpful for everybody to look through and determine whether there are exhibits that the parties wish to offer prior to our adjournment and, all of a sudden, an attempt to try to identify what exhibits are in or out.

Would that be helpful to everybody?

Sarah?

MS. KLAHN: Are you going to want closing briefs or proposed orders?

HEARING OFFICER: I thought I would allow some opportunity for a short period of time, if people want to offer something in writing. I don't want to hear oral argument, however.

MS. KLAHN: Right. That's what I was wondering, if you wanted something in writing. Okay.

HEARING OFFICER: Yeah.

Okay. We'll see everybody at 9:00 in the morning.

(Hearing adjourned at 5:21 p.m.)

REPORTER'S CERTIFICATE

I, ANDREA L. CHECK, CSR No. 748, Certified Shorthand Reporter, certify;

That the foregoing proceedings were taken before me at the time and place therein set forth, at which time the witness was put under oath;

That the testimony and all objections made were recorded stenographically by me and transcribed by me or under my direction;

That the foregoing is a true and correct record of all testimony given, to the best of my ability;

I further certify that I am not a relative or employee of any attorney or party, nor am I financially interested in the action.

IN WITNESS WHEREOF, I set my hand and seal this 19th day of June, 2023.

ANDREA L. CHECK, CSR No. 748, RPR, CRR
Notary Public
P.O. Box 2636
Boise, Idaho 83701-2636
My Commission expires July 20, 2028.

P R O C E E D I N G S

HEARING OFFICER: The 9:00 o'clock hour has arrived. Let's go on the record.

Okay. Are there preliminary matters we need to discuss this morning?

MR. THOMPSON: I just have one, Director.

This is Travis Thompson.

HEARING OFFICER: Yes.

MR. THOMPSON: Yeah. One of our witnesses, Chuck Brockway, had a procedure Tuesday. He thought he would recover in time to get here, but he's still feeling the effects of that. So I asked the parties last night if they would stipulate to allowing him to participate remotely. With your permission, he's able to do that, so I'd like to bring that up.

HEARING OFFICER: Any objection from the parties?

Okay. We've allowed that remote participation earlier in the hearing, so I'll allow it again. It causes some difficulties, but I recognize that there are circumstances that may arise.

I also, last night, received word from Sarah Klahn that she had an emergency and will not be here today, so she is excused. She said that her

interests will be adequately represented today by Mr. Bricker or others.

So thanks for being here, Mr. Bricker.

I also asked that Sarah, Andrea, and Pete Wood compile a list of exhibits.

Have those been compiled and distributed? Pete or Andrea, do you know?

MR. WOOD: I don't know. Let me send Sarah an email. I didn't do --

COURT REPORTER: She's was working on it, so --

MS. TSCHOHL: They were distributed to everyone, and they should be on your desk as well.

HEARING OFFICER: Okay. So the parties, apparently, have a list of those exhibits. And either at recess or lunchtime if you could review that exhibit list and ensure that the exhibits that you want received into evidence at least have been offered. And any that are -- have not been offered, we'll do some cleanup at the end, or you can offer those as testimony as presented.

Okay. Other matters we need to talk about?

The next witness?

MS. McHUGH: Sorry. So many cords. Sorry.

MR. THOMPSON: Two for two.

MS. McHUGH: Two for two. It's because I have flip-flops on, and I shouldn't be wearing those.

HEARING OFFICER: Apparently, you're calling a witness.

I'm glad to see you're light on your feet this morning, Ms. McHugh.

MS. McHUGH: I know.

Yes. McCain Foods would call Scott King.

HEARING OFFICER: Mr. King, if you'll come forward.

SCOTT KING,

called by McCain Foods, having been first duly sworn to tell the truth relating to said cause, testified as follows:

HEARING OFFICER: Please be seated here.

MS. McHUGH: And can the witness have exhibit -- the McCain exhibit book. I think it should be --

Is it in front of you?

Okay. And then also there will be exhibits -- the volume that includes Exhibit 317.

And, Mr. Director, I'll let you know, I had asked the parties if they would stipulate to the

exhibits offered by McCain, which were Exhibits 600 -- well, I'll wait a minute -- Exhibit 600, which is water rights for the McCain factory. In your book you should have Water Rights 2749, 7130 -- oh, that's wrong -- 2747, 2748, 2758, and 13970.

And just for the parties' notes, when I submitted these originally, I had three additional water rights included in there, and those have been removed from Exhibit 600.

And then Exhibit 601, 602, 603, and 604, the parties have agreed to have those -- to stipulate to their admission.

And then Exhibit 317, that exhibit has also been stipulated for admission.

HEARING OFFICER: Is the stipulation that's represented by Ms. McHugh -- is the stipulation accurate, and the parties agree to the --

MR. FLETCHER: It is, from our extent.

HEARING OFFICER: -- to the admission of these documents?

MR. FLETCHER: Yes, the Surface Water Coalition has stipulated.

HEARING OFFICER: Okay. And no objection from anyone else?

Okay. So the documents marked as Exhibit 601

through 604 -- well, let's recite all of them, 601, 602, 603, 604, and Exhibit 317 are received into evidence.

MS. McHUGH: And Exhibit 600.

HEARING OFFICER: Pardon me?

MS. McHUGH: And Exhibit 600.

HEARING OFFICER: Oh, I'm sorry. That's right. It started at 600. I apologize. And 600.

Thank you for the correction.

(Exhibits 600 - 604 and 317 received.)

DIRECT EXAMINATION

QUESTIONS BY MS. McHUGH:

Q. Good morning, Scott. Candice McHugh on behalf of McCain Foods.

Would you please state and spell your name for the record.

A. Scott King. S-c-o-t-t, K-i-n-g.

Q. And would you provide a brief background as it is relevant -- as it relates to today's proceeding?

A. I'm currently employed as a civil engineer with HDR, Inc. Previously with SPF Water Engineering, SPF --

COURT REPORTER: Okay. Slow down a little bit for me. Okay?

THE WITNESS: Will do. Sorry. Thank you.

SPF Water Engineering and HDR merged about a year ago, and I've been with SPF since around 2004.

As it relates to this hearing, I have worked on water right issues for McCain Foods going back to my time at SPF and continuing to HDR.

Q. (BY MS. McHUGH) And are you familiar with McCain's groundwater rights that divert from the Eastern Snake Plain Aquifer and serve the Burley facility?

A. Yes, I am.

Q. And could you look at Exhibit 600.

A. Yes.

Q. And you've been a consultant for McCain for, roughly, ten years? A little over ten years?

A. Yes. I believe I first started working for McCain Foods in late 2014.

Q. Does Exhibit 600 accurately show the water rights that McCain Foods uses for the Burley facility -- currently uses for the Burley facility?

A. Yes.

Q. Are there other water rights that McCain has at the Burley facility?

A. Yes.

Q. And why aren't they included in Exhibit 600?

A. Those ones are not being used, and I understand that they're part of a mitigation plan

already. So they're unused water rights. McCain doesn't need them.

Q. Is it your understanding that they're already curtailed under maybe a nonused -- because of a different water --

A. Yes. If I said "mitigation plan," I was incorrect. It's unused because they're curtailed because of their junior priority.

Q. In this particular case relative to McCain's interests, what were you originally tasked with doing?

A. In 2014 -- currently or in 2014?

Q. Currently.

A. Okay. I was tasked with providing technical analysis of McCain's water use as it related to developing a mitigation plan to address shortfalls in curtailment due to the Surface Water Coalition call.

Q. And when did you start working on that task with McCain?

A. That was March of this year.

Q. And why did you start working on it in March of this year? Do you know?

A. That's when I was asked to begin working on it.

Q. Are you aware of the proposed curtailment date that's pending on the aquifer back to December 31st,

1953?

A. Yes.

Q. And when you learned that as a consultant with McCain, what was the response to that?

A. We had conversations. We met and discussed the plans that we had considered for mitigation before and were trying to develop alternatives to meet this deadline, this date.

Q. And when did you learn of the proposed curtailment back to 1953?

A. Sometime late in April.

Q. And did you assist McCain in figuring out what to do in response to that curtailment date?

A. Yes.

Q. Could you look at Exhibit 601.

A. Yes.

Q. And could you identify that document?

A. This is a letter from McHugh Bromley, your law office, to Southwest Irrigation District petitioning to join the district for mitigation purposes.

Q. And what happened after that letter was sent to Southwest Irrigation District?

A. The district accepted the petition and allowed McCain to join the district for mitigation purposes.

Q. And why did McCain decide it needed to send a

letter to Southwest Irrigation District rather than continue your work on developing its own mitigation plan?

A. We didn't have sufficient time to develop McCain's own plan, so Southwest Irrigation District was the best alternative to meet that deadline.

Q. Was it your understanding there was a deadline that McCain had to meet in order to avoid curtailment this season?

A. Yes.

Q. Do you remember what that date was?

A. I think that was May 5th.

Q. And was that based on an order by the Director?

A. Yes.

Q. Once the letter was sent to Southwest Irrigation District and they accepted McCain within their boundary, do you know what happened next?

A. That I believe you notified the Department of Water Resources that McCain Foods had been accepted into Southwest for mitigation purposes.

Q. Can you look at Exhibit 602.

A. Yes.

Q. Can you identify that document.

A. Yes. This is your notice of mitigation to the

Department of Water Resources that McCain Foods was accepted into Southwest Irrigation District for mitigation.

And in the last paragraph they're requesting some kind of acknowledgment from the Department of Water Resources that they had been accepted.

Q. Okay. And if you could turn to Exhibit 603.

A. Okay.

Q. Have you seen that document before?

A. Yes.

Q. And what is that document?

A. This is an email from Garrick Baxter to you acknowledging that IDWR understands that these four McCain Foods water rights that were in Exhibit 600 were brought into Southwest Irrigation District for mitigation.

Q. And what is your understanding of what will happen if Southwest Irrigation District is not in compliance with their mitigation plan?

A. Part of this email also states: "So long as Southwest Irrigation District is in compliance with its approved mitigation plan, the four rights should be protected from curtailment."

So I would understand, there, if Southwest is not in compliance, that it could mean that McCain Foods

could be curtailed.

Q. Does McCain have any water rights senior to December 31st, 1953?

A. No.

Q. And do you have an understanding of what would happen if McCain did not have any water rights -- valid water rights at its Burley facility?

A. My understanding that McCain Foods would not be able to operate without having water.

Q. And throughout this process, has McCain had any concern about the process relative to understanding when the curtailment date was announced and being able to protect its water rights?

A. Yes, that there was insufficient time to develop their own mitigation plan to meet the deadline.

Q. Was McCain Foods' interest in developing its own mitigation plan its first priority, or was it -- how did that work?

A. McCain Foods wanted to have their own mitigation plan that they would be in control of.

Q. Do you know whether McCain can or could mitigate for its own groundwater pumping for itself?

A. I believe that they could develop a mitigation plan to operate on their own, to have their own mitigation plan, but we have not been able to construct

that by this deadline.

Q. Can I have you look at Exhibit 317.

A. Yes.

Q. Have you seen that document before?

A. Yes.

Q. And can you tell me what that document is.

A. This is a FAQ document that's on the Department of Water Resources front page address, "Surface Water Coalition delivery call and the Amended 5th Methodology and April 2023 As-Applied Orders."

Q. And can you turn to the -- I think it's the last page in that; I think it's page 3. It's a three-page document.

A. Yes.

Q. And do you see where that document discusses what would happen if you're a food producer and were under a mitigation plan or if you're a food producer without a mitigation plan?

And then I think the last paragraph says, "Can I file my own mitigation plan?"

Do you see that?

A. Yes.

Q. Can you read the last paragraph, question and answer.

A. The question: "Can I submit a mitigation plan

now and get it approved in time for this coming irrigation season?"

And the answer is: "It is unlikely that a mitigation plan can be approved before a potential curtailment order is issued. Once a plan is submitted, the plan must be advertised and is then subject to protest deadline. The plan is subject to hearing if protested or if the Director determines a hearing is necessary. This process can take many months."

Q. Can you turn to Exhibit 604.

A. Yes.

Q. Have you seen that document before?

A. Yes.

Q. Can you tell me what it is.

A. "This is the Notice of Possible Curtailment Call for Groundwater Rights with Priority Dates Junior to December 30th, 1953 - Surface Water Coalition Delivery Call," dated May 1, 2023.

Q. Is it your understanding that this is the letter that McCain received at its Burley facility?

A. Yes.

Q. I believe towards the end of that document -- I think it's in bold and it may be underlined -- it says something along the lines that "during the consideration of the mitigation plan, curtailment will not be stayed."

Do you see that?

A. No, I don't. I'll have to read this. What was it?

MS. McHUGH: I'm sorry, can I approach the witness, Director?

Q. (BY MS. McHUGH) It's the end of the fifth paragraph.

A. Okay. Gotcha. I was looking at the last paragraph.

Q. If you would look at the fifth paragraph there.

A. Yes.

Q. Can you read the last, I think, three sentences.

A. Yes. Beginning about halfway through this paragraph: "Upon receipt of a proposed mitigation plan, the Director will publish notice for two successive weeks, after which ten days will be allowed for the filing of protests. The Director may hold a hearing if necessary to determine whether a proposed mitigation plan will mitigate an injury to the SWC," Surface Water Coalition, "caused by diversions of groundwater authorized by junior priority groundwater rights. If the proposed mitigation plan is protested, the Director will hold a hearing. Please be advised that a

curtailment order is not stayed pending evaluation of a mitigation plan."

Q. Was it your understanding as a consultant for McCain Foods and McCain's understanding that if they filed a mitigation plan, that they would still be subject to the curtailment order?

A. Yes.

Q. And do you know when that May 1st letter was received at the Burley facility from McCain?

A. I understand McCain received that on May 12th.

MS. McHUGH: I have no further questions.

HEARING OFFICER: Other questions of Mr. King from the groundwater users?

Cross-examination?

MR. FLETCHER: I don't have any.

MR. SIMPSON: No.

MR. THOMPSON: I've got one.

HEARING OFFICER: Thank you, Mr. King -- Mr. Simpson.

Mr. Thompson, do you have some questions?

CROSS-EXAMINATION

QUESTIONS BY MR. THOMPSON:

Q. Good morning, Mr. King.

A. Good morning.

Q. Travis Thompson for A&B Irrigation District, et al.

A. Good morning.

Q. Just one question -- a couple questions.

Ms. McHugh asked you about timing of when McCain's could file a mitigation plan this spring.

Do you recall that?

A. Yes.

Q. Has McCain Foods attempted to file a mitigation plan anytime in the past?

Do you know?

A. Under this delivery call, not that I'm aware of.

Q. Anything that would prevent them from submitting a plan prior to this spring?

A. The only thing that I think that might prevent them is knowing what they need to submit the mitigation plan for, the details, the requirements of what they're mitigating.

Q. As far as the priority date?

A. Yes.

Q. I guess any of their rights junior to '53, would they have any reason to put a plan together before this year?

A. We weren't aware of what priority date would

require a mitigation plan, so -- and we didn't have water rights -- the 1953 date is new.

Q. Are they aware of the Surface Water Coalition's priority dates for their senior surface water rights?

A. I assume that they are, yes.

MR. THOMPSON: Thank you.

HEARING OFFICER: Any more cross-examination? Redirect, Ms. McHugh?

MS. McHUGH: No.

HEARING OFFICER: Thank you, Mr. King. Next witness?

MS. McHUGH: Amalgamated Sugar Company would call Dean Delorey.

HEARING OFFICER: Mr. Delorey, if you would come forward, please. Would you raise your right hand.

DEAN DELOREY,

called by Amalgamated Sugar Company, having been first duly sworn to tell the truth relating to said cause, testified as follows:

HEARING OFFICER: Thank you. Please be seated.

Ms. McHugh.

DIRECT EXAMINATION

QUESTIONS BY MS. McHUGH:

Q. Thank you. Good morning, Mr. Delorey.

A. Good morning.

Q. Could you state and spell your name for the record, please.

A. Yes. Dean Delorey, D-e-a-n, D-e-l-o-r-e-y.

Q. And, Mr. Delorey, have you ever been a witness in a judicial or administrative proceeding before?

A. No.

Q. Would you briefly explain your position at Amalgamated Sugar Company?

A. Yes, I'm the director of environmental affairs. My primary focus is on environmental compliance. I've worked with the company for over 30 years. I'm familiar with the -- each of our sugar beet processing facilities, and so my primary work is environmental compliance.

Q. Are you familiar with Amalgamated Sugar's groundwater rights that divert from the Eastern Snake Plain Aquifer for one of its beet processing facilities?

A. Yes, I'm familiar with the Mini-Cassia facility.

MS. McHUGH: And, Mr. Director, I probably should have done this before I started my examination, but you should have in front of you exhibits for Amalgamated Sugar Exhibits 700, 701, 702, and 703, and the parties have stipulated to the admission of those four exhibits.

HEARING OFFICER: Based on Ms. McHugh's statement that the parties have stipulated the admission of these documents, I will receive the documents marked as Exhibits 700, 701, 702, and 703 into evidence.

(Exhibits 700 - 703 received.)

Q. (BY MS. McHUGH) And so you are saying that you are familiar with the water rights for the Mini-Cassia facility that Amalgamated Sugar operates?

A. That's correct.

Q. Would you just generally tell me where that's located?

A. The Mini-Cassia facility?

Q. Yes.

A. The Mini-Cassia facility is located just outside Paul, Idaho.

Q. And if you look at Exhibit 700 in the binder in front of you.

A. Yes.

Q. Does that exhibit accurately show the water

rights for the Mini-Cassia factory except for the small domestic rights that are not subject to curtailment?

A. Yes.

Q. Are you aware of the proposed curtailment of the aquifer back to December 31st, 1953?

A. Yes.

Q. And what was Amalgamated's response when they learned that there was a potential curtailment back to December 31st, 1953?

A. Well, our initial response was to get legal involved. We've hired -- we've worked with you, and you're our groundwater expert and water rights expert, so that was our initial response. And I understand based on the initial response was for us to join the Magic Valley Ground Water District and see if we could be covered under their mitigation plan.

Q. If you could look at Exhibit 701.

Do you recognize this letter?

A. Yes.

Q. And what is it?

A. This is a letter requesting to allow Amalgamated to join the Magic Valley Ground Water District as a mitigation-only member.

Q. Was there any consideration of Amalgamated trying to develop its own mitigation plan, or was the

only option to look at Magic Valley?

A. We just haven't had time to look at our own mitigation plan, so this was the most efficient way of getting covered under a mitigation plan.

Q. And what happened after this letter was sent to Magic Valley Ground Water District?

A. We were just awaiting response from -- to find out if we would be part of the Magic Valley Ground Water District.

Q. And did they respond?

A. Yes.

Q. And if you would look at Exhibit 702.

In addition to some other things, could you explain what Exhibit 702 does relative to Amalgamated's enrollment in Magic Valley Ground Water District?

A. The primary purpose of this is a request to IDWR for notice of mitigation and for us to be covered under the Magic Valley Ground Water District and their approved mitigation plan.

Q. And would you look at Exhibit 703.

Have you seen this document before?

A. Yes.

Q. And what is it?

A. This is a response from IDWR stating that Amalgamated could be part of the Magic Valley Ground

Water District.

Q. And what is your understanding of what will happen if Magic Valley Ground Water District is not found to be in compliance with their mitigation plan?

A. There's potential for curtailment of our junior water rights.

Q. And Amalgamated has a couple water rights that are senior -- if you look back at Exhibit 700 --

A. Yes.

Q. -- that are senior to the December 31st, 1953, priority date.

What would Amalgamated -- what would happen to Amalgamated's operation at Mini-Cassia if it lost its water rights junior to the 1953 date?

A. Well, I would just say this -- are you saying the junior or the senior?

Q. I'm saying: What would happen if you lost your -- the water rights junior to 1953?

A. Well, we would -- to be honest, we just need time to evaluate or do a water balance to understand what -- how it would impact our facility.

So we would have to have -- I'd have to have discussions with the plant manager there to know what -- in terms of what that potential -- if there would be any potential issues, so...

Q. And Amalgamated hasn't had -- hasn't done that yet or is in the process of doing that, I suppose, because it takes some time because the water use in your facility is pretty complex?

A. Yeah. The water balances are complex, so we just need the time to be able to evaluate the overall water balance in term of groundwater usage.

Q. And --

COURT REPORTER: Can you guys please slow down for me.

THE WITNESS: Oh, sorry.

Q. (BY MS. McHUGH) And when did Amalgamated become aware of the December 31st, 1953, curtailment date?

A. That was back in early May.

Q. And did you understand that there was a deadline that you needed to comply with at that time?

A. Yeah. Talking with you, I understand there's a deadline, yes.

Q. Okay. And was there any time for Amalgamated to evaluate its own mitigation plan and the impact of the curtailment date on its operations?

A. We haven't had time to evaluate a mitigation plan.

Q. Okay. And you're in the process of

understanding kind of how to react to curtailed water use, potentially?

A. Yeah. Based on my understanding and my short course on water rights, we would likely hire someone to assist us with a mitigation plan.

Q. And what is your understanding of whether Magic Valley Ground Water District is in compliance with its mitigation plan?

A. Magic Valley is not in compliance with their mitigation plan. And, likely, we need to put together a mitigation plan as a corrective measure.

Q. I guess what I was asking is: What's your understanding of whether Magic Valley Ground Water District is in compliance with its mitigation plan?

Do you know whether it's in compliance or not?

A. I guess, based on my discussions with you, I'm not sure that it's going to be approved. And they may not be in compliance with their plan.

MS. McHUGH: I have nothing further.

HEARING OFFICER: Cross-examination?

Nothing?

Okay. Thank you.

THE WITNESS: Thank you. Appreciate it.

HEARING OFFICER: Next witness?

Are we shifting now? Are these Surface Water

Coalition witnesses that are being called?

MR. THOMPSON: Director, I think we'd call Chuck Brockway next. We might take a minute off the record to get it set up.

HEARING OFFICER: Let's go off the record for a moment.

(Break taken.)

HEARING OFFICER: Back on the record.

So we're back on the record, and it appears that Mr. Brockway is ready. And I think when you start to question him and he responds, Mr. Thompson, perhaps we'll see his full image on-screen.

Mr. Thompson, you -- oh, I need to swear him in, I forget, as they are online.

Mr. Brockway, if you'll stand, please, if you can, and raise your right hand.

Thank you.

CHARLES BROCKWAY, Ph.D., P.E.,

called by the Surface Water Coalition, having been first duly sworn to tell the truth relating to said cause, testified remotely as follows:

HEARING OFFICER: Thank you. Thanks for audibly responding.

Mr. Thompson, you may question Mr. Brockway.

DIRECT EXAMINATION

QUESTIONS BY MR. THOMPSON:

Q. Good morning, Chuck.

Can you hear me okay?

A. Good morning, Travis. I can hear you. I can't see you, though.

Q. Okay. That's probably better for you.

A. That's fine with me.

Q. Can you please --

HEARING OFFICER: Just a minute.

Why is that? Do we know?

MS. TSCHOHL: I believe our signal is just a little bit weak, so it's prioritizing audio.

HEARING OFFICER: Okay. Well, we can see Brockway. But anyway, let's -- we'd rather see the witness than Mr. Thompson anyway; right?

MR. THOMPSON: Absolutely.

HEARING OFFICER: All right. Here we go.

Q. (BY MR. THOMPSON) Chuck, can you please state and spell your name for the record.

A. Charles G. Brockway; C-h-a-r-l-e-s, G., B-r-o-c-k-w-a-y.

Q. And where do you work?

A. Brockway Engineering.
Q. And what is your current occupation?
A. Civil engineer and owner of the company.
Q. Is your CV attached to what's been marked the Surface Water Coalition Exhibit 4?
A. Yes.
Q. And does that generally describe your education and work history?
A. Yes.
Q. Have you been qualified as an expert witness before IDWR in prior cases?
A. Yes.
Q. Can you generally describe what Exhibit 4 is.
A. It's an expert report that was prepared by myself as well as Erick Powell, who also works for Brockway Engineering, and Dave Shaw, ERO, relative to the Fifth Methodology Order and the As-Applied Order.
Q. And can you just generally describe what you were asked to do for that report.
A. We were asked to review the Fifth Methodology Order and the As-Applied Order and provide technical comments on those orders primarily as it relates to irrigated area, project efficiencies, and the baseline year.
Q. And it looks like this report is broken up

into parts by letters; is that correct?

A. Correct.

Q. And I'll try to just walk through some of these parts with you.

Could you please summarize your opinion for Part A, describe what that is?

A. So Part A has to do with a comparison of the project irrigated areas that the Twin Falls Canal Company utilized in the Fifth Methodology relative to the other members that are out there, primarily the 2011 and the 2017 products that IDWR has set forth based on the irrigated lands dataset.

So we did a GIS comparison of those three shapefiles. I'll call them the methodology acres, the 2011 acres, and the 2017 acres. Rasters filed were provided by IDWR for those --

COURT REPORTER: Okay. What kind of files? Can you repeat that? What kind of files were provided?

THE WITNESS: Raster files, r-a-s-t-e-r.

COURT REPORTER: Okay. You can keep going. Just maybe slow down a little bit.

THE WITNESS: All right.

Raster files were provided by IDWR. Shapefiles were created in ArcMap. The shapefile files were intersected to determine their differences.

And we found that the 2011 and 2017 shapefiles were nearly identical, so we focused on the 2017 difference shapefile. And we, to the extent we could, explored the reason for the differences between the 2017 shapefile and the methodology shapefile for the Twin Falls Canal Company.

So we found that there were a number of factors that entered into the differences between those two shapefiles, and those are outlined in the report: Primarily ditches, ponds, other waterways that were taken out in the '17; there were fields that were not, apparently, irrigated in the 2017 photo; some pivot corners that, apparently, were not irrigated.

And then the other primary category would be developed areas around the fringe of municipalities, as well as roadways.

So that's what we did for Part A.

Q. (BY MR. THOMPSON) And, Chuck, can you turn to Exhibit 5.

Do you have that?

A. Yes.

Q. And can you generally describe that, for the record?

A. So this is an exhibit that shows the acreage comparison between the 2017 and the methodology acres.

The red line is the Twin Falls Canal Company service area, and the blue lines in that map are the differences between the 2017 acres and the methodology acres.

Q. And is there a date for the photo that this is overlaid on?

A. It's the 2021 aerial photo.

Q. If you could turn to Exhibit 6 -- or is there anything else on Exhibit 5?

A. No.

Q. Could you please describe Exhibit 6, for the record.

A. Exhibit 6 is just an example of where the 2017 irrigated area shapefile omits some fields that are definitely irrigated. So this is not meant to be a comprehensive analysis by any means. We simply pulled a snippet from a section of the shapefile to illustrate that there's a half-pivot that was omitted from the '17 shapefile and a small field on the right side of the map that was also omitted.

Q. And does this exhibit depict what could be waterways or canals that have been taken out as well?

A. It does, yes.

Q. Can you describe Exhibit 7, for the record, please.

A. Exhibit 7, again, is a snippet that we pulled

from the overall shapefile just as an example, not meant to be comprehensive of another problem that we found with the 2017 and the 2011 shapefiles, which is that there are registration differences between the '17 and the methodology shapefile. And by that -- when I say "registration," by that I mean the rectification of the aerial photo with the section lines.

And what you see there, there is a shift. And so what that results in is a -- an inconsistency in the acres delineation. Because there are roadways that were rightly removed in the 2013 Methodology delineation and roadways that were rightly removed in the 2017 delineation. However, in the 2017 delineation they were not added back in, so we have a double-counting of acreages that are removed.

Q. Now, turn your attention to the left side of that exhibit -- I guess the -- I'll call it the west side of the map if we're looking north.

A. Yes.

Q. Do you see a number of thin yellow lines horizontal in between the fields.

Do you see those?

A. Yes.

Q. Do you know what those may be depicting?

A. Those are likely --

COURT REPORTER: Can you start your answer over again? Because I had trouble hearing.

THE WITNESS: Those are likely depicting waste ditches that were present when these areas were gravity-irrigated. And now that it's been converted to a center pivot, those ditches are not there.

Q. (BY MR. THOMPSON) And over to the southeast side of that exhibit, I see some curved yellow lines.

Do you have an idea what those might be depicting?

A. Those are likely depicting, again, ditches or laterals that were removed in the 2017 delineation.

Q. Chuck, in your opinion, is it appropriate to remove ponds and waterways and consider them to have no consumptive use?

A. No, not in terms of demand, because a canal and a lateral and a ditch all evaporate from the water surface and have evapotranspiration from the vegetation on the ditch banks, and those are real consumptive demands that have to be met by the project diversion.

Q. So even if that is not an irrigated acre, would that still be considered a use or a demand of the water diverted from the Snake River?

A. Yes.

Q. I'd like to turn back to Exhibit 4, Part B. I

think it begins at page 6.

A. Travis, if you wouldn't mind, if I could just hit one more thing on Part A before we leave that.

Q. No, go ahead.

A. Well, one primary category of areas that are removed from the 2017 delineation are developed areas around the fringe of municipalities. These represent, typically, rural or semirural subdivisions on the edges of cities that are being developed. I think there are just some comments to keep in mind relative to that.

One is that these subdivisions are entitled to the same share delivery as the agricultural field was prior to the development. So the canal company has to be prepared to meet that same demand, even though the area is being developed and the actual irrigated acreage is going down. So while the consumptive use may be going down, the demand will usually not. And this is just a function of the nature of small residential developments.

Water use occurs in these developments at a much higher rate over a shorter period. So to even get the demand to stay the same as it was with the agricultural use, you have to enforce a strict rotation. So I think that's just an important demand side of the equation to keep in mind relative to subdivision

developments.

Q. At least in Twin Falls County, are you aware of requirements when land is developed to retain surface water for continued irrigation use?

A. Yes. The City of Twin Falls has that ordinance.

Q. If we could turn to Part B, page 6.

A. Okay.

Q. Can you generally describe what you reviewed and what this part addresses?

A. This section describes a statistical analysis of the annual water diversions for the Twin Falls Canal Company from Water District 1 adjusted for wheeled or recharge water for the years 2000 through 2021.

Figure 4 in our report shows those data points as well as a statistical trend line calculated for the data. In order to assess whether there was a trend in the data, we subject the data to a Mann-Kendall analysis -- that's M-a-n-n, dash, K-e-n-d-a-l-l -- to determine if there was a statistically significant trend in the data, and we found that the data shows that there was no trend.

And let me clarify something I said earlier.

The whole dataset was from 1977 through 2022, but the wheeled and recharge adjustments were only from

2000 through 2021 --

COURT REPORTER: Wait, wait. I apologize, Mr. Brockway. I couldn't hear that very well, so, "The whole dataset was from 1977 through 2022, but the wheeled and recharge adjustments were only from"?

THE WITNESS: 2000 through 2021.

I'm sorry, I'll speak more clearly.

Q. (BY MR. THOMPSON) Anything else on that part before we move on, Chuck?

A. No, Travis, other than just to make the observation that when you do a trend analysis, it's important to be very careful because the period that is selected for analysis can have a strong influence on whether or not a trend is detected. So, for example, if one were to use the period 2005 through the current, the analysis would likely show a trend upward. If one were to use the period 1990 through 2005, it would likely show a trend downward. So we felt that in order to get the full picture of what was happening to the Twin Falls Canal Company demands, we used the entire period of record.

Q. That period would capture years of above average water supply and below; is that correct?

A. That is correct.

Q. I'd like to turn to Part D, page 11.

Could you generally describe that section and what you looked at?

A. Part D was a general exposition on factors that affect project efficiency in any canal company but in particular large canal companies like the Twin Falls Canal Company.

And, again, just to restate what has been stated before, the project efficiency is defined as the crop water need, which is the consumptive irrigation requirement times the irrigated acres divided by the adjusted diversion. And the Fifth Methodology Order spells that out.

The project efficiency is a lumped parameter that essentially accounts for all of the operational water requirements that are needed for -- to operate the project but that do not directly go toward meeting the evapotranspirative demand of the crop.

So for a large company, these would, of course, start with the on-farm efficiency, which ranges from roughly 50 percent for gravity methods to roughly 80 to 85 percent for a high-efficiency center pivot system. Then you, typically, have a significant amount of canal seepage or conveyance loss, which varies from project to project but may range from 20 to 30 percent of the total diversion.

Related to that, you have the required wetting of the canal system that has to occur during the spring, the initial startup of the project when the canal beds are dry.

Another big factor in a large company is the operational spill. And I think we heard Jay Barlogi testify to this earlier. This is always necessary to -- in order to deliver water to users within the system, particularly those near the tail end of the system.

That spill has to be maintained in order to allow the buffering, if you will, for variations in demand by irrigators on the system. If you don't have that spill, you won't be able to reliably serve the tail ends of the system.

Another big factor is variations in meteorological conditions which affect on-farm demand by irrigators. For example, if a cool, rainy period comes in, that could lead to rapid decreases of on-farm demand as irrigators turn off, but that doesn't mean that a large canal company can simply reduce its diversion at the river. If it tried to do that, if it tried to follow every little variation and meteorological demand, then when the ordinary warm weather returned, they wouldn't be able to ramp up quick enough to meet that demand of returns. It's only if that cool period were

sustained for, you know, a number of days, maybe weeks that the project diversions could, potentially, be adjusted.

The other factor in project efficiency that's been talked a lot about is the conversion to sprinkler irrigation, which has happened across the plain, including on the Twin Falls Canal Company. And I think we heard some testimony that the current estimated sprinkler irrigation percentage on the Twin Falls Canal Company is about 50 to 60 percent.

So the important thing to keep in mind on sprinkler conversion is that it always leads to an increase in on-farm efficiency; that is, a center pivot system will, as a general statement, but will be more efficient than a gravity irrigation system. However, that does not always, necessarily, translate to an increase in overall project efficiency for a large system. And there are two general reasons for that.

One is a sprinkler irrigation farm has more of an on/off demand structure as opposed to a more continuous demand for a gravity irrigation system. So the canal company has to be prepared to deal with that on/off situation. So they have to maintain, essentially, the same diversion in the canal that they had before. And this goes, again, back to the

operational spill requirement.

The second factor, which is not unique to Twin Falls but it certainly occurs, to a great extent, on the Twin Falls Canal Company system, is that conversion to sprinkler irrigation results in a reduction of incidental recharge from irrigation, which leads to a reduction in drain flows that are relied upon for redelivery. So with gravity methods, there's a lot of irrigation infiltration, a lot of subsurface storage that occurs, drain flows are sustained, and that water is released later in the season. And that drain water is treated as project water that can be rediverted to meet obligations downstream and, again, potentially later in time.

So if there's -- if that drain flow goes down, that water that can't be rediverted has to be made up from somewhere, and so it has to come from a river. So -- and this is all very case-specific, of course, but in the Twin Falls Canal Company tract, when irrigation began -- or since irrigation began, the groundwater levels have increased, you know, from a low of 20 to 30 feet up to more than 100 feet in some areas.

And so that resulted in waterways flowing that ordinarily didn't flow. It augmented existing perennial streams. It created seeps and springs that didn't exist

before. And it created -- or it necessitated the development of hundreds and hundreds of drain tiles and seep tiles to lower the water table and capture that water and redivert it downstream.

So that's a factor that has to be taken into account in the Twin Falls Canal Company tract. And it is too simplistic just to say, well, diversion to sprinkler automatically must lead to a commensurate increase in project efficiency.

Finally, the other big factor in any big canal company is that in the shoulders of the irrigation system, efficiencies naturally tend to be low. So when the water is turned on in April, a major amount of water is needed to charge the system, to fill the canals, and that may take several days.

Similarly, that high initial seepage rate in the canals has to be overcome. During this time the crop water need is relatively low and so the overall project efficiency is, therefore, very low.

Similarly, in the late season, say in October, crop water need is lower, but the water is still in the canal system in order to convey the water to the end of the system to meet those tail end delivery obligations. Those don't go away just because we're in the tail end.

And my understanding and my reading of the

Fifth Methodology Order is that it does incorporate some provisions to ensure that the reasonable in-season demand is not underestimated in April or overestimated in October.

So I'm sorry, that's a very lengthy explanation of what we did, but it was just an overview of all the factors that have to be taken into account for a large canal company much beyond simple on-farm efficiency and conveyance losses.

Q. Do you have any other comments about challenges with project efficiency in large open canal systems, or does that pretty much cover it?

A. I think that pretty much covers it.

Q. Would you agree that changes in irrigated acres is not the only factor that would affect canal project efficiency?

A. Yes.

Q. Chuck, could you look at Part F, beginning at page 13. Can you generally describe that opinion?

A. Yes. So in Part F, we looked at the effect of an irrigated area reduction on the reasonable in-season demand as calculated in the methodology order.

Now, obviously, as a general principle, if there are fewer acres irrigated, everything else being equal, you would need to divert less for those acres.

However, in the methodology, the diversion demands are taken as a given whatever the acres may be for a project. Those diversions and those acres are used to then calculate the project efficiencies -- again, as the consumptive irrigation requirement times the acres divided by the diversion. Then those project efficiencies are used to calculate the reasonable in-season demand adjustments.

So, again, it's -- the diversions -- the actual observed diversions are taken as a given. So if the -- say the -- for example, the true acres, if we knew that, were 5 percent lower, then the project efficiencies would also be 5 percent lower, and the reasonable in-season demand adjustments, in theory, wouldn't change.

Now, I had time to look into the guts of the reasonable in-season demand spreadsheet to see what it may actually be doing, but what I just described is an accurate statement of the equations that are found in the Fifth Methodology Order.

And then, of course, the baseline year demand doesn't depend on acres at all, it's simply a selection of a year from, again, actual observed conditions -- sorry -- actual observed diversions.

So I don't think it's valid to simply say,

well, if your true acres are 5 percent less than what you say they are, your demands ought to be 5 percent less. The equations and the methodology are not set up that way.

Q. So removing one irrigated acre would not automatically equal a reduction in that amount of water needed to divert at the river?

A. Correct.

Q. Anything else on that before I turn to Part G?

A. No.

Q. Could you generally describe the -- what was offered at Part G on page 14 of your report?

A. Well [unintelligible] --

COURT REPORTER: Mr. Brockway, can you start your answer over again.

THE WITNESS: Part G talks about supplemental groundwater usage, which is the usage of private wells for supplemental purposes on surface water irrigated lands, which does occur within the Surface Water Coalition members' service areas and within the Twin Falls Canal Company service area.

The percentage of land in the Twin Falls Canal Company service area is -- that is served by supplemental wells, in my experience, is fairly low due to the overall reliability of the surface water supply

within the company.

A couple of things that should be taken into account when determining -- or evaluating the effect of supplemental groundwater usage:

One is that these groundwater supply systems, in my experience, on a particular farm, they are rarely nice, clean-cut, stand-alone systems. They're always hydraulically interconnected with the surface water supply systems somehow. There's usually multiple fields, multiple pumps and booster pumps and application systems that may be interconnected and used in some complicated and sometimes mysterious fashion that's only known to the irrigator.

And so, really, it's hard to assess -- to make an accurate assessment of the degree to which groundwater usage is employed. Really, to do it right, you'd almost have to ground truth each individual system of the farm operator.

The second point to make is that, similarly to what I said in the previous section, if you could quantify an acreage or an equivalent acreage, if you will, of land that was supplied by groundwater, that could, potentially, reduce the number of acres that are irrigated with surface water.

But, again, since the diversions are taken as

a given, that would simply reduce the project efficiency a little bit, which is based on those diversions, and those lower efficiencies would then be utilized in the methodology to calculate the reasonable in-season demand adjustments.

So, again, it's not valid, I don't think, to say there's just a one-for-one reduction if we were to identify the acres that are irrigated with groundwater based on the methodology equations.

Q. (BY MR. THOMPSON) Chuck, just one last part, I guess.

Could you look at Part H and describe opinions offered in that section?

A. Yes. Part H talks about the baseline year selection. And it is a brief recapitulation of the requirements for selection of the baseline year in the methodology order and a reproduction of Matt Anders' chart that was presented on November 11th, 2022, to the technical working group, where it was indicated that 2018 and 2020 were the only years that met all of the evaluation criteria, and those are highlighted in yellow; and then just a brief discussion as to the position, if you will, of 2018 within the overall dataset.

And there's different ways to do that. You

can look at a ranking analysis. You can look at different probability distribution fits. We chose to fit a normal distribution to the annual diversion volume data, which is a reasonable fit.

And, based on that, the 2018 year, which was selected by IDWR in the methodology, was at the 84th percentile. So it was certainly above average, and it was reasonably conservative, but it wasn't an extreme year like the highest year ever or the 95th percentile or 99th percentile.

So, again, consistent with the goal of being conservative to protect the senior surface water right holders, we felt that an 84th percentile was, again, reasonably conservative but not extreme.

Q. Chuck, in your opinion, I guess, does -- how that is used at the beginning of the year, protecting senior water rights in the event the water year does not turn out as forecast, is that a reasonable approach?

A. I think it's reasonable.

Q. That's all of the questions I have, Chuck.

MR. THOMPSON: I would move to admit Exhibits 4 through 7.

And we've tendered Dr. Brockway as an expert on the subjects addressed in the report.

COURT REPORTER: I'm sorry. I didn't get

that.

"And we tender Mr. Brockway" --

MR. THOMPSON: Dr. Brockway as an expert on the subjects addressed in the report.

HEARING OFFICER: It's my understanding that Mr. Brockway has been recognized as an expert through stipulation of the parties, so he is so recognized.

Any objection to the admission of the documents marked Exhibits 4 through 7?

Hearing no objection, the documents marked 4, 5, 6, and 7 are received into evidence.

(Exhibits 4 - 7 received.)

HEARING OFFICER: Mr. Simpson?

MR. SIMPSON: Mr. Hearing Officer, if I could have a moment with Mr. Thompson?

HEARING OFFICER: Sure.

MR. FLETCHER: Go off the record just a second.

HEARING OFFICER: Let's go off the record.

(Discussion held off the record.)

HEARING OFFICER: Let's go back on the record.

Further questions, Mr. Thompson?

MR. THOMPSON: No, thank you.

HEARING OFFICER: Any further questions from the Surface Water Coalition?

MR. FLETCHER: No, thank you.

HEARING OFFICER: Okay. What do we want to do at this point? Do we want to break for 15 and give the parties a chance to regroup and prepare?

All right. Let's break and come back at 10:30.

(Break taken.)

HEARING OFFICER: Let's go on the record, Andrea.

Mr. Brockway, are you there?

THE WITNESS: I am here.

HEARING OFFICER: Good. It looks like Mr. Budge has come forward for cross-examination.

Mr. Budge, you may examine.

CROSS-EXAMINATION

QUESTIONS BY MR. BUDGE:

Q. Good morning, Chuck.

How are you?

A. Hey, TJ. Doing good.

Q. Chuck, how long have you worked for Twin Falls Canal Company?

A. Oh, goodness, probably since the '90s.

Q. And just generally speaking, what type of work do you do for the company?

A. We work as needed, whatever they may need relative to the water rights or water supply evaluations or general advice at board meetings. A little bit of everything.

Q. Do you do fieldwork for them as well, analysis out in the field?

A. No, haven't really done that, at least recently.

Q. Let me have you turn to your expert report, Exhibit 4.

A. Yes.

Q. And if you'd turn to -- the pages aren't numbered, but I guess the second page or the first page with text, Section A: "Evaluation of TFCC Project Evaluation Acres." I've got some questions about that section.

A. Yes, I'm there.

Q. In that first paragraph you referred to the acreage used in the Fifth Methodology Order, the 194,732-acre figure. And then you say: [As read] "This is based on detailed aerial photo inspection and a delineation created by Twin Falls Canal Company consultants in 2013."

Did you participate in creating that shapefile?

A. I may have had some input into that, but I believe the primary consultant on that was Dave Shaw.

Q. Okay. Are you familiar with that GIS shapefile?

A. Yes.

Q. Are you sufficiently familiar with it that you're comfortable testifying about it today, or is that something I need to discuss with Dave?

A. Well, you know, I haven't looked at every part of it, for sure, but I can certainly take a stab at it.

Q. Are you familiar with the parts of that shapefile that are included in your expert report?

A. Yes.

Q. Okay. Let me have you turn to that page of your report. I think it's page 5.

A. Yes.

Q. Page 1 of the report says that this was created with a detailed inspection of photo or satellite imagery aerial or satellite imagery.

Can you explain the process that was used to create the 2013 shapefile?

A. That's a better question for Dave, but I think it just involved examination of the aerial photo and drawing lines on the map, if you will, in the GIS system to represent areas that were irrigated and excluding

those that did not appear to be irrigated.

Q. Okay. And looking at Exhibit 4, there's an excerpt of a portion of Twin Falls Canal Company's service area. And that image at the bottom, at the footer, says it's showing the difference between the 2013 and 2017 area. And I want to make sure that I understand correctly what it depicts.

The yellow areas marked in that image, are those areas that the 2017 irrigated lands dataset shows as not being irrigated but the 2013 GIS shapefile shows as being irrigated?

A. That is correct.

Q. So if we were looking solely at the 2013 GIS shapefile, all of the land in yellow would have, you know, been blue, essentially?

A. Yes.

Q. In terms of the process to generate the 2013 GIS shapefile, your request is that I discuss that with Dave Shaw?

A. I think he can shed more light on it than I can, yes.

Q. Okay. Do you know if, in 2013, those involved in that, if they excluded, from the irrigated area, what I would call rural farmsteads? They're, like, homes out in the country that you can see some of those, you know,

on this image?
A. I don't know.
Q. Do you know if they compared Twin Falls Canal Company delivery records to see if the water deliveries corroborated the aerial imagery?
A. I don't know.
Q. Do you know if there was any field verification involved with water users?
A. I don't know.
Q. Do you know if they took into account groundwater rights within the company's service area?
A. I don't know.
Q. Do you know if they took time to carve out private roads and subdivision roads, things of that nature?
A. It does appear so because they are excluded.
Q. There's some roads excluded?
A. It does appear so, yes. Again, certainly did not look at every square inch, but it does appear that roadways including major roads and driveways were excluded.
Q. Do you utilize GIS mapping frequently as part of your professional work?
A. Yes.
Q. If you were asked by Twin Falls Canal Company

to prepare a precise map that depicted irrigated acres, is that something you could do?

A. Yes.

Q. Twin Falls Canal Company has not asked you or your firm to do that?

A. No.

Q. Let me have you turn to page 4 of your report. I understand this is also an excerpt -- an image showing an excerpt of Twin Falls Canal Company service area; is that correct?

A. Yes.

Q. Did you create Exhibit 4?

A. Yes.

Q. And I understand the land that's highlighted in blue on Exhibit 4, that's land that is shown as irrigated in the Department's 2017 irrigated lands dataset?

A. Correct.

Q. And it looks like the irrigated lands dataset carves out things like roads, ditches, farmsteads, and some fields that were not irrigated at that time?

A. Correct.

Q. Do you know why the 2017 irrigated lands dataset was created?

A. Not exactly.

Q. Do you know who created it?
A. Well, my understanding is it was the Department staff.
Q. Do you understand they created that for use in the ESPA model?
A. I have heard that testimony, yes.
Q. Are you familiar with the ESPA model?
A. Yes, somewhat.
Q. Do you understand that that dataset is used in the ESPA model?
A. That is the testimony I've heard.
Q. You don't have personal knowledge of that?
A. No.
Q. Would you agree that when Department staff is evaluating irrigated acreage, their sole priority is to make sure that the data is as accurate as possible?
A. Well, I will give them that benefit of the doubt, TJ.
Q. You would agree that Department staff don't have any self-interest in showing more or less acreage than is actually irrigated?
A. Not that I'm aware of.
Q. If I just make a rough comparison of the 2013 GIS shapefile versus the 2017 dataset, would it be fair to say that the 2013 GIS shapefile was created with more

of a brush approach, whereas, the 2017 dataset was created with more of a scalpel approach?

A. Oh, I'm not sure I would characterize it that way. Again, I haven't been able to examine every bit of both datasets.

Q. So I'm just -- Chuck, I'm just looking at the GIS -- the 2013 shapefile, and the only thing that's excluded are what appear to be two public roads. And then if I look at the 2017, it's much more precise. There's a lot of smaller areas and ditches and homesteads that are excluded.

Would you agree that the 2017 process was a more precise process?

A. Well, I would agree that it does exclude more areas.

Q. But your opinion today is that the 2013 GIS shapefile is a more accurate depiction or analysis of irrigated acreage than the 2017 irrigated lands dataset?

A. Well, I think it goes back to my direct testimony as just one example. I don't think that ditches and laterals should be excluded, because they are a real consumptive demand that has to be met by the system. So that would be one quibble.

Another quibble with the 2017 would be these --

Q. Hey, Chuck. Chuck.
A. Yes, sir.
Q. I'll just interrupt because I understand that. But just on the whole --
A. Yeah.
Q. -- is it your testimony today, this is your opinion, that the 2013 GIS shapefile is a more accurate representation of irrigated lands in Twin Falls Canal Company than the 2017 irrigated lands dataset?
A. I don't have enough information to say that, TJ.
Q. Okay. So --
A. My testimony is that -- yeah. Go ahead.
Q. Okay. So you're not rendering an opinion that the 2013 shapefile is more accurate than the 2017 dataset?
A. Correct.
Q. Do you know why Twin Falls paid its consultants to develop the 2013 GIS shapefile?
A. Not exactly.
Q. You understand that that analysis was done prior to the 2015 settlement agreement between IGWA and the Surface Water Coalition?
A. Yes.
Q. You understand at that time, the way IGWA

provided mitigation is by renting and delivering storage water to members of the Surface Water Coalition?

A. Yes.

Q. You understand that if Twin Falls Canal Company could demonstrate a greater number of irrigated acres than had been used previously in the methodology order that the methodology order would calculate higher water demand for Twin Falls Canal Company?

A. If the order calculation methodology stayed the same, was not changed by the Department, then, yes.

Q. And so you understand that if Twin Falls Canal Company could show higher acreage, the methodology would create larger mitigation obligations, which means IGWA would have to provide larger amounts of storage to Twin Falls Canal Company to avoid curtailment?

A. Well, again, this goes back to my direct testimony relative to the equations and the methodology that are employed. The diversions from the river are taken as a given, whatever the acres may be, so --

COURT REPORTER: Wait. Mr. Brockway, sorry, I missed something. "The diversions from the river are taken as a given, whatever"?

THE WITNESS: Whatever the acres may be.

COURT REPORTER: Okay. And then you can continue.

THE WITNESS: If the true acres were larger, the same diversions would be used to calculate the project efficiencies. So the project efficiencies would just be a little bit higher. And then those efficiencies would be used in the reasonable in-season demand calculation.

Q. (BY MR. BUDGE) So, Chuck, do you agree that it would benefit Twin Falls Canal Company to be able to have a -- have the methodology order use as large of an irrigated acreage figure as possible?

A. No, for the reason I just described.

Q. Okay. You understand that the 2013 GIS shapefile was developed solely by Twin Falls Canal Company personnel and the company's consultants?

A. That's my understanding.

COURT REPORTER: "That's my understanding"?

THE WITNESS: That's my understanding.

Q. (BY MR. BUDGE) Chuck, I apologize there's occasions when we can't -- when there's like a technical glitch, and we don't hear your testimony, so if needed, we'll just ask you to repeat the answer.

A. I understand. That's fine.

Q. We did catch that one.

That process of creating the 2013 shapefile, that was not a collaborative process with the Department

of Water Resources?

A. I don't know that for sure, but I don't think it was. It may have been.

Q. And that was -- there was no collaboration with groundwater users or others outside of the company besides the company's consultants?

A. Not that I'm aware of.

Q. It was not performed by an independent third party?

A. You mean other than Twin Falls Canal Company consultant?

Q. Correct.

A. Not that I know of.

Q. And it was not presented in a hearing where it was subject to scrutiny by the parties to this case?

A. I don't know.

Q. Okay. Let me have you flip back to page 2 of your report. And you'll see at the bottom of page 2, there's a series of numbered paragraphs where you identify factors that influence the determination of acreage within a large canal company.

Do you see that?

A. Yes.

Q. I want to ask you about some of those. Paragraph 1 discusses ponds and other waterways whether

private or company owned.

You understand that Twin Falls Canal Company's water rights are for irrigation; correct?

A. Correct.

Q. And you would agree that the Department should not be curtailing groundwater irrigation rights to deliver -- so that Twin Falls could deliver water to private ponds and waterways?

A. Well, let me clarify. What I mean is privately owned irrigation ditches and ponds used for an irrigation system.

Q. Okay. So to clarify your report, you're not talking about other types of waterways; you're talking solely about what we would call regulating ponds for irrigation purposes and then irrigation ditches?

A. Correct.

Q. Let me ask you about No. 2. You refer to fields not being irrigated some years, and then you say: "Fields may have been left idle due to a limited water supply."

Were you here when Jay Barlogi testified that he's not aware of any fields that have been dried up due to lack of water?

A. Yes.

Q. You don't have any personal knowledge as to

whether any farmer within Twin Falls Canal Company has dried up a field because they did not have adequate water?

A. No.

Q. And you understand that fields are sometimes left idle as part of a fallowing program?

A. Yes.

Q. You understand that fallowing is sometimes used as part of a crop rotation to maintain soil health?

A. Yes.

Q. And every year there's going to be some number of acres within Twin Falls Canal Company's service area that are idled as part of a fallowing program; right?

MR. THOMPSON: Objection; foundation.

THE WITNESS: I think that's a fair statement.

MR. BUDGE: There was an objection from Travis.

HEARING OFFICER: Oh, I didn't --

MR. THOMPSON: Sorry.

HEARING OFFICER: I heard a voice.

MR. BUDGE: I should have just kept going.

MR. THOMPSON: I objected to the foundation of the question. I think Mr. Budge was asking about every year that there are acres in a fallowing program, and I didn't see the foundation for that question.

HEARING OFFICER: Okay. I'm not sure all of that was audible, but, Andrea?

MR. THOMPSON: You can sustain it.

(Record read by reporter.)

HEARING OFFICER: Overruled.

Q. (BY MR. BUDGE) Chuck, let me ask you about paragraph 4. And you're discussing there development of ag land into residential subdivisions. There's been quite a bit of that happen around Twin Falls in the last decade or two; right?

A. Yes.

Q. You give an example that if you have a 40-acre parcel that's converted to a subdivision, you may end up with, you know, half of that land actually being irrigated?

A. Yeah.

Q. This is just a hypothetical, I understand?

A. It is, yes.

Q. And the remaining 20 acres that irrigation is typically going to consist of grass and maybe some, you know, gardens or other landscaping?

A. Yes.

Q. Is it your testimony that grass consumes twice as much water as other crops grown on Twin Falls' tract, like hay, corn, sugar beets, et cetera?

A. No.
Q. So you would agree that the amount of crop ET would decrease when a 40-acre tract of farmland is converted into a residential subdivision?
A. Yes.
Q. I think your testimony was that the timing of irrigation changes because subdivision water use typically happens during a shorter period of time with maybe higher diversion rates?
A. Yeah, that is correct. Just the nature of small residential systems. For example, in a typical quarter-acre lot with a sprinkler system, each circuit may be designed for 18 gallons per minute, let's say, which is 2 inches -- 2 miner's inches, or about 3.2 shares in Twin Falls Canal Company.
I mean, that's about 12 times the amount on strictly a per-acre basis as compared to an agricultural parcel. It's just because small residentials have an extremely high flow rate for short periods of time. So unless there's a strict rotation in force, the actual demand will go up compared to an agricultural scenario.
Q. And in that context when you refer to "demand," you're referring to diversion rate?
A. Correct.
Q. You're not saying that the actual crop water

need, or ET, goes up. That actually goes down; right?

A. That actually goes down.

Q. Okay. Let me have you turn to the next page. In Item 5 you talk about land being fallow because the land is not fully covered by canal shares.

Do you understand that Twin Falls Canal Company does allow stockholders to buy and sell shares within the company?

A. Yes.

Q. So a farmer could sell shares they didn't need or if they needed income or something, but a farmer could sell part or all of their canal shares?

A. I believe that's the case, subject to company policies.

Q. And if a farmer utilized a fallowing program where, say, you know, one-fourth of its farm was fallow every year, it may not -- that farmer may not need enough shares to irrigate the whole farm every year?

A. I'm sorry, TJ. Run that scenario out again. I'm sorry.

Q. If a farmer utilizes a fallowing program as part of their crop rotation and leaves 25 percent of their farm fallow each year, that farmer may not desire or need to keep shares sufficient to irrigate the entire farm every year; correct?

A. He may not, yeah. Or he may keep his full shares and just use them on the remaining land.

Q. Okay. Let me ask you about paragraph 7.

You say: "The company's obligation is to be prepared to deliver water under all outstanding shares regardless of the status of the underlying land."

You're not testifying that when it comes to making curtailment decisions the Director should assume that parking lots, roads, driveways, and things like that are irrigated? You're not rendering that opinion, are you?

A. No, that's not what it says there.

Q. In terms of what the company needs to be prepared to deliver water to, they need to deliver water to land that's actually irrigated. Would you agree with that?

A. From the company's standpoint, their obligation is to deliver a particular user's shares at his authorized headgate. And what the user does with those shares or how many acres he irrigates with them is not governed by the company or even usually known by the company.

Q. So if the company has a tract of land in its service area that was formerly irrigated farmland and now it's a strip mall, should the company divert

water -- is it your opinion that the company should plan to divert water from the Snake River for delivery to that strip mall?

A. Well, I don't know. That's an extreme scenario. I mean, that would be a question for the company.

I mean, if a shareholder had shares and had a headgate, maybe his ditch goes somewhere else, to some other land that's being irrigated. I don't know.

Q. Yeah, but I'm talking about shares that are associated with the strip mall. You've put in your report that the company has to be prepared to deliver water to that strip mall.

Is it your testimony that the Director should curtail, potentially, junior groundwater users so that the company can deliver water to a strip mall?

A. No, I'm not making any opinion as to what should be curtailed or not curtailed.

Q. Would you agree that no irrigation occurs on a strip mall?

A. Correct.

Q. So you would agree, then, when crop water need is calculated, there shouldn't be an ET calculation or a demand calculation for land that's not actually irrigated?

A. The ET calculation could take that into account; that's right.

Q. Okay. And you would agree that the Department should not assume that acres that aren't capable of being irrigated -- they should not treat those as irrigated acres in the methodology order?

A. I think that's reasonable.

Q. At the bottom of page 2 -- and I do see a page number at this point -- you've got -- that last paragraph there, there's one sentence.

And at the bottom of that, you say: "the acreage used in the Fifth Methodology is reasonable, and there is no clear and convincing evidence at this time to adopt a different figure."

A. Yes.

Q. You're not a licensed attorney, right, Chuck?

A. That's right.

Q. And you understand that "clear and convincing evidence" is a legal standard?

A. Yes.

Q. And you understand you're not qualified to render opinions as to satisfaction of legal standards?

A. Yes.

MR. BUDGE: Director, based on the witness's testimony, I would move to strike, from his report, the

bottom paragraph on page 2 and have it redacted from the record.

HEARING OFFICER: I'll deny the motion. I think there's been enough reference in previous material, both submitted by the groundwater users, referring to "clear and convincing evidence" that I'm not going to start striking these references from individual reports.

Denied. Go on, Mr. Budge.

MR. BUDGE: Okay. And I will just note, for the record, that the groundwater users expert reports do not reference the clear and convincing standard. They do reference what is reasonable.

And I appreciate the ruling but did want to make that clear.

HEARING OFFICER: Well, certainly reasonable if you want to start -- if you want to start distinguishing between one legal standard and another, as it being appropriate, Mr. Budge, we can go through that. But the ruling is denied.

Go on, please.

MR. BUDGE: Okay.

Q. (BY MR. BUDGE) Chuck, are you familiar with the METRIC ET dataset used by the Department?

A. Somewhat.

Q. What's your experience with that dataset?
A. I personally don't have much experience with it, TJ --
Q. Okay.
A. -- just as a recognition that it's out there, general knowledge of how it's calculated, but not much direct experience.
Q. Thanks, Chuck. I appreciate that.
Chuck, were you involved or did you assist Twin Falls Canal Company in resolving their water right claims in the Snake River Basin Adjudication?
A. Yes.
Q. I understood from Mr. Barlogi's testimony that there was a process where the company and the Department worked together to identify the number of acres that were irrigated for purposes of the adjudication.
Were you involved in that process?
A. That was a long time ago, but I do remember being involved somewhat.
Q. Okay. Do you recall reviewing satellite imagery and working with the Department to determine the number of acres decreed under Twin Falls' water rights?
MR. THOMPSON: I'd like to lodge an objection, Director.
I guess the line of questioning regarding the

pre-partial decree process in the SRBA, I believe, is beyond the scope of this proceeding, isn't relevant.

We've had clear court decisions that say conjunctive administration is not a place to readjudicate a water right, so I think anything predecree, going into the process, what was done, is beyond the scope and irrelevant.

HEARING OFFICER: Well, thank you for the objection. I'll allow some exploration in this area, recognizing your statement is correct.

Mr. Budge, go ahead.

Q. (BY MR. BUDGE) Yeah, Chuck, were you involved in preparing the GIS shapefiles that were used in the -- as part of the adjudication to define irrigated acres for Twin Falls Canal Company?

A. So, again, TJ, that was a long time ago, but my recollection is we had -- we did some work in aerial photo analysis.

I think -- my recollection was this may have been pre-GIS days, so it may have been some hand calculations. But, I'm sorry, I don't have a clear recollection of that.

Q. That's fine. And I appreciate that.

Let me have you turn back to your expert report, and we'll flip to page 14, I believe, involving

supplemental groundwater use.

A. Yes.

Q. I am looking at heading G on page 14 in the first paragraph. And you discuss there that there are groundwater wells used for supplemental purposes within Twin Falls Canal Company's service area, but the percentage of the water supply is generally low due to the overall reliability of the surface water shares.

Do you understand, Chuck, that the methodology order does not account for supplemental groundwater use?

A. Yes.

Q. And you understand that the methodology order assumes that every acre within the company is irrigated solely with surface water?

A. I would have to examine the methodology order closely, TJ, but I think that's probably implicit in the analysis, yes.

Q. Have you analyzed how many acres within Twin Falls Canal Company have supplemental groundwater rights?

A. No.

Q. Do you have a rough idea?

A. No.

Q. Is this something you could do if you were asked?

A. We could analyze the areas that are covered by groundwater rights. That would be what could be done without field investigation.

Q. And you could do that analysis because the Department has, in its database, groundwater right points of diversion and places of use?

A. Correct.

Q. And then you would have to work with the canal company to figure out how much of that groundwater irrigated land also receives surface water?

A. Yes.

Q. It's the --

A. I'm sorry. We work with the canal company and the water user.

Q. Okay. It would be both; you would have to have the canal company's cooperation so you know where they deliver water, and then you may also want to work with the individual farmers?

A. Correct.

Q. Without access to Twin Falls Canal Company's water delivery records, there wouldn't really be a very good way of calculating or determining which acres receive supplemental groundwater use?

A. I don't understand the question, TJ.

Q. So in order to evaluate supplemental

groundwater use in a reliable fashion, it would be important to know which parcels of farmland the company delivers surface water to?

A. Yes.

Q. And that's data that's held by the Twin Falls Canal Company; that's not data that's held by the Department of Water Resources; correct?

A. Correct.

Q. So that's not data that IGWA or other groundwater users have access to?

A. Not that I know of.

Q. So you would agree, then, that neither IGWA or the other groundwater users in this case even have access to the data that would be needed to analyze supplemental groundwater use within the company?

A. Well, that's a broad --

COURT REPORTER: Mr. Brockway, can you start your answer again, I apologize.

THE WITNESS: That's a broad question. Some analysis could probably be done given available public data. But, yes, I believe to the extent that actual share locations and delivery locations are needed to make that analysis. I'm not sure that's public information.

Q. (BY MR. BUDGE) So it would require Twin Falls

Canal Company's cooperation for somebody to do that type of analysis; correct?

A. I think to do it right, yes.

Q. Okay. So for that to be done right, the canal company holds the cards, essentially?

A. I don't know. That's a judgment call.

Q. Let me ask you a little bit about the Fifth Methodology Order.

I assume you've read that?

A. Yes.

Q. Have you been familiar with the methodology order prior to your preparation for this case?

A. Somewhat.

Q. Do you generally understand how the methodology functions as defined in the order?

A. I think so.

Q. If you'll turn to Exhibit 300 -- and I believe Mr. Thompson emailed that to you today -- that's the Fifth Methodology Order.

A. Yeah, I have it.

Q. And then, Chuck, if you could flip to page 9 and draw your attention to paragraph 19.

A. I am there.

Q. Do you see in that paragraph where it talks about current conditions needing to be represented by

the net area of irrigated crops?
A. I see that.
Q. You understand that that net area is referring to actual irrigated acreage?
A. I'm not sure of the definition of the net area, frankly.
Q. Okay. Do you understand that the methodology order uses irrigated acreage to calculate water demand for members of the Surface Water Coalition?
A. Yes.
Q. And so you would agree that it's important to have --
A. Partially.
Q. I'm sorry, you would agree that it's important to have accurate irrigated -- accurate irrigated acreage information for use in the methodology by the Department?
A. Yes, I would agree that more accuracy is better.
Q. Thank you.
I believe Exhibit 337 was also emailed to you today. It's a collection of letters from legal counsel for certain members of the Coalition to the Director.
A. Yeah, I have that.
Q. Are you aware that members of the Surface

Water Coalition are required annually to submit their irrigated acreage to the Department for use in Step 1 of the methodology order?

A. Yes.

Q. Have you seen these letters before?

A. No.

Q. Does the company ever consult with you about its irrigated acreage in connection with preparing these letters?

A. No.

Q. So you don't maintain any type of database or analysis of irrigated acreage within the company?

A. No.

Q. Let me ask you just a couple other questions about the supplemental groundwater usage portion of your expert report. That's Exhibit 4, I'm on page 14, Section G.

A. Yes.

Q. That paragraph at the top that I quoted earlier states that "the percentage of water supply provided by groundwater is generally low due to the overall reliability of the surface water shares."

Can you explain that sentence?

A. The Twin Falls Canal Company water supply is generally reliable, obviously, during the shortages.

However, there hasn't been the need to develop supplemental groundwater on the Twin Falls tract as there has been, for example, on the North Side tract.

COURT REPORTER: On the what tract?

THE WITNESS: North Side.

COURT REPORTER: Thank you.

Q. (BY MR. BUDGE) So, Chuck, you're aware of other surface water delivery entities where there's larger percentages of supplemental groundwater wells?

A. Yes.

Q. And that typically occurs when the surface water supply is less reliable?

A. That's been my observation and experience.

Q. Okay. Were you here for the testimony of Jay Barlogi earlier this week?

A. Yes. I had to step out for a few moments of it, but I think I heard the bulk of it.

Q. During part of his testimony, I was asking him about the types of crops grown within the company's service area, and there were quite a few, including wheat and barley.

Do you recall that part of his testimony?

A. Yes.

Q. And you understand that wheat and barley are typically harvested in, you know, early August?

A. Yes.
Q. And you would agree that once those crops are harvested, the crop water need within the company would decline?
A. Yes.
Q. Mr. Barlogi also testified about some of the efficiencies that the company has implemented in recent years.
Do you remember that part of his testimony?
A. Yes.
Q. He mentioned automation and the Kinyon Pond and also some lining projects.
Do you recall that?
A. I do.
Q. One of the projects he mentioned was a large canal lining project that happened in 2019 on the High Line Canal.
Is that something you are familiar with?
A. No, other than to know that it occurred.
Q. Okay. And then he mentioned an upcoming large lining project that's, I think, slated for 2024.
Is that something you're involved with?
A. No.
Q. Okay. You understand when a canal company is lined, that's typically done to minimize or eliminate

the amount of seepage out the bottom of the canal?

A. Yes.

Q. And so if the water is diverted into the canal, that results in a decrease in the total amount of water lost through the bottom of the canal?

A. Yes, that's the objectives.

Q. And when those lining projects are implemented, the canal efficiency improves; correct?

A. Correct. Well, sorry, TJ. Efficiency is calculated lots of different ways. Let's say it this way: The conveyance loss from the canal decreases.

Q. That's a better way of saying that. Thank you, Chuck.

And I sometimes hear canal companies say that through these types of projects, they're able to stretch their water further. Would that be fair to say?

A. Generally that's true.

Q. Let me ask a few questions about the increase in sprinkler irrigation efficiency within Twin Falls Canal Company, and I believe you mentioned that it's gone from about 25 percent to 50 to 60 percent.

Was that based on Mr. Barlogi's earlier testimony in this case?

A. Yes.

Q. And you testified that when a shareholder

converts from flood irrigation to sprinkler irrigation, less water is applied to the farm field?

A. I think that's generally true. The on-farm efficiency can improve.

Q. And then the corollary to that is on that particular field, less water is diverted from the canal?

A. To that particular field. The same shares may be diverted to other lands, but for that particular field that got converted, generally that on-farm diversion will increase.

Q. And also as a result, you have less wastewater runoff under sprinkler irrigation than flood irrigation?

A. Generally, yes.

Q. And wastewater is typically collected in drains or what's sometimes called waste ditches; is that right?

A. Yes.

Q. And Mr. Barlogi testified that some of those drains or waste ditches come back into the canal system. Are you aware of that?

A. Yes.

Q. And others leave the system. They may discharge into a creek or into the canyon or something like that?

A. Yes. They may be lost from the system, if you

will.

Q. And so when a farmer converts from flood to sprinkler irrigation, there's some amount of system loss that is essentially saved to the system.

Would you agree with that?

A. When a farmer converts -- I'm sorry, say that again.

Q. When a farmer converts from flood to sprinkler irrigation, there's some amount of system loss that is saved to the system?

A. Well, by system loss, if you mean runoff from his farm.

Q. Yeah, that's --

A. I assume that's what you mean.

Q. That's a better way of saying it.

So there's some amount of farm runoff that is conserved or saved?

A. Or it decreases, the runoff decreases.

Q. And there's also a decrease in the amount of deep percolation or aquifer recharge when somebody converts from flood to sprinkler irrigation?

A. Yes.

Q. Let me ask a few questions about project efficiency.

You testified there's many factors that affect

project efficiency, including canal seepage, wetting of banks, operational spills, and sprinkler irrigation.

Do you recall that testimony?

A. Yes.

Q. And you testified that these and other factors should be taken into account when analyzing project efficiency?

A. When making a determination on evaluation or a judgment as to the reasonableness of a calculated efficiency. They're all factors that contribute to the need for water diversion that does not directly go to meet the ET of the crop.

Q. Okay. And you understand that the methodology order does not take any of these factors into account when it calculates project efficiency for members of the Surface Water Coalition?

A. Not directly, that's right.

Q. If I understood your testimony right, the methodology order uses an equation that simply divides the diversion volume by crop water need?

A. It divides the crop water need by diversion volume.

Q. I have that backwards. Thank you for the correction.

And so if the conveyance efficiencies of

Twin Falls Canal Company improve, the methodology order makes no change in the reasonable in-season calculation?

A. That is correct. Yes. That's a true statement.

Q. So when Twin Falls Canal Company installed their canal lining project in 2019, the methodology order didn't make any adjustments to account for that improvement?

A. Well, not directly, but to the extent that may have showed up as a change in the diversion volume, then the equation that you just spoke of would have picked it up.

Q. So if the company had reduced its diversion volume as a result of that improvement, then you would have seen some change in the diversion volume input into the methodology?

A. And some change in the efficiency, project efficiency.

Q. Okay. And we talked earlier that there's been a pretty substantial increase in the amount of sprinkler irrigated land, from 25 percent to 50 to 60 percent.

The methodology order does not do anything to directly account for that added efficiency?

A. Not directly.

Q. So if I understood your testimony, if

Twin Falls Canal Company becomes more efficient in using water, the equation used in the methodology order does not change the reasonable in-season demand?

A. Not directly, only if it shows up as a change in the diversion plan.

Q. And if irrigated acreage declined in the company, the methodology order would not change the reasonable in-season demand volume?

A. It's the same answer. The diversion volume is the baseline -- basis for the methodology calculation of the project efficiency.

So it's crop water need, which is a consumptive irrigation requirement, times irrigated area divided by the diversion point. The measure they observed diversion volume.

Q. So if Twin Falls' irrigated acreage decreased by one half, as long as they continued to maintain a stable diversion volume, their reasonable in-season demand would not change?

A. That's what the equations and the methodology set forth.

Q. Let me go back to your expert report. And we can turn to page 7.

A. Okay.

Q. And I'm looking at Figure 4, which you

discussed with Mr. Thompson.

And I understood your testimony to be, in your report, that this shows that Twin Falls Canal Company's diversions have remained relatively constant since the late 1970s?

A. Yes.

Q. And there's a statement in your report that diversions have all been within plus or minus 150,000 acre-feet of the average?

A. Yes.

Q. So do those gray horizontal lines that parallel the average -- there's one above and one below -- does that reflect the plus or minus 150,000 acre-feet figure you're talking about?

A. Yes.

Q. Okay. So I can see there's just a couple orange dots that are kind of outliers that reach that 150,000 acre-feet figure?

A. Yes. The 150,000 figure, plus or minus -- excuse me. Let me back up.

The average value plus or minus 150,000 acre-feet represents the range of the data.

Q. Okay. I understood that correctly, then.

And then if we took out those outliers, you know, like 2005 and 2020 and we go back to, say, 2000,

it looks to me like diversions have probably been plus or minus maybe 50- or 75,000 acre-feet?

A. I would agree. It does appear to be -- it does appear that the variability in the data has been less in recent decades.

Q. And at the bottom of that section of your report -- and I'm looking right above the heading number "C" -- or labeled "C" -- you state at the end that: "there's no statistically significant trend in the data set, and if any trend exists, it is a very weak downward trend."

You're referring to the time period of 46 years shown in that graph?

A. Yes.

Q. And I believe you testified earlier that if we were to look at a shorter time period, say, from the early 2000s, it would show an upward trend?

A. It could if you select the right starting and end date. That's the -- that's one of the bugaboos with trend analysis.

Q. Did you run that analysis with a shorter time frame to see what it would show?

A. I believe we did do some interdecadal, if you will, analysis to see what that would show, but I don't remember what the results were.

COURT REPORTER: A what kind of analysis?

THE WITNESS: Oh, let me change that word.

Let me say: We did analysis on certain periods within this dataset, but I don't remember what the results were.

Q. (BY MR. BUDGE) Just looking, you know, at the graph, isn't it obvious that if we used, like, from 2000 to today, so the last two decades, there's an increasing trend?

A. I think so. I think the data would probably show that.

Q. And during your -- during the discussion we had just a moment ago about project efficiency and crop water need and reasonable in-season demand, reasonable in-season demand is driven largely just by diversions; correct?

A. In the methodology order, you mean?

Q. Yes.

A. Yes.

Q. So increasing diversions will show -- will produce increasing demand within the methodology order irrespective of whether crop water need is going up or down or efficiency is going up or down?

A. I'm not sure you can make that blanket statement, TJ. But it is -- again, it's -- the

methodology assumes that the diversions are what they are, they're a given, and those are used to calculate project efficiency. And those are used, together with the crop water need, to calculate the reasonable in-season demand adjustments. So those factors go into that equation.

And then, of course, the baseline year demand doesn't have anything to do with acres, it's just based on diversion.

Q. So as diversions go up, the baseline year goes up?

A. No. The baseline year is a discretionary selection by the Department.

Q. Do you understand the baseline year has to be above the average?

A. Yes.

Q. So as diversions go up and push the average up, that forces the baseline year to go higher?

A. It could if, as happened this year, the average becomes greater than the previously used baseline year, then I assume the Department would reevaluate that.

MR. BUDGE: I don't have any further questions.

Thanks, Chuck.

THE WITNESS: Thanks, TJ.

HEARING OFFICER: Further cross-examination by the groundwater users?

Mr. Harris?

MR. BUDGE: Hey, Director, do you mind if I ask -- there's a document I left on my desk that I forgot to ask Chuck about.

HEARING OFFICER: You're asking to displace Mr. Harris?

MR. BUDGE: He hasn't taken his seat yet.

MR. HARRIS: Come on up.

HEARING OFFICER: All right.

MR. THOMPSON: TJ, I just had a question about the numbering of that exhibit.

I think you had numbered that as a Coalition exhibit. I wonder if you can just renumber it to whatever IGWA's exhibit number is?

MR. BUDGE: Yeah, we can do that. And it's not labeled on its face, so when we get to the admission portion of it, we'll do that.

Q. (BY MR. BUDGE) Chuck, I had your attorney email to you a couple copies of your expert report. It's pages 4 and 5 that I've added some red highlighting on.

Do you have those?

A. I see those. Yes, I have those. Yes.
Q. Chuck, except for the red highlighting, do you recognize those as Figure 2 and Figure 3 from your expert report?
A. Yes.
Q. I'll represent that I've added the highlighting. And what I've done is identified areas that do not appear to be irrigated with water from Twin Falls Canal Company.
And I'll give you some examples. I'm looking at Figure 2 to begin with; that's the 2017 irrigated lands dataset, and I'll just start in the upper-right-hand corner. That upper-right-hand red box is what I call a farmstead. It's a house and a yard that's out in the country.
Do you see that?
A. Yes.
Q. I assume you are aware that rural farmsteads like this typically have domestic wells?
A. Yes.
Q. And they're typically using their domestic wells for their culinary use and their, you know, yard and garden and things of that nature?
A. They --
COURT REPORTER: Mr. Brockway, sorry. You're

going to need to start your answer over.

THE WITNESS: They are using it for in-house purposes for sure. Sometimes they irrigate their half-an-acre allowance with the domestic well; sometimes they use their surface water shares, in my experience.

Q. (BY MR. BUDGE) Okay. If you can just take a moment to look at the areas I've highlighted in red. There was some pivot corners, and then the others are all farmsteads.

If you can just confirm that you agree that that's what I've identified?

A. Yes, I see them, TJ.

Q. Okay. And so these are areas that are not irrigated with the canal water unless the farmstead is using canal water for its landscaping and gardening around the house.

Do all the red areas look okay on that, Chuck?

A. I'm sorry. What's the question?

Q. Okay. And maybe you answered this already, but you've had a chance to review the areas that I marked in red on that?

A. Yes.

Q. Okay. And you agree that they're representing either pivot corners or rural farmsteads?

A. It looks that way, yes.

Q. And then I've done the same thing on Figure 3. The one difference for Figure 3 is there's that chunk in the middle where the red is shaped like an E.

And on this hard copy version it's kind of hard to see, but as you're aware -- as you're familiar with the original, that highlighted area that looks like an E is actually some subdivision roads. It looks like a newly created subdivision that has roads but no homes yet.

Do you recognize that?

A. Yes.

Q. Other than that subdivision, as I've just described, the other areas, you'd agree, represent rural farmsteads or pivot corners?

A. It does appear that way.

MR. BUDGE: I would move to have this document marked as the next IGWA Exhibit No. --

MS. PATTERSON: 838.

MR. BUDGE: -- 838 and admitted into evidence.

(Exhibit 838 marked.)

HEARING OFFICER: Any objection to the admission of this document?

Hearing no objection, the document marked as Exhibit 838 -- is that correct -- is received into evidence.

(Exhibit 838 received.)

MR. BUDGE: Thank you. And thank you for the accommodation.

HEARING OFFICER: Mr. Harris.

CROSS-EXAMINATION

QUESTIONS BY MR. HARRIS:

Q. Mr. Brockway, good afternoon.

Can you still only hear us? Or can you see us yet?

A. I can hear, but not see.

Q. Okay. Rob Harris here on behalf of the City of Idaho Falls.

Is it okay if I call you "Chuck" today?

A. Absolutely.

Q. Do you have, close to you or on your computer, Exhibit 300, which is the Fifth Methodology Order?

A. Yes.

Q. Your report, which is Exhibit 4, and then the expert report of Greg Sullivan with Spronk Water Engineers, that's Exhibit 347A. I'll be referring to those. So I wonder if you could just have those pulled up.

MR. THOMPSON: Rob, I think I'll have to email him that.

THE WITNESS: Okay. I have those pulled up, Rob.

MR. HARRIS: Okay. Great.

Q. (BY MR. HARRIS) You are described as one of the three authors of Exhibit 4; correct?

A. Correct.

Q. Did the three authors prepare different sections, or did you contribute to all of it and are able to testify as to all parts of it?

A. The three authors wrote different sections.

Q. What sections did you prepare?

A. I prepared -- well, let me clarify.

Brockway Engineering, myself and Erick Powell, prepared all but Section C; Dave Shaw prepared Section C.

Q. Okay. Thank you.

How long did it take you to prepare this report?

A. Probably three days.

Q. Would you have liked to have had more time to prepare it?

A. Yes.

Q. Okay. The Fifth Methodology Order describes the steps that the Director takes to calculate a material injury number for each member of the Coalition;

correct?

A. Yes.

Q. So it's essentially a formula. Would you agree with that?

A. Yes, or perhaps algorithm would be more appropriate.

Q. And it is an update to the Fourth Methodology Order that was issued in 2016; correct?

A. Correct.

Q. And the report is to be based on, "the best available science and underlying water data"; correct?

A. I don't know. Are you quoting from the order?

Q. I am. So if you look at page 2 of the Fifth Methodology Order, it uses a phrase there: "Apply the best available science and underlying water data."

Do you see that?

A. I do see that. Thank you.

Q. So from a technical standpoint, what does it mean to you to apply the best available science and underlying water data?

A. Well, goodness, that's, obviously, a broad question. That's open to interpretation by different people. Some things that occur to me would be that it would be using standard mathematical protocols, standard protocols for analyzing agricultural water use. The

underlying data should be available and reasonably accurate. I don't know, Rob, that's a -- that's not one that you can pin down precisely.

Q. I think you gave a good answer. And what I'm getting at is you said it had to have some reasonable accuracy; correct?

A. I would adopt that, yeah.

Q. So it doesn't, necessarily, mean that the data has to be perfect or 100 percent certain, does it?

A. No.

Q. Okay. I want to turn to page 1 of your report, so it's Section A, "The Evaluation of Twin Falls Canal Company Project Acres."

And would you agree with me that irrigated acres identifies land where there is the artificial application of water to grow crops?

A. Well, I -- that's a very narrow definition, but in the case of the methodology, it does need to include things like that, in my opinion, waterways that are a real consumptive demand that the system has to meet even though they don't meet your narrow definition.

Q. And I'll get to that here in a moment, but just in terms of irrigation, you would agree with me that it's the artificial application of water to land to grow a crop; right?

A. Yes.
Q. That didn't come through, but I think you said "yes"?
A. Yes.
Q. And so that would not include roads, sidewalks, parking lots, and other hardened acres?
A. Yes, right.
Q. And, in fact, if you have the Fifth Methodology Order in front of you, on page 10 --
A. Okay.
Q. -- paragraph 21, could you read paragraph 21 for us. You don't need to read the citations, but go ahead and read that.
A. "Estimates of irrigated acres from the hearing show a trend of decreasing irrigated acreage. According to the Hearing Officer, beneficial use cannot occur on acres that have been hardened or otherwise not irrigated."
Q. So you would agree that the number of irrigated acres for each Coalition entity feeds into the Fifth Methodology calculation; correct?
A. Correct.
Q. And so the number of irrigated acres would affect the end result of projecting material injury, would it not?

A. Well, this goes back to my previous testimony that the equations in the methodology order assume that the diversion volumes, the observed diversion volumes are -- again, whatever the number of acres are -- the project efficiencies are calculated based on crop water need divided by diversions, and then those project efficiencies go back into the -- those calculated project efficiencies go back into the reasonable in-season demand adjustment equation.

Q. So I'll have you look at page 9 of that methodology order and look at paragraph 19.

And, Chuck, I understand your argument, and I would categorize your argument as twofold. One is the one you're making where you're saying irrigated acres don't really matter, but there's also a component of your report that indicates that because there are some errors that could happen with generation of a shapefile, that the acreage shouldn't be updated.

And I'm asking you about the latter one, which is whether or not acres can be depicted through shapefiles and how that factors into this methodology.

So paragraph --

A. Oh, I see.

Q. So paragraph 19, you would agree with me, says: "A baseline year must be recent enough to

represent current irrigation practices. Current conditions should be represented by (a) the net area of the irrigated crops."

Do you see that?

A. I do.

Q. And so is it your position, then, that the Director was in error to look at irrigated acres as he indicated he has in the Fifth Methodology Order?

A. No.

Q. Okay. So in terms of just calculating irrigated acres, you and your office are familiar with GIS software; correct?

A. Yes.

Q. You know how to generate and amend shapefiles?

A. Yes.

Q. You've used them in water transfers and other analyses; correct?

A. Correct.

Q. In fact, on your website, you indicate that you employ Jennifer Jennings who is, quote, a specialist in GIS mapping and analysis using ArcMap; is that right?

A. That is -- that was right up until a few days ago, but she's no longer with the firm.

Q. Oh, I'm sorry to bring that up.

Okay. But that's something you're personally

trained and others in your office on how to do that; right?

A. Yes.

Q. So as for polygons that are created with GIS, would you agree that they represent the best available technology to calculate the size of areas that are covered by the polygon?

A. Yes, I would say so.

Q. Pretty accurate in calculating acreage; right?

A. If the area photo is rectified properly, it can be quite accurate.

Q. And with the update to the Fourth Methodology Order from 2016 to the Fifth in 2023 to have the best available science, that would include an update to the actual irrigated acres; correct?

A. It would.

Q. And if we look at what qualifies as irrigated acres, would you agree that open water in ditches, ponds, or other waterways are not -- they're not irrigated, are they?

A. Under the definition you provided, no.

Q. And as I understand your testimony, I think what you're, essentially, saying -- and I'll get to your other arguments in paragraphs 2, 3, 5, and 6 -- but it's that irrigated acres don't matter; what matters is just

the diversions.

That's the second position in your report; correct?

A. Well, we can talk about that when we get there. It's just -- it's not that they don't matter. It's important to understand how they're utilized or not utilized in the methodology equations.

Q. I understand.

But you're basically -- well, let me -- if I were to say I'm not sure I understand your answer, could you just describe what it is you're arguing, then? If you're saying that it doesn't matter what the irrigated acres are, it's the baseline year, and that's determined by the historic diversions?

A. Right. The baseline year demand doesn't have anything to do with acres. It's simply a discretionary selection that fits the criteria outlined in the methodology order.

Q. Okay. I appreciate your answer. I'm just going through my questions because I think that answers a fair amount of them.

And actually TJ gave a hypothetical, but does that -- that I'll just ask again -- but does that mean that if Twin Falls Canal Company's acres go down 100,000 acres, do we keep considering the diversions as

a given and compute project efficiency values lower and lower, say, down to 20 percent?

A. Well, that is a big hypothetical, obviously. If the acres were to reduce by 50 percent, it probably would show up as a reduced diversion demand, and so then, over time, that would show up as changes in the calculations that are in the methodology order.

Q. And I think Travis gave you an example of 1 acre, so I gave you 100,000 just to cover the range.

But the -- based on at least some calculations, there's been approximately a 15,000-acre change in the system based on the shapefiles; correct?

A. Yeah, I've seen those numbers.

Q. And overstating the number of actual irrigated acres, from a technical standpoint, would result in a higher determination of material injury; correct?

A. Well, again, it's not that clear. It's not a one-for-one calculation like that based on the methodology equations.

Q. Okay.

A. I could go through that again if you'd like.

Q. No, I think I understand your testimony. Thanks.

A. Okay.

Q. I do want to turn to Part B of your report,

which is the trend in the Twin Falls Canal Company diversion.

And I think you've taken the position that they've actually decreased over time; correct?

A. No. Rob, I don't think I would take that position. It's just if you look at the numerical value of the trend to calculate it, it's very slightly downward but not enough to be statistically significant and not enough to render that opinion.

Q. But your analysis of that begins in 1977; correct?

A. Correct.

Q. Okay. In the Fifth Methodology Order on page 3, the Director states: "To capture current irrigation practices, identification of a baseline year" -- abbreviated "BLY" -- "is limited to years subsequent to 1999."

Do you see that?

A. I do see that, yes.

Q. So the Director began his analysis in 2000.

Is it your position that the Director was incorrect to pick a time period after 2000 in his analysis?

A. No.

Q. Okay.

A. No. That's just a discretionary decision.
Q. Okay. And, in fact, I'll -- you indicated in your testimony to Mr. Budge that -- kind of just eye-balling recent diversions that it's likely increased.
I want to have you look at Greg Sullivan's expert report just a few pages from the very back. It's Table 2-1.
A. Uh-huh.
Q. And there's a chart in there that -- well, let me know when you get there.
HEARING OFFICER: What is the exhibit number?
MR. HARRIS: 347A.
HEARING OFFICER: Thank you.
THE WITNESS: Table 2-1. Okay. I'm there.
Q. (BY MR. HARRIS) Great.
This is a chart that summarizes the historic diversions of each of the Coalition entities.
Do you see the column for Twin Falls Canal Company?
A. I do.
Q. And do you see that there's some averages below them where you can actually see the average diversions from 2000 to 2014 of 1,045,120 acre-feet?
Do you see that?

A. Yes. Yes.
Q. And then do you see that there's an average of 2015 to 2021 of 1,098,477 acre-feet?
A. I do see that.
Q. So, at least based on those time frames, it appears that there's been an increase of over 50,000 acre-feet per year during the 2015-to-2021 time frame; correct?
A. I'm just checking to make sure these are adjusted volume. Yes. Yes. So assuming Greg's math is right, which I'm sure it is, then that is correct.
Q. Great. And so since the Fourth Methodology Order was issued in 2016 -- now we're in 2023 -- certainly since 2016 Twin Falls Canal Company diversions have increased; correct?
A. Well, I'd have to do the analysis just for that short period, Rob. I don't know if I can answer that today.
Q. Well, it's got a time period of 2015 to 2021. I'm just saying since 2016, based on these data, up to 2021, it looks like they've increased.
A. So you're asking me if the period 2016 to 2021 is greater than --
Q. I said -- yeah, greater than 2000 to 2014.
A. Well, I'd have to calculate the average of

2016 to 2021. That's not shown on Table 2-1.

Q. Okay. But at least from 2015 to 2021 it appears it's increased?

A. Yes.

Q. On -- I'm now going to have you turn to Part D of your report.

A. Uh-huh.

Q. And so that's on page -- well, I'll have you turn to page 13.

You gave a hypothetical there in the middle paragraph. You say: "A simple example calculation demonstrates this."

Do you see that?

A. I do.

Q. So the example assumes 56 percent on-farm efficiency, 20 percent canal loss at the diversion, and operational spill of 15 percent with an overall project efficiency around 42 percent; right?

A. Yes.

Q. And --

A. Well, that's -- the 42 percent is a calculated number based on above assumptions.

Q. Right. And you were here -- or I believe you said you were listening in on Mr. Barlogi's testimony that sprinkler irrigation comprises 50 to 60 percent of

Twin Falls Canal Company's irrigation practices today?

A. Yes.

Q. So in your hypothetical, would you expect Twin Falls Canal Company's on-farm efficiency to be 65 percent, in that range?

A. Oh, I think that may even be a little high, Rob. But that's maybe in the ballpark.

Q. But in your hypothetical you arrive at a calculated 42 percent project efficiency; right?

A. Right.

Q. In the methodology order it projects an efficiency that's 35 percent; correct?

A. On average.

Q. On average.

And so doesn't that mean that the company's collective losses, either conveyance losses or operational spills, must be greater than those in the hypothetical?

A. No. Because as I said in the last sentence there, this doesn't account for factors that are very difficult to even put a number on, such as the seasonal shoulder effects and the weather -- the short-term weather changes that reduce the crop water need but don't result in a diversion reduction.

So my only point with this paragraph is to say

using numbers that we have, that we can reasonably estimate, it's really easy to get to a number like 42 percent.

So my point here is that it's not at all unreasonable for a large canal company with a thousand miles of ditches and laterals to have an efficiency of something like 35 percent.

Q. Did you review the project efficiency of other Coalition members?

A. No.

Q. Was there a reason you did not look at those numbers?

A. Our task was, in the interest of time, primarily to focus on the hot-button company for this matter, which was Twin Falls Canal Company.

Q. So you don't know why the other members have been able to operate with much greater project efficiency values? You wouldn't have any knowledge of that?

A. I have general knowledge, but I don't have any specifics for you.

Q. I have one more area of inquiry, and then I'll be done. And it's Part G under "Supplemental Groundwater Usage."

A. Yes.

Q. You testified before that you're familiar with GIS shapefiles; correct?
A. Yes.
Q. And your office utilizes ArcMap, which I'm also familiar with, so you know how to use the clip, merge, buffer, intersect functions that can show areas where groundwater shapefiles overlap with company shapefiles?
A. Yes.
Q. And you could perform a function that would yield a shape that would show where that overlap occurs; right?
A. Yes.
Q. And the same thing with points of diversion?
A. Well, clarify that, if you would.
Points of diversion for wells would be the individual private wells.
Q. Correct.
A. Whereas --
Q. Yeah. And you could at least get an initial list of the privately decreed groundwater rights that exist within Twin Falls Canal Company's service area?
A. Yes.
Q. Okay. And those shapefiles have attribute data associated with them; correct?

A. Yes.
Q. It would have things like legal descriptions or IDWR metal tag numbers or even WMIS diversion numbers in it; correct?
A. Yes.
Q. And in terms of knowing who owns the properties where these shapes are, have you utilized tax parcel data that's generated by the counties to show land ownership?
A. Yes.
Q. And that's fairly readily available these days; right?
A. It is.
Q. And so wouldn't that be a starting point of where groundwater may be used within the company?
A. Yes.
Q. Are you familiar with the -- well, you are familiar with the WMIS database maintained by the Department; correct?
A. Yes.
Q. And that's an acronym for Water Management Information System?
A. Yes.
Q. And that system tracks groundwater diversions either measured by flowmeters or calculated through PCC

calculations; correct?
A. Yes.
Q. Okay. And, in fact, I believe you've used those in transfers and other situations, have you not?
A. Yes.
Q. And so do you consider them to be a reliable source of information, albeit maybe not perfect, for historical groundwater diversions?
A. Yes.
Q. I believe you said "yes"?
A. Not perfect. Yeah, I would agree with you, Rob. Not perfect, but reasonably reliable in most cases.
Q. And best available; right?
A. I think so.
Q. Okay. And I think the point of the Director's order is that supplemental groundwater use may be looked at because it may contribute to the overall water supply.
Do you agree with that?
A. Sorry. Could you restate that?
Q. Yeah. I believe that the Director's order -- the reason supplemental groundwater use is even mentioned is that it could be considered a source of water supply to irrigate acres within the Twin Falls

Canal Company's service area; correct?

A. So my apologies. I'm not familiar with where that's mentioned in the order. I would have to go reread that again.

Q. I'll refer you to page 10 at the bottom, paragraph 23.

Do you have that in front of you?

A. Okay. I'm there.

Q. It says: "There are lands within the service area of SWC entities that are irrigated with supplemental groundwater."

Do you see that?

A. I do see that.

Q. And that's under the section of the order under "Irrigation Practices," which is also under the available water supply to those that irrigate within the service area.

Do you see that?

A. I do see that.

Q. So as I understand the order, the analysis of supplemental groundwater is that it would provide another source of supply as to what could be irrigated acres within the company; right?

A. Right.

Q. Okay. And wouldn't WMIS data that's matched

to places of use points of diversion groundwater rights be a reliable starting point to determine how much supplemental groundwater is used?

A. It would be a starting point.

Q. And may be subject to some ground truthing as you said before; right?

A. Right.

Q. All right. I just have one more question. The last one is on the baseline year discussion.

Isn't it true that so long as Twin Falls Canal Company continues to increase its diversions, then the average will increase, and then in a few more years, there would be a higher baseline year with higher demand? Isn't that the end result of just looking at diversions?

A. If Twin Falls Canal Company diversions continue to increase, under that hypothetical, then, mathematically, their average will also continue to increase. What the Department does with that in the future is not something I can say.

Q. But if they continue to base mitigation obligations on that calculation, wouldn't that require the groundwater users to provide more upfront water?

A. Well, if -- under your assumption that a new baseline year is selected?

Q. Yes.
A. It could, yes.
MR. HARRIS: Director, I believe that's all of the questions I have.
Thank you.
HEARING OFFICER: Thank you, Mr. Harris.
THE WITNESS: Thank you, Rob.
HEARING OFFICER: I assume there is more cross-examination?
MR. BRICKER: Yeah.
HEARING OFFICER: Okay. Well, let's break for lunch. Come back at a quarter after 1:00. Thank you.
(Lunch break taken.)
HEARING OFFICER: Okay. Let's go back on the record. Next to examine.
Are we on, Andrea?
COURT REPORTER: Yes.
HEARING OFFICER: All right. Thank you.
Mr. Anderson, you may examine.
MR. ANDERSON: Thank you.

CROSS-EXAMINATION

QUESTIONS BY MR. ANDERSON:
Q. How are you, Mr. Brockway?
A. I'm doing fine, thank you.

Q. Good. I'm Dylan Anderson. I've seen you before. I don't know if we've actually met in person or not, but I just have a quick question for you.

As you explained with irrigated acres, as they would go down, the efficiency would go down, or as they would go up, the efficiency would go up, so they don't really affect the reasonable in-season demand. Is that an accurate representation as you've explained it?

A. They don't affect it on a direct proportionate basis; that's right.

Q. So if the Department wanted the actual irrigated acres to be reflected in the reasonable in-season demand, would they, then, need to somehow fix efficiency? "Fix," I mean make it static or control for that number?

A. That could be a way to do it.

MR. ANDERSON: That's it. That's the only questions I have.

Thanks.

HEARING OFFICER: Okay. Next?

Mr. Bricker, come forward.

MR. BRICKER: Before I begin the examination, Director, I believe the parties, we've all stipulated to admitting Exhibit 316 into evidence, and I just wanted to make that clear now.

HEARING OFFICER: 316?
MR. BRICKER: Yeah.
MR. FLETCHER: Which is the same as 914; right?
MR. BRICKER: Also 914, the same document.
HEARING OFFICER: Okay. There's a stipulation to the admission of 316 and what? Corresponding 914?
MR. BRICKER: Correct.
MR. FLETCHER: It's the same exhibit.
MR. BROMLEY: They just need 316.
MR. FLETCHER: Mr. Director, are we on the record?
HEARING OFFICER: We are.
MR. FLETCHER: Can we go off for just a second?
(Discussion held off the record.)
HEARING OFFICER: Back on the record.
So the parties have stipulated to the admission of Exhibit 914, which also corresponds to what was marked as 316. Thank you. It's received into evidence, Exhibit 914.
(Exhibit 914 received.)
MR. BRICKER: Good to go?
HEARING OFFICER: Yes.
///

CROSS-EXAMINATION

QUESTIONS BY MR. BRICKER:

Q. Good afternoon, Mr. Brockway.

A. Good afternoon.

Q. My name is Max Bricker. I represent the City of Pocatello. I have a few questions for you here.

So in your report, you state that: "The diversion volume in the Fifth Methodology baseline year of 2018 is at the 84 percentile and provides a reasonable factor of safety to protect senior water right holders."

Is that right?

A. I am getting there. One second. Are you looking at the conclusions?

Yes. Okay, I see that. Uh-huh.

Q. And you also state that: "Using 2018 as the BLY provides a reasonable factor of safety without being extreme."

Right?

A. Yes.

Q. Isn't it possible that diversions from a baseline year at a percentile lower than the 84th could still provide a reasonable factor of safety?

A. Well, obviously, the word "reasonable" was up to interpretation. So in general, yes.

Q. Thanks.

Isn't there already an additional safety factor by using the forecast supply minus one standard deviation?

A. Yes.

Q. If the safety factor is too high, then won't the forecast shortage almost always be greater than the actual shortage determined at the November 1st reconciliation?

A. The conservatism built into the system or into the algorithm could be set such that that would be the case.

Q. And similarly, if the groundwater users have to provide mitigation water based on an overly conservative forecast shortage, won't they almost always end up overmitigating?

A. That is the same answer to my previous question.

Q. Thanks. Doesn't that suggest that there is a point at which too much conservatism in the forecast ends up being a waste of the resource?

A. That's a policy question not a technical question, so I don't have an opinion on that.

Q. Okay. Also in your report you state that: "Operational spill is always necessary in order to

deliver water to users within the systems. Spill must be maintained in order to account for variations in demands by irrigators. Without spill it would be impossible to reliably serve the tail ends of the system."

Correct?

A. That's true.

Q. Even if operational spills were necessary, the amount can be reduced with more prudent management; correct?

A. Possibly.

Q. And isn't there a point when operational spills become excessive?

A. Again, there's no bright line there. I think there would be, but there's no set point or a bright line.

Q. Fair enough.

Okay. Also in your report, you state that: "It is not unreasonable to see flat or declining project efficiencies even though sprinkler conversions are continuing to occur."

Is that right?

A. Yes.

Q. So if on-farm efficiencies increase as sprinkler conversions continue and conveyance losses

stay constant but project efficiencies stay flat, that must mean that operational spill rates have increased; right?

A. Well, that's one possibility, but there could be other operational factors that might enter into that, as I've indicated.

Q. You also state that: "It has been demonstrated herein that the project efficiency is reasonable."

Right?

A. Yes.

Q. How are you defining the term "reasonable"?

A. Well, the hypothetical calculation that Mr. Harris and I went through, I think, is a good foundation for that. There are just certain levels of system losses, if you will, that can be reasonably achieved. There's no set definition for reasonable, but there are, certainly -- I think the term has been used -- "industry standards" that can be used to define whether waste is going on. So my only point of that calculation was just to demonstrate how very easy it is for a large, slow-moving canal system to have efficiencies that are very low.

Q. And you agree that project efficiencies can change; right?

A. Yes.
Q. And you also agree that a project whose operations are reasonable at one point in time could at some point in the future cease to be reasonable?
A. No. That's -- I don't know about that.
Q. So as an example, just because something was reasonable in the year 1910 doesn't, necessarily, mean it's reasonable today; right?
A. Well, I believe the definition of reasonable is to compare it with current industry standards or current state of the art. I think I would generally agree with that.
Q. So if the technology changes, that could render an outdated operation no longer reasonable; right?
A. Possibly.
Q. Isn't it true that Twin Falls Canal Company's baseline year demands are equal to its 2018 diversions in the Fifth Methodology Order?
A. What are you asking me, if the Department chose 2018 as the baseline year?
Q. Yes.
A. That's true.
Q. And its diversions in that year are the baseline demand?

A. Correct.
Q. Isn't it also true that Twin Falls Canal Company claims to divert roughly 1,100,000 acre-feet annually?
A. I think that's the round number that is often cited or stated.
Q. Okay. So hypothetically here, when multiplying 1,100,000 acre-feet by an average project efficiency of .35, that equals an annual crop water need of roughly 385,000 acre-feet; right?
A. Yes.
Q. Now, in your example in your report, you arrived at a project efficiency of .42; right?
A. For that purely hypothetical example.
Q. Sure. So in my hypothetical, if you were to divide that calculated crop water need of 385,000 acre-feet by a project efficiency of .42, doesn't that equal 917,000 acre-feet, roughly?
A. Yes.
Q. So if that crop water need were to stay consistent and the canal company in this hypothetical were to achieve a project efficiency of .42, its diversions could decrease by a magnitude of roughly 200,000 acre-feet; right?
A. Yes.

Q. Doesn't that indicate that a change -- a minor change in project efficiencies -- we'll call it a few decimal places -- can make a significant difference in demand by a magnitude of tens of thousands of acre-feet?

A. Yes.

MR. BRICKER: That's all of the questions I have. Thank you.

HEARING OFFICER: Other questions from the groundwater group?

I don't see anybody.

Redirect, Mr. Thompson?

MR. THOMPSON: Good afternoon, Chuck. This is Travis Thompson back here for a few redirect questions.

THE WITNESS: Hey, Travis. I can see you this time, so that's good.

MR. THOMPSON: Good for you or me? I don't know.

THE WITNESS: Well, I don't know.

REDIRECT EXAMINATION

QUESTIONS BY MR. THOMPSON:

Q. Can you -- you had a long discussion with Mr. Budge about irrigated acreage in the context of reasonable in-season demand and how that's calculated in the methodology.

Do you recall that?

A. I do.

Q. Can you provide a summary of your understanding?

A. Yes. Let me try to tidy this up because it's sort of been, I think, saved in a fractured manner. So let me try to summarize.

As a general principle for irrigation systems, of course the number of irrigated acres matters. You know, a diversion requirement is generally a requirement of irrigated acres. I don't think that's in dispute.

So my testimony is not that irrigated acres don't matter. But just looking at the mathematics outlined in the methodology that are required to make the reasonable in-season demand calculation right now for this year, the observed diversions are a given, and the historic project efficiencies are calculated as the consumptive irrigation requirement times the irrigated area divided by the observed diversions. Then the project efficiencies are used to calculate the reasonable in-season demand adjustments for this year. And, of course, the baseline year is not a function of acres at all.

So if the acreage s in the methodology are wrong, if you somehow knew that, then you would have to

go back and recalculate the historical project efficiencies, otherwise they would also be wrong. Then those different efficiencies will be used to calculate the reasonable in-season demand for this year.

Theoretically, the reasonable in-season demand calculated in that way might not change. Again, just talking about the specific calculation for this year.

Now, that may not exactly be true because things are confounded somewhat by the fact that the Department actually used different acres, historically, for some period in the past. And I have not delved into the guts of the reasonable in-season demand calculation spreadsheet to know exactly what it's doing. I'm just observing the mathematics in the methodology.

If the -- if a different acreage were used, it would not result in a direct proportional reduction in the reasonable in-season demand calculation for this year, as has been claimed.

So that's kind of a -- as tidy as I can make it a summary of how the acres play into or don't play into the calculation of the reasonable in-season demand.

MR. FLETCHER: Somebody needs to mute. They did.

Q. (BY MR. THOMPSON) Okay. Chuck, we're still here. Just had somebody, I think, that was off mute.

A. Okay.
Q. Did you hear the testimony of Jay Barlogi, that the Twin Falls Canal Company has over 100 miles of main canals and roughly 1,000 miles of laterals?
A. I did.
Q. And do you know the length of the lining project completed on the High Line in 2019 that Mr. Budge was discussing with you?
A. I don't know the exact length.
Q. I guess, would that be an important factor to consider to determine the impact on overall canal seepage?
A. Yes.
Q. And you've looked at the diversion data for large open canal systems in southern Idaho; is that correct?
A. In general, yes.
Q. Is 5 to 6 acre-feet per acre a reasonable diversion rate, in your opinion?
A. Yes.
Q. Getting back to these -- we talked about the regression analysis on trends and diversions for Twin Falls Canal Company.
Do you recall that discussion?
A. Yes.

Q. I think Mr. Harris pointed out to you the Fifth Methodology Order looking at a period of 1999 to 2021.

A. Right.

Q. And do you recall if 2001 to 2005 were multiple years of drought?

A. Yes.

Q. Would those be considered years of limited supply?

A. I'm not sure if they all were, but, in general, yes.

Q. And I think Mr. Budge talked about a trend of -- 2015 to 2021 showing an increasing trend in diversion; is that correct?

A. I believe so.

Q. I guess by that same analysis, would -- what would 2020 through 2022 show?

A. Well, it's only three years, but they will be decreasing.

Q. So it certainly depends on the number of years and what you're looking at for a trend analysis; isn't that correct?

A. It does. That's correct.

Q. Mr. Budge asked you some questions about Exhibit 838.

Do you recall those?
A. Yes.
Q. And I think that was an exhibit that he had overlaid some red-shaded areas in.
Do you recall that?
A. I do.
Q. Would you agree that the interpretation of what is actually irrigated can vary depending upon the individual involved?
A. Yes, very much so.
Q. So an attorney's interpretation, like Mr. Budge's, could vary from an engineer's. Would you agree with that?
A. Yes, I agree with that.
Q. And the particular year could change what actually happens on the ground; is that correct?
A. Yes.
Q. So a corner left out of irrigation in 2021 could actually be irrigated in 2023?
A. Yes, that's right.
Q. Finally, just a question Mr. Harris asked you about desiring to have more time to prepare your report in this case.
Do you recall that?
A. Yes.

Q. Do you work within the deadlines set for contested cases and adapt to what is required?
A. Oh, yes.
Q. Is that what you did here?
A. That's what I did here.
MR. THOMPSON: That's all of the questions I have.
Thank you, Chuck.
THE WITNESS: Thank you.
HEARING OFFICER: Recross, Mr. Budge?
Mr. Harris?
MR. HARRIS: I actually have just a couple.

RECROSS-EXAMINATION

QUESTIONS BY MR. HARRIS:
Q. Chuck, Rob Harris again.
Just to follow up, more of a foundational question to Mr. Thompson's question.
You said that you looked at the diversion data of large canals in southern Idaho.
What -- specifically, what canals were you looking at?
A. Well, let me clarify, Rob. Not for this case. My testimony is that I'm generally familiar with diversion data and volumes for large canal systems.

Q. Okay. And I guess, again, just a foundational question is: How are you familiar with those? Or what canals did you look at?

A. Just in the course of my general work. So it would be companies such as North Side -- excuse me -- Aberdeen-Springfield and some of the other eastern Idaho canal systems.

Q. And North Side Canal Company is an on-demand system like Twin Falls Canal Company is; correct?

A. I believe so, yeah.

Q. And the tailwater from that system comes in below the Milner Dam into the Snake River Canyon?

A. Yes.

Q. Mr. Thompson asked you some questions about Exhibit 838 about those red-shaded areas and about individual interpretation, that it can be different.

Do you recall that testimony?

A. Yes.

Q. Would you say it's often different or -- based on the photos, you can typically see green vegetation growing to indicate it's growing; right?

A. You can. And then there are those areas that are not green and are subject to interpretation.

Q. But wasn't that the same process that was used in the Snake River Basin Adjudication to determine

irrigated acres, in your experience?

A. I think generally, yeah. I mean, they started as a -- from a -- as a first cut, if you will, looking at land that was green or showed an infrared signature and then applied some human brain power to look at some areas that may not have been so clear.

MR. HARRIS: That's all of the questions I have. Thank you.

HEARING OFFICER: Mr. Anderson --

THE WITNESS: Thank you.

HEARING OFFICER: Mr. Anderson, further questions?

MR. ANDERSON: No, Director. Thank you.

HEARING OFFICER: Mr. Bricker, further questions?

MR. BRICKER: Nope.

HEARING OFFICER: Any other recross?

All right. Thank you, Mr. Brockway, for participating today.

THE WITNESS: Thank you, Director. I appreciate you for accommodating my situation here.

HEARING OFFICER: Yep.

Next witness.

MR. THOMPSON: The Surface Water Coalition will call Dave Shaw.

HEARING OFFICER: Mr. Shaw, if you'll come forward, please.

DAVID B. SHAW, P.E.,
called by the Surface Water Coalition, having been first duly sworn to tell the truth relating to said cause, testified as follows:

HEARING OFFICER: Thank you. Please be seated.

Mr. Thompson?

MR. THOMPSON: Thank you, Director.

DIRECT EXAMINATION

QUESTIONS BY MR. THOMPSON:

Q. Dave, could you please state and spell your name for the record.

A. David, D-a-v-i-d, middle initial "B" as in "boy," Shaw, S-h-a-w.

Q. And where do you currently work?

A. I work for ERO Resources Corporation.

Q. And what is your occupation?

A. I'm an engineer.

Q. Is your CV attached to what's been labeled as Exhibit 4 in this case?

A. Yes, it was.
Q. Does that generally describe your education and work history?
A. It hits the high spot, yes.
Q. Have you been qualified as an expert witness before IDWR in prior cases?
A. Yes.
Q. Can you generally describe what you were asked to do for the report identified as Exhibit 4?
MR. HARRIS: Director, real quick.
Dave, could you pull the microphone a little closer just so we can hear a little better.
Thank you.
THE WITNESS: I was asked to look at the methodology order and the As-Applied Order and evaluate its implementation.
Q. (BY MR. THOMPSON) And if you could turn to that Exhibit 4, page 7. It should be behind you.
A. Okay.
Q. Does that Part C of pages 7 through 11 generally reflect your work product in this report?
A. Yes, it is.
Q. And can you describe those opinions that you've offered there?
A. This was as a result of looking at

efficiencies. Mr. Sullivan and others were looking at the efficiencies and trying to do a trend analysis for changes in efficiencies over time. I thought it would be important to look at how the efficiencies were calculated, and that's primarily where I focused my effort.

Efficiency, I think everyone has talked about it before, it's crop water need times acres divided by diversion. Acres has been discussed here a lot. Crop water need, not so much. We know AgriMet is used for the ET values. Mr. Sullivan called them a CIR, consumptive irrigation requirement. But there wasn't -- hasn't been such discussion about crop mix. And that's also an important element in determining water use efficiency and crop water need.

Q. And is that crop data layer, is that CDL data that the Department uses?

A. The Department's used that since 2007. Prior to 2007, that data was not available. The information was reported on a countywide average. My recollection is the Department averaged the crop mix for the county or counties in which a delivery organization was located, and then from that, created some kind of an average that they used for the water delivery organization.

Q. And do you have some recommendations on the use of that data in the methodology going forward?

A. I do.

Q. And could you describe those?

A. My understanding of the current methodology and the technical work group was provided with a copy of what IDWR calls their calculator worksheet during the TWG meetings during last fall and winter.

My understanding is for the period 2000 through 2014, the crop mix for all of those years has been averaged together. So any trends, changes over time, have been lost. So the crop water need is calculated by the ET or CIR for a particular year against an average of the crops that have been raised over that 2000-to-2014 period.

Starting in 2015, IDWR took the prior three years -- so '12, '13, and '14 -- averaged that crop mix or those crop mixes and then used that average to calculate crop water need for 2015, and that's continued through last year.

Q. And does that data become available like as the actual data at the end of the year?

A. I understand it's available after the first of the year, so 2023 data will be available January 2024.

Q. And is there a question whether they'd go back

and insert the actual data into that number?

A. To have a true estimate of system efficiency, yes, they need to use the crop mix for the year they're using the diversion data from.

Q. Can you generally describe Figure 6 on page 11, what that depicts?

A. This is an estimate of alfalfa and corn from the CDL data for Twin Falls Canal Company for the period 2007 through 2022.

And then there's a third line that are the diversions for Twin Falls Canal Company adjusted for recharge.

And it shows the trends of increasing both alfalfa and corn, and there's a slight increase in diversion. I did not test it to see if it was significant or not.

Q. Those graphs confirm what you heard from Twin Falls Canal Company's manager Jay Barlogi earlier this week?

A. He has said there have been recent increases in alfalfa and corn, yes.

Q. And does that sort of crop mix, increases in those type of crops, impact water demand within the project?

A. It does. Alfalfa, Twin Falls AgriMet on

average is a little over 40 inches per year. Small grains -- wheat, oats, barley -- is low, 20 inches per year. So not quite 100 percent increase, but pretty significant increase going from small grains, for example, to alfalfa. Corn is in the upper 20s, lower 30, so even going from small grain to corn is roughly a 50 percent increase.

Q. And do you have any comments on, I guess, challenges with project efficiency in large, open canal systems?

A. I've heard there are challenges, yes.

Q. Do you have familiarity and experience with large, open canal systems in Idaho?

A. I do.

Q. And do you have any opinions on how the Twin Falls Canal Company operates and maintains its system?

A. Compared to other water delivery organizations I've seen in Idaho, I think they're well-managed. They do a good job with maintenance. I think their delivery system and their plan for delivery is reasonable.

MR. THOMPSON: I don't have any other questions. We'd just tender Mr. Shaw as an expert in the fields that he testified to in his report.

HEARING OFFICER: Excuse me. You want

Mr. Shaw recognized?

MR. THOMPSON: As an expert for the subjects that he's testified to in his report.

HEARING OFFICER: And I believe the parties have stipulated to recognize Mr. Shaw as an expert, so he is so recognized.

No further questions, Mr. Thompson?

MR. THOMPSON: No, thank you.

HEARING OFFICER: Cross-examination?

Mr. Budge?

CROSS-EXAMINATION

QUESTIONS BY MR. BUDGE:

Q. Good afternoon, Dave. How are you?

A. Good, TJ. How are you?

Q. Very good. Thank you.

A. Besides wanting to go home.

Q. Yeah, I'm looking forward to that.

MR. FLETCHER: It's all up to you, TJ.

MR. BUDGE: It's only going to take me ten minutes, Kent.

MR. FLETCHER: Oh, gosh, the TJ multiplier coming on.

Q. (BY MR. BUDGE) Dave, if would please turn to page 2 of your report for the heading "Evaluation of

TFCC Project Acres."

A. What page was that?

Q. It's just on the second page. It's heading A. Are you looking at Exhibit 4?

A. I am.

Q. And this is part of the expert report that you submitted?

A. Yes.

Q. And do you see at the top of page 2 a heading A?

A. Yes.

Q. Titled "Evaluation of TFCC Project Acres"?

A. Oh, okay. Yes.

Q. You were here when I discussed this with Mr. Brockway earlier today?

A. Yes.

Q. You recall I was asking him about the process used to create the 2013 GIS shapefile of Twin Falls Canal Company's irrigated lands?

A. Yes.

Q. And I understand that you participated in developing that shapefile?

A. Yes, I did.

Q. Can you explain the process that you went through to develop that?

A. As we looked at both 2011 and, I believe, 2013 aerial photography, we had done some prior work for Twin Falls where we had some historical photography for -- I think mostly areas along the boundary of the delivery organization, so we had some history on what had happened on some of those lands. So we tried to, very carefully, identify acres that were either irrigated in 2011 or 2013 or appeared they had been irrigated in recent years.

Q. And the data that went into that was you had aerial photography, I understand?

A. Yes.

Q. Or was it satellite imagery?

A. Aerial photography.

Q. Aerial photography.

And then you said on the fringes of the company, you had some other type of information. Could you clarify what that was?

A. Yes. We had some historical photography, some old black-and-white photos from Department of Ag.

Q. Okay. And your goal was to identify acres that were irrigated or had been irrigated in years past?

A. In recent years past, yes.

Q. Going how far back?

A. Well, the oldest photography I recall we used

was 2011, so it would have been that.

Q. And if you'll turn to page 5 of your report.

A. Okay.

Q. And my understanding is this is an aerial image of a portion of Twin Falls Canal Company's service area that shows which -- that uses highlighting to identify which lands were shown as irrigated in the 2013 GIS map versus which lands are shown as irrigated under the Department's 2017 irrigated lands dataset; is that correct?

A. That's my understanding also, yes.

Q. So if I want to use this map to understand just what was identified as irrigated in the 2013 GIS shapefile, I should consider everything with blue highlighting and yellow highlighting as having been identified as irrigated lands in the 2013 shapefile?

A. Yes. It looks like there's some yellow over the top of some of what we had already excluded. So it isn't everything that was yellow.

Q. So this photograph with the highlighting in blue, it has "2017 Irrigated Shape."

Do you see that?

A. Yes.

Q. So am I understanding correctly that everything in blue is identified as irrigated lands in

the 2017 dataset?

A. That's my understanding, yes.

Q. And then the yellow there in the legend says "2017 Difference." My understanding from talking to Mr. Brockway is that the land identified in yellow was shown as irrigated in the 2013 GIS shapefile but is not shown as irrigated in the 2017 dataset.

Am I understanding that correctly?

A. I don't think so. If you look at -- this is laying on its side, but the north/south yellow line kind of through the middle, some of those -- some of that area shows up as not being irrigated in the 2013 dataset, but is kind of merged with the yellow.

Q. Yes, I see that. So if I look approximately in the center of the image, there's a horizontal sliver that's not highlighted with either blue or yellow.

Do you see that?

A. Yes.

Q. And my understanding is that is the roadway that had been excluded from the 2013 GIS analysis?

A. That's correct.

Q. And just north of that excluded sliver there's a yellow parallel sliver, it's highlighted yellow that refers to a roadway.

Is it your assumption that that roadway

identified in yellow, that's parallel, is the roadway that was excluded in 2013?

A. The area that has no color on it is what was excluded in 2013.

Q. Okay. And you heard me discuss with Mr. Brockway or identify a number of farmsteads, and there's a subdivision or development that shows as being irrigated under the 2013 GIS shapefile?

A. Yes.

Q. And none of those farmsteads were excluded from the 2013 GIS shapefile at least in this section of the service area; correct?

A. Yeah, I don't have that in front of me. But, yes, I understand that.

Q. As a general rule, when you were creating the 2013 GIS shapefile, you did not exclude these residential properties that I've referred to as "farmsteads"?

A. No, I -- I think I tried to exclude hardened areas around farmsteads if there were large buildings or something like that.

Q. Okay. But none of those are excluded from either of these images?

A. Not from these images, no.

Q. Okay. And where there were subdivisions that

had been developed within the canal company service area, did you go through and carve out the roads and houses, or did you include the subdivision?

A. It's been too long, TJ. I remember I excluded the whole Twin Falls metropolitan area, but I can't remember for sure what we did with subdivisions.

Q. Okay. Generally, you were excluding land that was not capable at all of being irrigated, like parking lots and roads, things like that?

A. Yes.

Q. If it was irrigated or was capable of being irrigated, you generally included those lands?

A. Yes.

Q. As part of your analysis, you did not make an evaluation of supplemental groundwater rights within the company's service area?

A. That's correct.

Q. Did you compare your -- the 2013 GIS shapefile with company water delivery records to see if service water deliveries corresponded with the shapefile?

A. I didn't do that. Mr. Barlogi, at the time, was working in the central office, and I worked with him to get -- to do that kind of analysis and review what I had done.

Q. And you're not sure what he did in that

regard?

A. I'm not.

Q. You could have, with some additional time and effort, carved out farmsteads and subdivision roads and things like that if you had been asked to do that?

A. Well, at least as they existed in 2013, whatever the latest photography we had.

Q. And had you been asked to make an analysis of supplemental groundwater use, you had the ability to do that at that time?

A. Well, you could make an estimate. I've worked with place-of-use shapefiles from IDWR in other areas, and I keep being reminded not to put a lot of confidence in them.

I've also worked with WMIS data in other areas, and it's difficult to get like minds to agree on what the numbers are.

Q. You're familiar with the WMIS database?

A. Somewhat, yes.

Q. And, of course, you're very familiar with the Department's water rights database?

A. Yes.

Q. And if somebody asked you to do your best to analyze the extent of supplemental groundwater irrigation, it's within your expertise to do that?

A. Yes.
Q. But you've not been asked to do that for Twin Falls Canal Company?
A. That's correct.
Q. When that 2013 shapefile was created, I understand that was created strictly by Twin Falls Canal Company personnel and their consultants?
A. Yes.
Q. The Department was not involved as part of a collaborative process?
A. That's correct.
Q. And groundwater users or others were also not involved in that process?
A. That's correct.
Q. You understood at that time that it would benefit Twin Falls Canal Company to have as many acres identified as being irrigated as possible?
A. My direction was to accurately identify the acres being irrigated.
Q. I understand that, but you did understand that it would benefit the company to have as many acres identified as irrigated as possible?
A. Well, within their decree, yes.
MR. BUDGE: Okay. I have no further questions. Thank you.

Thanks, Dave.

HEARING OFFICER: Further cross-examination of Mr. Shaw?

Mr. Bromley?

MR. BROMLEY: Just a few.

CROSS-EXAMINATION

QUESTIONS BY MR. BROMLEY:

Q. Hi, Mr. Shaw.

A. Mr. Bromley.

Q. Okay. Figure 5 --

Do you have your report there? It's on page --

A. Yes.

Q. -- page 9.

So the Department's using the average of the three preceding years to determine the crop mix; is that correct?

A. That's the average crop mix, yes.

Q. But the Department's using the reference ET from the current year and methodology; correct?

A. Correct.

Q. So isn't it true that the differences between the 2018 to 2020 line and the 2021 line in Figure 5 are largely due to discrepancies in reference ET between

those years not due to differences in cropping?

A. And this is just for illustration purposes to show the difference that can occur between a three-year average and the next year.

Unfortunately, I didn't have CDL data to show here. So it's simply for illustration purposes.

Q. Thank you.

At the top of page 10, the first full sentence, I'll just go ahead and read that.

It says: "In Manager Barlogi's deposition we heard about the continual improvements being implemented by the Twin Falls Canal Co. (TFCC), and when CWN's were appropriately calculated, we believe those improvements will show continued reasonable use of the water resource."

Do you see that?

A. Yes.

Q. But as Dr. Brockway testified, if Twin Falls Canal Company doesn't actually reduce its diversions, then those improvements won't have any effect on the efficiencies used in the methodology; correct?

A. No. That was a no. Okay.

Q. Thank you.

All right. Let's look at the bottom of page 10, the last full sentence there, Mr. Shaw. And

I'll go ahead and read that.

A. I think we're -- maybe we're talking past each other.

Q. Okay.

A. I did not agree with Dr. Brockway.

Q. Oh, you don't agree with Dr. Brockway?

A. No.

Q. How is that?

A. Can you read your original question back to me?

Q. Sure thing. Absolutely.

So what we heard Dr. Brockway testify to a few times, both on cross with Mr. Harris and then, again, on, I believe, with City of Pocatello's attorney and, possibly, then with groundwater district's attorney, was that a number of statements that if Twin Falls Canal Company doesn't reduce its diversions, then a lot of what goes on in the calculations and the methodology order just continue to show increased need, even if, for example, acreage was reduced.

A. But if increases on diversions are necessary to meet increased crop demand because of improved efficiency from sprinklers or raising more water-intensive crops, then that would show up in improved efficiency, but it would not reduce diversions.

Q. Okay. So let me just ask the question one last time. And just answer it, please, so we can make sure that we're not talking past one another and that I didn't mishear what you said and you didn't mishear the question.

So as Dr. Brockway testified, if the canal company doesn't reduce its diversions, then these improvements won't have any effect on the efficiencies used in the methodology; correct?

A. No, I don't think that is correct.

Q. So at bottom of page 10, then, I'll just read this sentence -- the last sentence at the bottom of page 10.

"Figure 6 below shows the changes in alfalfa and corn acres since 2007 along with an increase in diversions by Twin Falls Canal Company to meet the demands of the more water-intensive crops."

And then we flip over to the next page, and we see Figure 6. So Figure 6 is a little "apples and oranges," isn't it? Because you're comparing alfalfa and corn acres to Twin Falls Canal Company diversions in acre-feet; correct?

A. Correct. That's why there are two y-axes.

Q. So you haven't actually computed the effect that the changes in alfalfa and corn acres has on crop

water need in acre-feet, have you?

A. No, I haven't.

Q. Still on page 11, Mr. Shaw, above paragraph D, the last paragraph there, there's discussion about changes in delivery that have occurred within the area of A&B Irrigation District.

Do you see that?

A. Yes, I do.

Q. Do you know if the A&B water rights have been updated through transfers to allow for surface water use on Unit B?

A. My recollection is they have a new permit for those acres.

Q. So this is the pipeline, then, from the river that's bringing surface water into some of those acres on Unit B?

A. Yes.

Q. Okay. When I read it, it was a little unclear to me if it was using -- I guess I would say, more senior A&B rights for irrigation.

But you've answered my question, which is it's that pipeline.

A. Yes.

Q. So thank you for that.

In your direct with Mr. Thompson, you said

Twin Falls Canal Company is a well-managed company compared to other Idaho canal systems.

Do you remember that?

A. I do.

Q. Have any of the systems that you were thinking of placed delivery calls?

A. Well, on some of those systems there are people shut off every year to supply water for the canal. That could be managed better.

Q. Okay. But have any of those companies filed a delivery call under the conjunctive management rules?

A. I don't know.

Q. Thank you.

Let's flip back to page 2, and this is paragraph 7.

And it says: "The company's" -- I'm sorry. Let's go to the second sentence of paragraph 7.

"The company has no way of knowing whether land covered by shares will or will not be irrigated and must prepare to meet the share delivery obligation."

Do you see that?

A. I do.

Q. Wouldn't you agree, based on your experience, Mr. Shaw, that farmers typically know which lands will be irrigated prior to the irrigation season because

they've already made cropping decisions, bought seed, bought chemicals?

A. Typically, yes.

Q. And in your experience for permissible places of use, is it a typical condition that the Department sometimes places, on rights with PPUs, to notify the Department as to which acres are going to be irrigated?

A. If there is a --

COURT REPORTER: Okay. Wait. I didn't hear that.

THE WITNESS: If there is a permissible place of use placed on the water right, then, yes, to Mr. Bromley's question.

Q. (BY MR. BROMLEY) So wouldn't it be reasonable for the company to ask its shareholders to notify it over the winter as to which acres will be irrigated and what crops will be planted?

A. No. I think it's up to the water user. If I am a water user, like Mr. Barlogi says, this is going to be a short year, and I've got 80 acres in new alfalfa and 40 acres of winter wheat, and I was going to plant potatoes but decided, no, I'll save my water for the crops I've got in the ground, I'm not going to irrigate that 40. And I wouldn't get my full water delivery, whatever it happens to be for the year, and I don't

think that matters to the companies.

Q. Okay. When I go over your Section 5 on crop water need, Mr. Shaw, I see a lot of suggestions to the Department as to how to get better and use more current data to better understand crop water need.

Is that a fair summary of what you're asking?

A. Yes.

Q. And then in Part A, though, of your report about Surface Water Coalition irrigated area, particularly Twin Falls Canal Company, you're advocating to use the 2017 shapefile for irrigated area for Twin Falls Canal Company; correct?

A. Not the 2017 shapefile, I don't believe.

Q. So you're using the 2017 shapefile, and then what are you doing with it?

A. We took the 2017 -- Mr. Brockway -- Dr. Brockway and his shop the 2017 raster irrigated lands dataset and overlaid it over the 2013 shape that had been prepared for Twin Falls Canal Company. I don't think there's a recommendation that the 2017 be the determination of acres for Twin Falls Canal Company.

Q. So the methodology order is using 2017 acres, the 2017 shapefile; correct?

A. No.

Q. No?

A. To my understanding, it's using the 194,000 acres from the 2013.

Q. Oh, that's correct. I'm sorry. That's a bad question.

So what you're advocating, though, for, with acres, is something that's from 2013, 2017 that's old data; correct?

A. Yeah. Well, its four years old, yes.

Q. But with crop water need, you're asking for current data, last year's data, as recent data as you can get; correct?

A. Well, crop water -- crop mixes can change from year to year, we know that, and that's a critical element in calculating crop water need that hasn't been, in my opinion, appropriately used. Irrigated acres may change over time. If there were resources to update that shapefile every year, you would have -- that would be the best solution. But we haven't seen that happen.

Q. And it would be seem to be consistent that if we're looking for use of best available information to use, in fact, what is best available information; correct?

A. And right now that's the 2013 shape.

Q. Even though that's from 2013 and we're in 2022?

A. That's the best available we have, yes.
MR. BROMLEY: Nothing further. Thank you.
HEARING OFFICER: Additional cross-examination?
I don't see any hands in the air.
Redirect, Mr. Thompson?
MR. THOMPSON: I don't have anything.
HEARING OFFICER: Okay. Thank you, Mr. Shaw.
Next witness?
Do we have another witness? I'm looking at the list, and I don't recall whether Alan Jackson intended to testify, whether the parties intended to call Alan Jackson.
MR. ANDERSON: No.
HEARING OFFICER: Do not intend to call Mr. Jackson?
MR. ANDERSON: No.
HEARING OFFICER: Are there any other witnesses slated to be called?
Mr. Anderson?
MR. ANDERSON: I don't think so. I just had a quick offer of proof I was going to put into the record.
HEARING OFFICER: Okay.
MR. ANDERSON: If that's appropriate now. I don't think we have any -- I created a quick outline

just to make it quick. I know we're -- it's Friday.

HEARING OFFICER: Well, in addition, I think we may have some rebuttal witnesses.

MR. ANDERSON: Right.

MR. FLETCHER: So far everyone said they don't have any rebuttal.

HEARING OFFICER: Well, I think the Department intends to recall Matt Anders, at least.

MR. ANDERSON: Well, I would think this would be appropriate before case in chief, if that's all right?

Just some quick background, Director. We have requested Mat Weaver as a witness; that was denied.

There are two exhibits identified in the City's exhibits -- one is Exhibit 340, one is 354 -- and then there are some questions and topics that would have come out of those exhibits. I've put those in outline form. I'd just like to offer that as an offer of proof.

MS. McHUGH: You're offering those two exhibits as the offer of proof?

MR. ANDERSON: Well, and the information, as well, contained in the outline. Along with those exhibits, there would have been questions, had he been made available as a witness.

MR. FLETCHER: Can we address that?

HEARING OFFICER: Yeah. I don't even understand what I have in front of me.

MR. ANDERSON: Sure. I can explain a little bit.

Just in offering the exhibits as well as the not being able to question Mat Weaver and not having him made available as a witness, this is the evidence that we believe he would be able to testify to. He would have answers to these questions. We believe that they're relevant to the methodology order, to the amendments made.

Both of these exhibits show examples of information about the methodology order to individuals outside the Department and also gathering information from individuals outside the Department, and so that's why. That's the gist of our offer of proof. If there are any questions, I can go into further detail.

HEARING OFFICER: Mr. Fletcher?

MR. FLETCHER: Yeah, we'd move to strike this and these exhibits. These were settlement documents. They say right on the documents they're for purposes of settlement discussion.

We just had a hearing in front of the Director where this issue came up about trying to present settlement discussion topics to the Director, and the

Director ruled that no settlement discussion would be allowed, and this is a backdoor attempt to do that very thing. And so we would ask that this be stricken from the record and that it not be considered since it is purely settlement discussion material.

MR. ANDERSON: If I could address that?

HEARING OFFICER: Okay, Mr. Anderson.

MR. ANDERSON: I don't think we're offering this for the proof of the matter. There's nothing about these documents that we're saying, you know, that you need to consider even the content of the documents. What we're saying here is there's evidence that -- information from the settlement agreement was used in the amendments of the methodology order.

HEARING OFFICER: By what? By a string of emails?

MR. ANDERSON: Well, the string of emails suggests that there was -- that the negotiations will inform the urgency of the finalization of the amendment to the methodology order. That suggests that there was information that came from the negotiations and, again, as far as settlement -- the privilege of settlement documents and settlement negotiations, again, we're not offering this for the proof of the matter. It's to show that information was used from those settlement

agreements to go to the methodology order. I think it's completely different, and it's not excluded by that evidentiary rule.

HEARING OFFICER: Okay. Mr. Anderson, I'm not even accepting this. I will tell you that I am always meeting with staff trying to establish priorities as to what I need to work on and what I don't need to work on, and that's what I'm doing here.

MR. ANDERSON: Well, I'm not intending to try to make you a witness, Director. I just -- this is information that was disclosed to us as part of a request.

HEARING OFFICER: That's fine. And we supplied this information in good faith, but I don't see anything in this that would either establish any nefarious intent or any reason to bring in this document that was -- I've never seen this document that I'm aware of. SWC discussion points, main discussion points, I've never seen any of this, and I think it's because it was part of settlement, and I was excluded from those discussions.

So my string of emails in here and what's included simply was an attempt on my part to say what do we need to prioritize and work on in the many responsibilities that the Department and the Director

has, and that was the intent of these emails. And we disclosed them in good faith, and I guess, from my perspective, for you to even insinuate that there was something nefarious, I find to be offensive, and I won't let it in. Thank you.

MR. ANDERSON: Okay.

HEARING OFFICER: Make sure we don't have that in the documents.

Okay. Rebuttal witnesses, Mr. Johns?

MR. JOHNS: I'd like to call Bryce Contor to rebut Mr. Brockway and Mr. Shaw's testimony, just briefly.

HEARING OFFICER: Do you want to wait until after Mr. Anders testifies, or do you want to call him now? I guess in the order of presentation, I'd prefer to have Mr. Anders go first.

MR. JOHNS: That works.

HEARING OFFICER: It seems to me it would work better for you as well.

MR. JOHNS: I think so. Thank you, Mr. Director.

HEARING OFFICER: There's Matt Anders.

If you'll come forward, Mr. Anders. You're already sworn in.

THE WITNESS: Oh, all right.

HEARING OFFICER: Please be seated.

MATTHEW ANDERS, P.G.,
called as a rebuttal witness by IDWR having been previously duly sworn to tell the truth relating to said cause, testified as follows:

DIRECT EXAMINATION

QUESTIONS BY MR. WOOD:

Q. Hello, Matt.

A. Good afternoon.

Q. I realize you've already testified in this matter, but can you please state and spell your name for the record one last time.

A. Sure. Matt Anders, M-a-t-t, A-n-d-e-r-s.

Q. And can you briefly tell us where you work and what role you played in developing the Fifth Methodology Order?

A. Yeah, I work for the Idaho Department of Water Resources. I did research and development on some of the methods in updating the method in the Fifth Methodology Order. I also participated in drafting portions of the order.

Q. And did you listen to the testimony of Bryce Contor and Sophia Sigstedt yesterday?

A. I did.
Q. Matt, can you please find Ms. Sigstedt's expert report which was previously admitted as Exhibit 837. And I'll have you turn to page 20 -- Exhibit 837, page 20, not page 16 of her report.
A. Page 20, I'm there.
Q. And does that have a bell-shaped figure at the top?
A. Yep, a blue one.
Q. And can you please find the sentence about halfway down the first paragraph that reads, "for 2018 there is a note"?
A. Yes, I see it.
HEARING OFFICER: Where are you again? I'm sorry.
MR. WOOD: Yeah. So it's Exhibit 837, page 20, but realizing that there's -- the document has two different page numbers on it. So this one says "Exhibit 837, page 20" as opposed to the actual number of the document, which is 16.
HEARING OFFICER: I'm with you.
Q. (BY MR. WOOD) And can you find that sentence about halfway down that starts, "For 2018 there is a note"?
A. Yes, I found it.

Q. Can you please read that sentence into the record.

A. "For 2018 there is a note about AFRD2 recharging between 5,000 - 10,000 acre-feet of recharge to Mile Post 31 for Magic Valley Ground Water District, and the calculation shows only 5,000 acre-feet of recharge was accounted for."

Q. And what is your understanding of what Ms. Sigstedt meant by that sentence?

A. My interpretation is that she's saying that we have missed or not adjusted the diversion for AFRD2 for 5,000 acre-feet.

Q. And have you had a chance to investigate that allegation?

A. I did.

Q. And what was your conclusion?

A. So after Ms. Sigstedt's testimony yesterday, Kara Ferguson and I looked through the calculator, and we found the note that she was referring to. And it's on the "Demand" tab, and it's where we're adjusting the demand for recharge and wheeled water.

And we looked at it, and she is correct, there was an adjustment for 5,000 based on the recharge -- the way we do our recharge adjustments. In this case, for recharge, it's a subtraction.

But we also found that in what we call the "adjustment side," the adjustments coming from -- the lease is coming from Water District 1. There were two private leases in there as well, for 10,000 acre-feet.

So what we concluded was that -- what we should have done was subtract 10,000 acre-feet from AFRD2's diversion in 2018 for this recharge that she is referring to.

In actuality, we subtracted 15,000. And we think that's because the data are coming to us from two different places. We get them from the recharge program here at IDWR, and we get them from Water District 1. And those leases and that note were referring to the same water, but we didn't realize it. So we subtracted too much from AFRD2 in that case. So there is an error in our baseline year for AFRD2. It's 5,000 acre-feet too low.

Q. Too low?

A. Yes.

Q. Can you please read the next sentence, the one starting with "Additionally, IGWA's settlement."

A. Okay. "Additionally, IGWA's settlement performance report shows almost 4,000 acre-feet of recharge by North Snake Groundwater District through North Side Canal Company that is not accounted."

Q. And what is your understanding of what Ms. Sigstedt meant by that sentence?

A. Similar to the previous line, she thinks that -- or my interpretation is she thinks we have -- we missed making an adjustment for 5,000 acre-feet of recharge for Magic Valley.

Q. And have you had a chance to investigate this allegation?

A. We did.

Q. And what did you conclude?

A. So, again, we -- after her testimony yesterday, we were looking through the adjustments for Magic Valley Ground Water District -- maybe I should back up.

So we recorded the baseline year at the technical working group. And based on discussions with the technical working group, we decided we needed to go back through the adjustments and make sure that we had everything. Because we were going to use 2018 as a baseline year.

In that second review, Kara found that we had missed this 4,000 acre-feet that Ms. Sigstedt is referring to. So at the time of the technical working group, we didn't have it in the baseline there. We hadn't made the subtraction. But for the Fifth

Methodology Order, we did do the subtraction.

So there was a change in the numbers between the technical working group and the Fifth -- what actually came out in the Fifth Methodology.

Q. But the numbers in the Fifth Methodology Order are correct; is that true?

A. Yes, they are correct in this case.

Q. Matt, can you now turn to page 28 again, of Exhibit 837.

A. Okay. I am on page 28.

Q. And do you see the paragraph entitled, "2.4.4 Bias in 2018 Baseline Year for Reasonable Carryover."

A. I do.

Q. And can you find the sentence about halfway through that starts "Figure 2-10 is IDWR's hindcast"?

A. So "Figure 2-10 is IDWR's hindcast analysis showing annual carryover volumes for Twin Falls Canal Company 1995 to 2022 under the Fourth Methodology Order (baseline year 06/08/12) and the Fifth Methodology Order (baseline year 2018)."

Q. Now, can you turn to Exhibit 300, which is the Fifth Methodology Order.

A. Okay. I have that.

Q. Well, let me back up. Let me back up for just a second.

Can you read the final sentence of that paragraph. I believe you didn't read the final sentence.

A. Oh, back on page 28?

Q. Yes. I'm sorry.

A. Okay. No problem.

"Under the Fifth Methodology Order, 19 out of the 30 years would have resulted in a carryover shortfall and that these occurred even in average and above-average years. Figure 2-1."

Q. Okay. So now let's turn to the Fifth Methodology Order, which is in Exhibit 300.

A. Yes.

Q. And can you turn to page 28 -- excuse me -- 23. And I'm looking for paragraph 68.

A. You said 23?

Q. Page 23, yes.

A. Okay. I'm on page 23, and I see paragraph 68.

Q. Can you explain what information is contained in paragraph 68?

A. So this paragraph describes the calculation that we use for calculating what we referred to as "maximum projected carryover need."

We take the projected -- yes, the projected demand of the 2018 baseline year, and we subtract the

projected supply, which is the average supply for the '02-'04 irrigation seasons.

And then under it is a table that shows the calculation -- the numbers used in the calculation. And then on the right is the maximum projected carryover need.

Q. And can you read the footnote that's in Footnote 18 there?

A. "This Fifth Methodology Order updates this chart with the baseline year and calculates new maximum projected carryover need values."

Q. And can you now turn to paragraph 78, which is on page 29.

A. You said 78?

Q. 78.

A. Okay. I'm on page 29. I see 78.

Q. Can you explain what information is contained in paragraph 78?

A. So paragraph 78 is the reasonable carryover values that we are assigning for the Fifth Methodology.

In the pages that we went -- that we just went through before the -- between the previous table on page 23 and here on 29, we do some additional analysis, and we adjust some of the numbers.

So we adjust the maximum projected carryover

need numbers from the table in 68. Three of those we've adjusted in Table 78: AFRD2, BID, and Twin Falls Canal Company.

Q. And so am I correct in understanding that the Fifth Methodology Order used the adjusted carryover data in paragraph 78, not the maximum projected carryover data in paragraph 68?

A. That is correct.

Q. And Ms. Sigstedt's conclusion was based on the maximum carryover data in paragraph 68; is that correct?

A. I believe -- I'm not totally sure, but I believe that that was the case.

Q. And so Ms. Sigstedt -- if that's true, then Ms. Sigstedt's conclusion that 19 out of the last 30 years would result in carryover shortfall was based on incorrect data; is that right?

A. Yes, that is correct.

Q. And when the adjusted carryover data in paragraph 78 is used, the proper data that was used in the Fifth Methodology Order, how many years out of the last 30 would have resulted in a shortfall?

A. Six.

MR. WOOD: Nothing further.

HEARING OFFICER: Okay. Examination? What's the order of examination? Do we have the groundwater

users go first?

Okay. Mr. Budge.

CROSS-EXAMINATION

QUESTIONS BY MR. BUDGE:

Q. Matt, you had so much fun on Tuesday that you wanted to come back.

A. It's hard to resist. I agree.

Q. I just have a few follow-up questions on several of your comments related to the expert report of Sophia Sigstedt.

The first discussion that you have with Mr. Wood was related to some of the recharge data of AFRD2 and North Side Canal Company.

Do you recall that?

A. Yes, I do.

Q. And Ms. Sigstedt's comments were based on information the Department had produced concerning that aspect of the methodology order?

A. Yeah, the first --

Q. I'll reask the question.

A. Yeah.

Q. There was a discussion about how much recharge had happened through AFRD2.

Do you remember that?

A. Yes.
Q. And Ms. Sigstedt cited a Department document that showed that there had been between 5,010,000 acre-feet of recharge through AFRD2?
A. Yes. The note that she is referring to comes -- is in our -- what we call "our calculator."
Q. And then when she brought that to the Department's attention, that caused you and Kara Ferguson to go explore that further?
A. Yes. Yep.
Q. You're not suggesting that Sophia made any type of intentional error or intentionally tried to mislead the Director by pointing that out in her report?
A. Oh, no. Certainly not. I mean, it was poorly documented in the calculator, it was ambiguous in there. And these are the kinds of things we want, the consultants to point out to us, like, you made an error, here, fix this, fix that.
So, no, not at all.
Q. Okay. And the same would be true for the issue involving North Side Canal Company recharge?
A. Yeah, the adjustments are very confusing, so it's hard to know if everything got included. So we appreciate the check.
Q. Okay. The Department didn't -- before issuing

the Fifth Methodology Order, there wasn't, like, a draft order that was provided for review by the parties; right? It was just issued on April 21st and implemented immediately?

A. That is correct.

Q. Had the process started sooner with either a hearing or some other collaborative process, these types of issues may have been raised before the Fifth Methodology Order was issued?

A. Possibly. Once we're drafting, things are always in flux. It's possible that we could have talked to them, but it's not guaranteed.

Q. I understand.

And you've sat through most of the hearing?

A. Yeah, I have. I've sat through all of it.

Q. Have you learned information at the hearing that you think may be useful or inform changes in the methodology in the future that may help it function more effectively?

A. Yeah --

MR. WOOD: Director, I'm going to object to that. That's outside the scope.

HEARING OFFICER: Sustained.

Q. (BY MR. BUDGE) Matt, have you learned anything at the hearing that may cause you to go back

and revisit certain parts of the Fifth Methodology Order?

MR. WOOD: Same objection.

HEARING OFFICER: Sustained.

MR. BUDGE: No further questions.

HEARING OFFICER: Thank you.

Other cross-examination? Any more questions for Mr. Anders?

I guess one of the reasons for my sustaining the objection is that the focus of the question -- or the focus of the questioning was very narrow in its scope to correct some information.

Thank you, Mr. Anders.

THE WITNESS: Thank you.

HEARING OFFICER: Now, I don't think -- I don't think the Department has any other information to put on in rebuttal.

MR. WOOD: That's correct.

HEARING OFFICER: Okay. We have a request for some additional rebuttal.

Was that from you, Mr. Johns?

MR. JOHNS: That's correct.

HEARING OFFICER: Okay.

MR. JOHNS: I'd like to call Bryce Contor back to the stand.

HEARING OFFICER: Mr. Contor, you're already sworn in. If you'll take a seat.

MR. JOHNS: Just one item, Director, and I talked with the Surface Water Coalition, and I assume the groundwater folks are okay, but we would like to offer Exhibits 502, 504, 505, 506, and 515 and request that they be admitted by stipulation.

HEARING OFFICER: Give me the numbers again.

MR. JOHNS: 502, 504, 505, 506, and 515.

HEARING OFFICER: And you represented that you've spoken to the Surface Water Coalition. What's the result of those conversations?

MR. JOHNS: I believe that they were okay with stipulating to the admission of those exhibits.

MR. FLETCHER: Did you say something? No. We're good.

MR. JOHNS: And yeah, 502, 504, 505, 506, and 515.

MR. THOMPSON: [Unintelligible.]

COURT REPORTER: I can't hear you, Mr. Thompson.

I couldn't hear what he said.

MR. FLETCHER: Can you repeat those again slowly?

MR. JOHNS: 502, 504, 505, 506, and 515.

HEARING OFFICER: And based on your question, Mr. Fletcher, are these references a matter of first impression with you?

MR. FLETCHER: No. I was -- no. I should do one thing to the latest. I was going to ask the last witness if AFRD2 got paid extra for the extra 15,000 that was reported, but I'm trying to keep this moving along.

HEARING OFFICER: So is there stipulation to the admission of these exhibits that have been --

MR. FLETCHER: There is from us.

HEARING OFFICER: Pardon me?

MR. SIMPSON: From us.

MR. FLETCHER: There is from the SWC.

HEARING OFFICER: And I assume there are no other objections.

All right. The documents that have been marked as Exhibits 502, 504, 505, 506, and 515 are received into evidence.

(Exhibits 502, 504 - 506, 515 received.)

MR. JOHNS: Thank you, Mr. Director. And I'll try to be concise with my rebuttal here.

///

///

///

BRYCE CONTOR,

called as a rebuttal witness by the Bonneville-Jefferson Ground Water District, having been previously first duly sworn to tell the truth relating to said cause, testified as follows:

DIRECT EXAMINATION

QUESTIONS BY MR. JOHNS:

Q. Bryce, welcome back up to the stand.

A. Thank you.

Q. Just briefly, were you present during the testimony of Mr. Brockway and Mr. Shaw?

A. Yes.

Q. Do you recall discussions regarding fallowing of acres and how that factors into calculations in the methodology order?

A. Yes.

Q. Okay. Have you performed technical work pertaining to the fallowed acres similar in this regard?

A. Yes. When I was making recommendations in the Snake River Basin Adjudication, I had to look at parcels -- aerial imagery and decide whether a field that was not green in that particular image was in general irrigated.

When I worked for IWRRI on the water budget

for the ESPAM model, we had to wrestle the same question in preparing the irrigated lands dataset. And now as I work helping clients prepare their claims in the Bear River Basin Adjudication, I have to wrestle the same question.

Q. So you have some expertise in this area?

A. Yes.

Q. Thank you.

MR. JOHNS: Would we be able to bring up -- or give him a copy of Exhibit 4?

MR. WOOD: Exhibit 4?

MR. JOHNS: Correct.

THE WITNESS: I have it here.

Q. (BY MR. JOHNS) Okay. Could you turn to page 2, and just quickly look over that. I just want to ask you just a couple questions that came up during Mr. Brockway and Mr. Shaw's discussions with counsel.

A. The one I have, the pages are not numbered, but I'm looking under Heading A, "Evaluation of TFCC Project Acres."

Q. And Item 5?

A. Item 5 is -- Item 5 that page is numbered, and it is numbered 2. Yes, I see that, Item 5.

Q. Now, I'm just going to ask you a couple questions.

First, is it reasonable that some fields would be fallowed in some years?

A. Yes.

Q. How so?

A. Well, so Dr. Brockway described a number of reasons that could occur. I think Mr. Barlogi did. And for the most part, those ring true to me. I couldn't repeat every discussion that they gave.

Q. But you agree it would be technically defensible to factor that into the methodology order?

A. Yes.

Q. If you were assigned to count acres, how would you treat fallowed acres?

A. So it would depend on the purpose. If I were trying to describe a permissible place of use, if I were trying to describe historical irrigation over a period of years, if I were trying to describe a service area, those acres definitely would want to be included if -- unless they were -- had never, ever been irrigated.

Q. But in a future year, that field might not be fallowed?

A. Yeah, that's right. And so I didn't finish. I'm sorry. If I was trying to determine the actual quantity or amount of irrigated acres, then for that year, those acres should need to be excluded.

Q. So excluding the fallowed acres would not distort the total acreage?

A. No, because, as I think Dr. Brockway explained, this parcel may be fallowed this year and irrigated in the next year. But the underlying mechanisms that caused the fallowing, that caused the rotation, those will be ongoing. And so this parcel becomes irrigated, this parcel becomes fallowed next year, the -- not only would excluding them be technically defensible, it would be more defensible and more correct than including those.

Q. Anything else you need to add on fallowed acres that was discussed?

A. I don't think so, thank you.

MR. JOHNS: I don't have any more questions.

HEARING OFFICER: Cross-examination of the witness, Surface Water Coalition?

Do you need a moment?

MR. FLETCHER: No. I just -- I didn't really understand some of the testimony.

HEARING OFFICER: Okay. Mr. Fletcher.

MR. FLETCHER: Thank you.

///

///

CROSS-EXAMINATION

QUESTIONS BY MR. FLETCHER:

Q. Thank you. Mr. Contor, I just need some clarification.

So when you say a fallow acre should be excluded, excluded from what?

A. Oh, I'm sorry. Yeah, that was unclear.

So from the calculation of actual irrigated acres in a year when we're doing the evaluation, if that acre is not irrigated in that year, it should not be counted.

Q. Okay. So if an acre on Twin Falls Canal Company, for example, is fallowed -- say a corner of a pivot, for example -- does that clearly indicate that the shares attributable to those acres aren't being used elsewhere?

A. I don't think it does. But the underlying assumption is that if those shares are being irrigated elsewhere, that irrigation will appear in the dataset. And then in a following year, if that irrigation is moved back to this corner, then it will have to disappear from where it was, and that's the rationale.

Q. So if -- are you saying that somehow each year someone should determine the actual irrigated acre s in that irrigation season?

A. So I'm saying that that may -- that is the best available science, whether it's attainable is a different question. What I'm saying is, is that if you -- it's going to be what I would call a "dynamic equilibrium." So this year this one's irrigated, this one's fallow; next year this one's irrigated, this one's fallow; next year this one's irrigated, this one's fallow. But any one of those snapshots would be a reasonable representation of the ongoing dynamic irrigated area.

All of the mechanisms that Dr. Brockway talked about, in my estimation, would be relatively constant year to year. That's what I was trying to say. So if you want to know exactly where every irrigated acre is, then, yes, you would have to do it every year. But if you want to know the quantity, the periodic snapshots should be adequate.

Q. Just because a farmer fallows an acre one year doesn't mean he, necessarily, fallows any acres the next year?

A. For an individual farmer, that is correct, but all of the mechanism s that Dr. Brockway described would operate in every year, and they would have similar effects year to year.

Q. So the Department is using data from prior

years in order to make this calculation; correct?

A. So currently, yes.

Q. And the shapefiles it's using are from prior years; correct?

A. Yes.

Q. So I guess it's your testimony that if an acre shows up as being fallow but has a right to be irrigated, it should not be included in the current year even though it could be irrigated in the current year?

A. So my testimony is that if the goal is to use prior data to do an estimate of the total quantity of acres that would be irrigated in the current year, that the best estimate -- given the fact that we have to use old data because the current year hasn't occurred yet -- the best estimate of what would happen in 2023 would be what actually happened in 2022.

And if in 2022 some random fraction of acres, for a number of reasons that Dr. Brockway explained well, were not irrigated, it's likely that under those same mechanisms, approximately the same number of acres in 2023 also would not be irrigated. The probability that they would be the exact same locations is fairly low. But the probability that the 2022 representation would be the total correct number of acres is fairly high.

Q. You would agree with -- I think it was Dave Shaw's testimony that each farmer makes his own determinations; correct?

A. I would agree with that, yes.

Q. And it's not the canal company making that determination?

A. I would agree.

Q. And the farmer is determining if he's laying 1 acre fallow or not fallow in any particular year?

A. I agree.

MR. FLETCHER: Thank you.

HEARING OFFICER: Redirect, Mr. Johns?

Do you have questions, Mr. Harris?

MR. HARRIS: I do have some follow-up.

HEARING OFFICER: Go ahead.

MR. JOHNS: Go ahead.

CROSS-EXAMINATION

QUESTIONS BY MR. HARRIS:

Q. Mr. Contor, just to pick up from Mr. Fletcher's comments.

It's your understanding that irrigated acres is part of the methodology order; correct?

A. Yes.

Q. And the shapefile that was actually used in

the methodology order was the 2013 shapefile, which essentially is -- it's 194,732 acres?

A. Yes.

Q. There's a more recent shapefile that has less acres than that; correct?

A. That's my understanding.

Q. And that was not used in the methodology order?

A. That's my understanding.

MR. HARRIS: Okay. No further questions.

HEARING OFFICER: Any recross? I assume no recross.

MR. FLETCHER: No recross. That's not mine.

HEARING OFFICER: Well, I guess --

MR. FLETCHER: It wouldn't be me. It's his counsel.

HEARING OFFICER: Well, let's call it.

Is there any further examination of Mr. Contor?

I appreciate Mr. Contor being here for the duration.

Thank you, Mr. Contor.

Are there other witnesses?

I see heads shaking no.

Ms. McHugh's negotiated the cords once more.

Do you have something to say?

MS. McHUGH: I was just getting close to a mic once we start discussing exhibits.

HEARING OFFICER: All right. Well, before we do that, let's break for 15 and come back. We've been here for almost two hours, and everybody can organize their thoughts and maybe organize their notes.

Come back at quarter after.

(Break taken.)

HEARING OFFICER: Back on the record.

Are we on?

COURT REPORTER: Yes.

HEARING OFFICER: Thank you, Andrea.

Are you at the podium to lead the discussion?

MS. McHUGH: I'm at the podium to just offer the fact that I believe we have a stipulation to three more exhibits to be admitted into the record, and then I'm going to be done.

HEARING OFFICER: Okay.

MS. McHUGH: So Exhibit 348, 349, and 350, which are summaries of the City of Pocatello, City of Idaho Falls, and Coalition of Cities water rights.

HEARING OFFICER: 348, 349, and 350.

And the parties have discussed these three exhibits? There's a stipulation for admission?

MR. FLETCHER: Yes.
MR. SIMPSON: Yes.
HEARING OFFICER: I hear no negatives.
MS. McHUGH: They're all falling in line right now.
HEARING OFFICER: Okay.
MS. McHUGH: Thank you.
HEARING OFFICER: So the documents marked as Exhibit 348, 349, and 350 are received into evidence.
(Exhibits 348 - 350 received.)
HEARING OFFICER: Have the parties reviewed the compilation of admitted exhibits, and is there any discrepancy?
Ms. Patterson?
MS. PATTERSON: No discrepancy. It looked accurate.
So I thank everybody, including our court reporter and Sarah, for keeping track of those.
IGWA would like to, with the stipulation of the other parties, admit the documents that were presented to the technical working group. And those are exhibits -- they're common exhibits, 900, 901, 902, 903, 904, 905, 906, 908, 909, 910, 912, 914 was previously admitted, and 928, which was discussed.
HEARING OFFICER: And have all of these

documents been reviewed by the parties?

Are these documents that were reviewed or presented by the Department to the technical working group?

MS. PATTERSON: They were presented to the Department for the technical working group, and they were made available by the Department as a part of its notice of what the parties may take -- may use for the scope of this hearing.

HEARING OFFICER: Okay. So based on the represented -- or represented stipulation, I will receive into evidence the documents marked as Exhibits 900, 901, 902, 903, 904, 905, 906, 908, 909, 910, 912, and 928.

Is that correct? Is that comprehensive?

MS. PATTERSON: That is.

(Exhibits 900 - 906, 908 - 910, 912, and 928 received.)

MS. PATTERSON: And we have one last item.

Director, if you'll recall, at the end of Sophia's testimony you asked her about a portion of the report where it looked like there was a typo.

Ms. Sigstedt confirmed that that was a typo, and she sent in an updated expert report which removes the errata. I've circulated, for the parties, the

redline version so you can see what was updated, and we have a clean updated report that I would like to label as 837A, similar --

HEARING OFFICER: What's the number?

MS. PATTERSON: 837A.

And this is similar to what the Cities did for the updated report of Mr. Sullivan.

And so I would just ask that, you know, where we reference 837 in the record, we'll actually be referring to the updated report which removes errata.

(Exhibit 837A marked.)

HEARING OFFICER: So are you moving for the admission of 837A --

MS. PATTERSON: That is correct.

HEARING OFFICER: -- what has been marked as 837A?

MS. PATTERSON: It's the updated expert report of Sophia Sigstedt, and it removes errata.

HEARING OFFICER: And have the parties had the chance to review the documents?

MR. FLETCHER: We did. I looked through it. I didn't have any issue. Most of it was just switching -- words had been switched and added an "A" in there. She did add a "not" somewhere, but that's okay. We talked about that.

HEARING OFFICER: Okay. So based on the represented stipulation, I'll receive the document marked as 837A into the record.

(Exhibit 837A received.)

MS. PATTERSON: Thank you.

HEARING OFFICER: Other corrections?

Mr. Thompson.

MR. THOMPSON: I believe the parties have stipulated to Exhibit 2 for the Surface Water Coalition. It's information contained in Exhibit 4, but it just has a little additional detail.

So I would offer that.

HEARING OFFICER: Okay. And based on the represented stipulation, I'll receive Exhibit 2 into the record.

(Exhibit 2 received.)

HEARING OFFICER: Others?

MR. BUDGE: Director. Last night I filed a motion to take official notice of the joint forecast. It was brought to my attention that the document I had attached to my motion is not the actual joint forecast of the Bureau and the Corps of Engineers. I've not been able to obtain what I understand to be the full joint forecast, so I'm going to withdraw that motion at this time.

If at some point we're able to locate the full document, then we may refile that motion at a future date.

HEARING OFFICER: Okay. Well, it is a document that the agency would typically rely upon, so I don't know that anybody would object as long as there's a disclosure to all of the parties.

MR. BUDGE: And I have discussed that with the Surface Water Coalition, and they agree.

So I'm just, for the record, withdrawing the motion that was filed yesterday.

HEARING OFFICER: Okay. Thank you.

Okay. Other cleanup?

All right. So let's just talk about post-hearing processes.

So as I have stated before, this is an expedited process. I apologize to everybody because of the -- in my opinion -- the urgency of holding this hearing, and as a result, I will allow some briefing, but I think it needs to come in within a week. I know that's probably a deadline that nobody likes, so I'll allow simultaneous briefs to be filed. No responses or replies.

So let's anticipate any briefs coming in by the close of business a week from today, which would be

nine plus -- is what, the 16th? Is that correct?

MR. BRICKER: Yes.

HEARING OFFICER: Well, let's talk a little bit about some of what I'm concerned about in the briefing.

And I've listened to four days of testimony from many witnesses, and I appreciate the participation of the attorneys. And I have respect for both the water bar and for the experts who work on these matters.

I want to answer the question that Mr. Budge asked of Mr. Anders and just say that there was much presented today that needs to be considered in the future as we refine the methodology order. It is a dynamic document. It's intended to be. And, honestly, that was the reason for reissuance.

So let's talk about some of that information that was presented and the context of that information in terms of the law and the delivery call as, at least, I remember it.

So people can correct me either here today or in the briefing. But my understanding in this delivery call is that there's been a determination of material injury already. And there's been a determination that pumping of the groundwater depletes flows in the Snake River, and those flows are flows that the Surface

Water Coalition depends upon for its water supply.

And it's also my understanding that the courts have said that at least there's a presumption that the senior water right holders are entitled to their water as described in the decrees that have been issued by the Snake River Basin Adjudication court. And so there's a presumption in favor of the senior water right holder that they're entitled to the quantities and the other elements that are in the water right.

And, from my perspective, the methodology order is an attempt to evaluate the actual use of water by the seniors to determine whether there is some adjustment that is appropriate from the decreed amounts. And that's the reason for the clear and convincing standard that's been imposed and that the Department has been told by the courts it needs to -- for any adjustment that that's the standard or the proof that needs to come to the Department. And that's the reason for safety factors built into the methodology order.

And so much of what I've listened to, honestly, is testimony about uncertainties in that process. And if there are uncertainties in determining by clear and convincing evidence that there's an adjustment that's appropriate, then I want to know what the fallback is legally.

Because, frankly, the presumption is that the senior is entitled to the elements of the water right. And if those adjustments are to be established by clear and convincing evidence and the evidence that comes in during the hearing establishes uncertainties about whether it's clear and convincing, then I want to know what the Department's fallback position is.

Is the position that we -- there's a determination of material injury, but there's so much uncertainty that the Department should not be administering the water rights? Is the question that there is so much model uncertainty that there is no determination of what a curtailment date should be.

And then I think -- associated with that, I think there's also a question about burdens of proof. In other words, in the conjunctive -- and I don't know the answer to this, necessarily, but under the conjunctive management rules, who bears the burden of establishing, by clear and convincing evidence, what those adjustments should be? Is it the Department's burden? Is it the senior burden? Or is it the junior burden?

And, honestly, who has that information? I mean, there was an attempt, I think, through the questions to say that the senior has total control over

determining whether there's supplemental groundwater use or not. And yet the groundwater diversions are diversions that are measured by the groundwater users and at least reported on an annual basis and reported long after the season is over.

So I guess my question is: Who bears that burden? I don't know the answer to that question, but it seems to me it has some relevance in what we're talking about.

So I think we need to be thinking rather than trying to look at all of the nuances and all of the deficiencies. I think we need to look at it in the framework of what have the courts told us and what are the standards that need to be applied in looking at how the methodology operates within the larger realm of water administration and conjunctive water administration?

Now, there's one other matter I just want to talk about, and I suspect that we will -- there will be arguments about due process and the fact that people didn't have enough time to prepare. And, you know, I think there are questions about whether there were any property interests that were injured prior to this hearing or the people that were deprived in some way in a property interest. Certainly, that harbinger of that

possibility is out there.

But I think the real question is, what do we do in terms of water administration and timely water administration and try to figure out what's adequate.

I'll also point out that there was a theme, I think, through the discussions about the inability to prepare. And I guess I feel a little bit -- you know, I don't know how to characterize this, but, you know, we have been involved in this dispute for 20 years now -- or going on 18, I'd say. And there have been opportunities for people to develop mitigation plans; there have been opportunities for people to gather data; there have been opportunities for folks to take on responsibility to prepare.

And I find I'm a little incredulous that people will come into the hearing and say, "We haven't had an opportunity to get ready." And I guess I just turn around and say, "Doggone it, there have been years of opportunity to prepare."

Now, maybe not for a change from steady state to transient, and, certainly, that's an issue that can be taken to the courts or I need to reconsider; I don't know. But to say that there hasn't been an opportunity to put in place safeguards for the possibility of water administration, I'm a little incredulous at that.

All right. I don't know whether there are other issues. You're certainly welcome to raise them.

Mr. Thompson.

MR. THOMPSON: A page limit, maybe, for post-hearing briefs for Mr. Harris.

MR. HARRIS: Mr. Thompson just referred to me, that that's the only reason for a page limit.

HEARING OFFICER: Did he suggest a number?

MR. HARRIS: No, he suggested he needed it because of me.

HEARING OFFICER: Because of you?

MR. HARRIS: Because of me.

HEARING OFFICER: I'm -- I won't impose a page limit, but you know what, if -- just think about the number of those briefs that I might receive and how quickly I need to get through them. So I would suggest brevity.

And one of the reasons that I wanted to talk about issues was to try to get you to focus and maybe not spend so much time arguing about this little nuance or that little nuance in the expert reports, because I think there's a larger framework we really need to be thinking about. And I, hopefully, at least, made a crude attempt at trying to identify a framework.

All right. Anything else?

Thanks, everybody, for your help --

MR. BRICKER: Thank you.

HEARING OFFICER: -- and your patience.

We'll close the record.

(Hearing concluded at 3:36 p.m.)

REPORTER'S CERTIFICATE

I, ANDREA L. CHECK, CSR No. 748, Certified Shorthand Reporter, certify;

That the foregoing proceedings were taken before me at the time and place therein set forth, at which time the witness was put under oath;

That the testimony and all objections made were recorded stenographically by me and transcribed by me or under my direction;

That the foregoing is a true and correct record of all testimony given, to the best of my ability;

I further certify that I am not a relative or employee of any attorney or party, nor am I financially interested in the action.

IN WITNESS WHEREOF, I set my hand and seal this 13th day of June, 2023.

ANDREA L. CHECK, CSR No. 748, RPR, CRR

STANDARD OF REVIEW 14

ISSUES ON APPEAL 14

SUMMARY OF THE ARGUMENT 16

ARGUMENT 17

IV. Procedural Errors 17

1. The Director violated due process and the APA by failing to hold a hearing before issuing the Fifth Methodology Order. 17

1.1 The Fifth Methodology Order was issued in a contested case, in the absence of an emergency. 19

1.2 The Fifth Methodology Order was issued in violation of due process and the APA. 20

1.3 The so-called "technical working group" cited by the Director does not satisfy due process or the APA. 21

1.4 The after-the-fact hearing does not satisfy due process or the APA. 22

2. The Director violated the APA by developing the Fifth Methodology Order using evidence not contained in the agency record. 23

3. The Director violated Department rule of procedure by taking official notice of information *after* the Fifth Methodology Order was issued. 23

4. The Director violated Idaho Code § 67-5252 by denying the motion for an independent hearing officer. 24

5. The Director violated due process, acted upon unlawful procedure, and abused discretion by blocking the parties from discovering and presenting relevant evidence. 24

6. The Director acted upon unlawful procedure, violated due process and the APA, and abused discretion by failing to give junior water users adequate time to conduct a field-level examination of irrigated acres and supplemental groundwater use, then ruling against them because they did not provide proof thereof at the hearing. 27

7. The Director violated Idaho law and abused discretion by failing to use the best science available to calculate SWC water needs in accordance with CM Rule 42.01.e. 32

7.1 The Director refused to improve the Forecast Supply calculation to account for all sources of water available to the SWC.....32

7.2 The Director refused to use the best science available to determine the current irrigated acres of TFCC.....33

7.3 The Director failed to evaluate whether the water needs of TFCC can be met with supplemental groundwater in accordance with CM Rule 42.01.h. 36

8. The Director violated Idaho law and abused discretion by failing to evaluate whether SWC water needs could be met without curtailment by making system improvements in accordance with CM Rules 40.03, 42.01.a, 42.01.g, and 42.01.h.....37

9. The Director violated Idaho law and abused discretion by refusing to apply the futile call doctrine in accordance with CM Rules 10.08 and 20.04. 40

10. The Director violated Idaho law and abused discretion by refusing to consider the public interest in achieving maximum beneficial use of Idaho's water resources in accordance with CM Rules 10.07, 20.03, and 42.01. 41

11. The errors cited above violate substantial rights of junior-priority water users. 44

12. The Director is liable for attorney fees under 42 U.S.C. § 1983 for depriving junior water users of clear due process rights, or alternatively, under Idaho Code § 42-117(1). 44

CONCLUSION..... 45

Constitutional Provisions

Idaho Const. Art. 15 § 7 29
Idaho Const. Art. I § 13 17
U.S. Const., Amend. 14 §1 17

Idaho Ground Water Appropriators, Inc. ("IGWA"), acting for and on behalf of North Snake Ground Water District, Magic Valley Ground Water District, Carey Valley Ground Water District, American Falls-Aberdeen Ground Water District, Jefferson-Clark Ground Water District, Madison Ground Water District, and Henry's Fork Ground Water District, through counsel, submits this opening brief pursuant to paragraph 9 of the Court's *Procedural Order* dated August 16, 2023, the Court's *Order Granting Unopposed Motion and Order Vacating and Resetting Hearing* dated November 17, 2023, Rule 84(p) of the Idaho Rules of Civil Procedure, and Rule 34 of the Idaho Appellate Rules.

STATEMENT OF THE CASE

I. Nature of the case

This is a petition for judicial review of actions taken by the Director of the Idaho Department of Water Resources ("IDWR" or "Department") in a contested case governed by the Idaho Administrative Procedures Act, Chapter 52, Title 67, Idaho Code ("APA"). The case involves the ongoing Surface Water Coalition[1] (SWC) delivery call. The Director adopted a new methodology that radically changes the way water rights are administered under the call. The process employed by the Director to develop the mew methodology violates due process and the APA. In addition, the Director failed to apply key provisions of the Rules for Conjunctive Management of Surface and Ground Water Resources, IDAPA 37.03.11 ("CM Rules").

II. Procedural History

In January 2005, the SWC petitioned the Director to shut off groundwater diversions from the ESPA so more water will overflow from the ESPA into the Snake River in the American Falls area, upstream from SWC diversions at Minidoka Dam and Milner Dam. After a period of litigation over the constitutionality of the CM Rules, an evidentiary hearing was held in 2008 before former Idaho Supreme Court Chief Justice Gerald F. Schroeder who was appointed hearing officer. On the recommendation of Justice Schroeder, former IDWR Director David R. Tuthill, Jr. developed a formula known as the "methodology" to annually predict material injury to SWC members in accordance with the CM Rules. The methodology was subsequently revised

[1] The SWC consists of seven irrigation entities in the Magic Valley that divert water from the Snake River: A&B Irrigation District, American Falls Reservoir District #2, Burley Irrigation District, Milner Irrigation District, Minidoka Irrigation District, North Side Canal Company, and Twin Falls Canal Company.

in 2010 (Second Methodology Order), 2015 (Third Methodology Order), and 2016 (Fourth Methodology Order).

In the fall of 2020, IDWR staff members began reviewing and evaluating changes to the Fourth Methodology Order. (Anders, Tr. Vol. I, 170:2-3.) This continued through 2021. *Id*. at 170:4-18. On August 5, 2022, at a status conference involving the SWC delivery call, the Director verbally notified those present that he intended to review the Fourth Methodology Order and consider what changes might be made to improve its functionality. (R. 298; Anders, Tr. Vol. I, 172:7-16.) In September, a Department staff member, Matt Anders, sent an email notifying various individuals that Department staff had been reviewing data used in the Fourth Methodology Order and would be presenting their findings to outside consultants in coming months. (Anders, Tr. Vol. I, 217:4-218:3.) From November 16-December 21, 2022, Department staff held six virtual meetings where they shared new data they had reviewed and various analyses they had conducted. (R. 1176.) On December 23, 2022, Department staff issued a one-page document containing "preliminary recommendations" for changes to the methodology order. The preliminary recommendations address three components of the methodology. (R. 2866.) With respect to the rest, it states: "IDWR will continue to evaluate the integration of these and other techniques into the methodology." *Id*. The document invited outside consultants to submit written comments by January 16, 2023, roughly three weeks later. *Id.*

Outside consultants obviously could not thoroughly analyze in three weeks the complex and voluminous data that Department staff spent more than a year reviewing and analyzing, but since Department staff had presented a one-page summary of "preliminary recommendations," and since the APA required the Director to hold a hearing before amending the Fourth Methodology Order, IGWA's consultant prepared comments that were likewise preliminary in nature, expecting that a full evidentiary record would be developed in a hearing. (R. 316.) This expectation, however, was not realized.

Rather than hold a hearing, the Director worked behind closed doors from late December 2022 through April 2023 to develop the *Fifth Amended Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("Fifth Methodology Order"), using information that is <u>not</u> in the agency record. The Director issued the Fifth Methodology Order on April 21, 2023. (R. 43.) The Fifth Methodology Order

makes some changes to the methodology that differ wildly from the preliminary recommendation of Department staff, while disregarding other changes recommended by Department staff.

On the same day the Director issued the Fifth Methodology Order, he applied it to the 2023 irrigation season via the *Final Order Regarding April 2023 Forecast Supply (Methodology Steps 1-3)* ("April As-Applied Order"). (R. 48-61.) Despite the exceptionally high snowpack in 2023, changes made to the Fifth Methodology Order caused the April As-Applied Order to predict a water supply shortage of 75,200 acre-feet to one member of the SWC: Twin Falls Canal Company ("TFCC"). (R. 50.) The April As-Applied Order requires curtailment of every groundwater right from the ESPA junior to December 30, 1953, stating: "If junior ground water user cannot establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted DS [Demand Shortfall] of 75,200 acre-feet in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water user." (R. 53.)

Under the Fourth Methodology Order, a predicted demand shortfall of 75,200 acre-feet would have exposed approximately 75,000 acres to curtailment. (Sukow, Tr. Vol. I, 55:9-56:4.) Under the Fifth Methodology Order, it exposed approximately 700,000 acres to curtailment. *Id*. The Director's decision to change the methodology without a prior hearing, making it immediately effective after the 2023 farming season had already begun, induced chaos.

On the same day the Director issued the Fifth Methodology Order and the April As-Applied Order, he set a prehearing conference the following week, on April 28, 2023, and an after-the-fact hearing six weeks later on June 6-10, 2023. (R. 63, 126.) He knew affected water users would want a hearing, though he didn't bother to hold one before issuing the Fifth Methodology Order. It was more convenient, apparently, for the Director to change the methodology on his own, without the benefit of a full evidentiary record, and then let affected water users try and convince him after-the-fact that he got it wrong.

Affected water users filed pre-hearing motions for a continuance and the appointment of an independent hearing officer, but they were denied. (R. 298-304.) The Director set a hearing schedule that gave affected water users a few weeks to complete all discovery, prepare expert reports, file lay and expert witness lists with a summary of anticipated testimony, and file pre-marked exhibits with the Department. (R. 127.) In addition, the Director blocked written discovery and issues orders preventing junior water users from discovering information from the

Department pertaining to policy matters and the Director's deliberative process. (R. 127; 301; 305-06.) Junior water users were given all of five weeks to review, analyze, and contest what the Department spent some 10 months developing, while being denied access to some of the information the Director considered in developing the Fifth Methodology Order.

The after-the-fact hearing was held June 6-9, 2023. The Director issued a *Post-Hearing Order Regarding Amended Methodology Order* ("Post-Hearing Order") and a *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("Sixth Methodology Order") on July 19, 2023. (R. 1067-1100; 1004-1053.) The Post-Hearing Order acknowledged one small data error in the Fifth Methodology Order, which was corrected in the Sixth Methodology Order. (R. 1086.) For all practical intents and purposes, the Sixth Methodology Order is identical to the Fifth Methodology Order.

While this brief at times refers to the Fifth Methodology or the Sixth Methodology Order separately, IGWA's position is that both orders must be set aside for the reasons set forth below, and that water rights administration should continue under the Fourth Methodology Order until the Department holds a hearing that affords due process and properly applies the CM Rules. This brief sometimes refers to the Fifth Methodology Order and the Sixth Methodology Order collectively as the Fifth & Sixth Methodology Orders.

III. Statement of Facts

The SWC consists of seven irrigation entities who filed a joint delivery call against groundwater users. The Director evaluates their water needs separately, however, and since the methodology order was first developed in 2010, only Twin Falls Canal Company (TFCC) and American Falls Reservoir District No. 9 (AFRD2) have been found to suffer a water supply shortage. When a water shortage is calculated, it usually affects only TFCC, as was the case in 2023. Therefore, the evidence presented at the after-the-fact hearing focused on the water supplies of TFCC to illustrate problems with the Fifth Methodology Order.

Over the last half century, the amount of water TFCC diverts has remained remarkably steady at around 1.1 million acre-feet annually, as shown in the following graphs:

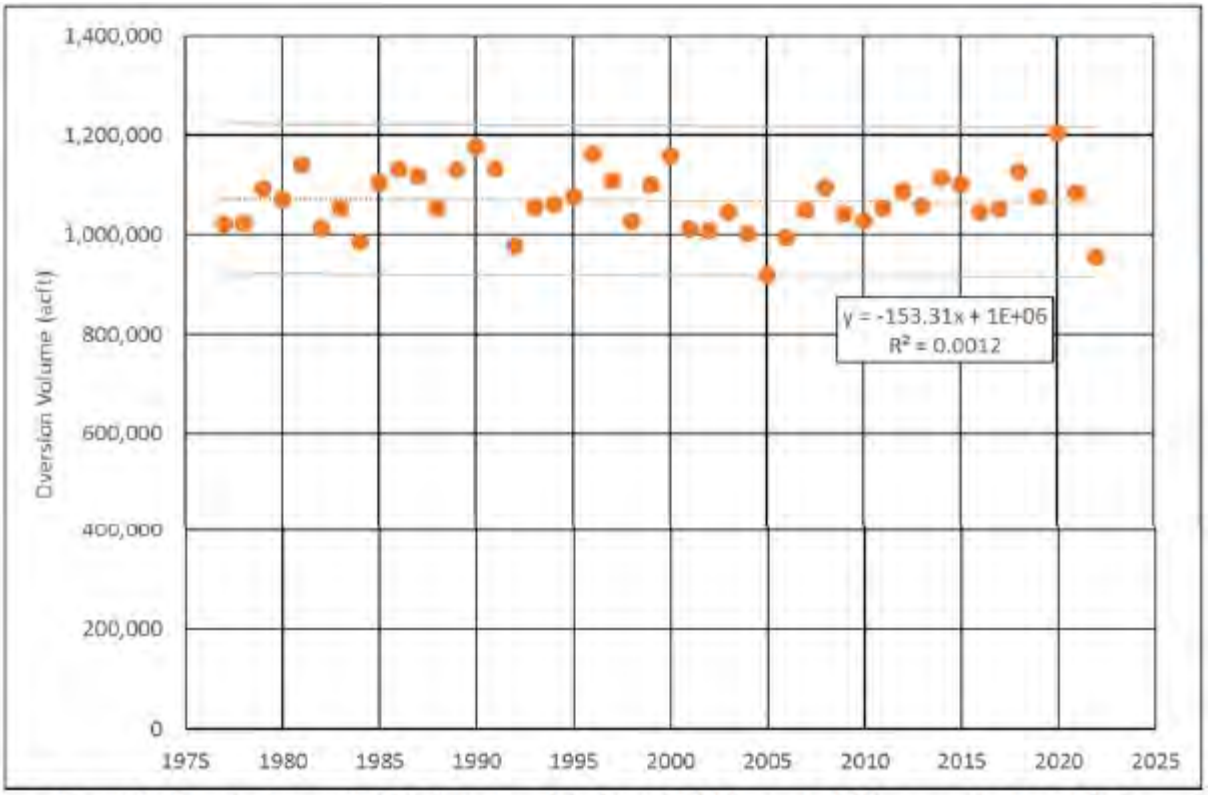

Figure 4. Adjusted annual TFCC diversion data from 1977 through 2022, presented in Table 1.

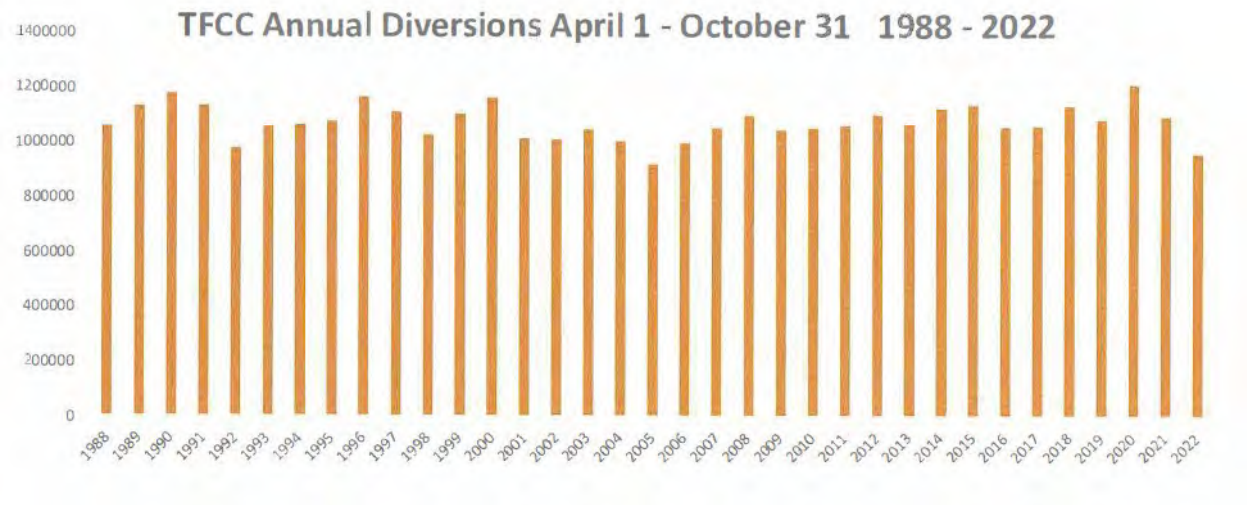
(R. 1239, Fig. 4.)



(R. 1206; Barolgi, Tr. Vol. II, 308:23-309:2.)

TFCC's longtime consultant, Dr. Charles Brockway, Jr., confirmed that TFCC has a reliable supply of water. (R. 1246.) Declining Snake River reach gains have not generally diminished the water supply available to TFCC because TFCC holds the most senior natural flow

water right downstream of American Falls Reservoir, supplemented by storage. Despite having the most senior natural flow rights, TFCC's storage supplies are modest compared to other SWC members. Ironically, the decline in aquifer storage and Snake River reach gains in the latter part of the twentieth century is due largely to the Winter Water Savings Program which effectively traded aquifer storage (and reach gains) for reservoir storage.

Changes made in the Fifth Methodology Order caused the April As-Applied Order to predict a water supply shortage (a/k/a "demand shortfall") of 75,200 acre-feet to TFCC, or approximately 6-7% of a full water supply. In an effort to increase overflow from the ESPA in the American Falls area by 75,200 acre-feet, the Director ordered curtailment of every groundwater right junior to December 30, 1953. (R. 52.) Absent mitigation, curtailment would have dried up an estimated 700,000 acres of farmland, eliminated beneficial use of roughly 1.6 million acre-feet of water, and left many cities and businesses without water, wreaking havoc on Idaho's economy, with no measurable increase in crop production by TFCC patrons. (R. 2762, 2763; Sukow, Tr. Vol. I, 55:22-56:2 (700,000 acres curtailed); R. 2411 (1,597,439 acre-feet curtailed).) Of the curtailed water use, less than 5% was predicted to accrue to TFCC during the 2023 irrigation season. (Sullivan, Tr. Vol. II, 453:15-21.)

Most of the curtailed groundwater rights are located far enough away from the Snake River that their curtailment would provide little if any additional water to the SWC. As shown in the following table, the April As-Applied Order curtails 20,620 acre-feet of groundwater use between Carey Valley Ground Water District, Henry's Fork Ground Water District, and Madison Ground Water District even though zero additional water would accrue to the SWC in 2023. It curtails an additional 872,402 acre-feet between Bonneville-Jefferson Ground Water District, Jefferson-Clark Ground Water District, Magic Valley Ground Water District, and North Snake Ground Water District, compared to a benefit of only 1,178.06 acre-feet to the SWC. Of the total among of curtailed water use in these districts (893,022 acre-feet), only one-tenth of one percent would accrue to the SWC.

Sub-Total	100.0%	63,645	84.6%		67,347	1,412,649	21:1		621,620	914,358	68%	1,787,002
SWID	-	-	-		0.02	153,292	7,664,595:1		-	-	-	-
No District	-	-	-		7,373.6	31,498	4:1		-	-	-	-
Grand Total					**74,720.8**	**1,597,439**	**21:1**					

1. Impact broken down by geographic boundary. Some non-members are included in each district. For example, the A&B usage is included in Magic Valley and North Snake GWDs. See accompanying map. Acre-ft rounded to 2 decimal places.
2. Total volume split geographically as described in note 1 from IDWR model input files from Jr12301953 run. Some slight conversion and rounding errors.
3. Acres provided by each district except Carey, Henry's Fork, and Madison. Based on breakdown of combined acres to provide effective acres per water right. 4. Baseline volume taken from 2022 Settlement Report submitted by IGWA to IDWR and the Surface Water Coalition. Represents average usage from 2010-2014.

(R. 2411, Tbl. 3-1.)

As mentioned above, the predicted demand shortfall of 75,200 acre-feet would have resulted in curtailment of water to approximately 75,000 acres of farmland under prior versions of the methodology order, compared to approximately 700,000 acres of farmland under the Fifth Methodology Order. (Sukow, Tr. Vol. I, 55:8-21; R. 1436.) This is the result of a sweeping change in how the ESPA Model is used in the methodology order. Prior methodology orders used a steady-state application of the Model. The Fifth Methodology Order switched to a transient-state application, causing exponentially larger curtailments in response to predicted water shortages. *Id.*

The Department has had the ability to run the Model at either steady-state or transient-state since at least 2013. (Sukow, Tr. Vol. I, 48:9-23.) The preliminary recommendation prepared by Department staff in December of 2022 did not recommend a change from to transient-state, yet that change was made in the Fifth Methodology Order, without explanation. And since the Director prevented the parties from discovering information related to the Director's policy decisions, or from calling Department witnesses to explain the basis for this change, we still don't fully know the reason for it.

Since the principal function of the methodology order is to calculate the amount of water SWC members need to meet irrigation demand, any update to the methodology order should cause it to become more accurate in that regard. At the after-the-fact hearing, outside consultants

identified several ways to improve the accuracy of the methodology order, as discussed below in section 7 this brief, but all were rejected by the Director.

The takeaway from all this is that the Methodology Order is not getting better at meeting the objectives of the CM Rules, it is getting worse. The Fifth Methodology Order will frequently cause complete curtailments of groundwater water use when the SWC is not actually short of water, and it is curtailing large number of groundwater rights even when it will provide no additional water to the SWC. (R. 2394, Tbl. 2-8.) This fundamental failing is lost amid all of the technicalities that caused the Director to change the methodology. It is a case of the proverbial failure to see the forest for the trees.

STANDARD OF REVIEW

Judicial review of the Fifth Methodology Order is governed by the APA. Under the APA, courts are to affirm agency action unless the agency's findings, inferences, conclusions, or decisions are: (a) in violation of constitutional or statutory provisions; (b) in excess of the statutory authority of the agency; (c) made upon unlawful procedure; (d) not supported by substantial evidence on the record as a whole; or (e) arbitrary, capricious, or an abuse of discretion. Idaho Code § 67-5279(3). The party challenging the agency decision must show that the agency erred in a manner specified in I.C. § 67-5279(3), and that a substantial right has been prejudiced. Idaho Code § 67-5279(4); *Barron v. Idaho Dep't of Water Res.*, 135 Idaho 414, 417 (2001). If the Fifth Methodology Order is not affirmed, it shall be set aside in whole or in part and remanded for further proceedings as necessary. Idaho Code § 67-5279(3).

ISSUES ON APPEAL

Procedural errors

1. Whether the Director violated due process or the APA by changing the methodology order without first providing notice and a hearing.

2. Whether the Director violated the APA by failing to base the findings of fact in the Fifth Methodology Order exclusively on the evidence in the record of the contested case.

3. Whether the Director acted upon unlawful procedure or abused discretion by taking official notice of facts *after* the Fifth Methodology Order was issued.

4. Whether the Director violated Idaho Code § 67-5252 by denying the cities' motion for an independent hearing officer.

5. Whether the Director violated due process or abused discretion by blocking junior water users from discovering and examining witnesses about relevant information the Director considered in developing the Fifth Methodology Order.

6. Whether the Director acted upon unlawful procedure, violated due process and the APA, or abused discretion by failing to give junior water users adequate time to conduct a field examination of the number of acres actually irrigated and the use of supplemental groundwater by SWC members, and then ruling against them because they did not provide proof thereof at the hearing.

Substantive errors

7. Whether the Director violated Idaho law or abused discretion by failing to use the best science available to calculate SWC water needs in accordance with CM Rule 42.01.e.

8. Whether the Director violated Idaho law or abused discretion by failing to evaluate whether SWC water needs could be met with their existing water supplies by making operational changes or system improvements in accordance with CM Rules 40.03, 42.01.a, and 42.01.h.

9. Whether the Director violated Idaho law or abused discretion by refusing to apply the futile call doctrine in accordance with CM Rules 10.07 and 20.04.

10. Whether the Director violated Idaho law or abused discretion by refusing to consider the public interest in full development of Idaho's water resources in accordance with CM Rules 10.07, 20.03, and 42.01.

Ancillary matters

11. Whether the errors cited above prejudiced substantial rights of junior water users.

12. Whether the Director is liable for attorney fees under 42 U.S.C. § 1983 for the deprivation of the due process rights.

13. Whether the Director is liable for attorney fees under Idaho Code § 12-117(1) for failing to hold a hearing before issuing the Fifth Methodology Order, failing to apply the futile call doctrine, or committing other errors without a reasonable basis in fact and law.

SUMMARY OF THE ARGUMENT

The Fifth & Sixth Methodology Orders should be set aside for both procedural and substantive errors. Procedural errors include (a) failing to hold a hearing before changing the methodology order, (b) using evidence not contained in the agency record, (c) taking notice of facts *after* the Fifth Methodology Order was issued, (d) denying the motion for an independent hearing officer, (e) blocking junior water users parties from discovering relevant information the Director considered in developing the Fifth Methodology Order, and (f) failing to give junior water users adequate time to conduct a field examination of the number of acres currently irrigated by TFC, then ruling against them because they did not provide proof thereof at the after-the-fact hearing.

The Director also committed several substantive errors, likely due in part to his failure to hold a hearing before issuing the Fifth Methodology Order. Substantive errors include the Director's refusal to (a) use the best science available to calculate SWC water needs, (b) evaluate whether SWC water needs could be met without curtailment by making operational changes or system improvements, (c) apply the futile call doctrine, or (d) consider the public interest in achieving maximum beneficial use of the state's water resources.

Despite clear and undisputed evidence of changes that should be made to improve the accuracy of the Fifth Methodology Order, as well as the Director's failure to apply important CM Rules, the Director refused to make any changes. Of course, making a substantive change would signify that he got it wrong the first time—that he wrongly ordered curtailment. The Director effectively tied his own hands by changing the methodology order and implementing it immediately without first holding a hearing and developing a full evidentiary record.

If the court finds that the Director violated the due process rights of IGWA and its members, the court should award IGWA's attorney fees under 42 U.S.C. § 1983. The court should also award IGWA's attorney fees under Idaho Code § 12-117(1) for committing errors, including failure to apply the futile call doctrine or the principle of maximum beneficial use, without a reasonable basis in fact or law.

ARGUMENT

IV. Procedural Errors

The Director committed several procedural errors in developing and implementing the Fifth Methodology Order, all of which were designed to prejudice junior water users. They were not innocent mistakes either. They were deliberate. And they left junior water users with an abiding belief that adjudicatory proceedings by the Department are neither fair, just, nor unbiased. It is critical that the judiciary correct these errors to restore trust in the Department and the rule of law.

1. The Director violated due process and the APA by failing to hold a hearing before issuing the Fifth Methodology Order.

A fundamental right afforded by the United Stated Constitution is that "No state … shall deprive any person of life, liberty, or property without due process of law." U.S. Const., Amend. 14 §1; Idaho Const. art. I, § 13. Under Idaho law, "individual water rights are real property rights which must be afforded the protection of due process." *Nettleton v. Higginson*, 98 Idaho 87, 90 (1977); *Clear Springs Foods, Inc. v. Spackman*, 150 Idaho 790, 815-16 (2011).

Due process entitles a property owner to "an opportunity for a hearing before he is deprived of any significant property interest." *Fuentes v. Shevin*, 407 U.S. 67, 82 (1972). The hearing "must be granted at a meaningful time and in a meaningful manner." *Id*. at 80 (quoting *Armstrong v. Manzo*, 380 U.S. 545, 552 (1965)). It must be held "*before* [a property owner] is deprived of any significant property interest, except for extraordinary situations when some valid governmental interest is at stake that justifies postponing the hearing until after the event." *Id*. at 81 (quoting *Boddie v. Connecticut*, 401 U.S. 371, 378-79 (1971) (emphasis in original)).

Not only must a hearing be held, but the decision-making process must be fair to those persons affected by the decision, as explained by the U.S. Supreme Court:

> The constitutional right to be heard is a basic aspect of the duty of government to follow a fair process of decision making when it acts to deprive a person of his possessions. The purpose of this requirement is not only to ensure abstract fair play to the individual. Its purpose, more particularly, is to protect his use and possession of property from arbitrary encroachment—to minimize substantively unfair or mistaken deprivations of property, a danger that is especially great when the State seizes goods simply upon application of and for the benefit of a private party.

Id. at 80-81. The hearing requirement "is not intended to promote efficiency or accommodate all possible interests: it is intended to protect the particular interests of the person whose possessions are about to be taken." *Id*. at 90, fn 22. "An individual must have an opportunity to confront all the evidence adduced against him, in particular that evidence with which the decisionmaker is familiar." *Vanelli v. Reynolds Sch. Dist. No. 7*, 667 F.2d 773, 780 (9th Cir. 1982). The hearing "must be provided at a time which allows the person to reasonably be prepared to address the issue." *State v. Doe*, 147 Idaho 542, 546 (Ct. App. 2009).

When a government agency fails to provide due process before issuing an order, the agency should be instructed "to vacate the Final Order … and hold a new hearing that complies with due process." *Citizens Allied for Integrity & Accountability, Inc. v. Schultz*, 335 F. Supp. 3d 1216, 1230 (D. Idaho 2018).

To ensure that Idaho agencies afford due process in contested cases, the Idaho legislature enacted the APA which requires state agencies, in the absence of an emergency, to hold a hearing *before* the agency decides the matter. Idaho Code § 67-5242. The purpose of the hearing is "to assure that there is a full disclosure of all relevant facts and issues, including such cross-examination as may be necessary." Idaho Code § 67-5242(3)(a). At the hearing, parties must be given "the opportunity to respond and present evidence and argument on all issues involved," Idaho Code § 67-5242(3)(b), and all findings of fact must be "based exclusively on the evidence in the record of the contested case and on matters officially noticed in that proceeding," Idaho Code § 67-5248(2).

The only time a state agency can take action in a contested case, other than by stipulation of the parties, without first holding a hearing, is "in a situation involving an immediate danger to the public health, safety, or welfare requiring immediate government action." Idaho Code § 67-5247(1). When emergency action is taken, the order must include a "brief, reasoned statement to justify both the decision that an immediate danger exists and the decision to take the specific action." Idaho Code § 67-5247(2). In addition, the agency must "proceed as quickly as feasible to complete any proceedings that could be required." Idaho Code § 67-5247(4).

The Idaho Supreme Court has confirmed that in the context of conjunctive management of surface and ground water rights, if there is no emergency a hearing must be held *before* an order is issued. In *American Falls Reservoir District No. 2 vs. Idaho Department of Water Resources* ("*AFRD2*"), the Idaho Supreme Court reversed the district court decision which

would have allowed the Director to make conjunctive management decisions first and hold hearings later. The Supreme Court explained that when it comes to conjunctive management, "[i]t is vastly more important that the Director have the necessary pertinent information and the time to make a reasoned decision based on the available facts." *AFRD2*, 143 Idaho 862, 875 (2006). In a subsequent case, the Court reprimanded the Director for issuing a curtailment order before holding a hearing, stating: "the Director abused his discretion by issuing the curtailment orders without prior notice to those affected and an opportunity for a hearing." *Clear Springs Foods,* 150 Idaho at 815.

Pre-decision hearings are critical to ensure fair and unbiased decisions. There is a huge difference between a decision that is based on a full evidentiary record, where the decision-maker has heard all relevant testimony and considered all relevant evidence before making the decision, and one that is not. After-the-fact hearings are allowed only in emergencies because humans, by nature, do not like to admit mistakes. When a hearing is held after-the-fact, affected parties are tasked with persuading the decision-maker to admit they got it wrong the first time. The deck is stacked against them. The pressure on the decision-maker to not deviate from the initial decision is especially heavy when the decision carries major real-life consequences. To avoid this, due process and the APA require a hearing first, in the absence of an emergency, which did not happen here.

1.1 The Fifth Methodology Order was issued in a contested case, in the absence of an emergency.

The Fifth Methodology Order was issued in what is commonly known as the SWC delivery call case, IDWR Docket No. CM-DC-2010-001. This is a contested case under the APA that has been ongoing since 2005 when the SWC filed its delivery call (IDWR did not begin using docket numbers until 2010). Every iteration of the methodology order has been issued in this case.

The Fifth Methodology Order was not issued in an emergency. The Director told Department staff as early as 2020 that he wanted to review the Fourth Methodology Order and consider making changes. (Anders, Tr. Vol. I, 169:15-170:3.) Department staff began working on this in Fall of 2020, and their work continued through the Fall of 2022, culminating in a one-page letter to the Director dated December 23, 2022, outlining recommended changes to the Fourth Methodology Order. (R. 2866.)

The Director could easily have held a hearing in 2021 or 2022, or even early winter of 2023, ahead of the irrigation season as required by the Idaho Supreme Court ruling *In Matter of Distribution of Water to Various Water Rts. Held By or For Ben. of A&B Irr. Dist*., 155 Idaho 640, 653 (2013): "The Director may develop and implement a pre-season management plan for allocation of water resources that employs a baseline methodology [provided it] be made available in advance of the applicable irrigation season."). Normal discovery procedures could have been followed, Department staff could have submitted a technical report for review by affected parties, consultants for affected parties could have prepared expert reports, and testimony and exhibits could have been received and considered—all before the methodology order was changed.

If additional time was needed to fully examine the Fourth Methodology Order, additional time was available. The Fourth Methodology Order has been in place since 2016, and there is no reason it could not continue functioning in 2023. The Fourth Methodology Order does not have an end date or require review at prescribed intervals; it merely states: "As more data is gathered and analyzed, the Director will review and refine the process of predicting and evaluating material injury. The methodology will be adjusted if the data supports a change." (R. 1410.)

Ultimately, there was no "situation involving an immediate danger to the public health, safety, or welfare requiring immediate action" to amend the Fourth Methodology Order. Idaho Code § 67-5247(1). Indeed, the Fifth Methodology Order contains no such statement. Thus, the Fifth Methodology Order is, and must be considered, a non-emergency order.

1.2 The Fifth Methodology Order was issued in violation of due process and the APA.

Since there was no emergency, due process and the APA require the Director to hold a hearing prior to issuing the Fifth Methodology Order to assure that "there is a full disclosure of all relevant facts and issues, including such cross-examination as may be necessary," Idaho Code § 67-5242(3)(a), the parties are given "the opportunity to respond and present evidence and argument on all issues involved," Idaho Code § 67-5242(3)(b), and all findings of fact are "based exclusively on the evidence in the record of the contested case and on matters officially noticed in that proceeding," Idaho Code § 67-5248(2). The Director had ample time to do this. He chose not to. In so doing, he violated due process and the APA.

1.3 The so-called "technical working group" cited by the Director does not satisfy due process or the APA.

The Director claimed he did not need to hold a hearing before issuing the Fifth Methodology Order because Department staff disclosed some of their technical analyses to outside consultants in November-December 2022, which the Director refers to as a "technical working group." The actions of Department staff fall far short of what due process and the APA require.

First, the term "working group" is a misnomer. The term suggests a collaborative process among Department staff and outside consultants; it was limited to Department staff working under the supervision of the Director. (Anders, Tr. Vol. I, 169:15-23.)

Second, outside consultants had no input as to what components of the Fourth Methodology Order would be analyzed and what types of studies would be performed; that was all directed behind the scenes by the Director, who personally reviewed and edited the presentations of Department staff to outside consultants. (Anders, Tr. Vol. I, 173:18-174:8; 176:11-24.)

Third, the "preliminary recommendations" of Department staff did not preview major changes that were made to the Fifth Methodology Order. Department staff published nothing more than a one-page document with conclusory recommendations. (R. 2866.) What's more, IGWA learned in depositions and at the hearing that while this document masquerades as a recommendation from Department staff to the Director, the Director actually reviewed and edited the content of the document before it was shared with consultants of the parties to the contested case. (Anders, Tr. Vol. I, 173:18-174:8.) It was, in effect, the Director's recommendation to himself.

Fourth, the preliminary recommendation document fails to provide any analysis of why certain critical components of the methodology were not modified. For example, the Fifth Methodology Order calculates water demand for TFCC based on the number of acres it reported to the Department as being irrigated in 2013, even though the Department's own subsequent investigation shows that there are more than 15,000 fewer acres that are actually irrigated. (Anders, Tr. Vol. I, 139:15-141:24; R. 1470.) Ordering curtailment to service non-irrigated acres is contrary to law: "[T]he Director has the duty and authority to consider circumstances when the water user is not irrigating the full number of acres decreed under the water right. If this Court

were to rule the Director lacks the power in a delivery call to evaluate whether the senior is putting the water to beneficial use, we would be ignoring the constitutional requirement that priority of water be extended only to those using the water." *In Matter of A&B*, 155 Idaho at 652 (emphasis added).

1.4 The after-the-fact hearing does not satisfy due process or the APA.

The Director attempted to cure his intentional violation of due process and the APA by holding an after-the-fact hearing. Yet, this was by no means healing.

First, as explained above, after-the-fact hearings are only allowed in emergency situations, which did not exist here.

Second, the rushed after-the-fact hearing was anything but fair. The process was prejudicial to junior water users for several reasons, including:

- Written interrogatories and requests for production were not permitted. (*Sched. Order and Order Auth. Remote Appear. At Hrg*., May 2, 2023, R. 127.)
- The compressed schedule did not afford adequate time for affected water users to conduct inspections and analyses needed to formulate expert opinions and develop reports addressing the complex issues such as (a) the seven years of additional, voluminous hydrologic and water use data used in the Fifth Methodology Order, (b) revised calculations employed in the Fifth Methodology Order, (c) the large discrepancy between Twin Falls Canal Company's (TFCC) actual irrigated acreage and the acreage used by the Director in the Fifth Methodology Order, (d) the use and availability of supplemental groundwater to TFCC, and (e) increasing diversions and decreasing project efficiency of TFCC in recent years. (R. 316-19; R. 83-84.)
- Greg Sullivan, the sole expert consultant for the Cities, was out of the country from May 17, 2023-June 3, 2023, leaving him unavailable to assist in developing strategy, preparing expert reports, preparing exhibits, and attending depositions. (R. 353.)
- Sophia Sigstedt, an expert consultant for IGWA, was unable to perform all of the work required to properly analyze the Fifth Methodology Order before the June hearing. In addition, she had a medical condition that prevented her from leaving her home state of Colorado until July 10, 2022. (R. 319.)
- Jaxon Higgs, expert consultant for IGWA, was unable to participate in the June hearing due to a previously planned out-of-country trip May 27-June 10, 2023. (R. 312.)
- IGWA was unable to locate a qualified engineering firm that had capacity to analyze the "project efficiency" component of the Fifth Methodology Order by the June hearing.
- The Director blocked the parties from discovering relevant evidence and from calling Department witnesses possession relevant evidence, as explained below.

Junior water users objected to the compressed hearing schedule and requested a continuance. (R. 80-89, 282-93, R.446-51.) The Director could have administered water rights in 2023 under the Fourth Methodology Order, as he had done from 2016-2022, to allow ample time to scrutinize the Fifth Methodology Order, but he refused, instead forcing the parties through a rushed after-the-fact hearing.

Based on the foregoing, this court should set aside the Fifth Methodology Order and the Sixth Methodology Order because they were issued in violation of due process and the APA, and instruct IDWR to "hold a new hearing that compliance with due process." *Citizens Allied*, 335 F. Supp. 3d at 1230.

2. The Director violated the APA by developing the Fifth Methodology Order using evidence not contained in the agency record.

The APA requires that orders issued in contested cases be "based exclusively on the evidence in the record of the contested case and on matters officially noticed in that proceeding." Idaho Code § 67-5248(2). The Director did not do this. He instructed Department staff to perform various analyses internally, evaluated them internally, and worked internally to develop the Fifth Methodology Order with no oversight or input from the parties to the contested case. (Anders, Tr. Vol. I, 175:2-176:24.) We still don't know all the information the Director considered because he prohibited the parties from discovering relevant information related to legal and policy decisions that contributed to changes made in the Fifth Methodology Order, as explained below.

As a result of the Director's development of the Fifth Methodology Order using information outside the agency record, this court should set aside the Fifth & Sixth Methodology Orders because they were made upon unlawful procedure and in violation of the APA.

3. The Director violated Department rule of procedure by taking official notice of information *after* the Fifth Methodology Order was issued.

In keeping with the premise that hearings must be held before decisions, and that orders in contested cases must be based exclusively on the agency record, the Department's procedural rule 602 allows the Director to take official notice of agency reports and memoranda, provided that such notice "must be provided before the issuance of any order that is based in whole or in part on facts or material officially noticed," and "[p]arties must be given an opportunity to contest and rebut the facts or material officially noticed." IDAPA 37.01.01.602.

After the Fifth Methodology Order was issued, the Director issued the *Notice of Materials Department Witnesses May Rely Upon and Intent to Take Official Notice*, which contains approximately 44 separate documents (PowerPoint presentations, emails, Excel files, and Word documents), which had been used to develop the Fifth Methodology Order. Since this occurred after the Fifth Methodology Order was issued, it was done in violation of rule 602. Therefore, this court should set aside the Fifth & Sixth Methodology Orders because they were made upon unlawful procedure.

4. The Director violated Idaho Code § 67-5252 by denying the motion for an independent hearing officer.

Idaho Code § 67-5252(1) provides that "any party shall have the right to one (1) disqualification without cause of any person serving or designated to serve as the presiding officer." Shortly after the Fifth Methodology Order was issued, the Coalition of Cities filed a motion for appointment of an independent hearing officer, effectively disqualifying Director Spackman as the presiding officer. (R. 73-79.) The appointment of an independent hearing officer would not have removed Director Spackman from the proceeding entirely, because he would remain in position to review the recommended or preliminary order issued by the presiding officer, but it would have given the parties the benefit of an independent, unbiased finder of fact.

Despite the statutory right to disqualify the Director as the presiding officer, the Director denied the request. (R. 298-304.) Therefore, this court should set aside the Fifth & Sixth Methodology Orders because they were made upon unlawful procedure and in violation of Idaho Code § 67-5252(1).

5. The Director violated due process, acted upon unlawful procedure, and abused discretion by blocking the parties from discovering and presenting relevant evidence.

The APA requires "a full disclosure of all relevant facts and issues, including such cross-examination as may be necessary," and "the opportunity to respond and present evidence and argument on all issues involved," Idaho Code § 67-5242(3) (emphasis added). Toward that end, Department rules of procedure provide that "[e]vidence should be taken by the agency to assist the parties' development of a record, not excluded to frustrate that development." IDAPA 37.01.01.600. While the Director is not bound by the Idaho Rules of Evidence, he is not empowered to exclude relevant evidence; Department rules only allow "[t]he presiding officer

[to] exclude evidence that is irrelevant." *Id*. This is consistent with due process which, as noted above, provides that "[a]n individual must have an opportunity to confront all the evidence adduced against him." *Vanelli*, 667 F.2d at 780.

After scheduling the after-the-fact hearing, the Director implemented a scheme to block junior water users from discovering all of the information he considered in developing the Fifth Methodology Order. First, he issued the *Scheduling Order and Order Authorizing Remote Appearance at Hearing* on May 2, 2023, which (i) designates Matt Anders and Jennifer Sukow as the only Department staff members who would be permitted to testify at the hearing, and (ii) limits the topics and data they may discuss to certain technical matters. (R. 126-27.) Second, he issued the *Order Denying the Appointment of an Independent Hearing Officer and Motion for Continuance and Limiting Scope of Depositions* ("Order Limiting Discovery") on May 5, 2023, which limited Mr. Anders and Ms. Sukow's testimony to "facts and information the Department considered in updating the Methodology Order and As-Applied Order," and precludes water users from asking "questions regarding the Director's deliberative process on legal and policy considerations." (R. 301.) Finally, the Director issued the *Notice of Materials Department Witnesses May Rely Upon at Hearing and Intent to Take Official Notice* ("Order Limiting Evidence") on May 5, 2023, limiting the materials Mr. Anders and Ms. Sukow may rely upon at the hearing and the topics they would be allowed to testify about. (R. 305-06.)

Based on these orders, at the depositions for Ms. Sukow and Mr. Anders held May 10 and 12, 2023, counsel for the Department instructed them to not answer almost 50 questions on the basis that they related to the Director's deliberative process. (R. 165; R. 175.) Among the questions they refused to answer are the following:

- What other documents are responsive to [Deposition Notice] Request No. 1, that show your involvement in the issuance of the Fifth Methodology Order outside of the technical working group documents that you've just described?
- Did you prepare any analysis, memos, those kinds of things that you would have shared?
- Are you aware of any documents, whether or not they were authored by you, that reflect other Department employees' input on the Department's decision to move from the steady state to transit modeling in the Fifth Methodology Order that are not uploaded to the website?
- Was there any discussion about whether or not using the transient model might impact analysis of futile call?

- Did you provide to Mat Weaver any documents relating to the Fifth Methodology Order or the April 2023 As-Applied Order that have not been uploaded to the Department's website?
- Did you participate in any meetings involving Mat Weaver, or meetings with Mat Weaver or the Director involving the Fifth Methodology Order or the April 2023 As-Applied Order?
- How were the comments that Sophia and Greg considered on January 16th, how are those considered in the Department?
- Did you have discussions with any Department staff members about potential use of a trim line?
- Were concepts of reasonable use, futile call, or full economic development ever brought up during your work on the Fifth Methodology Order?

As this list shows, many of the questions that Department staff refused to answer sought information the Director considered in developing the Fifth Methodology Order, not his deliberative process for evaluating information. The Director has no authority under Idaho law to block parties from discovery relevant information by claiming it relates to policy issues or his deliberative process.

Since the topics that Mr. Anders and Ms. Sukow were allowed to discuss do not encompass all of the information the Director considered in developing the Fifth Methodology Order, and do not address all of the issues involved in the Fifth Methodology Order, junior water users served upon the Department an I.R.C.P. 30(b)(6) deposition notice asking to depose Department personnel who can speak to information considered by the Director that goes beyond the topics and data that Mr. Anders and Ms. Sukow were permitted to address under the Order Limiting Evidence and the Order Limiting Discovery. (R. 393-97.) The Department refused to produce deponents in response to the I.R.C.P. 30(b)(6) based on the Director's Order Limiting Evidence and the Order Limiting Discovery.

Thus, the Order Limiting Evidence and the Order Limiting Discovery have been employed to hide information he considered in developing the Fifth Methodology Order.

At the after-the-fact hearing, junior water users attempted to submit emails into evidence that related to policy considerations that went into the Fifth Methodology Order, but the Director promptly shut down that line of questioning. (Tr. Vol. IV, 1029:9-1033:5.) Thus, the Director employed a strategic approach to keep relevant information out of the agency record for review.

The Director claimed authority to hide information by citing rule 521 of the Department's rules of procedure which authorizes the Director to "limit the type and scope of discovery." IDAPA 37.01.01.521. However, this rule must be applied in a manner that is both constitutional and consistent with the APA. *Lochsa Falls, L.L.C. v. State*, 147 Idaho 232, 241 (2009); *State v. Perkins*, 135 Idaho 17, 22 (Ct. App. 2000). As mentioned above, the APA, due process, and the Department's rules of procedure allow the exclusion of evidence that is irrelevant only. Thus, the Director applied rule 521 in a manner that violates Idaho law.

Therefore, this court should set aside the Fifth & Sixth Methodology Orders because they were made upon unlawful procedure and violate due process and the APA as a result of the Director blocking the parties from discovering and presenting relevant information.

6. The Director acted upon unlawful procedure, violated due process and the APA, and abused discretion by failing to give junior water users adequate time to conduct a field-level examination of irrigated acres and supplemental groundwater use, then ruling against them because they did not provide proof thereof at the hearing.

Under Idaho law, water users cannot divert more water than they need to accomplish their beneficial use. To do so would be a waste of water, and it is "against the spirit and policy of our constitution and laws, as well as contrary to public policy, to permit the wasting of our waters, which are so badly needed for the development and prosperity of the state." *Stickney v. Hanrahan*, 7 Idaho 424, 435 (1900). Accordingly, the Idaho Supreme Court has ruled that:

> no person can, by virtue of a prior appropriation, claim or hold more water than is necessary for the purpose of the appropriation, and the amount of water necessary for the purpose of irrigation of the lands in question and the condition of the land to be irrigated should be taken into consideration.

Washington State Sugar Co. v. Goodrich, 27 Idaho 26 (1915) (internal citation omitted) (aff'd *In Matter of A&B*, 155 Idaho at 650).

A water right license or decree defines the maximum amount of water that may lawfully be diverted under the water right. It does not define the amount needed at a particular time to accomplish the designated beneficial use. *AFRD2*, 143 Idaho at 876-78. Therefore, in a water right delivery call, IDWR must evaluate how much water the senior currently needs. *Id*.

This is part of the material injury determination under the CM Rules. The CM Rules do not authorize the Director to curtail groundwater pumping simply because a senior user is not receiving water at the maximum rate authorized under their water rights. Rather, the senior must

be suffering "material injury" in accordance with CM Rule 42. Among the factors the Director is to consider under CM Rule 42 is "the amount of water being diverted and used compared to the water rights." CM Rule 42.01.e. This requires an evaluation of the number of acres actually being irrigated by the senior, among other factors.

Although the number of irrigated acres is a primary driver of SWC water need, the Director does not carefully examine the number of acres SWC members actually irrigate. Rather, he calculates SWC water demand based on the number of acres the SWC *reports* as being irrigated, without verifying the accuracy of the report, even when IDWR has information that the reported acreage over-states actual irrigated acreage.

To illustrate, TFCC's water rights authorize the irrigation of 196,162 acres. However, this reflects irrigation as of the commencement of the SRBA on November 19, 1987. At the first evidentiary hearing held on the SWC delivery call in 2008, a manual review of the TFCC project revealed a total of 183,589 irrigated acres. (R. 970; R. 2376.) From 2010-2014, the Department calculated material injury for TFCC using this figure. (R. 2376.) However, since 2015 the Department has assumed 194,732 irrigated acres because TFCC has reported that number of acres being irrigated. The Department has never scrutinized this figure, and we learned at the hearing that TFCC does not actually keep track of irrigated acres and cannot verify its irrigated acreage either. (Barlogi, Tr. Vol. II, 321:2-5.)

Recognizing that irrigated acres are an important consideration under the CM Rules, and that a field-level examination of irrigated acres would require coordination with TFCC and take considerable time, IGWA and the Coalition of Cities filed a motion to continue the after-the-fact hearing. (R. 80-89.) Even though it was groundwater users had mitigated any potential injury to the SWC for 2023, the Director denied the motion. (R. 299.) Then, after the hearing was held, the Director ruled that the groundwater users had failed to prove by clear and convincing evidence that TFCC was irrigating less than 194,732 acres, because they had not provide a field-level analysis of actual irrigated acres. (R. 1085.)

It is a violation of fundamental fairness under due process, as well as the requirement under the APA that "there is a full disclosure of all relevant facts and issues, including such cross-examination as may be necessary," Idaho Code § 67-5242(3)(a), for the Director to implement a hearing schedule that precludes the parties from the discovering relevant evidence.

Therefore, the Fifth & Sixth Methodology Orders should be set aside because they were made upon unlawful procedure and violate due process and the APA.

Substantive Errors

The Director committed several substantive errors in developing and applying the Fifth Methodology Order, all of which relate to the principle of beneficial use. Idaho's prior appropriation doctrine consists of two foundational principles—priority and beneficial use. Priority is the principle that "first in time is first in right." Idaho Code § 42-106. Beneficial use represents "[t]he policy of the law of this State to secure the maximum use and benefit, and least wasteful use, of its water resources." *Poole v. Olaveson*, 82 Idaho 496, 502 (1960). These are the "bedrock principles" of the prior appropriation doctrine. *Idaho Ground Water Appropriators, Inc. v. Idaho Dep't of Water Res*., 160 Idaho 119, 132 (2016).

The principle of beneficial use exists because Idaho's water is owned by the State "for the purpose of ensuring that it is used for the public benefit." *Idaho v. Coeur d'Alene Tribe of Idaho*, 521 U.S. 261, 287 (1997). The interest of the public at large is to see the state's water resources put to maximum beneficial use. This is reflected in the Idaho Constitution which calls for "optimum development of water resources in the public interest." Idaho Const. Art. 15 § 7. It is also reflected in the policy of "full economic development" set forth in Idaho Code § 42-226. "The entire water distribution system under Title 42 of the Idaho Code is to further the state policy of securing the maximum use and benefit of its water resources." *Nettleton*, 98 Idaho at 91.

Priority and beneficial use are sometimes cast as competing principles that must be balanced, but they are not inherently opposed. The principle of priority can be, and historically has been, applied in a manner that maximizes beneficial use of Idaho's water resources.

To illustrate, surface water exists above ground and flows through defined channels—lakes, rivers, canals, ditches. When the surface water supply is inadequate to fill all water rights, the legislature has directed IDWR to apply the prior appropriation doctrine in accordance with Idaho Code § 42-607 by opening and closing headgates to shepherd water from one point of diversion to another based on priority. Application of the prior appropriation doctrine in this manner has maximized development of Idaho's surface water resources.

To maximize beneficial use of groundwater, the Legislature adopted a different framework. Unlike surface water, groundwater exists below ground in undefined spaces.

Groundwater cannot be directed from one water user to another through rivers, canals, and ditches. When groundwater is pumped from a well there is a drawdown of the aquifer around the well. When pumping ceases, the water table around the well rebounds. IDWR cannot shut off a well and direct that water to another well or a particular spring through a defined channel. If Idaho were to apply the prior appropriation doctrine to groundwater by shutting of junior rights any time the groundwater table drops, no matter how small the impact, it would *minimize* beneficial use of Idaho's aquifers by allowing senior users to insist that the groundwater table be kept at peak elevation.

Recognizing that groundwater behaves differently than surface water, the Legislature enacted the Ground Water Act in 1951 to ensure that priority is applied in a manner that maximizes beneficial use of Idaho's aquifers, as stated in Idaho Code 42-226:

> The traditional policy of the state of Idaho, requiring the water resources of this state to be devoted to beneficial use in reasonable amounts through appropriation, is affirmed with respect to the ground water resources of this state as said term is hereinafter defined and, while the doctrine of "first in time is first in right" is recognized, a reasonable exercise of this right shall not block full economic development of underground water resources.

To achieve maximum beneficial use, the Ground Water Act implemented a management framework based on the elevation of the aquifer groundwater table. The Act does not allow holders of senior water rights to insist that the water table be kept at peak elevation. Rather, it allows junior users to draw down the water table so long as they do not withdraw more water than the aquifer can sustain long-term. *Clear Springs Foods*, 150 Idaho at 802 ("… with respect to ground water pumping, the prior appropriation doctrine was modified so that it only protects senior ground water appropriators in the maintenance of reasonable pumping levels in order to obtain full economic development of ground water resources."); Idaho Code §§ 42-233a, 42-233b, 42-237a.g. If groundwater diversions exceed the maximum sustainable yield of the aquifer, priority determines which water rights are curtailed to maintain sustainable groundwater levels. Application of the prior appropriation doctrine in this manner maximizes beneficial use of Idaho's aquifers.

The CM Rules were created to ensure that the prior appropriation doctrine is also applied to conjunctive management in a manner that maximizes beneficial use of Idaho's water

resources. CM Rule 20 sets forth the purposes of the CM Rules. The principle of beneficial use is explicitly incorporated as follows:

> **03. Reasonable Use of Surface and Ground Water.** These rules integrate the administration and use of surface and ground water in a manner consistent with the traditional policy of reasonable use of both surface and ground water. The policy of reasonable use includes the concepts of priority in time and superiority in right being subject to conditions of reasonable use as the legislature may by law prescribe as provided in Article XV, Section 5, Idaho Constitution, optimum development of water resources in the public interest prescribed in Article XV, Section 7, Idaho Constitution, and full economic development as defined by Idaho law. An appropriator is not entitled to command the entirety of large volumes of water in a surface or ground water source to support his appropriation contrary to the public policy of reasonable use of water as described in this rule.
>
> **05. Exercise of Water Rights.** These rules provide the basis for determining the reasonableness of the diversion and use of water by both the holder of a senior-priority water right who requests priority delivery and the holder of a junior-priority water right against whom the call is made.
>
> **08. Reasonably Anticipated Average Rate of Future Natural Recharge.** These rules provide for administration of the use of ground water resources to achieve the goal that withdrawals of ground water not exceed the reasonably anticipated average rate of future natural recharge.

These concepts add an element of reasonableness to water right administration decisions by the Department. The Idaho Supreme Court has affirmed the Director's duty to do this, holding that first in time is first and right "is not an absolute rule without exception." *AFRD2*, 143 Idaho at 880.

The public interest in maximizing beneficial use of Idaho's water resources has various applications under the CM Rules, but the Director refused to apply any of them. As explained below, the Director violated Idaho law and abused discretion by (a) failing to use the best science available to calculate SWC water needs, (b) refusing to require senior water users to pursue alternatives to curtailment, (c) refusing to apply the futile call doctrine, and (d) refusing to consider whether curtailment unreasonably impedes the public interest in maximum beneficial use of Idaho's water resources.

7. The Director violated Idaho law and abused discretion by failing to use the best science available to calculate SWC water needs in accordance with CM Rule 42.01.e.

In applying the CM Rules, the Idaho Supreme Court has instructed the Director to use the "best science available." *Clear Springs Foods*, 150 Idaho at 813.

At the after-the-fact hearing, expert witnesses demonstrated several ways of improving the water supply and water demand calculations in the Fifth Methodology Order, including (a) adjusting the Baseline Year to correlate with hydrologic conditions represented previously by the Baseline Year (R. 2386-88, 2442-45, 969); (b) adjusting the Forecast Supply to account for inflows from other tributary basins (Anders, Tr. Vol. I, 162:9-164:8; R.970); (c) developing an improved regression model to forecast water supply for TFCC (R. 2391-92, R. 2245, 970); (d) using actual irrigated acreage to calculate material injury (R. 2394-95, 970-71); (e) accounting for supplemental groundwater use (R. 972); and (f) developing a method of calculating project efficiency based on real efficiency factors (R. 969-73). The Director refused to accept any of them. He elected to stick by his *less accurate* method of calculating water needs when more accurate methods are available. This effect is excessive curtailment of beneficial use. This is an abuse of discretion as it is contrary to the principle of beneficial use and the Idaho Supreme Court's instruction to use the best science available.

Three of the Director's decisions to use the best science available deserve special mention: (a) his refusal to improve the Forecast Supply calculation to account for all sources of water available to the SWC; (b) his refusal to evaluate actual irrigated acreage of TFCC; and (c) his refusal to evaluate supplemental groundwater use.

7.1 The Director refused to improve the Forecast Supply calculation to account for all sources of water available to the SWC.

A key component of the methodology order is the prediction of water supply, referred to in the Fifth Methodology Order as the "Forecast Supply." To calculate the water supply, the Fifth Methodology Order uses Snake River flows on the South Fork at the Heise Gage, but does not account for inflows to the Snake River from several tributaries below Heise including the Portneuf River, Blackfoot River, Willow Creek, and Henry's Fork. (Anders, Tr. Vol. I, 162:9-164:8.) Failure to account for inflows from the Portneuf River, Blackfoot River, and Willow Creek tributaries was especially significant in 2023 because these basins experienced record snowpack. As of April 3, 2023, Willow Springs basin snowpack was 178% of median, the

Blackfoot basin at 186%, and the Portneuf basin at 216% of median snowpack, according to the Idaho NRCS Snotel data. (R. 1599). The Portneuf River experienced significant flooding in 2023, adding much more water to the Snake River than normal, but this was unaccounted for in the Fifth Methodology Order, resulting in the Director predicting less water than was truly available to the SWC. (Anders, Tr. Vol. I, 167:19-168:11.)

7.2 The Director refused to use the best science available to determine the current irrigated acres of TFCC.

As mentioned above, the expedited after-the-fact hearing did not afford adequate time for junior water users to a field level examination of irrigated acres as supplemental groundwater use. Therefore, junior users relied on the Department's "Irrigated Lands" and "METRIC" datasets to demonstrate the number of acres currently irrigated by TFCC. These datasets show that TFCC actually irrigates approximately 15,000 fewer acres than TFCC reports to IDWR as being irrigated. (R. 2381.) The Irrigated Lands and METRIC datasets actually overstate irrigated acreage because they do not remove hardened acres within subdivisions and other developments that are partially irrigated. (Anders, Tr. Vol. I, 140:1:21; Sukow, Tr. Vol., 68:6-13. Still, IDWR staff agreed that these datasets are the best science available and are used in the ESPA Model which is used in the Fifth Methodology Order. (R. 1084-85.)

TFCC's manager admitted at the hearing that TFCC does not irrigate as many acres as it was decree based on practices in 1987. (Barlogi, Tr. Vol. II, 303:23-304:10; R. 1084.) TFCC's expert Charles Brockway Jr. acknowledged this. (R. 1233.) Thus, the clear and convincing standard has been met that TFCC is not irrigating its full decreed acreage. Once this occurs, the Director has a duty to evaluate the number of acres actually currently irrigated.

At the first evidentiary hearing held on the SWC delivery call in 2008, a manual review of the TFCC project revealed a total of 183,589 irrigated acres. (2376.) From 2010-2014, the Department calculated material injury for TFCC based on this figure. *Id*. Since 2015, the Department has assumed 194,732 irrigated acres based on a GIS shapefile that TFCC generated in-house with no collaboration with IDWR or the groundwater users directly affected by the issue. (Shaw, Tr. Vol. IV, 1018:5-14). The TFCC shapefile has never been subject to scrutiny in an evidentiary hearing. At the recent hearing, it was made clear that the 2013 shapefile was created with a broad brush that captured all land that could theoretically be irrigated, including many homes, farmsteads, subdivisions and other lands that are not in fact irrigated. (Shaw, Tr.

Vol. IV, 1015:15-1016:6; R. 1237.) Even more surprising, TFCC general manager Jay Barlogi testified that he did not know how many acres TFCC irrigated. (Barlogi, Tr. Vol. II, 321:2-5.). TFCC does not keep track of how many acres its users have fallowed under CRP and CREP programs, nor how many acres have been hardened by development. (*Id.* at 317:21-318:5; 320:5-19.) Thus, the 2013 TFCC shapefile captures a gross acreage figure that is far greater than actual irrigated acreage within TFCC.

IDWR maintains Irrigated Lands data sets used in the ESPA Model to define irrigated acreage. (Anders, Tr. Vol. I, 142:20-24). At the hearing Mr. Anders was asked:

> Q. Would you agree the Department's hand digitized maps that are created using the irrigated lands dataset process are highly accurate?
>
> A. I think they are highly accurate for the year that they are created for."

Id.

The 2011 Irrigated Lands data set calculated 179,486 irrigated acres for TFCC. (R. 2904.) The 2017 Irrigated Lands data set calculated 180,956 acres. *Id*. The 2021 METRIC data used in ESPAM is also more precise than TFCC's shapefile and shows 179,486 irrigated acres. (R. 2901.) The 2017 and 2021 data sets are more recent than the 2013 shapefile. Ms. Sukow testified that these data sets represent the best science available to determine actual irrigated acreage, and this is the data used in ESPAM for purposes of calculating curtailment under the fifth Methodology Order. (Sukow, Tr. Vol. I, 68:2-69:20.) These datasets consistently show 15,000 fewer irrigated acres than TFCC reports as being irrigated.

Despite being the best science available, Department staff did not use the irrigated acreage figures from Irrigated Lands or METRIC datasets to calculate water demand for TFCC. Matt Anders testified that he declined to use the best science available because he did not believe it satisfies the "clear and convincing" standard of proof. (Anders, Tr. Vol. I, 143:12-25.) This is mistaken. Once a junior proves that a senior is not irrigating the full number of acres, the Department must use the best science available to determine actual irrigated acreage.

The SWC could not verify or defend the 194,732 acre figure that they have been reporting to the Director since 2013. Instead, TFCC's manager and its expert Dr. Brockway, Jr. argued that TFCC has a legal obligation to deliver water to all shares of stock in the company, and the Department should therefore assume that every acre with appurtenant shares is fully irrigated regardless of whether the land is actually irrigated. (R. 1233, ¶ 4; Brockway, Tr. Vol.

IV, 905:11-16.) TFCC's manager asserted that "these subdivisions are entitled to the same share delivery as the agricultural field was prior to development. So the canal company has to be prepared to meet the same demand, even though the area being developed and the actual irrigated acreage is going down." (Barlogi, Tr. Vol. II, 309:20-310:1.) On cross-examination he did not retreat from the position that IDWR should assume that TFCC is irrigating land that is covered in concrete and asphalt:

> Q. So if the irrigated acre [of the subdivision] is half – lets start it this way, if a 40-acre field is taking 5.8 acre-feet of water, the subdivision has contracted that space by half due to hardening of acres, only half of those acres are receiving the same volume of water, which would be 11.86 acre-feet; correct?
>
> A. Yes.

(Barlogi, Tr. Vol. II, 309:20-310:1.) This is directly contrary to the Fifth Methodology finding of fact number 28, which states that "Reasonable in-season demand (RISD) is the projected annual diversion volume for each SWC entity during the year of evaluation that is attributable to the beneficial use of growing crops within the service area of the entity." (R. 12, ¶ 28 (emphasis added).) And finding of fact number 30, which acknowledges that raw SWC diversions values "will then be adjusted to remove any water diversions that can be identified to not directly support the beneficial use of crop development within the irrigation entity." (R. 13, ¶ 30; emphasis added.)

Remarkably, TFCC has done nothing to accurately track irrigated acreage in its surface area. (Barlogi, Tr. Vol. II, 321:2-5.) It does not maintain a map or record book of any type. (Barlogi, Tr. Vol. II, 350:23-951:9; 352:3-7.) TFCC annually reports irrigated acreage to IDWR under Step 1 of the Methodology Order, but there is no data or analysis to support it. *Id*. at 352:3-7. Not because TFCC lacks the ability to maintain an accurate accounting of actual irrigated acres, as other canal companies do, but because it benefits TFCC to not maintain an accurate inventory of irrigated acreage. (Barlogi, Tr. Vol. II, 352:24-353:18.) Because TFCC keeps no record of irrigated acreage, Mr. Barlogi testified that there is "zero percent change in TFCC's irrigated acreage" despite acknowledging the urban development of farmland as the City of Twin Falls grows. (Tr. Vol. II, 346:3-6.) TFCC's position is incredulous, but the Director accepts it.

Importantly, neither IGWA nor other groundwater users have access to TFCC's water delivery data, making it practically impossible for them to analyze actual irrigated acres without the cooperation of TFCC. Thus, TFCC holds all the cards—only they know which fields they

deliver water to, yet they don't keep track of irrigated acreage, because the Director has not required them to verify the number of acres they report as being irrigated.

Evidence presented at the hearing demonstrated that the Director could significantly improve the accuracy and reliability of the methodology order by requiring SWC entities to annually submit an accurate GIS shapefile or other reliable documentation of actual irrigated acreage, to be reviewed by Department staff, as contemplated in by the Department in 2015. (R. 2424.) The Director could also use the most recent Irrigated Lands dataset METRIC dataset to determine actual irrigated acreage of SWC entities, as discussed above.

Since (i) TFCC's 2013 shapefile was relatively imprecise and captures many acres that were not actually irrigated at that time; (ii) the Director has not verified the 194,732 acre figure that TFCC reports, (iii) TFCC does not actually keep track of irrigated acreage and cannot verify that figure, and (iiv) the Director did not give junior water users to opportunity to conduct a field level examination of irrigated acres, the best science available are the Irrigated Lands and METRIC datasets—the same datasets the Department uses in the ESPA Model, which is used in the Fifth Methodology Order. The Director abused his discretion by using outdated acreage data when the Department has newer and more accurate data.

7.3 The Director failed to evaluate whether the water needs of TFCC can be met with supplemental groundwater in accordance with CM Rule 42.01.h.

In evaluating SWC water need, CM Rule 42.01.h instructs the Director to consider "[t]he extent to which the requirements of the senior-priority surface water right could be met using alternate reasonable means of diversion or alternate points of diversion, including the construction of wells or the use of existing wells." Many farmers in Magic Valley have groundwater wells with supplemental groundwater rights they can use when surface water supplies are not available. CM Rule 42.01.h requires the Director to consider this when evaluating material injury.

In 2015, Department staff recommended that a procedure be developed for reviewing irrigated land data self-reported by SWC entities and accounting for supplemental groundwater use. (R. 2377.) The recommendation notes: "There was insufficient time for the committee to evaluate [supplemental ground water use]" but that the Department committee recommended reviewing this issue. (R. 2424.) Eight years later, the Fifth Methodology Order states: "At this time, the information submitted or available to the Department is insufficient to determine the

extent of supplemental irrigation on lands within the service areas of SWC entities." (R. 1314). Matt Anders testified that they performed no additional analysis or review to address supplemental ground water use. (Anders, Tr. Vol. I, 197:1-12.)

TFCC's manager and expert consultant Dr. Brockway, Jr. both testified that there is some supplemental groundwater use within TFCC. IGWA does not have the ability to accurately evaluate supplemental groundwater use for the same reason that it cannot accurately evaluate surface water irrigated acres—because TFCC holds the surface water delivery data. Unless the Department requires TFCC to disclose this data or provide a report of supplemental groundwater use, the methodology order will continue to assume there is no supplemental groundwater use and, as a result, overpredict the amount of water actually needed by the SWC. (Anders, Tr. Vol. I, 197:13-198:18; Brockway, Tr. Vol. IV, 944:4-945:24.)

The Department has a database used in the ESPA Model that assigns a groundwater fraction to mixed-source lands. (Sukow, Tr. Vol. I, 69:21-70:6.) As of today, this is the best science and data available to document supplemental groundwater use. The Director must utilize this data when calculating material injury, until better science becomes available.

Since undisputed evidence shows that TFCC patrons have supplemental groundwater rights that can be used to meet their water needs, the Director abused discretion by refusing to take this into account.

8. The Director violated Idaho law and abused discretion by failing to evaluate whether SWC water needs could be met without curtailment by making system improvements in accordance with CM Rules 40.03, 42.01.a, 42.01.g, and 42.01.h.

Given that large disparity between the amount of groundwater use must be curtailed to provide a comparatively small benefit to senior surface users, the CM Rules require senior water users to make all reasonable efforts to meet their water needs with their existing supplies before looking to curtail junior water users. CM Rule 40.03 states:

> In determining whether diversion and use of water under rights will be regulated under Rule Subsection 040.01.a. or 040.01.b., the Director shall consider whether the petitioner making the delivery call is suffering material injury to a senior-priority water right and is diverting and using water efficiently and without waste, and in a manner consistent with the goal of reasonable use of surface and ground waters as described in Rule 42.

CM Rule 42.01 similarly provides that the determination of material injury includes consideration of whether the senior user is "using water efficiently and without waste," and then lists several factors the Director may consider in making that determination, including "[t]he amount of water available in the source from which the water right is diverted" (CM Rule 42.01.a), "[t]he extent to which the requirements of the holder of a senior-priority water right could be met with the user's existing facilities and water supplies by employing reasonable diversion and conveyance efficiency and conservation practices" (CM Rule 42.01.g), and "[t]he extent to which the requirements of the senior-priority surface water right could be met using alternate reasonable means of diversion or alternate points of diversion, including the construction of wells or the use of existing wells" (CM Rule 42.01.h).

The requirement that senior water users take reasonable measures to meet their water needs with existing water supplies before looking to curtail juniors is grounded in the public interest in achieving maximum beneficial use of Idaho's water resources. The first section of Idaho's water code reads:

> Water being essential to the industrial prosperity of the state, and all agricultural development throughout the greater portion of the state depending upon its just apportionment to, and economical use by, those making a beneficial application of the same, its control shall be in the state, which, in providing for its use, shall equally guard all the various interests involved.

Idaho Code § 42-101. More than a century ago, the Idaho Supreme Court affirmed the obligation to use water efficiently:

> A prior appropriator is only entitled to the water to the extent that he has use for it when economically and reasonably used. It is the policy of the law of this state to require the highest and greatest possible duty from the waters of the state in the interest of agriculture and for useful and beneficial purposes.

Washington State Sugar Co., 27 Idaho 26 (internal citation omitted). This concept has been reaffirmed many times since. Recently, in a case involving conjunctive management of the ESPA, the Court held that "[j]ust apportionment to, and economical use by, those who have appropriated water for a beneficial use furthers the important governmental interest of securing the maximum use and benefit of Idaho's scarce water resources." *Clear Springs Foods*, 150 Idaho at 815.

When the SWC challenged the constitutionality of the CM Rules in the *AFRD2* case, they argued that it undermined their decreed water rights for the Director to evaluate, in response to a delivery call, their current water needs and whether those needs can be met with available water supplies before seeking to curtail junior users. *AFRD2*, 143 Idaho at 876-78. The Idaho Supreme Court disagreed, holding instead that "water rights adjudications neither address, nor answer, the questions presented in delivery calls," that there "may be some post-adjudication factors which are relevant to the determination of how much water is actually needed," and that IDWR may properly evaluate the senior user's "system, diversion, and conveyance efficiency, the method of irrigation water application and alternate reasonable means of diversion." *AFRD2*, 143 Idaho at 876-878. The Court subsequently upheld the obligation of a senior user "to take reasonable steps to maximize the use of that flexibility to move water within the system before it can seek curtailment or compensation from junior users." *In Matter of A&B*, 153 Idaho at 513-515.

Requiring senior users to take reasonable actions to meet their water needs with available water supplies before seeking to curtail junior users will often avoid the need for curtailment, thereby securing maximum use of Idaho's water resources. However, the Director refused to require TFCC or other members of the SWC to make any effort to meet their water needs with existing supplies. The Director could have required them to submit information containing the number of acres currently irrigated, all sources of water available to meet their demand, the amount of water that discharges out the end of their canal system, and a description of operational changes and system improvements that could be made to meet their water needs with existing water supplies, then evaluate whether reasonable measures are available to meet water needs with existing supplies. However, the Director refuses to do so. Instead, the Director jumps immediately from a calculated water supply shortage to curtailment.

As a result, Idaho is not maximizing beneficial use of its resources. Rather than find a way to meet TFCC's water demands with 93% of a full supply, the Department has deemed it more prudent to impose mass curtailment and the economic and social devastation that would result.

The Director's failure to require the SWC to take reasonable actions to meet their water needs with available water supplies before seeking to curtail junior users is an abuse of discretion.

9. The Director violated Idaho law and abused discretion by refusing to apply the futile call doctrine in accordance with CM Rules 10.08 and 20.04.

One reason curtailment is so excessive under the Fifth Methodology Order is because the Director refused to apply the futile call doctrine. The principle of beneficial use precludes IDWR from curtailing a junior user if it will not result in additional water reaching the senior when the senior needs it, because it would be a "futile call." The Idaho Supreme Court has explained:

> if due to seepage, evaporation, channel absorption or other conditions beyond the control of the appropriators the water in the stream will not reach the point of the prior appropriator in sufficient quantity for him to apply it to beneficial use, then a junior appropriator whose diversion point is higher on the stream may divert the water.

Sylte v. Idaho Dep't of Water Res., 165 Idaho 238, 245 (2019) (quoting *Gilbert v. Smith*, 97 Idaho 735, 739 (1976)). This court has held that the futile call doctrine is "a well established part of the prior appropriation doctrine." Order on Pet. for Jud. Rev. at 21, *Clear Springs Foods, Inc. v. Spackman*, No. 2008-0000444 (Gooding Cnty. Dist. Ct., Idaho, June 19, 2009).

The futile call doctrine is incorporated explicitly into the CM Rules, which define a "futile call" as "[a] delivery call made by the holder of a senior-priority surface or ground water right that, for physical and hydrologic reasons, cannot be satisfied within a reasonable time of the call by immediately curtailing diversions under junior-priority ground water rights or that would result in waste of the water resource." CM Rule 10.07. CM Rule 20.04 states: "The principle of the futile call applies to the distribution of water under these rules," and "a call may be denied under the futile call doctrine."

At the after-the-fact hearing, testimony confirmed that IDWR regularly applies the doctrine as between surface water users. IDWR watermaster Tony Olenichak testified that the doctrine is applied every year in Water District 1 when the tributaries to the main stem of the Teton River lose their surface water connection. (Tr. Vol. III, 799:3-800:4.) He explained that if shutting off diversions on a tributary stream does not cause surface water to reach the main stem within 3-5 days, the futile call doctrine takes effect and junior users are allowed to divert water out of priority. (Tr. Vol. III, 801:6-15.) Mr. Olenichak explained that the reason tributaries in the Teton Basin lose a surface water connection is because the surface flow in the tributary streams sinks into the ground through gravelly soils. This water flows underground in the shallow aquifer

until it daylights via springs along the main stem of the Teton River. (Tr. Vol. III, 801-18-802:9.) Despite the subsurface connection, IDWR deems curtailment futile. (R. 1092.)

As a minimum, the futile call doctrine must be applied to the SWC delivery call to preclude curtailment of groundwater rights for whom curtailment would provide no additional water to the SWC by the Time of Need. However, the doctrine has historically not been so strict. By definition, it also includes circumstances where curtailment would be wasteful.

Undisputed evidence at the hearing shows that curtailment of groundwater pumping within Carey Valley Ground Water District, Madison Ground Water District, and Henry's Fork Ground Water District will provide zero no additional water to the SWC at the Time of Need, and curtailment of groundwater pumping within North Snake Ground Water District, Magic Valley Ground Water District, Jefferson-Clark Ground Water District, and Bonneville-Jefferson Ground Water District will provide essentially no additional water to the SWC when compared to the magnitude of curtailment within those districts. (R. 2411.)

Notwithstanding, the Director refused to apply the futile call doctrine, giving no explanation why. While conjunctive management certainly requires some exercise of discretion by the Director, that discretion is not so broad as to allow the Director to utterly ignore established Idaho law and his own rules. Therefore, the Fifth & Sixth Methodology Orders should be set aside as a result of the Director's failure to apply the futile call doctrine.

10. The Director violated Idaho law and abused discretion by refusing to consider the public interest in achieving maximum beneficial use of Idaho's water resources in accordance with CM Rules 10.07, 20.03, and 42.01.

The Idaho Supreme Court has ruled that "water rights must be exercised with some regard to the public and necessities of the people, and not so to deprive a whole neighborhood or community of its use and vest an absolute monopoly in a single individual." *AFRD2*, 143 Idaho at 880 (internal quotes omitted). This concept was first applied in 1907 when a senior user sought to control an entire stream even though he beneficially used only a portion of it. *Van Camp v. Emery*, 13 Idaho 202 (1907). The Idaho Supreme Court refused to allow priority to be exercised in that manner, explaining:

> In this arid country where the largest duty and the greatest use must be had from every inch of water in the interest of agriculture and home-building, it will not do to say that a stream may be dammed so as to cause sub-irrigation of a few acres at a loss of enough water to surface-irrigate ten times as much by proper application.

Id. at 208.

It was again applied in 1910 to accommodate development of the Twin Falls Canal and the Northside Canal. In that case, *Schodde v. Twin Falls Land & Water Company*, a senior user had constructed 11 water wheels to divert water from the Snake River to irrigate 430 acres—a large investment in those days. *Schodde v. Twin Falls Land & Water Co.*, 224 U.S. 107 (1912). Twin Falls Land & Water Company sought to construct the Twin Falls Canal and the North Side Canal to bring irrigation water to more than a hundred thousand acres in the Magic Valley, but this would require damming the Snake River which would render the senior's water wheels inoperable and eliminate the senior's ability to divert water. Despite the injury to the senior user, the court allowed development of the junior rights because preserving the senior's use would unreasonably impede full development of Idaho's water resources. The court reasoned:

> Suppose from a stream of 1000 inches a party diverts and uses 100, and in some way uses the other 900 to divert his 100, could it be said that he made such a reasonable use of the 900 as to constitute an appropriation of it? Or, suppose that when the entire 1000 inches are running, they so fill the channel that by a ditch he can draw off to his land 100 inches, can he then object to those above him and appropriating the other 900 inches, because it will so lower the stream that his ditch becomes useless? This would be such an unreasonable use of the 900 inches as will not be tolerated under the law of appropriation.

Schodde v. Twin Falls Land & Water Co., 224 U.S. 107, 119 (1912).

The *Schodde* decision underpins the Ground Water Act and its policy of "full economic development of underground water resources," discussed above. Idaho Code § 42-226. The Act was once challenged on the basis it violated the prior appropriation doctrine, but the Idaho Supreme Court upheld the Act, finding it to be "consistent with the constitutionally enunciated policy of promoting optimum development of water resources in the public interest." *Baker v. Ore-Ida Foods, Inc*, 95 Idaho 575, 584 (1973).

What makes conjunctive management so vexing is the large amount of beneficial use of groundwater that must be curtailed to supply a relatively small amount of additional surface water to senior users. This is much different than surface water administration where the senior water user receives all of the water that would have otherwise been diverted by the junior. The principle of maximum beneficial use starkly germane to conjunctive management.

The CM Rules explicitly incorporate the principle of maximum beneficial use, stating: "An appropriator is not entitled to command the entirety of large volumes of water in a surface

or ground water source to support his appropriation contrary to the public policy of reasonable use of water." CM Rule 20.03. This rule was tested when the SWC challenged the constitutionality of the CM Rules, but it was upheld, with the Idaho Supreme Court explaining that "evaluation of whether a diversion is reasonable in the administration context should not be deemed a re-adjudication," *AFRD2*, 143 Idaho at 877, and "Somewhere between the absolute right to use a decreed water right and an obligation not to waste it and to protect the public's interest in this valuable commodity, lies an area for the exercise of discretion by the Director." *Id.* at 880. As stated by former Idaho Supreme Court Justice Gerald Schroeder: "The Director is not limited to counting the number of cubic feet per second in the decree and comparing the priority date to other priority dates and then ordering curtailment to achieve whatever result that action will obtain regardless of the consequences to the State, its communities and citizens." Opinion Constituting Finds of Fact, Conclusions of Law and Recommendations, at 39, *A & B Irr. Dist. v. Idaho Dep't of Water Res*., No. 2008-0000551 (Gooding Ctny. Dist. Ct., Idaho, Oct. 10, 2008).

As recent as 2016, the Idaho Supreme Court upheld the Director's authority to decline curtailment "based on the policy of beneficial use." *Idaho Ground Water Appropriators, Inc. v. Idaho Dep't of Water Res.*, 160 Idaho 119, 129 (2016). In that decision, the court explained that (i) "the policy of securing the maximum use and benefit, and least wasteful use of Idaho's water resources, has long been the policy of Idaho," (ii) "The policy of beneficial use serv[es] as a limit on the prior appropriation doctrine," (iii) "Idaho law contemplates a balance between the 'bedrock principles' of priority of right and beneficial use," and (iv) the director of IDWR must "determine in a delivery call proceeding whether there is a point where curtailment is unjustified because vast amounts of land would be curtailed to produce a very small amount of water to the caller." *Id*. at 131-132.

Ironically, were it not for the ruling in *Schodde* that a senior cannot exercise priority in a way that blocks full development of Idaho's water resources, TFCC and NSCC would not exist. Now that the shoe is on the other foot, they have persuaded the Director to curtail groundwater rights, even if it would provide them with no additional water.

There is one important distinction between the circumstances in *Schodde* and the circumstances here. In *Schodde*, the senior was completely deprived of his water right by the junior diversions of TFCC and NSCC. By contrast, the development of more than a million acres

of farmland with groundwater has had a comparatively small impact on TFCC's water supplies. As explained above, TFCC's diversions have remained steady over the last half century. In all but four of the last 46 years, TFCC's annual diversion volume has stayed within 75,000 acre-feet, or seven percent, of average. Even in the most extreme drought year, TFCC's diversion volume was within 14 percent, of average. (R. 1238-39.) Curtailment of hundreds of thousands of acres of groundwater irrigated farmland will do no more than increase TFCC's water supply by a few percentage points.

If the principle of maximum beneficial use does not apply here, where the senior seeks to curtail 10 or 100 times more water than it needs for a full water supply, where TFCC will receive nearly full supply of water without curtailment, and where a shortfall can almost certainly be remedied through more efficient water conveyance and usage practices, then the principle might as well be written out of Idaho law.

As with the futile call doctrine, the Director simply refused to apply the principle of maximum beneficial use. His failure was an abuse of discretion.

Ancillary Matters

If the court finds that the Director erred in one or more ways described above, the court should find that such error(s) violated the substantial rights of junior water users, and award IGWA's attorney fees, as described below.

11. The errors cited above violate substantial rights of junior-priority water users.

Water rights are real property rights. *Clear Springs Foods*, 150 Idaho at 797 (quoting *Olson v. Idaho Dep't of Water Res.*, 105 Idaho 98, 101; Idaho Code § 55-101). Real property rights are, as a matter of law, substantial rights. *Id*. The procedural errors described above violate the substantial rights of IGWA and its patrons because they deprived due process. The substantive errors described above violate the substantial rights of IGWA and its patrons because they generate larger and more frequent curtailments.

12. The Director is liable for attorney fees under 42 U.S.C. § 1983 for depriving junior water users of clear due process rights, or alternatively, under Idaho Code § 42-117(1).

The impact of the due process violations consciously perpetrated by the Director cannot be understated. It did more than violate IGWA's substantial rights, it undermined the institutional trust that all junior water users once placed in the Department of Water Resources.

A message must be sent demonstrating that transparent, fair treatment is the hallmark of our institutions, accordingly, IGWA request this Court grant attorneys' fees pursuant to 42 U.S.C. § 1983 if the Director was found to have deprived IGWA of its rights and privileges under the Idaho Constitution and law. Alternatively, the Director is liable for attorneys fees pursuant to Idaho Code § 42-117(1) for failing to hold a hearing before issuing the Fifth Methodology Order, issuing the Fifth Methodology Order in the absence of an emergency and after the applicable irrigation season had begun, for failing to apply the futile call doctrine subjecting almost every ground water right subject to curtailment in half the years, and finally for implementing the Fifth Methodology Order without a reasonable basis in fact or law. The Director is liable for attorney fees under Idaho Code § 42-117(1) for failing to hold a hearing before issuing the Fifth Methodology Order, and failing to apply the futile call doctrine, without a reasonable basis in fact or law.

CONCLUSION

For the reasons set forth above, IGWA respectfully requests that this Court set aside the Fifth & Sixth Methodology Orders and remand this case to the Director with instructions to (1) apply the Fourth Methodology Order until a proper evidentiary hearing is held that complies with due process and the APA, and (2) use the best science available in the methodology order.

RESPECTFULLY SUBMITTED this 8th day of December, 2023.

THOMAS J. BUDGE
Attorney for Petitioner-IGWA

CERTIFICATE OF SERVICE

I hereby certify that on this 8th day of December, 2023, I filed the foregoing document and served it upon the persons below via iCourt:

B. Procedural History 9

C. Statement of Facts 13

STANDARD OF REVIEW 15

ISSUES ON APPEAL 17

SUMMARY OF ARGUMENT 19

ARGUMENT 21

I. Evidentiary Standard During the Agency Hearing versus Judicial Review 21

II. The Director's Conclusion that the Forecast of TFCC's Supply is "Reasonable" and "Sufficiently Accurate" is Clearly Erroneous 23

III. The Director's Conclusion that 2018 is a "Reasonable" BLY is Clearly Erroneous 26

IV. The Department's Conclusion that Collectively the Safety Factors "do not aggressively overpredict demand shortfall" is Clearly Erroneous 28

V. The Director's Quantification of SWC's Irrigated Acreage is Arbitrary, Capricious, an Abuse of Discretion, and Contrary to Law 32

A. The Evidence at Hearing Clearly Demonstrated that TFCC's Irrigated Acreage Includes Hardened Acres 33

B. The Evidence at Hearing Clearly Demonstrated that SWC's Irrigated Acreage Includes Supplemental Ground Water Acres 35

C. The Evidence at Hearing Clearly Demonstrated that A&B's Irrigated Acreage Includes Enlargement Acres 37

VI. The Director's Conclusion that TFCC's Operations are "Reasonable" is Clearly Erroneous 39

A. How Project Efficiency is Used in the *Fifth Methodology Order* 40

B. The Director's Conclusion that TFCC's "diversions and efficiency are reasonable" is not Supported by Substantial Evidence; Further, the Evidence Shows that TFCC's Diversions are Unreasonable. 40

VII. The Director's Conclusion that "Curtailment dates . . . should be calculated by a transient model simulation . . ." is Clearly Erroneous and Causes IDWR to Curtail Ground Water Users that are not Causing the Material Injury to SWC 43

VIII. The Director's Conclusion that "the [Cities'] due process rights were not violated" is Clearly Erroneous and in Excess of IDWR's Statutory Authority 45

IX. To the Extent that the Director's Conclusions are not Found to be Clearly Erroneous, it is because the Cities were Deprived of Discovery 47

X. The Director's Orders and Erroneous Conclusions Prejudice Petitioners' Substantial Rights 48

CONCLUSION 49

APPENDIX A

1. *Order Granting Motion to Augment Record; Order Augmenting Record*, Case No. CV01-23-13238, Fourth Judicial District, Ada County, IDWR Docket No. CM-DC-2010-001 (Nov. 15, 2023)

2. *Motion for Clarification and Reconsideration of Denial of Request for Hearing and to Engage in Discovery*, Case No. CV01-23-13238, Fourth Judicial District, Ada County, IDWR Docket No. CM-DC-2010-001 (Sep. 5, 2023)

3. *Surface Water Coalition's Response to Cities' Motion for Clarification and Reconsideration*, Case No. CV01-23-13238, Fourth Judicial District, Ada County, IDWR Docket No. CM-DC-2010-001 (Sep. 19, 2023)

4. *Order Denying Cities' Motion for Clarification and Reconsideration*, Case No. CV01-23-13238, Fourth Judicial District, Ada County, IDWR Docket No. CM-DC-2010-001 (Sep. 25, 2023)

APPENDIX B

1. *Final Order Establishing 2023 Reasonable Carryover (Methodology Step 9)*, IDWR Docket No. CM-DC-2010-001 (Nov. 30, 2023)

2. *Final Order Establishing 2018 Reasonable Carryover (Methodology Step 9)*, IDWR Docket No. CM-DC-2010-001 (Nov. 30, 2018)

Petitioners City of Idaho Falls, City of Pocatello, and the Coalition of Cities[1] (collectively, "Petitioners" or "Cities"), through their undersigned counsel, submit this opening brief pursuant to paragraph 9 of the Court's *Procedural Order* dated August 17, 2023, the Court's *Order Granting Unopposed Motion; Order Vacating and Resetting Hearing* dated November 17, 2023, Rule 84(p) of the Idaho Rules of Civil Procedure, and Rule 34 of the Idaho Appellate Rules.

STATEMENT OF THE CASE

A. Nature of the Case

This is a petition for judicial review of the findings, inferences, conclusions, or decisions made by the Director in the *Post-Hearing Order Regarding Fifth Amended Methodology Order* (Jul. 19, 2023) ("Post-Hearing Order"), after a three-day hearing on the *Fifth Amended Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* (Apr. 21, 2023) ("Fifth Methodology Order").

B. Procedural History

The *Fifth Methodology Order* is one in a series of final orders arising out of the ongoing Surface Water Coalition ("SWC") Delivery Call, Docket No. CM-DC-2010-001, which was initiated by a January 14, 2005, letter from the SWC sent to the Director of Idaho Department of Water Resources ("Department" or "IDWR"). On May 2, 2005, the Director issued an *Amended Order* finding injury to certain SWC members' natural flow and storage rights ("2005 Order"). Among the numerous procedural and substantive pre-hearing actions was the Supreme Court's decision in *Am. Falls Reservoir Dist. No. 2 v. Idaho Dep't of Water Res.*, 143 Idaho 862 (2007)

[1] The Coalition of Cities is composed of the Cities of Bliss, Burley, Carey, Declo, Dietrich, Gooding, Hazelton, Heyburn, Jerome, Paul, Richfield, Rupert, Shoshone, and Wendell.

(*AFRD2*), rejecting the SWC's facial challenge to the Department's Rules for Conjunctive Management of Surface and Ground Water Resources, Idaho Admin. Code r. 37.01.11 ("CMR"), and defining the Department's conjunctive management obligation to require delivery to seniors of the amount required for beneficial uses on acres that are actually irrigated—not necessarily the quantity or number of acres decreed.

On August 1, 2007, the Department appointed retired Idaho Supreme Court Justice Gerald Schroeder as hearing officer, with Justice Schroeder holding a hearing on the SWC's delivery call request from January 16, 2008 to February 5, 2008. On April 29, 2008, Justice Schroeder issued an *Opinion Constituting Findings of Fact, Conclusions of Law and Recommendation* ("2008 Opinion"). The *2008 Opinion* concluded that as the inputs to the Department's determination of material injury changed, the Department had an obligation to revisit the delivery call analysis. *See*, *e.g.*, *id.* at 51 ("The concept of a baseline is that it is adjustable as weather conditions or practices change, and that those adjustments will occur in an orderly, understood protocol.").

On September 5, 2008, the Director adopted portions of the *2008 Opinion* in a *Final Order Regarding the Surface Water Coalition Delivery Call* ("2008 Order"), which was appealed. On remand from the appeals of the *2008 Order*, on April 7, 2010, the Director issued a *Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("Methodology Order"), based on the record developed at the January-February 2008 hearing, the *2008 Order*, and the rulings of the district court and Idaho Supreme Court on the various intervening appeals and petitions for judicial review. The *Methodology Order* refined the approach found in the Department's *2005 Order* to determine

material injury, including starting from a forecast water supply and projecting shortages based on a baseline of the SWC's demands.

The Department has amended the *Methodology Order* on numerous occasions between 2010 and 2023, to wit: June 16, 2010 ("First Amended Methodology Order"); June 23, 2010 ("Second Methodology Order"); April 16, 2015 ("Third Methodology Order"); and April 19, 2016 ("Fourth Methodology Order").[2] On April 21, 2023, the Director issued the *Fifth Methodology Order*, as well as the *Final Order Regarding April 2023 Forecast Supply (Methodology Steps 1-3)* ("2023 Steps 1-3 Order"). R. 0001-47. The *Fifth Methodology Order* updated the nine steps the Department uses to determine material injury to SWC members. R. 0002. Despite nearly full reservoirs and abundant snowpack in the Upper Snake watershed in the spring of 2023, the *2023 Steps 1-3 Order* predicted a demand shortfall of 75,200 acre-feet for the 2023 irrigation season, which required appropriators with water rights junior to December 30, 1953, to mitigate or face curtailment. R. 0048-61.

Also on April 21, 2023, the Director issued a *Notice of Hearing, Notice of Prehearing Conference, and Order Authorizing Discovery*, scheduling a prehearing conference for April 28, 2023, and an in-person evidentiary hearing on the *Fifth Methodology Order* and *2023 Steps 1-3 Order* for June 6-10. R. 0062-67. The Cities moved unsuccessfully to continue the evidentiary hearing—primarily on due process concerns—on multiple occasions. *See Motion for Continuance* (April 28, 2023) (R. 0080-89); *Motion for Reconsideration of Denial of Continuance* (May 5, 2023) (R. 0282-93); *Motion to Re-set Hearing Dates* (May 22, 2023) (R. 0446-51). *See Order Denying the Cities' Motion for Appointment of Independent Hearing Officer and Motion for Continuance and Limiting Scope of Depositions* (May 5, 2023) (R. 0299-

[2] This brief refers to the assortment of orders, both past and future, as the "Methodology Orders."

304) (reaffirming Director's oral denial of the Cities' *Motion for Continuance* at the April 28, 2023 prehearing conference); *Order Denying Motion for Reconsideration of Denial of Continuance* (May 19, 2023) (R. 0425-34); *Order Denying Motion to Re-set Hearing* (May 26, 2023) (R. 0500-04).

The Director held the evidentiary hearing from June 6-9, 2023. *See* R. 1067. The parties filed post-hearing briefs on or before June 16, 2023. *See* R. 0924-1003. On July 19, 2023, the Director issued a *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("Sixth Methodology Order"), R. 1004-53; an *Order Revising April 2023 Forecast Supply and Amending Curtailment Order (Methodology Steps 5 & 6)* ("2023 Steps 5-6 Order"), R. 1054-66; and the *Post-Hearing Order*, R. 1067-98.

On August 3, 2023, Petitioners filed a *Request for Hearing and Order Authorizing Discovery* based on the *Sixth Methodology Order*. R. 1130-34. On August 23, 2023, the Director issued an *Order Denying Request for Hearing and Motion to Authorize Discovery*. R. 1169-75. On September 5, 2023, Petitioners filed a *Motion for Clarification and Reconsideration of Denial of Request for Hearing and to Engage in Discovery*.[3] On September 25, 2023, prior to Petitioners' filing of a reply brief, the Director issued an *Order Denying Cities' Motion for Clarification and Reconsideration*.[4]

On August 16, 2023, Petitioners filed a *Notice of Appeal and Petition for Judicial Review of Final Agency Action (Re: Post-Hearing Order Regarding Fifth Amended Methodology Order)*.

C. Statement of Facts

Given the scope of water rights subject to administration under the SWC Delivery Call, the Methodology Orders have become one of the most (if not *the* most) significant conjunctive management tools in Idaho, and the Department has long acknowledged its obligation to rely on reliable, robust, and up-to-date information to evaluate the various inputs to the Methodology Orders. Throughout the many years the Department has administered the "ongoing"[5] SWC Delivery Call, starting with the *2008 Opinion*, the Methodology Orders have been characterized as "dynamic document[s] that would be subject to change and would change with better information, better data, and better analysis."[6]

It has been over 13 years since the *2010 Methodology* was initially issued, and the various Methodology Orders (First Amended, Second, Third, Fourth, Fifth, and Sixth) reflect the Department's incorporation of updated data, information, and modeling, some of which could be described as "robust" or the "best available science."[7] However, in some important instances the Department has also incorporated data and information that SWC itself provides to the Department without subjecting the SWC-provided information to meaningful scrutiny, and has preferentially adopted the SWC data rather than using other available and more reliable resources. *See* R. 0039-40 (describing process by which IDWR determines SWC's irrigated acreage); R 0048-49 (using irrigated acreage values simply "based on information submitted by

[5] R. 0748.

[6] *See, e.g.*, Hr'g Tr. Vol. II, , 132:16-133:8; Hr'g Tr. Vol. IV, 201:3-15; R. 1297.

[7] R. 1660 ("Numerical models [such as ESPAM 2.1] are recognized by the U.S. Geological Survey as the most robust approach for predicting the effects of groundwater pumping on surface-water discharge"); R. 1210 ("ESPAM 2.2 is supported by the ESHMC and broader scientific community as representing the best available science for regional hydrologic analysis of the ESPA"); R. 1300 ("[M]any aspects of the SWC Methodology represent the best available science for estimating forecasted supply (FS), RISD [reasonable in-season demand], and Demand Shortfall (DS)") (emphasis added).

the SWC . . .”). It has also adopted the SWC-provided information without providing Petitioners adequate discovery to collect alternative information to be offered at hearing. *Compare* R. 0064, 0127 (the Director provided Petitioners less than six (6) weeks to conduct discovery and prepare expert reports) *with* R. 0353-54 (Petitioners’ expert witness’ sworn statement that a *minimum* of three (3) to five (5) months is needed to perform necessary work).

The effect of this troubling reliance on uncorroborated data and information is that the *Fifth Methodology Order* grossly overpredicted SWC’s demand shortfall (i.e., material injury)[8] and ordered curtailment of far more acres than necessary to supply water that the SWC did not reasonably need.[9] A prominent example of the reliance on uncorroborated data is the Department’s use of SWC’s irrigated acreage numbers—acreage numbers derived from a 2013 shapefile created by Twin Falls Canal Company (“TFCC”) —that that are inconsistent with and much higher than both IDWR’s acreage numbers historically used in the Methodology Orders (based on evidence presented at hearing) and with IDWR’s own contemporaneously-developed acreage data.[10] The TFCC 2013 shapefile includes acres that the Department’s staff involved in developing the *Fifth Methodology Order* admitted, under oath, are “hardened” (and thus unable to be irrigated).[11] In the case of SWC’s project efficiencies, IDWR does not meaningfully assess whether those project efficiencies are reasonable by today’s standards,[12] presumably because the

---

[8] Due to overpredicting demands and underpredicting supplies. *See infra*, at sections II-IV.

[9] Compounded by the Director’s adoption of the “transient” modeling method for purposes of curtailment. *See infra,* at section VII.

[10] Hr’g Tr. Vol. I, 132-37 (Department witness Matt Anders testified that the Department’s use of 194,732 acres (from the 2013 shapefile) for TFCC’s irrigated acreage was first incorporated into the *Fourth Methodology Order*, that prior *Methodology Orders* has used 183,589 acres, and that the Department did not disclose the change).

[11] Hr’g Tr. Vol. I, 132.

[12] Hr’g Tr. Vol. I, 130-132 (Mr. Anders testified that, while IDWR does examine “the reasonableness of the calculations” “on a technical level,” they do not assess whether the project efficiencies are “reasonable” in the legal sense).

Hearing Officer in 2008 found them to be reasonable.[13] The upshot is that IDWR blindly concludes that SWC's submitted acreage data and the derived project efficiencies are accurate and/or reasonable, and then, in the context of discovery in advance of the 2023 hearing, stifled Petitioners' attempts to investigate the validity of these conclusions. IDWR limited discovery on the *Fifth Methodology Order* because time was allegedly "of the essence."[14] Yet when Petitioners challenged the *Sixth Methodology Order* a full eight months before the 2024 irrigation season, IDWR outright denied discovery.[15] This process has effectively precluded the Cities from successfully challenging the flaws in the *Fifth Methodology Order* and *Sixth Methodology Order* that were prescribed by the Director in 2023.[16]

STANDARD OF REVIEW

Any party "aggrieved by a final order in a contested case decided by an agency may file a petition for judicial review in the district court." *Sagewillow, Inc. v. Idaho Dep't of Water Res.,* 138 Idaho 831, 835 (2003) (citing Idaho Code ("I.C.") § 67-5270(3)). Judicial review of a final decision or order of the Director is governed by the Idaho Administrative Procedure Act ("APA"). I.C. § 42-1701A(4). Under the APA, the Court shall "review an appeal from an agency decision based on the record created before the agency." *Chisholm v. State Dep't of Water Res.,* 142 Idaho 159, 162 (2005). District courts acting pursuant to the APA independently

[13] *See* R. 0772 ("[b]oth the Hearing Officer and the Director found [in 2008], in considering the Rule 42 factors, that the Coalition members operate reasonable and efficient irrigation projects").

[14] *See, e.g.*, R. 0300.

[15] *See* R. 1130-34 (Requesting hearing and order authorizing discovery on the *Sixth Methodology Order*); R. 1169-75 (order denying discovery request); *Order Augmenting Record* at 003-07 (motion for clarification and reconsideration); *id.* at 014-020 (order denying clarification/reconsideration motion).

[16] For purposes of this brief, the content of the two Methodology Orders is identical, and they are used interchangeably, as the same flaws exist in both. *See* R. 1159-60 (stating that "the only change in the *Sixth Methodology Order*" was "limited corrections to the *Fifth Methodology Order*" "regarding AFRD2's 2018 diversion volume").

review the agency record on appeal. *Maclay v. Idaho Real Estate Comm'n*, 154 Idaho 540, 544 (2012).

Petitioners' substantial rights have been prejudiced by the Director's *Post-Hearing Order*. The *Post-Hearing Order*, and many of the Director's "findings, inferences, conclusions, or decisions" therein, are "(a) in violation of constitutional or statutory provisions; (b) in excess of the statutory authority of the agency; (c) made upon unlawful procedure; (d) not supported by substantial evidence on the record as a whole; or (e) arbitrary, capricious, or an abuse of discretion," thus the *Post-Hearing Order* (and the accompanying *Sixth Methodology Order*) must "be set aside, in whole or in part, and remanded for further proceedings as necessary." I.C. § 67-5279(3).

An agency action is arbitrary "if it was done in disregard of the facts and circumstances presented or without adequate determining principles," and capricious "if it was done without a rational basis." *In re Delivery Call of A&B Irrig. Dist.*, 153 Idaho 500, 511 (2012). Courts determine whether there was an abuse of discretion by analyzing whether the decisionmaker "(1) correctly perceived the issue as one of discretion; (2) acted within the outer boundaries of its discretion; (3) acted consistently with the legal standards applicable to the specific choices available to it; and (4) reached its decision by the exercise of reason." *Chambers v. Idaho Bd. of Pharmacy & Agency*, 170 Idaho 701, 705 (2022).

"Substantial evidence is such relevant evidence as a reasonable mind might accept to support a conclusion . . . . It is more than a scintilla, but less than a preponderance." *Williams v. Idaho State Bd. of Real Estate Appraisers*, 157 Idaho 496, 507 (2014). Courts "will uphold an agency's findings if they are supported by substantial and competent evidence." *Id.* "The substantial and competent evidence standard is also equivalent to the 'clearly erroneous' standard

of I.R.C.P. 52(a)." *Higgins v. Larry Miller Subaru-Mitsubishi*, 145 Idaho 1, 4 (2007); *see also Nw. Farm Credit Servs. v. Lake Cascade Airpark, LLC*, 156 Idaho 758, 763 (2014) ("A finding is clearly erroneous if is not supported by substantial and competent evidence").

> The substantial evidence rule is said to be a middle position which precludes a *de novo* hearing but which nonetheless requires a serious review which goes beyond the mere ascertainment of procedural regularity.
>
> Such a review requires more than a mere scintilla of evidence in support of the agency's determination . . . though something less than the weight of the evidence. Put simply . . . the substantial [competent] evidence rule requires a court to determine whether the agency's findings of fact are reasonable.

Watson v. Joslin Millwork, Inc., 149 Idaho 850, 855 (2010) (quoting *Idaho State Insurance Fund v. Hunnicutt*, 110 Idaho 257, 260 (1985). The evidence "need not be uncontradicted, nor does it need to necessarily lead to a certain conclusion; it need only be of such sufficient quantity and probative value that reasonable minds could reach the same conclusion as the fact finder." *Nw. Farm Credit Servs*., 156 Idaho at 764 (internal citation omitted).

ISSUES ON APPEAL

1. Whether the Director's conclusion that "TFFC's 0.72 R-squared value is reasonable and the TFCC's natural flow forecast is sufficiently accurate," R. 1082, and his failure to account for runoff in tributary basins, is supported by substantial evidence in the record as a whole, or is arbitrary, capricious, or an abuse of discretion.
2. Whether the Director's conclusions that "a safety factor of 4% is reasonable" and "2018 best satisfies the criteria for a baseline year," R. 1082, is supported by substantial evidence in the record as a whole, or is arbitrary, capricious, or an abuse of discretion.

3. Whether the Director's conclusion that "the Department's safety factors do not aggressively overpredict demand shortfall," R. 1083, is supported by substantial evidence in the record as a whole, or is arbitrary, capricious, or an abuse of discretion.

4. Whether the Director's conclusion that "the [Cities'][17] failed to satisfy their burden of proof" because they "did not establish an alternative number of acres irrigated by clear and convincing evidence," R. 1085, is arbitrary, capricious, or an abuse of discretion because the Cities presented clear and convincing evidence that TFCC's irrigated acreage is no more than 183,589 acres.

5. Whether the Director's failure to ascertain and exclude "supplemental groundwater" acres, R. 1085-86, and "enlargement" acres, R. 2907, from SWC's irrigated acreage violates his "ongoing obligation to use the best available science and information," R. 0003, and his duty "to consider circumstances when the water user is not irrigating the full number of acres decreed under the water right." *AFRD2*, 143 Idaho at 876.

6. Whether the Director's conclusion that "TFCC's diversions and efficiency are reasonable," R. 1089, and his failure to assess the reasonableness of all SWC

[17] The bracketed use of the term "Cities" is necessary because unfortunately, in the *Post-Hearing Order*, the Director referred collectively to the Cities ***and*** the ground water districts (IGWA, Bonneville-Jefferson GWD, Bingham GWD) as the "ground water users"—even when rejecting evidence or argument made by only one or the other group of entities. The Cities and the ground water districts prosecuted separate appeals of the *Fifth Methodology Order* before the agency, and while they were aligned on the result, they did not agree on all issues. With that said, in certain instances the arguments and evidence presented at hearing by the Cities and ground water districts overlapped. For clarity, in this brief if a reference to the *Post-Hearing Order* refers to "Ground Water Users" on an issue upon which the Cities and ground water districts were not aligned (or did not even present evidence) we have noted that disconnect.

members' operations, is supported by substantial evidence on the record as a whole, or is arbitrary, capricious, or an abuse of discretion.

7. Whether the Director's conclusion that "curtailment dates . . . should be calculated by a transient model simulation," R. 1091, is in excess of the statutory authority of the agency, is supported by substantial evidence on the record as a whole, or is arbitrary, capricious, or an abuse of discretion.

8. Whether the Director's conclusion that "the [Cities'] due process rights were not violated," R. 1095, is in excess of the statutory authority of the agency, is supported by substantial evidence on the record as a whole, or is arbitrary, capricious, or an abuse of discretion.

9. Whether all of the foregoing conclusions by the Director were made upon unlawful procedure.

SUMMARY OF ARGUMENT

The Director periodically updates the Methodology Orders with new information which should be the "best available science and information." However, the changes that the Director made—or in some instances, did *not* make—in 2023 render the *Sixth Methodology Order less* accurate at estimating SWC's material injury than the 2016 *Fourth Methodology Order*. There is no better example than the Director's prediction of material injury under the *Fifth Methodology Order* in April 2023, a year with abundant snowpack, which proved to be wildly inaccurate only a few months later.

There are three principal flaws in the *Sixth Methodology Order*: it grossly (1) over-predicts the SWC's material injury at the start of the irrigation season, (2) over-determines the

SWC's material injury at the end of the irrigation season, and (3) over-estimates the curtailment date necessary to redress the material injury during the irrigation season.

First, the Director's prediction of material injury (a/k/a "demand shortfall") in April is flawed because SWC's new "baseline year" for "reasonable in-season demand" is a year of *well* above-average diversions, and the "forecast supply" for TFCC is statistically inaccurate and fails to account for runoff in tributary basins below the Heise Gage. The result is a prediction of demand shortfall that is divorced from actual needs of the SWC. Second, the Director's determination of material injury in November is flawed because the Director uses overstated "irrigated acres" numbers and fails to deduct acreage associated with junior, enlargement surface water rights and/or acreage that is served by supplemental ground water rights; this issue is compounded by the Director assuming that SWC's "project efficiencies" are reasonable without any meaningful analysis, and the record does not support a conclusion that TFCC is reasonably efficient. Third, the Director's determination of curtailment dates is flawed because it improperly redresses SWC's material injury—the change to using transient modeling to determine curtailment dates grossly overstates which ground water rights are *causing*, and thus must face curtailment to remedy, the SWC's material injury; it also disregards the imbalance of curtailing 700,000 acres of junior farmland to produce 75,200 acre-feet to senior farmland.

Finally, Petitioners attempted to show the Director that the *Fifth Methodology Order* contained these glaring flaws at hearing in June 2023, but were unsuccessful, at least in part, due to having six weeks to prepare with discovery limitations. Thus, the Director's conclusions in the *Post-Hearing Order* are not only substantively erroneous but procedurally erroneous as well.

Accordingly, Petitioners request that the Court, consistent with the provisions of I.C. § 67-5279(3), set aside the *Post-Hearing Order* affirming the flaws in the *Fifth Methodology*

Order, and remand the *Sixth Methodology Order* for further proceedings consistent with the arguments in this brief to ensure that the Department's administration of water rights under the Methodology Orders has a proper basis in fact and law.

ARGUMENT

I. Evidentiary Standard During the Agency Hearing versus Judicial Review

The District Court in *A&B Irrig. Dist. v. IDWR*[18] required the application of the "clear and convincing" standard in the event the Director determines to answer a delivery call by requiring delivery of less than the full decreed amount of a senior water right. *Memorandum Decision and Order on Petition for Judicial Review* at 24-38, Case No. 2009-000647 (Minidoka Cty. Dist., May 4, 2010). The Court's rationale, subsequently upheld by the Idaho Supreme Court,[19] included the following:

> Conditions surrounding the use of water are not static. Post-adjudication circumstances can result where a senior may not require the full quantity decreed. The most obvious example would be if the senior is not irrigating the full number of acres for which the right is decreed. Efficiencies, new technologies, and improvements in delivery systems that reduce conveyance losses can result in a circumstance where the full decreed quantity may not be required to irrigate the total number of decreed acres.
>
> ***
>
> Idaho law prohibits a senior from depriving a junior appropriator of water if the water called for is not being put to beneficial use.

Id. at 30, 33. The Department—and this Court on judicial review—evaluates challenges to the Methodology Orders' variations from decreed elements of the water right under the "clear and convincing standard." R. 0761 ("If the Director is going to administer to less than the full amount of acres set forth on the face of the Coalition's *Partial Decrees,* such a determination

[18] 153 Idaho 500 (2012).

[19] *A&B Irrig. Dist. v. Spackman,* 155 Idaho 640, 655 (2013).

must be supported by clear and convincing evidence"); R. 1079 ("[a]ny diminishment of the decreed elements must be proven by clear and convincing evidence. *A&B Irrig. Dist*., 153 Idaho at 524 . . .").

But the Methodology Orders also incorporate metrics that are not elements of SWC's water rights. For example, the "baseline year" is not an element of a water right,[20] hence challenges to this metric at hearing must meet the preponderance of the evidence standard, not the heightened standard of "clear and convincing."[21] This is reflected in the Court's review of challenges to these metrics: for example, this Court affirmed the Director's decision to use an average of 2006 and 2008 values to establish a BLY on the basis of "substantial evidence" rather than the failure of the SWC to establish their position on the basis of "clear and convincing evidence." R. 0759-60.

In this brief, the Cities will show that at hearing their evidence—whether through direct examination of their own witnesses or cross-examination of the Department and SWC's witnesses—met the "clear and convincing" standard for *all* of the issues raised on appeal whether or not the issues related to elements of SWC's decreed water rights. However, for those metrics in the Methodology Orders that are *not* elements on the face of SWC's decrees, the Cities need only demonstrate that the Director's determination for a particular metric is not supported by substantial evidence.

---

[20] Neither is "reasonableness," among other things. *AFRD2*, 143 Idaho at 877 ("reasonableness is not an element of a water right; thus, evaluation of whether a diversion is reasonable in the administration context should not be deemed a re-adjudication").

[21] Other examples of non-decreed metrics include: "crop water need" ("CWN"), which relies on data generated by federal agencies regarding crop mix in particular counties; climate-related factors, such as reference evapotranspiration ("ET") values; and Heise Gage and SWC diversion data.

II. The Director's Conclusion that the Forecast of TFCC's Supply is "Reasonable" and "Sufficiently Accurate" is Clearly Erroneous[22]

There are two variables that the Department uses to predict SWC's demand shortfall ("DS") in April: the SWC's forecast supply ("FS") and the SWC's reasonable in-season demand ("RISD"), which is initially represented by "the historic demands associated with a baseline year" ("BLY"). R. 0002.

To start, Petitioners challenged the reasonableness of Department's input for the first variable, the FS for TFCC, under the *Fifth Methodology Order*. *See, e.g.*, R. 2390-92; Hr'g Tr. Vol. III, 230-33. The FS "is comprised of natural flow and stored water." R. 0018. The Department predicts natural flow supply upon receiving the "Joint Forecast" from the United States Bureau of Reclamation and United States Corps of Engineers in April, which "predicts an unregulated inflow volume at the Heise Gage from April 1 to July 31 for the forthcoming year." *Id.* It uses the Joint Forecast to develop multi-linear regression equations "to predict the natural flow diverted for the upcoming irrigation season." *Id.* The regression equations compare "the actual Snake River near Heise natural flow and the flows at Box Canyon to the natural flow diverted." *Id.*

Using this process, the Department predicted TFCC's total water supply to be 1,046,519 acre-feet in 2023 (R. 0050), grossly underestimating TFCC's total water supply in light of the extraordinary snowpack and runoff associated with Snake River tributaries in 2023. *See* Hr'g Tr. Vol. I, 167-68. The evidence and testimony at hearing revealed that the Department's forecast: (1) is far less accurate at predicting TFCC's supplies (R-squared value of 0.72) than predicting any other SWC members' supplies (R-squared values range from 0.84-0.93), R. 2655; and

[22] The Table of Acronyms at the front of the brief can be used to navigate the thicket of acronyms in certain sections of this brief.

(2) fails to consider runoff in tributary streams that join the Snake River below the Heise Gage but above TFCC's point of diversion. Hr'g Tr. Vol. I, 161-65; Hr'g Tr. Vol. III, 230-33. Nevertheless, in the *Post-Hearing Order*, the Director concluded that "TFFC's 0.72 R-squared value is reasonable and the TFCC's natural flow forecast is sufficiently accurate." R. 1082.

First, the Department's reliance on the Joint Forecast to predict TFCC's water supplies is arbitrary and capricious. The Joint Forecast relies solely on the Heise Gage, located near Palisades Reservoir (Hr'g Tr. Vol. I, 162), and thus excludes several tributaries to the Snake River below the Heise Gage that are a source of surface water to SWC members, who all divert below American Falls Reservoir. Hr'g Tr. Vol. III, 232-33. The Water District 01 Watermaster testified that in 2023 these basins experienced unusually high runoff and even higher snowpack totals than the basins above Palisades. Hr'g Tr. Vol. III, 233-34; *see also* R. 1599. Department witness Matt Anders testified that he was aware of the above-average snowpack totals in these basins but that there were no discussions within the Department to consider them when forecasting SWC's supplies. Hr'g Tr. Vol. I, 161-65. The Department's choice to disregard this information that could improve its water supply forecasting not only defies its duty to use the "best available science and information," R. 0002, but resulted in the Department's FS being wildly inaccurate, one of two reasons[23] why the Department walked back its initial DS prediction for TFCC. *Compare* R. 0050 (predicting an FS of 1,046,519 acre-feet and a 75,200 acre-feet DS) *with* R. 1060-61 (predicting an FS of 1,076,089 acre-feet and zero DS).[24]

---

[23] The other reason being the Department's prediction of TFCC's RISD, by using a flawed BLY, was grossly overestimated. *See supra*, at section III.

[24] The Cities request that the Court take judicial notice of the *Final Order Establishing 2023 Reasonable Carryover (Methodology Step 9)* (Nov. 30, 2023) ("2023 Step 9 Order") (attached as App. B), which demonstrates that TFCC's total supplies in 2023 were 1,130,031 acre-feet (83,512 more than predicted in the FS—significantly more than the predicted DS of 75,200 acre-feet). https://idwr.idaho.gov/wp-content/uploads/sites/2/legal/CM-DC-2010-001/CM-

Second, the Department's determination that TFCC's 0.72 R-squared is "reasonable" was arbitrary and capricious. R-squared statistics "help users understand how much of the variability that regression equation is accounting for." Hr'g Tr. Vol I, 187; *see also* Hr'g Tr. Vol. III, 49. While other SWC-member R-squared values have remained constant between 0.84 and 0.93 since 2014 (the first year the regression equations were used), TFCC's value has declined from 0.86 to 0.72. R. 2655. Despite repeated recommendations (as far back as 2015, *see* R. 2882) from experts that the Department use an alternative forecasting approach and re-evaluate the forecasting if R-squared values drop below a threshold, R. 2391-92, the Department has made no changes and does not currently intend to change the way it forecasts TFCC's water supplies. Hr'g Tr. Vol I, 188-91. The Department could improve the accuracy of its FS, thereby increasing the R-squared value, to account for tributary flows when predicting TFCC's FS. From a practical perspective it isn't clear why this wasn't done: if there is no snow in the tributary basins, that will be reflected in the pre-season prediction; if there is snow, it will more accurately predict available supply. There is no risk to the seniors from creating a more accurate predictive tool for FS.

While "the Director purposely underestimates the water supply that is predicted"[25] because he believes that "this is an appropriate burden for junior appropriators to carry," R. 0037, in 2023 the Director's continued reliance on a forecast tool that fails to account for tributary basin flows is an abuse of discretion, especially considering precipitation data for those basins are readily available to the Department. *See* Hr'g Tr. Vol I, 163-165; Hr'g Tr. Vol. IV, 127.

DC-2010-001-20231130-Final-Order-Establishing-2023-Reasonable-Carryover-Methodology-Step-9.pdf (last visited Dec. 19, 2023).

[25] This reference to underestimation refers to the Department's "shifting the April Forecast Supply prediction curve down one standard error of estimate," which is another safety factor *on top of* the discussed inaccuracies in the FS for TFCC.

Accordingly, the Court should reject as clearly erroneous the Director's conclusion that an R-squared value of 0.72 is "reasonable" and the FS for TFCC is "sufficiently accurate," R. 1082, and, on remand, require the Department to account for precipitation in tributary basins below the Heise Gage when predicting TFCC's FS.

III. The Director's Conclusion that 2018 is a "Reasonable" BLY is Clearly Erroneous

Petitioners disputed the reasonableness of the Department's input for the second variable in the SWC's DS prediction, the BLY, challenging the Director's switch from using an average of diversions in 2006, 2008, 2012 ("2006/2008/2012 BLY") in the *Fourth Methodology Order* to using 2018 diversions as the BLY for RISD in the *Fifth Methodology Order*. *See*, *e.g.*, R. 1527-28 (pointing out that the Department increased SWC's BLY demands without any "analyses to assess the reasonableness of the increased SWC member diversions since 2014 that prompted the need to change the BLY"). As shown in the figure below, the change from the 2006/2008/2012 BLY to the 2018 BLY increased the Department's prediction for SWC's RISD by 147,217 acre-feet. R. 0012 (difference between 3,341,939 acre-feet and 3,194,722 acre-feet). In particular, it increased TFCC's and AFRD2's—the only two SWC members who have ever experienced material injury under the Methodology Orders—BLY demands by 61,706 acre-feet and 26,218 acre-feet, respectively. R. 0012. This increase in predicted RISD occurred despite SWC witnesses' testimony that they have continually improved the efficiencies of their systems with new and better technologies. *See*, *e.g.*, Hr'g Tr. Vol. II, 75.

Average SWC Diversions (acre-feet) for 2000-2021, 2006/2008/2012 BLY, and 2018 BLY.

(R. 0012.)

The Department defended the change by stating that 2018 "best satisfies" the Department's own criteria for selecting a BLY, SWC's 2018 diversions were 104% of average (from 2000-2021), and "a safety factor of 4% is reasonable." R. 1082. For TFCC and AFRD2, however, the safety factor is 6%; for Milner and A&B Irrigation District ("A&B"), the safety factor is 10% and 8%, respectively. R. 0012 . TFCC's 2018 diversions rank second in its annual diversions in the fifteen (15) year period from 2007-2021, and AFRD2's rank fourth. R. 1578-79.

The 2006/2008/2012 BLY provided TFCC and AFRD2 safety factors of 1% and 2%, respectively. R. 1390. Safety factors of this magnitude are consistent with those associated with the 2006/2008 BLY that this Court approved in 2014—in that appeal, the City of Pocatello challenged the 2006/2008 BLY because it was inconsistent with the *2008 Opinion*, which approved of the use of historical average diversions; the Court rejected Pocatello's arguments and affirmed the Director's selection, holding that the use of an average BLY (i.e., a year(s) where diversions were 100% of average) unreasonably shifts the risk to seniors for purposes of pre-season predictions. R. 0774-76.

The Cities' argument here is that the Department's selection of 2018 as the new BLY *goes beyond* what is required to avoid shifting the risk to the seniors. This selection had significant repercussions in 2023 for junior ground water users—because the Department grossly over-predicted demand for the largest SWC member, numerous junior users were forced to rush to acquire mitigation supplies that would not have been needed under an appropriately conservative BLY. If a "a safety factor of 4% is reasonable" (R. 1082), then the Department must find a BLY that provides a 4% safety factor for all of the seniors. Accordingly, the Court should reject as clearly erroneous the Director's conclusion that its selection of the 2018 BLY was "reasonable," and, on remand, require the Department to select a new BLY that is indeed reasonable, especially when predicting TFCC's and AFRD2's RISD.

IV. The Department's Conclusion that Collectively the Safety Factors "do not aggressively overpredict demand shortfall" is Clearly Erroneous

As discussed in the foregoing sections, the Department's FS for TFCC is flawed and underestimates supplies, and the Department's selection of the 2018 BLY is unreasonably conservative and overestimates RISD, resulting in DS predictions that far exceed volumes TFCC reasonably needs to satisfy its beneficial uses. While each error warrants a remand on its own, when taken together, the combination of the two (or, as the Department calls it, "cumulative bias," R. 1083) illustrate the magnitude of the Department's inaccuracy when predicting TFCC's DS. As shown in the table below, the Department's predictions in April 2023 overstated DS by approximately 200,000 acre-feet.

Order:	TFCC-FS (af)	TFCC- BLY/RISD (af)	TFCC- DS (af)
2023 Steps 1-3 Order (R. 0050)	1,046,519	1,121,717	75,200
2023 Steps 5-6 Order (R. 1061)	1,076,089	996,214	0
2023 Step 9 Order (attached as App. B)	1,130,031	1,007,766	0
Net changes over the course of 2023	+83,512	-113,941	-200,000

While forecasts are inherently imperfect, the Department's DS prediction under the *Fifth Methodology Order* reflects inaccuracies that amount to an abuse of discretion.

The *Post-Hearing Order* defends the Director's conclusion that "the Department's safety factors do not aggressively overpredict demands shortfall" by pointing out that the predicted DS in April was less than the actual DS in November four (4) times in the eight (8) year period between 2015-2022, so the *Fourth Methodology Order's* "safety factors failed to protect seniors 50% of the time." R. 1083 (citing Ex. 837A at 82 (R. 2450)). However, as shown in the figure below (R. 2450), two (2) of the four (4) years where the actual DS exceeded the predicted DS under the 2006/2008/2012 BLY only did so by a small margin[26], and the other two (2) years were the severe drought years of 2021-2022.[27] R. 2450; *see also* R. 2730. It also reveals that there were two (2) years where predicted DS exceeded the actual DS by a magnitude of 20,000 acre-

[26] "Small margin" means 11,000 acre-feet or less, which occurred in 2015 (difference between 88,959 and 92,246) and 2018. Further, the *Final Order Establishing 2018 Reasonable Carryover (Methodology Step 9)* (*see* App. B) reveals that there was zero DS in 2018, so the 10,996 acre-feet DS amount that is reflected in the far-right column appears to be erroneous.

[27] Further, the RISD value that is used in the November DS equation is calculated by dividing CWN by historical project efficiencies, R. 0017. As discussed in section V, *infra*, TFCC's irrigated acreage numbers are overstated, and in section VI, *infra*, TFCC's operations are not reasonably efficient; so, the DS values in the far-right column on R. 2450 are also overstated on those bases.

feet or more.[28] R. 2450. When looking at the second column from left rather the first (using the 2018 BLY instead of the 2006/2008/2012 BLY), actual DS exceeds the predicted DS just once (2021) in the eight (8) year period, and predicted DS exceeds actual DS seven (7) times. R. 2450.

Table 1 - Summary of Hindcast SWC Delivery Call Demand Shortfall Calculations 2000-2022

Year	April BLY 06-08-12 (AF)	April BLY 2018 (AF)	July BLY 06-08-12 (AF)	July BLY 2018 (AF)	November Actual Demand Shortfall (AF)
2000	30,183	126,125	0	0	0
2001	179,947	334,970	160,472	200,546	243,565

Max:	199,101	364,958	365,880	388,939	289,065

Hindcasting and spreadsheet summary developed by IDWR (Matt Anders, Kara Furgason) as part of the Nov-Dec 2022 SWC Delivery Call TWG meetings.

[28] This occurred in 2016 (overprediction by roughly 36,000 acre-feet) and 2019 (overprediction by nearly 21,000 acre-feet).

(R. 2450.)

Using 2018 as the BLY results in predicted shortfalls (i.e., DS >0) *every* year in the 2015-2022 period, including two (2) years where using the 2006/2008/2012 BLY *correctly* predicted zero DS (2017, 2020). R. 2450. Thus, had the Director used the 2018 BLY in those years when predicting DS, junior users would have unnecessarily acquired mitigation supplies (or faced curtailment) as occurred in 2023. *Compare* R. 0050 *with* R. 1061. Finally, three (3) of the years where using the 2018 BLY causes the predicted DS to exceed the actual DS would have resulted in overpredictions between 88,000-103,000 acre-feet (2015, 2016, 2019).[29]

The Director's predicted DS of 75,200 acre-feet for TFCC in April 2023, which was inaccurate by approximately 200,000 acre-feet,[30] had severe consequences for junior users—and more importantly from a legal perspective, is contrary to the Director's obligation to "use the best available science and information" and take straightforward measures to improve the accuracy of these predictions to avoid unwarranted hardship. R. 0002. In ratcheting down the Methodology Orders' provisions to avoid risk to seniors, the Department has created BLY demand and FS rubrics that stray from the delivery call principles affirmed by the Supreme Court both in *AFRD2*,[31] 143 Idaho at 880, and in *A&B Irrig. Dist. v. Spackman*, 155 Idaho at 649 (the "baseline estimate [is] to represent predicted in-season irrigation *needs* . . . .") (emphasis added).

---

[29] Which, under the transient model approach, would require curtailment of up to 941,400 acres of irrigated agriculture to supply those amounts to TFCC, because curtailing *all* rights junior to October 11, 1900 (TFCC's natural flow right priority) is predicted to yield a maximum of 97,700 acre-feet of supply to SWC in an irrigation season. This means that virtually *all* ground water rights junior to TFCC's right would have faced curtailment under such overpredictions. *See* R. 2750-71; *supra*, at section VII.

[30] *Compare 2023 Step 9 Order* at 3 with R. 0050.

[31] "Somewhere between the absolute right to use a decreed water right and an obligation not to waste it and to protect the public's interest in this valuable commodity, lies an area for the exercise of discretion by the Director. This is certainly not unfettered discretion . . . and upon a properly developed record, this Court can determine whether that exercise of discretion is being properly carried out."

Accordingly, the Court should reject as clearly erroneous the Director's conclusion that, cumulatively, "the Department's safety factors do not aggressively overpredict demand shortfall," R. 1083, and require on remand that the Director correct the flaws in the two DS prediction variables as requested in the sections above.

V. The Director's Quantification of SWC's Irrigated Acreage is Arbitrary, Capricious, an Abuse of Discretion, and Contrary to Law

Sections II-IV above covered the deficiencies in the *Fifth Methodology Order* regarding the Director's prediction of DS that occurs in the April Steps 1-3 Orders. Sections V-VI will cover the deficiencies regarding the Director's determination of DS that occurs in the November Step 9 Orders.[32]

After the irrigation season concludes, the Director determines the DS by subtracting SWC members' calculated RISD from their actual supplies. *See* R. 0043, 1083, 2193.[33] RISD is calculated by first "multiplying crop specific [consumptive use] values," (i.e., acre-feet per acre consumptive use requirements by crop) "by the total irrigated area of individual crop types, and summing for all crop types," (i.e., total irrigated acres) which yield a total crop water need ("CWN," in units of acre-feet; CWN is then divided by historical project efficiencies. *See* R. 0013-15, 1087. Under the *Fifth Methodology Order*, the Director's determination of TFCC's DS is inaccurate because (1) the irrigated acreage values are significantly overstated and include hardened acres, supplemental ground water acres, and enlargement acres; and (2) the project efficiency values are unreasonably low. *See, infra,* Section VI. Together, these flaws amplify the inaccuracy and render TFCC's *reasonable* in-season demands to be *un*reasonably high.

---

[32] It bears noting that the intermediate steps (Steps 5-8) utilize a hybrid formula, where the Department determines DS to-date while predicting DS for the remainder of the irrigation season. *See* R. 0039-43.

[33] *See also 2023 Step 9 Order* at 3.

A. The Evidence at Hearing Clearly Demonstrated that TFCC's Irrigated Acreage Includes Hardened Acres

The testimony and evidence at hearing showed there are no fewer than four data sources available to the Department showing TFCC's irrigated acreage is between 179,400-183,600 acres: (1) 2011 Irrigated Lands data (179,486 acres), R. 2813; (2) 2017 Irrigated Lands data (180, 956 acres), R. 2813; (3) 2021 NRT Metric Processing data (179,456 acres), R. 2810; and (4) the 2007 SPF data (183,589 acres), R. 0364-66. Nonetheless, the Department used 194,732 acres as TFCC irrigated acreage number in the *Fifth Methodology Order*, based on a shapefile created by TFCC in 2013. R. 0010. This acreage value is over 11,000 acres *higher* than the acreage number used by the Department in the Methodology Orders from 2010 through 2014, R. 0364-65; it is also substantially higher than the acreage endorsed by the Hearing Officer in 2008 as a finding of fact. *2008 Opinion* at 53 ("IGWA has established that at least 6,600 acres claimed by TFCC in its district are not irrigated").[34]

According to the testimony of Matt Anders, the Department's technical services bureau chief who is the lead on updating the Methodology Orders, the Department began using 194,732 acres for TFCC in 2015.[35] Hr'g Tr. Vol. I, 133-34 (prior to 2015, the Department was using 183,589 acres for TFCC); *see also* R. 0365 (the amount seemingly changed based on letters from SWC counsel in 2014 and 2015 that asserted TFCC irrigates 194,778 acres).[36] Mr. Anders

[34] Which means that, as of 2008, there was no more than 189,562 (196,162 minus 6,600) acres being irrigated. *See* R. 0012 (TFCC's decreed acreage amount is 196,162 acres).

[35] Neither the *Third Methodology Order*, issued in April 2015, nor the *Fourth Methodology Order*, issued in April 2016, identified the basis for increasing TFCC's irrigated acreage. *See* Hr'g Tr. Vol. I, 136-37; *compare* R. 0009-10 (table showing SWC irrigated acres is contained in ¶ 22 of the "irrigation practices" section) *with* R. 1388-89 (no such table in the "irrigation practices" section of the *Fourth Methodology Order*).

[36] Interestingly, one of the few changes between the *Fifth Methodology Order* and the *Sixth Methodology Order* was the removal of the first sentence in ¶ 21 of the *Fifth Methodology Order*, which stated "estimates of irrigated acres from the hearing show a trend of decreasing irrigated acreage." *Compare* R. 0009-10 *with* R. 1013-14.

testified that the TFCC 2013 shapefile showing 194,732 acres and used by the Department in the *Fifth Methodology Order* contains "hardened" (un-irrigable) acres. Hr'g Tr. Vol. I, 132, and that the Department's 2017 data is a "more accurate representation of irrigated acres than the 2013 shapefile." *Id.* at 194-95.

The evidence shows it is "highly probable" that TFCC's irrigated acres is no more than 183,589 acres.[37] Nevertheless, the Director erroneously concluded "the ground water users failed to satisfy their burden of proof" because they "did not establish an alternative number of acres irrigated by clear and convincing evidence," R. 1085, and again endorsed 194,732 as the irrigated acreage value for TFCC in the *Sixth Methodology Order*. R. 1014. The Director's rationale that the TFCC 2013 shapefile is a better representation of "the number of acres TFCC may irrigate in 2023" than the "2017 shapefile" because the latter is but "a snapshot in time" and does not "predict *future* irrigated acres" is inadequate to support his finding—the exact same thing can be said about the TFCC 2013 shapefile acres. R. 1084. It is difficult to fathom what evidence Petitioners would have needed to present to clearly convince the Director that TFCC's irrigated acreage value is no more than 183,589 acres.[38]

The *2008 Opinion* limited determination of the supply to be made available to the SWC in a delivery call based on irrigated acres. *2008 Opinion* at 53 ("Non-irrigated acres should not be considered in determining the irrigation supply necessary for SWC members").[39] Petitioners acknowledge their burden to presenting clear and convincing evidence establishing that SWC members are not irrigating "the full amount of acres set forth on the face of the Coalition's

---

[37] This is the standard for clear and convincing evidence. *See* R. 1074 (citing *In re Doe*, 157 Idaho 694, 699, 339 P.3d 755, 760 (2014)).

[38] And in any event, as discussed *infra* at section IX, the Director's discovery schedule was inadequate to allow for the type of analyses that would have allowed the Cities and IGWA to develop a (fifth) independent acreage analysis.

Partial Decrees" (R. 0783, 0787), but if that burden was not met at the June 2023 hearing, it was arguably met by IGWA's evidence offered in 2008 and adopted by the Hearing Officer. The Cities are unaware of any proceeding in which the TFCC 2013 shapefile has been demonstrated to be more accurate than the 2008 value adopted by Justice Schroeder.

But leaving aside the evidentiary issues, the Director doesn't act in a vacuum. "[T]he Director 'has the duty and authority' to consider circumstances when the water user is not irrigating the full number of acres decreed under the water right." *AFRD2,* 143 Idaho at 876. It is undisputed that the Director's use of 194,732 acres for TFCC's irrigated acreage significantly overstates the number of acres *actually* being irrigated.[40] The use of this number is clearly erroneous and an abuse of discretion that violates the Director's duty identified by the Supreme Court, as well as his duty to use the "best available science and information," R. 0002, in order to avoid delivering water to the SWC that is not "attributable to the beneficial use of growing crops within the service area of the entity." R. 0012. Accordingly, on remand, the Court should require the Department to issue an updated *Methodology Order* that uses the *best* available data for TFCC's irrigated acres.

B. The Evidence at Hearing Clearly Demonstrated that SWC's Irrigated Acreage Includes Supplemental Ground Water Acres

As part of the Department's evaluation of material injury and reasonableness of diversions in a delivery call context, the CMRs provide several factors for consideration, including supplemental ground water use. CMR 42.01(g). The Department purports to consider supplemental ground water use as a factor under the *Fifth Methodology Order.* R. 0010. Factually, the Director has already determined "[t]here are lands within the service areas of SWC

[40] The Director's use of 194,732 acres for TFCC's irrigated acreage also does not account for acres being irrigated by supplemental ground water rights and enlargement acres, as discussed in the next sub-sections.

entities that are irrigated with supplemental groundwater[,]" *id*., which is not disputed by SWC's experts. R. 1246 ("Usage of private groundwater wells for supplemental purpose on surface water irrigated lands occurs within the Twin Falls Canal Company service area[.]").[41] Despite the foregoing, the Director asserted in the *Sixth Methodology Order* that the Department's current supplemental ground water information is not sufficient or reliable, and consequently, the Director has elected to ignore this factor entirely. R. 1045.

Evidence presented at the hearing demonstrates that there is information available to the Department through its Water Management Information System ("WMIS") database and Geographic Information Shapefiles ("GIS") regarding ground water right places of use and points of diversion. As acknowledged by Dr. Brockway, SWC's expert, the WMIS database tracks ground water diversion either measured by flowmeters or calculated through power conversion calculations. Hr'g Tr. Vol. IV, 982:17-983:2. Dr. Brockway testified that he uses this data in conjunction with transfer applications (filed under I.C. § 42-222), and while not perfect, considers it to be a reliable source of information for historical ground water diversions in other Department contexts. *Id*. at 983:3-13. He further acknowledged that the ground water diversion information contained in the WMIS data is the "best available" and that information could then be matched to places of use and points of diversion for ground water rights that are contained within TFCC's service area. *Id*. at 983:14-984:4.

[41] The Department's witness Matt Anders admitted the agency made no effort to evaluate supplemental ground water use during the Department's technical review of the *Fourth Methodology Order*. Hr'g Tr. Vol. 1, 197. Certainly, if the available Department data on supplemental ground water use was deficient, one would expect the Department to have engaged in some effort to obtain data or refine existing data since the *Fourth Methodology Order* was issued seven (7) years ago in April of 2016. If the Department will not do the work on its own and denies Petitioners any meaningful opportunity to discover information in a timely manner, the agency's inability to incorporate this type of information into the Methodology Order is self-fulfilling.

Additionally, in the absence of direct data, the Department utilizes estimates of ground water use on mixed-source ground in its ESPA model where both surface and ground water entitlements are authorized to be used. Hr'g Tr. Vol I, 69:21-70:6. Presumably, such estimates are informed by data from the WMIS database, but in any event, no matter how the Department calculates its estimates, there is no legal or factual reason why the Department could not similarly employ the same methodology to provide an estimate in its *Fifth Methodology Order* for supplemental ground water use.

Although the Director found that available supplemental ground water use data was not sufficient or reliable, the Department witnesses did not present any evidence or testimony as to the bases for this conclusion; similarly, the *Post-Hearing Order* is devoid of an explanation and does not explain why the unrefuted testimony in the record does not establish the reliability of available data for purposes of determining supplemental ground water use. The Department's omission of a determination under the *Fifth Methodology Order* that would improve the accuracy of the material injury determination is contrary to the Department's duty to use the "best available science and information." R. 002. The Director could have considered supplemental ground water data in this matter and abused his discretion by refusing to do so, particularly when there is no dispute that supplemental ground water diversions are occurring. Thus, on remand, the Court should require the Department to issue an updated Methodology Order that ascertains the extent of supplemental ground water use within SWC's service areas and reduce the predictions and determinations of SWC's DS accordingly, consistent with CMR 42.01(g).

C. <u>The Evidence at Hearing Clearly Demonstrated that A&B's Irrigated Acreage Includes Enlargement Acres</u>

Petitioners asserted at the hearing that the Department's number in the *Fifth Methodology Order* for A&B's irrigated acreage (15,924 acres) includes acres associated with A&B's

enlargement water rights (1,175 acres) that bear junior priority dates ("enlargement acres"). Hr'g Tr. Vol. I, 203-05; *see also* R. 0010, 2907. As the Court is well aware, within the boundaries of the Snake River Basin Adjudication enlargement acres are administered with a priority date of April 12, 1994. *A&B Irrig. Dist. v. Aberdeen-American Falls Ground Water Dist.*, 141 Idaho 746, 749 (2005); *see also e.g. A&B Irrig. Dist. Water Right No. 36-15127B*.[42] The curtailment date under the *2023 Steps 1-3 Order* was December 30, 1953, R. 0052-53, meaning the Department threatened curtailment against ground water rights with priority dates senior to April 12, 1994 for the benefit of A&B's enlargement acres, not just its senior acres; this was erroneous.

Department witness Matt Anders testified that the Department has not investigated or discussed whether the irrigated acreage number used in the Methodology Orders should exclude enlargement acres. Hr'g Tr. Vol. I, 205. He also testified that he is not sure whether there are enlargement acres within the service areas of the other SWC members. Hr'g Tr. Vol. I, 215-16. This testimony notwithstanding, the Director continued to use 15,924 acres as A&B's irrigated acreage in the *Sixth Methodology Order*. R. 1014.

The evidence and testimony at hearing demonstrate that the Director knowingly included enlargement acres in A&B's irrigated acreage number in the *Sixth Methodology Order* and may have included enlargement acres in other SWC members' numbers. While seemingly minor, this error is material because it contributes to the Department's overestimation of the DS predictions and determinations for the SWC. Accordingly, on remand, the Court should require the Director

[42] One condition states: "This right is based upon an enlargement of Right No. 36-2080 pursuant to Section 42-1426, Idaho Code. This right is subordinate to all water rights with a priority date earlier than April 12, 1994, that are not decreed as enlargements pursuant to Section 42-1426, Idaho Code. As between water rights decreed as enlargements pursuant to Section 42-1426, Idaho Code, the earlier priority right is the superior right."

to issue an updated Methodology Order that ascertains the irrigated acres associated with SWC members' senior water rights and use those numbers in future Methodology Orders.

VI. The Director's Conclusion that TFCC's Operations are "Reasonable" is Clearly Erroneous

Under CMR 42.01, the Department is required to consider SWC's allegations of injury in light of whether seniors are "using water efficiently and without waste." IDWR may properly evaluate SWC's "system, diversion and conveyance efficiency, the method of irrigation water application and alternate reasonable means of diversion." *AFRD2,* 143 Idaho at 876-78.[43] Building on this *AFRD2* standard, the Hearing Officer concluded that "system efficiency" was the proper metric for Rule 42.01(g) analyses, and rejected "achievable farm efficiency," concluding that the standard was "reasonableness" of operations. *2008 Opinion* at 56. The Hearing Officer also concluded that SWC satisfied the 42.01(g) standard and was reasonably efficient but noted "[t]his is not a static system, and as improvements either in technology or management practices that fall within reasonable costs are identified, the Director may consider whether they have been implemented" in evaluating injury. *Id.* at 57 (emphasis added).

In 2014, this Court rejected a challenge to the *2010 Methodology Order* regarding the Department's conclusion that the SWC's operations were reasonably efficient, relying on the conclusions in the *2008 Opinion*. Fifteen years later, TFCC's project efficiency has declined, notwithstanding large increases in sprinkler-served acres and numerous "conveyance" efficiency projects, including canal lining. Hr'g Tr. Vol. II, 130-31, 194-97; R. 1559. Based on the testimony and evidence received at trial, the Director's conclusion that TFCC remains "reasonably efficient" is not supported by substantial evidence. If TFCC's operations are not

[43] *See also*, *A&B Irrig. Dist. v. IDWR*, 153 Idaho at 513-15 (the senior is obligated "to take reasonable steps to maximize [ ] flexibility to move water within the system before it can seek curtailment…"); CMR 42.01(a)-(h).

"reasonably efficient," then the Director's reliance on its "project efficiency" in the RISD calculation for TFCC is without basis.

A. How Project Efficiency is Used in the *Fifth Methodology Order*

To implement the Methodology, the Department employs "project efficiency" (the shorthand of which is Ep) as a metric in the calculation of RISD. *See* R. 0016 (stating that the calculated RISD is "the quotient of CWN and Ep"). Although called "project efficiency," this is the same as the "system efficiency" concept approved of by the Hearing Officer. R. 0012-13. Monthly project efficiencies are then averaged over a fifteen (15) year period to "reduc[e] impacts of short-term trends." R. 0013. In effect, as the Department has derived the metric, project efficiency is the ratio between CWN versus total diversions (i.e., the net amount consumed out of the gross amount diverted). By its terms, project efficiency assumes that SWC's actual diversions were necessary to satisfy CWN (i.e., not wasteful). Hr'g Tr. Vol. IV, 996 ("the observed diversions are a given").

The Department then determines SWC members' RISD for a given year by dividing each member's CWN by its historical project efficiencies. R. 0016-17. Thus, even if a SWC member's operations have not been reasonably efficient in recent history, the Department still calculates *reasonable* in-season demand (RISD) without any correction for inefficient operations.

B. The Director's Conclusion that TFCC's "diversions and efficiency are reasonable" is not Supported by Substantial Evidence; Further, the Evidence is "Clear and Convincing" that TFCC's Diversions are Unreasonable.

The Director concluded that "TFCC's diversions and efficiency are reasonable" (R. 1089), relying on TFCC General Manager Jay Barlogi's testimony that TFCC does not waste a significant amount of water to the Snake River, (*see* Hr'g Tr. Vol. II, 43), and SWC expert witness David Shaw's conclusory opinion that TFCC's "system and their plan for delivery is

reasonable." Hr'g Tr. Vol. IV, 146. The conclusion overlooked much contradictory evidence and testimony and is not supported by substantial evidence.

First, Mr. Barlogi testified that the amount of sprinkler systems in the TFCC service area has never been higher. *See* Hr'g Tr. Vol. II, 130-31, 194-97. Despite the increased use of sprinklers, which increase efficiency of on-farm irrigation operations, *see* R. 1245,[44] TFCC's efficiency has *declined* since 2006. *See* R. 1559; Hr'g Tr. Vol. II, 130-31,[45] 144-46.[46] Indeed, despite the increased number of sprinklers, Mr. Barlogi testified that TFCC diverts around 1,100,000 acre-feet annually, which it has consistently over the last thirty (30) years. Hr'g Tr. Vol. II, 71.

Dr. Brockway, SWC's expert, testified that sprinkler conversions in TFCC have not led to higher overall project efficiencies due to "factors that are very difficult to put a number on." *See* Hr'g Tr. Vol. IV, 116-17. Dr. Brockway agreed, however, that TFCC's operational spill volumes have increased over time; *see id.* at 127-29. In fact, TFCC's return flows, including operational spills, generally increased from 2009-2020. *See* R. 1598. As Petitioners' expert witness Gregory Sullivan testified, the framework of the Methodology Orders inherently incentivizes SWC to maximize diversions, even if the diversions exceed what is needed to meet CWN, and rewards them for doing so (e.g., increases calculated RISD). Hr'g Tr. Vol. II, 142-44, 250-52. While a certain amount of operational spills (a/k/a wastewater or tailwater) is expected with large-scale

---

[44] SWC's expert witness associates flood (or gravity) irrigation with a 50% on-farm efficiency and sprinkler irrigation with an 80% on-farm efficiency.

[45] ("[T]he continued sprinkler conversions, these efficiency improvements . . . would suggest that, if anything, the diversions should have gone down . . . they should have been able to get by with less, but they've been diverting more").

[46] ("[TFCC's] actual efficiencies have gone down since 1990 to 2006. . . . That's going the opposite direction from what I would expect given these continued conversions to sprinkler, canal lining, better irrigation system operation technology, and that sort of thing").

conveyance systems, it is not expected that operational spills would increase in TFCC's on-demand system which has installed, *inter alia,* advancements in canal automation technology. *See* Hr'g Tr. Vol. II, 75.

The Director's "project efficiency" calculation requires a supportable finding that SWC members are all "reasonably efficient," and the conclusion that TFCC's operations are "reasonably efficient" is not supported by substantial evidence. While this Court declined to assess the reasonableness of the Director's conclusions regarding TFCC's efficiency of operation in 2014,[47] citing the Hearing Officer's 2008 findings, the Hearing Officer also determined that "this [the SWC's irrigation operations] is not a static system," and he called on the Director to consider whether SWC is not utilizing the "improvements either in technology or management practices that fall within reasonable costs . . . in making the decision of whether ground water pumpers should be curtailed."[48] Where, as here, the record does not contain substantial evidence related to the reasonableness of TFCC's operations, the Director's imposition of the "project efficiency" term in the RISD calculation is without basis and this portion of the order must be remanded for further proceedings on this point.[49]

---

[47] R. 0771-72.

[48] *2008 Opinion* at 56-57.

[49] TFCC is not the only SWC member whose project efficiencies have declined and are now 35% or less—this concern also applies to AFRD2 and NSCC. *See* R. 1559 (comparing average project efficiencies from 1990-2006 with the project efficiency in the *Fifth Methodology Order*, which is based on average project efficiencies from 2007-2021). While Petitioners have focused on the reasonableness of TFCC's operations at hearing and in this brief, largely due to the consequences of TFCC's overpredicted DS in 2023, their request—that the Director perform a meaningful analysis to determine whether their project efficiencies are reasonable by today's standards, rather than assume it—equally applies to other SWC members whose project efficiencies have declined over time.

VII. The Director's Conclusion that "Curtailment dates . . . should be calculated by a transient model simulation . . ." is Clearly Erroneous and Causes IDWR to Curtail Ground Water Users that are not Causing the Material Injury to SWC.

The *Fifth Methodology Order* applied "transient modeling to determine a curtailment priority date that would supply adequate water to the senior water right holders." R. 0035. Petitioners challenged the validity of the Department's reliance on transient modeling at hearing. *See* Hr'g Tr. Vol. II, 191, 209.[50] Nevertheless, the Director concluded that "curtailment dates, periodically determined at time of recalculating in-season demand shortfall (IDS), should be calculated by a transient model simulation that will return the full quantity of water to the senior priority rights at the time and place required, or the maximum quantity that can be returned by curtailing all junior water rights." R. 1091.

The Idaho Supreme Court has stated "the policy of securing the maximum use and benefit, and least wasteful use of Idaho's water resources, has long been the policy in Idaho." *Rangen, Inc. v. Idaho Dep't of Water Res.*, 160 Idaho 119, 131 (2016) (*Rangen*) (citing Clear *Springs Foods, Inc. v. Spackman*, 150 Idaho 790, 808 (2011)). The Court acknowledged that this policy "limits the prior appropriation doctrine by excluding from its purview water that is not being put to beneficial use." *Rangen* at 131 (citing *AFRD2*, 143 Idaho at 876). The Court further tied the policy of maximum use to an acceptable "limit on the prior appropriation doctrine," found in CMR 20.03, that "[a]n appropriator is not entitled to command the entirety of large volumes of water in a surface or ground water source to support his appropriation contrary to the public policy of reasonable use of water." *Id.* (quoting IDAPA 37.03.11.020.03 (CMR 20.03)).

[50] The predicted 75,200 acre-feet demand shortage "was caused by the wells junior to the mid-[19]80s, and, therefore, they should be the ones responsible for mitigating it because they caused the problem"); *see also* R. 1546-47 ("Curtailing or requiring mitigation from groundwater rights in 2023 with priority dates senior to the mid-1980s would injure those groundwater rights because pumping under these more senior groundwater rights did not create the shortage to the TFCC this year").

In the conjunctive administration of ground water and surface water, the Court has recognized that "not all of the water collected due to the curtailment will accrue to the senior water right holder; some will remain in the aquifer, and some will flow to other tributary springs." *Id.* at 132.

Here, curtailment based on transient modeling improperly "commands large volumes of water" for nominal to no benefit to SWC. Curtailment to achieve the predicted DS of 75,200 acre-feet during the 2023 irrigation season would have resulted in the idling of roughly 700,000 acres of ground water-irrigated farmland under the *Fifth Methodology Order*. In contrast, under the steady-state modeling approach utilized in all prior Methodology Orders, curtailment would have idled approximately 75,000 acres. Hr'g Tr. Vol. I, 55; R. 1436. Similarly, under a transient modeling approach, the maximum amount that would accrue to seniors from curtailment back to October 11, 1900 (effectively curtailing the entire ESPA) is 97,700 acre-feet of water (R. 2761, 2764)—nearly the amount predicted under the *2023 Steps 1-3 Order*. R. 0050. The change to the transient-state model does not properly balance both the interests of the seniors and the juniors, I.C. § 42-101 (the Director "shall equally guard all the various interests involved"), and offends the settled policy that promotes the maximum beneficial use of the water resources of the states.

As discussed in *Rangen,*, the Director has the statutory duty and authority to distribute water within water districts and adopt rules and regulations as necessary to carry out that duty. 160 Idaho at 255 (citing I.C. §§ 42-602, 42-603). The court went on to say:

> Under CMR 40.01, when it is found that junior-priority ground water pumping is causing a senior right holder material injury, the Director must either: (1) curtail junior-priority ground water pumping to satisfy the senior's right, or (2) '[a]llow out-of-priority diversion of water by junior-priority ground water users pursuant to a mitigation plan that has been approved by the Director.' IDAPA 37.03.11.040.01.

Id. at 256 (emphasis added). The Department's use of transient modeling to determine the curtailment date to offset SWC's predicted DS is over-inclusive and threatens curtailment against junior users that are not actually causing the demand shortfall (under the *2023 Steps 1-3 Order*, those with priority dates senior to the mid-1980s). R. 1546-47.

The Director's conclusion in the *Post-Hearing Order* that "[c]urtailment dates . . . should be calculated by a transient model simulation," R. 1091, is clearly erroneous and his application of transient modeling to determine curtailment dates in the *Fifth Methodology Order* is arbitrary, capricious, an abuse of discretion, and contrary to his duty under CMR 40.01, as recognized by *Rangen*, to only threaten curtailment against those ground water users who are causing the demand shortfall. Accordingly, on remand, the Court should set aside this conclusion and require the Director to issue an updated Methodology Order that determines curtailment dates pursuant to steady-state modeling.

VIII. The Director's Conclusion that "the [Cities'] due process rights were not violated" is Clearly Erroneous and in Excess of IDWR's Statutory Authority.[51]

The Director concluded that "the [Cities'] due process rights were not violated, which the District Court has already determined." R. 1095. First, this conclusion is beyond the Director's authority.[52] Accordingly, the Director's conclusion should be set aside as being in excess of the Department's statutory authority under I.C. § 67-5279(3)(b).

Further, the record as a whole reveals that, notwithstanding this Court's oral ruling denying Petitioners' petitions for writs of prohibition and mandamus on June 1, 2023, the

[51] To avoid repetition, the Cities adopt and incorporate herein IGWA's Opening Brief, sections 1.3, 2, 3, 5 and 6.

[52] *See City of Sandpoint v. Indep. Highway Dist.*, 161 Idaho 121, 125 (2016) ("An administrative agency is limited to the power and authority granted it by the legislature") (internal citations omitted). Moreover, due process rights are constitutional questions, which are reserved for the courts, not administrative tribunals. *See Owsley v. Idaho Indus. Comm'n*, 141 Idaho 129, 134 (2005).

Department's discovery restrictions made it functionally impossible to develop evidence. The Cities' and IGWA's expert witnesses explained what they *would have done* had they been given sufficient time to prepare for the hearing. *See* R. 0353-54; Hr'g Tr. Vol. II, 121-23; Hr'g Tr. Vol. III, 14-15.[53] Further, the record reflects a pattern and practice of the Department to use "time is of the essence" and "urgency" (e.g., R. 0062, 300) as all-purpose excuses to foreclose any meaningful inquiry by junior users into the bases of the Methodology Orders and any meaningful analysis of the SWC's uses and practices. All of this amounts to a violation of the Cities' right to due process.

First, Petitioners were given insufficient time to gather and develop evidence to support their arguments prior to the June 6-9, 2023 hearing and then were told in the *Post-Hearing Order* that their evidence was inadequate—even though the junior users' experts had testified to the types of analyses they would have done had they a) had time; and b) been present in the United States.

Then, when the Cities requested permission to conduct discovery on issues disputed in the *Sixth Methodology Order*, they were told "no, you've already had your chance." The Director has not explained how the Cities can develop evidence on disputed issues involving information uniquely in the control of SWC.[54] For the Cities to conduct discovery independently without a Department order authorizing discovery is not only untenable, it is impossible.[55]

---

[53] Even SWC expert witnesses wanted more time to prepare for the hearing. *See* Hr'g Tr. Vol. IV, 103 (Dr. Brockway answering "yes" to the question of "would you have liked to have more time to prepare [your report]?").

[54] The Cities do not concede that the evidence in the record is insufficient to grant the relief they seek in this appeal; to the extent the Court disagrees, however, the Cities highlight the pattern and practice of the Department playing administrative "gotcha" in its handling of discovery and scheduling issues that violates due process.

[55] The Department doubled-down on these positions when the Cities' requested a hearing and an order authorizing discovery on the *Sixth Methodology Order*. The Cities' requests came *after* the Director invited Petitioners to present evidence in the future, R. 1170 n.1, and *after* the Department had already determined that there was no

Further, setting a hearing on the *Fifth Methodology Order* after the irrigation season was a tangible alternative. In fact, the Cities, in their *Motion for Reconsideration of the Denial of Continuance* (May 5, 2023), told the Director that timely administration could still occur in 2023 under the *Fourth Methodology Order*, and even conceded that they would not object to the Director implementing the *Fifth Methodology Order* during the 2023 irrigation season if it meant that the hearing were continued to later in the calendar year. R. 0282-93.[56] Still, the Director refused to continue the hearing. R. 0425-34. Thus, time was not "of the essence"—there were multiple pathways for the Director to administer the SWC Delivery Call in 2023 and the Director's "urgency" basis for denying the Cities the time and ability to gather and develop necessary evidence is a sham.

IX. To the Extent that the Director's Conclusions are not Found to be Clearly Erroneous, it is because the Cities were Deprived of Discovery.

The Director's orders limiting discovery on the *Fifth Methodology Order* and denying discovery on the *Sixth Methodology Order* resulted in a heightened evidentiary standard in these proceedings, and as discussed, have precluded Petitioners from gathering and developing the evidence apparently necessary to persuade the Director that the values he is using to predict and determine SWC's demand shortfall are flawed. While Petitioners believe they satisfied their burdens of proof with the evidence that is in the record, to the extent the Court disagrees, it must recognize that Petitioners would have presented different or additional evidence before the Department had they been given sufficient time and been able to use the tools of discovery.

shortage in 2023. *See* R. 1061-62 (no shortfall in 2023), 1130-1134 (Petitioners' discovery request), 1169-1175 (Order denying discovery request).

[56] The lack of time to prepare for hearing was not the only concern for the ground water users; they were also dealing with the unavailability of key witnesses, both during discovery and at the hearing, due to international trips that had been previously scheduled. R. 0284-86.

Therefore, to the extent the Court determines that the Director's conclusions are supported by substantial evidence, are *not* an abuse of discretion, and are consistent with law, it should determine that the Director's conclusions are nonetheless made upon unlawful procedure due to the discovery limitations that were imposed, and remand the *Sixth Methodology Order* to the Department, ordering adequate period for discovery and an opportunity for the Cities to be heard on the issues in dispute.

X. The Director's Orders and Erroneous Conclusions Prejudice Petitioners' Substantial Rights

To prevail on appeal, parties must show that their substantial rights have been prejudiced. I.C. § 67-5279(4). The Director's *Post-Hearing Order* affirming the *Fifth Methodology Order* (and endorsing issuance of the virtually identical *Sixth Methodology Order*) prejudices Petitioners' substantial rights because the Department erroneously administers ground water rights under the *Fifth Methodology Order*.

As discussed in section VII, *supra*, in 2023, in accordance with the *Fifth Methodology Order*, the Director erroneously threatened curtailment against water rights junior to December 30, 1953. R. 0052-53. While Petitioners presently have safe harbor from curtailment under their approved mitigation plan, that protection is neither absolute (if they fail to satisfy their contractual obligations due to insufficient mitigation supplies) nor permanent (expires no later than 2053). *See Coalition of Cities, City of Idaho Falls, and City of Pocatello Joint Mitigation Plan*, Docket No. CM-MP-2019-001 (Feb. 25, 2019) at Ex. 1, p. 7. Thus, the Cities have a significant interest in ensuring that the applicable Methodology Order accurately predicts and determines the SWC's material injury (and curtailment date to offset the injury) so that ground water rights are not erroneously subject to curtailment.

In Idaho, water rights are real property rights. *Clear Springs Foods, Inc. v. Spackman*, 150 Idaho 790, 797 (2011) (quoting *Olson v. Idaho Dep't of Water Res.*, 105 Idaho 98, 101 (1983); I.C. § 55-101). Because the *Sixth Methodology Order* inaccurately predicts and determines SWC's demand shortfall (and curtailment date to offset the injury), the Department's administration in accordance therewith erroneously infringes upon Petitioners' real property rights. Accordingly, the *Post-Hearing Order* prejudices Petitioners' substantial rights on that basis. Additionally, because the Director restricted Petitioners' ability to conduct discovery, thereby precluding Petitioners from presenting crucial evidence at the June 6-9, 2023 hearing, the Director also prejudiced Petitioners' substantial right to due process. *Eddins v. City of Lewiston*, 150 Idaho 30, 36 (2010).

CONCLUSION

Petitioners request that the Court set aside the *Post-Hearing Order* on the primary issues of the Department over-predicting material injury, over-determining material injury, and over-estimating a curtailment date to remedy material injury, and remand as appropriate the *Sixth Methodology Order* to the Department for further proceedings to correct its flaws.

IN THE MATTER OF THE DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY AND FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIRS DISTRICT NO. 2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY.

On August 16, 2023, the Petitioners filed a *Petition* seeking judicial review of the Director's *Post-Hearing Order Regarding Fifth Amended Methodology Order*. The administrative transcript and record were lodged with the Court on September 28, 2023. On October 19, 2023, the Petitioners filed a *Motion to Augment the Record*, followed by an *Amended Motion to Augment the Record* on October 20, 2023. The *Amended Motion* requests that the Court augment the agency record to include the following three documents pursuant to Idaho Rule of Civil Procedure 84(l):

1. Motion for Clarification and Reconsideration of Denial of Request for Hearing and to Engage in Discovery, filed in IDWR Docket No. CM-DC-2010-001 on September 5, 2023,

2. Surface Water Coalition's Response to Cities' Motion for Clarification and Reconsideration, filed in IDWR Docket No. CM-DC-2010-001 on September 19, 2023, and

3. Order Denying Cities' Motion for Clarification and Reconsideration, filed in IDWR Docket No. CM-DC-2010-001 on September 25, 2023.

A hearing on the *Motion* was held before the Court on November 9, 2023. For reasons set forth on the record, the Court in an exercise of discretion determined to grant the *Amended Motion.*

THEREFORE, BASED ON THE FOREGOING, THE FOLLOWING ARE HEREBY ORDERED:

1. The Petitioners' *Amended Motion to Augment the Record* is hereby granted.

2. The agency record is hereby augmented to include the three documents identified above as bates stamped and attached hereto.

IT IS SO ORDERED.

Dated: November 15, 2023

ERIC J. WILDMAN
District Judge

BEFORE THE DEPARTMENT OF WATER RESOURCES
OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **MOTION FOR CLARIFICATION AND RECONSIDERATION OF DENIAL OF REQUEST FOR HEARING AND TO ENGAGE IN DISCOVERY**

COME NOW, the Cities of Bliss, Burley, Carey, Declo, Dietrich, Gooding, Hazelton, Heyburn, Jerome, Paul, Richfield, Rupert, Shoshone, and Wendell ("Coalition of Cities"), by and through their attorneys of record, Candice M. McHugh and Chris M. Bromley, the City of Idaho Falls, by and through its attorney of record, Robert L. Harris, and the City of Pocatello, by and through its attorneys of record, Sarah A. Klahn and Maximilian C. Bricker

(collectively the "Cities"), pursuant to IDAPA 37.01.01.740.02.b and 770 of the Department's rules of procedure and hereby file this *Motion for Reconsideration and Clarification* of the August 23, 2023, *Order Denying Request for Hearing and Motion Authorizing Discovery* ("Order Denying Hearing") and move for reconsideration of the Director's order denying the Parties' request for a hearing on the *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("Sixth Methodology Order").

ARGUMENT

1. **The Cities seek clarification on the nature of the Sixth Methodology Order.**

On July 19, 2023, the Director of the Idaho Department of Water Resources ("Department") issued, as relevant here, two orders: a *Post-Hearing Order Regarding Fifth Amended Methodology Order* ("Post-Hearing Order") and the *Sixth Methodology Order*. Rather than amending the Department's April 21, 2023 *Fifth Amended Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("Fifth Methodology Order"), which was subject to a hearing on June 6-9, 2023, the Director chose to issue a new final order.

Idaho Code § 42-1701A(3) states in relevant part:

> Unless the right to a hearing before the director . . . is otherwise provided in by statute, any person aggrieved by any action of the director, including any decision, determination, order or other action . . . who is aggrieved by the action of the director, and who has not previously been afforded an opportunity for a hearing on the matter shall be entitled to a hearing before the director to contest the action.

The Director denied the Parties' request for a hearing on the *Sixth Methodology Order* because: "The parties have previously been afforded an opportunity for hearing on the issues identified related to the *Sixth Methodology Order* and are not entitled to a hearing pursuant

to Idaho Code § 42-1701A(3)." However, no hearing has actually been held on the *Sixth Methodology Order*. Thus, the Parties request clarification of the nature and status of the *Sixth Methodology Order*—is it, in fact, merely an "amended" *Fifth Methodology Order* that is ripe for immediate appeal?

2. **Regardless of the answer to the clarification question above, the Parties seek reconsideration and clarification of the denial of the request to engage in discovery.**

The Director has stated on numerous occasions that the SWC Delivery Call is a continuing contested case, requiring the Department to periodically update the Methodology Order, which is a "living document." Tr. Hearing Vol. I, 18:21. The Director has also acknowledged on numerous occasions that the Department would consider data or analyses brought forward by the Cities in updating or applying the Methodology Order—even the *Order Denying Hearing* asserted that the Director would welcome "new information [developed by the Cities that] the Director may consider in the future." *Id.* at 2-3 n.1.[1] The Parties have been down this road before, as their April 28, 2023 *Motion for Continuance*, which requested adequate time to conduct investigations prior to a hearing on the *Fifth Methodology Order*, was denied on the ground that the Director had sufficiently notified the junior groundwater users that changes to the *Fourth Methodology Order* were impending (i.e., they had had plenty of "opportunities" to develop data and analyses). *Order Denying the Cities' Motion for Appointment of Independent Hearing Officer and Motion for Continuance and Limiting Scope of Depositions* at 2. To be adequately prepared for the hearing, however, the Cities needed authorization to access SWC's lands, under IDAPA

[1] For example, at the *Fifth Methodology Order* hearing, the Director said at one point: "there have been opportunities for people to gather data; there have been opportunities for folks to take on responsibility to prepare [analyses]." Tr. Hearing Vol. IV, 205:12-14.

37.01.01.520.01.e and I.R.C.P. Rule 34, to develop data associated with the nature and extent of irrigation on SWC lands; the Cities also needed adequate time to analyze the results of these inspections and investigations. The Cities did not have such authorization prior to April 21, 2023, so any "presentations" that the "Department conducted" in fall 2022 fell far short of what was reasonably needed to prepare for the hearing on the *Fifth Methodology Order*. *Id.*

The instant request to engage in discovery reflects the Cities' efforts to take seriously the Director's invitation to present "new information" to the Department update the Methodology Order with the best available science, and to be prepared to challenge the Department's application of the *Sixth Methodology Order* in 2024 on the basis of erroneous or outdated inputs. Accordingly, the Cities request that the Director reconsider his denial of the Cities' request to conduct discovery.

However, if this is indeed a continuing contested case, perhaps no new order authorizing such discovery is necessary. In that case, the Cities seek clarification as to whether it is entitled to proceed with serving requests on SWC members notwithstanding the *Order Denying Hearing* and whether the SWC members are obligated to comply.

Attorneys for American Falls Reservoir District #2 and Minidoka Irrigation District

BEFORE THE DEPARTMENT OF WATER RESOUCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **SURFACE WATER COALITION'S RESPONSE TO CITIES' MOTION FOR CLARIFICATION AND RECONSIDERATION**

COME NOW, A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, and TWIN FALLS CANAL COMPANY ("Surface Water Coalition" or "Coalition"), by and through counsel of record, and hereby respond to the *Motion for Clarification and Reconsideration of Denial of*

Request for Hearing and to Engage in Discovery ("Motion") filed on September 5, 2023.[1] The Coalition requests the Director to deny the Cities' Motion for the reasons set forth below.

BACKGROUND

The Sixth Methodology Order was issued as a "final" administrative order subject to reconsideration and/or appeal to district court. *See* I.C. §§ 67-5246; 67-5270 to 5272; *see also*, Explanatory Information to Accompany a Final Order (attached to the Director's Sixth Methodology Order). The Cities filed a notice of appeal and petition for judicial review concerning the Director's related *Post-Hearing Order*, another order issued as part of the matter resulting in the Sixth Methodology Order. *See City of Idaho Falls et al. v. IDWR*, Fourth Jud. Dist., Ada County Dist. Ct., Case No. CV01-23-13238 (appeal filed August 16, 2023). IGWA filed a notice of appeal and petition for judicial review of various orders as well, including specifically the Sixth Methodology Order. *See IGWA v. IDWR*, Fourth Jud. Dist., Ada County Dist. Ct., Case No. CV01-23-13173 (appeal filed August 16, 2023). The Coalition of Cities and the City of Pocatello filed notices of appearance in that case. The two appeals are pending in district court and it is anticipated the cases will be consolidated.

ARGUMENT

I. The Director Properly Denied the Cities' Request for Hearing.

The Cities request clarification of the Director's Sixth Methodology Order claiming "no hearing has actually been held on the *Sixth Methodology Order*." Motion at 2-3. Yet, the Cities' feigned ignorance about the order is merely form over substance. The Cities fully participated in the contested case and administrative hearing that resulted in the issuance of the Sixth Methodology Order. They cannot dispute this fact. There is no basis to hold a second hearing

[1] The motion was filed the Coalition of Cities (cities of Bliss et al.), the City of Idaho Falls, and the City of Pocatello.

on the Sixth Methodology Order that fully addressed all of the information either presented at or before the administrative hearing. As such, the Director properly denied the requested hearing. *See Order Denying Request for Hearing and Motion Authorizing Discovery* at 2-3.

Moreover, the Cities have appealed the Director's *Post-Hearing Order* that addresses the issues raised on the Fifth Methodology Order, including the updated data the Director included in the Sixth Methodology Order. Although the Cities had a right to appeal the Sixth Methodology Order they failed to do so. Regardless, all of the Cities except Idaho Falls have appeared in IGWA's appeal of the Sixth Methodology Order.[2] Consequently, there is nothing to clarify and the petitions for judicial appeal will proceed pursuant to Idaho's civil rules.

II. The Director Properly Denied the Cities' Request for Discovery.

The Cities have also requested the Director to reconsider the denial of their motion to authorize discovery. *See* Motion at 2-3. Since the request for hearing was denied, the request to authorize discovery was properly denied as well. The Cities misconstrue this matter as a "continuing contested case" with no end. Motion at 2. Although the Director's methodology regarding the SWC delivery call may be updated at some point in time, that does not mean the prior contested cases resulting in "final orders" that have been appealed or are currently on appeal to the District Court are continuing *ad infinitum* as the Cities suggest. To find otherwise would keep the parties in a perpetual state of discovery, motion practice, and litigation, without any culminating hearing or end.[3] Such a scenario has no basis in statute or rule and would be unduly burdensome and mire the parties in endless litigation expense.

---

[2] Whether the City of Idaho Falls will file a notice of appearance is unknown. If the cases are ultimately consolidated it may not matter as all parties will be participating.

[3] It is curious why the Cities seem determined to re-litigate prior contested cases and outcomes in the face of their approved mitigation plan for the SWC delivery call and safe harbor from curtailment pursuant to the CM Rules. The request for discovery is unwarranted and would be overly burdensome in the context of what has already

Finally, the Cities' argument that they could not "adequately prepare" for the prior hearing is also erroneous and does not support their present reconsideration request. These arguments have been previously addressed by both the Director and the District Court. The Cities' continued efforts to "redo" prior contested cases is unwarranted and was properly denied by the Director. Since the final agency orders are presently on appeal to the district court, the agency should refrain from restarting contested cases as requested by the Cities.

CONCLUSION

The Cities have pointed to no new authority or information that would warrant reconsideration of the Director's August 23, 2023 order. The Coalition respectfully requests the Director to deny the Cities' Motion accordingly.

DATED this 19th day of September, 2023.

MARTEN LAW LLP

Jessica Nielsen
Assistant for Travis L. Thompson

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **ORDER DENYING CITIES' MOTION FOR CLARIFICATION AND RECONSIDERATION**

BACKGROUND

On June 6–9, 2023 a hearing was held on the Department's April 21, 2023 *Fifth Amended Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("*Fifth Methodology Order*"). On July 19, 2023, Gary Spackman, the then-Director of the Idaho Department of Water Resources ("Department"), issued his *Post-Hearing Order Regarding Fifth Amended Methodology Order* ("*Post-Hearing Order*") and *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("*Sixth Methodology Order*"). The *Sixth Methodology Order* corrects data in the Department's *Fifth Methodology Order* found to be in error during the hearing held in this matter. The *Sixth Methodology Order*, like the *Fifth Methodology Order*, comprises nine steps to determine material injury to members of the Surface Water Coalition ("SWC").

On August 3, 2023, the Department received the *City of Pocatello's, City of Idaho Falls', and Coalition of Cities' Request for Hearing and Order Authorizing Discovery* ("*Request for Hearing and Discovery*"). The *Request for Hearing and Discovery* asks the Director to hold a status conference to schedule a four-day hearing, pursuant to Idaho Code § 42-1701(A)(3), on the *Sixth Methodology Order*. *Request for Hearing and Discovery* at 2. The request also asks the Director for an order authorizing discovery, pursuant to IDAPA 37.01.01.521. *Id.* at 2–3. Four issues for hearing are identified in the *Request for Hearing and Discovery*:

> a) Whether the members of the Surface Water Coalition ("SWC") operate reasonably and without waste;
>
> b) Whether the irrigated acreage numbers for the SWC members in the Sixth Methodology Order are accurate;
>
> c) Whether the number of acres irrigated with supplemental groundwater rights within the service areas of the SWC members can be accurately determined; [and]

d) Whether the number of acres irrigated with enlargement rights within the service areas of the SWC members can be accurately determined[.]

Id. at 2.

On August 22, 2023, the Department received the *Surface Water Coalition's Response to Cities' Request for Hearing and Order Authorizing Discovery* ("*SWC's Response*"). The *SWC's Response* requests the Director "deny or limit the Cities' request for hearing and an order authorizing discovery . . . ." *SWC's Response* at 7.

On August 25, 2023, Director Spackman issued an *Order Denying Request for Hearing and Motion Authorizing Discovery* ("*Order Denying Request for Hearing*"). After quoting Idaho Code § 42-1701(3), the Director concluded that "[t]he parties have previously been afforded an opportunity for hearing on the issues identified related to the Sixth Methodology Order and are not entitled to a hearing pursuant to Idaho Code § 42-1701A(3)." *Order Denying Request for Hearing* at 2.

On September 5, 2023, the City of Pocatello, the City of Idaho Falls, and Coalition of Cities (collectively "Cities") filed a *Motion for Clarification and Reconsideration of Denial of Request for Hearing and to Engage in Discovery* ("*Motion for Clarification and Reconsideration*"). The Cities "seek clarification on the nature of the Sixth Methodology Order." *Motion for Clarification and Reconsideration* at 2. The Cities "request clarification on the nature and status of the Sixth Methodology Order – is it, in fact, merely an 'amended' Fifth Methodology Order that is ripe for immediate appeal?" *Id.* at 3. The Cities also ask that the Director also "reconsider his denial of the Cities' request to conduct discovery." *Id.* at 4.

On September 19, 2023, the SWC submitted *Surface Water Coalition's Response to Cities' Motion for Clarification and Reconsideration* ("*SWC's Response to Motion for Clarification*"). The SWC argues the Director correctly denied the Cities' request for hearing and request for discovery and urges the Director to deny the latest request. *SWC's Response to Motion for Clarification* at 2–4.

ANALYSIS AND CONCLUSIONS OF LAW

A. Motion for Clarification and Reconsideration.

Idaho Code § 42-1701A(3) states in relevant part:

> Unless the right to a hearing before the director . . . is otherwise provided by statute, any person aggrieved by any action of the director, including any decision, determination, order or other action . . . who is aggrieved by the action of the director, and who has not previously been afforded an opportunity for a hearing on the matter shall be entitled to a hearing before the director to contest the action.

I.C. § 42-1701A(3) (emphasis added).

The Director denies the *Cities' Motion for Clarification and Reconsideration* because there is nothing unclear about the *Order Denying Request for Hearing*. As was stated in the *Order Denying Request for Hearing*, "[t]he parties have previously been afforded an opportunity for hearing on the issues identified related to the Sixth Methodology Order and are not entitled to a hearing pursuant to Idaho Code § 42-1701A(3)." *Order Denying Request for Hearing* at 2. The *Sixth Methodology Order* is an order issued after a hearing in response to the issues raised by the parties at hearing. The Cities ask whether "the *Sixth Methodology Order* – is it, in fact, merely an 'amended' Fifth Methodology Order." *Motion for Clarification and Reconsideration* at 3. The title of the order does not matter. What matters is that the Cities have previously been afforded an opportunity for a hearing on the issues. Because the parties were recently afforded a hearing on the issues, the parties are not entitled to another hearing at this time. I.C. § 42-1701A(3).

B. Motion to Authorize Discovery.

Because the request for an order authorizing discovery was made as part of an improper request for hearing, the Director will not consider the request for discovery.

ORDER

IT IS HEREBY ORDERED that the *Motion for Clarification and Reconsideration of Denial of Request for Hearing and to Engage in Discovery* is DENIED.

DATED this 25th day of September 2023.

MATHEW WEAVER
Director

EXPLANATORY INFORMATION TO ACCOMPANY AN ORDER DENYING PETITION FOR RECONSIDERATION

(To be used in connection with actions when a hearing was not held)

(Required by Rule of Procedure 740.02)

The accompanying order is an **Order Denying Petition for Reconsideration** of the "final order" or "amended final order" issued previously in this proceeding by the Idaho Department of Water Resources ("department") pursuant to section 67-5246, Idaho Code.

REQUEST FOR HEARING

Unless the right to a hearing before the director or the water resource board is otherwise provided by statute, any person who is aggrieved by the action of the director, and who has not previously been afforded an opportunity for a hearing on the matter shall be entitled to a hearing before the director to contest the action. The person shall file with the director, within fifteen (15) days after receipt of written notice of the action issued by the director, or receipt of actual notice, a written petition stating the grounds for contesting the action by the director and requesting a hearing. See section 42-1701A(3), Idaho Code. **Note: The request must be received by the Department within this fifteen (15) day period.**

APPEAL OF FINAL ORDER TO DISTRICT COURT

Pursuant to sections 67-5270 and 67-5272, Idaho Code, any party aggrieved by a final order or orders previously issued in a matter before the department may appeal the final order and all previously issued orders in the matter to district court by filing a petition in the district court of the county in which:

i. A hearing was held,
ii. The final agency action was taken,
iii. The party seeking review of the order resides, or
iv. The real property or personal property that was the subject of the agency action is located.

The appeal must be filed within twenty-eight (28) days of: a) the service date of the final order, b) the service date of an order denying petition for reconsideration, or c) the failure within twenty-one (21) days to grant or deny a petition for reconsideration, whichever is later. See section 67-5273, Idaho Code. The filing of an appeal to district court does not in itself stay the effectiveness or enforcement of the order under appeal.

APPENDIX A -2

Motion for Clarification and Reconsideration of Denial of Request for Hearing and to Engage in Discovery, Case No. CV01-23-13238, Fourth Judicial District, Ada County, IDWR Docket No. CM-DC-2010-001 (Sep. 5, 2023)

BEFORE THE DEPARTMENT OF WATER RESOURCES
OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **MOTION FOR CLARIFICATION AND RECONSIDERATION OF DENIAL OF REQUEST FOR HEARING AND TO ENGAGE IN DISCOVERY**

COME NOW, the Cities of Bliss, Burley, Carey, Declo, Dietrich, Gooding, Hazelton, Heyburn, Jerome, Paul, Richfield, Rupert, Shoshone, and Wendell ("Coalition of Cities"), by and through their attorneys of record, Candice M. McHugh and Chris M. Bromley, the City of Idaho Falls, by and through its attorney of record, Robert L. Harris, and the City of Pocatello, by and through its attorneys of record, Sarah A. Klahn and Maximilian C. Bricker

(collectively the "Cities"), pursuant to IDAPA 37.01.01.740.02.b and 770 of the Department's rules of procedure and hereby file this *Motion for Reconsideration and Clarification* of the August 23, 2023, *Order Denying Request for Hearing and Motion Authorizing Discovery* ("Order Denying Hearing") and move for reconsideration of the Director's order denying the Parties' request for a hearing on the *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("Sixth Methodology Order").

ARGUMENT

1. **The Cities seek clarification on the nature of the Sixth Methodology Order.**

On July 19, 2023, the Director of the Idaho Department of Water Resources ("Department") issued, as relevant here, two orders: a *Post-Hearing Order Regarding Fifth Amended Methodology Order* ("Post-Hearing Order") and the *Sixth Methodology Order*. Rather than amending the Department's April 21, 2023 *Fifth Amended Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("Fifth Methodology Order"), which was subject to a hearing on June 6-9, 2023, the Director chose to issue a new final order.

Idaho Code § 42-1701A(3) states in relevant part:

> Unless the right to a hearing before the director . . . is otherwise provided in by statute, any person aggrieved by any action of the director, including any decision, determination, order or other action . . . who is aggrieved by the action of the director, and who has not previously been afforded an opportunity for a hearing on the matter shall be entitled to a hearing before the director to contest the action.

The Director denied the Parties' request for a hearing on the *Sixth Methodology Order* because: "The parties have previously been afforded an opportunity for hearing on the issues identified related to the *Sixth Methodology Order* and are not entitled to a hearing pursuant

to Idaho Code § 42-1701A(3)." However, no hearing has actually been held on the *Sixth Methodology Order*. Thus, the Parties request clarification of the nature and status of the *Sixth Methodology Order*—is it, in fact, merely an "amended" *Fifth Methodology Order* that is ripe for immediate appeal?

2. **Regardless of the answer to the clarification question above, the Parties seek reconsideration and clarification of the denial of the request to engage in discovery.**

The Director has stated on numerous occasions that the SWC Delivery Call is a continuing contested case, requiring the Department to periodically update the Methodology Order, which is a "living document." Tr. Hearing Vol. I, 18:21. The Director has also acknowledged on numerous occasions that the Department would consider data or analyses brought forward by the Cities in updating or applying the Methodology Order—even the *Order Denying Hearing* asserted that the Director would welcome "new information [developed by the Cities that] the Director may consider in the future." *Id.* at 2-3 n.1.[1] The Parties have been down this road before, as their April 28, 2023 *Motion for Continuance*, which requested adequate time to conduct investigations prior to a hearing on the *Fifth Methodology Order*, was denied on the ground that the Director had sufficiently notified the junior groundwater users that changes to the *Fourth Methodology Order* were impending (i.e., they had had plenty of "opportunities" to develop data and analyses). *Order Denying the Cities' Motion for Appointment of Independent Hearing Officer and Motion for Continuance and Limiting Scope of Depositions* at 2. To be adequately prepared for the hearing, however, the Cities needed authorization to access SWC's lands, under IDAPA

[1] For example, at the *Fifth Methodology Order* hearing, the Director said at one point: "there have been opportunities for people to gather data; there have been opportunities for folks to take on responsibility to prepare [analyses]." Tr. Hearing Vol. IV, 205:12-14.

37.01.01.520.01.e and I.R.C.P. Rule 34, to develop data associated with the nature and extent of irrigation on SWC lands; the Cities also needed adequate time to analyze the results of these inspections and investigations. The Cities did not have such authorization prior to April 21, 2023, so any "presentations" that the "Department conducted" in fall 2022 fell far short of what was reasonably needed to prepare for the hearing on the *Fifth Methodology Order*. *Id.*

The instant request to engage in discovery reflects the Cities' efforts to take seriously the Director's invitation to present "new information" to the Department update the Methodology Order with the best available science, and to be prepared to challenge the Department's application of the *Sixth Methodology Order* in 2024 on the basis of erroneous or outdated inputs. Accordingly, the Cities request that the Director reconsider his denial of the Cities' request to conduct discovery.

However, if this is indeed a continuing contested case, perhaps no new order authorizing such discovery is necessary. In that case, the Cities seek clarification as to whether it is entitled to proceed with serving requests on SWC members notwithstanding the *Order Denying Hearing* and whether the SWC members are obligated to comply.

Submitted this 6th day of September, 2023.

BEFORE THE DEPARTMENT OF WATER RESOUCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **SURFACE WATER COALITION'S RESPONSE TO CITIES' MOTION FOR CLARIFICATION AND RECONSIDERATION**

COME NOW, A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, and TWIN FALLS CANAL COMPANY ("Surface Water Coalition" or "Coalition"), by and through counsel of record, and hereby respond to the *Motion for Clarification and Reconsideration of Denial of*

Request for Hearing and to Engage in Discovery ("Motion") filed on September 5, 2023.[1] The Coalition requests the Director to deny the Cities' Motion for the reasons set forth below.

BACKGROUND

The Sixth Methodology Order was issued as a "final" administrative order subject to reconsideration and/or appeal to district court. *See* I.C. §§ 67-5246; 67-5270 to 5272; *see also*, Explanatory Information to Accompany a Final Order (attached to the Director's Sixth Methodology Order). The Cities filed a notice of appeal and petition for judicial review concerning the Director's related *Post-Hearing Order*, another order issued as part of the matter resulting in the Sixth Methodology Order. *See City of Idaho Falls et al. v. IDWR*, Fourth Jud. Dist., Ada County Dist. Ct., Case No. CV01-23-13238 (appeal filed August 16, 2023). IGWA filed a notice of appeal and petition for judicial review of various orders as well, including specifically the Sixth Methodology Order. *See IGWA v. IDWR*, Fourth Jud. Dist., Ada County Dist. Ct., Case No. CV01-23-13173 (appeal filed August 16, 2023). The Coalition of Cities and the City of Pocatello filed notices of appearance in that case. The two appeals are pending in district court and it is anticipated the cases will be consolidated.

ARGUMENT

I. The Director Properly Denied the Cities' Request for Hearing.

The Cities request clarification of the Director's Sixth Methodology Order claiming "no hearing has actually been held on the *Sixth Methodology Order*." Motion at 2-3. Yet, the Cities' feigned ignorance about the order is merely form over substance. The Cities fully participated in the contested case and administrative hearing that resulted in the issuance of the Sixth Methodology Order. They cannot dispute this fact. There is no basis to hold a second hearing

[1] The motion was filed the Coalition of Cities (cities of Bliss et al.), the City of Idaho Falls, and the City of Pocatello.

on the Sixth Methodology Order that fully addressed all of the information either presented at or before the administrative hearing. As such, the Director properly denied the requested hearing. *See Order Denying Request for Hearing and Motion Authorizing Discovery* at 2-3.

Moreover, the Cities have appealed the Director's *Post-Hearing Order* that addresses the issues raised on the Fifth Methodology Order, including the updated data the Director included in the Sixth Methodology Order. Although the Cities had a right to appeal the Sixth Methodology Order they failed to do so. Regardless, all of the Cities except Idaho Falls have appeared in IGWA's appeal of the Sixth Methodology Order.[2] Consequently, there is nothing to clarify and the petitions for judicial appeal will proceed pursuant to Idaho's civil rules.

II. The Director Properly Denied the Cities' Request for Discovery.

The Cities have also requested the Director to reconsider the denial of their motion to authorize discovery. *See* Motion at 2-3. Since the request for hearing was denied, the request to authorize discovery was properly denied as well. The Cities misconstrue this matter as a "continuing contested case" with no end. Motion at 2. Although the Director's methodology regarding the SWC delivery call may be updated at some point in time, that does not mean the prior contested cases resulting in "final orders" that have been appealed or are currently on appeal to the District Court are continuing *ad infinitum* as the Cities suggest. To find otherwise would keep the parties in a perpetual state of discovery, motion practice, and litigation, without any culminating hearing or end.[3] Such a scenario has no basis in statute or rule and would be unduly burdensome and mire the parties in endless litigation expense.

[2] Whether the City of Idaho Falls will file a notice of appearance is unknown. If the cases are ultimately consolidated it may not matter as all parties will be participating.

[3] It is curious why the Cities seem determined to re-litigate prior contested cases and outcomes in the face of their approved mitigation plan for the SWC delivery call and safe harbor from curtailment pursuant to the CM Rules. The request for discovery is unwarranted and would be overly burdensome in the context of what has already

Finally, the Cities' argument that they could not "adequately prepare" for the prior hearing is also erroneous and does not support their present reconsideration request. These arguments have been previously addressed by both the Director and the District Court. The Cities' continued efforts to "redo" prior contested cases is unwarranted and was properly denied by the Director. Since the final agency orders are presently on appeal to the district court, the agency should refrain from restarting contested cases as requested by the Cities.

CONCLUSION

The Cities have pointed to no new authority or information that would warrant reconsideration of the Director's August 23, 2023 order. The Coalition respectfully requests the Director to deny the Cities' Motion accordingly.

DATED this 19th day of September, 2023.

APPENDIX A -4

Order Denying Cities' Motion for Clarification and Reconsideration, Case No. CV01-23-13238, Fourth Judicial District, Ada County, IDWR Docket No. CM-DC-2010-001 (Sep. 25, 2023)

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **ORDER DENYING CITIES' MOTION FOR CLARIFICATION AND RECONSIDERATION**

BACKGROUND

On June 6–9, 2023 a hearing was held on the Department's April 21, 2023 *Fifth Amended Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("*Fifth Methodology Order*"). On July 19, 2023, Gary Spackman, the then-Director of the Idaho Department of Water Resources ("Department"), issued his *Post-Hearing Order Regarding Fifth Amended Methodology Order* ("*Post-Hearing Order*") and *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("*Sixth Methodology Order*"). The *Sixth Methodology Order* corrects data in the Department's *Fifth Methodology Order* found to be in error during the hearing held in this matter. The *Sixth Methodology Order*, like the *Fifth Methodology Order*, comprises nine steps to determine material injury to members of the Surface Water Coalition ("SWC").

On August 3, 2023, the Department received the *City of Pocatello's, City of Idaho Falls', and Coalition of Cities' Request for Hearing and Order Authorizing Discovery* ("*Request for Hearing and Discovery*"). The *Request for Hearing and Discovery* asks the Director to hold a status conference to schedule a four-day hearing, pursuant to Idaho Code § 42-1701(A)(3), on the *Sixth Methodology Order*. *Request for Hearing and Discovery* at 2. The request also asks the Director for an order authorizing discovery, pursuant to IDAPA 37.01.01.521. *Id*. at 2–3. Four issues for hearing are identified in the *Request for Hearing and Discovery*:

> a) Whether the members of the Surface Water Coalition ("SWC") operate reasonably and without waste;
>
> b) Whether the irrigated acreage numbers for the SWC members in the Sixth Methodology Order are accurate;
>
> c) Whether the number of acres irrigated with supplemental groundwater rights within the service areas of the SWC members can be accurately determined; [and]

d) Whether the number of acres irrigated with enlargement rights within the service areas of the SWC members can be accurately determined[.]

Id. at 2.

On August 22, 2023, the Department received the *Surface Water Coalition's Response to Cities' Request for Hearing and Order Authorizing Discovery* ("*SWC's Response*"). The *SWC's Response* requests the Director "deny or limit the Cities' request for hearing and an order authorizing discovery . . . ." *SWC's Response* at 7.

On August 25, 2023, Director Spackman issued an *Order Denying Request for Hearing and Motion Authorizing Discovery* ("*Order Denying Request for Hearing*"). After quoting Idaho Code § 42-1701(3), the Director concluded that "[t]he parties have previously been afforded an opportunity for hearing on the issues identified related to the Sixth Methodology Order and are not entitled to a hearing pursuant to Idaho Code § 42-1701A(3)." *Order Denying Request for Hearing* at 2.

On September 5, 2023, the City of Pocatello, the City of Idaho Falls, and Coalition of Cities (collectively "Cities") filed a *Motion for Clarification and Reconsideration of Denial of Request for Hearing and to Engage in Discovery* ("*Motion for Clarification and Reconsideration*"). The Cities "seek clarification on the nature of the Sixth Methodology Order." *Motion for Clarification and Reconsideration* at 2. The Cities "request clarification on the nature and status of the Sixth Methodology Order – is it, in fact, merely an 'amended' Fifth Methodology Order that is ripe for immediate appeal?" *Id*. at 3. The Cities also ask that the Director also "reconsider his denial of the Cities' request to conduct discovery." *Id*. at 4.

On September 19, 2023, the SWC submitted *Surface Water Coalition's Response to Cities' Motion for Clarification and Reconsideration* ("*SWC's Response to Motion for Clarification*"). The SWC argues the Director correctly denied the Cities' request for hearing and request for discovery and urges the Director to deny the latest request. *SWC's Response to Motion for Clarification* at 2–4.

ANALYSIS AND CONCLUSIONS OF LAW

A. Motion for Clarification and Reconsideration.

Idaho Code § 42-1701A(3) states in relevant part:

> Unless the right to a hearing before the director . . . is otherwise provided by statute, any person aggrieved by any action of the director, including any decision, determination, order or other action . . . who is aggrieved by the action of the director, and who has not previously been afforded an opportunity for a hearing on the matter shall be entitled to a hearing before the director to contest the action.

I.C. § 42-1701A(3) (emphasis added).

The Director denies the *Cities' Motion for Clarification and Reconsideration* because there is nothing unclear about the *Order Denying Request for Hearing*. As was stated in the *Order Denying Request for Hearing*, "[t]he parties have previously been afforded an opportunity for hearing on the issues identified related to the Sixth Methodology Order and are not entitled to a hearing pursuant to Idaho Code § 42-1701A(3)." *Order Denying Request for Hearing* at 2. The *Sixth Methodology Order* is an order issued after a hearing in response to the issues raised by the parties at hearing. The Cities ask whether "the *Sixth Methodology Order* – is it, in fact, merely an 'amended' Fifth Methodology Order." *Motion for Clarification and Reconsideration* at 3. The title of the order does not matter. What matters is that the Cities have previously been afforded an opportunity for a hearing on the issues. Because the parties were recently afforded a hearing on the issues, the parties are not entitled to another hearing at this time. I.C. § 42-1701A(3).

B. Motion to Authorize Discovery.

Because the request for an order authorizing discovery was made as part of an improper request for hearing, the Director will not consider the request for discovery.

ORDER

IT IS HEREBY ORDERED that the *Motion for Clarification and Reconsideration of Denial of Request for Hearing and to Engage in Discovery* is DENIED.

DATED this 25th day of September 2023.

MATHEW WEAVER
Director

EXPLANATORY INFORMATION TO ACCOMPANY AN ORDER DENYING PETITION FOR RECONSIDERATION

(To be used in connection with actions when a hearing was **not** held)

(Required by Rule of Procedure 740.02)

The accompanying order is an **Order Denying Petition for Reconsideration** of the "final order" or "amended final order" issued previously in this proceeding by the Idaho Department of Water Resources ("department") pursuant to section 67-5246, Idaho Code.

REQUEST FOR HEARING

Unless the right to a hearing before the director or the water resource board is otherwise provided by statute, any person who is aggrieved by the action of the director, and who has not previously been afforded an opportunity for a hearing on the matter shall be entitled to a hearing before the director to contest the action. The person shall file with the director, within fifteen (15) days after receipt of written notice of the action issued by the director, or receipt of actual notice, a written petition stating the grounds for contesting the action by the director and requesting a hearing. See section 42-1701A(3), Idaho Code. **Note: The request must be received by the Department within this fifteen (15) day period.**

APPEAL OF FINAL ORDER TO DISTRICT COURT

Pursuant to sections 67-5270 and 67-5272, Idaho Code, any party aggrieved by a final order or orders previously issued in a matter before the department may appeal the final order and all previously issued orders in the matter to district court by filing a petition in the district court of the county in which:

i. A hearing was held,
ii. The final agency action was taken,
iii. The party seeking review of the order resides, or
iv. The real property or personal property that was the subject of the agency action is located.

The appeal must be filed within twenty-eight (28) days of: a) the service date of the final order, b) the service date of an order denying petition for reconsideration, or c) the failure within twenty-one (21) days to grant or deny a petition for reconsideration, whichever is later. See section 67-5273, Idaho Code. The filing of an appeal to district court does not in itself stay the effectiveness or enforcement of the order under appeal.

APPENDIX B-1

Final Order Establishing 2023 Reasonable Carryover (Methodology Step 9), IDWR Docket No. CM-DC-2010-001 (Nov. 30, 2023)

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **FINAL ORDER ESTABLISHING 2023 REASONABLE CARRYOVER** ***(METHODOLOGY STEP 9)***

FINDINGS OF FACT

1. On July 19, 2023, the Director ("Director") of the Idaho Department of Water Resources ("Department") issued the *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("*Methodology Order*"). The *Methodology Order* establishes nine steps for determining material injury to members of the Surface Water Coalition ("SWC"). This order applies step nine, the final step of the *Methodology Order*, for the 2023 water year.

2. The *Methodology Order* describes step 9 as follows:

> Step 9: Following the end of the irrigation season (on or before November 30), the Department will determine the total actual volumetric demand and total actual [crop water need] for the entire irrigation season. This information will be used for the analysis of reasonable carryover shortfall, selection of future [base line year], and for the refinement and continuing improvement of the method for future use.
>
> On or before November 30, the Department will issue estimates of actual carryover and reasonable carryover shortfall volumes for all members of SWC. These estimates will be based on, but not limited to, the consideration of the best available water diversion and storage data from Water District 01, return flow monitoring, comparative years, and [reasonable in-season demand]. These estimates will establish the obligation of junior ground water users in providing water to the SWC for reasonable carryover shortfall. Fourteen (14) days following the issuance by the Department of reasonable carryover shortfall obligations, junior ground water users will be required to establish, to the satisfaction of the Director, their ability to supply a volume of storage water or to conduct other approved mitigation activities that will provide water to the injured members of the SWC equal to the reasonable carryover shortfall for all injured members of the SWC. If junior ground water users cannot provide this information, the Director will issue an order curtailing junior ground water rights. A transient ESPAM simulation will be run to determine

> the priority date of water rights that must be curtailed to produce the reasonable carryover shortfall volume by September 30 of the following year. Curtailment will be simulated within the area of common ground water supply, as described by CM Rule 50.01.

Methodology Order at 45.

3. The following table summarizes the 2023 irrigation season diversions, crop water need, and reasonable in-season demand ("RISD") volumes for each SWC entity. RISD is calculated for each SWC entity using demand, crop water need, and project efficiency. *Methodology Order* at 17. All values are reported in acre-feet ("AF"). These values are used to determine entity-specific season ending RISD values.

Entity	Demand[1]	Crop Water Need
A&B	62,080	28,401
AFRD2	433,151	135,217
BID	231,011	86,494
Milner	52,976	27,074
Minidoka	322,423	156,201
NSCC	985,149	313,401
TFCC	1,079,398	403,209

4. The following table summarizes the final calculated 2023 in-season demand shortfall values in AF, if any, for each member of the SWC. The values in this table are different from those in the *Final Order Regarding April 2023 Forecast Supply (Methodology Steps 1-3)* (April 21, 2023) ("*April Forecast Supply Order*"), *Order Revising April 2023 Forecast Supply and Amending Curtailment Order (Methodology Steps 5 & 6)* (July 19, 2023) ("*July Order*") and the *Order Revising July 2023 Forecast Supply (Methodology Steps 7-8)* (August 31, 2023). The differences are due to changes in total supply and RISD that reflect diversion and ET data not available when the *April Forecast Supply Order* and *July Order* were issued. The second column of the summary table contains the total natural flow diversions from April 1 to October 31 for each SWC member.[2] The third column summarizes the natural flow adjustments, which include natural flow delivered for recharge[3] and natural flow delivered to SWID.[4] The fourth column contains the preliminary storage allocations reported from the August 1, 2023 Water

[1] The "Demand" for each SWC entity is equal to each entity's 2023 April–October diversions.

[2] The natural flow diverted was calculated from the preliminary daily water right accounting records located here: https://research.idwr.idaho.gov/apps/Hydrologic/Accounting/.

[3] Natural flow recharge values represent accomplished recharge through the Idaho Water Resource Board's recharge water rights as of October 31, 2023.

[4] *See* column titled "Natural Flow Adjustment" in "Attachment A" for further information regarding these adjustments.

District 01 storage report.[5] The fifth column summarizes storage adjustments due to the application of the Minidoka Credit.[6] The sixth column contains the total supply available to each SWC member and is calculated by summing columns two through five. The seventh column contains the calculated RISD. The demand shortfall in the last column is calculated by subtracting the RISD from the total supply. The demand shortfall is zero when the total supply exceeds the RISD. No members of the SWC have a demand shortfall for 2023.

Entity	Natural Flow Diverted through 10/31	Natural Flow Adjustment	Preliminary Storage Allocation	In-Season Storage Adjustment	Total Supply	RISD	Demand Shortfall
A&B	15,628	-	132,888	-	148,516	46,854	0
AFRD2	155,354	(7,395)	382,422	1,000	531,380	378,375	0
BID	127,690	(3,714)	220,083	5,130	349,189	204,761	0
Milner	19,476	(3,011)	88,090	-	104,555	48,319	0
Minidoka	166,934	-	336,711	8,370	512,015	315,721	0
NSCC	508,227	(3,986)	834,525	(7,750)	1,331,016	831,620	0
TFCC	898,401	(181)	238,561	(6,750)	1,130,031	1,007,766	0

5. The following table summarizes the end of season reasonable carryover shortfall calculation for 2023. All values are reported in AF. The second column of the table contains the preliminary storage allocations reported from the August 1, 2023 Water District 01 storage report. The third column summarizes adjustments for storage water due to the application of the Minidoka Credit. The fourth column summarizes adjustments for water delivered through the SWC member's canals for use by non-SWC members.[7] The fifth column contains the total storage water use reported from the October 31, 2023 Water District 01 water right accounting report.[8] The sixth column contains the actual carryover volumes as defined by the *Methodology Order* (*Methodology Order* at 45) and is calculated by subtracting the sum of columns four and five from the sum of columns two and three. The seventh column contains the reasonable carryover volumes established in the *Methodology Order*. *Methodology Order* at 31. The reasonable carryover shortfall in the last column is zero when the actual carryover is greater than the reasonable carryover, otherwise it is calculated as the difference between reasonable carryover and the actual carryover volume for each member of the SWC. No members of the SWC have a reasonable carryover shortfall for 2023.

[5] The preliminary storage allocations can be found on Water District 01's website: https://www.waterdistrict1.com/current-data/.

[6] *See* column titled "In-Season Storage Adjustment" in "Attachment A." The Minidoka Credit is a long existing exchange of stored water among AFRD2, BID, MID, NSCC, and TFCC that has been incorporated into an agreement of those entities and accepted by the SRBA district court.

[7] *See* column titled "Storage Use Adjustment" in "Attachment A" for further information regarding these adjustments.

[8] This water right accounting report was published to the Water District 01 webpage on November 17, 2023: https://www.waterdistrict1.com/current-data/.

	Preliminary Storage Allocation	In-Season Storage Allocation Adjustment	Storage Use Adjustment[9]	Storage Use	Actual Carryover	Reasonable Carryover	Reasonable Carryover Shortfall
A&B	132,888	-	-	46,452	86,436	22,700	0
AFRD2	382,422	1,000	(45,453)	331,435	97,230	16,700	0
BID	220,083	5,130	(11,500)	118,653	118,060	0	0
Milner	88,090	-	(2,100)	38,611	51,579	16,100	0
Minidoka	336,711	8,370	-	155,372	189,709	0	0
NSCC	834,525	(7,750)	(28,091)	508,999	345,867	113,300	0
TFCC	238,561	(6,750)	(5,366)	186,544	50,633	37,400	0

6. The above determinations are based on water diversion and storage data from Water District 01. Although these preliminary numbers are subject to revision by Water District 01 during its final accounting for 2023, revisions will not become available until after issuance of this order. For this reason, these estimates establish the final obligation of junior ground water users in supplying water to the SWC for reasonable carryover shortfall. The above determination of reasonable carryover shortfall is carried forward from the *Methodology Order* and considers the best available water diversion and storage data, comparative water years, and RISD. *Methodology Order* at 45.

CONCLUSIONS OF LAW

1. The *Methodology Order* states that, on or before November 30, the Director will estimate the SWC's reasonable carryover shortfall, if any, for 2023. *Methodology Order* at 45. If a reasonable carryover shortfall is established, junior-priority ground water users shall have fourteen days to demonstrate, to the satisfaction of the Director, "their ability to supply a volume of storage water or to conduct other approved mitigation activities that will provide water to the injured members of the SWC equal to the reasonable carryover shortfall for all injured members of the SWC." *Id*.

2. The evidentiary standard to apply in conjunctive administration of hydraulically connected water rights is clear and convincing. *A&B Irr. Dist. v. Idaho Dept. of Water Resources*, 153 Idaho 500, 524, 284 P.3d 225, 249 (2012).

3. "Clear and convincing evidence refers to a degree of proof greater than a mere preponderance." *Idaho State Bar v. Topp*, 129 Idaho 414, 416, 925 P.2d 1113, 1115 (1996) (internal quotations removed). "Clear and convincing evidence is generally understood to be '[e]vidence indicating that the thing to be proved is highly probable or reasonably certain.'" *State v. Kimball*, 145 Idaho 542, 546, 181 P.3d 468, 472 (2008) (citing *In re Adoption of Doe*, 143 Idaho 188, 191, 141 P.3d 1057, 1060 (2006)); *see also Idaho Dept. of Health & Welfare v. Doe*, 150 Idaho 36, 41, 244 P.3d 180, 185 (2010).

[9] Storage Use Adjustment values include storage assignments reported on the Water District 01 Adjustment Worksheet as of November 22, 2023 (Attachment A). Personal communication with Water District 01 and water users indicates Water District 01 will finalize additional storage assignments this water year that will decrease the Storage Use Adjustment values and increase the Actual Carryover values of SWC entities.

4. Consistent with Finding of Fact 5, the Director concludes by clear and convincing evidence that no members of the SWC have a reasonable carryover shortfall for 2023.

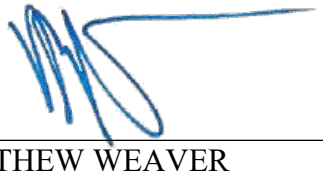
5. Because no members of the SWC have a reasonable carryover shortfall for 2023, junior ground water users do not need to establish "their ability to supply a volume of storage water or to conduct other approved mitigation activities that will provide water to the injured members of the SWC equal to the reasonable carryover shortfall for all injured members of the SWC." *Methodology Order* at 45. Therefore, the Director will not "issue an order curtailing junior ground water rights." *Id.*

ORDER

Based upon the foregoing, IT IS HEREBY ORDERED that no member of the SWC is owed reasonable carryover storage in 2023 for use in 2024.

IT IS FURTHER ORDERED that this final order concludes the application of the *Methodology Order* to the climatic, hydrologic, and agronomic facts of the 2023 irrigation season.

DATED this 30th day of November 2023.



MATHEW WEAVER
Director

EXPLANATORY INFORMATION TO ACCOMPANY A FINAL ORDER

(To be used in connection with actions when a hearing was **not** held)

(Required by Rule of Procedure 740.02)

The accompanying order is a "**Final Order**" issued by the department pursuant to section 67-5246, Idaho Code.

PETITION FOR RECONSIDERATION

Any party may file a petition for reconsideration of a final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: The petition must be received by the Department within this fourteen (14) day period.** The department will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law. See section 67-5246(4), Idaho Code.

REQUEST FOR HEARING

Unless the right to a hearing before the director or the water resource board is otherwise provided by statute, any person who is aggrieved by the action of the director, and who has not previously been afforded an opportunity for a hearing on the matter shall be entitled to a hearing before the director to contest the action. The person shall file with the director, within fifteen (15) days after receipt of written notice of the action issued by the director, or receipt of actual notice, a written petition stating the grounds for contesting the action by the director and requesting a hearing. See section 42-1701A(3), Idaho Code. **Note: The request must be received by the Department within this fifteen (15) day period.**

APPEAL OF FINAL ORDER TO DISTRICT COURT

Pursuant to sections 67-5270 and 67-5272, Idaho Code, any party aggrieved by a final order or orders previously issued in a matter before the department may appeal the final order and all previously issued orders in the matter to district court by filing a petition in the district court of the county in which:

i. A hearing was held,
ii. The final agency action was taken,
iii. The party seeking review of the order resides, or
iv. The real property or personal property that was the subject of the agency action is located.

The appeal must be filed within twenty-eight (28) days of: a) the service date of the final order, b) the service date of an order denying petition for reconsideration, or c) the failure within twenty-one (21) days to grant or deny a petition for reconsideration, whichever is later. See section 67-5273, Idaho Code. The filing of an appeal to district court does not in itself stay the effectiveness or enforcement of the order under appeal.

Revised July 1, 2010

APPENDIX B-2

Final Order Establishing 2018 Reasonable Carryover (Methodology Step 9), IDWR Docket No. CM-DC-2010-001 (Nov. 30, 2018)

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **FINAL ORDER ESTABLISHING 2018 REASONABLE CARRYOVER** ***(METHODOLOGY STEP 9)***

FINDINGS OF FACT

1. On April 19, 2016, the Director ("Director") of the Idaho Department of Water Resources ("Department") issued the *Fourth Amended Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("Methodology Order"). The Methodology Order establishes nine steps for determining material injury to members of the Surface Water Coalition ("SWC"). This order applies step nine, the final step of the Methodology Order, for the 2018 water year.

2. The Methodology Order describes step 9 as follows:

> Step 9: Following the end of the irrigation season (on or before November 30), the Department will determine the total actual volumetric demand and total actual [crop water need] for the entire irrigation season. This information will be used for the analysis of reasonable carryover shortfall, selection of future BLY, and for the refinement and continuing improvement of the method for future use.
>
> On or before November 30, the Department will issue estimates of actual carryover and reasonable carryover shortfall volumes for all members of SWC. These estimates will be based on, but not limited to, the consideration of the best available water diversion and storage data from Water District 01, return flow monitoring, comparative years, and [reasonable in-season demand]. These estimates will establish the obligation of junior ground water users in providing water to the SWC for reasonable carryover shortfall. Fourteen (14) days following the issuance by the Department of reasonable carryover shortfall obligations, junior ground water users will be required to establish, to the satisfaction of the Director, their ability to supply a volume of storage water or to conduct other approved mitigation activities

that will provide water to the injured members of the SWC equal to the reasonable carryover shortfall for all injured members of the SWC. If junior ground water users cannot provide this information, the Director will issue an order curtailing junior ground water rights.

Methodology Order at 38-39.

3. The following table summarizes the 2018 irrigation season diversions, crop water need, and reasonable in-season demand ("RISD") volumes for each SWC entity. RISD is calculated for each SWC entity using demand, crop water need, and project efficiency *Methodology Order* at 16. All values are reported in acre-feet ("AF").

Entity	Demand[1]	Crop Water Need	RISD
A&B	64,192	38,220	62,661
AFRD2	456,319	156,633	439,226
BID	256,034	111,821	261,340
Milner	68,429	31,156	54,637
Minidoka	370,890	200,689	430,338
NSCC	1,037,970	367,342	1,023,441
TFCC	1,127,305	462,889	1,174,249

4. The following table summarizes the final calculated 2018 in-season demand shortfall values in AF, if any, for each member of the SWC. The values in this table are different from those in the *Final Order Regarding April 2018 Forecast Supply (Methodology Steps 1-3)* (April 17, 2018) ("April Forecast Supply Order") and *Order Revising April 2018 Forecast Supply (Methodology Step 5 & 6)* (July 23, 2018) ("July Order"). The differences are due to changes in total supply and RISD that reflect diversion and ET data not available at the time the April Forecast Supply Order and July Order were issued. In the April Forecast Supply Order, the Director predicted no demand shortfall to members of the SWC. *April Forecast Supply Order* at 3. In the July Order, the Director continued to predict no demand shortfall. *July Order* at 8. The second column of the summary table contains the total natural flow diversions from April 1 to October 31 for each SWC member.[2] The third column summarizes the natural flow adjustments, which include natural flow delivered for recharge[3] and natural flow delivered to SWID.[4] The fourth column contains the preliminary storage allocations reported from the July 11, 2018,

[1] The "Demand" for each SWC entity is equal to each entity's 2018 April – October diversions.

[2] The natural flow diverted was calculated from the preliminary daily water right accounting records located here: http://www.idwr.idaho.gov/water-data/water-rights-accounting/research.html.

[3] Natural flow recharge values represent accomplished recharge through the Idaho Water Resource Board's recharge water rights as of October 31, 2018.

[4] *See* column titled "Natural Flow Adjustment" in "Attachment A" for further information regarding these adjustments.

Water District 01 storage report.[5] The fifth column summarizes storage adjustments due to application of the Minidoka Credit.[6] The sixth column contains the total supply available to each SWC member and is calculated by summing columns two through five. The seventh column contains the calculated RISD. The demand shortfall in the last column is calculated by subtracting the RISD from the total supply. The demand shortfall is zero when the total supply is greater than the RISD. No members of the SWC have a demand shortfall for 2018.

Entity	Natural Flow Diverted through 10/31	Natural Flow Adjustment	Preliminary Storage Allocation	In-Season Storage Adjustment	Total Supply	RISD	Demand Shortfall
A&B	25,064	-	134,983	-	160,047	62,661	0
AFRD2	257,879	(66,910)	387,120	1,000	579,089	439,226	0
BID	139,908	(3,714)	222,616	5,130	363,940	261,340	0
Milner	24,489	(3,011)	87,796	-	109,274	54,637	0
Minidoka	197,623	-	359,982	8,370	565,975	430,338	0
NSCC	555,645	-	844,619	(7,750)	1,392,514	1,023,441	0
TFCC	946,206	(923)	241,687	(6,750)	1,180,220	1,174,249	0

5. The following table summarizes the end of season reasonable carryover shortfall calculation for 2018. All values are reported in AF. The second column of the table contains the preliminary storage allocations reported from the July 11, 2018, Water District 01 storage report. The third column summarizes adjustments for storage water due to application of the Minidoka Credit. The fourth column summarizes adjustments for water delivered through the SWC member's canals for use by non-SWC members.[7] The fifth column contains the total storage water use reported from the October 31, 2018, Water District 01 water right accounting report.[8] The sixth column contains the actual carryover volumes as defined by the Methodology Order (*Methodology Order* at 38) and is calculated by subtracting the sum of columns four and five from the sum of columns two and three. The seventh column contains the reasonable carryover volumes established in the Methodology Order. *Methodology Order* at 28. The reasonable carryover shortfall in the last column is zero when the actual carryover is greater than the reasonable carryover, otherwise it is calculated as the difference between reasonable carryover and the actual carryover volume for each member of the SWC. No members of the SWC have a reasonable carryover shortfall for 2018.

[5] The preliminary storage allocations can be found on Water District 01's website located here: http://www.waterdistrict1.com/WD01%20Storage%20Report.pdf.

[6] *See* column titled "In-Season Storage Adjustment" in "Attachment A." The Minidoka Credit is a long existing exchange of stored water among AFRD2, BID, MID, NSCC, and TFCC that has been incorporated into an agreement of those entities and accepted by the SRBA district court.

[7] *See* column titled "Storage Use Adjustment" in "Attachment A" for further information regarding these adjustments.

[8] This water right accounting report was published to the Water District 01 webpage on November 6, 2018: http://www.waterdistrict1.com/SNKWRA.htm.

	Preliminary Storage Allocation	In- Season Storage Allocation Adjustment	Storage Use Adjustment	Storage Use	Actual Carryover	Reasonable Carryover	Reasonable Carryover Shortfall
A&B	134,983	0	0	39,128	95,855	18,500	0
AFRD2	387,120	1,000	(14,500)	284,850	117,770	11,500	0
BID	222,616	5,130	(6,680)	122,807	111,619	0	0
Milner	87,796	0	(1,312)	45,252	43,856	4,800	0
Minidoka	359,982	8,370	(200)	173,467	195,084	0	0
NSCC	844,619	(7,750)	(9,100)	491,424	354,545	65,500	0
TFCC	241,687	(6,750)	(1,637)	183,659	52,915	25,200	0

6. The above determinations are based on water diversion and storage data from Water District 01. Although these preliminary numbers are subject to revision by Water District 01 during final accounting for 2018, revisions will not become available until after issuance of this order. For this reason, these estimates establish the final obligation of junior ground water users in supplying water to the SWC for reasonable carryover shortfall. The above determination of reasonable carryover shortfall is carried forward from the Methodology Order and takes into account the best available water diversion and storage data, comparative water years, and RISD. *Methodology Order* at 38-39.

CONCLUSIONS OF LAW

1. The Methodology Order states that, on or before November 30, the Director will estimate the SWC's reasonable carryover shortfall, if any, for 2018. *Methodology Order* at 38-39. If a reasonable carryover shortfall is established, junior-priority ground water users shall have fourteen days to demonstrate, to the satisfaction of the Director, "their ability to provide a volume of storage water or to conduct other approved mitigation activities that will provide water to the injured members of the SWC equal to the reasonable carryover shortfall for all injured members of the SWC." *Id.* at 39.

2. The evidentiary standard to apply in conjunctive administration of hydraulically connected water rights is clear and convincing. *A&B Irr. Dist. v. Idaho Dept. of Water Resources*, 153 Idaho 500, 524, 284 P.3d 225, 249 (2012).

3. "Clear and convincing evidence refers to a degree of proof greater than a mere preponderance." *Idaho State Bar v. Topp*, 129 Idaho 414, 416, 925 P.2d 1113, 1115 (1996) (internal quotations removed). "Clear and convincing evidence is generally understood to be '[e]vidence indicating that the thing to be proved is highly probable or reasonably certain.'" *State v. Kimball*, 145 Idaho 542, 546, 181 P.3d 468, 472 (2008) citing *In re Adoption of Doe*, 143 Idaho 188, 191, 141 P.3d 1057, 1060 (2006); *see also Idaho Dept. of Health & Welfare v. Doe*, 150 Idaho 36, 41, 244 P.3d 180, 185 (2010).

4. Consistent with Finding of Fact 5, the Director concludes by clear and convincing evidence that no members of the SWC have a reasonable carryover shortfall for 2018.

5. Because no members of the SWC have a reasonable carryover shortfall for 2018, junior ground water users do not need to establish "their ability to supply a volume of storage water or to conduct other approved mitigation activities that will provide water to the injured members of the SWC equal to the reasonable carryover shortfall for all injured members of the SWC." *Methodology Order* at 39. The Director will not "issue an order curtailing junior ground water rights." *Id.*

ORDER

Based upon the foregoing, IT IS HEREBY ORDERED that no member of the SWC is owed reasonable carryover storage in 2018 for use in 2019.

IT IS FURTHER ORDERED that this final order concludes application of the Methodology Order to the climatic, hydrologic, and agronomic facts of the 2018 irrigation season.

DATED this 30th day of November 2018.

GARY SPACKMAN
Director

EXPLANATORY INFORMATION TO ACCOMPANY A FINAL ORDER

(To be used in connection with actions when a hearing was **not** held)

(Required by Rule of Procedure 740.02)

The accompanying order is a "**Final Order**" issued by the department pursuant to section 67-5246, Idaho Code.

PETITION FOR RECONSIDERATION

Any party may file a petition for reconsideration of a final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: The petition must be received by the Department within this fourteen (14) day period.** The department will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law. See section 67-5246(4), Idaho Code.

REQUEST FOR HEARING

Unless the right to a hearing before the director or the water resource board is otherwise provided by statute, any person who is aggrieved by the action of the director, and who has not previously been afforded an opportunity for a hearing on the matter shall be entitled to a hearing before the director to contest the action. The person shall file with the director, within fifteen (15) days after receipt of written notice of the action issued by the director, or receipt of actual notice, a written petition stating the grounds for contesting the action by the director and requesting a hearing. See section 42-1701A(3), Idaho Code. **Note: The request must be received by the Department within this fifteen (15) day period.**

APPEAL OF FINAL ORDER TO DISTRICT COURT

Pursuant to sections 67-5270 and 67-5272, Idaho Code, any party aggrieved by a final order or orders previously issued in a matter before the department may appeal the final order and all previously issued orders in the matter to district court by filing a petition in the district court of the county in which:

i. A hearing was held,
ii. The final agency action was taken,
iii. The party seeking review of the order resides, or
iv. The real property or personal property that was the subject of the agency action is located.

The appeal must be filed within twenty-eight (28) days of: a) the service date of the final order, b) the service date of an order denying petition for reconsideration, or c) the failure within twenty-one (21) days to grant or deny a petition for reconsideration, whichever is later. See section 67-5273, Idaho Code. The filing of an appeal to district court does not in itself stay the effectiveness or enforcement of the order under appeal.

Attorneys for A&B Irrigation District

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF THE MITIGATION PLAN FILED BY A&B IRRIGATION DISTRICT FOR THE DISTRIBUTION OF WATER TO WATER RIGHTS HELD BY THE SURFACE WATER COALITION	)	**CM-MP-2015-003** **STIPULATION REGARDING A&B IRRIGATION DISTRICT'S AMENDED RULE 43 MITIGATION PLAN**

COME NOW, A&B IRRIGATION DISTRICT ("A&B" or "District"), AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, and TWIN FALLS CANAL COMPANY, by and through their respective undersigned counsel of record, and hereby submits this stipulation in the above-captioned matter for A&B's ground water rights: 36-2080, 36-15192, 36-16749, 36-15127A, 36-15193A, 36-15194A, 36-15195A, 36-15196A, 36-15127B, 36-15193B, 36-15194B, 36-15195B, and 36-15196B.

As detailed below, diversion of ground water under A&B's water rights subject to any future curtailment orders issued by the Director in response to the Surface Water Coalition delivery call can be fully mitigated with various actions undertaken by the District. The Coalition hereby stipulates to this plan as described below.

BACKGROUND

A&B filed an amended mitigation plan on May 21, 2015. After published notice pursuant to CM Rule 43, the Director issued a *Final Order Approving Plan* on December 16, 2015. The parties are filing the current stipulation consistent with other stipulated mitigation plans (i.e. SWID, IGWA, Coalition of Cities) so that A&B does not have to submit new documentation every year showing that it can mitigate for its proportionate share of a predicted demand shortfall. *See Final Order Regarding April 2023 Forecast Supply (Methodology Steps 1-3)* at 5, n. 5.

A&B has curtailed the diversion of groundwater to approximately 3,573.6 acres within the Unit B portion of the irrigation district. A&B has delivered surface water to these "soft conversion" acres dating back to 1994 (1,378 acres) and 2016 (2,195 acres). The cessation of groundwater pumping and delivery or surface water benefits the Eastern Snake Plain Aquifer (ESPA) and the hydraulically connected reaches of the Snake River, including the Near Blackfoot to Minidoka reaches.

A&B also holds rights to storage water in American Falls Reservoir (46,826 af) and Palisades Reservoir (90,800 af) and has the ability to participate in Water District 01's Rental Pool. Available storage can be delivered to injured Coalition members to mitigate for any shortfalls caused by the District's junior priority ground water that are subject to curtailment beyond what may not be covered by the "soft conversions" described above. This action would

only be necessary if the benefits of the above conversions do not satisfy the injury caused by A&B's ground water rights that are found to be subject to curtailment in any given year.

The Mitigation Plan provides replacement water "at the time and place required by the senior-priority water right, sufficient to offset the depletive effect of ground water withdrawal on the water available in the surface or ground water source at such time and place as necessary to satisfy" injured senior surface water rights held by the Coalition, including A&B. *See* CMR 43.03.b.

A&B and the other parties hereby request the Director to approve this stipulation accordingly.

DATED this 27 day of December, 2023.

OTHER CITATIONS

Memorandum Decision (Gooding County Dist. Ct., Fifth Jud. Dist., Consolidated Case No. CV-2010-382, Sept. 26, 2014) ..... passim
Webster's Dictionary (www.merriam-webster.com) (visited Jan. 8, 2024) 11

STATEMENT OF THE CASE

I. Nature of the Case.

This case concerns the Idaho Ground Water Appropriators, Inc.'s ("IGWA" or "Districts") petition for judicial review of certain orders issued by the Director of the Idaho Department of Water Resources ("IDWR" or "Department") in the Surface Water Coalition's water right delivery call proceeding (CM-DC-2010-001). The Director updated the methodology for conjunctive administration in the spring of 2023, and affected parties were provided an opportunity for a hearing on those updates pursuant to Idaho Code § 42-1701A(3). Following the hearing, IGWA filed its present appeal challenging the Director's final *Post-Hearing Order* (R. 1067) and the *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("*Sixth Methodology Order*" or "*Sixth Order*") (R. 1004).[1]

II. Procedural History / Statement of Facts.

The Court is well versed on the underlying history of the Coalition's delivery call and resulting appeals and decisions. *See generally, Memorandum Decision and Order on Petitions for Judicial Review* (Gooding County Dist. Ct., Fifth Jud. Dist., Consolidated Case No. CV-2010-382, Sept. 26, 2014) (hereinafter referred to as the "*382 Decision*").[2] A brief background is provided below to summarize the history of the Department's prior orders and IGWA's actions related thereto.

IDWR issued its first *Final Order Regarding Methodology for Determining Material Injury to Reasonable In Season Demand and Reasonable Carryover* ("*First Order*") on April 7,

[1] The Director issued the *Fifth Amended Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* on April 21, 2023 (hereinafter "*Fifth Order*"). R. 43. That order was amended and superseded by the *Sixth Methodology Order* issued on July 19, 2023. R. 1004.

[2] A copy of the Court's prior decision is attached for convenience at Addendum A.

2010. That order, issued in response to the district court's initial remand,[3] set forth a ten (10) step process for annual conjunctive administration of the Coalition's delivery call. Following issuance of that order, the Director held another administrative hearing in response to petitions requesting the same on May 24-26, 2010.[4] Shortly after that hearing, the Director issued the *Second Amended Final Order Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("*Second Order*") on June 23, 2010.

Thereafter, twelve separate judicial review cases regarding the *Second Order* and various implementation orders were filed with district courts in Gooding, Lincoln, and Twin Falls Counties.[5] Those consolidated appeals culminated with the district court's *382 Decision* that comprehensively addressed the Director's methodology. *See* Addendum A. The fundamental concepts of the underlying methodology and IGWA's alleged defenses thereto have been fully adjudicated. Further, the parties' consultants have been familiar with the calculations and methods employed by the agency for over a decade. No party, including IGWA, appealed the Court's *382 Decision* and final judgment entered in that consolidated case.

Following the Court's review and ordered remand of the *Second Order*, the Director issued the *Third Methodology Order* on April 16, 2015. This order superseded the prior methodology orders and set out essentially the same nine-step process that is implemented by

[3] *See generally, Order on Petition for Judicial Review* (Gooding County Dist. Ct., Fifth Jud. Dist, Case No. CV-2008-551, July 24, 2009).

[4] Documents and hearing audio found at: https://idwr.idaho.gov/legal-actions/delivery-call-actions/SWC/. Similar to the timing of the facts in the current case, the Director held an administrative hearing on various petitions approximately six weeks from issuance of the initial methodology order. The Director recently used a similar timeframe in a conjunctive administration proceeding concerning water rights in Basin 37, where a notice of hearing was issued in early May and the hearing was held about six weeks later in early June. *See South Valley Ground Water District et al. v. IDWR*, __ P.3d__, 2024 WL 136840 (Idaho Jan. 12, 2024) ("*South Valley*").

[5] Documents filed in that case available at: https://idwr.idaho.gov/legal-actions/delivery-call-actions/swc/archived-matters/.

IDWR today.[6] Both IGWA and the City of Pocatello requested hearings on the *Third Order*. However, at about that same time the Coalition and IGWA reached general settlement terms concerning mitigation that season and filed a joint motion with IDWR requesting withdrawal of the *Third Order* and the April order applying the first three steps.[7] The City of Pocatello did not oppose that motion.

After execution and approval of the stipulated mitigation plan, the Coalition and IGWA further agreed to have IDWR reinstate the *Third Order* on March 9, 2016 and requested the agency to conjunctively administer ground water rights accordingly. The City of Pocatello requested a hearing on that order but also asked the Director to stay further action on its request.[8] Despite having an opportunity for an administrative hearing on its issues with the Director's methodology for several years, the City chose to continue that indefinite stay.

Approximately one month later the Director issued the *Fourth Methodology Order* on April 19, 2016.[9] The City of Pocatello again requested a hearing and a stay (May 4, 2016).[10] The Director continued to apply the methodology from 2017-2022 since not all junior ground water rights were covered by approved mitigation plans. R. 52-53.

In the fall of 2022 IDWR convened a technical working group comprised of staff and consultants for the parties to evaluate potential updates to the methodology. Sukow, Tr. Vol. I,

---

[6] *See Third Methodology Order* at 32-36. Available at: https://idwr.idaho.gov/wp-content/uploads/sites/2/legal/CM-DC-2010-001/CM-DC-2010-001-20150417-Third-Amended-Final-Order-Regarding-Methodology.pdf

[7] *See generally, SWC and IGWA Stipulation and Joint Motion* (May 8, 2015). Available at: https://idwr.idaho.gov/legal-actions/delivery-call-actions/SWC/

[8] Available at: https://idwr.idaho.gov/legal-actions/delivery-call-actions/SWC/

[9] Available at: https://idwr.idaho.gov/legal-actions/delivery-call-actions/SWC/

[10] Similar to its *Third Order* request, the City of Pocatello never asked the Director to lift the stay on its requested hearing on the *Fourth Methodology Order* which had been pending for several years.

53:11-15, Anders, Tr. Vol I, 170:5-6, 16-18. IDWR staff Matt Anders sent the first notice to the parties in early September. *See id.* 217:20-25.[11]

The working group participants included IDWR staff, as well as the parties' consultants and counsel, and other non-active participants. The working group held meetings at IDWR (with remote participation) on November 16, 17, 28 and December 1, 9, and 14, 2022. R. 1176. At each of these meetings Department staff received comments and feedback from the participants. R. 312 (Higgs participation); R. 316 (Sigstedt participation), Tr. Vol III, 13:19-24; R. 351 (Sullivan participation), Tr. Vol. II, 119:20-22; R. 473 (Colvin participation), Tr. Vol. I, 107:18-19.

Matt Anders presented information and data related to the "baseline year" at the November 16, 2022 meeting. *See* R. 1176 (11/16/22 Anders PowerPoint). Jennifer Sukow presented the results of using a transient analysis for determining a projected curtailment date on November 28, 2022. *See* R. 1176 (11/28/22 Sukow PowerPoint), 1424. In other words, the parties were put on notice over six months before issuance of the *Fifth Methodology Order* that these specific updates could be made to the methodology.[12]

Ultimately, following the series of meetings and presentations, IDWR staff submitted a preliminary recommendation to the Director on December 23, 2022. R. 2866. Consultants for the Coalition, IGWA, and the various Cities then submitted their own comments on or before

[11] Mr. Anders identified the topics and purpose of the TWG meetings in an October 25, 2022 email to counsel and all consultants. That email specifically listed potential updates to the "baseline year" and use of "ESPAM 2.2: Steady State vs. Transient." *See generally*, Ex. D to *Thompson Dec.* filed in *IGWA v. IDWR* (Ada County Dist. Ct., Fourth Jud. Dist., Case No. CV01-23-8187); publicly available at: https://idwr.idaho.gov/wp-content/uploads/sites/2/legal/CV01-23-08187/CV01-23-08187-20230530-Declaration-of-Travis-L.-Thompson-in-Support-of-Surface-Water-Coalitions-Response-in-Opposition.pdf

[12] Any allegations of insufficient time to analyze changes to the methodology are unfounded as the Director's *Fifth Order* was not the first time parties were presented with the updated baseline year and transient modeling analyses. R. 1176 (staff PowerPoints).

January 16, 2023. *See* R. 1300, 2867, 2879. IDWR reviewed and considered the comments submitted by the parties. Anders, Tr. Vol. I, 220:10-12.

On April 21, 2023 the Director issued the *Fifth Methodology Order* and the *Final Order Regarding April 2023 Forecast Supply* ("*April 2023 Order*") implementing steps 1-3 for the 2023 irrigation season. *See* R. 1, 48. The Director issued a notice that same day setting an administrative hearing to be held over six weeks later on June 6-10, 2023. *See* R. 62.

With these updates, several parties, including the Districts and the Coalition, all filed petitions requesting a hearing pursuant to section 42-1701A(3). R. 68, 90-103, 135-163, 263. The Districts and the Cities repeatedly requested the Director to stay or continue the scheduled hearing. R. 80, 282, 323, 446. The Coalition opposed these requests noting the fact that not all ground water rights were covered by an approved mitigation plan, potential worsening water supply conditions, and the need for timely water right administration during the irrigation season. R. 378, 457.

The Director considered the requests for delay and accommodated remote participation for certain individuals unable to travel to Boise, Idaho. *See* R. 425-431. However, the Director denied the repeated requests to delay the administrative hearing. R. 425, 500. Notably, the Director recognized the following:

> The Director has a responsibility to timely respond to injury incurred by senior water users and there should be no unnecessary delays in that process. *Am. Falls Reservoir Dist. No. 2 v. Idaho Dep't of Water Res*., 143 Idaho 862, 874, 154 P.3d 433, 445 (2007). "Clearly, a timely response is required when a delivery call is made and water is necessary to respond to that call." Id. The Department also agrees with the SWC that "[i]n practice, an untimely decision effectively becomes the decision; i.e. no decision is the decision." *Objection* at 3 (citing *Order on Plaintiffs' Motion for Summary Judgment* at 97 (AFRD#2 et al. v. IDWR, No. CV-2006-600 (Gooding County Dist. Ct. Idaho June 2, 2006)).

R. 430.

The Director set a deadline to disclose witness and exhibit lists and any expert reports by May 30, 2023.[13] R. 126. The parties identified numerous witnesses and exhibits and disclosed expert reports prior to the hearing. R. 505-630, 792-861,1208-1231, 1511-1579, 1600-1632, 2112-2368. Notably, IGWA, the Cities, and individual ground water districts listed five different retained expert witnesses to testify at the administrative hearing. R. 524, 536, 546, 575. The Director presided over a four-day hearing held June 6-9, 2023.[14] The parties had a full and fair opportunity to present testimony and exhibits, as well as cross-examine IDWR staff and all other witnesses. *See generally*, Tr. Vol. I-IV.

The parties submitted post-hearing briefs at the request of the Director. R. 924-1103. Thereafter, the Director issued the final *Post-Hearing Order* and the *Sixth Methodology Order* on July 19, 2023. R. 1067, 1004. The *Sixth Order* essentially continues the same nine steps from the *Fourth Order* issued in 2016. Again, the basic framework and steps were previously litigated on judicial review before this Court. *See generally, 382 Decision.*[15]

The *Sixth Methodology Order* incorporates known additional data from 2015-2021 with the following updates to certain methodology steps:

a. Baseline Year

The methodology's baseline year "is a year or average of years when irrigation demand represents conditions that predict need in the current year of irrigation at the start of the irrigation

[13] The parties agreed to close discovery that day as well. The Cities and Districts propounded discovery and took the depositions of Jennifer Sukow, Matt Anders, and Jay Barlogi (Twin Falls Canal Company). R. 164-182, 400-406, 419-424, 435-445.

[14] The Director set the hearing date by notice on April 21st and granted the various requests for hearing that followed. R.62, 490.

[15] Documents filed in that case available at: https://idwr.idaho.gov/legal-actions/delivery-call-actions/swc/archived-matters/.

season." R. 1006. A baseline year "should represent a year(s) of above average diversions . . . and should also represent a year(s) of above average temperatures and reference ET, and below average precipitation to ensure that increased diversions were a function of crop water need and not other factors . . .[and] actual supply should be analyzed to assure that the BLY is not a year of limited supply." R. 1006-07. The criteria for selecting a baseline year have not changed since the Director issued the *Second* through *Fifth Orders*.[16]

However, what has changed is the number of years the Director had available to analyze against those criteria. R. 1015 ("the years 2000-2021 were considered for the BLY selection"). As a result of the updated data, the Director found that "BLY 06/08/12 no longer satisfies the presumption criteria that total diversions in the BLY should exceed the average annual diversions." R. 1015. Consequently, the Director concluded that "total diversions for 2018 adequately protect senior water rights when predicting the demand shortfall at the start of the irrigation season and selects 2018 as the BLY." R. 1016.

Notably, IDWR staff recommended changing the baseline year to 2018 in its December 23, 2022 staff memorandum. R. 2866. Whereas the data from 2018 was presented to the parties back in mid-November 2022, IGWA was on notice and had the ability to evaluate this data over the course of several months. R. 1176 (11/18/22 Anders PowerPoint).

b. Reasonable Carryover

The methodology for determining reasonable carryover did not change from the *Third* or *Fourth Orders* either. R. 1026-34. What changed was the Director's use of projected demand in his calculation with a projected demand (2018 BLY) instead of (06/08/12 BLY). R. 1028. The

[16] The Director previously updated the baseline year in this matter. In 2016, the Director updated the baseline year from the 06/08 average used in the *Second Order* to a new average of 06/08/12 because at that time he found "the 06/08 diversions are no longer above average." *See Fourth Order* at 11; available at: https://idwr.idaho.gov/legal-actions/delivery-call-actions/SWC/.

Director did make adjustments to certain Coalition members' "maximum projected carryover need" as well. R. 1032-34. Although the reasonable carryover quantities changed in response to a change in the baseline year, the Director's evaluation of injury to carryover storage and the basic mechanics of Step 9 did not change.

c. Determination of Curtailment Date

The Director identified how the ESPAM groundwater model has been and can be run to identify a curtailment date for junior groundwater rights causing material injury. R. 1034-36. Unless another procedure has been agreed to and approved, if a ground water right is not covered by an approved and effectively operating mitigation plan, then curtailment is the Director's only remedy to prevent material injury to the senior right.

A steady-state analysis evaluates the impact of curtailment on the aquifer and connected river reaches long-term (i.e. 50 years), whereas a transient analysis predicts the timing of changes that would occur during the irrigation season. R. 1035. The Director acknowledged that only "9% to 15% of the steady state response is predicted to accrue to the near Blackfoot to Minidoka reach between May 1 and September 30 of the same year." *See id.* In other words, if curtailment is based upon a steady-state analysis, it severely under-mitigates a predicted injury to the Coalition's senior water rights. Consequently, the Director adopted a transient analysis as being "necessary to simulate the short-term curtailments prescribed in the methodology."[17] R. 1036. The potential use of a transient simulation was first disclosed in the fall of 2022. R. 1176 (11/28/22 Sukow PowerPoint). In other words, the parties and their consultants had well over

[17] Such a finding is consistent with the Director's approval of mitigation plans where he allows the delivery of storage equal to the amount of an injury finding.

five months to analyze the Director's use of ESPAM in this manner.[18]

The Director's updates were incorporated into both the *Fifth* and *Sixth Methodology Orders* issued in 2023. No member of IGWA was curtailed in response to the issuance of these orders.

STANDARD OF REVIEW

When reviewing an agency action on a petition for judicial review, this court must affirm the agency unless it finds that the agency's findings, inferences, conclusions, or decisions are: "(a) in violation of constitutional or statutory provisions; (b) in excess of the statutory authority of the agency; (c) made upon unlawful procedure; (d) not supported by substantial evidence in the record as a whole; or (e) arbitrary, capricious, or an abuse of discretion." *3G AG LLC v. Idaho Dept. of Water Res.*, 170 Idaho 251, 257, 509 P.3d 1180, 1186 (2022) (quoting I.C. § 67-5279(3); *see also*, *South Valley*, 2024 WL 136840, at *5. Furthermore, even if one of the conditions in section 67-5279(3)(a)-(e) is met, a reviewing court should still affirm the agency action "unless substantial rights of the appellant have been prejudiced." *A&B Irr. Dist. v. Idaho Dept. of Water Res.*, 153 Idaho 500, 505-06, 284 P.3d 225, 230-31 (2012) (quoting I.C. § 67-5279(4)).

Finally, the court will not substitute its judgment for that of the agency as to the weight of the evidence on questions of fact. *See 3G AG LLC*, 170 Idaho at 257, 509 P.3d at 1186 (citing Idaho Code § 67-5279(1)); *South Valley*, 2024 WL 136840, at *5. So long as the agency's determinations are supported by substantial, competent evidence in the record, the factual determinations are binding on the court, even where there is conflicting evidence before the agency. *See In re Idaho Workers Compensation Bd.*, 167 Idaho 13, 22, 467 P.3d 377, 386 (2020);

[18] Ms. Sigstedt, IGWA's consultant, is very familiar with ESPAM as she has participated on IDWR's Eastern Snake Hydrologic Modeling Committee for years. R. 316. Mr. Sullivan, the Cities' consultant, has participated on the committee "since its inception." R. 350.

South Valley, 2024 WL 136840, at *5, 20 ("We do not resolve factual issues like this on appeal. Our duty is to review the decision of the Director to determine whether substantial, competent evidence supports his decision").

ARGUMENT

> **déjà vu**. noun. 1 a: the illusion of remembering scenes and events when experienced for the first time. b: a feeling that one has seen or heard something before. 2: something overly or unpleasantly familiar.

Webster's Dictionary (www.merriam-webster.com) (visited Jan. 8, 2024).

All counsel, parties, and this Court may be experiencing what Webster's aptly describes above, a keen sense of "déjà vu." The Surface Water Coalition's continued water right delivery call proceeding has been ongoing since 2005. Since that time the Department has held three administrative hearings, numerous petitions for judicial review have been filed, district courts have issued two memorandum decisions and final judgments, and the Idaho Supreme Court has issued two opinions. *See AFRD#2 v. IDWR*, 143 Idaho 862, 154 P.3d 433 (2007); *A&B Irr. Dist. v. IDWR*, 155 Idaho 640, 315 P.3d 828 (2013).

Through it all, the Department has produced a comprehensive procedure or "methodology" for responding to the call on an annual basis. This basic framework was fully litigated in the *382 Decision*. *See* Addendum A. No party appealed the *382 Decision*, thus that ruling, or "law of the case," is a critical adjudication of the same claims raised in IGWA's present appeal.

When IDWR released the *Fourth Methodology Order* in the summer of 2016, only the City of Pocatello requested a hearing on that decision. Despite having an opportunity for an administrative hearing on its issues for several years, the City voluntarily chose to continue the indefinite stay before the agency. IGWA did not request a hearing on that decision and did not challenge the Director's methodology.

With additional years of data, the Director updated the inputs into the methodology in the spring of 2023. The parties were put on notice of these potential updates as early as the fall of 2022, and engaged in an open technical working group process for several months. With the issuance of the *Fifth Methodology Order* in mid-April, the Director provided yet another opportunity for hearing on his decision pursuant to section 42-1701A(3). Though the Department's updates largely addressed the addition of known data from the years 2015-2021, IGWA and other parties impermissibly attempted to restart the delivery call case as if the prior 18 years of litigation didn't happen.

Contrary to IGWA's efforts, the administrative hearing and this appeal do not provide groundwater users with the chance to relitigate defenses that have already been denied. Pursuant to well-established doctrines of *res judicata* and "law of the case," the Court can deny IGWA's appeal and affirm the agency's final order. In addition, IGWA has further failed to show that the Director erred in any of the ways set forth by the Idaho APA. *See* I.C. § 67-5279.

Finally, the Director's decisions are supported by substantial competent evidence and IGWA cannot show prejudice to any substantial right. For the reasons set forth below, the Court should deny IGWA's petition for judicial review and affirm IDWR's decisions in this case.

DUE PROCESS ISSUES

I. The Director's Fifth and Sixth Methodology Orders Satisfied Due Process and the Idaho Administrative Procedures Act.

a. The Administrative Hearing Was Timely Because it Occurred Before any Deprivation of Property Rights.

IGWA argues that the Director improperly failed to hold a hearing "*before* decid[ing] the matter," in contravention of Idaho Code § 67-5242. *IGWA Br*. at 17-18 (emphasis in original). This argument fails because the Director's *Fifth Order* did not fully decide the matter and the Idaho APA does not specify when a hearing must take place. Following issuance of the *Fifth*

Order, the Director granted requests for and held an evidentiary hearing which complied with all elements of section 67-5242, as explained below. After considering the evidence and testimony, including the parties' post-hearing briefing, the Director then issued the final *Sixth Methodology Order*. R. 1004. This order was issued after the hearing and was the dispositive order that IGWA claims actually impacted the property rights of its members.

Other junior groundwater users advanced this same argument a dozen years ago, and the Supreme Court rightly rejected it in *Clear Springs Foods, Inc. v. Spackman*, 150 Idaho 790, 252 P.3d 71 (2011). In that case certain spring users filed delivery calls with IDWR in early 2005. Without holding a hearing, the Director issued orders requiring curtailment of specific junior groundwater rights, including those of the appellants. After several parties—including IGWA—moved to intervene, the Director held an evidentiary hearing regarding the delivery calls. 150 Idaho at 796, 252 P.3d at 77. Following the 12-day hearing, the hearing officer issued his findings of fact, conclusions of law, and recommendation. *See id.* In July 2008, the Director issued a final order "adopt[ing] the [2005] findings of fact and conclusions of law, the hearing officer's recommendations, and the curtailment orders," subject to certain modifications. *Id.*

The groundwater users in *Clear Springs* "ask[ed] that the curtailment orders be set aside for the failure to grant them a hearing before the orders were issued," arguing that "due process entitles property owners to an opportunity for a hearing before he is deprived of any significant property interest." *Id.* at 814 (cleaned up). The Supreme Court noted that the users "were given notice and a hearing before the Director issued his final order, and it is that order which is the subject of this appeal." *Id.* Thus, "[t]hat they may have initially been denied due process with respect to the curtailment orders issued in May and July 2005 does not invalidate the final order issued in July 2008 after the hearing." *Id.*

The facts here are no different with respect to the Director honoring IGWA's due process rights. Moreover, the parties have been provided the opportunity for several hearings on the issues advanced by IGWA. First, IDWR held a three-week hearing in 2008 on the initial orders. When the Director issued the first methodology order in early 2010 the parties were provided another opportunity for a hearing regarding the use of updated 2008 data. Finally, when the Director issued the *Fifth Order* and the *April As-Applied Order*, he held yet another hearing in June 2023. Importantly, neither of these orders substantially prejudiced IGWA's rights as its members were covered by an approved mitigation plan. Stated another way, the notice of curtailment did not deprive IGWA's members of any property right in the spring of 2023. Moreover, the Director allowed for pre-hearing procedures and discovery, allowed expert reports and testimony, and held a hearing that lasted four days. There is no question IGWA had a full and fair opportunity to examine its witnesses, introduce exhibits, and cross-examine IDWR and other parties' witnesses.

Then, on July 19, 2023, the Director issued the *Sixth Order,* which modified the *Fifth Order* based on evidence presented at the hearing. Similar to the *Clear Springs* case, the Director's process of holding a hearing after an initial order but before a final order, where the hearing affected the final order, satisfies due process and is a remedy specifically provided by section 42-1701A(3). *See* 150 Idaho at 816, 252 P.3d at 97. The litigation history in this matter further belies IGWA's due process claims. Although IGWA attempted to stop the June hearing on due process grounds, the Court recognized the need for timely action in the unique context of the in-season water right administration and the fact the methodology order had been updated before to incorporate new data and techniques. *See* Addendum B.[19]

[19] Transcript of court's ruling in *IGWA v. IDWR*, Ada County Dist. Ct., Fourth Jud. Dist., Case No. CV01-23-8187 (June 1, 2023).

Further, the Idaho Supreme Court's recent discussion of "due process" in conjunctive administration matters is instructive regarding the facts in this case. In *South Valley* the Court explained:

> Procedural due process requires that there be some process to ensure that an individual is not arbitrarily deprived of his rights in violation of the state or federal constitutions. . . . Determining whether an individual's due process rights have been violated requires this Court to engage in a two-step analysis. . . . For the first step, we must decide whether an individual's threatened interest is a liberty or property interest under the Fourteenth Amendment. *Id.* In the second step, we "determine[ ] what process is due." *Id.* Water rights are real property rights that require due process, so the first step is met. . . . On the contrary, "the determination of what process is required" for a particular curtailment "requires a balancing of both the nature of the governmental function involved and the private interests affected." . . . . Three factors guide this balancing test:
>
> > "(1) the importance of the private interest at stake; (2) the risk of an erroneous deprivation of rights given the processes at hand and the probable value, if any, of additional or substitute procedural safeguards; and (3) the Government's interest, 'including the function involved and the fiscal and administrative burdens that the additional or substitute procedural requirement would entail.'"

South Valley, 2024 WL 136840, at *23-24.

IGWA essentially claims the Director had no authority to issue the *Fifth Order* absent a hearing. IGWA's argument ignores section 42-1701A(3) and the Director's discretion and timeliness requirements for purposes of conjunctive administration. Applying the two-step analysis in *South Valley* there is no dispute that water rights are property rights. As to the second step, the Director did not "curtail" any junior rights following issuance of the order, but instead, similar to the facts in *South Valley*, "opted for a pre-curtailment process complete with advance notice, a full panoply of pre- and post-hearing procedures, and a [four]-day hearing." 2024 WL 136840, at 25 (emphasis added). Reviewing the private interests at stake, the risk of an erroneous deprivation of rights, and the government interest in timely administration of water rights, the Director satisfied due process.

First, IGWA's junior groundwater right interests did not outweigh the Coalition's senior surface water right interests as explained by the Supreme Court in *South Valley:*

> Furthermore, the risk of curtailment of a junior-priority groundwater right during a time of shortage is a risk that Idaho water users knowingly undertake and for which they should always plan, as senior surface water users must also do. We conclude that both Senior and Junior water users had significant private interests at stake, and that given the balance of risk among all water users, those with junior rights were the party fittingly most affected by a curtailment determination.

2024 WL 136840, at *24.

In this case the Director forecasted an initial injury to certain senior water rights in April and recognized his duty to act in a timely manner during the irrigation season. R. 430-31 ("To ensure timely administration for predicted material injury in this current irrigation season, the Director cannot agree to continue the hearing beyond June"). The Coalition opposed IGWA's repeated requests to delay the hearing and noted the predicted injury and potential worsening conditions that would only further injure senior rights. R. 378-87; 457-64 ("Further exacerbating potential injury this year is the deteriorating water supply evidenced by the U.S. Bureau of Reclamation's revised May 1st streamflow forecast and the recently released 2023 aquifer sentinel well index"); R. 467-79. Regardless of any snowpack conditions, groundwater levels had declined to near all-time lows in the spring of 2023 as well. R. 381, 392, 473, 478-79. Given the circumstances at the time, the junior groundwater right interests did not outweigh the interests of the senior surface rights and the need for timely water right administration.

Next, IGWA's complaints about the hearing process are similar to those rejected in the *South Valley* case. *See* 2024 WL 136840, at *24-25. There the Court noted that "[d]ue process is not a concept rigidly applied to every adversarial confrontation, but instead is a flexible concept calling for such procedural protections as are warranted by the situation." *Id.* The Court noted that "[t]ime was of the essence and in-season administration of these water rights was warranted

– curtailing out-of-priority water use *after the irrigation season had passed* would have been too little, too late." *Id.* at 25 (emphasis in original). The risk of any "erroneous deprivation of rights" was properly weighed and balanced by the Director in delaying implementing any curtailment order until after the June 2023 hearing was held. R. 430 ("The Director will not be issuing a curtailment order until after a hearing in this matter so that junior ground water users have the opportunity for a hearing before being curtailed"). IGWA and the Cities conducted pre-hearing discovery (R. 400), including deposing IDWR staff (R. 393, 435, 495) and TFCC's representative (R. 419, 452), filed several expert reports (R. 1511-2579, 1600-1632, 2369-2625) and submitted evidence through numerous witnesses and exhibits at hearing. This was in addition to prior hearings and IDWR's production of potential changes to the methodology provided months ago in the fall of 2022. R. 1176. Clearly, there was no "shortage of meaningful opportunities" for IGWA to be heard. *See e.g.*, 2024 WL 136840, at *25.

Finally, there is no question that the Director had an "essential government function" to administer water rights during the 2023 irrigation season. R. 430; *see also*, *South Valley*, 2024 WL 136840, at *25-26. As found by the Supreme Court, "[t]hese powers and duties would be hollow if, in times of drought, in-season administration of interconnected surface and groundwater rights must wait for protracted litigation before any curtailment occurs. The irrigation season is too short for that – especially in times of extreme drought." *Id.* at *26. The Director acknowledged his duty to administer within the exigencies of the irrigation season and provided an expedited hearing schedule that was consistent with prior cases (i.e. 2010 SWC hearing; 2021 Basin 37 hearing).

The Court recognized the same in its ruling denying IGWA's attempt to stop the June hearing. *See* Addendum B at 4, lns. 13-17 ("In any given year the reality is, there is a short time

frame between when water supply determinations can be made and when water users' demands for irrigation water begin. Any process employed by the director must account for the exigencies of these time constraints"). Under these circumstances the Director acted within reasonable timeframes that did not violate IGWA's due process rights.

Moreover, IGWA's reliance upon the U.S. Supreme Court's opinion in *Fuentes v. Shevin*, 407 U.S. 67 (1972) is mistaken. IGWA acknowledges *Fuentes*' requirements that the hearing must take place "before [a property owner] is deprived of a significant property interest" and "at a meaningful time and in a meaningful manner." *IGWA Br.* at 17 (quoting *Fuentes*, 407 U.S. at 80, 82). Here, the Director gave himself opportunity to—and in fact, did—amend the *Fifth Order* into the (final) *Sixth Order* to reflect the evidence and arguments presented at the hearing. Thus, the "notice and a hearing … serve[d] its full purpose" because it was "granted at a time *when the deprivation can still be prevented*." *Fuentes*, 407 U.S. at 81 (emphasis added).[20] Thus, it is not the sequence of the hearings and the orders that matter, it is whether a deprivation order preceded a hearing. IGWA can point to no "deprivation" of any property interest because no curtailment order was implemented against its members prior to the hearing (who regardless had safe harbor pursuant to an approved mitigation plan). R. 430.

Similarly, IGWA contends that a "hearing 'must be provided at a time which allows the person to reasonably be prepared to address the issue.'" *IGWA Br.* at 18 (quoting *State v. Doe*, 147 Idaho 542, 546, 211 P.3d 787, 791 (Ct. App. 2009)). IGWA's omission of the beginning of the quote is telling; in explaining the adequacy of notice for a disposition hearing, the court of appeals said: "In addition, *notice* must be provided at a time which allows the person to

[20] It also bears pointing out that the Court invalidated as violations of due process two state statutes which did not provide for opportunity to be heard before a state "authorizes its agents to seize property in the possession of a person upon the application of another." 407 U.S. at 80. The Director did no such thing here.

reasonably be prepared to address the issue." *Doe*, 147 Idaho at 546, 211 P.3d at 791. IDWR provided IGWA with notice over six weeks before the hearing occurred and IGWA was aware of the potential updates to the methodology several months before during the technical working group process. R. 1176. Again, under these unique circumstances IGWA was provided with adequate notice and had a meaningful opportunity to be heard.

IGWA further argues that "when it comes to conjunctive management, '[i]t is vastly more important that the Director have the necessary pertinent information and the time to make a reasoned decision based on the available facts.'" *See IGWA Br.* at 19 (citing *AFRD#2 v. IDWR*, 143 Idaho 862, 875, 154 P.3d 433, 446 (2007)). This quote is taken out of context—the Court was discussing the timeliness of responding to a delivery call and rejecting use of a bright-line rule in its resolution: "Given the complexity of the factual determinations that must be made in determining material injury, whether water sources are interconnected and whether curtailment of a junior's water right will indeed provide water to the senior, it is difficult to imagine how such a timeframe might be imposed across the board. It is vastly more important that the Director have the necessary pertinent information and the time to make a reasoned decision based on the available facts." *See AFRD#2*, 143 Idaho at 875, 154 P.3d at 446.

Furthermore, IGWA's argument that the Supreme Court "reprimanded the Director for issuing a curtailment order before holding a hearing" in *Clear Springs*, discussed above, is at best a red herring. It is true that the Court stated "the Director abused his discretion by issuing the curtailment orders without prior notice to those affected and an opportunity for a hearing." However, like the facts here, junior groundwater rights were not actually curtailed with the issuance of the initial orders in the *Clear Springs* case.

Furthermore, the Court's note did not invalidate the curtailment orders that were the subject of that appeal because the users "were given notice and a hearing before the Director issued his final order, and it is that order which is the subject of this appeal." *See Clear Springs*, 150 Idaho at 815-17, 252 P.3d at 96-98 (emphasis added). A reprimand is one thing; remand or vacatur entirely different. Whereas the Director repeatedly noted groundwater rights would not be curtailed until after the June 2023 hearing was held, IGWA received the due process due in this unique circumstance of timely water right administration during the exigencies of an irrigation season.[21] R. 430.

b. The Director Did Not Err in Denying the Cities' Request for an Independent Hearing Officer.

IGWA claims the Director violated section 67-5252 by denying the Cities' motion for an independent hearing officer. *IGWA Br.* at 24. The Cities requested the Director to appoint an independent hearing officer pursuant to section 42-1701A(2). R. 73. The Director denied this request in his discretion explaining that time was of the essence and that he had unique familiarity with the matter. R. 300. IGWA does not argue the Director abused his discretion but instead turns to the Idaho APA "disqualification" statute in support.

First, the statute does not apply to the Cities' underlying motion. The Cities requested appointment of an independent hearing officer, they did not seek to "disqualify" Director Spackman from presiding. R. 73. IGWA misinterprets the Cities' motion and now for the first time on appeal relies upon a statute that was not at issue before the agency.

[21] IGWA's other due process issues also fail. IGWA lists a number of issues alleging the hearing "was anything but fair." *IGWA Br.* at 22-23. All parties were subject to schedule provided, and the Director made accommodations for remote participation by IGWA's consultants. R. 431 ("Sophia Sigstedt and Jaxon Higgs may appear virtually by video link on June 6-10, 2023"). Further, the parties' consultants were familiar with the updates to the methodology going back as far as the fall of 2022. The fact certain consultants opted to continue with planned vacations was their choice and not a reason to change the hearing date or prevent timely water right administration during the 2023 irrigation season. Delaying for that reason would have unduly prejudiced the Coalition's senior water rights.

Moreover, IGWA misreads the statute by omitting subsection (4) which provides:

> (4) Where disqualification of the agency head or a member of the agency head would result in an inability to decide a contested case, the actions of the agency head shall be treated as a conflict of interest under the provisions of section 74-404, Idaho Code.

I.C. § 67-5252(4).

The Director, as the Department's agency head, is responsible for issuing final orders in this proceeding. Since section 67-5252(1) addresses "disqualification" of a presiding officer, IGWA provides no explanation or argument alleging that Director Spackman had a "conflict of interest" as defined by section 74-403(4).

IGWA has failed to demonstrate any error by the Director and has failed to present any argument or authority in support of its new theory on appeal. The Court can deny this argument accordingly. *See* I.R.C.P. 84(r); I.A.R. 35(a)(6); *Minor Miracle Productions, LLC v. Starkey*, 152 Idaho 333, 337, 271 P.3d 1189, 1193 (2012) ("When an appellant fails to assert his assignments of error with particularity and to support his position with sufficient authority, those assignments of error are too indefinite to be heard by the Court").

c. The Director's Development of and Reliance Upon the Agency Record Was Not Improper.

IGWA argues that the Director based his *Sixth Order* on an improper administrative record by blocking certain discovery prior to the hearing, preventing introduction of certain evidence at the hearing, and taking official notice of information after issuing the *Fifth Order* (but before issuing the final, *Sixth Order)*. The Coalition agrees that the APA requires "a full disclosure of all relevant facts and issues, including such cross-examination as may be necessary," and "the opportunity to respond and present evidence and argument on all issues involved." Idaho Code § 67-5242(3). To that end, the Department's rules provide that "[e]vidence should be taken by the agency to assist the parties' development of a record, not

excluded to frustrate that development." IDAPA 37.01.01.600.

The scope of the record is not without bounds, however, and the rules of procedure give the Director (or other presiding officer) substantial discretion in key respects. Contrary to IGWA's assertion, the Director, "with or without objection, *may* exclude evidence that is irrelevant, unduly repetitious, inadmissible on constitutional or statutory grounds, or on the basis of any evidentiary privilege provided by statute, rule or recognized in the courts of Idaho." IDAPA 37.01.01.600 (emphasis added); *see also* I.C. § 67-5251(1); *Chisholm v. Idaho Dept. of Water Res.*, 142 Idaho 159, 163, 125 P.3d 515, 519 (2005). Furthermore, "[a]ll other evidence *may* be admitted if it is of a type commonly relied upon by prudent persons in the conduct of their affairs." *Id.* (emphasis added). Finally, "[t]he agency's experience, technical competence and specialized knowledge may be used in evaluation of evidence." *Id.* And with respect to discovery, the presiding officer "may … authorize[]" certain types of discovery and "may limit the type and scope of discovery." IDAPA 37.01.01.520, 37.01.01.521.[22]

The courts echo this deference to the agency. "A strong presumption of validity favors an agency's actions." *Young Elec. Sign Co. v. State ex rel. Winder*, 135 Idaho 804, 807, 25 P.3d 117, 120 (2011). Courts "will only reverse a hearing officer's decision on the admissibility when there has been an abuse of discretion," though questions of relevancy are reviewed de novo. *See Chisholm*, 142 Idaho at 163, 125 P.3d at 519 (citations omitted). And of particular importance to the Director's actions here, the Director has a statutory duty to distribute water and "the details of

[22] IGWA cites *Lochsa Falls, L.L.C. v. State*, 147 Idaho 232, 241, 207 P.3d 963, 971 (2009), and *State v. Perkins*, 135 Idaho 17, 22, 13 P.3d 344, 349 (Ct. App. 2000), for the proposition that Rule 521 "must be applied in a manner that is both constitutional and consistent with the APA." *IGWA Br.* at 28. These citations are puzzling. *Lochsa Falls* does not discuss discovery or the scope or content of APA hearings; rather, it stands for the propositions that the APA governs the issuance of an encroachment permit and that, because no administrative remedies were available to the appellant, the district court violated due process by dismissing the complaint for failure to exhaust administrative remedies. *Lochsa Falls*, 147 Idaho at 235-41, 207 P.3d at 966-971. Similarly, *Perkins* does not address administrative due process at all; the case concerns a sex offender registration requirement and record expungement request. *Perkins*, 135 Idaho at 18-22, 13 P.3d at 345-349.

the performance of the duty are left to the director's discretion." *Musser v. Higginson*, 125 Idaho 392, 395, 871 P.2d 809, 812 (1994), abrogated on other grounds by *Rincover v. State, Dept. of Fin., Sec. Bureau*, 132 Idaho 547, 976 P.2d 473 (1999).

In this matter the Director and the parties have been working with the general framework of the methodology for well over a decade. Updates have been made over time and the Director convened the technical working group to address additional updates in the fall of 2022. R. 1176. The need to perform timely administration and provide for a pre-curtailment hearing process of over six weeks is not unusual in conjunctive administration cases that take place during the irrigation season. *See e.g. South Valley*, 2024 WL 136840, at *25. The Director provided a fair process given the exigencies of water right administration and did not abuse his discretion in these unique circumstances.

IGWA also protests the timing of the Director's order taking notice of certain agency materials. The Department's procedural rule 602 allows the Director to take official notice of agency reports and memoranda "before the issuance of any order that is based in whole or in part on facts or material officially noticed," and grants parties "an opportunity to contest and rebut the facts or material officially noticed." IDAPA 37.01.01.602. On May 5, 2023, the Director issued the *Notice of Materials Department Witnesses May Rely Upon and Intent to Take Official Notice*, which made available approximately 45 documents that Department officials "may rely upon *at the June 6-10 hearing*" (emphasis added). The June hearing gave the parties the opportunity to contest or rebut the noticed material, and the parties did so. The *Sixth Order* followed the June hearing and was based in part on the noticed material provided by the Department. Thus, the procedure functioned exactly as intended here and is not a basis for reversal. The Director properly exercised his discretion, and the Court should affirm accordingly.

SUBSTANTIVE ISSUES

I. IGWA's Misreading of Idaho Law Should be Denied.

IGWA begins its alleged "substantive errors" discussion with a flawed interpretation of the Ground Water Act and its application for conjunctive administration. First, IGWA vaguely implies that section 42-226 can be applied to limit conjunctive administration in some manner. *See IGWA Br.* at 30 ("it allows junior users to draw down the water table so long as they do not withdraw more water than the aquifer can sustain long-term . . . If groundwater diversions exceed the maximum sustainable yield of the aquifer priority determines which water rights are curtailed to maintain sustainable groundwater levels"). As noted, the "reasonable groundwater pumping level" provision in the Act only applies only to "groundwater" rights, not surface water rights. *See Clear Springs*, 150 Idaho at 804, 252 P.3d at 85 ("There is nothing in statute addressing reasonable aquifer levels. It only mentions reasonable pumping levels. By its terms, section 42-226 only applies to appropriators of ground water. The Spring Users are not appropriators of ground water . . . They are appropriators of surface water flowing from springs") (emphasis added). Accordingly, IGWA's misinterpretation of the statute can be soundly rejected.

Next, IGWA wrongly claims that the concept of "beneficial use" is further defined or conditioned by certain definitions and general statements of purpose in the CM Rules. Again, the Idaho Supreme Court has rejected IGWA's interpretation and has identified the limited import of CM Rule 20. In *Clear Springs* the Court held:

> On its face, [CM Rule 20.03] does not state that priority of right as between a senior surface water user and junior ground water users is to be disregarded as long as the Aquifer is not being overdrawn by ground water users. Likewise, the authorities cited in the Rule do not so state.
>
> * * *

> First, neither section (Art. XV § 4 and § 5) applies to the water user who has appropriated water directly from the water source. . . . Finally, neither section governs conjunctive management. . . . There is nothing in the wording of Article XV, § 7, that indicates that it grants the legislature or the Idaho Water Resource Board the authority to modify that portion of Article XV, § 3, which states, "Priority of appropriation shall give the better right as between those using the water" . . . The policy of securing the maximum use and benefit, and least wasteful use, of the State's water resources applies to both surface and underground waters, and it requires that they be managed conjunctively.

150 Idaho at 805-807, 252 P.3d at 86-88.

Accordingly, any claims of error related to the Director's application of the Ground Water Act or CM Rule 20 should be denied. Those provisions do not apply in the manner IGWA suggests and do not expose any errors in the Director's *Sixth Order* and the continued conjunctive water right administration in this case. Further, the following legal doctrines prohibit IGWA's attempts to re-challenge the methodology and the established burdens of proof and evidentiary standards adopted by the Idaho Supreme Court. *See A&B Irr. Dist.*, 155 Idaho at 655, 315 P.3d at 843.

II. Res Judicata and The Law of the Case Doctrines Preclude IGWA's Alleged Defenses.

IGWA attempts to impermissibly re-litigate certain defenses through its "substantive errors" portion of the opening brief. *See generally IGWA Br.* at 29-31, 36-44. These defenses, having been previously raised and litigated, are barred by both the *res judicata* and "law of the case" doctrines. In other words, IGWA cannot continue to regurgitate defenses that have already been denied by Idaho's judiciary. The Court should reject IGWA's arguments accordingly.

The doctrine of *res judicata* covers both claim preclusion and issue preclusion. *See Monitor Finance, L.C. v. Wildlife Ridge Estates, LLC*, 164 Idaho 555, 560, 433 P.3d 183, 188 (2019). Claim preclusion bars a subsequent action between the same parties upon the same claim or upon claims relating to the same cause of action. *See id.*

The three criteria are: 1) the original action ended in a final judgment on the merits; 2) the present claim involves the same parties; and 3) the present claim arises out of the same transaction or series of transactions as the original action. *See id.* The doctrine exists "to prevent the resurrection of a lawsuit already laid to rest." *See Byrd v. Idaho State Bd. of Land Comm'rs*, 169 Idaho 922, 931, 505 P.3d 708, 717 (2022). Further, the doctrine applies to administrative proceedings as well. *See id.* All three of the criteria are met here and therefore the Court should apply *res judicata* to deny IGWA's present appeal of the agency's alleged "substantive errors."

First, the appeal concerns the same parties, the Coalition, IGWA, and IDWR. Next, the claims arise out of the same transaction, the underlying delivery call proceeding and the Director's methodology for administration. IGWA collaterally attacks the Director's methodology for forecasting water supply, use of irrigated acreage, accounting for supplemental groundwater use, and calculating project efficiency and system improvements. *See IGWA Br.* at 32-39. IGWA also alleges the Director wrongly refused to deny the call on theories of "futile call" and "maximum beneficial use." *See id.* at 39-44. All of these claimed errors and defenses were previously litigated and denied.[23] Moreover, any challenges to the methodology steps and underlying analysis were fully adjudicated in the *382 Decision*. Consequently, the final criteria of a final judgment on the merits is met, and the Court can deny IGWA's appeal of these issues accordingly. There simply is no legal basis to allow IGWA to continue to litigate defenses that have already been denied.

[23] IGWA originally moved for summary judgment on "futile call" and its "maximum use" theories. *See* Addendum C (*Idaho Ground Water Appropriators' Motion for Summary Judgment and Memorandum in Support*, Mar. 23, 2005). The Director denied IGWA's motion. *See* Addendum D (*Order on Petition to Intervene and Denying Motion for Summary Judgment et al.*, Apr. 6, 2005). IGWA did not appeal the Director's decision on these issues, and the resulting order on judicial review and the Supreme Court opinion constitute a final adjudication on the merits of IGWA's claimed defenses. *See Order on Petition for Judicial Review* (Gooding County Dist. Ct., Fifth Jud. Dist., Case No 2008-551); *A&B Irr. Dist. v. IDWR*, 155 Idaho 640, 315 P.3d 828 (2013).

In addition to *res judicata*, the "law of the case" doctrine precludes IGWA from re-raising previously denied defenses and alleged errors in the methodology. The doctrine of "law of the case" is well established in Idaho and provides that "upon an appeal, the Supreme Court, in deciding a case presented states in its opinion a principle or rule of law necessary to the decision, such pronouncement becomes the law of the case, and must be adhered to throughout its subsequent progress both in the trial court and upon subsequent appeal." *Swanson v. Swanson*, 134 Idaho 512, 515, 5 P.3d 973, 976 (2000); *see also*, *South Valley*, 2024 WL 136840, at *15.

Idaho courts have applied the doctrine to preclude re-litigation of issues in cases that did not reach the Supreme Court during the first appeal. *See* 134 Idaho at 516, 5 P.3d at 977. Further, where a district court acts in an appellate capacity and there is no appeal to the Supreme Court, the rulings of the district court "become final rulings in the case, not subject to attack in this appeal, and which stated the law of the case that the magistrate–and even this appellate court–must follow in this appeal." *Id.*; *see also*, 2024 WL 136840, at *15 ("The doctrine prevents relitigating issues decided by a district court acting in its appellate capacity, even when an appeal was not taken to the Supreme Court"). The law of the case doctrine "prevents consideration on a subsequent appeal of alleged errors that might have been, but were not, raised in the earlier appeal." *State v. Hawkins*, 155 Idaho 69, 72, 305 P.3d 513, 516 (2013).

IGWA's claimed defenses of "futile call" and "maximum beneficial use" have been denied and do not preclude the Director's continued conjunctive administration in this matter. IGWA did not appeal those prior denials[24] and the Idaho Supreme Court affirmed the Director's ability to employ an adjustable "methodology" for administration of the call pursuant to the "established evidentiary standards, presumptions, and burdens of proof." *See* 155 Idaho at 648-

[24] *See supra* at 25, n. 23.

53, 315 P.3d at 836-41. Any alleged errors with the methodology framework and analysis were similarly addressed in the *382 Decision*. Consequently, these decisions are "law of the case" and therefore preclude re-litigation IGWA's alleged "substantive errors" and defenses.

Further, whereas this Court previously reviewed the methodology framework and the analyses and calculations used by the Director, IGWA cannot now claim errors related to the "baseline year," "forecast supply," and "system efficiency" issues that were previously litigated. *See IGWA Br.* at 32. The Director has updated the data based upon additional years, and IGWA cannot collaterally attack the underlying technique and analysis now. In short, both the *res judicata* and "law of the case" doctrines bar IGWA's present arguments and the Court should deny its appeal accordingly.

III. Best Science Claims

IGWA casts an overly broad argument that the *Clear Springs* Court "has instructed the Director use the 'best science available'" in support of its claims related to the forecast supply, irrigated acres, and supplemental groundwater. IGWA distorts the Court's evaluation of ESPAM in that case as standing for a new standard that the Director somehow violated.[25] IGWA further alleges the Director abused his discretion by not accepting its proposed changes to technical matters in the methodology. *See IGWA Br.* at 32. IGWA's claim regarding its "more accurate methods" rings hollow, particularly in light of the standard of review under the Idaho APA.

On judicial review, courts cannot substitute their judgment for that of the agency as to the weight of the evidence on questions of fact. *See* I.C. § 67-5279(1); *Byrd v. Idaho State. Bd. of*

[25] The issue in *Clear Springs* concerned the Groundwater Users' claim that the Director failed to take into account a higher level of uncertainty in applying the model. *See* 150 Idaho at 812-15; 252 P.3d at 93-95. The Court found the Groundwater Users "failed to show that the Director abused his discretion in relying upon the model." *Id.* The case did not, as IGWA implies here, create a new standard of review different than what is provided by Idaho's APA. *See* I.C. § 67-5279.

Land Comm'rs, 169 Idaho 922, 928, 505 P.3d 708, 714 (2022). Even if there is conflicting evidence in the record, an agency's factual determinations are binding so long as they are supported by substantial and competent evidence in the record. *See In re Idaho Workers Comp. Bd.*, 167 Idaho 13, 22, 467 P.3d 377, 386 (2020). Substantial evidence is less than a preponderance, but more than a scintilla. *See id.; see also Chisholm*, 142 Idaho at 164, 125 P.3d at 520. It is also "relevant evidence that a reasonable mind might accept to support a conclusion." *South Valley*, 2024 WL 136840, at *5.

The Director comprehensively addressed IGWA's alleged technical errors and underlying evidence supporting his decision on these issues in his *Post-Hearing Order*. R. 1077-1094. IGWA fails to show that the Director committed error or abused his discretion on technical questions related to the methodology. While IGWA lists a number of technical matters it disagrees with, it does not show the Director erred in rejecting IGWA's alleged "improvements." Further, as to the three issues IGWA specially addresses, the Director's decision is supported by prior decisions and substantial and competent evidence in the record.

a. Forecast Supply

IGWA first claims the forecast supply is in error based upon tributary flow conditions that existed below Heise in 2023. *See IGWA Br.* at 32-33. This argument challenges the calculations used in Step 2 of the methodology that has been in place since the *Second Order* was issued in 2010. The *Sixth Methodology Order* continued the use of the joint forecast for the Heise Gage from April 1 through July 31 for the computed regression algorithms for purposes of the April evaluation.[26] R. 1045. The fact that certain tributary basins had higher snowpacks in early 2023

[26] The use of the Heise Gage as a starting point in the forecast supply was affirmed by Hearing Officer Schroeder in his 2008 opinion: "Initial use of the Heise Gage unregulated flow is reasonable as a starting point in predicting the water supply, but as the year progresses and adjustments become necessary other sources utilized by the irrigation districts to monitor and predict their water supplies should be included." *2008 Opinion* at 53. IGWA never

does not constitute a basis for changing the methodology. Indeed, any temporary benefits from those basins to the Coalition's water supply are taken into account throughout the year (Steps 5-8) where the Director examines the total storage allocation as well as the "sum of the year-to-date actual natural flow diversions." R. 1046; Anders, Tr. Vol I, 168:21-169:2. Stated another way, IGWA fails to show any error in the Director's use of the initial forecast as the Coalition's total water supply is fully captured by the continued evaluation of actual storage and natural flow diversions as the irrigation season progresses.

In sum, the use of the April Joint Heise forecast has been affirmed and the Director's use of it is supported by substantial evidence in the record.

b. TFCC Irrigated Acres

TFCC has complied with Step 1 of the methodology every year since 2013, and consistent with the Supreme Court's decision in *A&B Irr. Dist. v. IDWR*, the Department has used the information provided by the company. R. 1491-1507; (Anders, Tr. Vol. I, 143:12-25). TFCC's manager confirmed that it his was testimony the total irrigated acreage had not varied by more than 5% over time. Barlogi, Tr. Vol. II, 86:17-20. On appeal IGWA claims the Director erred by not relying upon certain information related to other IDWR programs and projects. Notably, IGWA alleges that the 2017 Irrigated Lands data set and the 2021 METRIC dataset should have been applied to quantity TFCC's irrigated acreage instead of what TFCC supplied in response to Step 1 of the methodology.[27]

challenged that decision. Further, the use of the initial joint forecast was noted and confirmed by this Court. *See 382 Decision* at 11 (reference to what was "step 3" at the time). IGWA did not appeal that decision and final judgment either.

[27] IGWA mischaracterizes Mr. Barlogi's testimony in an effort to show error on the Director's part on this issue. In discussing water delivery to subdivisions Mr. Barlogi acknowledged the different total acreage, but explained how those areas result in a different demand upon TFCC operations and water delivery compared to cropland. R. 1203; Tr. Vol. II, 96:11-97:20.

The Director noted that the 2017 data set was used by IDWR for "model calibration" which employs "hindcasts, not forecasts." R. 1084. The information was not compiled for the purpose of the Coalition's delivery call and did not predict potential 2023 irrigated acres. Further, Dr. Brockway, an SWC expert, identified clear errors with the 2017 data where entire fields had been omitted from the total irrigated acreage. R. 1236. Dr. Brockway also described other errors and problems relying upon that dataset for purposes of calculating irrigated acreage in 2023. R. 1233-34.

With such conflicting evidence the Director rightly rejected IGWA's attempt to shift the burden to TFCC to "re-prove" what its shareholders would irrigate within its project during the 2023 irrigation season. In the *Post-Hearing Order* the Director found:

> The purpose of the 2017 shapefile was to assist Department staff in determining TFCC's irrigation demand in 2017 for use in model calibration. . . . The 2017 shapefile is more recent than the 2013 shapefile, but it does not necessarily represent the number of acres TFCC may irrigate in 2023. The 2017 shapefile was a snapshot in time. It does not necessarily predict *future* irrigated acres. . . .
>
> Mr. Shaw also testified that in his opinion the 2013 shapefile currently represents the best available information for determining TFCC's actual irrigated acreage. Hr'g Tr. vol. IV, at 164-6. Finally, the Director has letters from TFCC's counsel stating that from 2014-2022 the number of acres TFCC irrigated has not varied by more than 5% from the previous (2013) shapefile numbers. Ex. 337.
>
> * * *
>
> At the hearing and in their post-hearing briefing, the ground water users state that the burden is on TFCC or the Department to create a new shapefile that identifies the number of acres TFCC can irrigate in 2023. The ground water users are mistaken. To reduce TFCC's predicted irrigated acreage below 194,732 acres, the burden is on the junior ground water users to establish the accuracy of a lesser number (e.g., 180,956) by clear and convincing evidence. . . . The ground water users did not establish an alternative number of acres irrigated by clear and convincing evidence.

R. 1084-85.

The Director properly applied the governing evidentiary standard and burden of proof on this defense given the conflicting evidence in the record. Whereas IGWA did not establish a lesser number by "clear and convincing evidence," the Director did not err on this issue. Pursuant to Idaho's standard of review, the Director's decision should be upheld. *See Byrd*, 169 Idaho at 928, 505 P.3d at 714; *see also*, *City of Blackfoot v. Spackman*, 162 Idaho 302, 306, 396 P.3d 1184, 1188 ("the agency's factual determinations are binding on the reviewing court, even when there is conflicting evidence before the agency, so long as the determinations are supported by substantial competent evidence in the record"). The Director had substantial competent evidence on this issue, confirmed by his staff and expert testimony from the Coalition's witnesses that supports the irrigated acreage used for TFCC in this proceeding. The Court should affirm the Director's decision accordingly.

c. Supplemental Groundwater Use

IGWA also falls back on previously rejected defenses in an effort to claim the Director erred in the *Sixth Methodology Order*. First, IGWA argues that the Director erred by not finding TFCC's water supply could be met with "supplemental groundwater." *IGWA Br.* at 36. IGWA makes this claim without any supporting factual information.[28] Instead, IGWA claims that the "groundwater fraction" in the ESPA Model is the best available science and that the Director should use this data for purposes of determining material injury. *See id.* at 37. However, this argument was previously litigated and rejected in litigation over the *Second Methodology Order*.

[28] Ground water rights and their place of use is publicly available information on IDWR's "water right search" database on its website. *See* www.idwr.idaho.gov. TFCC's place of use is similarly publicly available, and TFCC has reported its annual irrigated acreage pursuant to Step 1 of the methodology every year. IGWA's failure to research and identify any relevant information on this point is not the Director's error. Further, as instructed by the Court, "[i]f the supplemental ground water rights being used are themselves subject to curtailment under the senior call, (as suggested may be the case here by the Hearing Officer), that factor should also be accounted for by the Director." *382 Decision* at 18 (Addendum A); *see also*, *South Valley*, 2024 WL 136840, at *20 ("The Districts' focus on alternate sources of water available to the Seniors does not diminish the substantial and competent evidence of injury that would be caused by junior groundwater users").

The Court rejected IDWR's prior attempt to use the "ground water fraction" without supporting factual information. *See 382 Decision* at 18-20 ("The record does not contain evidence that acres accounted for under the Coalition's senior surface water rights are being irrigated from a supplemental ground water source"). In other words, the model's "ground water fraction" standing alone is insufficient to change the calculated water needs of the Surface Water Coalition. TFCC's expert Dr. Brockway testified about the lack of supplemental ground water use on his project and IGWA did not rebut this with any specific evidence. Brockway, Tr. Vol. IV, 85:14-86:3; R. 1246. Further, the Director specifically found that the "record in this matter equally lacks sufficient evidence to justify a reduction of the total number of acres irrigated with surface water by SWC members." R. 1085. The Director did not use the "ground water fraction" in the methodology, and his decision is supported by the Court's prior decision on this issue and the evidence in the record.

In sum, IGWA has not shown that the Director erred in the *Sixth Methodology Order* by not reducing TFCC's water supply needs due to alleged supplemental groundwater use not disclosed in the record. *See North Snake Ground Water Dist. v. IDWR*, 160 Idaho 518, 526, 376 P.3d 722, 730 (2016) ("On the record before us, it does not appear that the Director's findings were clearly erroneous"). The Director's findings on this issue should be affirmed accordingly.

IV. Water Delivery System Improvements

IGWA further attacks the Director's decision on the alleged basis that he failed to force the SWC to make "system improvements" to meet their water needs. *IGWA Br.* at 37. IGWA erroneously insinuates the Coalition is "wasting" water and could meet their "needs" with existing supplies through "operational changes and system improvements." *See id.* at 39. IGWA's alleged defense is soundly refuted by substantial and competent evidence in the record and has been repeatedly rejected in prior decisions in this matter.

First, this defense was previously addressed by the agency following the 2008 and 2010 hearings in this proceeding. In his 2008 opinion, Hearing Officer Schroeder found:

> **3. The existing facilities utilized by the Surface Water Coalition members are reasonable.** The evidence does not show substandard facilities for diversion and conveyance. The members of the Surface Water Coalition have improved their conveyance practices since the time the water rights were licensed or decreed. . . .
>
> **3. The members of the Surface Water Coalition are employing reasonable conservation practices.** There is evidence the members of the SWC monitor the use of water closely. It is very clear that during the drought period they did not apply the full extent of their water rights throughout the irrigation season. They withheld water and rationed it according to conditions. Had they not used the water reasonably they likely would have suffered catastrophic losses.

2008 Opinion at 54, 56 (emphasis in original).

Following the May 2010 hearing, the Director similarly found that "members of the SWC operate reasonably and without waste."[29] Reviewing the *Second Methodology Order* after the 2010 hearing, this Court also found the following:

> Therefore, the Court finds that the *Methodology Order* takes into consideration acres that are no longer irrigated, crop needs, water diverted by the Coalition for use by others, and water leased by the Coalition to other water users. Furthermore, both the Hearing Officer and the Director found, in considering the Rule 42 factors, that the Coalition members operate reasonable and efficient irrigation projects. The Director found that "as found by the hearing officer in his recommended order, members of the SWC operate reasonably and without waste," and that he will not "impose greater project efficiencies upon members of the SWC that have been historically realized."

382 Decision at 30; Addendum A.

Again, IGWA did not appeal these decisions rejecting the claimed defense of inefficient or wasteful water delivery systems. Those final orders and judgments are binding in the present matter. Moreover, with respect to the Twin Falls Canal Company, Mr. Barlogi (TFCC manager)

[29] *See Order on Reconsideration of Final Order et al.* at 5 (June 16, 2010). A copy of the order is available at: https://idwr.idaho.gov/legal-actions/delivery-call-actions/SWC/

and Mr. Shaw (expert witness) provided additional evidence of continued system improvements and efficiency measures that the company has employed over time. R. 1192-1204; Barlogi, Tr. Vol. II, 17:1-21:17; Shaw, Tr. Vol. IV, 146:18-21.

The Director confirmed the above findings and concluded that the Coalition members continue to operate their water delivery systems reasonably and without waste:

> TFCC's general manager Jay Barlogi testified that his organization's diversions were reasonable and that TFCC worked hard to improve its efficiency, for example by annually cleaning its canals, lining canals, and replacing over 100 concrete structures per year. . . . Mr. Shaw testified that TFCC does a good job maintaining its infrastructure compared to other water delivery organizations, and that TFCC's delivery system is reasonable.
>
> * * *
>
> The SWC entities must be able to discharge some water out of its system to ensure delivery of water to its patrons and operate efficiently within the limits of the delivery system. Testimony at the hearing established that the SWC entities operated efficiently within the limits of their delivery system. *See* Hr'g Tr. vol. II, at 75, 90-91, 94-96, Hr'g Tr. vol IV, at 146.

R. 1088-89 (emphasis added).

Again, IGWA did not prove the defense of an unreasonable water delivery system with "clear and convincing evidence." Just the opposite, the Director's decision rejecting IGWA's defense is supported by substantial and competent evidence in the record and should be affirmed. *See e.g.,* I.C. § 67-5279(4); *South Valley*, 2024 WL 136840, at *5.

V. Futile Call

IGWA next claims the Director erred by not accepting its futile call defense to the SWC delivery call. *See IGWA Br.* at 40-41. IGWA failed to prove a futile call defense in this proceeding and has never appealed such decisions from the agency. *See generally*, Addendums C and D; *2008 Opinion*; *Final Order Regarding Surface Water Coalition Delivery Call* (Sept. 5, 2008); *Order on Petition for Judicial Review* (Gooding County Dist. Ct., Fifth Jud. Dist., Case

No. 2008-551, July 24, 2009); *A&B Irr. Dist. v. Spackman*, 155 Idaho 640, 315 P.3d 828 (2013); *382 Decision*. After nearly 20 years of conjunctive administration IGWA cannot now claim the Director has erred by refusing to apply a defense that has been rejected from the outset. Consequently, the "law of the case" and *res judicata* doctrines preclude IGWA from attempting to relitigate past failed defenses in this appeal.

Further, IGWA's hyper-temporal view of the futile call doctrine in the context of conjunctive administration across the ESPA is flawed. IGWA wrongly attempts to superimpose the application of a surface water right administration futile call into this conjunctive administration proceeding. *See IGWA Br.* at 40. Conjunctive administration of an area of common ground water supply like the ESPA is not the same as regulating surface water rights on the Teton River. *See id.* Indeed, the CM Rules acknowledge the fact that even if certain ground water use does not have an immediate impact on a surface water source, that use can still be administered:

> Although a call may be denied under the futile call doctrine, these rules may require mitigation or staged or phased curtailment of a junior-priority use if diversion and use of water by the holder of the junior-priority water right causes material injury, even though not immediately measurable, to the holder of a senior-priority surface or ground water right in instances where the hydrologic connection may be remote, the resource is large and no direct immediate relief would be achieved if the junior-priority water use was discontinued.

CM Rule 20.04.

IGWA also ignores the fact that the continued impact of prior junior priority ground water use in various ground water districts (i.e. Carey Valley, Madison, Henry's Fork) is being realized on the Snake River today. Sukow, Tr. Vol. I, 79:1-9. Whereas the impact of historic ground water use in those areas is being realized now, those same juniors cannot escape conjunctive administration through misapplication of the futile call doctrine.

The Director's denial of IGWA's defense is supported by the record in this proceeding and should be affirmed.

VI. IGWA's "Public Interest" and "Maximum Beneficial Use" Should be Denied.

IGWA's final failed defense misapplies the Ground Water Act and a reasonable means of diversion case that has already been rejected by the Idaho Supreme Court. IGWA essentially argues that "full economic development" of the aquifer and "optimum development of water resources in the public interest" trumps conjunctive administration of junior priority ground water rights in the ESPA. *See IGWA Br.* at 41-42. The Supreme Court plainly rejected this argument in *Clear Springs*:

> The Groundwater Users' argument that full economic development means that priority of right is taken into consideration in managing the Aquifer only as necessary to prevent over-drafting of the Aquifer is not consistent with Idaho law. It would, in essence, preclude conjunctive management of the Aquifer. Conflicts between senior surface water users and junior ground water users would be ignored as long as withdrawals from the aquifer and recharge were in balance. . . . As we held in *Musser v. Higginson*, 125 Idaho 392, 871 P.2d 809 (1994), hydrologically connected surface and ground waters must be managed conjunctively.
>
> * * *
>
> The Idaho Water Resource Board and the Idaho legislature have the power to formulate and implement a state water plan for "optimum development of water resources in the public interest." Idaho Const. Art. XV, § 7. There is no difference between securing the maximum use and benefit, and least wasteful use, of this State's water resources and the optimum development of water resources in the public interest. Likewise, there is no material difference between "full economic development of water resources in the public interest." They are two sides of the same coin. Full economic development is the result of the optimum development of water resources in the public interest. . . . The policy of securing the maximum use and benefit, and least wasteful use, of the State's water resources applies to both surface and underground waters, and it requires that they managed conjunctively.

150 Idaho at 808; 252 P.2d at 89.

Furthermore, with respect to the issue of the water wheel means of diversion in *Schodde*, the Court explained:

> The issue in *Schodde* was whether the senior appropriator was protected in his means of diversion, not in his priority of water rights. Thus, in *American Falls Reservoir District No. 2 v. Idaho Department of Water Resources*, 143 Idaho 862, 877, 154 P.3d 433, 448 (2007), we cited *Schodde* for the proposition that "evaluation of whether a diversion is reasonable in the administration context should not be deemed a re-adjudication [of a water right]."

150 Idaho at 809; 252 P.2d at 90.

IGWA does not challenge the Coalition's "means of diversion" from the Snake River, nor the Director's findings that the Coalition members employ reasonable and efficient canal systems. R. 1088-89. Instead, IGWA turns back to the rejected argument that *Schodde* and "full economic development" preclude conjunctive administration where the impact on ground water user is too "large" in its opinion.[30] *See IGWA Br.* at 42. Where the Director's findings are supported by the substantial and competent evidence in the record, and this defense has been fully addressed before, the Court should affirm the Director accordingly.

VII. IGWA Has Failed to Show Prejudice to a Substantial Right.

In addition to showing that the Director committed error under the applicable standard of review (I.C. § 67-5279(3)), IGWA must also establish prejudice to a "substantial right" in order to succeed on appeal. *See* I.C. § 67-5279(4); *Hungate v. Bonner County*, 166 Idaho 388, 394, 458 P.3d 966, 972 (2020) ("even when an agency blatantly contravenes its own ordinance, as the County did here, contestants like the Hungates must still establish prejudice to a *substantial right* to overcome the agency action").

[30] IGWA's reliance upon *IGWA v. IDWR*, 160 Idaho 119, 369 P.3d 897 (2016) is misplaced as the facts in that case are markedly different. Whereas the Rangen delivery call required analysis of water accruing to a single model cell, the SWC case concerns vast reaches of the Snake River (i.e. Near Blackfoot to Minidoka) stretching over a hundred miles. The Director's use of the Great Rift "trim line" in Rangen thus has no application in this proceeding.

IGWA generally alleges that the claimed due process and substantive errors "violate the substantial rights of IGWA and its patrons because they deprived due process" and "generate larger and more frequent curtailments." *IGWA Br.* at 44. Although a water right, a real property right in Idaho (I.C. § 55-101), is a "substantial right" for purposes of an APA appeal, IGWA has failed to show how any right of its members has been prejudiced. Notably, the Director granted IGWA's and other parties' request for a hearing and held a four-day hearing pursuant to section 42-1701A(3). R. 62, 490. The Director acted within a reasonable timeframe given the exigencies of the irrigation season and need for timely water right administration. *See generally*, Addendum B.

Although IGWA disagreed with the timing, the Director explained that would "not be issuing a curtailment order until after a hearing in this matter so that junior ground water users have the opportunity for a hearing before being curtailed." R. 430. Ultimately, no ground water user was curtailed during the 2023 irrigation season. Hence, no "property right"' or "substantial right" was prejudiced by the Director's orders. IGWA's claim that the alleged errors "generate larger and more frequent curtailments" is pure speculation at this point and does not prejudice any substantial right either. Moreover, IGWA's members have been covered by an approved mitigation plan since 2016 and no water right was curtailed in 2023. Unless IGWA is pre-determining its future non-compliance with an approved mitigation plan, then any feigned prejudice to a substantial right is not warranted.

Whereas the Director acted expeditiously in the context of the irrigation season and required conjunctive administration, IGWA was provided due process and has not shown any substantive error that violates any substantial right. Consequently, the Court can affirm the *Sixth Methodology Order* on this separate ground as well. *See* I.C. § 67-5279(4).

CONCLUSION

The Court is familiar with this case and the prior defenses that have been raised and repeatedly denied. IGWA's dues process claims are defeated by the particular facts in this case, where the overall methodology has been fully and fairly adjudicated. Further, the Director's updates to the methodology, which were disclosed to the parties back in the fall of 2022, should be affirmed as they are supported by substantial and competent evidence in the record. Moreover, IGWA's substantive errors should be denied based upon existing law and prior decisions in this proceeding. For the foregoing reasons the Coalition respectfully requests the Court to deny IGWA's petition for judicial review accordingly.

DATED this 19th January 2024.

MEMORANDUM DECISION AND ORDER ON PETITIONS FOR JUDICIAL REVIEW

A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY AND TWIN FALLS CANAL COMPANY

Appearances:

Travis Thompson of Barker Rosholt & Simpson, LLP, Twin Falls, Idaho, attorneys for A&B Irrigation District, Burley Irrigation District, Milner Irrigation District, North Side Canal Company, and Twin Falls Canal Company.

W. Kent Fletcher of Fletcher Law Office, Burley, Idaho, attorney for American Falls Reservoir District #2 and Minidoka Irrigation District.

Randall Budge of Racine Olson Nye Budge & Bailey, Chartered, Pocatello, Idaho, attorneys for the Idaho Ground Water Appropriators, Inc.

Mitra Pemberton of White & Jankowski, LLP, Denver, Colorado, attorneys for the City of Pocatello.

Michael Orr and Garrick Baxter, Deputy Attorneys General of the State of Idaho, Idaho Department of Water Resources, Boise, Idaho, attorneys for the Idaho Department of Water Resources and Gary Spackman.

I.

STATEMENT OF THE CASE

A. Nature of the Case.

This matter involves a dispute between senior surface water users and junior ground water users over the conjunctive administration of water in the Snake River Basin. The dispute arises in the context of a delivery call initiated by the A&B Irrigation District, American Falls Reservoir District No. 2, Burley Irrigation District, Milner Irrigation District, Minidoka Irrigation District, North Side Canal Company and Twin Falls Canal Company (collectively, "Coalition" or "SWC") against certain junior ground water rights located in the Eastern Snake Plain Aquifer ("ESPA"). At issue is the methodology utilized by the Director of the Idaho Department of Water Resources ("Department") for determining material injury to reasonable in-

season demand and reasonable carryover to Coalition members, and his subsequent application of that methodology. The Coalition, Idaho Ground Water Appropriators, Inc. ("IGWA") and the City of Pocatello seek judicial review of the Director's methodology and his application of that methodology. Those parties ask this Court to set aside and remand various aspects of the Director's final orders.

B. Course of proceedings and statement of facts.[1]

1. This judicial review proceeding involves a number of *Petitions for Judicial Review*. They seek review of a series of final orders issued by the Director in relation to the Coalition's delivery call. What follows is a recitation of those final orders, the resulting *Petitions for Judicial Review*, and the subsequent proceedings on those *Petitions* before this Court.

2. On June 23, 2010, the Director issued his *Second Amended Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("*Methodology Order*"). 382 R., pp.564-604. *Petitions* seeking judicial review of the *Methodology Order* were filed by the Coalition in Gooding County Case No. CV-2010-384, IGWA in Gooding County Case No. CV-2010-383, and the City of Pocatello in Gooding County Case No. CV-2010-388.

3. On June 24, 2010, the Director issued his *Final Order Regarding April 2010 Forecast Supply (Methodology Steps 3 & 4); Order on Reconsideration* ("*As-Applied Order*"). 382 R., pp.605-625. *Petitions* seeking judicial review of the *As-Applied Order* were filed by the Coalition in Twin Falls County Case No. CV-2010-3403, IGWA in Gooding County Case No. CV-2010-382, and the City of Pocatello in Gooding County Case No. CV-2010-387.

4. The six *Petitions for Judicial Review* previously mentioned were reassigned to this Court.[2]

---

[1] **Footnote Re: Citations to Agency Record.** The agency record in this proceeding consists of two subparts: (1) the previously-compiled record for the judicial review proceeding under Gooding County Case No. CV-2008-551, and (2) the more recently compiled record for the judicial review petitions consolidated under Gooding County Case No. CV-2010-382. For clarity and convenience, citations of the former record will use form "551 R., p. ___," while citations to the latter record will use the form "382 R., p.___."

[2] The reassignments were made pursuant to the Idaho Supreme Court's *Administrative Order* dated December 9, 2009, issued *In the Matter of the Appointment of the SBRA District Court to Hear All Petitions for Judicial Review from the Department of Water Resources Involving Administration of Water Rights.*

5. On July 29, 2010, pursuant to the unopposed request of the parties, the Court entered an *Order* consolidating the six *Petitions for Judicial Review* into Gooding County Case No. CV-2010-382 ("Consolidated 382 Case").

6. On September 17, 2010, the Director issued his *Final Order Revising April 2010 Forecast Supply (Methodology Step 7)*. 382 R., pp.636-645. A *Petition* seeking judicial review of that *Final Order* was filed by the Coalition in Twin Falls County Case No. CV-2010-5520. The *Petition* was reassigned to this Court.

7. On November 30, 2010, the Director issued his *Final Order Establishing 2010 Reasonable Carryover (Methodology Step 9)*. 382 R., pp.684-692. A *Petition* seeking judicial review of that *Final Order* was filed by the Coalition in Twin Falls County Case No. CV-2010-5946. The *Petition* was reassigned to this Court.

8. On December 13, 2010, the Court issued an *Order* staying proceedings in the Consolidated 382 Case pending the Idaho Supreme Court's issuance of its written decision in Idaho Supreme Court Docket No. 38193-2010. The stay was entered pursuant to the request and agreement of the parties.

9. On January 3, 2011, pursuant to the unopposed request of the parties, the Court entered an *Order* consolidating the Coalition's *Petitions* in Twin Falls County Case Nos. CV-2010-5520 and 2010-5946 into consolidated the Consolidated 382 Case.

10. On April 13, 2012, the Director issued his *Final Order Regarding April 2012 Forecast Supply (Methodology Steps 1-8)*. 382 R., pp.728-742. On May 9, 2012, the Director issued his *Order Denying Petition for Reconsideration; Denying Motion to Authorize Discovery; Denying Request for Hearing (Methodology Steps 1-8)*. 382 R., pp.753-757. A *Petition* seeking judicial review of that *Final Order* and *Order Denying Petition for Reconsideration* was filed by the Coalition in Twin Falls County Case No. CV-2012-2096. The *Petition* was reassigned to this Court.

11. On April 17, 2013, the Director issued his *Final Order Regarding April 2013 Forecast Supply (Methodology 1-4)*. 382 R., pp.829-846. On May 22, 2013, the Director issued his *Order Denying Petition for Reconsideration; Denying Request for Hearing; Denying Motion to Authorize Discovery (Methodology Steps 1-4)*. 382 R., pp.888-893. A *Petition* seeking judicial review of that *Final Order* and *Order Denying Petition for Reconsideration* was filed by

the Coalition in Twin Falls County Case No. CV-2013-2305. The *Petition* was reassigned to this Court.

12. On June 17, 2013, the Director issued his *Order Releasing IGWA from 2012 Reasonable Carryover Shortfall Obligation (Methodology Step 5)*. 382 R., pp.922-928. On July 18, 2013, the Director issued his *Order Denying AFRD2's Petition for Reconsideration of Order Releasing IGWA from 2012 Reasonable Carryover Shortfall Obligation (Methodology Step 5)*. 382 R., pp.937-943. A *Petition* seeking judicial review of that *Order* and *Order Denying Petition for Reconsideration* was filed by American Falls Reservoir District #2 in Lincoln County Case No. CV-2013-155. The *Petition* was reassigned to this Court.

13. On August 27, 2013, the Director issued his *Order Revising April 2013 Forecast Supply (Methodology 6-8)*. 382 R., pp.948-957. On September 27, 2013, the Director issued his *Order Denying Petition for Reconsideration; Denying Motion to Authorize Discovery; Denying Request for Hearing (Methodology Steps 6-8)*. 382 R., pp.1037-1044. A *Petition* seeking judicial review of that *Order* and *Order Denying Petition for Reconsideration* was filed by the Coalition in Twin Falls County Case No. CV-2013-4417. The *Petition* was reassigned to this Court.

14. On November 12, 2013, pursuant to the unopposed request of the parties, the Court entered an *Order* consolidating the Coalition's *Petitions* in Twin Falls County Case Nos., CV-2012-2096, CV-2013-2305, 2013-4417 and Lincoln County Case No. CV-2013-155 into the Consolidated 382 Case.

15. On December 17, 2013, the Idaho Supreme Court issued its written decision in Idaho Supreme Court Docket No. 38193-2010. Thereafter, the Court lifted the stay in the Consolidated 382 Case. The parties subsequently briefed the issues, and a hearing on the *Petitions* was held before this Court on August 13, 2014.

II.
MATTER DEEMED FULLY SUBMITTED FOR DECISION

Oral argument before the Court in this matter was held on August 13, 2014. The parties did not request the opportunity to submit additional briefing nor does the Court require any. Therefore, this matter is deemed fully submitted for decision on the next business day or August 14, 2014.

III.

STANDARD OF REVIEW

Judicial review of a final decision of the director of IDWR is governed by the Idaho Administrative Procedure Act, Chapter 52, Title 67, Idaho Code § 42-1701A(4). Under IDAPA, the Court reviews an appeal from an agency decision based upon the record created before the agency. Idaho Code § 67-5277; *Dovel v. Dobson,* 122 Idaho 59, 61, 831 P.2d 527, 529 (1992). The Court shall not substitute its judgment for that of the agency as to the weight of the evidence on questions of fact. Idaho Code § 67-5279(1); *Castaneda v. Brighton Corp.,* 130 Idaho 923, 926, 950 P.2d 1262, 1265 (1998). The Court shall affirm the agency decision unless the court finds that the agency's findings, inferences, conclusions, or decisions are:

(a) in violation of constitutional or statutory provisions;

(b) in excess of the statutory authority of the agency;

(c) made upon unlawful procedure;

(d) not supported by substantial evidence on the record as a whole; or,

(e) arbitrary, capricious, or an abuse of discretion.

Idaho Code § 67-5279(3); *Castaneda,* 130 Idaho at 926, 950 P.2d at 1265. The petitioner must show that the agency erred in a manner specified in Idaho Code § 67-5279(3), and that a substantial right of the party has been prejudiced. I.C. § 67-5279(4). Even if the evidence in the record is conflicting, the Court shall not overturn an agency's decision that is based on substantial competent evidence in the record.[3] *Barron v. IDWR,* 135 Idaho 414, 417, 18 P.3d 219, 222 (2001). The Petitioner also bears the burden of documenting and proving that there was not substantial evidence in the record to support the agency's decision. *Payette River Property Owners Assn. v. Board of Comm'rs.*, 132 Idaho 552, 976 P.2d 477 (1999).

IV.

HISTORY AND PRIOR DETERMINATIONS

The *Petitions for Judicial Review* filed in this case arise in the context of an ongoing delivery call. Before the Court is the methodology established by the Director for determining

[3] Substantial does not mean that the evidence was uncontradicted. All that is required is that the evidence be of such sufficient quantity and probative value that reasonable minds *could* conclude that the finding – whether it be by a jury, trial judge, special master, or hearing officer – was proper. It is not necessary that the evidence be of such quantity or quality that reasonable minds *must* conclude, only that they *could* conclude. Therefore, a hearing officer's findings of fact are properly rejected only if the evidence is so weak that reasonable minds could not come to the same conclusions the hearing officer reached. *See eg. Mann v. Safeway Stores, Inc.* 95 Idaho 732, 518 P.2d 1194 (1974); *see also Evans v. Hara's Inc.*, 125 Idaho 473, 478, 849 P.2d 934, 939 (1993).

material injury to the Coalition's reasonable in-season demand and reasonable carryover caused by junior ground water rights, and his subsequent application of that methodology. Consideration of the issues requires a review of the prior administrative and judicial proceedings undertaken in relation to this call.

A. 2005 Delivery call.

The delivery call at issue here was filed by the Coalition in 2005. 551 R., pp.1-52. On May 2, 2005, the Director issued an *Amended Order* finding that junior ground water diversions from the ESPA were materially injuring the Coalition's natural flow and storage rights. 551 R., pp.1359-1424. The Director's *Amended Order* utilized a "minimum full supply" methodology in determining material injury. 551 R., pp.1382-1385. That methodology relied upon a baseline analysis to determine material injury based upon shortfalls to a chosen baseline quantum of the Coalition's in-season irrigation and reasonable carryover needs. *Id.*

Various parties sought an administrative hearing before the Department on the *Amended Order*. *See e.g.,* 551 R., pp.1642-1657; 551 R., pp.1704-1724. However, that was put on hold while members of the Coalition filed a declaratory judgment action challenging the constitutionality of the Conjunctive Management Rules ("CM Rules").[4] The declaratory judgment action culminated in the Idaho Supreme Court's written decision in *American Falls Reservoir Dist. No. 2 v. Idaho Dep't of Water Res.*, 143 Idaho 862, 154 P.3d 433 (2007) ("*AFRD#2*"), which upheld the CM Rules as facially constitutional. Thereafter, the Department proceeded with an administrative hearing on the *Amended Order*. The Director appointed the Honorable Gerald F. Schroeder as the presiding hearing officer ("Hearing Officer").

B. Director's *2008 Final Order.*

The Hearing Officer issued his *Opinion Constituting Findings of Fact, Conclusions of Law and Recommendation* on April 29, 2008. 551 R., pp.7048-7118. The Hearing Officer's *Recommendation* analyzed the Director's use of a minimum full supply methodology in determining material injury to the Coalition. 551 R., pp.7086-7095. The Hearing Officer generally approved the Director's use of a minimum full supply methodology, including his use

[4] The term "Conjunctive Management Rules" or "CM Rules" refers to the *Rules for Conjunctive Management of Surface and Ground Water Resources*, IDAPA 37.03.11.

of a baseline as a starting point for the consideration of the call and in determining material injury. *Id.* But, the Hearing Officer noted that "[t]here have been applications of the concept of a minimum full supply that should be modified if the use of the protocol is to be retained," and that "there must be adjustments as conditions develop if any baseline supply concept is to be used." 551 R., pp.7091 & 7093. Exceptions to the Hearing Officer's *Recommendation* were subsequently filed with the Director by various parties. *See e.g.,* 551 R., pp.7126-7134; 551 R., pp.7141-7197.

On September 5, 2008, the Director issued his *Final Order Regarding the Surface Water Coalition Delivery Call* ("*2008 Final Order*"). 551 R., pp.7381-7395. The *2008 Final Order* adopted the findings of fact and conclusions of law of the Hearing Officer's *Recommendation* except as specifically modified therein, including his recommendation that certain refinements be made to the minimum full supply methodology for determining material injury. 551 R., p.7387. Of significance to the instant proceeding, the Director abandoned the "minimum full supply" methodology in his *2008 Final Order* in favor of a "reasonable in-season demand" methodology. 551 R., p.7386. Although the Director adopted the Hearing Officer's recommendation that refinements be made, he did not address those refinements or the details of his new "reasonable in-season demand" methodology in his *2008 Final Order*, stating:

> Because of the need for ongoing administration, the Director will issue a separate final order . . . detailing his approach for predicting material injury to reasonable in-season demand and reasonable carryover for the 2009 irrigation season.

551 R., p.7386. *Petitions* seeking judicial review of the Director's *2008 Final Order* were subsequently filed in Gooding County Case No. CV-2008-551.

C. District court decision in Gooding County Case No. CV-2008-551 and Director's orders on remand.

The district court entered its *Order on Petition for Judicial Review* in Gooding County Case No. CV-2008-551 on July 24, 2009. 551 R., pp.10075-10108. The district court upheld the Director's adoption of a baseline methodology for determining material injury. It held that "[t]he Director did not abuse discretion or act outside his authority in utilizing a 'minimum full supply' or 'reasonable in-season demand' baseline for determining material injury." 551 R., p.10099. However, the court did find that the Director abused his discretion by waiting to issue a separate

final order detailing his approach for determining material injury to reasonable in-season demand and reasonable carryover. The case was therefore remanded to the Director. 551 R., pp.10106-10107. On remand, the Director complied with the district court's instruction. On June 23, 2010, the Director issued his *Methodology Order*, which by its terms provides the Director's methodology for determining material injury to reasonable in-season demand and reasonable carryover. 382 R., pp.564-604. Additionally, on June 24, 2010, the Director issued his *As-Applied Order*, wherein he applied his methodology to determine material injury to members of the Coalition in 2010. 382 R., pp.605-625. Both *Orders* are presently before the Court in this proceeding.

D. Idaho Supreme Court's decision in *In the Matter of Distribution of Water to Various Water Rights Held by or for the Benefit of A&B Irr. Dist.*

Meanwhile, the Coalition appealed the District Court's *Order on Petition for Judicial Review* in Gooding County Case No. CV-2008-551. On December 17, 2013, the Idaho Supreme Court issued its written decision in *In the Matter of Distribution of Waters to Various Water Rights Held by or for the Benefit of A&B Irr., Dist.,* 155 Idaho 640, 315 P.3d 828 (2013) ("*2013 SWC Case*"). In that decision, the Court held that the Director may employ a baseline methodology for management of water resources, and as a starting point in administration proceedings for considering material injury. *2013 SWC* Case, 155 Idaho at 650, 315 P.3d at 838. Although the Director's *Methodology Order* had been issued prior to the Supreme Court's consideration of the *2013 SWC Case*, the Court in its opinion made clear that "since the district court did not review this final methodology order, the findings of fact that shape that methodology and any modifications to the methodology are not properly before this Court." *2013 SWC Case*, 155 Idaho at 649, 315 P.3d at 837.

V.

METHODOLOGY ORDER ANALYSIS

The stated purpose of the Director's *Methodology Order* "is to provide the methodology by which the Director will determine material injury to [reasonable in-season demand] and reasonable carryover to members of the SWC." 382 R., p.591. Section II of the *Methodology Order* details the Director's approach for determining material injury to reasonable in-season

demand. 382 R., pp.565-585. Section III of the *Methodology Order* details the Director's approach for determining material injury to reasonable carryover. 382 R., pp.585-590. The *Methodology Order* then sets forth a ten step process to be undertaken annually for purposes of determining material injury. 382 R., pp.597-601. The Coalition, IGWA and the City of Pocatello seek judicial review of various aspects of the Director's methodology.

A. The *Methodology Order* fails to provide a proper remedy for material injury to reasonable in-season demand when taking into account changing conditions.

The Coalition argues that the signature flaw of the *Methodology Order* is its failure to properly remedy material injury to reasonable in-season demand based on changing conditions during the irrigation season. It asserts that if material injury to its reasonable in-season demand is greater than originally determined by the Director, the *Methodology Order's* failure to remedy that injury through either curtailment or the requirement of a mitigation plan is contrary to Idaho law. For the reasons set forth below, this Court agrees.

i. Overview of the Director's methodology for determining material injury to reasonable in-season demand.

Reasonable in-season demand is defined under the *Methodology Order* as "the projected annual diversion volume for each SWC entity during the year of evaluation that is attributable to the beneficial use of growing crops within the service area of the entity." 382 R., p.575. Under steps 1 and 2 of the *Methodology Order,* the Director calculates the crop water needs of the Coalition for that year.[5] However, the Director's initial determination of reasonable in-season demand is not based on those calculations, but rather is based on a historic demand baseline analysis. The *Methodology Order* makes this clear, providing that reasonable in-season demand is initially "equal to the historic demands associated with a baseline year or years ("BLY") as selected by the Director, but will be corrected during the season to account for variations in the climate and water supply between the BLY and actual conditions." 382 R., p.568. The *Methodology Order* uses the values of 2006 and 2008 to arrive at an average baseline year for purposes of the initial reasonable in-season demand determination. 382 R., p.574.

[5] The term "crop water need" is defined in the *Methodology Order* as "the project wide volume of irrigation water required for crop growth, such that crop development is not limited by water availability, for all crops supplied with surface water by the surface water provider." 382 R., p.579.

Under step 3, the Director makes his initial determination of water supply. Step 3 occurs after the United States Bureau of Reclamation ("USBOR") and the United States Corps of Engineers ("USACE") issue their Joint Forecast predicting unregulated inflow volume at the Heise Gage. 382 R., p.598. The Joint Forecast is typically released within the first two weeks of April. *Id.* Thereafter, the Director issues an April Forecast Supply for the water year. *Id.* The Director also determines in step 3 whether a demand shortfall to any member of the Coalition will occur in the coming season. *Id.* Demand shortfall is the difference between reasonable in-season demand and the April Forecast Supply. *Id.* If reasonable in-season demand is greater that the April Forecast Supply, a demand shortfall exists. *Id.*

Under step 4, if the demand shortfall is greater than the reasonable carryover shortfall from the previous year,[6] material injury exists or will exist, and junior users are required to establish their ability to mitigate that injury to avoid curtailment. 382 R., pp.598-599. To mitigate, junior users only need establish their ability to secure mitigation water to be provided to the Coalition at a later date, which the Director refers to as the "Time of Need." The Director then makes adjustments to his calculations throughout the irrigation season as conditions develop. These adjustments are provided for in steps 6 and 7 of the *Methodology Order*, which provide that at various times throughout the irrigation season, the Director will recalculate reasonable in-season demand and adjust demand shortfall for each member of the Coalition. 382 R., pp.599-600. The Director's recalculations are based on actual crop water need up to that point and a revised Forecast Supply, among other things. *Id.*

Step 8 addresses the obligations of junior water users after the Director makes his in-season recalculations and adjustments. These obligations generally trigger when Coalition members have exhausted their storage water rights to where all that remains in the reservoirs is an amount of water equal to their reasonable carryover. The Director refers to this as the "Time of Need."[7] Step 8 provides:

> Step 8: At the Time of Need, junior ground water users are required to provide the lesser of the two volumes from Step 4 (May 1 secured water) and the

---

[6] Junior water users will have previously mitigated for any reasonable carryover shortfall from the previous year under step 9 of the *Methodology Order*. 382 R., pp.600-601.

[7] The *Methodology Order* provides that "[t]he calendar day determined to be the Time of Need is established by predicting the day in which the remaining storage allocation will be equal to reasonable carryover, or the difference between the 06/08 average demand and the 02/04 supply. The Time of Need will not be earlier than the Day of Allocation." 382 R., p.584 fn.9.

[reasonable in-season demand] volume calculated at the Time of Need. **If the calculations from steps 6 or 7 indicate that a volume of water necessary to meet in-season projected demand shortfalls is greater than the volume from Step 4, no additional water is required.**

382 R., p.600. While junior user's original mitigation obligation for material injury to reasonable in-season demand may be adjusted downward under the plain language of step 8, it may not be adjusted upward.

ii. Idaho law requires that out-of-priority diversions can only be permitted pursuant to a properly enacted mitigation plan.

The Coalition takes issue with step 8 of the *Methodology Order*. They assert that it unlawfully permits out-of-priority water use to occur without remedy of curtailment or a properly enacted mitigation plan. This Court agrees. In the *2013 SWC Case*, the Idaho Supreme Court held that the CM Rules "require that out-of-priority diversions only be permitted pursuant to a properly enacted mitigation plan." *2013 SWC Case*, 155 Idaho at 653, 315 P.3d at 841. Further, that when the Director responds to a delivery call "the Director shall either regulate and curtail the diversions causing injury or approve a mitigation plan that permits out-of-priority diversion." *Id.* at 654, 315 P.3d at 842. The Court's holding in this respect was based on the plain language of Rule 40 of the CM Rules, which provides that once the Director makes a determination of material injury, the Director shall:

> a. Regulate the diversion and use of water in accordance with the priorities of rights of the various surface or ground water users whose rights are included within the district . . .; or
>
> b. Allow out-of-priority diversion of water by junior-priority ground water users pursuant to a mitigation plan that has been approved by the Director.

IDAPA 37.03.11.040.01.a, b.

This Court finds that step 8 of the *Methodology Order* is inconsistent with Rule 40 of the CM Rules and the precedent established in the *2013 SWC Case*. Step 8 effectively caps junior users' mitigation obligations for material injury to reasonable in-season demand to that amount determined in step 4. This determination is made in or around April. The cap remains in place even if changing conditions during the irrigation season establish that material injury to reasonable in-season demand is greater than originally determined. When that scenario arises,

step 8 provides that junior users are required to deliver to the Coalition the water they previously secured as mitigation under step 4. Even though that amount of water will be insufficient to remedy the full extent of material injury, the plain language of step 8 provides that "no additional water is required." The result is that material injury to reasonable in-season demand is realized by the Coalition, out-of-priority junior water use occurs, and no remedy of curtailment or the requirement of a mitigation plan exists to address that injury. The endorsement of such unmitigated out-of-priority water use is contrary to Idaho's doctrine of prior appropriation.

The Director justifies his decision as follows. First, he states that "the purpose of predicting need is to project an upper limit of material injury at the start of the season." 382 R., p.569. He then provides:

> Just as members of the SWC should have certainty at the start of the irrigation season that junior ground water users will be curtailed, in whole or in part, unless they provide the required volume of mitigation water, in whole or in part, junior ground water users should also have certainty entering the irrigation season that the predicted injury determination will not be greater than it is ultimately determined at the Time of Need . . . . **If it is determined at the time of need that the Director under-predicted the demand shortfall, the Director will not require that junior ground water users make up the difference, either through mitigation or curtailment. This determination is based upon the Director's discretion and his balancing of the principle of priority of right with the principles of optimum utilization and full economic development of the State's water resources. Idaho Const. Art XV, § 3; Idaho Const. Art. XV, § 7; Idaho Code § 42-106; Idaho Code § 42-226.**

382 R., p.594 (emphasis added).

The justifications relied upon by the Director do not permit out-of-priority water use in contravention of CM Rule 40 and the *2013 SWC Case*. Neither Article XV, Section 3, nor Article XV, Section 7 of the Idaho Constitution permits such water use to occur under the circumstances presented. The Idaho Supreme Court has held that nothing in Article XV, § 7 "grants the legislature or the Idaho Water Resource Board the authority to modify that portion of Article XV, §3, which states, 'Priority of appropriation shall give the better right as between those using the water [of any natural stream].'" *Clear Springs Foods, Inc. v. Spackman*, 150 Idaho 790, 807, 252 P.3d 71, 88 (2011). With respect to Idaho Code § 42-226, the Idaho Supreme Court has directed that it, and its reference to "full economic development," has no application in delivery calls between senior surface water users and junior ground water users, such as the one at issue here. *A&B Irr. Dist. v. Idaho Dept. of Water Res.*, 153 Idaho 500, 509,

284 P.3d 225, 234 (2012). The Court therefore finds that the legal justifications expressly relied upon by the Director do not support his determination to refrain from requiring further mitigation or curtailment from junior users if material injury to reasonable in-season demand is greater than originally determined in step 4 due to changing conditions.

iii. The Director's "total water supply" argument does not justify out-of-priority diversions without a properly enacted mitigation plan.

In briefing and at oral argument, counsel for the Department asserts another justification for step 8 of the *Methodology Order*. Counsel argues that under a "total water supply" theory, "the Director is not required to determine material injury to in-season demand and 'reasonable carryover' separately, nor is he required to order separate mitigation for each."[8] Counsel suggests that if material injury to reasonable in-season demand is greater than originally determined under step 4, the Department need not curtail or require a mitigation plan to make up the difference. Rather, it can require Coalition members to exhaust their reasonable carryover to cure the material injury. Then, at a point later in the year, make a subsequent determination as to material injury to reasonable carryover and mitigation at that time. In so arguing, counsel refers to steps 9 and 10 of the *Methodology Order*, wherein the Director in or around November 30th determines material injury to reasonable carryover and establishes the mitigation obligations of the juniors. This Court rejects this argument.

As an initial matter, counsel's total water supply argument appears contrary to the plain language of the Director's *Methodology Order*. The *Methodology Order* itself contains separate and unique methodologies for determining material injury to reasonable in-season demand (Section II) and reasonable carryover (Section III).[9] 382 R., pp.565 & 585. The methodologies described in Sections II and III of the *Methodology Order* establish that a determination of material injury will be conducted for both reasonable in-season demand and for reasonable carryover, and that such determinations will be conducted and mitigated separately. *Id.* For

---

[8] The Court notes that this justification was not set forth by the Director in his *Methodology Order*. Notwithstanding, the Court will address the argument.

[9] Section II of the *Methodology Order* is entitled "Methodology for Determining Material Injury to Reasonable In-Season Demand." 382 R, p.565. Section III of the *Methodology Order* is entitled "Methodology for Determining Material Injury to Reasonable Carryover." 382 R., p.585.

example, when detailing his methodology for determining material injury to reasonable in-season demand in Section II, the Director sets forth his calculation of demand shortfall and directs:

> The amount calculated represents the volume that junior ground water users will be required to have available for delivery to members of the SWC found to be materially injured by the Director. The amounts will be calculated in April, **and if necessary, at the middle of the seasons and at the time of need.**

382 R., p.585 (emphasis added). The argument is also contrary to steps 3 and 4 of the *Methodology Order*, wherein the Director mitigates for material injury to reasonable in-season demand by requiring junior users to establish their ability to secure mitigation water or face curtailment. 382 R., pp.598-599.

More importantly, the total water supply argument is contrary to law. The concept of a "total water supply" arises out of Rule 42 of the CM Rules. The Rule permits the Director to consider the Coalition's natural flow and storage rights in conjunction with one another when determining material injury. IDAPA 37.03.011.042.g. Indeed, the Director does so in his *Methodology Order* when determining material injury to reasonable in-season demand as well as in determining the Coalition's "Time of Need." However, problems arise when the Coalition is required to deplete its reasonable carryover, *in addition to its other storage water*, to address its material injury to reasonable in-season demand. Under Idaho law the holder of a surface water storage right is entitled to maintain a reasonable amount of carryover-over storage to assure water supplies for future dry years. IDAPA 37.03.011.042.g; *AFRD#2*, 143 Idaho at 880, 154 P.3d at 451. Counsel's argument fails to address what happens if the Coalition's reasonable carryover is insufficient to address the full extent of material injury to reasonable in-season demand. Additionally, while the Coalition will have been required to deplete its reasonable carryover under counsel's argument, out-of-priority water use will have occurred without curtailment or the enactment of a mitigation plan. If junior users are unable to secure all or part of their mitigation obligation in November due to cost, scarcity or unwillingness, the remedy of curtailment is lost, as the out-of-priority water use will have already occurred. In that scenario, there is no contingency to protect senior rights as required by the *2013 SWC Case*. Such a result is not contemplated by the CM Rules, and is in contravention of the plain language of CM Rule 40 and the Idaho Supreme Court's precedent in the *2013 SWC Case*.

iv. The Director may require use of reasonable carryover pursuant to a properly enacted mitigation plan that contains appropriate contingency provisions to protect senior rights.

In conjunction with step 8, if the Director determines a greater volume of water is necessary than the previously determined to address material injury to reasonable in-season demand, the ability of junior users to secure additional in-season water during what is typically the most water intensive stage of the irrigation season is problematic. Further problematic is that curtailment at that stage would not only have a devastating impact on junior users but may not timely provide sufficient water to the Coalition. Accordingly, curtailment may still not prevent the Coalition from relying on its reasonable carryover to help get through the remainder of the irrigation season. Nonetheless, a viable mitigation plan is still possible.

In conjunction with a properly enacted and approved mitigation plan, the Director could require the Coalition to rely on its reasonable carryover provided that: 1) existing carryover storage allocations meet or exceed the additional shortfall to the revised reasonable in-season demand; and 2) junior users secure a commitment at that time for a volume of water equal to the shortfall to the revised reasonable in-season demand to be provided the following season if necessary. This could be accomplished through an option or lease to provide water. The water would provide mitigation for any shortfalls to reasonable carryover determined to exist at the end of the season. If no shortfall is determined to exist due to changing conditions, then the option or lease need not be exercised. If a shortfall is determined to exist, then the option or lease is in place to be exercised in whole or in part as required to mitigate for any shortfall. The water would be secured but not have to be provided until such time as it can be determined whether or not the storage allocations will fill next season. This process eliminates the risk of the Director not being able to compel junior users to secure water at the end of the season in lieu of curtailment the following season. And, curtailment the following season may not provide sufficient water in storage to remedy the injury to storage, particularly if curtailment will also be required as a result of a demand shortfall to reasonable in-season demand the following season.

The process is consistent with the requirement set forth in the *2013 SWC Case* "that out-of-priority diversions only be permitted pursuant to a properly enacted mitigation plan." *2013 SWC Case*, 155 Idaho at 653, 315 P.3d at 841. It also eliminates the problem of securing water that will not be put to beneficial use because the water is being secured for the next season and

the amount secured can be adjusted down at the end of the instant season thereby leaving plenty of time for the unneeded water to be used elsewhere. Following any adjustment at the end of the instant season the amount of water that ultimately be secured would be the same as is currently required under Step 9.

B. The *Methodology Order's* use of the values of 2006 and 2008 to arrive at an average baseline year for purposes of the initial reasonable in-season demand determination is supported by substantial evidence.

The Coalition argues that the Director's use of the values of 2006 and 2008 to arrive at an average baseline year for purposes of the initial reasonable in-season demand determination is not supported by substantial evidence and must be set aside. 382 R., p.574. The Idaho Supreme Court has already approved the Director's employment of a baseline methodology as a starting point in administration proceedings and for determining material injury. *2013 SWC Case*, 155 Idaho at 648-653, 315 P.3d at 836-841. The Court finds that the Director's use of the values of 2006 and 2008 to arrive at an average baseline year is supported by substantial evidence.

The *Methodology Order* explains that a baseline year is selected by analyzing three factors: (1) climate; (2) available water supply; and (3) irrigation practices. 382 R., p. 569. To capture current irrigation practices, the *Methodology Order* limits the identification of a baseline year to 1999 and beyond. *Id.* Additionally, the *Methodology Order* instructs as follows:

> [A] BLY should represent a year(s) of above average diversions, and should avoid years of below average diversions. An above average diversion year(s) selected as the BLY should also represent a year(s) of above average temperatures and ET, and below average precipitation to ensure that increased diversions were a function of crop water need and not other factors. In addition, actual supply (Heise natural flow and storage) should be analyzed to assure that the BLY is not a year of limited supply.

382 R., p.570. The Director found that "using the values of 2006 and 2008 (06/08) to arrive at an average BLY fits the selection criteria for all members of the Coalition."[10] 382 R., p.574. In so holding, the Director made findings that the 06/08 average has below average precipitation, near average ET, above average growing degree days, and represents years in which diversions were not limited by availability of water supply. *Id.* These findings are supported by the record.

[10] The Director determined that using values from a single year would not fit the selection criteria for all members of the Coalition. 382 R., p.574.

See 551 R., Ex. 8000, Vol. IV, Appdx. AS-1-8. Therefore, the Court finds that the Director's decision in this respect was reached through an exercise of reason, is within the limits of his discretion and must be affirmed.

Furthermore, the Court's holding regarding step 8 of the *Methodology Order* should alleviate the concerns raised by the Coalition on this issue. The baseline year should only be used as a starting point. As set forth above, it cannot result in the implementation of a cap on junior users' mitigation obligations. If changing conditions establish that material injury is greater than originally determined pursuant to the baseline analysis, then adjustments to the mitigation obligations of the juniors must be made when the Director undertakes his mid-season recalculations. The Coalition's concerns should be addressed since the mid-season adjustments include recalculating reasonable in-season demand for each member of the Coalition based on, among other things, actual crop water need to that point. 382 R., p.599.

C. The *Methodology Order's* provision for the consideration of supplemental ground water does not violate Idaho law. However, the Director's finding regarding ground water fractions is not supported by substantial evidence and must be remanded.

Step 1 of the *Methodology Order* provides in part that "[i]n determining the total irrigated acreage [of Coalition members], the Department will account for supplemental ground water use." 382 R., p.597. The Coalition argues that the *Methodology Order's* consideration of supplemental ground water use violates Idaho law and has no relevance to the administration of the Coalition's senior rights. This Court disagrees. The Idaho Supreme Court has directed that in responding to a delivery call, the Director has the authority "to consider circumstances when the water user is not irrigating the full number of acres decreed under the water right." *AFRD#2*, 143 Idaho at 876, 154 P.3d at 447. If it is established that acreage accounted for under the Coalition's senior surface water rights is being irrigated from a supplemental ground water source, that is a factor the Director has the authority to consider in the context of a delivery call. If the supplemental ground water rights being used are themselves subject to curtailment under the senior call, (as suggested may be the case here by the Hearing Officer[11]), that factor should also be accounted for by the Director. However, the *Methodology Order's* instruction that the Department will consider supplemental ground water use when determining the total irrigated

[11] 551 R., p.7507

acreage of Coalition members does not violate Idaho law. The Director's decision to include that instruction in the *Methodology Order* is affirmed.

That said, the Court finds that the Director's assignment of an entity wide split for each member of the Coalition of the ground water fraction to the surface water fraction is not supported by substantial evidence in the record. In the *Methodology Order*, the Director makes the following finding:

> All acres identified as receiving supplemental ground water within the boundaries of a single SWC entity will initially be evaluated by assigning an entity wide split of the ground water fraction to the surface water fraction as utilized in the development of the ESPA Model. *See Ex. 8000 Vol. II, Bibliography at II,* referencing *Final ESPA Model, IWRRI Technical Report 06-002 & Design Document DDW-017.* For each entity the ground water fraction to the surface water fraction is as follows: A&B 95:5; AFRD2 30:70; BID 30:70; Milner 50:50; Minidoka 30:70; NSCC 30:70; & TFCC 30:70. If these ratios change with a subsequent version of the ESPA Model, the Department will use the values assigned by the current version of the ESPA Model.

382 R., p.576 fn.6. The Coalition argues that there is no factual support in the record justifying these ground water fractions, and that the Director's finding is arbitrary and capricious. The Department, IGWA and the City of Pocatello do not respond to the Coalition's argument in this respect.

A review of the record supports the Coalition's position. The record does not contain evidence that acres accounted for under the Coalition's senior surface water rights are being irrigated from a supplemental ground water source. Or that the ground water fractions utilized by the *Methodology Order* reflect such supplemental ground water use. If the Director is going to administer to less than the full amount of acres set forth on the face of the Coalition's *Partial Decrees*, such a determination must be supported by clear and convincing evidence. *See. e.g., A&B Irr. Dist., v. Idaho Dept. of Water Res.*, 153 Idaho 500, 524, 284 P.3d 225, 249 (holding, "Once a decree is presented to an administrating agency or court, all changes to that decree, permanent or temporary, must be supported by clear and convincing evidence"). Here, the parties fail to cite the Court to anything submitted before the Department in either written form or via oral testimony establishing the use of supplemental ground water by individual irrigators within the Coalition. That such was the case is illustrated by the Hearing Officer's limited findings on the issue. He found only that "an undetermined number of individual irrigators within SWC *may hold supplemental ground water rights. . . .*" and that "[i]t would seem that any

such ground water rights would be junior to the surface irrigations rights and subject to curtailment." 551 R., p.7507 (emphasis added). The Director did not address the Hearing Officer's findings in his *Methodology Order*, or include any further analysis on his findings. Rather, to support his ground water fraction finding, the Director cites to a document entitled *Final ESPA Model, IWRRI Technical Report 06-002 & Design Document DDW-017*, which is not in the record. Therefore, the Court finds the Director's finding is not supported by substantial evidence in the record. The Director's ground water fractions as set forth in the *Methodology Order* are hereby set aside and remanded for further proceedings as necessary.

D. The *Methodology Order's* reliance upon the Joint Forecast, and its use of the Heise Gage, to determine the available water supply for the Twin Falls Canal Company is set aside and remanded for further proceedings as necessary.

The Coalition argues that the Director's reliance upon the Joint Forecast, and its focus on the Heise Gage, to predict the available water supply for the Twin Falls Canal Company is arbitrary and capricious and not supported by substantial evidence. In response to this argument, the Department concedes the following in its briefing:

> The Department recognizes that while the Joint Forecast is a "good indicator" for predicting the supplies of most Coalition members, it is "not the best evidence" for purposes of predicting TFCC's supply. *SWC Methodology Brief* at 36. The Director has "previously expressed to TFCC that the Department is willing to work with the TFCC to improve the predictors for TFCC for future application in the Methodology Order and Department staff have even met with TFCC consultants on this issue."

Corrected Br. of Respondents, p.37 fn.30 (July 30, 2014). As a result, the Coalition's argument on this issue is unopposed. Therefore, the Director's decision in this respect is set aside and remanded for further proceedings as necessary.

E. The Director in his discretion may use the U.S. Department of Agriculture's National Agriculture Statistics Service data as a factor in determining crop water need, but should also take in account available data reflecting current cropping patterns.

Under steps 1 and 2 of the *Methodology Order,* the Director calculates the crop water needs of the Coalition for that year. In determining crop water need, the *Methodology Order* instructs that among other things the Director "will utilize crop distributions based on

distributions from the United States Department of Agriculture's National Agricultural Statistics Service ("NASS")." 382 R., p.580. The *Methodology Order* goes onto provide:

> NASS reports annual acres of planted and harvested crops by county. NASS also categorizes harvested crops by irrigation practice, i.e., irrigated, non irrigated, non irrigated following summer fallow, etc. *Crop distribution acreage will be obtained from NASS by averaging the "harvested" area for "irrigated" crops from 1990-2008.* Years in which harvested values were not reported will not be included in the average. In the future, the NASS data may not be the most accurate source of data. The Department prefers to rely on data from the current season if and when it becomes usable.

Id. (emphasis added). The Coalition argues that the *Methodology Order's* designation of NASS data for 1990-2008 average crop distribution fails to capture current cropping patterns, resulting in under-determined crop water need. Specifically, that changes in cropping patterns have resulted in the planting of more water intensive crops such as corn and alfalfa in recent years which is not reflected in the 1990-2008 data.

The Court finds that the Director's decision to use NASS data as a factor in determining the Coalition's crop water need is a matter within his discretion. That said, while the Director may use historic cropping data as a starting point in determining crop water need, he should also take into account available data reflecting current cropping patterns. The *Methodology Order* provides that "the Department prefers to rely on data from the current season if and when it becomes usable." 382 R., p.580. Likewise, the Hearing Officer in addressing the issue of crop water need made the following recommendation which was adopted by the Director:

> **If there have been significant cropping changes resulting in either greater or less need for water, those factors should be factored.** This is an area of caution. Cropping decisions are matter for the irrigators acting within their water rights. Those decisions should be driven by the market. The fact that a particular crop may take less water does not dictate that it be planted.

551 R., p.7099. Taking in account available data reflecting current cropping patterns also addresses the Coalition's concerns regarding the Director's decision to factor in only "harvested" area when considering historic NASS data. Since the *Methodology Order* already provides that the Director prefers to use data from the current seasons if and when it becomes usable, no remand is necessary on this issue.

F. The *Methodology Order's* timing for initial determinations of water supply and material injury to reasonable in-season demand do not run afoul of Idaho law.

The Coalition takes issue with the timing of the Director's initial determinations of water supply and material injury to reasonable in-season demand under the *Methodology Order*. Under step 3 of the *Methodology Order*, the Director makes his initial determination of water supply through the issuance of his April Forecast Supply. 382 R., p.598. This occurs after the USBOR and USACE issue their Joint Forecast, which is typically released within the first two weeks of April. Then, the Director first determines whether a demand shortfall will occur for any member of the Coalition for the coming season. *Id.* If material injury exists or will exist, step 4 of the *Methodology Order* provides the juniors another fourteen days or until May 1st, whichever is later, to establish their ability to mitigate that material injury or face curtailment. *Id.* The Coalition asks this Court to set aside steps 3 and 4 of the *Methodology Order* and remand with instructions that the Director's initial determinations of water supply and material injury to reasonable in-season demand be made prior to the irrigation season (i.e., prior to March 15th).

The Coalition relies on the *2013 SWC Case* for the proposition that these initial determinations must occur prior to the irrigation season. In that case, the Court distinguished the two ways the Director may utilize a baseline methodology. *2013 SWC Case*, 155 Idaho at 650, 315 P.3d at 838. First, the Court directed that such a methodology may be used in a management context in preparing a pre-season management plan for the allocation of water resources. *Id.* Second, the Court directed that the Director may also use such a methodology in an administrative context "in determining material injury in the context of a water call." *Id.* The Court instructed that if the Director chooses to utilize a baseline methodology to "develop and implement a pre-season management plan for allocation of water resources," it must "be made available in advance of the applicable irrigation season . . . ." *Id.* at 653, 315 P.3d at 841. The irrigation season delineated on the Coalition's senior surface water rights begins March 15th.

The parties dispute whether the *Methodology Order* could be considered a pre-season management plan as contemplated in the *2013 SWC Case*. However, it is plain that the baseline methodology set forth in the *Methodology Order* is utilized by the Director in an administrative context in this case. Specifically, it is used a starting point for consideration of the Coalition's call for administration, and as a starting point in determining the issue of material injury. The

procedural background of the *Methodology Order* makes clear that it was issued in response to the Coalition's 2005 call. In his 2008 *Final Order*, the Director explained he would be issuing a separate final order because of the need for ongoing administration. 551 R., p.7386. The stated purpose of the *Methodology Order* is "to set forth the Director's methodology for determining material injury to RISD and reasonable carryover to members of the SWC." 382 R., p.565. Therefore, the Court finds that the *Methodology Order's* baseline methodology is used in an administrative context "in determining material injury in the context of a water call." *2013 SWC Case*, 155 Idaho at 650, 315 P.3d at 838.

The Idaho Supreme Court has directed that "[w]hile there must be a timely response to a delivery call, neither the Constitution nor statutes place any specific timeframes on this process," and that it is "vastly more important that the Director have the necessary and pertinent information and the time to make a reasoned decision based on the available facts." *AFRD#2*, 143 Idaho at 875, 154 P.3d at 446. In this case, the Director found that it is necessary to wait until the Joint Forecast is issued to make the initial determinations at issue here. 382 R., p.572. He held that "given current forecasting techniques, the earliest the Director can predict material injury to RISD 'with reasonable certainty' is soon after the Joint Forecast is issued." 382 R., p.582. In so finding, the Director held that the Joint Forecast "is generally as accurate a forecast as is possible using current data gathering and forecasting techniques." 382 R., p.572. And, that it is "a good indicator of the total available irrigation water supply for a season." *Id.* The Director's holding is supported by the record. *See. e.g.*, 551 R., p.1379. Therefore, the Court finds that the Director's decision in this respect was reached through an exercise of reason, is within the limits of his discretion and must be affirmed.

G. The Director's use of the ESPA Model boundary to determine a curtailment priority date in steps 4 and 10 of the *Methodology Order* is set aside and remanded.

The Coalition argues that steps 4 and 10 of the *Methodology Order* unlawfully and arbitrarily reduce junior ground water acres subject to administration in the event of curtailment. Step 4 provides in part as follows:

> If junior ground water users fail or refuse to provide this information by May 1, or within fourteen (14) days from issuance of the values set forth in Step 3, whichever is later in time, the Director will issue an order curtailing junior ground water users. Modeled curtailment shall be consistent with previous Department

> efforts. The ESPA Model will be run to determine the priority date necessary to produce the necessary volume within the model boundary of the ESPA. However, because the Director can only curtail junior ground water rights within the area of common ground water supply, CM Rule 50.01, junior ground water users will be required to meet the volumetric obligation within the area of common ground water supply, not the full model boundary.

382 R., p.598-599.

The plain language of step 4 directs that the Director will use the ESPA Model to determine the curtailment priority date necessary to remedy material injury "within the model boundary of the ESPA." *Id.* Step 4 then notes that under the CM Rules, the Director "can only curtail junior ground water rights within the area of common ground water supply." *Id.* Thus, step 4 recognizes a conflict between the model boundary of the ESPA and the area of common ground water supply. The conflict arises from the fact that the ESPA Model boundary and the boundary of the area of common ground water supply – as it is defined by the CM Rules – are not consistent with one another. The ESPA Model boundary is larger, and contains ground water rights that are not within the area of common ground water supply. This fact is undisputed by the parties. It is the Coalition's position that the *Methodology Order* wrongly uses the ESPA Model boundary, instead of the boundary of the area of common water supply, to determine a curtailment priority date. And, that the Director's practice in this respect results in unmitigated material injury contrary to law. This Court agrees.

When a senior water user seeks the conjunctive administration of ground water rights under the CM Rules, the senior user is seeking administration within the area of common ground water supply. The plain language of CM Rules make this clear. The Rules prescribe the procedures for responding to a delivery call made "in an area having a common ground water supply."[12] IDAPA 37.03.11.001. Likewise, the Rules provide for administration when a delivery call is made by the holder of a senior-priority water right "alleging that by reason of diversion of water by the holders of one (1) or more junior-priority ground water rights ... from

---

[12] An "area having a common ground water supply" is defined as:

> A ground water source within which the diversion and use of ground water or changes in in ground water recharge affect the flow of water in a surface water source or within which the diversion and use of water by a holder of a ground water right affects the ground water supply available to the holders of other ground water rights.

IDAPA 37.03.11.010.01

an area having a common water supply in an organized water district the petitioner is suffering material injury." IDAPA 37.03.11.040.01 (emphasis added). As a result, the *Methodology Order's* use of the ESPA Model to determine the curtailment priority date necessary to remedy material injury to the Coalition's water rights "within the model boundary of the ESPA" is problematic. Absent further analysis, which the *Methodology Order* does not provide for, it will result in unmitigated material injury and out-of-priority water use to the detriment of the Coalition in the event of curtailment.

The Director's application of step 4 in 2010 is illustrative. Under steps 3 and 4 of the *Methodology Order*, the Director determined a demand shortfall to reasonable in-season demand of 84,300 acre-feet to various Coalition members. 382 R., p.186. As permitted in step 4, the Director gave the junior users 14 days to mitigate by establishing their ability to secure 84,300 acre-feet of water. 382 R., p.188. In the event the juniors could not, the Director utilized the ESPA Model boundary to determine the curtailment priority date necessary to increase appropriate reach gains in the Snake River by 84,300 acre-feet. 382 R., p.187. This exercise resulted in a curtailment priority date of April 5, 1982. *Id.* However, the Director then provided that "[c]urtailing only those ground water rights located within the area of common ground water supply [junior to April 5, 1982] , IDAPA 37.03.11.050.01, will increase reach gains . . . by 77,985 acre-feet." *Id.* The amount of 77,985 acre-feet would not have fully mitigated the material injury. Notwithstanding, the *Methodology Order* does not provide further analysis or a mechanism to adjust the curtailment priority date upward within the boundary of the area of common water supply to provide enough water to fully mitigate the injury.

Therefore, the Court finds that the *Methodology Order's* use of the ESPA Model boundary to determine a curtailment priority date is arbitrary and contrary to the CM Rules. It includes ground water rights in the modeling that are not subject to curtailment under the plain language of the CM Rules to the detriment of the Coalition. The Court further finds that the use of the ESPA Model boundary results in out-of-priority water use contrary to law. The Director should either (1) use the boundary of the area of common water supply to determine a curtailment priority date, or (2) add further analysis to the *Methodology Order* to convert the curtailment priority date arrived at by using the ESPA Model boundary to a priority date which will provide the required amount of water to the Coalition when applied to the boundary of the

area of common water supply. The Director's decision in this respect is set aside and remanded for further proceedings as necessary.

H. The Coalition's argument that mitigation water for material injury to reasonable carryover must be provided up front has previously been addressed and will not be revisited.

With respect to the issue of mitigation of material injury to reasonable carryover, the Coalition argues that the *Methodology Order* is contrary to Idaho law in that it does not require the transfer of actual mitigation water to the Coalition's storage space up front to "carryover" for use in future years. This Coalition's argument in this respect has previously been addressed and rejected. In Gooding County Case No. CV-2008-551, the district court held that as long as assurances are in place, such as an option for water, that mitigation water could be acquired and transferred the following irrigation season, then junior users need not transfer that mitigation water up front to be carried over:

> In this regard, although the Director adopted a "wait and see" approach, the Director did not require any protection to assure senior right holders that junior ground water users could secure replacement. ... *This does not mean that juniors must transfer replacement water in the season of injury,* however, the CMR require that assurances be in place such that replacement water can be acquired and will be transferred in the event of a shortage. An option for water would be such an example. Seniors can therefore plan for the future the same as if they have the water in their respective accounts and juniors may avoid the threat of curtailment.

Order on Petition for Judicial Review, Gooding County Case No. CV-2008-551, p.19 (July 24, 2009) (emphasis added). Given that the decision of the district court in this respect was not overturned by the Idaho Supreme Court in the *2013 SWC Case*, this Court sees no reason to revisit the issue. The Director's decision in this respect is affirmed.

I. The *Methodology Order's* process for determining reasonable carryover does not violate the CM Rules.

The CM Rules provide that in determining reasonable carryover, "the Director shall consider the average annual rate of fill of storage reservoirs and the average annual carry-over for prior comparable water conditions and the projected water supply for the system." IDAPA 37.03.11.042.g. The Coalition argues that the Director's *Methodology Order* fails to consider

these factors in its process for determining reasonable carryover, and asks this Court to set aside and remand the same. Section III of the *Methodology Order* sets forth the Director's methodology for determining material injury to reasonable carryover. 382 R., pp.585-590. A review of Section III reveals that the Director does consider and analyze, consistent with CM Rule 42.g, the projected water supply, average annual rate of fill and average annual carryover of the Coalition members. The *Methodology Order* first considers the projected water supply. 382 R., pp.585-586. It uses the values of Heise Gage natural flow data for the years 2002 and 2004 to establish a projected typical dry year supply as the projected water supply. 382 R., p.585. In so doing, the Director notes that "[t]he Heise natural flow, for the years 2002 and 2004, were well below the long term average . . . ." *Id.* The *Methodology Order* then considers and sets forth the annual percent fill of storage volume by Coalition members from 1995 to 2008. 382 R., pp.586-587. Last, the *Methodology Order* considers and sets forth actual average carryover of Coalition members from 1995-2008. 382 R., pp.587-588.

The CM Rules do not limit the Director's determination of reasonable carryover to consideration of the factors enumerated in CM Rule 42.g, but only require that the Director consider those enumerated factors. The Court finds based on a review of the *Methodology Order* that the Director's process for determination reasonable carryover does consider the enumerated factors. Therefore, the Court finds that the Director's process was reached through an exercise of reason, is within the limits of his discretion and must be affirmed.

J. Step 10 of the *Methodology Order* is set aside and remanded for further proceedings.

The Coalition argues that the transient modeling provision of step 10 of the *Methodology Order* is contrary to law. Step 10 provides in part as follows:

> As an alternative to providing the full volume of reasonable carryover shortfall established in Step 9, junior ground water users can request that the Department model the transient impacts of the proposed curtailment based on the Department's water rights data base and the ESPA Model. The modeling effort will determine total annual reach gain accruals due to curtailment over the period of the model exercise. In the year of injury, junior ground water users would then be obligated to provide the accrued volume of water associated with the first year of the model run. In each subsequent year, junior ground water users would be required to provide the respective volume of water associated with reach gain accruals for that respective year, until such time as the reservoir storage space held by members of the SWC fills, or the entire volume of water from Step 9 less any previous accrual payments is provided.

382 R., p.601 (internal citations omitted). The Director justifies his determination in this respect as follows:

> Because of the uncertainty associated with this prediction, and in the interest of balance priority of right with optimum utilization and full economic development of the State's water resources, Idaho Const. Art. XV, § 3; Idaho Const. Art. XV, § 7; Idaho Code § 42-106; Idaho Code § 42-226, the Director will use the ESPA Model to simulate transient curtailment of the projected reasonable carryover shortage.

382 R., pp.596-597. For reasons stated elsewhere in this decision (see Section V.A.ii above), the Court finds that the articles and code sections relied upon by the Director do not justify his decision. The Department acknowledges as much in its briefing, providing that "the Director did not have the benefit of the guidance in *Clear Springs* and the 2012 and 2013 *A&B* decisions when the *Methodology Order* was issued."[13] *Corrected Brief of Respondents*, p.68. The Department thus suggests that "a remand to the Director with instructions to apply the Idaho Supreme Court's guidance is the appropriate remedy if this Court determines that the *Methodology Order* does not provide an adequate explanation of the basis for the transient modeling provision of Step 10." *Id.*

This Court agrees that the transient modeling provision of step 10 must be set aside and remanded for further proceedings. Counsel for the Department argues that the provision is supported by the CM Rules' provisions for phased-in curtailment. However, this justification was not contemplated or detailed by the Director in the *Methodology Order*. Rather, it is being raised for the first time on judicial review. The Court does question the viability of phased curtailment as a justification for the practice outlined in step 10. Reasonable carryover is surface water "which is retained or stored for future use in years of drought or low-water." *AFRD#2*, 143 Idaho at 878, 154 P.3d at 449. As the *Methodology Order* is currently constituted, the out-of-priority use resulting in the material injury to the Coalition's reasonable carryover will have already occurred by the time the Director reaches step 10 of the *Methodology Order*. It is questionable whether after-the-fact phased curtailment, as contemplated by the CM Rules, would be consistent with Idaho law or satisfies the purpose of reasonable carryover. For the reasons set

[13] Counsel refers to the Idaho Supreme Court's decisions in *Clear Springs Foods, Inc. v. Spackman*, 150 Idaho 790, 252 P.3d 71 (2011), *A&B Irr. Dist. v. Idaho Dept. of Water Resources*, 153 Idaho 500, 284 P.3d 225 (2012), and *In the Matter of Distribution of Waters to Various Water Rights Held by or for the Benefit of A&B Irr., Dist.*, 155 Idaho 640, 315 P.3d 828 (2013), respectively.

forth in this section, the transient modeling provision of step 10 will be set aside and remanded for further proceedings as necessary.

K. The *Methodology Order's* procedures for determining Coalition members' reasonable in-season demand are consistent with Idaho law.

The City of Pocatello and IGWA both argue that the Director's methodology for determining the Coalition's reasonable in-season demand, as set forth in the *Methodology Order*, are contrary to law. They assert several arguments in support of their position. Each will be addressed in turn.

i. The Director did not act contrary to law or abuse his discretion in considering the Coalition's historic use in determining reasonable in-season demand.

The primary argument asserted by IGWA and the City of Pocatello is that the *Methodology Order* unlawfully considers the Coalition's historic use in initially determining reasonable in-season demand. As discussed above, the Director uses a historic demand baseline analysis that utilizes the values of 2006 and 2008 to arrive at an average baseline year for purposes of the initial reasonable in-season demand determination. 382 R., p.574. However, the *Methodology Order* also provides that the initial reasonable in-season demand determination "will be corrected during the season to account for variations in climate and water supply between the BLY and actual conditions." 382 R., p.568. Further, that "[g]iven the climate and system operations for the year being evaluated will likely be different from the BLY, the BLY must be adjusted for those differences." 382 R., p.575. The Director's consideration of the Coalition's historic use in this context is not contrary to law. The Idaho Supreme Court has already affirmed "the Director's use of *a predicted baseline of a senior water right holders' needs* as a starting point in considering the material injury issue in a water call." *2013 SWC Case*, 155 Idaho at 656, 315 P.3d at 844 (emphasis added). Therefore, the Court finds that the *Methodology Order's* use of a baseline analysis as the starting point in determining the Coalition's reasonable in-season demand is not contrary to law.

In conjunction with their argument, the City of Pocatello and IGWA assert that the *Methodology Order's* process for determining reasonable in-season demand fails to consider

various contemporary factors. IGWA argues that it fails to consider acres that are no longer irrigated, crop needs, water diverted by the Coalition for use by others, and water leased by the Coalition to other water users. IGWA and the City of Pocatello additionally argue that it fails to consider certain factors listed in CMR Rule 42, including the rate of diversion compared to the acreage of land served, the annual volume of water diverted, the system diversion and conveyance efficiency, and the method of irrigation water application. This Court disagrees.

A review of the *Methodology Order* reveals that the Director's calculation of reasonable in-season demand provides for the consideration of all the factors raised by IGWA and the City of Pocatello. For instance, the Director's consideration of project efficiency and crop water need includes the following:

> Monthly irrigation entity diversion ("Q_D") will be obtained from Water District 01's diversion records. Ex. 8000, Vol. II, at 8-4, 8-5. *Raw monthly diversion values will then be adjusted to remove any water diversions that can be identified to not directly support the beneficial use of crop development within the irrigation entity.* Examples of adjustments include the removal of diversions associated with in-season recharge *and diversion of irrigation water on the behalf of another irrigation entity.* Adjustments, as they become known to the Department, will be applied during the mid-season updates and in the reasonable carryover shortfall calculation. Examples of adjustments that can only be accounted for later in the season include SWC deliveries for flow augmentation, SWC Water placed in the rental pool, and SWC private leases. *Adjustments are unique to each irrigation season and will be evaluated each year. Any natural flow or storage water deliveries to entities other than the SWC for purposes unrelated to the original right will be adjusted so that the water is not included as a part of the SWC water supply or carryover volume.* Water that is purchased or leased by a SWC member may become part of IGWA's shortfall obligation; to the extent that member has been found to have been materially injured. . . . *Conversely, adjustments will be made to assure that water supplied to private leases or to the rental pool will not increase the shortfall obligation.*

382 R., p.578 (emphasis added). Therefore, the Court finds that the *Methodology Order* takes into consideration acres that are no longer irrigated, crop needs, water diverted by the Coalition for use by others, and water leased by the Coalition to other water users. Furthermore, both the Hearing Officer and the Director found, in considering the Rule 42 factors, that the Coalition members operate reasonable and efficient irrigation projects. The Director found that "as found by the hearing officer in his recommended order, members of the SWC operate reasonably and without waste," and that he will not "impose greater project efficiencies upon members of the SWC than have been historically realized." 382 R., p.551; 551 R., pp.7102-7104.

In conjunction with IGWA's and the City of Pocatello's argument in this respect, it is necessary to reiterate the presumptions and evidentiary standards that apply to a delivery call. *See e.g., 2013 SCW Case*, 155 Idaho at 650, 315 P.3d at 838 (providing, "when utilizing the baseline in the administration context, the Director must abide by established evidentiary standards, presumptions, and burdens of proof"). First, when a call is made "the presumption under Idaho law is that the senior is entitled to his decreed water right." *AFRD#2*, 143 Idaho at 878, 154 P.3d at 449. Then, "[o]nce a decree is presented to an administrating agency or court, all changes to that decree, permanent or temporary, must be supported by clear and convincing evidence." *A&B Irr., Dist.*, 153 Idaho at 524, 284 P.3d at 249. Finally, "[o]nce the initial determination is made that material injury is occurring *or will occur*, the junior then bears the burden of proving that the call would be futile or to challenge, in some other constitutionally permissible way, the senior's call." *AFRD#2*, 143 Idaho at 878, 154 P.3d at 449 (emphasis added).

These presumptions and evidentiary standards are instructive on this issue. The *Methodology Order* provides for the Director's consideration of the factors with which IGWA and the City of Pocatello are concerned. However, if the junior users believe for some reasons that the seniors will receive water they cannot beneficially use, it is their burden under the established evidentiary standards and burdens of proof to prove that fact by clear and convincing evidence. For example, the juniors may assert that the Director in their opinion is considering some, but not *all* acres that are no longer irrigated by the seniors. Or it may be their opinion that the Director is considering some, but not *the full extent* of water diverted by the seniors for use by others. In that scenario, it is then their burden under the established evidentiary standards and burdens of proof get evidence supporting their position before the Director in an appropriate fashion.

ii. The Director did not abuse his discretion or act contrary to law in declining to adopt a water budget methodology to determine the Coalition's water needs.

IGWA and the City of Pocatello argue that the Director's *Methodology Order* should have adopted a water budget methodology to determine the water needs of the Coalition. At the hearing before the Hearing Officer, the parties each proposed a water budget methodology for

determining the water needs of the Coalition. The Director declined to adopt any such methodology, favoring instead the use of a baseline demand analysis as the starting point in determining reasonable in-season demand. 382 R., pp.575-577. The Director's decision in this respect is supported by law, the record, and is within his discretion.

The Idaho Supreme Court has already affirmed "the Director's use of a predicted baseline of a senior water right holders' needs as a starting point in considering the material injury issue in a water call." *2013 SWC Case*, 155 Idaho at 656, 315 P.3d at 844. Furthermore, the Director's reasoning for declining to adopt a water budget method is supported by the record. The record establishes that both the Hearing Officer and the Director questioned the validity of using a water budget methodology under the facts and circumstances presented, recognizing the wildly differing results reached by the surface water and ground water experts under such an approach. In addressing the issue, the Hearing Officer stated:

> The irony in this case is that surface water and ground water expert testimony used much of the same information and in some respects the same approaches and came up with a difference of 869,000 acre-feet for an average diversion budget analysis of SWC districts for the period from 1990 through 2006. . . . The total under the SWC analysis is 3,274,948 acre-feet as compared to the Pocatello analysis of . . . 2,405,861 [acre-feet].

551 R., p.7096. The Hearing Officer concluded that such results do "not promote much faith in the science of the water budget analysis," and declined to adopt any of the presented water budget approaches. 551 R., pp.7096-7097. The Director echoed these sentiments in his *Methodology Order* when making the determination to utilize a baseline methodology. 382 R., pp.576-577. As set forth in detail above, the Court finds that the Director's use of the values of 2006 and 2008 to arrive at an average baseline year for purposes of the initial reasonable in-season demand determination is supported by substantial evidence. In reviewing the Director's assessment and rejection of the water budget methodology, this Court finds that the Director's decision was reached through an exercise of reason, is within the limits of his discretion and must be affirmed.

iii. The *Methodology Order's* use of the values of 2006 and 2008 to arrive at an average baseline year for purposes of the initial reasonable in-season demand determination is not contrary to law.

The City of Pocatello and IGWA allege that the *Methodology Order* impermissibly overestimates the reasonable in-season demand of the Coalition. They point to the Director's use of the values of 2006 and 2008 to arrive at an average baseline year for purposes of a reasonable in-season demand determination. They assert that the Director's use of those values results in the selection of a baseline year of above average temperatures and evapotranspiration and below average precipitation, which in turn impermissibly results in overestimated reasonable in-season demand. It is their position that the Director must determine the needs of the Coalition based on historic use data associated with a year with average temperatures, evapotranspiration and precipitation. This Court disagrees.

The Director's adoption of a baseline year intentionally utilizes above average temperatures and evapotranspiration and below average precipitation. In selecting a baseline year, Director notes that "demand for irrigation water typically increases in years of higher temperature, higher evapotranspiration ("ET"), and lower precipitation." 382 R., p.569. He then explains that it is necessary to select a baseline year of above average temperatures and evapotranspiration and below average precipitation in order to protect senior rights:

> Equality in sharing the risk will not adequately protect the senior priority surface water right holder from injury. The incurrence of actual demand shortfalls by a senior surface water right holder resulting from pre-irrigation season predictions based on average data *unreasonably shifts the risk of shortage to the senior surface water right holder*. Therefore, a BLY should represent a year(s) of above average diversions, and should avoid years of below average diversions. An above average diversion year(s) selected as the BLY should also represent a year(s) of above average temperatures and ET, and below average precipitation to ensure that increased diversions were a function of crop water need and not other facts.

382 R., pp.569-570 (emphasis added). In his *Methodology Order*, the Director found that "using the values of 2006 and 2008 (06/08) to arrive at an average BLY fits the selection criteria for all members of the SWC." 382 R., p.574.

The Director did not err in his intentional adoption of a baseline year based on above average temperatures and evapotranspiration and below average precipitation. The Court agrees that use of such data is necessary to protect senior rights if the Director is going to administer to an amount less than the full decreed quantity of the Coalition's rights. The arguments set forth by the City of Pocatello and IGWA that the Director must use data associated with an average year fail to take into account the legal limitations placed on the Director in responding to a

delivery call. The senior is entitled to a presumption under Idaho law that he is entitled to his decreed water right. *AFRD#2*, 143 Idaho at 878, 154 P.3d at 449. If the Director is going to administer to less than the full quantity of the decreed water right, his decision must be supported by clear and convincing evidence in order to adequately protect the senior right. *A&B Irr. Dist.*, 153 Idaho at 524, 284 P.3d at 249.

If the Director determined the needs of the Coalition based on historic use data associated with an average year, any decision to administer to less than the full quantity of the Coalition's decreed rights based on that data would not adequately protect its senior rights. Using data associated with an average year by its very definition would result in an under-determination of the needs of the Coalition half of the time. The Director simply cannot rely upon such data if he is going to administer to less than the decreed quantity of the Coalitions' water rights as his analysis would not be supported by clear and convincing evidence.

The City of Pocatello and IGWA additionally argue that the Director's use of the values of 2006 and 2008 violates the law of case. Specifically, they argue that the use of such data violates the Hearing Officer's recommendation, which they interpret as requiring use of data associated with an average year. Whether this interpretation of the Hearing Officer's recommendation is accurate need not be addressed. What is important is that after the Hearing Officer issued his *Recommendation*, but before the Director issued his *Methodology Order*, case law developed instructing the Director concerning the significance of a decreed water right in a delivery call. *Memorandum Decision and Order on Petition for Judicial Review*, Minidoka County Case No. 2009-647 (May 4, 2010). In that case, the district court held that if the Director determines to administer to less than the decreed quantity of water, such a determination must be supported by clear and convincing evidence. *Id.* at 38. The Director in issuing his *Methodology Order* was bound to follow this case law.[14] As set forth above, using data associated with an average year in order to administer to less than the full decreed quantity of the Coalitions' water rights would not meet a clear and convincing evidence standard. Therefore, the arguments set forth by IGWA and the City of Pocatello are unavailing.

[14] The district court's decision in this regard was ultimately affirmed by the Idaho Supreme Court on appeal. *A&B Irr. Dist. v. Idaho Dept. of Water Resources*, 153 Idaho 500, 284 P.3d 225 (2012).

L. The *Methodology Order's* procedures for determining water supply are consistent with Idaho law.

IGWA and the City of Pocatello additionally argue that the Director wrongly underestimates the forecasted water supply in the *Methodology Order*. The *Methodology Order* explains that in determining water supply "[t]he actual natural flow volume that will be used in the Director's Forecast Supply will be one standard error below the regression line, which underestimates the available supply." 382 R., p.582. Further,

> By using one standard error of estimate, the Director purposefully underestimates the water supply that is predicted in the Joint Forecast. . . . The Director's prediction of material injury to RISD is purposefully conservative. While it may ultimately be determined after final accounting that less water was owed than was provided, this is an appropriate burden for the juniors to carry. Idaho Const. Art. XV, § 3, Idaho Code § 42-106.

382 R., p.594. IGWA and the City of Pocatello argue that the Director's intentional underestimation of the forecasted water supply is an abuse of discretion and contrary to Idaho law. This Court disagrees for the reasons set forth in the preceding section regarding the Director's use of the values of 2006 and 2008 to arrive at an average baseline year for purposes of the initial reasonable in-season demand determination. The analysis set forth in that preceding section is incorporated herein by reference. The Court finds that the Director did not abuse his discretion or act contrary to law in finding that the use of one standard error below the regression line is necessary to protect senior rights if the Director is going to administer to an amount less than the full decreed quantity of the Coalition's rights. The Court finds that the Director's decision to utilize such a regression analysis was reached through an exercise of reason, is within the limits of his discretion and must be affirmed.

M. Neither the City of Pocatello nor IGWA were denied due process.

The City of Pocatello and IGWA argue that the Director denied them due process by declining to allow them to present evidence challenging the *Methodology Order* after his issuance of that *Order*. This Court disagrees. Idaho Code Section 42-1701A provides in part that "any person aggrieved by any action of the director, including any decision, determination, order or other action . . . who is aggrieved by the action of the director, and who has not previously been afforded an opportunity for a hearing on the matter shall be entitled to a hearing

before the director to contest the action." In this case, the City of Pocatello and IGWA were previously afforded an opportunity for hearing. On January 16, 2008, a hearing was commenced before the Hearing Officer that resulted in the development and issuance of the *Methodology Order*. 551 R., p.7382. For approximately fourteen days, evidence and testimony was presented to the Hearing Officer by the parties, including IGWA and the City of Pocatello. Both IGWA and Pocatello had the opportunity at that hearing to present their theories and testimony on how material injury to the Coalition should be determined. Among other things, those parties had the opportunity to present their water budget analysis, which was rejected by the Hearing Officer and Director for reasons stated in the record. After considering the parties' evidence and arguments, the Director adopted the methodology for determining material injury set forth in the *Methodology Order*. The question of whether the *Methodology Order's* process for determining material injury is contrary to law, or inconsistent with the record, is a matter for judicial review. This Court has taken up those arguments in this decision. As a result, the IGWA and the City of Pocatello are not entitled to the relief they seek on this issue.

VI.
ANALYSIS OF METHODOLOGY AS APPLIED

The Director issued his *Methodology Order* in June 2010. Since that time, the Director has issued several final orders applying his methodology to subsequent water years. Those final orders have resulted in the filing of a number of *Petitions* seeking judicial review of the Director's applications.

A. The Director's application of the *Methodology Order* in 2013 failed to adjust the mitigation obligations of the juniors to take into account changing conditions.

The Coalition argues that the Director's application of the *Methodology Order* in 2013 was contrary to law. On April 17, 2013, the Director issued his *Final Order Regarding April 2013 Forecast Supply (Methodology Steps 1-4)*. 382 R., pp.829-846. In that *Order*, the Director concluded that the Twin Falls Canal Company would experience material injury to reasonable in-season demand in the amount of 14,200 acre-feet. 382 R., p.831. He also determined that the rest of the Coalition members would experience no material injury to reasonable in-season

demand. *Id.* Consistent with step 4 of the *Methodology Order*, the Director gave IGWA fourteen days to secure 14,200 acre-feet of mitigation water to avoid curtailment. 382 R., p.835. IGWA filed its *Notice of Secured Water* with the Director on April 22, 2013. 382 R., pp.848-853.

After the Director undertook his in-season recalculations, he issued his *Order Revising April 2013 Forecast Supply (Methodology Steps 6-8)* on August 27, 2013. 382 R., pp.948-957. In that *Order*, the Director revised his original material injury determination based on changing conditions. He increased the material injury to reasonable in-season demand for the Twin Falls Canal Company from 14,200 acre-feet to 51,200 acre-feet. 382 R., p.953. He also increased the material injury to reasonable in-season demand for American Falls Reservoir District No. 2 from no material injury to 54,000 acre-feet of material injury. *Id.* Consistent with step 8 of the *Methodology Order*, the Director did not require the junior users to secure additional mitigation water to address the increased material injury, nor did he provide for curtailment. 382 R., p.954. Rather, the Director required the juniors to release the 14,200 acre-feet of mitigation water they had previously secured. *Id.* He then directed the Watermaster for Water District 01 to allocate 6,900 acre-feet to the Twin Falls Canal Company, and 7,300 acre-feet to American Falls Reservoir District No. 2 to address their respective material injuries. *Id.* As a result, the Twin Falls Canal Company did not get the amount of mitigation water that the Director ordered was to be secured for it under his *Final Order Regarding April 2013 Forecast Supply (Methodology Steps 1-4)*.

The Coalition argues that the Director's refusal to adjust the juniors' mitigation obligation in 2013 is contrary to law. This Court agrees. In 2013, the Director did not provide a proper remedy for material injury to the reasonable in-season demand of the Twin Falls Canal Company or American Falls Reservoir District No. 2 when taking into account changing conditions. Namely, the Director improperly capped the mitigation obligations of junior users to that amount of material injury determined under step 4 (i.e., 14,200 acre-feet) even though changing conditions resulted in an increase of material injury to both the Twin Falls Canal Company and American Falls Reservoir District No. 2 (i.e., 51,200 acre-feet and 54,000 acre-feet, respectively). The analysis and justifications for the Court's finding in this respect are set forth above under Section V.A. of this decision. They will not be repeated here, but are incorporated by reference. The Court finds that the Director's failure to adjust the mitigation

obligations of the juniors to take into account changing conditions in 2013 resulted in prejudice to the Coalition's senior water rights and was contrary to law.

The Department argues that no further mitigation or curtailment was required in 2013 because "the April forecast and the in-season adjustments to it were predictions of material injury . . . not final determinations of actual material injury." Respondents' Br., pp.29-30. First, this argument is internally inconsistent with the *Methodology Order*, and the Director's application of the *Methodology Order* in 2013. In contravention of this argument, the *Methodology Order* itself provides for mitigation or curtailment if material injury to reasonable in-season demand is determined to exist in April. In fact, contrary to the Department's current argument, the Director required IGWA to secure mitigation water in 2013 following his initial April determination that the Twin Falls Canal Company would experience material injury to reasonable in-season demand in the amount of 14,200 acre-feet. 382 R., p.836. Second, the Department's argument is contrary to law. The Idaho Supreme Court has made clear that the burden of proof in a delivery call switches to the junior users once a determination has been made that material injury "is occurring *or will occur*." *AFRD#2*, 143 Idaho at 878, 154 P.3d at 449 (emphasis added). When the Director makes his April and mid-seasons calculations of material injury to reasonable in-season demand, he is making the determination under the plain language of the *Methodology Order* that material injury is or will occur. Therefore, the proper burdens of proof and evidentiary standards must be applied. The Director's *Order Revising April 2013 Forecast Supply (Methodology Steps 6-8)* is set aside and remanded for further proceedings as necessary.

B. The Court finds that the *Methodology Order* provides a reasonable timeframe for the Director to make adjustments to his initial material injury determination based on changing conditions. However, the Director failed to follow that timeframe in 2013.

The Coalition argues that in 2012 and 2013 the Director failed to timely make adjustments to his initial material injury determinations to take into account changing conditions. When and how often the Director adjusts his initial material injury determination to reasonable in-season demand based on changing conditions is a matter with which the Director exercises great discretion. The Director makes his initial material injury determination in or around April. The Director then makes adjustments to his initial determination throughout the irrigation season

as conditions develop, as provided for in steps 6 and 7 of the *Methodology Order*. These occur "approximately halfway through the irrigation season." 382 R., p.599. The Court finds that the *Methodology Order* provides a reasonable timeframe for the Director to make adjustments to his initial material injury determination. It would be unreasonable, for example, to require the Director to update his material injury determination to reasonable in-season demand on a daily or weekly basis as a result of changing conditions. If the Director determines that changing conditions require earlier, or more frequent adjustments, than that provided for in his *Methodology Order*, the Director may undertake such adjustments in his discretion.

The Coalition argues that in 2012 the Director failed to timely make adjustments to his initial material injury determination to reasonable in-season demand. It points to the fact that shortly after the USBOR and USACE issued their Joint Forecast on April 5, 2012, the USBOR and USACE issued a revised Joint Forecast on April 16, 2012 that reduced predicted water flows. The Director made his initial material injury determination based on the April 5, 2012, Joint Forecast, and then declined to update his initial material injury again in April following the issuance of the revised Joint Forecast. 382 R., p755. The Court finds that the Director did not abuse his discretion in this respect. As stated above, the Court finds that the *Methodology Order* provides a reasonable timeframe for the Director to make adjustments to his initial material injury determination. When the Director makes his in-season adjustments pursuant to steps 6 and 7 of the *Methodology Order*, he issues a revised forecast supply. That revised forecast supply will take into account the changing water conditions that differ from his initial April Forecast Supply. The Director must then adjust the mitigation obligations of the junior users accordingly. It is noted that the Court's holding regarding step 8 of the *Methodology Order* should alleviate the concerns raised by the Coalition on this issue, since the initial material injury determination will not result in a cap of the junior users' mitigation obligations. The Court finds that the Director's decision in this respect was reached through an exercise of reason, is within the limits of his discretion and must be affirmed.

With respect to 2013, the Court finds that the Director acted arbitrarily and capriciously by waiting until August 27 to apply step 6 of the *Methodology Order*. Step 6 provides that "approximately half way through the irrigation season" the Director will revise the April forecast and determine the "time of need" for purposes of providing mitigation. 382 R., p. 599. In 2013, the Director did not issue his *Order Revising April 2013 Forecast Supply (Methodology 6-8)*

until August 27, 2013. 382 R., pp.948-957. The Coalition argues the Director's delay in applying step 6 required its members to make water delivery decisions for the remainder of the irrigation season without the benefit of the revised forecast and any related mitigation obligation. The Coalition argues the Director acted arbitrarily and capriciously by delaying the application of step 6. This Court agrees.

The Director identifies the "irrigation season" as running from "the middle of March to the middle of November - an eight month span." 382 R., p. 1039. Therefore, mid-July is halfway through the irrigation season. The word "approximately" is defined as "almost correct or exact: close in value or amount but not precise." *See e.g.* www. merriam-webster.com /dictionary/ approximately. Although step 6 provides for some flexibility by not requiring the revision to be made precisely halfway through the irrigation season, a delay of close to a month and half does not even fit under a generous interpretation of the word "approximately." In this regard, the Director acted arbitrarily and capriciously. The Director should apply his established procedure as written or further define and/or refine the procedure so that Coalition members relying on the procedure know when to anticipate its application and are able to plan accordingly.

C. The Director's calculation of crop water need of the Minidoka Irrigation District, Burley Irrigation District, and the Twin Falls Canal Company in 2013, as set forth in his *Order Revising April 2013 Forecast Supply (Methodology Steps 6-8)* is set aside and remanded for further proceedings as necessary.

The Coalition asserts that the Director has erroneously refused to use certain irrigated acreage information provided by it when determining its crop water need under steps 1 and 2 of the *Methodology Order*. The Coalition's argument focuses primarily on the 2013 water year. Step 1 of the *Methodology Order* requires the Coalition "to provide electronic shape files to the Department delineating the total irrigated acres within their water delivery boundary or confirm in writing that the existing electronic shape file from the previous year has not varied by more than 5%" on or before April 1. 382 R., p.597. Step 2 provides that starting at the beginning of April, the Department will calculate the cumulative crop water need volume for all land irrigated with surface water within the boundaries of each member of the SWC. *Id.* It further provides that volumetric values of crop water need will be calculated "using ET and precipitation values

from the USBR's AgriMet program, *irrigated acres provided by each entity*, and crop distributions based on NASS data." *Id.*

The record establishes that in March of 2013, the members of the Coalition provided the Director with shape files showing the acres being irrigated within the water delivery boundaries for the Minidoka Irrigation District, Burley Irrigation District, and the Twin Falls Canal Company. 382 R., pp.821-828; *see also* 20130329 BID & TFCC Folder (in Bastes Stamped OCR Docs) (382 R., Disc 1). With respect to the A&B Irrigation District, Milner Irrigation District and North Side Canal Company, the Coalition informed the Director that the acres being irrigated within the water delivery boundaries for those entities was the same as the previous year. *Id.* Therefore, the Court finds that the Coalition timely complied with the *Methodology Order's* step 1 requirements. The Director also found that the Coalition complied with step 1 in 2013. 382 R., p.830.

The record further establishes that even though the Minidoka Irrigation District, Burley Irrigation District, and the Twin Falls Canal Company timely complied with the step 1 requirements, the Director did not use the irrigated acreage data provided by those entities data to calculate their crop water needs in 2013. IDWR 8-27-13_August Background Data Folder, document entitled "DS RISD Calculator" (in Bastes Stamped OCR Docs) (382 R., Disc 1). Rather, the Director used irrigated acreage data for the Burley Irrigation District and Minidoka Irrigation District contained in a report prepared by SPF Water Engineering in 2005 (i.e., 551 Ex. 4300). *Id.* With respect to the Twin Falls Canal Company, the Director used irrigated acreage data contained in a report from 2007 (i.e., 551 Ex. 4310). *Id.* In doing so, the Director calculated the crop water needs of those entities based on less irrigated acres than that provided by those entities. *Id.* The Director provides no reasoning or rationale in his *Order Revising April 2013 Forecast Supply (Methodology Steps 6-8)* for deviating from step 2 of the *Methodology Order* in this respect. 382 R., pp.948-957. As set forth above, if the Director is going to administer to less than the full amount of acres set forth on the face of the Coalition's *Partial Decrees*, such a determination must be supported by clear and convincing evidence. *See. e.g., A&B Irr. Dist., v. Idaho Dept. of Water Res.*, 153 Idaho 500, 524, 284 P.3d 225, 249 (holding, "Once a decree is presented to an administrating agency or court, all changes to that decree, permanent or temporary, must be supported by clear and convincing evidence"). Since

the Director's decision to deviate from step 2 in this respect is not supported by reasoning it is hereby set aside and remanded for further proceedings as necessary.

D. The Coalition is not entitled to the relief it seeks on the issue of the Director's process for the use of storage water as mitigation.

The Coalition argues that the Director has failed to require that the use of storage water for mitigation be accomplished in accordance with the Water District 01 Rental Pool rules and procedures. Further, that the Director has provided no formal defined process for interaction between IDWR, Water District 01, and junior ground water users when addressing storage water leased, optioned, or otherwise contracted for mitigation purposes. The Coalition complains specifically of the mitigation water secured by IGWA in 2010 and 2013. With respect to storage water secured by IGWA under its 2010 mitigation plan, this Court has already held that mitigation plan, and its use of storage water located in the Upper Snake Reservoir System for mitigation, complied with the requirements of the CM Rules. *Memorandum Decision and Order on Petition for Judicial Review*, Twin Falls County Case No CV-2010-3075 (Jan. 25, 2011). This Court's holding in that case will not be revisited.[15] With respect to the mitigation water secured by IGWA in 2013, the Court finds that the Director reviewed leases and contracts evidencing that IGWA had secured the required amount of mitigation water. 382 R., pp.881-887. Based on his review, the Director found that those leases and contracts would provide water to the Coalition at the Time of Need, and concluded that IGWA had satisfied its mitigation obligation. 382 R., p.884. The Court finds the Director's holding in this respect complied with the requirements of the CM Rules, as well as this Court's decision in Twin Falls County Case No. CV-2010-3075. In addition, the Court finds that the Coalition is not entitled to the relief its seeks on this issue, as it has failed to establish that its substantial rights have been prejudiced as a result of the mitigation water secured in 2010 and 2013. I.C. § 67-5279(4).

[15] A final judgment was entered in Twin Falls County Case No CV-2010-3075 on January 21, 2011. No appeal was taken from that final judgment.

E. The Director's decision to deny the Coalition the opportunity for a hearing in 2012 and 2013 is in violation of Idaho Code § 42-1701A.

At the administrative level, the Coalition requested hearings before the Department with respect to several final orders issued in 2012 and 2013, wherein the Director applied his methodology to the facts and circumstances presented by those water years. Those final orders include the Director's (1) *Final Order Regarding April 2012 Forecast Supply (Methodology Steps 1-8)* dated April 13, 2012, (2) *Final Order Regarding April 2013 Forecast Supply (Methodology Steps 1-4)* dated April 17, 2013, and (3) *Order Revising April 2013 Forecast Supply (Methodology Steps 6-8)* dated August 27, 2013. 382 R., pp.728-742; 382 R., pp.829-846; and 382 R., pp.948-957. The Coalition argued it was entitled to such hearings under Idaho Code § 42-1701A, asserting that no administrative hearing had previously been held on those matters. The Director denied the requests, finding that the Coalition had been afforded hearings on the issues raised. 382 R., p.757; 382 R., pp.890-891; and 382 R., p.1040. The Director held that hearings conducted in 2008 and 2010 constituted hearings previously afforded to the Coalition on the matters. *Id.* This Court holds that the Director's decision in this respect was made in violation of Idaho Code § 42-1701A.

Idaho Code § 42-1701A provides in part that "any person aggrieved by any action of the director, including any decision, determination, order or other action . . . who is aggrieved by the action of the director, and who has not previously been afforded an opportunity for a hearing on the matter shall be entitled to a hearing before the director to contest the action." I.C. § 42-1701A. The plain language of the statute is mandatory. The Director does not specify the previous hearings in 2008 and 2010 on which he relies in denying the Coalition's requests for hearing. However, the Director likely refers to the hearing held before Hearing Officer commencing on January 18, 2008, and the hearing on the *Methodology Order* held on May 24, 2010. Those two hearings pertained specifically to the development and issuance of the *Methodology Order*. However, the Director thereafter issued a series of final orders, listed above, applying his methodology to the facts and circumstances arising in the 2012 and 2013 water years. The hearings conducted in 2008 and 2010 did not address his application of his methodology to the 2012 and 2013 water years. And, a review of the Coalition's *Requests for Hearing* establishes that the Coalition raised issues, and requested hearings on issues, not previously addressed in the 2008 and 2010 hearings.

The Coalition's *Request for Hearing on Order Revising April 2013 Forecast Supply (Steps 6-8)* is illustrative. 382 R., pp.969-979. The Coalition requested a hearing on the Director's issuance of his *Order Revising April 2013 Forecast Supply (Methodology Steps 6-8)* on August 27, 2013. It asserted that waiting until August 27 to issue a revised forecast was contrary to step 6 of the *Methodology Order*, which provides that "[a]pproximately halfway through the irrigation season" the Director will issue a revised forecast supply. 382 R., pp.970-971. The Coalition also requested a hearing on the Director's decision to apportion the 14,200 acre-feet of mitigation water secured by IGWA to give 7,300 acre-feet to American Falls Reservoir District No. 2 and 6,900 acre-feet to the Twin Falls Canal Company. 382 R., pp.971-972. It asserted that such an apportionment was in error, given that the entirety of the mitigation water was initially secured to address material injury to the Twin Falls Canal Company. *Id.* The record establishes that neither of these matters had been previously addressed in a prior administrative hearing. These arguments do not attack the *Methodology Order* itself, but rather challenge whether the Director complied with the terms of the *Methodology Order* in his application of his methodology to the 2013 water year. Therefore, the Director was statutorily required to afford the Coalition a hearing under the plain language of Idaho Code § 42-1701A.

Since the Director did not previously afford the Coalition a hearing on the issuance raised in the subject *Requests for Hearing*, the Director's decisions to deny the Coalition the opportunity for a hearing on those *Requests* were made in violation of Idaho Code § 42-1701A. The Court further finds that substantial rights of the Coalition members were prejudiced in the form of their statutory right to an administrative hearing. As a result, the Director's decisions in this respect are hereby set aside and remanded for further proceedings as necessary.

F. The City of Pocatello is not entitled to the relief it seeks with respect to the Director's *As-Applied Order*.

The City of Pocatello seeks judicial review of the Director's *As-Applied Order* on several grounds. It first argues that the *As-Applied Order*, wherein the Director applied steps 3 and 4 of the *Methodology Order* to the 2010 water year, is arbitrary and capricious. Specifically, that the *As-Applied Order* arbitrarily and capriciously based its initial material injury determination to the Coalition's reasonable in-season demand upon a historic demand baseline analysis and an intentional underestimation of water supply. This argument is not an attack on the *As-Applied*

Order, but rather another challenge to the Director's methodology for determining material injury to reasonable in-season demand as set forth in the *Methodology Order*. This Court addressed and rejected the City's argument in this respect above under Sections V.K. and V.L.

The City of Pocatello next argues that requiring junior users to secure mitigation water that is ultimately not required for beneficial use is contrary to Idaho law.[16] Again, this is not a challenge to the *As-Applied Order*, but rather a challenge to steps 4 and 8 of the *Methodology Order*. If the Director determines that material injury to reasonable in-season demand exists or will exist under steps 3 and 4, then the junior users are required under step 4 to establish their ability to mitigate that injury to avoid curtailment. 382 R., pp.598-599. To avoid curtailment, junior users only need establish their ability to secure mitigation water to be provided to the Coalition at a later date (i.e., the "Time of Need"). Step 8 then provides that if the Director's in-season recalculations and adjustments establish that material injury to reasonable in-season demand is less than initially determined due to changing conditions, the juniors will not need to provide the full amount of water initially secured to the Coalition. 382 R., p.600. The City's argument that this result is contrary to law is unavailing, and fails to account for the burdens of proof and evidentiary standards established by Idaho law.

As stated in more detail above, when the Director makes his initial material injury determination to reasonable in-season demand in April, he is making the determination that material injury is occurring or will occur. Under the CM Rules and established Idaho law, the Director must curtail at that point, or allow out-of-priority water use pursuant to a properly enacted mitigation plan. *2013 SWC Case*, 155 Idaho at 653, 315 P.3d at 841. There is no presumption that administering to the full quantity of the Coalition's decreed water rights will result in waste. To the contrary, since the Coalition's water rights are decreed rights, Idaho law dictates that proper weight must be given to the decreed quantity of those rights. As a result, the presumption under Idaho law is that the Coalition members are entitled to their decreed quantities in times of shortage. *AFRD#2*, 143 Idaho at 878, 154 P.3d at 449. If junior users believe that administering to the full decreed amount of the Coalition's water rights will result in waste, they must come forth with clear and convincing evidence establishing that fact. *A&B Irr. Dist.*, 153 Idaho at 524, 284 P.3d at 249.

---

[16] As set forth in further detail below, the Director's *As-Applied Order* did not require or result in the City of Pocatello securing mitigation water in 2010 that was not ultimately required for beneficial use.

It is against these legal presumptions, burdens of proof, and evidentiary standards that the Director's *Methodology Order* must be analyzed. In the *Methodology Order*, the Director recognizes that "[i]f the Director predicts that the SWC will be materially injured, the consequence of that prediction is an obligation that must be borne by junior ground water users." 382 R., p.593. And, that:

> By requiring that junior ground water users provide of have options to acquire water in place during the season of need, the Director ensures that the SWC does not carry the risk of shortage to their supply. By not requiring junior ground water users to provide mitigation water until the time of need, the Director ensures that junior ground water users provide only the amount of water necessary to satisfy the reasonable in-season demand.

Id. The Court finds that the Director's analysis in this respect protects senior rights in times of shortage by appropriately accounting for the legal presumptions, burdens of proof, and evidentiary standards required by Idaho law. Therefore, the Court finds that the Director's decision in this respect was reached through an exercise of reason, is within the limits of his discretion and must be affirmed.

The City of Pocatello next argues that in determining the reasonable in-season demand of the Coalition in his 2010 *As-Applied Order*, the Director failed to account for all water diverted by Coalition members for delivery to other entities (i.e., wheeled water). The *Methodology Order* provides that in calculating the Coalition's reasonable in-season demand, "any natural flow or storage water deliveries to entities other than the SWC for purposes unrelated to the original right will be adjusted so that the water is not included as a part of the SWC water supply or carryover volume." 382 R., p.578. The City argues that the Director erroneously failed to subtract all wheeled water from the Coalition's reasonable in season demand calculations. This Court disagrees. The City relies on Exhibit 3000 from the hearing on the *As-Applied Order* in 2010. That exhibit provides that "Wheeled water transactions for A&B, AFRD2, Minidoka, and TFCC *may have occurred*, but values were less than 1% of total demand and therefore were not considered." 382 Ex. 3000, *Hearing on the As-Applied Order*. That exhibit only establishes that wheeled water transactions "may have occurred." The fact that such transaction may have occurred is not is not sufficient if the Director is going to use that data to administer to less than the full amount of the Coalition's decreed rights. *A&B Irr. Dist.*, 153 Idaho at 524, 284 P.3d at 249 (holding, "Once a decree is presented to an administrating agency or court, all changes to

that decree, permanent or temporary, must be supported by clear and convincing evidence"). The City points to no clear and convincing evidence in the record establishing that such transactions did occur. Therefore, the City is not entitled to the relief it seeks on this issue.

The City of Pocatello next argues that the Director improperly limited the scope of a hearing held on one of the Director's orders applying his methodology to the 2010 water year. This Court disagrees. On April 29, 2010, the Director issued his *Order Regarding April 2010 Forecast Supply (Methodology Steps 3 & 4)*. 382 R., pp.185-198. Unlike the Coalition's requests for hearings in 2012 and 2013, which were improperly denied, the Director acted consistent with Idaho Code § 42-1701A in 2010 by granting a hearing following the issuance of his April 29, 2010, *Order* when requested. The April 29, 2010, *Order* was limited to applying steps 3 and 4 of the *Methodology Order* to the 2010 water year. Therefore, the Director did not err in limiting the evidence presented at that hearing to information relevant to whether the Director's application of steps 3 and 4 to the 2010 water year complied with the *Methodology Order*. 382 R., p.466. The Court finds, after a review of the record in this case, that the Director complied with the requirements of Idaho Code § 42-1701A, and that the City of Pocatello had a meaningful opportunity to be heard at that hearing, as Department staff familiar with the *Order* were present at that hearing to present evidence and testimony and to be subject to examination. Therefore, the City of Pocatello's request for relief on this issue is denied.

Last, with respect to all of the issues raised by the City of Pocatello relating to the Director's *As-Applied Order*, the Court finds that City of Pocatello has failed to establish that its substantial rights were prejudiced as a result of that *Order* under Idaho Code § 67-5279(4). The Director's *As-Applied Order* required no action on the part of the City of Pocatello. The Director did not order the City of Pocatello to mitigate any material injury to the Coalition in 2010 in his *As-Applied Order*. Nor has the City of Pocatello established that it would have been in the curtailment zone in 2010 under the *As-Applied Order*. Only IGWA was required to show it ability to secure mitigation water under the Director's *As-Applied Order* in 2010 in order to avoid curtailment. Therefore, since the City of Pocatello has failed to establish that its substantial rights were prejudiced as a result of the Director's *As-Applied Order*, it is not entitled to the relief it seeks with respect to that *Order*. I.C. § 67-5279(4).

VII.

REMAINING *FINAL ORDERS*

The Coalition filed *Petitions* seeking judicial review of the Director's *Final Order Revising April 2010 Forecast Supply (Methodology Step 7)*, dated September 17, 2010, *Final Order Establishing 2010 Reasonable Carryover (Methodology Step 9)*, dated November 30, 2010, and *Order Releasing IGWA from 2012 Reasonable Carryover Shortfall Obligation (Methodology Step 5)*, dated June 13, 2013. The Coalition provided no briefing or argument specific to these *Final Orders* on judicial review. However, through these *Final Orders* the Director applied his methodology as set forth in the *Methodology Order*. To the extent these *Final Orders* applied the *Methodology Order* in a manner inconsistent with this Court's analysis and holdings regarding the *Methodology Order* as set forth herein, they are set aside and remanded for further proceedings as necessary.

VIII.

CONCLUSION AND ORDER OF REMAND

For the reasons set forth above, the actions taken by Director in this matter are affirmed in part and set aside in part. The case is remanded for further proceedings as necessary consistent with this decision.

IT IS SO ORDERED.

Dated September 26, 2014

ERIC J. WILDMAN
District Judge

CERTIFICATE OF MAILING

I certify that a true and correct copy of the MEMORANDUM DECISION AND ORDER ON PETITIONS FOR JUDICIAL REVIEW was mailed on September 26, 2014, with sufficient first-class postage to the following:

COURT'S RULING

THE COURT: Well, given the exigency of the circumstances and the time constraints and the fact that the parties have to know how they are going to be proceeding in the future, the Court does not have the luxury of taking the matter under advisement and, as such, will be ruling from the bench at this time.

So in -- with respect to Case Number CV01-23-8258, the Court, regarding the writ of prohibition and the writ of mandate, the Court will rule as follows:

Under Idaho Code Section 7-302, a writ of mandate may issue, quote, "to any inferior tribunal to compel the performance of an act which the law especially enjoins as a duty resulting from an office," end quote, or to compel the admissions of a party to the use and enjoyment of a right or office to which he is entitled and from which he is unlawfully precluded by such inferior tribunal. The writ is only available in limited circumstances where there is not a plain, speedy, and adequate remedy in the ordinary course of law. That's Idaho Code Section 7-303.

A writ of mandamus is not a writ of right, and the Court's decision whether to issue a writ is discretionary. That's *Regan vs. Denney*, 165 Idaho 15, 2019 case.

Further, the Idaho Supreme Court has instructed and this Court has held on numerous occasions -- I went through

and printed off every case where I have addressed mandamus with respect to delivery calls -- that a writ of mandate is not available to control discretionary acts of tribunals acting within their jurisdiction.

A writ of prohibition is the counterpart to a writ of mandate, Idaho Code Section 7-401. It arrests the proceedings of a tribunal when it is in excess of the jurisdiction of the tribunal. It may issue in all cases where there is not a plain, speedy, and adequate remedy in the ordinary course of law. The Court's decision whether to issue a writ is discretionary. That's *Hepworth Holzer vs. Fourth Judicial District*, 169 Idaho 387, 2021.

Okay. With regard to the issues pertaining to the legal propriety of the Fifth Amended Methodology Order and Final Order regarding the April, 2023, forecast supply, the Court finds the petitioners have a plain, speedy, and adequate remedy at law through IDAPA in the form of judicial review. The Idaho Supreme Court has made it clear, it was never that the intention of a writ should take the place of an appeal. *Smith vs. Young*, 71 Idaho 31, 1950.

The Court, importantly, the Court also notes that there is a hearing presently scheduled before the Department to commence on June 6th on these orders. That administrative remedy has not been exhausted at this time, and the director must first be given the opportunity through that hearing to address issues

raised by petitioners pertaining to the legal propriety of the 2023 orders.

That segues us into issues pertaining to due process. Petitioners raised due process concerns pertaining to the hearing process utilized by the director for the administrative hearing to commence June 6th. In evaluating the due process concerns raised by the petitioners, the Court must be cognizant of the director's duty to timely administer water rights in priority.

The Idaho Supreme Court instructed in *Musser vs. Higginson* that the director's duty to administer water is clear and executive. Time is of the essence in water administration. In any given year the reality is, there is a short time frame between when water supply determinations can be made and when water users' demands for irrigation water begin. Any process employed by the director must account for the exigencies of these time constraints. These exigencies were recognized by the drafters of our Constitution as set forth in the Idaho Supreme Court and American Falls Reservoir District Number 2. The Court found the drafters intended that there be no unnecessary delay in the delivery of water pursuant to a valid water right and that a timely response is clearly required when a delivery call is made and water is necessary to respond to that call. That's AFRD Number 2, 143 Idaho at 874.

This analysis recognizes the failure of the

director to timely administer in priority can result to senior rights in times of shortage. In conjunction, the Idaho Supreme Court further determined that neither the Constitution nor the statutes place any specific time frames on this process.

In this case the record reflects the Department began notifying individuals in September, 2022, that it would be reviewing data used in the Fourth Methodology Order. In November and December, 2022, the Department conducted six meetings regarding possible amendments to the Fourth Methodology Order where staff presented new data and analyses with respect to methodology. Later in December the Department released a document setting forth preliminary recommendations for amendments to the Fourth Methodology Order. The preliminary recommendations stated that the Department will continue to evaluate the integration of these recommendations and others into the methodology. The recommendations also invited outside consultants to submit written comments by January 16, 2023, which some outside experts did by submitting preliminary comments.

On April 21st, 2023, the director issued the Fifth Amended Methodology Order and Final Order regarding the April, 2023, forecast supply. In the final order regarding the April, 2023, forecast supply, the director predicted an in-season demand shortfall to the Twin Falls Canal Company in the amount of 75,200-acre feed. The order gave affected juniors until May 5, 2023, to establish they can mitigate for their proportionate

share of the predicted demand shortfall. For those juniors who could not, the order stated that the director would issue a curtailment order.

The director did hold a hearing prior to issuing the April 21st, 2023, orders. However, he has set a hearing -- and he has set a hearing to commence June 6th, 2023, on the orders pursuant to Idaho Code Section 42-1701A(3). Idaho Code Section 42-1701A(3) governs hearings before the director. Subsection 3 applies where the director takes action without a hearing. Normally a party has 15 days to request a hearing under Subsection 3. However, because the director found time was of the essence and because he anticipated multiple parties would request a hearing, he took the proactive step of sua sponte noticing up a hearing to save time. He also set a prehearing conference for April 28th, 2023.

The director subsequently denied a request from the petitioners to continue the June 6th hearing until December or January. He also denied a request from the petitioners to appoint an independent hearing officer.

On May 2nd, 2023, the director issued a scheduling order, directing that discovery be completed by May 31st, 2023. Then on May 5th, 2023, the director issued an order limiting discovery to preclude questions regarding the director's deliberative process.

Oh. I misread my notes here, and I want to go

back. When I said that the director held a hearing prior to issuing the April 21st, 2023, order, I meant to say he did not issue an -- he did not hold a hearing.

Okay. Again, on May 2nd, 2023, the director issued a scheduling order, directing that discovery be completed by May 31st, 2023. Then on May 5th, 2023, the director issued an order limiting discovery to preclude questions regarding the director's deliberative process on legal and policy considerations.

Okay. So in evaluating the process in this case against the director's duty to timely administer water rights in priority, the Court finds it provides due process consistent with the exigencies of the circumstances and the need to administer water in priority to avoid injury to senior rights. In making this finding, the Court is influenced by the fact that administration in this case arises in the larger context of an ongoing delivery call that has existed since 2005. The director issued its first methodology order in 2010. Since then, the methodology order has been modified and amended three times to account for new data, modeling revisions, and climate trends. So this is not a new issue. And the director gave heads-up that amendments may be required again in 2023, starting in September of 2022, when he notified individuals that the Department was investigating integrating new data techniques into the methodology order.

Again, he then conducted a series of meetings, presenting new data and techniques, and issued a preliminary recommendation setting forth proposed amendments and inviting comment from outside experts. In effect, the parties were put on notice starting in September of 2022 that amendments to the methodology order were being considered. Based on prior actions within the context of this ongoing delivery call, parties were also well-aware of the exigent time constraints following demand shortfall predictions.

In particular, in its memorandum decision issued on April 11, 2011, in Gooding County Case CV-2010-382, the Court addressed similar due process arguments concerning short time frames for notice and discovery in the context of this very call. The process provided then was found to provide due process.

In this instance the parties are being provided with a hearing on the 2023 orders to commence on June 6th. They were provided approximately six weeks actual notice for the hearing. In addition, the director began making parties aware that amendments to the methodology order were being considered back in September of 2022. At the hearing on June 6th the parties will be given the opportunity to present evidence and arguments pertaining to the 2023 orders.

The Court finds this process provides due process consistent with the exigencies of the circumstances and the director's duty to timely administer water rights in priority.

And frankly, setting a hearing after the irrigation season as requested is not a tangible alternative, given the director's duty and the demand shortfall prediction for the 2023 irrigation season.

With respect to the discovery limitations, the Court finds the director does have the discretion to limit the type and scope of discovery in an administrative hearing. We talked about IDAPA 37.01.01.521. This discretion was also recognized by the Idaho Supreme Court in *Musser* when it held that while the director has a clear duty to administer water, the details of how he chooses to do so are largely left to his discretion.

For these reasons the Court, in an exercise of its discretion, will deny petitioner's applications for writ of mandate and writ of prohibition in Case CV01-23-8258.

That brings me to the Ground Water District's petition and motions in CV01-23-8187. With respect to the motions filed in that case, the Court finds it lacks jurisdiction over the petition for judicial review filed in that proceeding pursuant to Idaho Code Section 42-1701A and the doctrine of exhaustion.

Subsection 3 of Idaho Code Section 42-1701A provides that any aggrieved person, by any action of the director, including any decision, determination order, or other action, who has not previously been afforded an opportunity for a

hearing on the matter shall be entitled to a hearing before the director to contest the action. It further provides that judicial review of any final order of the director issued following the hearing shall be had pursuant to Subsection 4 of that section of the Code.

Here the director issued the 2023 orders without a hearing. This is within the director's discretion, given that the orders were issued under the umbrella of an active and ongoing delivery call. Therefore, Subsection 3 of Idaho Code Section 42-1701A controls. Until the director holds the hearing on June 6th and issues a written decision, no person aggrieved by the 2023 orders are entitled to judicial review under Idaho Code Section 42-1701A(4). Likewise, under the doctrine of exhaustion, the pursuit of statutory remedies is a condition precedent to judicial review.

In this case the remedy provided in Idaho Code Section 42-1701A(3) has not been exhausted. The Court must -- or excuse me. The director must be given the opportunity to address the issues raised by the petitioners pertaining to the 2023 orders.

The Court notes that it has come to the same conclusion previously in several similar cases involving premature petitions for judicial review, and I'll cite a few of them. In preparation for this hearing, I went in and printed off every one of them, and I have a stack of them here. But that

includes the Order Dismissing Petition for Judicial Review in Ada County Case CV01-17-67, issued February 16, 2017; Order Dismissing Petition for Judicial Review in Ada County Case CV01-16-23173, also issued February 16, 2017; and an Order Granting Motion to Dismiss in Jerome County Case CV27-22-945, issued December of 2022. Therefore, based on the foregoing reasons, the Court will grant the motion to dismiss.

With respect to McCain Foods' motion for stay, CV -- and petition, CV01-23-8306, with respect to the motion for stay filed in that case, the Court will deny the motion for the same reason it denied the motion for stay and motion for injunctive relief in CV01-23-8187. Namely, the director has discretion to limit the type and scope of discovery in an administrative hearing and that the Court lacks jurisdiction over the petition for judicial review filed in this case due to the pendency of a hearing. Therefore, the Court, in an exercise of discretion, will deny the motion for stay and grant the motion to dismiss.

And I'm going to add one final conclusion here. You know, after reviewing the issues raised in these cases and preparing for these hearings, as I had mentioned earlier, I went back and reviewed the numerous opinions that have been addressed by this Court where substantially the same if not the same issues were raised in the context of conjunctive management delivery calls, including this same delivery call brought by the Surface

Water Coalition. The issues are not new, and my reading of the prior decisions explicitly sets forth and reiterates the overriding principles that govern these types of matters. And I'm aware in every single one of those, parties attempt to distinguish that particular set of circumstances to justify the requirement of exhausting administrative remedies.

But the issues raised -- and based on my review, the issues raised today in these cases are no different. And these include that the director's statutorily charged with administering water in priority; time is of the essence in responding to delivery calls; the director must act quickly to avoid injury to senior rights; due process is required but must account for the exigencies of the circumstances; the director has discretion in limiting the scope and timing of the hearings; and unless a statute or rule otherwise provides for a hearing, the director may issue an order and conduct a hearing after issuance of the order.

If a hearing has been requested or otherwise set, administrative remedies have not been exhausted, thereby depriving this Court of jurisdiction. The director must first have the opportunity to rule on the issues raised by the order. This process is set forth plainly in Idaho Code Section 42-1701A(3). Further, writs of mandate cannot issue for acts that are discretionary with the director. Staying hearings and holding them after the irrigation season where the director has

predicted material injury to seniors is unworkable as juniors will be permitted to pump out of priority during the irrigation season.

So that is my ruling. And anything else we need to take up at this time?

MR. BAXTER: No, Your Honor. The only thing that just briefly -- I think the parties -- do we want to stick around for a minute?

(Discussion regarding parties conferring by Zoom following the hearing)

THE COURT: Well, for the rest of -- everybody else on the Zoom, if you're not -- those that aren't participating in the discussion will be adjourned.

(Proceedings concluded)

Attorneys for Idaho Ground Water Appropriators, Inc.

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF THE REQUEST FOR ADMINISTRATION IN WATER DISTRICT 120 AND THE REQUEST FOR DELIVERY OF WATER TO SENIOR SURFACE WATER RIGHTS BY A & B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, and TWIN FALLS CANAL COMPANY	**IDAHO GROUND WATER APPROPRIATORS' MOTION FOR SUMMARY JUDGMENT AND MEMORANDUM IN SUPPORT**

Petitioners Surface Water Coalition ("Coalition") instituted this action with their January 14, 2005 letter to the Director of the Idaho Department of Water Resources ("Department") requesting water right administration in Water District 120 (the "Delivery Call"). Pursuant to Department Rule of Procedure 260 and Idaho Rule of Civil Procedure 56, Idaho Ground Water Appropriators, Inc. ("IGWA"), through its counsel Givens Pursley LLP and on behalf of its ground water district members, American Falls-Aberdeen Ground Water District, Magic Valley Ground Water District, Bingham Ground Water District, North Snake Ground Water District,

Bonneville-Jefferson Ground Water District, Southwest Irrigation District, and Madison Ground Water District ("Ground Water Users"), hereby moves the Director for an order granting summary judgment against the Coalition on their Delivery Call. The grounds for this motion are set forth in the following memorandum.

THE FACTS, IN BRIEF

Most of the facts underlying this case are well known to the Director, and many are set forth in the Director's February 14, 2005 Order in this matter ("Director's Order") or in other portions of the record (including, for example, admissions in the Delivery Call itself and in the Coalition's submission of information in response to Director's Order). Additional facts are set forth in the attached Affidavits of Dr. Charles M. Brendecke ("Brendecke Affidavit") and Mr. John Church ("Church Affidavit"), together with their respective exhibits. But the central, animating facts in this case are simple, and are the focus of this Memorandum: The Delivery Call seeks to dry up several hundred thousand acres of irrigated crop land in southern Idaho. Shutting off wells to do this would not likely produce meaningful supplies of water to the Coalition or significantly increase their irrigated acreage, would be devastating to Idaho's economy, and would not make full economic use of our ground water resources. In Dr. Brendecke's words:

> Because curtailing ground water use on the ESPA will have delayed effects on AFR reach gains, and because Coalition members historically have experienced water shortages only rarely and as a result of intermittent drought events, curtailing ground water diversions on a large or small-scale is not likely to produce meaningful supplies of water during the short-term period when it might be diverted to beneficial use by surface water users. During the long-term, most of the predicted increases in reach gains will be expressed during periods when Coalition members already will have a full supply and/or when the reservoir system will not be able to hold the additional water and it consequently will be spilled and provide no benefit to Coalition members.

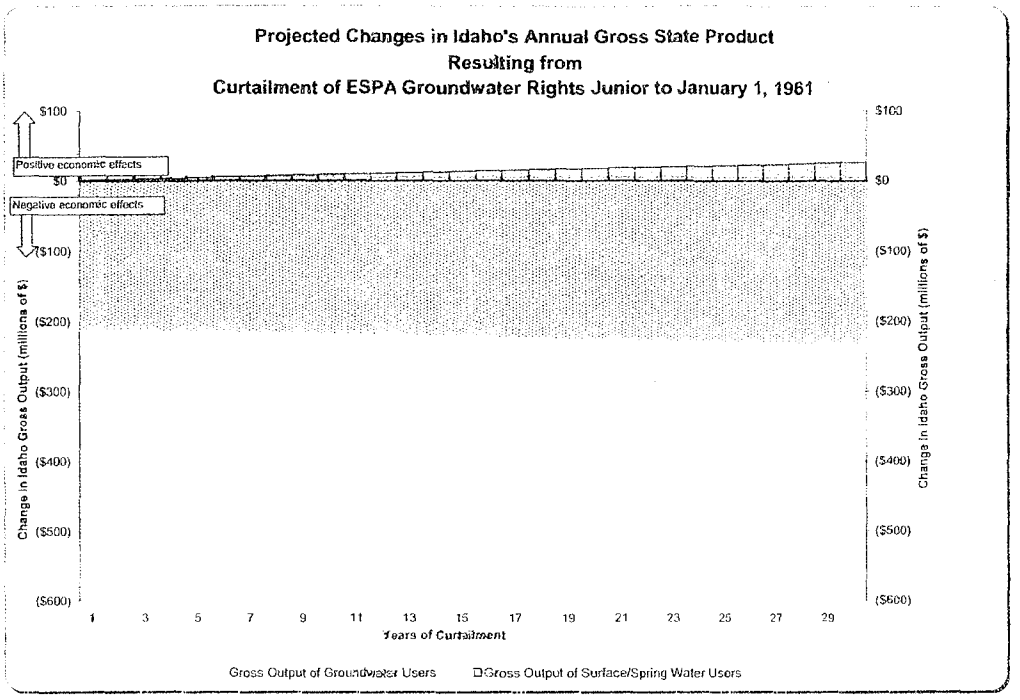
Brendecke Affidavit at 20. Dr. Brendecke also explains that "[a]ssuming the typical diversion by [Coalition] members of 6 acre-feet per acre, the dry-up of 1.1 million acres of ground water irrigated land would generate enough water to supply approximately 10,000 acres of [Coalition] land." *Id.* In other words, a curtailment along these lines would achieve an administration efficiency of 0.1%.

With regard to the proposal's effects on Idaho's economy and its relation to the "full economic development of underground water resources," Mr. Church says:

> [T]he concept of pursuing full economic development of Idaho's groundwater resources is wholly inconsistent with any alternative that regulates the use of the state's water resources to cause the state's economy to lose a present value of close to $8.1 billion in gross output during the next thirty years to gain a present value of $423.5 million. Whether or not, in the near-term, a curtailment of ESPA groundwater users would be considered a "futile call," it is quite evident that, in both the near and long terms, it would cause substantial, and likely permanent, harm to Idaho's economy that, in its first year alone, would overwhelm any possible long-term gain.

Church Affidavit at 14 (emphasis in original). The following are graphs, which Mr. Church adapted from a study recently commissioned by the Idaho Legislature, depicting the grossly disproportionate economic impacts—enormous, even devastating, costs to the state in return for paltry benefits—predicted to occur from the curtailment of ground water rights junior to 1961 and 1949, respectively.[1]

[1] These are discussed in detail in the Church Affidavit at 14, and shown in Appendix B to the affidavit.



Based on Snyder Report graphs, "Comparison of Gain and Loss Flows Over 10 Years," Snyder Report at 53.

Based on Snyder Report graphs, "Comparison of Gain and Loss Flows Over 10 Years," Snyder Report at 53.

John Church Affidavit Appendix B

ARGUMENT

I. Introduction.

This case presents Idaho with unprecedented questions of water law and economic policy that are vital to Idaho's future. And it is not a theoretical or distant future. The focal point for these critical questions is coming up immediately, this irrigation season, in a few weeks. A decision granting the Coalition's Delivery Call seeking to curtail all junior ground water rights in Water District 120 (or beyond)[2] would immediately idle, and probably permanently put out of business, several thousand farms in southern Idaho, beginning immediately. It would instantly change the face of our state and deal an almost unimaginable blow to Idaho's irrigated agriculture and the interconnected economies dependent upon it. In such a scenario, it is difficult to fathom when our state's agricultural economy would recover, if at all.

In policy terms, the answer to this question is self-evident: Idaho should not, with the stroke of a pen, shut off ground water deliveries to literally hundreds of thousands of acres of irrigated land, thus destroying the economic viability of thousands of farms depending on ground water and undercutting the economies of communities across the Snake Plain. Even more obvious, it would seem, is that Idaho should not implement such a shut-off because it would provide only a limited amount of water of questionable benefit this year—or next year, or the next—to surface water irrigators who have asserted pumping injures their water rights.

Fortunately, Idaho's water law does not look favorably on economic self-destruction. In resolving questions with such enormous economic and social dimensions, Idaho's foundational

---

[2] The Delivery Call seeks curtailment of all junior ground water diversions within Water District 120,which contains the Aberdeen-American Falls Ground Water District, Bingham Ground Water District, Bonneville-Jefferson Ground Water District, and portions of the Magic Valley Ground Water District. However, the Director has made it clear that if there is to be a delivery call honored, he will decide where it will extend. See Director's Order at 19-20. Accordingly, as vast as Water District 120 is (over 370,000 acres of ground water irrigated land), Water District 130 and other areas of the ESPA also are implicated.

laws have never separated rights and responsibilities under the state's water law from considerations of economic development, maximum use of water resources in the public interest, or the necessities of other water users. This may come as a surprise to some, who may believe that priority and a claimed diversion amount are all that is needed to curtail any junior they believe is causing impacts to a common water source.[3]

This memorandum explains how Idaho's Constitution, statutes, case law, and administrative rules all require consideration of these important factors. Idaho water law is not a cold, one-sided assessment of priority and injury as the Coalition would have it. At least during monumental conflicts like these, Idaho water law has imposed a balancing. And as a matter of law and the undisputed facts of this case, that balancing must result in a denial of the Delivery Call.

II. Summary judgment standards.

Under Idaho Rule of Civil Procedure 56(c), the Department must grant a summary judgment motion "if the pleadings, depositions, and admissions on file, together with the affidavits, if any, show that there is no genuine issue as to any material fact and that the moving party is entitled to a judgment as a matter of law." I.R.C.P. 56(c). As the party moving for summary judgment, IGWA, "initially carries the burden to establish there is no 'genuine issue of material fact' and that he or she is entitled to judgment as a matter of law.'" *Dunnick v. Elder,* 126 Idaho 308, 311, 882 P.2d 475, 478 (1994). However, because IGWA will not carry the burden of production or proof at trial, IGWA can meet this burden by establishing that the Coalition lacks evidence on an essential element of its case. *See id.* "Such an absence of

[3] We use "claimed diversion amount" here advisedly. Those Coalition members located in Water District 1 have not yet had their surface water rights reported or adjudicated in the Snake River Basin Adjudication. Therefore, no ESPA ground water user has yet had an opportunity to scrutinize these surface rights as to their quantity, place of use, or other elements which, once finally determined, would be relevant in any proceeding to determine the appropriateness or scope of any such Delivery Call.

evidence may be established either (1) by an affirmative showing with the moving party's own evidence or (2) by a review of all the nonmoving party's evidence and the contention that such proof of an element is lacking." *Id.*

Once IGWA meets this burden, the burden shifts to the Coalition to respond with sufficient opposing evidence to show there is indeed a genuine issue for trial. *Id. See also Jordan v. Beeks*, 135 Idaho 586, 590, 21 P.3d 908, 912 (2001). If the Coalition does not come forward with admissible evidence sufficient to establish the existence of every single element of its case, then the Department must grant IGWA's summary judgment motion. "In such a situation, there can be 'no genuine issue as to any material fact,' since a complete failure of proof concerning an essential element of the nonmoving party's case necessarily renders all other facts immaterial." *Sparks v. St. Luke's Regional Med. Center*, 115 Idaho 505, 509, 768 P.2d 768, 772 (1988) (citing *Celotex, v. Catrett*, 477 US 317, 106 S.Ct. 2548 (1986)).

III. The Coalition's Delivery Call, if granted, would violate the longstanding requirement of Idaho law to maximize the use of Idaho's water resources.

Idaho law requires the Department to evaluate a Delivery Call by balancing the "first in time" principle of prior appropriation against other longstanding principles of the prior appropriation doctrine. These include the full economic development of ground water resources, preservation of the state's agricultural base, the necessities of other water users, and the public interest, all in light of hydrological realities. The Idaho Constitution is the original source of this balancing requirement. Over the years, the Idaho Legislature, the Idaho Supreme Court and the Department all have secured its place in Idaho law.

A. Idaho's Constitution prescribes maximizing use of the resource by balancing public cost and benefit during times of water shortage.

The Delivery Call asks the Department to do nothing more than note that the Coalition's priorities are senior, take the Coalition's word that they are about to be injured by ground water

pumping, and then simply shut off the Ground Water Users' wells across a wide expanse. In lodging a Delivery Call premised on the fact of priority and the allegation of injury, the Coalition is asking the Department to ignore not only its own rules and Idaho statutes, but the Idaho Constitution itself.

Never in the many years of the surface water users' saber-rattling about the alleged effects of irrigation diversions from the Eastern Snake Plain Aquifer ("ESPA") have they ever attempted to explain how their desire for a "toggle-switch" shut-down of hundreds of thousands of acres of irrigated agriculture to deliver a paltry amount of water to the river squares with the Idaho Constitution. What the Constitution provides is a far cry from the concept of "priority, period," that the Coalition asks the Department to employ.

At least where irrigation entities are involved, in times of shortage the Idaho Constitution contemplates that the State will balance interests, give due regard to the "necessities" of junior-priority water users, and place "reasonable limitations" on senior-priority users, all to promote the greater economic interests of the State.

Our founding document states:

> The use of all waters now appropriated, or that may hereafter be appropriated for . . . distribution . . . is hereby declared to be a public use, and subject to the regulations and control of the state in the manner prescribed by law.

Idaho Const. Art. XV, sec. 1 (emphasis added). The Coalition members are using the public's water, and the public, through the Legislature and the Department, has abiding interests, including economic interests, that must be considered.

To be sure, the Constitution sets up the familiar "first in time is first in right" principle. Idaho Const. Art. XV, sec. 3. However, as among those receiving the public's water for agricultural purposes under a distribution program—such as that occurring on the lands served

by every Coalition member---the Constitution qualifies this principle with the obligation that prior appropriators accept "reasonable limitations" in times of shortage.

> [P]riority in time shall give superiority of right to the use of such water . . .; but whenever the supply of such water shall not be sufficient to meet the demands of all those desiring to use the same, such priority of right shall be subject to such reasonable limitations as to the quantity of water used and times of use as the legislature, having due regard both to such priority of right and the necessities of those subsequent in time of settlement or improvement, may by law prescribe.

Idaho Const. Art. XV, sec. 5 (emphasis added). The Constitution also mandates that those using water in irrigation projects must comply "with such equitable terms and conditions as to the quantity used and time of use, as may be prescribed by law." Idaho Const. Art. XV, sec. 4 (emphasis added). The Idaho Constitution also establishes the Idaho Water Resource Board and empowers it to "formulate and implement a state water plan for optimum development of water resources in the public interest." Idaho Const. Art. XV, sec. 7 (emphasis added).[4] In contrast to all these directives, what the Coalition seeks with its Delivery Call is simple: impose no limitations on them at all, give no consideration to the necessities of anyone but them, and dismantle a large percentage of the water development in the state. It will not do for any water user to say that the rules of reasonable use, optimum development and reasonable limitations on the use of the public water resource apply to everyone's use but theirs.

While priority of right undeniably is a central factor in the allocation and administration of Idaho's water, it is not the only factor. Another requirement of equal importance—a

---

[4] It is worth noting that nearby western states' constitutions do not contain these unique and detailed provisions and instead are silent on the matter or simply emphasize priority as the operative principle in water allocation. *See, e.g.,* Colorado Const. Art. XVI, Sec. 6; Wyoming Const. 97-8-003; Montana Const. Art. IX; and Utah Const., Art. XVII, sec. 1. The Idaho Constitution—with its provisions expressly authorizing the Legislature to subject one's priority to "reasonable limitations" so as to extend "due regard to . . . the necessities" of junior priority rights, with its language enunciating the need to provide for "optimum development" of our water resources, and with its declaration that water used under a distribution scheme is a "public use"—stands in stark contrast to the charters of these other western prior appropriation doctrine states. These provisions are in our Constitution for a reason, and this case presents the exact situation where they, and the statutes and rules enacted to implement them, should not be ignored.

requirement whose relevance is squarely apparent in this case—is the constitutional stipulation that "reasonable limitations" shall be placed on prior rights to accommodate the "necessities" of junior appropriators. Idaho Const. Art. XV, sec. 5.

While the goal of avoiding injury to senior rights is important, it is not spelled out in the Constitution; instead there is the concept of "optimum use," and the constitutional requirement that water rights used "for agricultural purposes" can be subjected to those "equitable terms and conditions as to the quantity used and time of use" that the Legislature finds appropriate from time to time.

In the simple case, on a stream or river where shutting a junior's headgate will deliver water to the senior immediately and in amounts equal (or nearly so) to the shut-off, the priority system typically can proceed without significant constraint from any constitutional principle other than priority. The action is neutral in terms of economic impact: either the junior gets a certain amount of water for beneficial use or the senior gets the same amount. In such a situation, it is proper that the senior should have it, and maximum use of the resource is preserved. This is one reason the state has supported the construction of large surface storage reservoirs—so that there is a supplemental supply to ease the impact of the "instant on/off" system of priorities that works on surface streams.

However, it is a far different story with regard to the vast ESPA and its complex relationship to the river. Here, a call seeking to improve river flows by enough to irrigate 1000 acres may require drying up 100,000 acres of land served by ground water. Here, little of the water use curtailed will be delivered to the seniors in the year the call is made. The balance will not be fully "delivered" for decades, during which the climatic conditions and water supply situation will have changed several times. Here the effect of curtailment very likely will put

many, or most, ground water users out of business, perhaps permanently. Such a proposal surely triggers the balancing factors set forth in our Constitution.

B. The Idaho Legislature has codified these Constitutional principles.

Idaho's Legislature has implemented the principles the constitution set forth. "It is the policy of the state of Idaho to promote and encourage the optimum development and augmentation of the water resources of this state." Idaho Code § 42-234. The Legislature has been particularly explicit on this subject with regard to ground water rights, such as those the Coalition seeks to curtail. In Idaho's Ground Water Act, the Legislature confirmed that a weighing of the constitutionally-recognized factors in times of shortage, not rote priority, is the law in Idaho. The stated policy of this statute is that "while the doctrine of 'first in time is first in right' is recognized, a reasonable exercise of this right shall not block the full economic development of underground water resources." Idaho Code § 42-226 (emphasis added.) The Idaho Supreme Court has noted that this statute is "consistent with the Idaho Constitution" because it seeks to promote "optimum development of water resources." *Baker v. Ore-Ida Foods, Inc.*, 95 Idaho 575, 584 (1973).

Brought down to the terms of this case, the statute means, as its constitutional heritage means, that the Coalition's priorities must be held in check so that they may be "reasonably" exercised, and so that the Department may assure that they do not block "full" economic development of the ground water resource. It would hardly serve either the Constitution or the Ground Water Act for the Department simply to eliminate the economic development that has occurred with ESPA ground water.

The Ground Water Act is not the only place that the Legislature has implemented Idaho's constitutional goals of optimum use and reasonable limitations on priority. The lawmakers have

enacted several other provisions mandating that considerations other than priority and injury be considered when it comes to the use of the public waters of the state.

For example, in evaluating water right transfers, the Legislature requires the Department to determine that the change will be "consistent with the conservation of water resources within the state of Idaho and is in the local public interest," and that "the change will not adversely affect the local economy of the watershed or local area within which the source of water for the proposed use originates." Idaho Code § 42-222(1).

This same statute expressly prohibits the director from approving "a change in the nature of use from agricultural use where such change would significantly affect the agricultural base of the local area." *Id.* (emphasis added). Where large acreages are implicated by the proposed transfer (i.e., more than 5,000), the Legislature has declared that both that body and the Department have a role in approving it, and that "[e]ach shall give due consideration to the local economic and ecological impact of the project or development so proposed." *Id.* (Emphasis added.)

The Legislature also has mandated specific adjudicatory procedures to apply when surface water users, like the Coalition here, make injury claims against ground water users. Idaho's Ground Water Act provides that if the holder of a surface water right asserts that his or her right "is being adversely affected by one or more user[s] of ground water rights of later priority" the surface water right holder may initiate an action at the Department seeking curtailment or other administration of the ground water rights. Idaho Code § 42-237b. Once the Director has received from the surface user written grounds the Director deems "sufficient" for initiating a proceeding to consider such administration, the statute requires the Director to set the matter "for hearing before a local ground water board." *Id.* The board may recognize the senior

surface water users call and curtail the junior ground water right only "if the use of the junior rights affects, contrary to the declared policy of this act, the use of the senior right." Idaho Code § 42-237c. The "declared policy" of the act is "full economic development of underground water resources," a goal that shall not be blocked by "reasonable exercise" of a prior right.

The State's policy, when it comes to using the public water resource, is not simply to tally relative priorities in a surface water-ground water dispute, accept the senior's allegation of injury, and then switch off ground water pumps.[5] The statute contemplates a process where local considerations, the hydrological and economic effects of curtailment, the legislative mandate of full economic development of ground water, and the principles enunciated by the Framers, all are taken fully into account.

IGWA contends that the Coalition's Delivery Call must be referred to a local ground water board, that the Coalition's statements in support of the call are insufficient under section 42-237b, and that this is an independent ground for summarily rejecting the Delivery Call.

C. Idaho's Supreme Court has ruled repeatedly that priority of right is not the only element to be considered during times of shortage and that maximum use and related concepts are critical elements.

In harmony with these constitutional and statutory mandates, Idaho's Supreme Court has confirmed that "maximum use" of the public's water, and its "optimum use," are overarching goals of state regulation. "The policy of the law of this State is to secure the maximum use and benefit, and least wasteful use, of its water resources." *Poole v. Olaveson*, 82 Idaho 496, 502, 356 P.2d 61, 65 (1960). *See also Reynolds Irr.Dist. v. Sproat*, 70 Idaho 217, 222, 214 P.2d 880 (1950).

---

[5] Chapter 6, Idaho Code, is designed to allow administration on surface streams, where instant curtailment leading to instant relief is possible. Idaho Code § 42-237b sets up a different, more appropriate procedure where ground water rights are concerned.

> In this arid country, where the largest duty and the greatest use must be had from every inch of water, in the interest of agriculture and home building, it will not do to say that a stream may be dammed so as to cause subirrigation of a few acres, at a loss of enough water to surface irrigate ten times as much by proper application.

Van Camp v. Emery, 13 Idaho 202, 208, 89 P. 752, 754 (1907). One might also say that it will not do to demand that the ESPA be kept at an artificially high level—higher than when the Coalition's members obtained their surface water rights—so that the Coalition members may have their water rights improved beyond what they were when first appropriated.

In *State v. Hagerman Water Right Owners,* 130 Idaho 727, 735, (1997), quoting *Kunz v. Utah Power & Light Co.*, 117 Idaho 901, 904 (1990),[6] the Idaho Court stated:

> The water of this arid state is an important resource. Not only farmers, but industry and residential users depend upon it. Because Idaho receives little annual precipitation, Idahoans must make the most efficient use of the limited resource. The policy of the law of the [s]tate is to secure the maximum use and benefit, and the least wasteful use, of its water resources.

Using language that was later to be echoed in Idaho's own constitution, the U.S. Supreme Court in *Basey v. Gallagher*, 87 U.S. 670, 683 (1874), ruled that the "right of the first appropriator" is to be "exercised within reasonable limits," and with reference to "the necessities of the people, and not so as to deprive a whole neighborhood or community of its use, and vest an absolute monopoly in a single individual."

The Director's initial ruling in this very case recognizes these principles. Director's Order at 27-29. Here, the proposal is to curtail many times more acre-feet of ground water than could be delivered to or used by the Coalition's members, causing direct economic impact to the ground water-dependent economies while providing only transitory, eventual, and partial benefit

---

[6] *Kunz* cites nine additional Idaho cases for this proposition. *Kunz v. Utah Power & Light Co.*, 117 Idaho at 904.

to the surface water users. The Coalition has not attempted to show how its Delivery Call can be sustained in light of this fact, or in light of the principles of law mandated by our court.

D. The Department's Conjunctive Management Rules require any Delivery Call to be considered in light of these same principles.

The Department's Conjunctive Management Rules embody the same principles—maximum use, balancing of priority against other factors—as articulated by the Framers, the Legislature, and the Idaho Supreme Court. The Department has expressly declared that:

> The policy of reasonable use includes the concepts of priority in time and superiority in right being subject to conditions of reasonable use as the legislature may by law prescribe as provided in Article XV, Section 5, Idaho Constitution, optimum development of water resources in the public interest prescribed in Article XV, Section 7, Idaho Constitution, and full economic development as defined by Idaho law.

IDAPA 37.03.11.020.03. Similar standards are set forth in other portions of the rules. *Id.* at 37.03.11.020.04 (futile calls will not be honored, or may be honored with conditions); 37.03.11.020.05 ("reasonableness of diversion and use of water" is a factor to be considered). These principles are not idle comments in the Rules; it is not by accident that the Department specifically refers to these same provisions of the Idaho Constitution. They are central to the consideration of the Coalition's Delivery Call.

The Rules also authorize the Director to consider, in evaluating whether "material injury" has occurred, the extent to which a senior's water requirements could be met by employing "reasonable diversion and conveyance efficiency and conservation practices" or "alternate reasonable means of diversion," including wells. IDAPA 37.03.11.042.01g and h. Again, the burden is on the Coalition to answer these concerns, and to come forward with a proof that they meet these standards.

These principles should require heightened scrutiny of any request, such as the Coalition's request here, to shut off over a million acre-feet of ground water pumping to deliver perhaps 5% of that amount to the seniors this irrigation season.[7]

The Department's Rules also recite a principle basic to authorities such as the United States Supreme Court's opinion, upholding the position of the predecessor to Coalition member Twin Falls Canal Company in *Schodde v. Twin Falls Water Co.*, 224 U.S. 107 (1912): "An appropriator is not entitled to command the entirety of large volumes of water in a surface or ground water source to support his appropriation contrary to the public policy of reasonable use of water as described in this rule." IDAPA 37.03.01.020.04. The Coalition's Delivery Call fails to address this factor. If granted, the Delivery Call also would violate it.

In sum, the wholesale shut-down of thousands of wells sought by the Coalition does not comport with the economic development, maximum use, and balancing principles contemplated by Idaho law.

The Coalition has made no attempt whatsoever to evaluate these hydrologic or economic factors, or to provide the Director with any facts that could support the radical and economically destructive ground water curtailment its members seek in this case.

IV. The Coalition has failed to meet its obligation to provide evidence of beneficial use and material injury.

As stated above, summary judgment is appropriate if the Coalition has failed to present evidence on at least one essential element of its case. *Dunnick v. Elder,* 126 Idaho 308, 311, 882 P.2d 475, 478 (1994). A review of the Coalition's evidence demonstrates that the Coalition has failed to present sufficient evidence on both beneficial use and material injury to prove those elements of its case.

---

[7] See Brendecke Affidavit, attached.

The Department's Conjunctive Management Rules require that, before a delivery call will be honored, the Director first must "determin[e] the reasonableness of the diversion and use of water by both the holder of a senior-priority water right who requests priority delivery and the holder of a junior-priority water right against whom the call is made." IDAPA 37.03.11.020.05. To allow the Director to make this determination here, the Rules require the Coalition to provide the following information, among other required information, to support a call for water delivery: (1) "... the water diversion and delivery system being used by petitioner and the beneficial use being made of the water" and (2) "[a]ll information, measurements, data or study results available to the petitioner to support the claim of material injury." IDAPA 37.03.11.030.01 (a, c).

In addition to the Rules' requirements, the Director's February 14 Order in this case specifically directed the Coalition to supply certain information. Director's Order at 31. Although the Coalition was granted an extension to obtain and submit some of this information (the names, addresses and description of the water rights of the ground water users who are alleged to be causing material injury), the deadline has passed for the Coalition to make their record on the required items quoted above—namely, (1) documentation of their delivery system and beneficial use and (2) evidence showing material injury. March 7, 2005 letter from Travis Thompson to Director Dreher; *Order Denying Motion to Authorize Discovery; and Granting Additional Time to Serve Respondents* (March 9, 2005).

The limited information the Coalition has provided fails to satisfy both the minimum requirements of IDAPA 37.03.11.030.01 and the Director's Order. *Petitioners' Joint Response to Director's February 14, 2005 Request for Information* (March 15, 2005), as amended by March 18, 2005 letter from Travis Thompson to Director Dreher. First, the Coalition has not

provided sufficient information about its beneficial use of water. As explained in more detail below, with regard to the Coalition's lack of responsiveness to the Director's Order, the Coalition has not provided sufficient evidence showing the actual amounts of water beneficially used by each of its members' landowners and shareholders. Without this, how can the Director make a determination about material injury?

Second, and even more significantly, the Coalition has provided no information—beyond pointing out that river flows, and perhaps their diversions, have decreased in recent years (during a once-in-500-years drought)—to demonstrate how its members' landowners and shareholders are suffering material injury from ground water pumping. They have provided no evidence showing the extent of any shortage, how they have been affected by any such shortage, or what adjustments they have made to accommodate it. In this case, the Coalition has made sweeping allegations and called for thousands of acres of irrigated crop land to be dried up immediately, yet they have not made any effort to prove this central element of their case—material injury.

In addition, the Coalition provided either no information, or incomplete information, in response to the following specific requests in the Director's Order: (1) total diversions of ground water in acre feet per month by the Coalition members' landowners or shareholders, as to A&B Irrigation District, Minidoka Irrigation District, Burley Irrigation District, and Milner Irrigation District; (2) number of the Coalition members' landowners or shareholders holding individual ground water rights; (3) average monthly headgate deliveries in inches per acre to Coalition members' landowners or shareholders, as to A&B Irrigation District, Minidoka Irrigation District and Burley Irrigation District; (4) the total amount of reservoir storage in acre feet carried over to the subsequent year; (5) the quantity of water in acre feet the Coalition members' landowners or shareholders leased to other users through the water supply bank and the Water District 01

Rental Pool; (6) the quantity of water in acre feet the Coalition members' landowners or shareholders made available to other users through means other than the water supply bank and the Water District 01 Rental Pool; (7) the total number of acres irrigated by flood irrigation and the total number of acres irrigated by sprinkler irrigation, as to A&B Irrigation District, American Falls Reservoir District #2, Minidoka Irrigation District, North Side Canal Company, and Twin Falls Canal Company; and (8) the specific types of crops planted on irrigated acres served by the Coalition members' landowners or shareholders (without some indication of the number of acres on which each crop is grown, for each year for the last fifteen years, the meager information as provided is meaningless to support the Coalition's Delivery Call).[8]

The Coalition seems to be waiting for someone else to make their case, but that burden falls squarely on them. The Coalition's failure to provide evidence proving essential elements of their case warrants dismissal on summary judgment. The Ground Water Users and the State of Idaho should not be forced into the expense of full litigation when the Coalition has not brought forth evidence to support their claim.

V. The Surface Water Coalition's Delivery Call should not be granted because it would be futile.

The Department's Conjunctive Management Rules specify that a delivery call will be deemed "futile" and therefore denied if the call, "for physical and hydrologic reasons, cannot be satisfied within a reasonable time of the call by immediately curtailing diversions under junior-priority ground water rights or that would result in waste of the water resource." IDAPA 37.03.11.010.08. The Department already has refused, in response to delivery calls or proposed

[8] The Coalition itself agreed to provide any "further information concerning 'material injury'," beyond the wholly unsupported allegations in their Delivery Call. However, when requested (by the Director's Order) the Coalition again failed to provide the necessary information.

administration in water districts, to curtail juniors where it would be futile, including those situations where water could be delivered but to do so would be unreasonably wasteful.

In a 2004 case involving competing surface water rights on the Big Lost River, the Director concluded that a proposed delivery was futile and would not be attempted where channel and ditch losses between the junior diversions and the downstream seniors ranged from 75 percent to 90.2 percent. *In the Matter of Determining a Futile Call for the Delivery of Surface Water in Water District No. 34, Big Lost River* (July 30, 2004) (construing IDAPA 37.03.12.020.04, which prohibits "unreasonable waste").

In the present case, the Delivery Call asks the Department to curtail ground water use across a broad—and, as the Director's Order notes, as yet unspecified—expanse of the ESPA. The numbers implied in the Delivery Call certainly could involve drying up as many as 1.1 million acres of ground water irrigated land to "deliver" enough water to irrigate perhaps 10,000 acres of land. The Delivery Call requests an unreasonable waste of water and the antithesis of full economic development.

The Department's Rules indicate that, based on a finding that a call would be futile, the Department can either deny a curtailment or mitigation obligation outright or—provided the facts support it in light of the "full economic development" standard—require juniors to implement "mitigation" or "staged or phased curtailment." IDAPA 37.03.11.020.04 (emphasis added). The Director certainly has discretion in this regard. However, IGWA submits that, given the extreme imbalances involved and the certain harm to Idaho's economy that would result, it would be an abuse of discretion to require curtailment of any kind in this case.

Based on any one of the arguments raised in this memorandum and the facts set forth in the attached affidavits of H. J. Church and Charles M. Brendecke, the Coalition's Delivery Call should be dismissed on summary judgment.

RESPECTFULLY SUBMITTED this 23d day of March 2005.

GIVENS PURSLEY LLP

Addendum
D

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF THE REQUEST FOR ADMINISTRATION IN WATER DISTRICT 120 AND THE REQUEST FOR DELIVERY OF WATER TO SENIOR SURFACE WATER RIGHTS BY A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	**ORDER ON PETITIONS TO INTERVENE AND DENYING MOTION FOR SUMMARY JUDGMENT; RENEWED REQUEST FOR INFORMATION; AND REQUEST FOR BRIEFS**

Background

On February 14, 2005, the Director of the Department of Water Resources ("Director" or "Department") issued an Order in this matter and other related matters. The Order provided an initial response by the Director to the water delivery call made by letter on January 14, 2005, by the seven irrigation districts, reservoir district, and canal companies named in the above caption and referred to as the Surface Water Coalition ("Coalition"). The delivery call seeks the administration and curtailment of ground water rights within Water District No. 120 that are junior in priority to water rights held by or for the benefit of members of the Coalition. Among other actions, the Order designated the Coalition's delivery call as a contested case and granted the petition of the Idaho Ground Water Appropriators, Inc. ("IGWA") to intervene in the delivery call proceeding involving Water District No. 120.

In addition, the Order required each member of the Coalition to submit to the Director within thirty (30) days certain information called for in the Order. The Order states that the Director will consider the water delivery call as a call for administration and curtailment of junior priority ground water rights in Water Districts No. 120 and No. 130 that are alleged to, or may, be causing injury to the senior surface water rights of the members of the Coalition. The Order further states that the Director will make a determination of the extent of likely injury after April 1, 2005, when the U. S. Bureau of Reclamation and U. S. Army Corps of Engineers release their jointly prepared operating forecasts for inflow from the Upper Snake River Basin for the period April 1 through July 31, 2005. The forecasts are expected to be released on or about April 8, 2005. The Director expects to be able to issue an order addressing the extent of likely injury during the week of April 18, 2005.

4-6-05

Additional Petitions to Intervene

In addition to IGWA, other entities have filed timely petitions to intervene in this matter including the Idaho Dairymen's Association ("IDA"), the United States Bureau of Reclamation ("USBR"), and the Idaho Power Company ("Idaho Power"). IDAPA 37.03.01.353 provides as follows:

> If a timely-filed petition to intervene shows direct and substantial interest in any part of the subject matter of a proceeding and does not unduly broaden the issues, the presiding officer will grant intervention, subject to reasonable conditions, unless the applicant's interest is adequately represented by existing parties. If it appears that an intervenor has no direct or substantial interest in the proceeding, the presiding officer may dismiss the intervenor from the proceeding.

The IDA represents entities holding ground water rights that, based on the Coalition's water delivery call, are potentially subject to curtailment. Therefore, the IDA has a direct and substantial interest in the subject of the proceeding that may not be adequately represented by the present parties. Because the interests of the IDA will not unduly broaden the issues, the IDA is granted intervention.

The USBR is the legal owner of some of the water rights directly at issue in this proceeding as stated in Finding of Fact 54 of the Order of February 14, 2005. Therefore, the USBR has a direct and substantial interest in the subject of the proceeding that is not adequately represented by the present parties. Because the interests of the USBR will not unduly broaden the issues, the USBR is granted intervention.

Unlike the USBR, Idaho Power does not identify in its petition any water rights it holds that are the subject of this proceeding. Furthermore, unlike the IDA, Idaho Power does not state in its petition that it holds ground water rights that are potentially subject to the actions and relief requested. Therefore, Idaho Power has not demonstrated a direct and substantial interest in the subject of the proceeding and is denied intervention. Additionally, to the extent Idaho Power believes its water rights are being interfered with by the exercise of junior priority ground water rights, it has other adequate forms of relief available, such as the filing of a separate delivery call.

Motion for Summary Judgment

On March 23, 2005, IGWA filed *Idaho Ground Water Appropriators' Motion for Summary Judgment and Memorandum in Support*. IGWA also filed the *Affidavit of Dr. Charles M. Brendecke* ("Brendecke Affidavit") and the *Affidavit of Mr. John Church* ("Church Affidavit") in support of the summary judgment motion. The motion asks the Director to dismiss the Coalition's delivery call based upon the supporting affidavits and numerous factual and legal arguments. On March 28, 2005, the Coalition submitted a letter to the Director objecting to the filing of the summary judgment motion by IGWA. The Coalition argues that the motion for summary judgment is inappropriate at this informal stage of the proceeding and

should be stricken, or if not stricken the Director should inform the Coalition as to whether it is expected or required to respond to the motion pursuant to Rule 270 of the Department's Rules of Procedure.

The Order issued by the Director on February 14, 2005, designated this matter as a contested case and did not specify that the matter would proceed under the Informal Proceedings provided for by Rules 100 through 103 of the Department's Rules of Procedure. IDAPA 37.01.01.100 - 103. The Order did state, however, that the Director intended to make a determination of the extent of likely injury to the rights held by or for the benefit of members of the Coalition after April 1, 2005, which will be prior to any opportunity for a hearing in the contested case. Once the Director has issued a further order addressing the merits of the delivery call, the parties will have an opportunity to request a hearing and engage in the normal steps of a contested case provided for under the Department's Rules of Procedure. IGWA's *Motion for Summary Judgment* will, therefore, be denied without prejudice at this time, and the Coalition shall have no duty to respond. The Director has reviewed the *Motion for Summary Judgment* and the Brendecke Affidavit, but does not intend to rely upon the information contained therein in making a determination of the extent of likely injury to the members of the Coalition. The Director has not reviewed the Church Affidavit and does not intend to do so.

Renewed Request for Information

The Order of February 14, 2005, required that each member of the Surface Water Coalition file with the Director certain information called for under Conclusion of Law No. 38 of the Order for the past fifteen (15) irrigation seasons, 1990 to 2004, within thirty (30) days of the Order. The Coalition members filed information in response to this request on March 15 and 18, 2005.

The response filed by the Coalition members relied heavily on data obtained from the Department (total monthly diversions of natural flow and total monthly diversions of water released from reservoir storage), failed to identify members or shareholders holding individual ground water rights (alleging that such information is "irrelevant for purposes of the request for water right administration of Petitioners' surface water rights"), referred the Director to his own staff or the watermaster for Water District 01 (total amount of reservoir storage carried over to the subsequent year, quantity of water leased to other users through the water supply bank and the Water District 01 Rental Pool, and quantity of water made available to other users through means other than the water supply bank or the Water District 01 Rental Pool), provided data or estimates for the total number of acres irrigated by flood irrigation and the total number of acres irrigated by sprinkler irrigation for one year only (Minidoka Irrigation District, North Side Canal Company, and Twin Falls Canal Company), and a single list of crops for each member of the coalition (no acreage numbers and no history of crop rotation).

All of the information that was to have been provided pursuant to the Order of February 14, 2005, is relevant for the determination of the extent of material injury to surface water rights held by or for members of the Coalition. Ground water rights held by individual members of the entities comprising the Coalition (landowners in irrigation districts and shareholders in canal

companies) is especially relevant since such rights may have been established and used to supplement surface water supplies during times of shortage. If information about the ground water rights held by individuals within the Coalition members is not available, the Coalition may, as an alternative, supply documented information to the Director identifying the number and location of acres served by each Coalition member for which an inadequate water supply was available to irrigate or finish crops in specific years from any available water source.

The Coalition alleges that: "Since the Department 'maintains complete records for all claimed, permitted, licensed, and decreed water rights authorizing the diversion and use of ground water from the ESPA', the Department is capable of determining whether or not any landowners or shareholders of the respective Petitioner entity hold individual ground water rights." With the exception of the North Side Canal Company, the Department does not have records of the landowners and shareholders that receive water delivered by the member entities comprising the Coalition. Consequently, with the exception of the North Side Canal Company, the Department cannot determine whether landowners or shareholders of the respective member entity of the Surface Water Coalition hold individual ground water rights.

The Director hereby reiterates the request of the members of the Surface Water Coalition for submission of all information called for under Conclusion of Law No. 38 of the Order of February 14, 2005, to the extent that information has not been submitted to date. The failure to fully comply with this request will limit the Director's ability to fully address the relief requested by the Coalition.

Request for Briefs

In preparing the forthcoming order determining the extent of likely injury that will be experienced by the members of the Surface Water Coalition, the Director has identified a legal issue for which briefing by the parties is requested. The issue is whether Idaho law permits the Coalition members to pursue a delivery call to supply water rights that were decreed in a proceeding(s) to which the ground water users were not a party.

The Director requests that the parties review the cases of *Mays v. District Court*, 34 Idaho 200, 200 P. 115 (1921); *Scott v. Nampa Meridian Irr. Dist.*, 55 Idaho 672, 45 P.2d 1062 (1934); *Nettleton v. Higginson*, 98 Idaho 87, 558 P.2d 1048 (1977); *State v. Hagerman Water Right Owners, Inc.*, 130 Idaho 736, 947 P.2d 409 (1997), and any other Idaho Supreme Court decisions that may be relevant to the issue raised. The Director requests that the parties provide simultaneous briefing on this issue to the Director within seven (7) days from the date of this order.

ORDER

Based upon and consistent with the foregoing,

IT IS HEREBY ORDERED as follows:

1. The Petitions to Intervene as parties in this matter filed by the Idaho Dairymen's Association and the United States Bureau of Reclamation are GRANTED, and the Petition to Intervene filed by the Idaho Power Company is DENIED.

2. The Motion for Summary Judgment filed by the Idaho Ground Water Appropriators is DENIED without prejudice.

3. The Director renews his request of the members of the Surface Water Coalition for submission of all information called for under Conclusion of Law No. 38 of the Order of February 14, 2005, to the extent that information has not already been submitted to the Director.

4. The parties are requested to provide simultaneous briefing to the Director within seven (7) days from the date of this order on whether Idaho law permits the Coalition members to pursue a delivery call to supply water rights that were decreed in a proceeding(s) to which the ground water users were not a party.

DATED this 6th day of April 2005.

KARL J. DREHER
Director

Administrative Assistant to the Director
Idaho Department of Water Resources

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **FINAL ORDER REGARDING APRIL 2024 FORECAST SUPPLY** **(METHODOLOGY STEPS 1–3)**

FINDINGS OF FACT

1. On July 19, 2023, the Idaho Department of Water Resources ("Department") issued its *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("*Methodology Order*"). The *Methodology Order* established nine steps for determining material injury to members of the Surface Water Coalition ("SWC"). This order applies steps 1, 2, and 3 of the *Methodology Order*.[1]

A. Step 1

2. By April 1 of each year, Step 1 requires members of the SWC to submit to the Department electronic shapefiles delineating the total anticipated irrigated acres for the upcoming year "or confirm in writing that the existing electronic shape file submitted by SWC has not varied by more than five percent." *Methodology Order* ¶ 1 at 41.

3. On February 21, 2024, the Department received a letter from American Falls Reservoir District #2 ("AFRD2"), stating that its total number of irrigated acres has not varied by more than five percent.

4. On March 5, 2024, Minidoka Irrigation District ("Minidoka") submitted its electronic shapefile delineating its total irrigated acres to the Department.

5. On April 1, 2024, the Department received a letter from A&B Irrigation District ("A&B"), Burley Irrigation District ("BID"), Milner Irrigation District ("Milner"), North Side Canal Company ("NSCC") and Twin Falls Canal Company ("TFCC"). In the letter, A&B, BID, Milner, and NSCC confirmed that their total number of irrigated acres for 2024 will not vary by

[1] Shortly after the *Methodology Order* was issued, the Idaho Ground Water Appropriators, Inc., and certain Idaho cities filed petitions for judicial review in Ada County (Nos. CV01-23-13173 and CV01-23-13238). The filing of a petition for judicial review does not stay the effectiveness of the order. I.C. § 67-5274. No party to the judicial review proceedings has requested a stay of the *Methodology Order*. Accordingly, the Director will apply the *Methodology Order* in this order.

more than five percent from the electronic shapefiles submitted in prior years. With the letter, TFCC submitted an electronic shapefile delineating its total irrigated acres.

6. Based on the information submitted by the SWC, the Department will use the following total irrigated acres:

	Total Irrigated Acres[2]	Data Source
A&B	15,924[3]	SRBA Partial Decree
AFRD2	62,361	SRBA Partial Decree
BID	46,035	2013 shapefile submitted by BID, reduced by the Department for overlapping acres and acres outside of service area.
Milner	13,264	2010 service area shapefile, reduced by the Department for overlapping acres and acres outside of service area.
Minidoka	74,725	2024 shapefile submitted by Minidoka, reduced by the Department for overlapping acres and acres outside of the service area.
NSCC	154,067	SRBA Partial Decree
TFCC	196,162	SRBA Partial Decree

B. Step 2

7. Step 2 states that, within fourteen days of the issuance of the joint forecast prepared by the United States Bureau of Reclamation ("USBR") and the United States Army Corp of Engineers ("USACE"), the Director "will issue a final order predicting the April [Forecast Supply] for the water year for each SWC entity. The Director will compare the April [Forecast Supply] for each SWC entity to the [Baseline Demand] for each SWC entity to determine if an in-season demand shortfall ("IDS") is anticipated for the upcoming irrigation season." *Methodology Order* ¶ 3 at 42.

8. On April 4, 2024, the USBR and USACE issued their joint forecast ("Joint Forecast"), predicting an unregulated inflow of 3,370,000 acre-feet at the Snake River near Heise gage for the period of April through July. The forecasted flow volume equates to 102% percent of the average.[4] The Joint Forecast "is generally as accurate a forecast as is possible using current data gathering and forecasting techniques." *Id.* ¶ 49 at 19 (citation omitted).

[2] "The number of irrigated acres used in this methodology order is the number of reported acres unless that number is larger than the decreed irrigated acres, and if so, then the decreed acres are used." *Methodology Order* ¶ 22 at 11.

[3] The question of whether A&B's enlargement acres should be included in A&B's total irrigated acreage count is an issue raised in the appeal of the *Methodology Order* currently pending before Judge Wildman in Ada County (No. CV01-23-13238). Because the matter is still under consideration and because there is no shortfall predicted for A&B, the Department has not modified the total irrigated acreage count for A&B.

[4] The average is based on the years 1991–2020. The Joint Forecast relies on a "30-Year Climate Normal" to calculate an average April through July runoff volume.

9. The April–July Heise natural flow data from the years 1990–2023 were data inputs for the development of regression equations for A&B and Milner to predict the natural flow supply.[5] Data greater or less than two standard deviations from average were excluded from the regression development.

10. The April–July Heise natural flow data from the years 1990–2023 and Box Canyon November–March total discharge data for the period 1989–2023, were data inputs for the development of multiple linear regression equations to predict the natural flow supplies for AFRD2, BID, Minidoka, NSCC, and TFCC. *Methodology Order* ¶ 49 at 19. The U.S. Geological Survey measures and monitors the flow at the Box Canyon stream flow measurement gage. The Box Canyon November–March total discharge used by the Director in the regression models for 2024 totaled 92,979 acre-feet.

11. The storage allocations were predicted for each SWC member. As of April 8, 2024, Water District No. 1's preliminary water right accounting indicates water rights for Jackson Lake 1906, Lake Walcott, Jackson Lake 1910, Jackson Lake 1913, Henrys Lake 1917, Palisades Winter Water Savings, Island Park 1921, American Falls Winter Water Savings, American Falls, and Henrys Lake 1965 are satisfied. The remaining reservoir rights are 271,024 acre-feet short of satisfaction. Based on a comparison of the current Heise natural flow forecast to the analogous year of 2020, the Director anticipates the remaining reservoir water rights will be satisfied, and the SWC will receive a full storage allocation. The storage allocations are based on the anticipated full allocation minus evaporation charges.

12. Based on the above, the Director projects the following shortfalls:

	Predicted Natural Flow Supply	Predicted Storage Allocation	Minidoka Credit Adjustment	Total Forecast Supply	Baseline Demand (BLY 2018)	In-Season Demand Shortfall
A&B	11,752	135,194		146,946	64,192	0
AFRD2	97,606	386,596	1,000	485,202	458,890	0
BID	102,178	222,485	5,130	329,793	262,211	0
Milner	15,166	87,870		103,036	58,417	0
Minidoka	146,201	360,077	8,370	514,648	354,851	0
NSCC	421,878	844,703	-7,750	1,258,831	1,026,661	0
TFCC	812,780	241,584	-6,750	1,047,614	1,121,717	74,100
				Total Predicted April In-Season Demand Shortfall (AF)		74,100

[5] Attached hereto, as Attachment A, are the regression analyses for each SWC entity used to predict natural flow supply.

C. Step 3

13. Step 3 requires the following:

> Step 3: By May 1, or within fourteen (14) days from issuance of the final order predicting the April [Forecast Supply], whichever is later in time, junior ground water users with approved mitigation plans for delivery of water must secure, to the satisfaction of the Director, a volume of water equal to their proportionate share of the April IDS unless the April IDS is revised as explained below in paragraph 6. If junior ground water users secured water for a reasonable carryover shortfall to an individual SWC member in the previous year, the current-year mitigation obligation to the individual SWC member will be reduced by the quantity of water secured for the reasonable carryover shortfall. The secured water will not be required to be delivered to the injured members of the SWC until the Time of Need.

Methodology Order ¶ 4 at 42.

14. The predicted April IDS for TFCC is 74,100 acre-feet. Because the TFCC is the only SWC entity with a predicted shortfall, the total predicted April IDS is 74,100 acre-feet.

15. The Eastern Snake Plain Aquifer Model ("ESPAM") is used to predict the junior priority water rights that must be curtailed to produce the volume of water equal to the predicted April IDS in the near Blackfoot to Minidoka reach. The ESPAM is updated periodically as new field measurements and advancements in modeling technology become available. ESPAM Version 2.2 ("ESPAM2.2") is the latest model version.[6]

16. The Department ran ESPAM2.2 to predict the junior priority water rights within the area of common ground water supply that must be curtailed to produce the volume of water equal to the predicted April IDS between the May 1 and September 30 of this irrigation season pursuant to the *Methodology Order*. Ground water rights bearing priority dates junior to March 31, 1954, must be curtailed to produce the volume of water equal to the predicted April IDS in the near Blackfoot to Minidoka reach.

CONCLUSIONS OF LAW

1. The Fifth Judicial District Court, in and for the County of Minidoka, held that the evidentiary standard of proof to apply in conjunctive administration of hydraulically connected water rights is clear and convincing. *See* Mem. Decision & Order on Pets. for Jud. Rev., *A&B Irr. Dist., Inc. v. Idaho Dep't of Water Res.*, No. CV-2009-647 (Minidoka Cnty. Dist. Ct. Idaho May 4, 2010); Mem. Decision & Order on Pets. for Reh'g, *A&B Irr. Dist., Inc. v. Idaho Dep't of Water Res.*, No. CV-2009-647 (Minidoka Cnty. Dist. Ct. Idaho Nov. 2, 2010).

[6] The Department finalized ESPAM2.2 model documentation reports (including a model calibration report, a predictive uncertainty analysis, a superposition model scenario, and a curtailment scenario) on May 27, 2021. *See* Idaho Dep't of Water Res., *ESPAM2.2 Reports* (2021), https:// research.idwr.idaho.gov/files/projects/espam/browse/ESPAM22_Reports/.

2. "Clear and convincing evidence refers to a degree of proof greater than a mere preponderance." *Idaho State Bar v. Topp*, 129 Idaho 414, 416, 925 P.2d 1113, 1115 (1996) (internal quotations removed). "Clear and convincing evidence is generally understood to be '[e]vidence indicating that the thing to be proved is highly probable or reasonably certain.'" *State v. Kimball*, 145 Idaho 542, 546, 181 P.3d 468, 472 (2008) (citing *In re Adoption of Doe*, 143 Idaho 188, 191, 141 P.3d 1057, 1060 (2006)); *see also Idaho Dep't of Health & Welfare v. Doe*, 150 Idaho 36, 41, 244 P.3d 180, 185 (2010).

3. The Director must utilize the best available technology for determining the impact of junior ground water diversions. *See Clear Springs Foods, Inc. v. Spackman*, 150 Idaho 790, 814, 252 P.3d 71, 95 (2011). ESPAM 1.1 and 2.1 are the model versions utilized previously in SWC delivery call proceedings. Previously, the Director determined that ESPAM 2.1 was the best available scientific tool for predicting the effects of ground water pumping. *See Idaho Ground Water Assoc. v. Idaho Dep't of Water Res.*, 160 Idaho 119, 124, 369 P.3d 897, 902 (2016). ESPAM 2.2 is the latest version of the ESPAM model. The improvements incorporated into ESPAM 2.2, as discussed in Finding of Fact 15, make it the best available scientific tool for predicting the effects of ground water pumping in this proceeding.

4. In 2024, the Director will have sufficient information to quantify the irrigated areas for each of the SWC members as required by Step 1.

5. The USBR-USACE April Joint Forecast predicts an unregulated inflow of 3,370,000 acre-feet at the Snake River near Heise gage from April to July. The forecasted volume equates to 102% of the average.

6. The predicted April IDS is 74,100 acre-feet. Junior ground water users holding consumptive water rights bearing priority dates junior to March 31, 1954, within the Eastern Snake Plain Aquifer area of common ground water supply[7] must mitigate for their proportionate share of the predicted April IDS in accordance with an approved mitigation plan.[8] Junior ground

[7] During the 2024 legislative session, the Idaho Legislature passed Senate Bill 1341 – ESPA Area of Common Groundwater Supply Expansion Act. This bill modifies the definition of the ESPA area of common ground water supply. Because the legislation does not become effective until July 1, 2024, the Department will continue to use the definition set forth in Rule 50 of the Department's Rules for Conjunctive Management of Surface and Ground Water Resources until July 1, 2024.

[8] There are seven approved mitigation plans responding to the SWC delivery call. The plans were filed by: 1) A&B Irrigation District, 2) Southwest Irrigation District and Goose Creek Irrigation District (collectively, "SWID"), 3) the Idaho Ground Water Appropriators, Inc. ("IGWA"), 4) certain cities commonly referred to as the "Coalition of Cities", and 5) certain entities commonly referred to as the "Water Mitigation Coalition." Recently, seven new mitigation plans were filed with the Department, but they have not been approved. Given the nature of certain plans, the Department must calculate the proportionate share of the predicted IDS. With regard to A&B Irrigation District's mitigation plan, A&B Irrigation District's proportionate share of the predicted April IDS of 74,100 acre-feet is 455 acre-feet. Due to the nature of the mitigation plans for SWID, the Coalition of Cities, and the Water Mitigation Coalition, these entities do not need to establish that they can mitigate for their proportionate share of the predicted IDS. IGWA has two approved mitigation plans. While uncertainty exists regarding the status of the plans, the Department will address the proportionate share obligated under each plan. Regarding IGWA's mitigation plan CM-MP-2016-001 (the 2016 SWC/IGWA settlement agreement mitigation plan), IGWA does not need to establish that

water users mitigating for their proportionate share of the predicted April IDS with a secured volume of water pursuant to an approved mitigation plan must, to the satisfaction of the Director, secure their proportionate share for delivery to the injured members of the SWC on or before May 2, 2024. Because there was no carryover shortfall in the fall of 2023, junior ground water users have not previously secured mitigation water for a carryover shortfall. Accordingly, there is no adjustment to the mitigation obligation.

7. If, on or before May 2, 2024, ground water users holding consumptive water rights bearing priority dates junior to March 31, 1954, within the Eastern Snake Plain Aquifer area of common ground water supply fail to establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted April IDS of 74,100 acre-feet in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water user. Junior ground water users who are mitigating with a secured volume of water are not required to assign the secured volume of water until after the Director issues a subsequent order requiring the assignment of the water.

8. If, at any time prior to the Director's final determination of the April Forecast Supply, the Director can determine with certainty that any member of the SWC has diverted more natural flow than predicted, or has accrued more storage than predicted, the Director will revise his initial, predicted IDS determination.

ORDER

Based upon and consistent with the foregoing, IT IS HEREBY ORDERED as follows:

The Director predicts an April IDS of 74,100 acre-feet. On or before May 2, 2024, ground water users holding consumptive water rights bearing priority dates junior to March 31, 1954, within the Eastern Snake Plain Aquifer area of common ground water supply shall establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted April IDS of 74,100 acre-feet in accordance with an approved mitigation plan. If a junior ground water user cannot establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted April IDS in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water user.

Dated this 18th day of April 2024.

MATHEW WEAVER
Director

it can mitigate its proportionate share of the predicted IDS. Regarding IGWA's 2009 storage water delivery mitigation plan CM-MP-2009-007, IGWA's obligation is 74,100 acre-feet, consistent with the rationale identified in the May 23, 2023 *Order Determining Deficiency in IGWA's Notice of Secured Water*. *See Order Determining Deficiency* at 4 ("[T]he plan clearly states that IGWA will mitigate for all ground water users, not just its members and non-member participants . . . ."). Issues regarding the status of the plans will not be addressed here.

CERTIFICATE OF SERVICE

I HEREBY CERTIFY that on this 18th day of April 2024, the above and foregoing, was served by the method indicated below, and addressed to the following:

EXPLANATORY INFORMATION TO ACCOMPANY A FINAL ORDER

(To be used in connection with actions when a hearing was **not** held)

(Required by Rule of Procedure 740.02)

The accompanying order is a "**Final Order**" issued by the department pursuant to section 67-5246, Idaho Code.

PETITION FOR RECONSIDERATION

Any party may file a petition for reconsideration of a final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: The petition must be received by the Department within this fourteen (14) day period.** The department will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law. See section 67-5246(4), Idaho Code.

REQUEST FOR HEARING

Unless the right to a hearing before the director or the water resource board is otherwise provided by statute, any person who is aggrieved by the action of the director, and who has not previously been afforded an opportunity for a hearing on the matter shall be entitled to a hearing before the director to contest the action. The person shall file with the director, within fifteen (15) days after receipt of written notice of the action issued by the director, or receipt of actual notice, a written petition stating the grounds for contesting the action by the director and requesting a hearing. See section 42-1701A(3), Idaho Code. **Note: The request must be received by the Department within this fifteen (15) day period.**

APPEAL OF FINAL ORDER TO DISTRICT COURT

Pursuant to sections 67-5270 and 67-5272, Idaho Code, any party aggrieved by a final order or orders previously issued in a matter before the department may appeal the final order and all previously issued orders in the matter to district court by filing a petition in the district court of the county in which:

i. A hearing was held,
ii. The final agency action was taken,
iii. The party seeking review of the order resides, or
iv. The real property or personal property that was the subject of the agency action is located.

The appeal must be filed within twenty-eight (28) days of: a) the service date of the final order, b) the service date of an order denying petition for reconsideration, or c) the failure within twenty-one (21) days to grant or deny a petition for reconsideration, whichever is later. See section 67-5273, Idaho Code. The filing of an appeal to district court does not in itself stay the effectiveness or enforcement of the order under appeal.

RE: SWC Delivery Call / Notice of Mitigation Water (*Final Order Regarding April 2024 Forecast Supply (Steps 1-3)*

Dear Director Weaver:

I am writing on behalf of our client the A&B Irrigation District ("A&B" or "District") in response to the *Final Order Regarding April 2024 Forecast Supply* ("*Order*") (April 18, 2024). This letter responds to the request for junior ground water right holders to establish how they will mitigate for their proportionate share of the predicted demand shortfall. *See Order* at 6, ¶ 7.

A&B has an approved mitigation plan regarding the above delivery call and order. The plan was stipulated to by the SWC last year and it was the District's belief with that stipulation it would not have to send this annual letter. The District requests confirmation of this going forward.

I have conferred with manager Justin Temple and it is the District's intent to continue to curtail the enlargement water rights (2,063 acres) for the 2024 irrigation season. The District will also deliver surface water to an additional 1,510.6 acres that could have been irrigated with some of the District's ground water rights with an April 1, 1962 priority (water right nos. 36-15127A et al.). The District intends to continue to deliver surface water to lands formerly irrigated with groundwater, approximately 3,573.6 in total, with groundwater supplied to certain areas as needed for pipeline operations.

Based upon similar prior correspondence on this issue with IDWR it is my understanding that this notice will satisfy the request stated in the *Order*. However, to the extent that A&B needs to also show that it has 455 acre-feet of storage to deliver to TFCC, that water is expected to be available in its final storage allocation for the 2024 irrigation (American Falls and Palisades storage space). If necessary, that amount of storage can be assigned from A&B to TFCC through Water District 01. Please advise if you have any questions.

As to IDWR's calculation of the District's proportionate share it is unclear if the Department is assuming full groundwater delivery to those acres covered by water rights junior to 1954. As noted, the District is delivering surface water to 3,573.6 acres, so if that proportionate share is revised based upon that fact please advise as to any changes.

Finally, although the District disagrees with and reserves all rights concerning the *Order* initially allowing IGWA to choose to mitigate under its 2009 Storage Water Mitigation Plan, if IGWA does establish that it has 74,100 acre-feet, then A&B will no longer have any obligation for the 2024 irrigation season. *See Order* at 5-6, n. 8. It is the District's understanding this issue will be addressed at the May 3, 2024 status conference scheduled by the Director.

If you have any questions or need additional information, please contact me at (208) 733-0700.

Sincerely,

Travis Thompson
Partner

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-MP-2016-001 **ORDER DENYING IGWA'S MOTION TO VACATE OR AMEND 2022 COMPLIANCE ORDER**
IN THE MATTER OF IGWA'S SETTLEMENT AGREEMENT MITIGATION PLAN	

BACKGROUND

On April 24, 2023, the Director of the Idaho Department of Water Resources ("Department") issued the *Amended Final Order Regarding Compliance with Approved Mitigation Plan* ("*Amended 2021 Compliance Order*"). In the *Amended 2021 Compliance Order*, the Director found that certain members of the Idaho Ground Water Appropriators, Inc. ("IGWA"), breached IGWA's 2016 Mitigation Plan in 2021 but that IGWA could remedy noncompliance by supplying "to the [Surface Water Coalition] an additional 30,000 [ac-ft] of storage water in 2023 and an additional 15,000 [ac-ft] of storage water in 2024 within 10 days after the Data of Allocation of such year." *Amended 2021 Compliance Order*, at 20.

On May 15, 2023, IGWA filed a *Petition for Judicial Review* on the *Amended 2021 Compliance Order*. *See IGWA v. Idaho Dep't of Water Res.*, No. CV01-23-07893 (Ada Cnty. Dist. Ct. Idaho).

On August 2, 2023, the Director issued the *Final Order Regarding IGWA's 2022 Mitigation Plan Compliance* ("*2022 Compliance Order*"). In the *2022 Compliance Order*, the Director held that certain IGWA members failed to satisfy their proportionate share of IGWA's mitigation obligation in 2022 and were not in compliance with IGWA's 2016 Mitigation Plan. *2022 Compliance Order*, at 1. However, the Director declined to issue a curtailment order because the mid-season as-applied order predicted that the SWC members would not suffer a demand shortfall during the 2023 irrigation season. *Id*.

On August 16, 2023, the Surface Water Coalition ("SWC") filed its *Surface Water Coalition's Petition for Reconsideration & Request for Hearing* ("*Request for Hearing*"), pursuant to Idaho Code § 42-1701A(3). In its *Request for Hearing*, the SWC requested the Director hold a hearing to issue an order requiring IGWA to cure the 2022 breach and order curtailment if compliance did not take place. *Request for Hearing*, at 6.

On August 22, 2023, IGWA filed *IGWA's Response to SWC's Petition for Reconsideration and Request for Hearing* ("*Response to Request for Hearing*"), requesting the Department deny SWC's *Request for Hearing*. *Response to Request for Hearing*, at 1.

On September 6, 2023, the Department issued an *Order Granting Request for Hearing; Notice of Scheduling Conference* ("*Hearing Order*"). The *Hearing Order* was granted on the legal basis that the SWC was not previously afforded an opportunity for a hearing on the *2022 Compliance Order*. *Hearing Order*, at 2.

On November 16, 2023, the Snake River Basin Adjudication District Court of the Fifth Judicial District ("District Court") affirmed the Department's *Amended 2021 Compliance Order*. *Mem. Decision & Order*, at 10, *IGWA v. Idaho Dep't of Water Res.*, No. CV01-23-7893 (Ada Cnty. Dist. Ct. Nov. 16, 2023) [hereinafter *Memorandum Decision & Order*].

On November 29, 2023, IGWA filed a *Petition for Rehearing* with the District Court in the *Amended 2021 Compliance Order* case.

On December 12, 2023, the Department issued an *Order Appointing Hearing Officer* for SWC's *Request for Hearing* regarding the *2022 Compliance Order*. The order appointed former Idaho Supreme Court Justice Roger S. Burdick as the hearing officer.

On December 29, 2023, Hearing Officer Burdick issued an *Order Authorizing Discovery; Scheduling Order; Order Suspending IDAPA 37.01.01.354; Notice of Prehearing Conference and Hearing* ("*Notice of Hearing*"). The *Notice of Hearing* identified four issues for hearing regarding the *2022 Compliance Order*. *Notice of Hearing*, at 4.

On February 12, 2024, the *Surface Water Coalition's Motion for Summary Judgment / Supporting Points & Authorities* ("*SWC's Motion for Summary Judgment*") was filed, requesting the Hearing Officer find (1) the Director erred in failing to order specific actions for IGWA to cure its 2022 breach or to issue an order curtailing certain ground water districts not in compliance; and (2) IGWA must comply with the 2016 Mitigation Plan to cure the 2022 breach. *SWC's Motion for Summary Judgment*, at 19.

On February 12, 2024, IGWA filed a *Motion for Summary Judgment* and *Memorandum in Support of IGWA's Motion for Summary Judgment* (collectively, "*IGWA's Motion for Summary Judgment*").

On March 5, 2024, the District Court issued an *Order Denying Petition for Rehearing* in the *Amended 2021 Compliance Order* case.

On March 12, 2024, Hearing Officer Burdick issued an *Order on Motions for Partial Summary Judgment* granting the *SWC's Motion for Summary Judgment* and resolving issues one through three identified in the *Notice of Hearing*. *See Order on Mots. for Partial Summ. J.*, at 10–11.

On March 14–15, 2024, Hearing Officer Burdick held a hearing on the fourth issue identified in the *Notice of Hearing* which discussed what actions must be taken by the ground water districts to cure their 2022 breach. *Notice of Hearing*, at 4. The Department is awaiting a recommended order based on that hearing.

On April 5, 2024, IGWA filed a notice of appeal of the District Court's *Memorandum Decision and Order* and *Denial of Petition for Rehearing* in the *Amended 2021 Compliance Order* case with the Idaho Supreme Court.

On April 8, 2024, IGWA filed *IGWA's Motion to Vacate or Amend 2022 Compliance Order* ("*Motion to Vacate*"). In its *Motion to Vacate*, IGWA claims that the ground water districts may use a novel 3-year baseline calculation to measure compliance, so the *2022 Compliance Order* is moot. *Motion to Vacate*, at 4. On April 8, 2024, IGWA also filed *Declaration of Elisheva M. Patterson in Support of Motion to Vacate Order* ("*Patterson Declaration*").

On April 16, 2024, the SWC filed *Surface Water Coalition's Motion to Strike or Deny IGWA's Motion to Vacate or Amend 2022 Compliance Order* ("*Motion to Strike*"). In its *Motion to Strike*, the SWC claims IGWA is not authorized to change the baseline on its own after the Director issued a final order finding IGWA's noncompliance and that IGWA failed to timely request a review of the Director's determination. *Motion to Strike*, at 4.

On April 25, 2024, IGWA filed *IGWA's Reply Brief in Support of Motion to Vacate or Amend 2022 Compliance Order* ("*Reply Brief*") stating that IGWA's *Motion to Vacate* is not barred by the doctrine of res judicata. *Reply Brief*, at 1.

The Director considered the arguments of counsel and the record presently before him and for the reasons stated below, the Director will deny IGWA's *Motion to Vacate*.

ANALYSIS

The first issue that must be addressed is who has authority to rule on IGWA's *Motion to Vacate*. When IGWA filed its motion, it did not serve the motion upon the Director but served it upon Hearing Officer Burdick. However, throughout the *Motion to Vacate*, IGWA addresses the Director's authority to vacate or amend orders. *See, e.g.*, *Motion to Vacate*, at 6. The scope of Hearing Officer Burdick's authority was limited to holding the contested case hearing requested by the SWC regarding the *2022 Compliance Order*. *Order Appointing Hr'g Officer*, at 2. The Director concludes the request to vacate an order of the Director is outside the scope of Hearing Officer Burdick's authority. Furthermore, time is of the essence as the Department has predicted that the SWC will suffer an in-season demand shortfall this year and a curtailment order is pending in the related delivery call matter. *See Final Order Regarding April 2024 Forecast Supply*, at 6, No. CM-DC-2010-001 (Apr. 18, 2024). Questions regarding the status of IGWA's 2016 Mitigation Plan must be addressed promptly by the Director. Accordingly, the Director will address the *Motion to Vacate*.

In its *Motion to Vacate*, IGWA claims it can retroactively change the baseline used to measure its compliance with the 2016 Mitigation Plan. IGWA states it has unilaterally "elected to change from the 5-year baseline to a 3-year baseline . . . ." *Motion to Vacate* at 4. IGWA claims it can make this change now because the 2016 Mitigation Plan "does not specify how diversion reductions will be measured." *Id.* at 2. IGWA argues that neither the Director's nor the District Court's earlier rulings "mandate the use of a 5-year baseline to measure compliance . . . ." *Id*. at 4. IGWA claims that because of its retroactive change in the baseline calculation, it did not breach the 2016 Mitigation Plan in 2022 and thus the Director's earlier determination of breach in the *2022 Compliance Order* is now "moot." *Id*. at 4. IGWA suggests the Director has "inherent authority to vacate orders that are moot or that otherwise should not be applied prospectively." *Id*. IGWA suggests the Director's authority "is akin to the authority of courts to set aside judgments under rule 60(b) of the Idaho Rules of Civil Procedure." *Id*. at 6.

The *2022 Compliance Order* is not a final order because the SWC requested a hearing on the order. *See* IDAPA 37.01.01.740.02.c.. However, to the extent IGWA is asking the Director to exercise his discretionary authority to modify an earlier order either using "inherent authority" or under some authority "akin to IRCP 60(b)," the Director will not do so.[1] As described in the background section above, there has been extensive litigation involving IGWA's compliance with the 2016 Mitigation Plan. The Director held a hearing related to IGWA's 2021 compliance with the plan, after which the Director concluded that certain IGWA members breached the 2016 Mitigation Plan. IGWA's compliance in that case was based on the 5-year baseline that it developed, implemented, and complied with from 2016 to 2023. IGWA sought judicial review of that order, and the District Court affirmed the Director's *Amended 2021 Compliance Order*. The case is now pending before the Idaho Supreme Court.

Regarding IGWA's compliance in 2022, the Department issued an order determining that IGWA breached its 2016 Mitigation Plan in 2022. IGWA's compliance in 2022 was also based on its 5-year baseline. The SWC requested a hearing on that order to address issues with the 2016 Mitigation Plan that were not ripe when the Director held the hearing on IGWA's 2021 compliance. The hearing requested was assigned to Hearing Officer Burdick and he has issued an order on partial summary judgement and has already held the hearing in the matter. A decision is expected on that matter shortly.

It is absurd for IGWA to argue that it can, at this point in all these proceedings, unilaterally decide to change the method used for determining compliance.[2] IGWA admits it has used the 5-year baseline to measure compliance since the start of the 2016 Mitigation Plan. *Motion to Vacate*, at 2. IGWA created the 5-year baseline, and it has been used by IGWA, the SWC, and the Department for the past 7 years to measure actions taken by the ground water districts pursuant to the 2016 Mitigation Plan.[3] IGWA cannot now unilaterally change the baseline after-the-fact just so it can try to argue it did not breach the 2016 Mitigation Plan and so it can avoid the consequences of its lack of compliance with the plain language of the 2016 Mitigation Plan. Issuing an order finding the *2022 Compliance Order* moot amid active proceedings would be detrimental to the administrative process and wasteful of resources.

The Director also finds that IGWA's *Motion to Vacate* has been filed in bad faith as a further attempt to avoid undertaking aquifer conservation activities that it agreed to and for which it received safe harbor from past curtailments. In its 2016 Mitigation Plan, IGWA agreed to take certain annual actions including reducing ground water use and conducting recharge to recover aquifer levels as measured in a series of sentinel wells, by approximately 5.10 feet from

[1] The decision to grant or deny a motion under I.R.C.P. 60(b) is committed to the discretion of the hearing officer. *See Eby v. State*, 148 Idaho 731, 734, 228 P.3d 998, 1001 (2010).

[2] While IGWA only asks the Director to vacate the *2022 Compliance Order* and does not ask the Director to vacate the *Amended 2021 Compliance Order* (at least at this time), if IGWA can retroactively change the baseline in the 2022 Compliance Order, it could do so for the *Amended 2021 Compliance Order*, thereby unsettling the litigation before the Idaho Supreme Court.

[3] Further, if IGWA was permitted to unilaterally change the universally relied-upon compliance calculation and recalculate its performance retroactively to perpetually avoid a determination of noncompliance, the agreement underlying the 2016 Mitigation Plan could be considered illusory.

2016 to 2023, and by an additional 4.83 feet from 2023 to 2026.[4] In the Spring of 2023, sentinel well levels were approximately equal to 2016 levels. In other words, IGWA missed its 2023 aquifer level benchmark by approximately 5.10 feet or the full amount. If the aquifer level benchmarks were not achieved, the 2016 Mitigation Plan calls for adaptive water management measures to be implemented by IGWA. The settlement agreement between IGWA and the SWC states in relevant part:

> If any of the benchmarks or the ground water level goal is not met, additional recharge, consumptive use reductions, or other measures as recommended by the Steering Committee shall be implemented by the participating ground water parties to meet the benchmarks or ground water level goal.

Settlement Agreement Entered Into June 30, 2015 Between Participating Members of the Surface Water Coalition and Participating Members of the Idaho Ground Water Appropriators, Inc. § 4.a.

IGWA's aquifer conservation activities have not resulted in the desired increases in aquifer levels as measured in the sentinel wells. As a result, as previously agreed, IGWA should now be working through the Steering Committee to implement adaptive water management measures including further decreasing its ground water consumptive use or conducting more recharge. Instead, IGWA now chooses to rejigger the math in such a way that its historical actions, those actions that failed to have the agreed-upon positive effect on the aquifer, can now be viewed as compliant with the 2016 Mitigation Plan. The Director finds IGWA's attempt to decrease its obligations under the 2016 Mitigation Plan at the exact time it previously agreed to increase its obligations to be a disingenuous act that will allow it to further injure senior surface water users.

The Director also denies IGWA's request because it is untimely. Idaho Code § 42-1701A(3) provides in relevant part:

> Unless the right to a hearing before the director . . . is otherwise provided by statute, any person aggrieved by any action of the director, including any decision, determination, order or other action . . . who is aggrieved by the action of the director, and who has not previously been afforded an opportunity for a hearing on the matter shall be entitled to a hearing before the director to contest the action. The person shall file with the director, within fifteen (15) days after receipt of written notice of the action issued by the director, or receipt of actual notice, a written

[4] In its 2016 Mitigation Plan, IGWA agreed to "increase ground water levels at identified wells by April 2026 to [levels equal to the average aquifer levels from 1991-2001]" and to "[i]ncrease [] ground water levels by April 2023 to a point half way between 2015 ground water levels and [levels equal to the average aquifer levels from 1991-2001]. . . ." The parties agreed to use an index value of agreed-to "sentinel well" as the measure of aquifer levels contemplated in the 2016 Mitigation Plan and as the basis to evaluate the effectiveness of IGWA's mitigation activities. Sentinel well index values for the 2016 Mitigation Plan's 2020, 2023, and 2026 benchmark years are negative 8.72, negative 3.90, and positive 0.93 feet respectively. Sentinel well index values were measured at negative 5.57 feet in 2020 and negative 8.97 feet in 2023.

petition stating the grounds for contesting the action by the director and requesting a hearing.

After the Director issued the *2022 Compliance Order*, the SWC timely filed its *Request for Hearing* asking the Director to "issue an order setting forth a remedy to cure the 2022 breach as required by the Agreement and order curtailment if compliance does not take place." *Request for Hearing*, at 6. The Department granted the SWC's *Request for Hearing* pursuant to Idaho Code § 42-1701A(3) because it did not hold a hearing before issuing the *2022 Compliance Order*. *Hearing Order*, at 2.

Initially, IGWA opposed SWC's *Request for Hearing* on the *2022 Compliance Order* because "[t]he Director's decision was appropriate and wise and should not be changed." *Response to Request for Hearing*, at 1. If IGWA had grievances with the *2022 Compliance Order*, it should have timely requested a hearing within 15 days after the order was issued pursuant to Idaho Code § 42-1701A(3). IGWA did not ask for a hearing on the baseline or any other issue. In addition to failing to timely request a hearing, IGWA failed to raise the baseline issue at other critical times. IGWA did not raise the baseline issue in its *Response to Request for Hearing*. IGWA failed to raise the baseline issue when Hearing Officer Burdick provided the parties an opportunity to identify the issues they wanted to address at hearing. *See IGWA's Statement of Proposed Issues*. IGWA failed to raise the issue in *IGWA's Motion for Summary Judgment*.[5] Instead, IGWA waited eight months to request to vacate the *2022 Compliance Order* amid administrative proceedings held by Hearing Officer Burdick and Idaho Supreme Court proceedings regarding the *Amended 2021 Compliance Order*. Because IGWA failed to timely raise the baseline calculation issue, IGWA cannot now unilaterally change the baseline methodology used in the *2022 Compliance Order*.

ORDER

Based upon and consistent with the foregoing, IT IS HEREBY ORDERED that *Idaho Ground Water Appropriators, Inc's Motion to Vacate or Amend the 2022 Compliance Order* is DENIED.

DATED this 2nd day of May 2024.

MATHEW WEAVER
Director

[5] Similarly, the District Court in the petition for judicial review regarding the *Amended 2021 Compliance Order* recognized that IGWA failed to raise the baseline issue there. *Memorandum Decision & Order*, at 11 n.8 ("How IGWA calculates the pre-2015 baseline year was not raised as a disputed issue before the Director below and is not at issue on judicial review.").

CERTIFICATE OF SERVICE

I HEREBY CERTIFY that on this 2nd day of May 2024, the above and foregoing, was served by the method indicated below, and addressed to the following:

EXPLANATORY INFORMATION TO ACCOMPANY A FINAL ORDER

(To be used in connection with actions when a hearing was **not** held)

(Required by Rule of Procedure 740.02)

The accompanying order is a "**Final Order**" issued by the department pursuant to section 67-5246, Idaho Code.

PETITION FOR RECONSIDERATION

Any party may file a petition for reconsideration of a final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: The petition must be received by the Department within this fourteen (14) day period.** The department will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law. See section 67-5246(4), Idaho Code.

REQUEST FOR HEARING

Unless the right to a hearing before the director or the water resource board is otherwise provided by statute, any person who is aggrieved by the action of the director, and who has not previously been afforded an opportunity for a hearing on the matter shall be entitled to a hearing before the director to contest the action. The person shall file with the director, within fifteen (15) days after receipt of written notice of the action issued by the director, or receipt of actual notice, a written petition stating the grounds for contesting the action by the director and requesting a hearing. See section 42-1701A(3), Idaho Code. **Note: The request must be received by the Department within this fifteen (15) day period.**

APPEAL OF FINAL ORDER TO DISTRICT COURT

Pursuant to sections 67-5270 and 67-5272, Idaho Code, any party aggrieved by a final order or orders previously issued in a matter before the department may appeal the final order and all previously issued orders in the matter to district court by filing a petition in the district court of the county in which:

i. A hearing was held,
ii. The final agency action was taken,
iii. The party seeking review of the order resides, or
iv. The real property or personal property that was the subject of the agency action is located.

The appeal must be filed within twenty-eight (28) days of: a) the service date of the final order, b) the service date of an order denying petition for reconsideration, or c) the failure within twenty-one (21) days to grant or deny a petition for reconsideration, whichever is later. See section 67-5273, Idaho Code. The filing of an appeal to district court does not in itself stay the effectiveness or enforcement of the order under appeal.

Attorneys for Magic Valley Ground Water District and North Snake Ground Water District

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket Nos. CM-DC-2010-001 CM-MP-2016-001 CM-MP-2009-007 **JOINT NOTICE OF COMPLIANCE—MAGIC VALLEY GROUND WATER DISTRICT & NORTH SNAKE GROUND WATER DISTRICT'S 2024 IRRIGATION SEASON MITIGATION COMMITMENTS**

Magic Valley Ground Water District ("MV") and North Snake Ground Water District ("NS"), through undersigned counsel, submit this *Joint Notice of Compliance* ("Joint Notice") in response to the Director's: (a) *Final Order Regarding April 2024 Forecast Supply* (Apr. 18, 2024) ("April 2024 As-Applied Order"); and (b) combined *Order Shortening Notice Period; Notice of Status Conference* (Apr. 30, 2024) ("Notice").

I.
BACKGROUND

The April 2024 As-Applied Order requires groundwater users (including members of MV and NS) "establish, to the satisfaction of the Director, that they can mitigate for their proportionate

share of the predicted April IDS of 74,100 acre-feet in accordance with an approved mitigation plan." April 2024 As-Applied Order, p. 6. Similarly, the Notice requires that the parties "come prepared to discuss the status of IGWA's mitigation plans and IGWA's mitigation efforts for this [2024] irrigation season." Notice, p. 1.

This Joint Notice is submitted by MV and NS through undersigned counsel because of a current lack of consensus within IGWA's membership frustrating IGWA's ability to submit an entity-wide responsive notice. This Joint Notice is also submitted by MV and NS in recognition that some substantive response to the April 2024 As-Applied Order and the Notice—albeit on an individual district level—is better than no response at all.

In that vein (i.e., that some substantive response is better than no response), and acknowledging as the Director has that "uncertainty exists regarding the status of [IGWA's approved mitigation] plans" (*see* April 2024 As-Applied Order at p.5, note 8), MV and NS submit the following 2024 irrigation season mitigation commitments in this matter recognizing that their own mitigation plans (Docket Nos. CM-MP-2023-005 and CM-MP-2023-004, respectively) are currently on-hold by Hearing Officer Schroeder pending the outcome of Hearing Officer Burdick's proceedings in Docket No. CM-MP-2016-001.

II.
2024 IRRIGATION SEASON MITIGATION

Under the 2009 Storage Water Plan (CM-MP-2009-007), MV and NS agree to collectively provide up to 15,590 acre-feet of storage water to the Surface Water Coalition ("SWC") based on the 74,100 acre-feet of 2024 IDS predicted in the April 2024 As-Applied Order. By district, the 15,590 acre-feet of storage water breaks down as:

> **MV:** 11,925 acre-feet (representing a 16.1% proportionate share of the steady state allocation predicted under ESPAM 2.2 for the 74,100 acre-foot IDS); and

NS: 3,665 acre-feet (representing a 4.9% proportionate share of the steady state allocation predicted under ESPAM 2.2 for the 74,100 acre-foot IDS).[1]

The districts' steady state-based commitments above shall not be construed as an admission or concession that steady state application of ESPAM 2.2 is the appropriate application of the model. Clearly, the Director has determined that transient model simulation/application is the appropriate method of ESPAM 2.2 deployment. *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover ("Methodology Order")* (Jul. 19, 2023) ("Sixth Methodology Order"), pp. 38 (Conclusion of Law No. 24) and 42 (Order re "Step 2"). Under transient application of the model, MV's proportionate share of the April-predicted IDS would be 25 acre-feet, and NS's proportionate share would be negligible (0.1 acre-feet). Be that as it may, MV and NS are willing to collectively provide 15,590 acre-feet (as opposed to merely 25 acre-feet under transient modelling) for the 2024 irrigation season in a good faith effort to do what they can, the fairest they can in recognition of the lingering effects of legacy pumping.

In addition to mitigating their proportionate share of the SWC April 2024-predicted IDS through the provision of storage water outlined above, MV and NS further agree/commit to ongoing pumping reductions and conservation efforts of at least 32,462 acre-feet (MV) and 25,474 acre-feet (NS), respectively, during the 2024 irrigation season as has historically been the case

[1] These proportionate shares of the 74,100 acre-foot IDS are based largely upon the analysis, modeling, and extrapolation of IGWA consultant Sophia Sigstedt as explained in her Declaration filed by IGWA (filed May 2, 2024). The shares differ, however, because MV and NS commit to contribute up to their proportionate share of the 74,100 IDS based on an assumption of IGWA bearing 100% of the total IDS, rather than 89.2% (or 66,102 acre-feet) of the IDS unless and until the Director approves of the 89.2%-based shares. It is MV and NS's understanding that this IGWA member "share" issue is the subject of a pending motion for reconsideration (i.e., the issue of whether IGWA member districts bear 100% of the IDS, or only 89.2% of the IDS).

under the IGWA 2016 Mitigation Plan (Docket No. CM-MP-2016-001). The districts acknowledge that this collective quantity of water (57,936 acre-feet) is based on the former IGWA-wide conservation target of 205,937 acre-feet, and not the full 240,000 acre-foot target affirmed by the Director in his *Amended Final Order Regarding Compliance With Approved Mitigation Plan* (Apr. 24, 2023) (Docket No. CM-MP-2016-001) (compare Table Nos. 1 and 2). However, the districts submit that their commitment to supply the SWC with upwards of 15,590 acre-feet of storage water alone mitigates their proportionate share of the April 2024-predicted IDS. This reaffirmed commitment to ongoing pumping reductions/conservation efforts (collectively 57,936 acre-feet) is an additional effort beyond addressing the 2024 IDS—an additional effort to further attempt to proportionately share in the longer term stabilization of the aquifer.

The districts' collective access to the 2024 storage water quantity of 15,590 acre-feet is secured by existing contract (*Multi-Year Tribal Lease Agreement*) executed between the Shoshone-Bannock Tribes of the Fort Hall Reservation and IGWA, effective October 27, 2020. The contract provides annual access to no less than 25,000 acre-feet of tribal storage water for the benefit of IGWA members MV, NS, Southwest Irrigation District, American Falls-Aberdeen Ground Water District, and Carey Valley Ground Water District between April 1, 2021 and October 31, 2025. The contract then automatically renews annually thereafter unless terminated by the parties with requisite advance notice. While MV and NS have yet to make a 2024 payment under the contract, that is because the contract provides a payment schedule that has yet to come due this year (first half payment is due July 1, and second half payment is due November 1).

III.
PRIOR PRECEDENTIAL SUPPORT FOR MV AND NS'S 2024- MITIGATION EFFORTS

As a threshold matter, and as asserted in Section 2.1 of IGWA's *Memorandum in Support of Summary Judgment* (Feb. 12, 2024) (Docket No. CM-MP-2016-001) ("Memo"), the Conjunctive Management Rules authorize junior priority water users to submit and mitigate under multiple, approved mitigation plans. *See* Memo, pp. 9-11 (incorporated by reference herein). For his part, Hearing Officer Burdick agreed as a general matter, though he concluded that the multiple mitigation plan legal principle did not squarely address the issues pending before him in Docket No. CM-MP-2016-001. *Order on Motions for Partial Summary Judgment* (Mar. 12, 2024) (Docket No. CM-MP-2016-001), p. 9, Note 12. To this point, the Director has yet to address the question and, in the meantime, has acknowledged the ongoing validity of the 2009 storage water-based mitigation plan in the interim. *See, e.g.*, April 2024 As-Applied Order, pp. 5-6, Note 8.

Given the ongoing validity of the 2009 storage water-based mitigation plan, at least in the interim, there is no question that the Director has historically held that the provision of storage water supplies sourced from the Basin 01 rental pool or otherwise constitutes a valid method of mitigation. For example, in his *Order Approving Mitigation Plan* (Jun. 3, 2010) (Docket No. CM-MP-2009-007) ("2009 Plan Order"), the Director plainly held—after hearing and over the protest and objection of the SWC—that:

- "Rental or acquisition of an option to rent storage water prior to or at the beginning of the irrigation season will assure the SWC of an adequate quantity of water for the upcoming irrigation season";
- the "rental of storage water by IGWA will not diminish the supply of water available to the SWC";
- the "rental of storage water and delivery of the storage water [to the SWC] . . . is in compliance with Idaho law";

- the "[storage water-based] mitigation plan will provide replacement water at the time and place required by the senior-priority water right. During many years, there will be sufficient storage water to offset the depletive effect of ground water withdrawal on the water available in the Snake River at such time and place as necessary to satisfy the rights of diversion from the Snake River";

- "Storage water in the Snake River reservoirs is a reliable source of replacement water";

- the "[storage water-based] mitigation plan will maximize the beneficial use of water in the State of Idaho and promote the conservation of water resources"; and

- "Use of storage water for mitigation is in the public interest and will not injure other water rights."

2009 Plan Order, pp. 9-10. The Director subsequently, and consistently, upheld the same storage water-based mitigation method in the context of A&B Irrigation District's approved 2015 mitigation plan. *See Final Order Approving Mitigation Plan* (Dec. 16, 2015) (Docket No. CM-MP-2015-003), pp. 2-3 (wherein the Director noted A&B's proposed mitigation use of its "storage water in American Falls Reservoir and Palisades Reservoir, or to rent storage water through Water District 01's Rental Pool," and ultimately held that that mitigation method, among others contained in the plan, comprise "the type of activities that can provide replacement water at the time and place required by the senior-priority water rights.").

MV and NS acknowledge and understand that this submission (*i.e.*, their 2024 irrigation season mitigation proposal) is, arguably, a form of mitigation plan hybridization that the Director has rejected in the past. However, it is equally true that the Director has moved more and more to recognizing and affirming the concept of ground water district "proportionate shares" of the total obligations owed under any particular mitigation plan. The Director's move to transient modeling further underscores the notion that "one-size-does-not-fit-all"—that pumping location and effect

correlate such that compliance obligations, evaluation, and determination should likely track accordingly.

By this submission, MV and NS seek to be part of a more global solution—to do their fair share, and then some, in 2024. Hopefully, the Director agrees with this approach.

IV.
PROCEDURAL POST-SCRIPT

Undersigned counsel is aware of the status conference noticed in this matter. However, given the shortened notice of the conference, counsel is not able to avoid previously-scheduled travel putting him in areas of likely spotty-to-no cell phone service along the Highway 20 corridor in eastern Oregon at the time of the conference. While counsel will attempt to call in with the number and code provided in the Notice, whether successful connection can be made is currently unknown. Consequently, the districts will continue to rely on Mr. Budge to appear and speak on their behalf at least for purposes of the status conference should undersigned counsel be unable to successfully connect by phone.

DATED this 2nd day of May, 2024.

Andrew J. Waldera

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **AMENDED ORDER DETERMINING DEFICIENCY IN NOTICES OF SECURED WATER**

BACKGROUND

On July 19, 2023, the Idaho Department of Water Resources ("Department") issued its *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("*Methodology Order*"). The *Methodology Order* established nine steps for determining material injury to members of the Surface Water Coalition ("SWC").

Step 3 of the Methodology Order states that by May 1, or within 14 days from issuance of the final order predicting a shortfall, "whichever is later in time, junior ground water users with approved mitigation plans for delivery of water must secure, to the satisfaction of the Director, a volume of water equal to their proportionate share" of any predicted shortfall unless the forecast is revised. *Methodology Order* ¶ 4 at 42. Step 3 further states that "[t]he secured water will not be required to be delivered to the injured members of the SWC until the Time of Need." *Id*.

On April 18, 2024, the Director issued the *Final Order Regarding April 2024 Forecast Supply (Methodology Steps 1–3)* ("*April As-Applied Order*"), in which the Director determined the predicted shortfall obligation for junior ground water users for 2024. The Director concluded that Twin Falls Canal Company ("TFCC") is the only entity with a predicted in-season demand shortfall ("IDS") for 2024 and the IDS is 74,100 acre-feet. *April As-Applied Order*, at 4. The Director ordered that:

> On or before May 2, 2024, ground water users holding consumptive water rights bearing priority dates junior to March 31, 1954, within the Eastern Snake Plain Aquifer area of common ground water supply shall establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted April IDS of 74,100 acre-feet in accordance with an approved mitigation plan.

Id. at 6. The Director also ordered that, if such a junior ground water user cannot establish "they can mitigate for their proportionate share of the predicted April IDS in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water user." *Id*.

Historically, the Idaho Ground Water Appropriators, Inc. ("IGWA"), acting on behalf of its member ground water districts, filed a notice of mitigation with the Department to establish that the ground water districts can mitigate for their proportionate share of the predicted IDS in accordance with an approved mitigation plan. However, this year, individual ground water districts submitted their own mitigation notices.[1]

On May 2, 2024, Bonneville-Jefferson Ground Water District ("Bonneville-Jefferson") and Jefferson-Clark Ground Water District ("Jefferson-Clark") each individually filed mitigation notices. *BJGWD's Notice of Mitigation in Resp. to April 2024 As-Applied Order (Methodology Steps 1-3)* [hereinafter *BJGWD's Notice*]; Letter from Jerry Rigby, attorney for Jefferson-Clark, to Mathew Weaver, Department Director (Regarding mitigation water obligations of Jefferson-Clark).

Also on May 2, Magic Valley Ground Water District ("Magic Valley") and North Snake Ground Water District ("North Snake") jointly filed a mitigation notice and Henry's Fork Ground Water District ("Henry's Fork") and Madison Ground Water District ("Madison") jointly filed a mitigation notice. *Joint Notice of Compliance—Magic Valley Ground Water Dist.& North Snake Ground Water Dist.'s 2024 Irrigation Season Mitigation Commitments* [hereinafter *MVNS's Notice*]; Letter from Jerry Rigby, attorney for Henry's Fork and Madison, to Mathew Weaver, Department Director (Regarding mitigation water obligations of Henry's Fork and Madison).

On May 3, 2024, Bingham Ground Water District ("Bingham") filed a mitigation notice. *Notice of Bingham Ground Water District 2024 Mitigation*. On the same day, Carey Valley Ground Water District ("Carey Valley") submitted a letter proposing a "mitigation plan for 2024 . . . ." Letter from Leta Hansen, Chairman of Carey Valley, to Mathew Weaver, Department Director. While the letter was framed as a "mitigation plan," the Director will consider it a mitigation notice.

Also on May 3, the Director held a status conference to discuss the status of IGWA's mitigation plans and IGWA's mitigation efforts for this irrigation season. *Am. Notice of Status Conf.*, at 1.

On May 6, 2024, American Falls-Aberdeen Ground Water District ("American Falls-Aberdeen") filed a mitigation notice. Letter from Sarah Klahn, attorney for American Falls-Aberdeen, to Mathew Weaver, Department Director [hereinafter AFA Mitigation Notice] (Regarding Case Nos.CM-DC-2010-001 and CM-MP-2016-001).

On May 8, 2024, the Department received a letter from IGWA regarding ground water district compliance with IGWA's *2016 Settlement Mitigation Plan* (CM-MP- 2016-001). In the letter, IGWA clarifies its intent to comply with certain elements of the plan regarding its 2021 performance. Letter from T.J. Budge, attorney for IGWA, to Mathew Weaver, Department

[1] The Department received *IGWA's Request for Mitigation Credit for Aquifer Enhancement Activities (2024)* on May 2, 2024. This request will be addressed by the Director is a separate order.

Director (Regarding Case Nos. CM-DC-2010-001, CM-MP-2016-001, and Sept. 7, 2022 Settlement Agreement between IGWA and SWC).

On May 10, 2024, the Director issued the *Order Determining Deficiency in Notices of Secured Water* ("*Order Determining Deficiency*").

On May 14, 2024, IGWA submitted *IGWA's Conditional Notice of Mitigation Compliance; Petition for Reconsideration; and Request for Expedited Decision* ("*IGWA Second Petition for Reconsideration*") in which IGWA asked the Director to reconsider the Director's conclusion in the *Order Determining Deficiency* that under the *2009 Storage Water Mitigation Plan* IGWA must mitigate for all ground water users. *IGWA Second Petition for Reconsideration*, at 2–3. On the same day, Bingham filed a *Brief in Support of IGWA's Conditional Notice of Mitigation Compliance; Petition for Reconsideration; and Request for Expedited Decision* ("*Bingham's Brief*"), in which Bingham took issue with the Director's use of the term "free rider" in the *Order Determining Deficiency*. *Bingham's Brief*, at 1–2.

On May 17, 2024, American Falls-Aberdeen filed a *Motion for Reconsideration of Order Determining Deficiency in Notices of Secured Water* ("*AFA's Motion for Reconsideration*") in which it also sought reconsideration of the *Order Determining Deficiency*. American Falls-Aberdeen argued that the Director requiring "evidence [that] it has secured storage water to satisfy the entire 50,000 acre-feet ("50kaf") delivery obligation . . . . is inconsistent with the plain language of the underlying settlement that was adopted as the *2016 Plan* and with the Department's prior interpretations of the ground water districts' obligations under the *2016 Plan*." *AFA's Motion for Reconsideration*, at 1. American Falls-Aberdeen argued that the *2016 Settlement Mitigation Plan* does not require the ground water districts to deliver the 50,000 acre-feet until 21 days after the day of allocation and that "[t]he Director has no legal basis to impose this proof-of-secured-water requirement on AFA or any district complying with, and seek safe harbor under, the 2016 Plan." *Id*. at 3, 5. American Falls-Aberdeen also argued that the parties to the 2016 plan must resolve disputes through the steering committee before bringing issues of breach to the Director. *Id*. at 4. American Falls-Aberdeen requested the Director reconsider the *Order Determining Deficiency* to remove any obligation on behalf of the ground water districts to provide proof that 50,000 acre-feet of storage water has been secured under the *2016 Settlement Mitigation Plan*. *AFA's Motion for Reconsideration*, at 5–7.

On May 28, 2024, the Director issued an order denying *IGWA's Second Petition for Reconsideration*. *Order Denying IGWA's Second Petition for Reconsideration; Order Determining Deficiency in IGWA's May 17, 2024 Notice of Storage Water Leases,* at 8. On the same day, the Director issued an *Order Granting Upper Valley Districts Limited Intervention and AFA's Motion for Reconsideration*, in which the Director agreed with the arguments in *AFA's Motion for Reconsideration* and agreed to issue this *Amended Order Determining Deficiency in Notices of Secure Water* with changes shown in strikeout/underline.

ANALYSIS

At the status conference, the Director started by asking each participating ground water district to identify whether, in 2024, they plan to mitigate under IGWA's *2009 Storage Water*

Mitigation Plan (CM-MP-2009-007) or IGWA's *2016 Settlement Mitigation Plan*. The Director asked this because many of the mitigation notices submitted by the ground water districts included vague, confusing, or contradictory statements regarding compliance with the approved mitigation plans. Bonneville-Jefferson, Magic Valley, and North Snake indicated that they had secured water for 2024 and would dedicate their secured water towards the mitigation requirements under the *2009 Storage Water Mitigation Plan*. Jefferson-Clark, Henry's Fork, and Madison indicated that they also had secured storage water and would dedicate their secured storage water towards required mitigation activities set forth in either the *2009 Storage Water Mitigation Plan* or the *2016 Settlement Mitigation Plan*. American Falls-Aberdeen indicated that it planned to mitigate under the *2016 Settlement Mitigation Plan* only. Bingham indicated it will not mitigate under any approved mitigation plan. Carey Valley did not participate in the status conference.

At the status conference, questions arose regarding whether the ground water districts storage water obligations were additive between the 2009 and 2016 plans, and if and how the ground water district's secured storage water could count towards compliance with either plan. In response, the Director indicated that the ground water districts obligations were not additive between the 2009 and 2016 plans. However, the Director clarified that the ground water districts can apply their secured storage water to either plan, but not both.

This order evaluates whether the ground water districts that seek protection under the *2009 Storage Water Mitigation Plan* and the *2016 Settlement Mitigation Plan* are entitled to protection under their chosen mitigation plan, evaluates the mitigation notices submitted by the ground water districts, and evaluates whether each ground water district has shown, to the satisfaction of the Director, that they have secured the required storage water. The order also discusses Bingham and Carey Valley's decisions not to mitigate under either plan.

1. Mitigation Pursuant to IGWA's *2009 Storage Water Mitigation Plan*

a. The May 3, 2024 Status Conference

At the status conference, Jefferson-Clark, Henry's Fork, Madison, Magic Valley, North Snake, and Bonneville-Jefferson indicated that in 2024, they plan to mitigate using IGWA's *2009 Storage Water Mitigation Plan*. In response to a question about the status of the *2009 Storage Water Mitigation Plan*, the Director recognized that a recent decision by Hearing Officer Roger Burdick in another matter created a question of whether the ground water districts can still use the *2009 Storage Water Mitigation Plan*. The Director concluded that the Hearing Officer's decision was still pending, and the issue had not yet been presented to him for consideration so he would consider the *2009 Storage Water Mitigation Plan* available for use at this time. The Director also stated that he reviewed former Director Spackman's 2023 *Order Determining Deficiency in IGWA's Notice of Secured Water* and agreed with two key conclusions reached in that order related to the *2009 Storage Water Mitigation Plan*. First, that the plain language of the *2009 Storage Water Mitigation Plan* "clearly states" that IGWA will mitigate for all ground water users, not just its members and non-member participants. *Order Determining Deficiency in IGWA's Notice of Secured Water*, at 4. Second, that "IGWA cannot pick and choose who gets the benefit of storage water if IGWA is not providing storage water amounts equal to the

shortfall obligation." *Id*. at 5. The Director reiterated that regarding the *2009 Storage Water Mitigation Plan*, if ground water districts submit adequate contracts to establish that they have secured storage water and the amount secured is less than the shortfall obligation, the Director will credit the contracted volume against the overall obligation, thus reducing the overall obligation for all ground water users.

At the status conference, the ground water districts seeking to use the *2009 Storage Water Mitigation Plan* claimed that they secured the following volumes of water for use in 2024:

Ground Water Districts (GWD)	**GWD Volume of Secured Water (acre-feet)**
Aberdeen-American Falls GWD	0
Bingham GWD	0
Bonneville-Jefferson GWD	8,928
Carey Valley GWD	0
Jefferson-Clark GWD	6,858
Henry's Fork GWD	1,500
Madison GWD	
Magic Valley GWD	11,925
North Snake GWD	3,665
Total	32,876
2009 Mitigation Plan Secured Storage Water Obligation	74,100
Deficiency in the Amount of Secured Storage Water	41,224

The above table shows that the ground water districts have indicated that they have secured 32,876 acre-feet, which is less than the full shortfall obligation of 74,100 acre-feet. Because the amount secured is less than the shortfall obligation, the Director will credit the volume against the overall obligation, thus reducing the overall obligation for all ground water users, if the ground water districts are able to show, to the satisfaction of the Director, that they have secured 32,876 acre-feet of water. The Department has calculated what the revised curtailment date would be if these ground water districts can show, to the satisfaction of the Director, that they have secured 32,876 acre-feet of water. The revised curtailment date for all ground water users would be February 16, 1970. However, to reemphasize the point, this is contingent upon the Director concluding in subsection 1.b. below that the ground water districts provide sufficient evidence that they have secured 32,876 acre-feet of storage water.

b. Sufficency of Mitigation Notices

Mitigation notices must show that the water user has secured, to the satisfaction of the Director, the storage water needed to mitigate. The ground water districts are required to provide the Director with legally enforceable contracts, options, or similar documentation to establish

that they have secured the water necessary to meet the mitigation obligation. *See Order on Pet. for Judicial Review*, at 19, *A&B Irrigation Dist. v. Tuthill*, No. CV-2008-551 (Gooding Cnty. Dist. Ct. Idaho July 24, 2009). Below, the Director reviews the mitigation notices submitted by the ground water districts and determines whether they have complied with these requirements.

i) Bonneville-Jefferson's Mitigation Notice

In its May 2 mitigation notice, Bonneville-Jefferson states that it "will mitigate this season by providing its proportionate share of the IDS from the leases attached hereafter as Exhibit 'A'." *BJGWD's Notice*, at 2. Unfortunately, the leases included as Exhibit A are all leases entered into by IGWA, not Bonneville-Jefferson. It is unclear whether Bonneville-Jefferson has the authority to submit IGWA's leases to the Director for the benefit of Bonneville-Jefferson. Furthermore, even if Bonneville-Jefferson is authorized to lease water under IGWA's leases, Department records do not show that Bonneville-Jefferson has sought or received approval from Water District 01 for any lease. Without approval by Water District 01 and payment of the required fees, Bonneville-Jefferson has not demonstrated to the satisfaction of the director that it has secured the volume of water reported in its May 2 mitigation notice. As indicated in Subsection 1.c. below, Bonneville-Jefferson will have until May 17, 2024, to resolve these issues.

ii) Jefferson-Clark's Mitigation Notice

At the status conference and in its May 2 mitigation notice, Jefferson-Clark indicated that it would mitigate under the *2009 Storage Water Mitigation Plan* for 2024 and that it has secured 6,858 acre-feet of storage water. Unfortunately, Jefferson-Clark did not include contracts, leases, options, or similar documentation to establish that it had secured the water necessary to meet or offset the obligation. Furthermore, the Department records do not show that Jefferson-Clark sought or received approval from Water District 01 for any lease. Without approval by Water District 01 and payment of the required fees, Jefferson-Clark has not demonstrated to the satisfaction of the Director that it has secured the volume of water reported in its May 2 mitigation notice. As indicated in Subsection 1.c. below, Jefferson-Clark will have until May 17, 2024, to resolve these issues.

iii) Henry's Fork and Madison's Mitigation Notice

At the status conference and in its May 2 mitigation notice, Henry's Fork and Madison indicate that they will mitigate under the *2009 Storage Water Mitigation Plan* for 2024 and that they have secured 1,500 acre-feet of storage water. Unfortunately, Henry's Fork and Madison did not include contracts, leases, options, or similar documentation to establish that they have secured the water necessary to meet the obligation. Furthermore, the Department records do not show that Henry's Fork and Madison sought or received approval from Water District 01 for any lease. Without approval by Water District 01 and payment of the required fees, Henry's Fork and Madison have not demonstrated to the satisfaction of the Director that they have secured the water reported in their May 2 mitigation notice. As indicated in Subsection 1.c. below, Henry's Fork and Madison will have until May 17, 2024, to resolve these issues.

iv) Magic Valley and North Snake's Mitigation Notice

Magic Valley and North Snake's May 2 mitigation notice indicates that they will collectively provide 15,590 acre-feet of storage water to the SWC pursuant to the *2009 Storage Water Mitigation Plan*. *MVNS's Notice*, at 2. Unfortunately, Magic Valley and North Snake did not include contracts, leases, options, or similar documentation to establish that they had secured the water necessary to meet the obligation. Furthermore, the Department records do not show that Magic Valley and North Snake sought or received approval from Water District 01 for any lease. Without approval by Water District 01 and payment of the required fees, Magic Valley and North Snake have not demonstrated to the satisfaction of the Director that they have secured the water reported in their May 2 notice. As indicated in Subsection 1.c. below, Magic Valley and North Snake will have until May 17, 2024, to resolve these issues.

c. Conclusion Regarding *2009 Storage Water Mitigation Plan*

While certain ground water districts indicate their intent to mitigate under the *2009 Storage Water Mitigation Plan*, they have failed to show, to the satisfaction of the Director, that they have secured the storage water needed to mitigate in full or in part. The Director will extend the deadline for the ground water districts to submit information to establish, to his satisfaction, that they can mitigate for all or part of the predicted April IDS of 74,100 acre-feet. The ground water districts have until May 17, 2024, to submit the appropriate documentation and to pay any fees required by Water District 01. If appropriate documentation is submitted and fees paid by this deadline, the Director will adjust the curtailment date accordingly.

2. Mitigation Using IGWA's *2016 Settlement Mitigation Plan*

At the status conference and in its mitigation notice, American Falls-Aberdeen indicates that it intends to mitigate under the *2016 Settlement Mitigation Plan*. At the status conference, Jefferson-Clark, Henry's Fork, and Madison also indicated that they would dedicate their secured storage water towards the *2016 Settlement Mitigation Plan* if that would result in their compliance with the plan. The *2016 Settlement Mitigation Plan* allows individual ground water districts to mitigate for their proportionate share of the 240,000-acre-foot reduction obligation set forth in the plan. It also requires that the ground water districts annually provide 50,000 acre-feet of storage water though private leases to the SWC 21 days after the day of allocation. ~~While the *2016 Settlement Mitigation Plan* allows for determining the proportionate share of the reduction obligation of the parties, it does not authorize the proportionate sharing of the 50,000-acre-foot storage volume by the parties. As a result of the plain language of the plan, for any ground water district to be in compliance with the plan, the entire 50,000 acre-feet must be provided.~~

a. The 2021 Breach

Ground water districts were found to have breached the *2016 Settlement Mitigation Plan* in 2021. *Am. Final Order Regarding Compliance with Approved Mitigation Plan*, at 16–17, *In re IGWA's Settlement Agreement Mitigation Plan*, No. CM-MP-2016-001 (Idaho Dept. of Water Res. Apr. 24, 2023) [hereinafter *Compliance Order*]. In his April 24, 2023 *Compliance Order*, the Director approved a one-year settlement agreement to remedy the 2021 breach. *Id*. at 20. In

the settlement agreement, the parties agreed that "IGWA will collectively provide to the SWC an additional 30,000 acre-feet of storage water in 2023 and an additional 15,000 acre-feet of storage water in 2024 within 10 days after the Date of Allocation of such year. Such amounts will be in addition to the long-term obligations set forth in section 3 of the Settlement Agreement and approved Mitigation Plan." *Settlement Agreement*, at 2, No. CM-MP-2016-001 (Sept. 7, 2022).

The first question that arises in evaluating whether any ground water district is complying with the *2016 Settlement Mitigation Plan* is addressing compliance with the agreed upon cure of IGWA's 2021 breach. It is the Director's understanding that the ground water districts provided the required 30,000 acre-feet of storage in 2023. In its May 6 mitigation notice, American Falls-Aberdeen states that it "has entered into a lease with the Shoshone-Bannock Tribe for approximately 11,000 acre feet of water." AFA Mitigation Notice, at 1. American Falls-Aberdeen states it plans to provide its share of the 15,000-acre-foot obligation under the 2021 Breach Order, approximately 2,900 acre-feet, to the SWC using this lease. *Id*. In its May 8 letter to the Director, IGWA confirms that it will "deliver the balance of the 15,000 acre-feet." The obligation to supply the water does not accrue until ten days after the day of allocation. *Settlement Agreement*, at 2.

So long as the entire 15,000-acre-foot obligation is provided to the SWC within ten days following the forthcoming day of allocation, the 2021 breach has been remedied.

b. <u>The 2022 Breach</u>

American Falls-Aberdeen and certain other ground water districts were found to have breached the *2016 Settlement Mitigation Plan* in 2022. *Final Order Regarding IGWA's 2022 Mitigation Plan Compliance*, at 9, No. CM-MP-2016-001 (Aug. 2, 2023). The following table summarizes the volume of the individual ground water district's breaches.

Ground Water Districts (GWD)	**2022 Deficiency in GWD Compliance with 2016 Mitigation Plan (acre-feet)**
Aberdeen-American Falls GWD	1,352
Bingham GWD	32,476
Bonneville-Jefferson GWD	5,204
Carey Valley GWD	0
Jefferson-Clark GWD	18,605
Henry's Fork GWD	0
Madison GWD	0
Magic Valley GWD	0
North Snake GWD	0

Id at 8.

American Falls-Aberdeen subsequently entered into an agreement with the SWC and mitigated for their breach. *Notice of Satisfaction of American Falls-Aberdeen Ground Water District 2022 Mitigation Obligation*, No. CM-MP-2016-001 (Nov. 7, 2023). American Falls-Aberdeen has remedied their 2022 breach.

c. The Sentinel Well Benchmark

The ground water districts also failed to achieve the 2023 sentinel well benchmark established by the *2016 Settlement Mitigation Plan*. On May 3, 2024, the Director issued an order determining the additional actions that ground water districts that are signatories to the 2016 settlement agreement must take as part of ongoing adaptive management requirements to ensure they comply with the plan. The Director ordered ground water districts to:

> increase their proportionate share of the total annual ground water use reduction of 240,000 acre-feet by an additional 5% (12,000 acre-feet) during the 2024 irrigation season. The [ground water districts] will increase their proportionate share of the total annual ground water use reduction of 240,000 acre-feet by an additional 12,000 acre-feet each year thereafter until the 2023 benchmark is achieved

Final Order Specifying Additional Actions, at 5, No. CM-MP-2016-001 (May 3, 2024).

In its May 6 mitigation notice, American Falls-Aberdeen confirmed that it intends to "satisfy all its obligations under the *2016 Settlement Mitigation Plan*," including the "adaptive management" obligations prescribed by the Director in his *Final Order Specifying Additional Actions* in CM-MP-2016-001. AFA Mitigation Notice, at 1.

d. 50,000 Acre-Feet of Storage Water

As discussed above, the *2016 Settlement Mitigation Plan* requires the ground water districts to provide the SWC with 50,000 acre-feet of storage water annually. Under the plain language of the *2016 Settlement Mitigation Plan*, the 50,000-acre-foot obligation does not come due until 21 days after the day of allocation. *Settlement Agreement* at 2, ¶ 3.b.i. Furthermore, the *2016 Settlement Mitigation Plan* does not require documentation of securing the water. Therefore, American Falls-Aberdeen's safe harbor from curtailment is not contingent on American Falls-Aberdeen providing proof it has secure 50,000 acre-feet of storage water at this time. In addition, the *2016 Settlement Mitigation Plan* specifically spells out a dispute resolution process if the Districts breach the 50,000-acre-foot obligation. *Id*. at ¶ 2c. Only if that dispute resolution process fails does the Director get involved. *Id.* Since there is no requirement for American Falls-Aberdeen to provide proof that it has secured water at this time and because the steering committee has not referred an allegation of breach of the 50,000-acre-foot obligation to the Director, the Director concludes that American Fals-Aberdeen is in compliance with the requirements of the *2016 Settlement Mitigation Plan's* requirements related to the 50,000 acre-feet of storage water. ~~At the status conference, the Director reiterated that he would adopt former Director Spackman's reasoning regarding the *2016 Settlement Mitigation Plan* and that to comply with the plan, the entire 50,000-acre-foot obligation must be provided (not just a proportionate share). In other words, were American Falls-Aberdeen the only ground water~~

district seeking protection under the *2016 Settlement Mitigation Plan*, it would have to secure and deliver the full 50,000 acre-feet to remain in compliance. In its May 6 mitigation notice, American Falls-Aberdeen does not explicitly state how much water it has secured towards this obligation. However, it reports having secured 11,000 acre-feet of storage water, of which it will credit approximately 2,900 acre-feet towards its 2021 breach obligations. The director interprets American Falls-Aberdeen's notices and statements to imply it has secured 8,100 acre-feet towards the 50,000-acre-foot storage water obligation.

In addition to American Falls-Aberdeen, at the status conference, Jefferson Clark, Henry's Fork, and Madison also indicated they would count their secured storage water towards the *2016 Settlement Mitigation Plan* if that would result in their compliance with the plan.

Based on the ground water district's mitigation notices and comments at the status conference, the following table summarizes the potential volumes of water secured to comply with the *2016 Settlement Mitigation Plan*:

Ground Water Districts (GWD)	**GWD Volume of Secured Water (acre-feet)**
Aberdeen-American Falls GWD	8,100
Bingham GWD	0
Bonneville-Jefferson GWD	0
Carey Valley GWD	0
Jefferson-Clark GWD	6,858
Henry's Fork GWD	1,500
Madison GWD	
Magic Valley GWD	0
North Snake GWD	0
Total	16,458
2016 Mitigation Plan Secured Storage Water Obligation	50,000
Deficiency in the Amount of Secured Storage Water	33,542

e. Conclusion Regarding *2016 Settlement Mitigation Plan*

Based on the above discussion previous summary table, the Director concludes that ground water districts that (1) did not breach the *2016 Settlement Mitigation Plan* in 2022 or who did breach and have remedied their breach, and (2) agree to the "additional actions" required in the *Final Order Specifying Additional Actions* in CM-MP-2016-001, are in compliance with the 2016 plan and entitled to protection under the plan. At this time, American Falls-Aberdeen is the only ground water district that has told the Director that it continues to uphold and seek protection under the *2016 Settlement Mitigation Plan* and has demonstrated that it continues to

comply with all elements of the plan. ~~the ground water districts are short of the 50,000-acre-foot obligation by approximately 33,542 acre-feet. Because the ground water districts have not met the full 50,000-acre-foot obligation, no ground water district can be protected by the *2016 Settlement Mitigation Plan*. As a result of this determination, the Director will give the ground water districts until May 17, 2024, to demonstrate to his satisfaction that they have contracted for the total required storage of 50,000 acre-feet to qualify for protection. The Director will also require confirmation from the Tribes that the water has been paid for and is available for use as mitigation.~~

3. Ground Water Districts Planning to Use Neither the *2009 Storage Water Mitigation Plan* nor the *2016 Settlement Mitigation Plan*.[2]

At the status conference, Bingham indicated that it had secured 8,590 acre-feet of water for the coming irrigation season but that it did not intend to mitigate under either the *2009 Storage Water Mitigation Plan* or the *2016 Settlement Mitigation Plan*. While Bingham stated in its mitigation notice that there "does not appear to be an option for mitigation" under the *2009 Storage Water Mitigation Plan* for this year, *Notice of Bingham Ground Water District 2024 Mitigation*, at 3, the Director made clear at the status conference he would consider mitigation proposals under the *2009 Storage Water Mitigation Plan* for 2024. Still, when pressed at the status conference, counsel for Bingham indicated that Bingham would not apply its storage water towards its mitigation obligations under either of the approved mitigation plans. It is surprising that ~~Why~~ a ground water district would secure storage water but then refuse to claim protection from curtailment under an approved mitigation plan ~~is surprising~~. While the 8,590 acre-feet of water the district has already secured would not make up the current shortfalls under either approved mitigation plan, under the 2009 Storage Delivery Plan, it would nonetheless advance the priority date and reduce the number of its ground water users subject to curtailment. Furthermore, if the other ground water districts contribute storage under the *2009 Storage Water Mitigation Plan* but Bingham does not, ~~this makes Bingham a free rider in this year's delivery call proceedings because~~ some of its members will nonetheless benefit, by avoiding curtailment through the actions of other ground water districts contributing storage water while Bingham undertakes no commensurate actions. Regardless, if the Bingham Ground Water District Board Members do not want to contribute the water they have already secured, ~~would rather free ride under the *2009 Storage Water Delivery Plan* and not~~ to increase the number of its members protected from curtailment, that is its choice. The Director cannot force the district to obligate its secured storage water to maximize the protection of its users.

In its mitigation notice, Bingham expresses frustration about its inability to seek protection under a new mitigation plan that it filed in January of 2024. The new mitigation plan was only for the benefit of Bingham Ground Water District. *Pet. for Approval of Bingham Ground Water District's Mitigation Plan for the Surface Water Coalition*, No. CM-MP-2024-001 (Jan. 2, 2024). Several other ground water districts also submitted individual mitigation plans at about the same time. The plans were advertised, and they were protested by numerous entities. The Director appointed an independent hearing officer, Gerald F. Schroeder, to hear the contested cases on behalf of the Department. It is the Director's understanding that some of the

[2] The changes in this section are made in response to *Bingham's Brief* in which Bingham took issue with the use of the term "free rider."

parties to those contested cases sought to stay the new mitigation plan proceedings until an order was issued by the Director related to the proceeding before Hearing Officer Burdick. Others, including Bingham, did not want to stay the proceedings. It is the Director's understanding that Hearing Officer Schroeder heard arguments on both sides and concluded that it was best to wait for Hearing Officer Burdick's order before scheduling a hearing. While the Director understands Bingham's desire to move forward to hearing, Hearing Officer Schroeder considered the arguments raised by those who wanted to move forward and concluded that it was most appropriate to wait. The Director will not second guess the hearing officer's approach.

Carey Valley did not participate in the May 3, 2024 status conference. Its mitigation notice does not mention securing storage under the *2009 Storage Water Mitigation Plan* or the *2016 Settlement Mitigation Plan*. The Director concludes that Carey Valley has not secured any storage water and as a result does not seek protection under either mitigation plan in 2024.

ORDER

Based on and consistent with the foregoing, IT IS HEREBY ORDERED that the mitigation notices filed by Bonneville-Jefferson, Jefferson-Clark, Magic Valley, North Snake, Henry's Fork, Madison, Bingham, and Carey Valley~~, and American Falls-Aberdeen~~ ground water districts are deficient and fail to demonstrate that they are operating in accordance with an approved mitigation plan. American Falls-Aberdeen Ground Water District has demonstrated that it is operating in accordance with an approved mitigation plan. ~~The Director will give the ground water districts until May 17, 2024, to submit additional notice that demonstrates to the satisfaction of the director that they have secured storage water in compliance with either the *2009 Storage Water Delivery Plan* or the *2016 Settlement Mitigation Plan*.~~

Dated this 28th day of May 2024.

MATHEW WEAVER
Director

EXPLANATORY INFORMATION TO ACCOMPANY A FINAL ORDER

(To be used in connection with actions when a hearing was **not** held)

(Required by Rule of Procedure 740.02)

The accompanying order is a "**Final Order**" issued by the department pursuant to section 67-5246, Idaho Code.

PETITION FOR RECONSIDERATION

Any party may file a petition for reconsideration of a final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: The petition must be received by the Department within this fourteen (14) day period.** The department will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law. See section 67-5246(4), Idaho Code.

REQUEST FOR HEARING

Unless the right to a hearing before the director or the water resource board is otherwise provided by statute, any person who is aggrieved by the action of the director, and who has not previously been afforded an opportunity for a hearing on the matter shall be entitled to a hearing before the director to contest the action. The person shall file with the director, within fifteen (15) days after receipt of written notice of the action issued by the director, or receipt of actual notice, a written petition stating the grounds for contesting the action by the director and requesting a hearing. See section 42-1701A(3), Idaho Code. **Note: The request must be received by the Department within this fifteen (15) day period.**

APPEAL OF FINAL ORDER TO DISTRICT COURT

Pursuant to sections 67-5270 and 67-5272, Idaho Code, any party aggrieved by a final order or orders previously issued in a matter before the department may appeal the final order and all previously issued orders in the matter to district court by filing a petition in the district court of the county in which:

i. A hearing was held,
ii. The final agency action was taken,
iii. The party seeking review of the order resides, or
iv. The real property or personal property that was the subject of the agency action is located.

The appeal must be filed within twenty-eight (28) days of: a) the service date of the final order, b) the service date of an order denying petition for reconsideration, or c) the failure within twenty-one (21) days to grant or deny a petition for reconsideration, whichever is later. See section 67-5273, Idaho Code. The filing of an appeal to district court does not in itself stay the effectiveness or enforcement of the order under appeal.

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-MP-2016-001 **ORDER DENYING IGWA'S REQUEST FOR CLARIFICATION OF ORDER DENYING IGWA'S MOTION TO VACATE OR AMEND 2022 COMPLIANCE ORDER**
IN THE MATTER OF IGWA'S SETTLEMENT AGREEMENT MITIGATION PLAN	

BACKGROUND

On April 24, 2023, the Director of the Idaho Department of Water Resources ("Department") issued the *Amended Final Order Regarding Compliance with Approved Mitigation Plan* ("*Amended 2021 Compliance Order*"). In the *Amended 2021 Compliance Order*, the Director found that certain members of the Idaho Ground Water Appropriators, Inc. ("IGWA") breached the *2016 Settlement Mitigation Plan* in 2021. *Amended 2021 Compliance Order*, at 14.

On August 2, 2023, the Director issued the *Final Order Regarding IGWA's 2022 Mitigation Plan Compliance* ("*2022 Compliance Order*"). In the *2022 Compliance Order*, the Director held that certain IGWA members failed to satisfy their proportionate share of IGWA's mitigation obligation in 2022 and were not in compliance with the *2016 Settlement Mitigation Plan*. *2022 Compliance Order*, at 1.

On April 8, 2024, IGWA filed *IGWA's Motion to Vacate or Amend 2022 Compliance Order* ("*Motion to Vacate*"). In its *Motion to Vacate*, IGWA claimed that the ground water districts had decided to adopt a new 3-year baseline calculation to measure compliance. IGWA argued that as a result of this change, the *2022 Compliance Order*, which had relied on IGWA's 5-year baseline, is now moot. *Motion to Vacate*, at 4.

On May 2, 2024, the Director issued an *Order Denying IGWA's Motion to Vacate or Amend 2022 Compliance Order* ("*Order Denying Motion to Vacate*"). After a long recitation of all the current legal proceedings that implicate the 5-year baseline, the Director concluded that IGWA cannot "at this point in all these proceedings, unilaterally decide to change the method used for determining compliance." *Order Denying Motion to Vacate*, at 4. The Director also denied the request because it was untimely, stating that IGWA had an opportunity to request a hearing on the *2022 Compliance Order* but failed to timely do so and that IGWA failed to raise the issue at other critical times. *Order Denying Motion to Vacate*, at 6.

On May 16, 2024, IGWA filed *IGWA's Request for Clarification of Order Denying IGWA's Motion to Vacate or Amend 2022 Compliance Order* ("*Request for Clarification*"). IGWA seeks three points of clarification: 1) whether "IGWA must use a five-year baseline to measure reductions in groundwater use" and if "that determination applies to the 2022 Performance Report only or if it includes subsequent performance reports"; 2) whether IGWA can "change the baseline used in future performance reports"; and 3) whether "the Director has deemed the 2016 Plan ambiguous." *Request for Clarification*, at 1–2.

ANALYSIS

The *2022 Compliance Order* found that four ground water districts breached the *2016 Settlement Mitigation Plan* in 2022. *2022 Compliance Order*, at 8. IGWA's *Motion to Vacate* asked the Director to vacate the *2022 Compliance Order*. In its *Motion to Vacate*, IGWA also discussed in detail the earlier issued *2021 Amended Compliance Order*, which is currently on appeal to the Idaho Supreme Court. IGWA's first two points of clarification ask the Director about future performance reports, not about the 2021 or 2022 performance reports relied upon in the *2021 Amended Compliance Order* and *2022 Compliance Order.*

The *Motion to Vacate* and *Order Denying Motion to Vacate* only discuss previous performance reports. They do not discuss future performance reports. The Director should only decide those issues presented. Because the Director did not decide its applicability to future performance reports, there is no need to clarify the order regarding future performance reports.

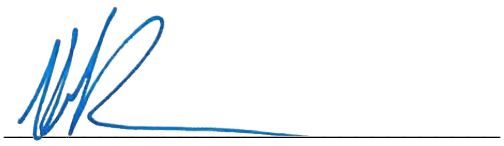
Regarding IGWA's last point of clarification, IGWA asks whether the Director "has deemed the 2016 Plan ambiguous." *Request for Clarification*, at 2. Because the Director repeatedly stated in the *2021 Amended Compliance Order* and *2022 Compliance Order* that the 2016 plan is not ambiguous, and because nothing in the *Order Denying Motion to Vacate* suggests otherwise, the Director does not interpret IGWA's question as a genuine request for clarification.

In conclusion, the Director denies IGWA's request because the issues IGWA seeks "clarification" on are not really questions that are unclear in the order but are questions outside the scope of the order.

ORDER

Based upon and consistent with the foregoing, IT IS HEREBY ORDERED that *IGWA's Request for Clarification of Order Denying IGWA's Motion to Vacate or Amend 2022 Compliance Order* is DENIED.

DATED this 28th day of May 2024.



MATHEW WEAVER
Director

EXPLANATORY INFORMATION TO ACCOMPANY A FINAL ORDER

(To be used in connection with actions when a hearing was **not** held)

(Required by Rule of Procedure 740.02)

The accompanying order is a "**Final Order**" issued by the department pursuant to section 67-5246, Idaho Code.

PETITION FOR RECONSIDERATION

Any party may file a petition for reconsideration of a final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: The petition must be received by the Department within this fourteen (14) day period.** The department will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law. See section 67-5246(4), Idaho Code.

REQUEST FOR HEARING

Unless the right to a hearing before the director or the water resource board is otherwise provided by statute, any person who is aggrieved by the action of the director, and who has not previously been afforded an opportunity for a hearing on the matter shall be entitled to a hearing before the director to contest the action. The person shall file with the director, within fifteen (15) days after receipt of written notice of the action issued by the director, or receipt of actual notice, a written petition stating the grounds for contesting the action by the director and requesting a hearing. See section 42-1701A(3), Idaho Code. **Note: The request must be received by the Department within this fifteen (15) day period.**

APPEAL OF FINAL ORDER TO DISTRICT COURT

Pursuant to sections 67-5270 and 67-5272, Idaho Code, any party aggrieved by a final order or orders previously issued in a matter before the department may appeal the final order and all previously issued orders in the matter to district court by filing a petition in the district court of the county in which:

i. A hearing was held,
ii. The final agency action was taken,
iii. The party seeking review of the order resides, or
iv. The real property or personal property that was the subject of the agency action is located.

The appeal must be filed within twenty-eight (28) days of: a) the service date of the final order, b) the service date of an order denying petition for reconsideration, or c) the failure within twenty-one (21) days to grant or deny a petition for reconsideration, whichever is later. See section 67-5273, Idaho Code. The filing of an appeal to district court does not in itself stay the effectiveness or enforcement of the order under appeal.

RE: SWC Delivery Call / Follow Up Notice of Mitigation Water in Response to Garrick Baxter Request

Dear Director Weaver:

I am writing on behalf of our client the A&B Irrigation District ("A&B" or "District") in response to Garrick Baxter's request (phone conversation and email) concerning A&B's ability to provide storage water to any injured Coalition member during the 2024 irrigation season.

First, A&B has been provided no notice that its May 1, 2024 *Notice of Mitigation Water* was deficient until yesterday when Mr. Baxter called me. Although the notice was in front of IDWR for over three weeks, it was apparently deemed insufficient as of yesterday afternoon, a day before the curtailment notice will be issued. Apparently A&B's water rights will be included in a curtailment list if it does not comply with Mr. Baxter's request.

A&B has previously provided notice of its ability to deliver storage water without any issues with the Department. Apparently now IDWR is requesting A&B to submit a lease form and associated unrefundable fees to Water District 01 to confirm its prior notice. Please see the attached lease form and check that is being transmitted to WD1 today. *See* Ex. A. The District could have sent this to Water District 1 earlier had IDWR provided A&B with a formal order or proper notice.

I have conferred with manager Justin Temple and the District is delivering surface water to 3,573.6 acres that are covered by various junior priority ground water rights (36-15192 through 36-15127B), as well as a portion of water right 36-15127A (1,378.1 acres). This leaves 508.3 acres under water right 36-15127A and 26 acres under 36-16749 that may need to be covered by a storage water delivery to TFCC for mitigation purposes. A&B has submitted the attached lease for 62 acre-feet to cover the proportionate share

of the April 2024 in-season demand shortfall as calculated in the table sent to me by Garrick Baxter (0.115 acre-feet per acre).

Finally, although the District disagrees with and reserves all rights concerning the *April Steps 1-3 Order* initially allowing IGWA to choose to mitigate under its 2009 Storage Water Mitigation Plan, if IGWA does establish that it has 74,100 acre-feet, then A&B will no longer have any obligation for the 2024 irrigation season. *See Order* at 5-6, n. 8. Moreover, even if the Director allows the Districts to partially mitigate under the 2009 Plan, A&B is relying upon the Director's representation that the potential curtailment date has changed to February 16, 1970. *See Amended Order Determining Deficiency in Notices of Secured Water* (May 28, 2024) (original order identifying the changed curtailment date was issued on May 10, 2024).

Finally, A&B reserves all rights concerning the Department's changed position on A&B's notice of mitigation as well as any potential curtailment notice, including the right to request a hearing pursuant to Idaho Code § 42-1701A(3).

If you have any questions or need additional information, please contact me at (208) 733-0700.

Sincerely,

Travis Thompson

Exhibit
A

WATER DISTRICT #1 RENTAL POOL - PRIVATE LEASE AGREEMENT

A&B Irrigation District (lessor) agrees to lease 62 acre-feet of storage to Twin Falls Canal Company (lessee) for the 2024 irrigation season at a price of $ 0 according to the rules and regulations contained in the Water District #1 Rental Pool Procedures.

Description of Lease:

Name of River or Stream from which lease is diverted: Twin Falls South Side Division

Canal or Pump Name and location: _____

Place of Use description: _____

Water Right Appurtenant to Lands: _____

An Idaho Water Resources Board surcharge (10% of the purchase price) plus a $1.30 per acre-foot administrative fee must be received by Water District #1 prior to the approval of the storage lease).

If the reservoir storage system fails to fill in the season following the year leased, the lessor's storage allocation shall be reduced by the amount leased to offset any impacts to other spaceholders' storage accruals according to the approved Water District #1 Rental Pool Procedures pursuant to Idaho Code Section 42-1765. The lessor understands the net effect of this rule is to make an amount of the lessor's space (equal to the amount leased) last-to-fill in the reservoir system for the irrigation season following the lease.

☒ If the lease is for irrigation purposes, the Applicant, by checking this box, certifies that the use of this leased storage water complies with the moratorium on new consumptive uses as outlined in Rental Pool Procedure 3.4. Failure to meet the conditions contained in Rental Pool Procedure 3.4 may be grounds for denying the application.

If the leased storage is diverted by a diversion outside the area regulated by Water District #1, the applicant, by signing this agreement agrees to report to the Watermaster of the water district containing the diversion, the daily amounts of leased storage diverted during the year. The Watermaster of that district, according to Rental Pool Procedure 4.3.107, must then report to the Water District #1 Watermaster the daily rental diverted by November 30th. Failure to report the daily rental diversion may result in the rental not being delivered in Water District #1's final rental delivery records.

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 **FINAL ORDER CURTAILING GROUND WATER RIGHTS JUNIOR TO MARCH 31, 1954**

The Director of the Idaho Department of Water Resources ("Department") finds, concludes, and orders as follows:

FINDINGS OF FACT

1. On July 19, 2023, the Idaho Department of Water Resources ("Department") issued its *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("*Methodology Order*"). The *Methodology Order* established nine steps for determining material injury to members of the Surface Water Coalition ("SWC").[1]

2. On April 18, 2024, the Director issued the *Final Order Regarding April 2024 Forecast Supply (Methodology Steps 1-3)* ("*As-Applied Order*"), which applied steps 1, 2, and 3 of the *Methodology Order*. The Director predicted an April in-season demand shortfall ("IDS") of 74,100 acre-feet. *As-Applied Order*, at 3. The Director ordered that, by May 2, 2024, ground water users with consumptive water rights "bearing priority dates junior to March 31, 1954, within the Eastern Snake Plain Aquifer area of common ground water supply [("ESPA ACGWS")] shall establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted April IDS of 74,100 acre-feet in accordance with an approved mitigation plan." *Id.* at 6. The Director also ordered that, if such a junior ground water user cannot establish that they can mitigate for their proportionate share of the predicted IDS "in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water user." *Id.*

[1] The SWC is comprised of A&B Irrigation District, American Falls Reservoir District #2, Burley Irrigation District, Milner Irrigation District, Minidoka Irrigation District, North Side Canal Company, and Twin Falls Canal Company.

3. There are currently seven approved mitigation plans in place responding to the SWC delivery call[2]:

(1) Docket No. CM-MP-2009-007 for the benefit of the Idaho Ground Water Appropriators, Inc. ("IGWA") (delivery of stored water);

(2) Docket No. CM-MP-2009-006 for the benefit of IGWA (conversions, dry-ups, and recharge);

(3) Docket No. CM-MP-2016-001 for the benefit of IGWA (the IGWA and SWC stipulated mitigation plan);

(4) Docket No. CM-MP-2010-001 for the benefit of the Southwest Irrigation District and Goose Creek Irrigation District (collectively, "SWID");

(5) Docket No. CM-MP-2019-001 for the benefit of certain cities commonly referred to as the "Coalition of Cities";

(6) Docket No. CM-MP-2015-003 for the benefit of the A&B Irrigation District ("A&B"); and

(7) Docket No. CM-MP-2007-001 for the benefit of certain entities commonly referred to as the "Water Mitigation Coalition."

4. In the 2024 *As-Applied Order*, the Director found that due to the nature of the approved mitigation plans for SWID, the Coalition of Cities, and the Water Mitigation Coalition, these entities do not need to establish they can mitigate for their proportionate share of the predicted April IDS. *See As-Applied Order*, at 5 n.8. However, the Director found that A&B must mitigate for its proportionate share of the predicted IDS of 74,100 acre-feet and determined that A&B's proportionate share is 455 acre-feet. *Id*. Regarding IGWA's mitigation plan CM-MP-2016-001, the Director found that IGWA does not need to establish it can mitigate for its proportionate share of the predicted IDS. *Id*. at 5–6 n.8. Regarding IGWA's mitigation plan CM-MP-2009-007, the Director found that IGWA's obligation is 74,100 acre-feet, and consistent with the plan IGWA must mitigate for all ground water users. *Id*. at 6 n.8.

5. In response to the 2024 *As-Applied Order*'s requirement for junior ground water right holders to establish how they will mitigate their proportionate share of the predicted demand shortfall, A&B sent a letter to the Director stating:

> [I]t is the District's intent to continue to curtail the enlargement water rights (2,063) acres for the 2024 irrigation season. The District will also deliver surface water to an additional 1,510.6 acres that could have been irrigated with some of the District's ground water rights with an April 1, 1962 priority (water right nos. 36-15127A et al.). The District intends to continue to deliver surface water to lands formerly

[2] In December 2023 and January 2024, a number of ground water districts and A&B Irrigation District submitted new individual mitigation plans. The plans were advertised, and they were protested by various entities. The Director has appointed an independent hearing officer, Gerald F. Schroeder, to hear the contested cases on behalf of the Department. Those proceeding are ongoing and no final orders have been issued related to the new mitigation plans.

> irrigated with groundwater, approximately 3,573.6 in total, with groundwater supplied to certain areas as needed for pipeline operations.

Letter from Travis Thompson, attorney for A&B, to Mat Weaver, Department Director (May 1, 2024).

6. On May 2, 2024, IGWA filed IGWA's *Petition for Reconsideration of Final Order Regarding April 2024 Forecast Supply* ("*Petition for Reconsideration*") with the Department. In the *Petition for Reconsideration*, IGWA asked the Director to reconsider requiring IGWA to mitigate ground water diversions by non-IGWA members. *Petition for Reconsideration*, at 2. IGWA disputed the Director's conclusion that under IGWA's *2009 Storage Water Mitigation Plan*, IGWA must provide the full 74,100-acre-foot obligation. *Id*. The Director issued a *Final Order Denying IGWA's Petition for Reconsideration of April As-Applied Order* ("*Order Denying Reconsideration*") on May 10, 2024.

7. Historically, IGWA, acting on behalf of its member ground water districts, filed a notice of mitigation with the Department to establish that the ground water districts can mitigate the predicted IDS in accordance with an approved mitigation plan. However, this year, individual ground water districts submitted their own mitigation notices. Between May 2 and May 6, 2024, Bonneville-Jefferson, Jefferson-Clark, Magic Valley together with North Snake, Henry's Fork together with Madison, Bingham, Carey Valley, and American Falls-Aberdeen ground water districts (collectively, the "Districts") all filed mitigation notices with the Department.

8. On May 10, 2024, the Director issued an *Order Determining Deficiency in Notices of Secured Water* ("*Order Determining Deficiency*"). In the *Order Determining Deficiency*, the Director found that the mitigation notices filed by the Districts "are deficient and fail to demonstrate that they are operating in accordance with an approved mitigation plan." *Order Determining Deficiency*, at 11. The Director concluded:

> The *2016 Settlement Mitigation Plan* allows individual ground water districts to mitigate for their proportionate share of the 240,000-acre-foot reduction obligation set forth in the plan. It also requires that the ground water districts annually provide 50,000 acre-feet of storage water though private leases to the SWC 21 days after the day of allocation. While the *2016 Settlement Mitigation Plan* allows for determining the proportionate share of the reduction obligation of the parties, it does not authorize the proportionate sharing of the 50,000-acre-foot storage volume by the parties. As a result of the plain language of the plan, for any ground water district to comply with the plan, the entire 50,000 acre-feet must be provided.

Id. at 6. Additionally, the Director noted,

> that regarding the *2009 Storage Water Mitigation Plan*, if ground water districts submit adequate contracts to establish that they have secured storage water and the amount secured is less than the shortfall obligation, the Director will credit the contracted volume against the overall obligation, thus reducing the overall obligation for all ground water users.

Id. at 4. The Director gave the Districts until May 17, 2024, "to submit additional notice that demonstrates to the satisfaction of the [D]irector that they have secured storage water in compliance with either the *2009 Storage Water [Mitigation] Plan* or the *2016 Settlement Mitigation Plan*." *Id*.

9. On May 14, 2024, the Department received *IGWA's Conditional Notice of Mitigation Compliance; Petition for Reconsideration; and Request for Expedited Decision* ("*Second Petition for Reconsideration*"). IGWA's *Second Petition for Reconsideration* requested that the *Order Determining Deficiency* and *Order Denying Reconsideration* be "amend[ed] or vacate[d] and replace[d]" on an expedited basis. *Id*. at 3–4. The Director denied the *Second Petition for Reconsideration* on May 28, 2024.

10. On May 17, 2024, American Falls-Aberdeen filed a *Motion for Reconsideration of Order Determining Deficiency in Notices of Secured Water* ("*AFA's Motion for Reconsideration*"). American Falls-Aberdeen argued that requiring "evidence [that] it has secured storage water to satisfy the entire 50,000 acre-feet ("50kaf") delivery obligation . . . . is inconsistent with the plain language of the underlying settlement that was adopted as the *2016 Plan* and with the Department's prior interpretations of the ground water districts' obligations under the *2016 Plan*." *AFA's Motion for Reconsideration*, at 1. American Falls-Aberdeen requested the Director reconsider the *Order Determining Deficiency* to remove any obligation on behalf of the ground water districts to provide proof that 50,000 acre-feet of storage water has been secured under the *2016 Settlement Mitigation Plan*. *Id*. at 5–7.

11. Also on May 17, 2024, IGWA submitted *IGWA's Notice of Storage Water Leases* ("*IGWA's Notice*") for the purpose of demonstrating that adequate storage water leases were secured to mitigate material injury caused by ground water use within Bonneville-Jefferson, Jefferson-Clark, Magic Valley, North Snake, Henry's Fork, Madison, Bingham, and Carey Valley ground water districts, in compliance with the *2009 Storage Water Mitigation Plan*. *IGWA's Notice*, at 1. IGWA produced copies of storage water leases evidencing "44,509 acre-feet available to meet the proportionate mitigation of the" Districts, excluding American Falls-Aberdeen Ground Water District. *Id*. at 2 (emphasis added). Further, IGWA stated:

> These leases are submitted on condition that they are utilized by IDWR strictly to mitigate for material injury caused by groundwater use within the districts listed above [the Districts, excluding American Falls-Aberdeen Ground Water District] in accordance with Idaho Code § 42-5224(11). These leases cannot be used to roll back the curtailment date for all groundwater users or to otherwise mitigate for groundwater users that do not belong to the districts listed above.

Id. at 3.

12. On May 28, 2024, the Director issued an *Order Granting Upper Valley Districts Limited Intervention and AFA's Motion for Reconsideration* ("*Order Granting AFA Reconsideration*") and *Amended Order Determining Deficiency in Notices of Secure Water* ("*Amended Order Determining Deficiency*"). In the *Order Granting AFA Reconsideration,* the Director concluded:

> Under the plain language of the *2016 Settlement Mitigation Plan*, the 50,000-acre-foot obligation does not come due until 21 days after the day of allocation. *Settlement Agreement* at 2, ¶ 3.b.i. . . . . The Director agrees that those portions of the *Order Determining Deficiency* that condition AFA's safe harbor from curtailment on providing proof it has secure 50,000 acre-feet of storage water should be withdrawn and replaced.

Order Granting AFA Reconsideration, at 5. In accordance with the *Order Granting AFA Reconsideration*, the concurrently issued *Amended Order Determining Deficiency* included: "At this time, American Falls-Aberdeen is the only ground water district that has told the Director that it continues to uphold and seek protection under the *2016 Settlement Mitigation Plan* and has demonstrated that it continues to comply with all elements of the plan." *Amended Order Determining Deficiency*, at 10–11.

13. Also on May 28, 2024, the Director issued an *Order Denying IGWA's Second Petition for Reconsideration; Order Determining Deficiency in IGWA's May 17, 2024 Notice of Storage Water Leases* ("*Second Order Denying Reconsideration and Determining Deficiency*"). In the order, the Director concluded, "IGWA's *2009 Storage Water Mitigation Plan* requires IGWA to mitigate for all junior groundwater users," therefore, the Director could not consider the conditioned leases IGWA produced on May 17, 2024. *Second Order Denying Reconsideration and Determining Deficiency*, at 7. Consequently, the Director found *IGWA's Notice* to be deficient "because it fail[ed] to demonstrate that Bonneville-Jefferson, Jefferson-Clark, Magic Valley, North Snake, Henry's Fork, Madison, Bingham, and Carey Valley ground water districts are operating in accordance with an approved mitigation plan." *Id*. at 8. The Director ordered:

> Any ground water district that previously sought protection under the *2009 Storage Water Mitigation Plan* that now wishes to seek protection under the *2016 Settlement Mitigation Plan* has until Wednesday, May 29, 2024, at 5:00 p.m. (MT) to inform the Director of their intention to do so and to demonstrate they are incompliance with the *2016 Settlement Mitigation Plan*.

Id. (emphasis added).

14. On May 29, 2024, Henry's Fork and Madison ground water districts jointly filed a timely *Notice of Intended Compliance With 2016 Mitigation Plan by Henry's Fork Ground Water District and Madison Ground Water District* ("*HFMGWD Compliance Notice*"). The two districts gave notice,

> that for the year 2024, they will comply with the 2016 mitigation plan as to their proportionate share, which by agreement with IGWA to date has been 1,500 acre feet of storage and 3,000 acre feet of recharge as well as any adaptive management which the Director imposes on said [d]istricts should the various [Districts] fail to agree to any proportionality.

HFMGWD Compliance Notice, at 4.[3] Attached to the *HFMGWD Compliance Notice*, for the benefit of the two districts, is an assignable storage water lease for 1,500 acre-feet of storage water. *Id.* at 5, Attach.

15. On May 29, 2024, North Snake and Magic Valley ground water districts jointly filed a timely *Notice of Compliance; Request for Clarification* ("*NSMVGWD Compliance Notice*"). However, the *NSMVGWD Compliance Notice* does not inform the Director of an intention to seek protection under the *2016 Settlement Mitigation Plan*; instead, North Snake and Magic Valley request the Director grant them safe harbor under the *2009 Storage Water Mitigation Plan*. *NSMVGWD Compliance Notice*, at 9. The two districts commit to supply "their proportionate share of the full 74,100 April 2024-predicted IDS." *Id*. at 5. Further, North Snake and Magic Valley request the Director provide clarification and an explanation if he "believes the 2009 Plan is unavailable to the Districts for some reason, or unavailable to the Districts on a proportionate share basis . . . ." *Id*. at 9.

16. Additionally, on May 29, 2024, at 5:23 p.m., Bingham, Bonneville-Jefferson, and Jefferson-Clark ground water district jointly submitted *Bingham Ground Water District, Bonneville Jefferson Ground Water District, and Jefferson Clark Ground Water District Amended Notice of Mitigation Compliance* ("*BGWD Compliance Notice*").[4] Like North Snake and Magic Valley's notice, the *BGWD Compliance Notice* does not inform the Director of an intention to seek protection under the *2016 Settlement Mitigation Plan*; instead, the ground water districts continue to seek protection under the *2009 Storage Water Mitigation Plan*. *BGWD Compliance Notice*, at 3–4.

CONCLUSIONS OF LAW

1. Idaho Code § 42-602 authorizes the Director to supervise water distribution within water districts:

> The director of the department of water resources shall have direction and control of the distribution of water from all natural water sources within a water district to the canals, ditches, pumps and other facilities diverting therefrom. Distribution of water within water districts created pursuant to section 42-604, Idaho Code, shall be accomplished by watermasters as provided in this chapter and supervised by the director. The director of the department of water resources shall distribute water in water districts in accordance with the prior appropriation doctrine. The provisions of chapter 6, title 42, Idaho Code, shall apply only to distribution of water within a water district.

[3] Henry's Fork and Madison also state that they plan to mitigate "not only under the [*2016 Settlement Mitigation Plan*], but also under any version of the 2009 mitigation plan, which is being proposed by other ground water districts." *HFMGWD Compliance Notice*, at 4–5. In a previous order, the Director made it clear that ground water districts cannot apply their secured storage water to multiple plans. *Order Determining Deficiency*, at 3 ("ground water districts can apply their secured storage water to either plan, but not both."). Because Henry's Fork and Madison cannot mitigate under both plans, the Director will treat their submission solely as a request to mitigate under the *2016 Settlement Mitigation Plan*.

[4] While the filing is untimely, the Director will address the filing in this order.

2. As explained above, by May 2, 2024, ground water users with consumptive water rights "junior to March 31, 1954, within the [ESPA ACGWS]" had to "establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted April IDS of 74,100 acre-feet in accordance with an approved mitigation plan." *As-Applied Order*, at 6. If a junior ground water user does not establish that they can mitigate for their proportionate share of the predicted April IDS "in accordance with an approved mitigation plan" the ground water user will be subject to this "order curtailing the junior-priority ground water user." *Id.*

3. Due to the nature of the approved mitigation plans for SWID, the Coalition of Cities, and the Water Mitigation Coalition, these entities do not need to establish that they can mitigate for their proportionate share of the predicted April IDS. Junior ground water users entitled to the protection of SWID, the Coalition of Cities, and the Water Mitigation Coalition mitigation plans will not be subject to curtailment during the 2024 irrigation season.

4. American Falls-Aberdeen, Henry's Fork, and Madison ground water districts have demonstrated that they are operating in accordance with the *2016 Settlement Mitigation Plan*. Junior ground water users who are members of American Falls-Aberdeen, Henry's Fork, or Madison ground water district will not be subject to curtailment during the 2024 irrigation season.

5. The *Second Order Denying Reconsideration and Determining Deficiency* gave ground water districts that "wish[ed] to seek protection under the *2016 Settlement Mitigation Plan* [ ] until Wednesday, May 29, 2024, at 5:00 p.m. (MT) to inform the Director of their intention to do so. . . ." *Second Order Denying Reconsideration and Determining Deficiency*, at 8 (emphasis added). The *NSMVGWD Compliance Notice* does not inform the Director of an intention to seek protection under the *2016 Settlement Mitigation Plan*. Accordingly, Magic Valley and North Snake have failed to show that they can mitigate in accordance with the *2016 Settlement Mitigation Plan*. Their notice does, however, express an intention to seek "safe harbor" under the *2009 Storage Water Mitigation Plan* and inquires as to the status of the mitigation plan. *NSMVGWD Compliance Notice*, at 9. As stated in the *Amended Order Determining Deficiency*, the Director considers the *2009 Settlement Mitigation Plan* "available for use at this time." *Amended Order Determining Deficiency*, at 4. But as was also made clear in that order, and again in the *Second Order Denying Reconsideration and Determining Deficiency*, the plain language of the plan requires that IGWA will mitigate for all ground water users, not just member participants. This is not an arbitrary requirement imposed by this Director. This is the plain language of the approved mitigation plan. IGWA has affirmed that this was IGWA's intent: "IGWA offered to provide storage water to mitigate all material injury, whether caused by IGWA members or others." *Second Petition for Reconsideration*, at 2. As was also stated in the *Amended Order Determining Deficiency*, previous decisions of the agency have held if IGWA fails to provide the full volume of secured water, the Director will subtract the amount of secured water from the overall obligation and not allow ground water districts to mitigate only for their water users' proportional share:

> IGWA cannot pick and choose who gets the benefit of storage water if IGWA is not providing storage water amounts equal to the shortfall obligation. The Director reiterated that regarding the *2009 Storage Water Mitigation Plan*, if ground water

> districts submit adequate contracts to establish that they have secured storage water and the amount secured is less than the shortfall obligation, the Director will credit the contracted volume against the overall obligation, thus reducing the overall obligation for all ground water users.

Amended Order Determining Deficiency at 4–5 (quotations and citations omitted). IGWA's obligation under the *2009 Storage Water Mitigation Plan* is 74,100 acre-feet. Magic Valley and North Snake state that they have secured what they claim is their proportionate share of the 74,100-acre-foot IDS—15,590 acre-feet of storage water. *NSMVGWD Compliance Notice*, at 6. Since they have secured less than the full shortfall obligation, if the Director were to accept their lease, it would not provide Magic Valley and North Snake "safe harbor under the *2009 Storage Water Mitigation Plan*" but would only reduce the overall obligation for all ground water users. It is clear from the *NSMVGWD Compliance Notice* that they only seek protection for their members, not for ground water users outside their district. While Magic Valley and North Snake did not expressly condition the Director's acceptance of their notice like IGWA did with *IGWA's Notice of Storage Water Leases*, it has the same effect. Magic Valley and North Snake seek an outcome that is inconsistent with the plan. Accordingly, the Director deems the notice deficient. If the Director has interpreted Magic Valley and North Snake's notice incorrectly and it was their intent to have the Director credit the contracted volume against the overall obligation, they simply need to submit a filing clarifying their intent. As a result of their deficient notice of secured storage water filings, Magic Valley and North Snake will be subject to curtailment during the 2024 irrigation season.

6. In the *BGWD Compliance Notice*, the Bingham, Bonneville-Jefferson, and Jefferson-Clark ground water districts take a position similar to Magic Valley and North Snake. They state that they have "secured storage water leases to fully cover their proportionate shares of the 74,100 acre-feet IDS . . . ." *BGWD Compliance Notice*, at 3. Like Magic Valley and North Snake, these ground water districts seek an outcome that is inconsistent with the *2009 Storage Water Mitigation Plan*. Accordingly, the Director deems the notice deficient. If the Director has interpreted their notice incorrectly and it was their intent to have the Director credit the contracted volume against the overall obligation, they simply need to submit a filing clarifying their intent. As a result of their deficient notice of secured storage water filings, Bingham, Bonneville-Jefferson, and Jefferson-Clark ground water districts will be subject to curtailment during the 2024 irrigation season.

7. A&B has failed to provide timely documentation that it has adequately secured the storage water necessary to mitigate for all its obligation under its approved mitigation plan.[5] Accordingly, A&B will be subject to curtailment during the 2024 irrigation season.

[5] On May 30, 2024, A&B submitted a lease for 62 acre-feet. The required fee had not yet been received by the Water District 01 watermaster. In the event the required fee is received, and the lease is approved, the Director will consider how to apply the mitigation benefit associated with the leased water.

8. Carey Valley Ground Water District has not demonstrated that it is operating in accordance with an approved mitigation plan. Accordingly, Carey Valley will be subject to curtailment during the 2024 irrigation season.

9. Consistent with the *As-Applied Orde*r, Idaho Code § 42-602, and decisions of the courts, the Director must order curtailment of junior-priority ground water users that have not established they can mitigate in accordance with an approved mitigation plan. Junior-priority ground water users subject to curtailment are listed in Attachments A and B[6] to this order.

ORDER

Based upon and consistent with the foregoing, IT IS HEREBY ORDERED that effective May 30, 2024, ground water users holding water rights bearing priority dates junior to March 31, 1954, within the ESPA ACGWS, and listed in Attachment A to this order, shall immediately curtail/refrain from diversion and use of ground water pursuant to those water rights unless notified by the Department that the order of curtailment has been modified or rescinded as to their water rights.

IT IS FURTHER ORDERED that effective May 30, 2024, ground water users holding water rights bearing priority dates junior to March 31, 1954, within the ESPA ACGWS, and listed in Attachment B to this order, shall curtail/refrain from diversion and use of ground water pursuant to those water rights unless notified by the Department that the order of curtailment has been modified or rescinded as to their water rights.

IT IS FURTHER ORDERED that holders of ground water rights listed in Attachment B to this order may seek to participate in an approved mitigation plan through a ground water district and shall have fifteen days from the date of this order to join, solely for mitigation purposes, the ground water district situated nearest the lands to which the water rights are appurtenant. *See* H.B. 737a, 58th Leg., 2d Reg. Sess. (Idaho 2006) (*Act Relating to the Administration of Ground Water Rights Within the Eastern Snake River Plain*); *see also* I.C. § 42-5259.

IT IS FURTHER ORDERED that watermasters for the water districts within the ESPA ACGWS who regulate ground water are directed to review the water rights listed in Attachment A and B to this order and begin the curtailment process.

IT IS FURTHER ORDERED that this order shall apply to consumptive ground water rights, including but not limited to, agricultural, commercial, industrial, and municipal uses. This order excludes ground water rights used for *de minimis* domestic purposes where such domestic use is within the limits of the definition set forth in Idaho Code § 42-111 and ground water rights

[6] The *Act Relating to the Administration of Ground Water Rights Within the Eastern Snake River Plain*, H.B. 737a, 58th Leg., 2d Reg. Sess. (Idaho 2006), allows for ground water users that are not members of a ground water district to join or participate in an approved mitigation plan of a ground water district. Attachment B identifies those junior ground water users who, according to Department records, are not currently members of a ground water district and are subject to curtailment by this order.

used for *de minimis* stock watering where such stock watering use is within the limits of the definitions set forth in Idaho Code § 42-1401A(11), pursuant to IDAPA 37.03.11.020.11.

Dated this 30th day of May 2024.

MATHEW WEAVER
Director

EXPLANATORY INFORMATION TO ACCOMPANY A FINAL ORDER

(To be used in connection with actions when a hearing was **not** held)

(Required by Rule of Procedure 740.02)

The accompanying order is a "**Final Order**" issued by the department pursuant to section 67-5246, Idaho Code.

PETITION FOR RECONSIDERATION

Any party may file a petition for reconsideration of a final order within fourteen (14) days of the service date of this order as shown on the certificate of service. **Note: The petition must be received by the Department within this fourteen (14) day period.** The department will act on a petition for reconsideration within twenty-one (21) days of its receipt, or the petition will be considered denied by operation of law. See section 67-5246(4), Idaho Code.

REQUEST FOR HEARING

Unless the right to a hearing before the director or the water resource board is otherwise provided by statute, any person who is aggrieved by the action of the director, and who has not previously been afforded an opportunity for a hearing on the matter shall be entitled to a hearing before the director to contest the action. The person shall file with the director, within fifteen (15) days after receipt of written notice of the action issued by the director, or receipt of actual notice, a written petition stating the grounds for contesting the action by the director and requesting a hearing. See section 42-1701A(3), Idaho Code. **Note: The request must be received by the Department within this fifteen (15) day period.**

APPEAL OF FINAL ORDER TO DISTRICT COURT

Pursuant to sections 67-5270 and 67-5272, Idaho Code, any party aggrieved by a final order or orders previously issued in a matter before the department may appeal the final order and all previously issued orders in the matter to district court by filing a petition in the district court of the county in which:

i. A hearing was held,
ii. The final agency action was taken,
iii. The party seeking review of the order resides, or
iv. The real property or personal property that was the subject of the agency action is located.

The appeal must be filed within twenty-eight (28) days of: a) the service date of the final order, b) the service date of an order denying petition for reconsideration, or c) the failure within twenty-one (21) days to grant or deny a petition for reconsideration, whichever is later. See section 67-5273, Idaho Code. The filing of an appeal to district court does not in itself stay the effectiveness or enforcement of the order under appeal.

TRENT TRIPPLE, Clerk
By ERIC ROWELL
DEPUTY

IN THE DISTRICT COURT OF THE FOURTH JUDICIAL DISTRICT OF THE STATE OF IDAHO, IN AND FOR THE COUNTY OF ADA

IDAHO GROUNDWATER APPROPRIATORS, INC., Petitioner, vs. THE IDAHO DEPARTMENT OF WATER RESOURCES, and MATHEW WEAVER in his capacity as the Director of the Idaho Department of Water Resources, Respondents, and AMERICAN FALLS RESERVOIR DISTRICT #2, MINIDOKA IRRIGATION DISTRICT A&B IRRIGATION DISTRICT, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, TWIN FALLS CANAL COMPANY, CITY OF POCATELLO, CITY OF BLISS, CITY OF BURLEY, CITY OF CAREY, CITY OF DECLO, CITY OF DIETRICH, CITY OF GOODING, CITY OF HAZELTON, CITY OF HEYBURN, CITY OF JEROME, CITY OF PAUL, CITY OF RICHFIELD, CITY OF RUPERT, CITY OF SHOSHONE, AND CITY OF WENDELL, BONNEVILLE-JEFFERSON GROUND WATER DISTRICT, and BINGHAM GROUNDWATER DISTRICT, Intervenors.	Case No. CV01-23-13173 **MEMORANDUM DECISION AND ORDER**

IN THE MATTER OF THE DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY AND FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIRS DISTRICT NO. 2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY.	))))))))))

I.

BACKGROUND

A. Delivery call.

The Surface Water Coalition is comprised of irrigators.[1] Each year, they use a combination of natural flow water from the Snake River and storage water held in reservoirs to water their fields. Their diversion of both sources of water is done pursuant to water rights. In 2005, members of the Coalition initiated a delivery call with the Director of the Idaho Department of Water Resources. The call seeks curtailment of junior priority ground water rights that divert from the Eastern Snake Plain Aquifer ("Aquifer"). It asserts surface and ground waters in the Snake River Basin are hydraulically connected. Further, that the Aquifer discharges to the Snake River via tributary springs and that junior ground water pumping on the Aquifer has decreased natural flows in the Snake River. The Coalition asserts injury to both its natural flow and storage water rights. The Director issued an order on May 2, 2005, finding that junior ground water diversions from the Aquifer were materially injuring the Coalition's natural flow and storage rights. Since that time, the delivery call has been ongoing in nature. It has required yearly evaluation by the Director as to whether junior ground water pumping is causing material injury to the Coalition's senior rights.

Beginning in 2010, the Director began using procedures set forth in his methodology order to conduct his yearly evaluation. The methodology order contains a series of steps to be

[1] The term "Surface Water Coalition" refers collectively to the A&B Irrigation District, American Falls Reservoir District #2, Burley Irrigation District, Milner Irrigation District, Minidoka Irrigation District, North Side Canal Company, and Twin Falls Canal Company. The term "Coalition" as used herein refers to the Surface Water Coalition.

undertaken annually through which the Director determines whether the Coalition's water rights are suffering material injury. If so, the Director will order the curtailment of junior rights unless he finds junior right holders can mitigate the material injury through an approved mitigation plan.

The First Methodology Order was issued on April 7, 2010, and was amended on June 16, 2010. The Second Methodology Order was issued on June 23, 2010. Various petitions seeking judicial review of that Order were filed with this Court in Gooding County Case No. CV-2010-382 ("382 Case"). The Court entered its decision on September 26, 2014, affirming the Second Methodology Order in part and setting it aside and remanding in part. Various parties appealed the Court's decision, but the notices of appeal were withdrawn before the Idaho Supreme Court undertook its review.

In response to the Court's decision in the 382 Case, the Director issued the Third Methodology Order on April 17, 2015. No appeal was taken from that Order. The Fourth Methodology Order was issued on April 19, 2016. In summary, it:

> (1) explained how the Director would determine material injury to storage and natural flow water rights of members of the Surface Water Coalition ("SWC");
>
> (2) established methods for quantifying material injury to SWC storage and natural flow water rights as predictive and actual demand shortfalls;
>
> (3) established methods for quantifying mitigation obligations by holders of junior priority ground water rights for shortfalls in predictive and actual SWC water demands; and
>
> (4) established a method for determining a priority date for curtailment if mitigation obligations are not satisfied.

R., 1. The Order recognized the methodology set forth therein may need to be adjusted from time to time:

> Recognizing that climate and surface water supplies (natural flow and storage) are inherently variable, the Director's predictions of material injury to RISD and reasonable carryover are based upon the best available information and the best available science, in conjunction with the Director's professional judgment as the manager of the State's water resources. Recognizing his ongoing duty to administer the State's water resources, the Director should use available data, and consider new analytical methods or modeling concepts, to evaluate the methodology. As more data is gathered and analyzed, the Director will review and refine the process

of predicting and evaluating material injury. The methodology will be adjusted, if the data supports a change.

R., 1410. No appeal was taken from the Fourth Methodology Order.

B. Fifth Methodology Order.

In August 2022, the Director issued a directive to Department staff to convene a committee of experts to review and provide comments on potential technical changes to the Fourth Methodology Order. R., 2866. The Department created a technical working group composed of Department staff, experts representing the parties to the Surface Water Coalition delivery call and other interested persons and entities. R., 2866. The technical work group held meetings on November 16, 17, 28 and December 1, 9, and 14, 2022. R., 1176. On December 23, 2022, the Department issued a summary of preliminary technical revisions to the Fourth Methodology Order:

> Based on the information presented at the meetings and distributed to the technical working group, IDWR staff have the following preliminary technical recommendations:
>
> • Update the Baseline Year (BLY) irrigation demand used to determine reasonable in-season demand from the current average of diversion demands for the 2006, 2008, and 2012 irrigation seasons to the diversion demand for the 2018 irrigation season.
>
> • Update the BLY irrigation demand used to determine reasonable carryover for each SWC member from the current average of the diversion demands for the 2006, 2008, and 2012 irrigation seasons to the diversion demand for the 2018 irrigation season.
>
> • Update the project efficiency value used to calculate monthly reasonable in-season demand from a rolling average of the previous eight years to a rolling average of the previous fifteen years.
>
> At this time, staff do not have recommendations on utilizing near real time METRIC for determining crop water need, updating April and July regressions to improve their predictive power for natural flow supply, or using transient model simulation for determining curtailment priority dates. IDWR will continue to evaluate the integration of these and other techniques into the methodology.

R., 2866. The summary requested written comments on the recommendations be submitted to the Department by January 16, 2023. R., 2866. Various comments were submitted. R., 1300,

2867, & 2879. These included comments from Lynker Technologies on behalf of the Idaho Ground Water Appropriators, Inc. ("IGWA") and Spronk Water Engineers, Inc. on behalf of the Coalition of Cities[2] and City of Pocatello. R., 1300, 2867, & 2879.

On April 21, 2023, the Director issued the Fifth Methodology Order. R., 1. The Fifth Methodology Order updated the baseline year used to determine reasonable in-season demand. R., 11-12. Previously this metric was determined from the average diversion demands for the 2005, 2008, and 2012 irrigation seasons. The Fifth Methodology Order replaced that with the diversion demand for the 2018 irrigation season.[3] R., 11-12. It also switched to transient-state simulations of the Eastern Snake Plan Aquifer Model ("ESPAM") when determining curtailment priority date. This replaced the steady-state simulations previously used.[4] R., 29-31. The stated purpose of the Fifth Methodology Order is to update the methodology to use the best available science and information:

> Many of the data sets the Department relied upon in the Fourth Methodology Order have been expanded and now include additional years. Furthermore, the Department now has multiple years of experience with the methodology to better understand the impact of applying steady-state modeling versus transient modeling to determine a curtailment priority date that would supply adequate water to the senior water right holders. The first version of the ESPA groundwater flow model was not calibrated at a time-scale that supported in-season transient modeling. In contrast, the current version was calibrated using monthly stress periods and half-month time steps, a refinement that facilitates in-season transient modeling for calculating the response to curtailment of groundwater use. The purpose of this *Fifth Amended Final Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover* ("Fifth Methodology Order") is to update the Director's methodology for determining material injury to storage and natural flow water rights either held by or committed to members of the SWC consistent with the Director's ongoing obligation to use the best available science and information.

---

[2] The term "Coalition of Cities" refers collectively to the Cities of Bliss, Burley, Carey, Declo, Dietrich, Gooding, Hazelton, Heyburn, Jerome, Paul, Richfield, Rupert, Shoshone, and Wendell.

[3] A baseline year is "a year or average of years when irrigation demand represents conditions that can predict need in the current year of irrigation at the start of the irrigation seasons." R., 3. The purpose of predicting need is to estimate material injury. R., 3.

[4] The ESPAM "simulates the effects of the reduction in aquifer stress and calculates predicted increases in aquifer discharge to the Snake River resulting from the curtailment of ground water pumping from the ESPA." R., 29-30. ESPAM simulations can be either steady-state or transient. R., 30. Steady-state simulations predict long-term responses resulting from continuous curtailment of groundwater priorities used at a consistent rate over a long period of time. R., 31. Transient simulations predict responses resulting from the short-term curtailment of priorities. R., 31. Prior to 2010, ESPAM did not have the capability to run transient simulations.

R., 2. Ultimately, the Fifth Methodology Order sets forth nine steps to be undertaken annually to administer water rights under the ongoing Surface Water Coalition delivery call. R., 39-43.

C. 2023 As-Applied Order.

The Director issued his Final Order Regarding April 2023 Forecast Supply ("As-Applied Order") contemporaneously with the Fifth Methodology Order. R., 48. The As-Applied Order applies the first three steps of the Fifth Methodology Order to 2023. R., 48. For 2023, the Director predicted an in-season demand shortfall to the Surface Water Coalition of 75,200 acre-feet. R., 53. The Director ran ESPAM 2.2 to predict the junior priority water rights within the area of common ground water supply that must be curtailed to produce the volume of water equal to the predicted demand shortfall. R., 51. He found ground water rights bearing priority dates later than December 30, 1953, must be curtailed to produce that volume of water. R., 51. However, the Director did not curtail any junior water rights at that time. R., 53. Rather, he allowed junior users the opportunity to show they could mitigate the material injury through an approved mitigation plan to avoid curtailment:

> The Director predicts an in-season DS of 75,200 acre-feet. On or before May 5, 2023, ground water users holding consumptive water rights bearing priority dates junior to December 30, 1953, within the Eastern Snake Plain Aquifer area of common ground water supply shall establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted DS of 75,200 acre-feet in accordance with an approved mitigation plan. *If a junior ground water user cannot establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted DS of 75,200 acre-feet in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water user.*

R., 53 (emphasis added).

D. Idaho Code § 42-1701A(3) hearing and Sixth Methodology Order.

The Director anticipated that various persons or entities would request a hearing in response to the Fifth Methodology Order and/or the As-Applied Order under Idaho Code § 42-1701A(3). R., 62. Finding time to be of the essence, the Director set an Idaho Code § 42-1701A(3) hearing on the Orders rather than wait for written notice of such a request. R., 62. The hearing was set for June 6-10, 2023. R., 62. He also set a prehearing conference and issued

an Order authorizing discovery. R., 63-64. The notices of hearing and prehearing conference, as well as the discovery order, were issued on April 21, 2023.[5] R., 62-64.

On April 28, 2023, the Cities moved the Director to continue the hearing until "December 2023 or January 2024."[6] R., 80. The Cities also moved the Director to appoint an independent hearing officer to preside over the hearing. R., 70. The Director denied both requests via an order on May 5, 2023. R., 298. He also subsequently denied the Cities' motion for reconsideration of his denial of the motion for continuance. R., 425.

Meanwhile, on May 19, 2023, the Cities and McCain Foods USA, Inc. filed a Complaint for Declaratory Relief, Petition for Writ of Prohibition, and Petition for Writ of Mandamus before this Court in Ada County Case CV01-23-8258. The Complaint sought a writ restraining the Director from conducting the administrative hearing scheduled to commence on June 6, 2023. Also on May 19, 2023, IGWA, Bingham Ground Water District, and Bonneville-Jefferson Ground Water District filed a Petition for Judicial Review with this Court in Ada County Case CV01-23-8187. Along with the Petition, the petitioners filed a Motion for Stay, Motion to Compel, Motion for Injunctive Relief, Motion for Order to Show Cause, and Motion for Expedited Decision. Cumulatively, the Motions requested that the Court stay implementation of the Fifth Methodology Order and vacate and continue the administrative hearing set to commence on June 6, 2023. Following a hearing on June 1, 2023, the Court orally denied the relief requested in both cases.

The administrative hearing proceeded before the Director as scheduled. It commenced on June 6, 2023, and concluded on June 9, 2023. Following post-hearing briefing, the Director issued the Sixth Methodology Order on July 19, 2023. R., 1004. The stated purpose of the Sixth Methodology Order is to "correct data in the Fifth Methodology Order found to be in error during the June 6, Hearing." R., 1005. It also edited "a few other non-substantive matters in the Fifth Methodology Order." As with the Fifth Methodology Order, the Sixth sets forth nine steps to be undertaken annually to administer water right under the ongoing Surface Water Coalition delivery call. R., 1044-1048. The nine steps set forth in the Sixth Methodology Order are

[5] Additionally, several parties subsequently filed petitions requesting an Idaho Code §42-1701A(3) hearing. R., 68, 90, 135, 263.

[6] The term "the Cities" refers collectively to the Cities of Bliss, Burley, Carey, Declo, Dietrich, Gooding, Hazelton, Heyburn, Jerome, Paul, Richfield, Rupert, Shoshone, Wendell, Pocatello, and Idaho Falls.

incorporated herein by reference. R., 39-43. Like the Fifth, the Sixth Methodology Order uses the diversion demand for the 2018 irrigation season as the baseline year for irrigation demand. R., 1016, 1039. It also uses transient-state simulations of the Eastern Snake Plan Aquifer Model ("ESPAM") when determining curtailment priority date. R., 1036, 1041.

IGWA subsequently filed a Petition seeking judicial review of the following eight orders issued by the Director: (1) Fifth Methodology Order; (2) 2023 As-Applied Order; (3) Scheduling Order and Order Authorizing Remote Appearance at hearing; (4) Order Denying the Cities Appointment of Independent Hearing Officer and Motion for Continuance and Limiting Scope of Deposition; (5) Notice of Materials Department Witnesses May Rely Upon at Hearing and Intent to Take Official Notice; (6) Post-Hearing Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover; (7) Sixth Methodology Order; and (8) Order Revising April 23, Forecast Supply and Amending Curtailment Order. IGWA's Petition asserts the Director's orders are contrary to law and requests the Court set them aside and remand for further proceedings. The Court entered an Order permitting the Intervenors to participate in this proceeding. The parties submitted briefing on the issues raised on judicial review and a hearing on the Petition was held before the Court on April 4, 2024.

II.
STANDARD OF REVIEW

Judicial review of a final decision of the director of IDWR is governed by the Idaho Administrative Procedure Act ("IDAPA"). Under IDAPA, the court reviews an appeal from an agency decision based upon the record created before the agency. I.C. § 67-5277. The court shall not substitute its judgment for that of the agency as to the weight of the evidence on questions of fact. I.C. § 67-5279(1). The court shall affirm the agency decision unless it finds that the agency's findings, inferences, conclusions, or decisions are: (a) in violation of constitutional or statutory provisions; (b) in excess of the statutory authority of the agency; (c) made upon unlawful procedure; (d) not supported by substantial evidence on the record as a whole; or (e) arbitrary, capricious, or an abuse of discretion. I.C. § 67-5279(3). Further, the petitioner must show that one of its substantial rights has been prejudiced. I.C. § 67-5279(4). Even if the evidence in the record is conflicting, the Court shall not overturn an agency's

decision that is based on substantial competent evidence in the record. *Barron v. IDWR*, 135 Idaho 414, 417, 18 P.3d 219, 222 (2001). The Petitioner bears the burden of documenting and proving that there was not substantial evidence in the record to support the agency's decision. *Payette River Property Owners Assn. v. Board of Comm'rs.*, 132 Idaho 552, 976 P.2d 477 (1999).

III.

ANALYSIS

A. The Director did not act contrary to law by holding a hearing after issuance of the Fifth Methodology Order.

IGWA asserts the Director was required to hold a hearing prior to his issuance of the Fifth Methodology Order under the Idaho Administrative Procedure Act ("IDAPA"). The provisions of IDAPA govern agency proceedings which may result in the issuance of an order "except as provided by other provisions of law." I.C. § 67-5240. This section makes clear IDAPA "controls agency decision-making procedures only in the absence of more specific statutory requirements." *The Idaho Administrative Procedure Act: A Primer for the Practitioner*, 30 Idaho L. Rev. 273, 277 (1994).

Here, a more specific statutory provision exists. Idaho Code § 42-1701A specifically governs hearings before the Director. Therefore, it controls. Subsection 3 of that provision provides:

> Unless the right to a hearing before the director or the water resource board is otherwise provided by statute, any person aggrieved by any action of the director, including any decision, determination, order or other action, including action upon any application for a permit, license, certificate, approval, registration, or similar form of permission required by law to be issued by the director, who is aggrieved by the action of the director, and who has not previously been afforded an opportunity for a hearing on the matter shall be entitled to a hearing before the director to contest the action. The person shall file with the director, within fifteen (15) days after receipt of written notice of the action issued by the director, or receipt of actual notice, a written petition stating the grounds for contesting the action by the director and requesting a hearing. The director shall give such notice of the petition as is necessary to provide other affected persons an opportunity to participate in the proceeding. The hearing shall be held and conducted in accordance with the provisions of subsections (1) and (2) of this section. Judicial review of any final order of the director issued following the hearing shall be had pursuant to subsection (4) of this section.

I.C. § 42-1701A(3).

The Director acted when he issued the Fifth Methodology Order. That action was done without a hearing, and Title 42 of the Idaho Code contains no statutory right to a pre-action hearing under these circumstances. Therefore, under Idaho Code § 42-1701A(3), any person aggrieved was entitled to a hearing before the Director to contest the action upon timely written notice. Rather than wait for written notice, the Director set an Idaho Code § 42-1701A(3) hearing on the Fifth Methodology Order when he issued it. R., 62. Although, the Court does note that the Coalition of Cities, the City of Pocatello, and McCain Foods USA, Inc. each did provide written notice requesting an Idaho Code § 42-1701A(3) hearing in this case. R., 68, 90, 94. A four-day hearing was subsequently held. Therefore, the Director did not act contrary to law by holding a hearing after issuance of the Fifth Methodology Order.

B. The proceeding before the Director satisfied due process.

i. IGWA's concerns.

IGWA raises due process concerns regarding the process utilized by the Director in issuing the Fifth Methodology Order. It asserts due process required a hearing prior to the issuance of the Fifth Methodology Order. Further, that the Idaho Code § 42-1701A(3) hearing held in June 2023 did not satisfy due process. IGWA raises the following due process concerns related to that hearing:

- Written interrogatories and requests for production were not permitted.

- The compressed schedule did not afford adequate time for affected water users to conduct inspections and analyses needed to formulate expert opinions and develop reports addressing the complex issues . . . .

- Greg Sullivan, the sole expert consultant for the Cities, was out of the country from May 17, 2023-June 3, 2023, leaving him unavailable to assist in developing strategy, preparing expert reports, preparing exhibits, and attending depositions.

- Sophia Sigstedt, an expert consultant for IGWA, was unable to perform all of the work required to properly analyze the Fifth Methodology Order before the June hearing. In addition, she had a medical condition that prevented her from leaving her home state of Colorado until July 10, 2022.

> • Jaxon Higgs, expert consultant for IGWA, was unable to participate in the June hearing due to a previously planned out-of-country trip May 27-June 10, 2023.
>
> • IGWA was unable to locate a qualified engineering firm that had capacity to analyze the "project efficiency" component of the Fifth Methodology Order by the June hearing.
>
> • The Director blocked the parties from discovering relevant evidence and from calling Department witnesses in possession of relevant evidence, as explained below.

IGWA's Opening Brief, p.22.

ii. What the methodology order is.

Prior to engaging in a due process analysis, it is necessary to establish what the methodology order is. The Surface Water Coalition call is described as an ongoing call. This is meant to denote that it does not present a one and done situation. Rather, the nature of the call is ongoing in that the underlying source problem of diminished ground water levels in the Aquifer, the culmination of which has occurred over a time span of decades, cannot be restored in a single year. The result is yearly reductions in the natural flow of the Snake River which may, in turn, result in material injury to surface water users.[7]

Diminished ground water levels present a long-term water supply problem that requires ongoing administration. This is evidenced by the fact the Director first found material injury to Coalition members resulting from ground water depletions in 2005. *Amended Order*, p.44 (May 2, 2005). Since that time, the reality of ground water depletions has not been resolved. The Idaho Supreme Court recognized that from "October 1980 through September 2008, average annual discharge from the ESPA exceeded average annual recharge by 270,000 acre feet, which resulted in declining aquifer water levels and declining discharge to the Snake River and tributary springs." *Idaho Ground Water Assoc v. Idaho Dept. of Water Res.*, 160 Idaho 119, 122 369 P.3d 897, 900 (2016). Likewise, the record in this case shows that large scale ground water

[7] "The amount of water that discharges from the aquifer to hydraulically connected surface water sources is largely dependent on ground water elevations and hydraulic conductance." *Idaho Ground Water Assoc v. Idaho Dept. of Water Res.*, 160 Idaho 119, 122 369 P.3d 897, 900 (2016).

pumping has, over time, contributed to a long-term general decline trend in ground water levels throughout the ESPA from the 1950s through 2023. R., 478-479; 392.[8]

Understanding that the call is ongoing in nature, the methodology order provides water users direction as to how the Director will administer the call into the future. It does this by providing nine steps to be undertaken annually. Through these steps, the Director determines whether the Coalition's water rights are suffering material injury and whether that injury will be addressed via mitigation and/or curtailment.

Briefly stated, in April of each year, the Director predicts what material injury to Coalition members is anticipated for the upcoming irrigation season through a metric known as in-season demand shortfall. Also in April, he runs ESPAM to calculate the curtailment priority date predicted to produce a volume of water equal to the predicted in-season demand shortfall. Ground water users then have no shorter than fourteen (14) days within which to present mitigation plans showing they can mitigate forth their proportionate share of the predicted shortfall. Those who can mitigate may continue diverting ground water while those who cannot face curtailment. The Director then re-examines his initial prediction at least once halfway through the irrigation season to take into account changing conditions.

In this respect, the methodology order is a framework. It provides an identifiable and orderly structure through which both surface and ground water users may plan early in the year how best to proceed with the irrigation season. Contrast this with a curtail-now-hearing-later approach, wherein the Director curtails straight away once injury is occurring. *See e.g., South Valley Ground Water Dist. v. Idaho Dept. of Water Res.*, 2024 WL 136840, 32 (2024) (recognizing the propriety of a curtail-now-hearing-later approach in appropriate cases). Such an approach can result in abrupt late seasons curtailments, after economic investments for the year have been made, leaving little room for proactive planning by water users. The methodology order acts to promote concepts of optimum development and maximum use and benefit by

[8] The surface flows on which senior rights rely depend on a combination of natural flow, discharges from the ESPA and storage. The significance of the impact of aquifer declines on senior rights depends in part on the quantity of storage rights held by the senior right holder. Seniors holding rights for greater quantities of storage are less reliant on aquifer discharges to satisfy their rights throughout the entirety of the irrigation season. Seniors with less storage are more dependent on natural flow rights and are more heavily reliant on aquifer discharges contributing to those rights after the spring runoff has subsided. As such, a year with above-average snowpack may have little benefit to those seniors lacking sufficient storage rights to store water from the additional snowpack.

providing a framework through which both surface and ground water users may, as early as is practicable, proactively plan for the upcoming irrigation season.[9]

But the methodology order is more than just a framework or a management tool.[10] It is an administrative tool the Director uses annually to administer water under the ongoing call to provide water, if necessary, to injured surface water users at the time and place needed. In this respect, the methodology order acts to promote the concept of first in time first in right. It is in the methodology order that the Director determines the best available science and information to predict the effects of ground water pumping on Snake River flows. As years go by, the data sets relied upon by the Director for administration expand. This is self-evident. Additionally, the science available to the Director may improve. This is evidenced by the progression of ESPAM from its initial form to its current form. As data sets expand and as science improves, the methodology order may need to be adjusted to reflect the best available science and information. Therefore, the methodology order is an administrative tool utilized by the Director to administer water rights in priority under the Surface Water Coalition call through a predictive framework that balances concepts of first in time first in right with the optimum development and maximum use and benefit of the State's water resources.

iii. Due process.

Procedural due process "requires that there be some process to ensure that an individual is not arbitrarily deprived of his rights in violation of the state or federal constitutions." *South Valley Ground Water Dist. v. Idaho Dept. of Water Res.*, 2024 WL 136840, 30 (2024). Determining whether due process rights have been violated requires a two-step analysis. *Id.* First, the Court must "decide whether an individual's threatened interest is a liberty or property interest under the Fourteenth Amendment." *Id.* Second, the Court must "determine what process is due." Id. As to the first step, there is no dispute water rights are property rights. I.C. §

[9] The period of use for many irrigation water rights begins March 15. However, predicting the water supply at that early stage of the irrigation season presents practical difficulties as the United States Bureau of Reclamation and Army Corps of Engineers do not typically issue their joint forecast predicting unregulated inflow volume at the Heise Gage until the first two weeks of April.

[10] In *A&B Irr. Dist. v. Spackman*, 155 Idaho 640, 815 P.3d 828 (2013), the Idaho Supreme Court distinguished between an administrative tool and a management tool. While the delineation between a management tool and an administrative tool can overlap, it's clear that the methodology order is an administrative tool developed for the conjunctive administration of water pursuant to an on-going delivery call.

55-101. As to the second step, the Idaho Supreme Court recently provided guidance on what process is due in its decision in *South Valley*.

Like this case, *South Valley* involved the conjunctive administration of interconnected ground and surface water rights. There, the Director initiated a proceeding to determine whether the diversion of ground water in the Wood River Valley would injure senior surface water rights. *South Valley*, 2024 WL 136840 at 1. As is the case here, the Director utilized a truncated hearing process. The notice initiating the proceeding was issued on May 4, 2021. *Id.* at 4. It set a hearing for June 7-11, 2021. *Id.* The parties filed prehearing motions, "including two motions to dismiss the proceeding, a motion to appoint an independent hearing officer, motions to continue or postpone the hearing, and a motion to authorize discovery." *Id.* at 5. The Director granted the motion to authorize discovery but denied the other motions. *Id.* After limited discovery, the Director held a six-day hearing from June 7–12, 2021. *Id.* The Director issued his final order on June 28, 2021, curtailing over 300 groundwater rights for the 2021 irrigation season. *Id.*

As is the case here, juniors in *South Valley* argued the truncated proceeding "violated any notion of fundamental fairness and failed to provide the 'opportunity to be heard in a meaningful time and in a meaningful manner.'" *Id.* at 30. The Court disagreed. It found "the Director opted for a pre-curtailment process complete with advance notice, a full panoply of pre- and post-hearing procedures and a six-day hearing." *Id.* at 32. The procedure provided was "necessarily expedited, but within reasonable limits in light of the imminent loss to senior right holders." *Id.*

The Court finds the process provided by the Director to be in line with that provided in *South Valley*. The process utilized by the Director in issuing the Fifth and Sixth Methodology Orders is set forth in the Background section of this decision. It included advance notice beginning in August 2022 that changes to the Fourth Methodology may be necessary. R., 2866. This was followed by the convening of a technical working group which conducted multiple meetings throughout the fall of 2022 to review the issue. R., 1176. The Department then provided further notice by issuing a written summary of preliminary technical revisions and inviting written comments. R., 1300, 2867, & 2879. After comments were submitted and considered, the Director issued the Fifth Methodology Order on April 21, 2023. R.,1. The Director then provided notice to aggrieved persons of the opportunity to be heard on the Fifth Methodology Order through a five-day hearing scheduled approximately six weeks out from the

Order's issuance. R., 62. The hearing proceeded before the Director as scheduled. The Director provided time for limited discovery, admitted exhibits into evidence, took testimony, and allowed the parties to submit post-hearing briefing. The Director then issued his Sixth Methodology Order on July 19, 2023. The entirety of the process happened prior to any curtailment.

In evaluating the Director's process, the Court notes that both senior surface water users and junior ground water users had significant private interests at stake in this proceeding in the form of water rights. However, when material injury is predicted, "the risk of curtailment of a junior-priority groundwater right during a time of shortage is a risk that Idaho water users knowingly undertake. . . ." *South Valley*, 2024 WL 136840 at 31. In evaluating the risk of an erroneous deprivation of rights, the presumption "is that the senior is entitled to his decreed water right, whether that senior joined the proceeding or not." *Id.* at 32. Time is of the essence in water administration. The reality is there is a short timeframe between when water supply determinations can be made and when water users' demands for irrigation water begin. Any process employed by the Director must account for the exigencies of these time constraints as the Director has a duty to timely administer water in priority. *South Valley*, 2024 WL 136840 at 33. This is because the consequences of delaying administration in times of shortage is out-of-priority water use and "water in usable quantities for at least some of the senior surface water users would go undelivered." *Id.* The Idaho Supreme Court has directed that this is not a risk that should be foisted on senior water right holders "through additional, typical procedural avenues." *Id.* Last, as was recognized in *South Valley*, "the Director's obligation to administer water rights is an essential government function." *Id.* at 33. Weighing these factors together, the Court holds that the proceeding before the Director, which consisted of a pre-curtailment process complete with advance notice, a full panoply of pre- and post-hearing procedures and a five-day hearing, satisfied due process.

Continuing the hearing until after the irrigation season, as originally requested by the juniors, is not tenable given the Director's duty to timely administer water rights in priority. R., 80. "[C]urtailing out-of-priority water use *after the irrigation season had passed* would [be] too little, too late." *South Valley*, 2024 WL 136840 at 32. Notwithstanding, the juniors argue there was no pressing need to implement the Fifth Methodology Order in 2023 because the Fourth Methodology Order was in place and could have been used. The Court disagrees.

The methodology order is an administrative tool that is applied annually. The Director determined that the Fourth Methodology Order would not adequately protect senior water rights in 2023. In particular, he determined that application of steady state simulations to ESPAM as required by the Fourth Methodology Order would not provide senior users water in the quantity, time, and place necessary to address material injury from out-of-priority junior diversions in 2023. R., 29-31. Additionally, that the baseline year used in the Fourth Methodology Order would not protect senior rights in 2023. R., 11-12. Recognizing that the Fourth Methodology Order would not get senior water users the water they needed, the Director did not err in updating the methodology order in 2023 to be in compliance with the law and his obligation to timely administer water rights in priority.[11]

C. The Director's denial of the motion for an independent hearing officer is affirmed.

IGWA asserts Idaho Code § 67-5252(1) required the Director to disqualify himself as the presiding officer for the June 2023 hearing. This issue was not raised below. The record reflects the Coalition of Cities, the City of Idaho Falls, and the City of Pocatello filed a Motion for Appointment of Independent Hearing Officer on April 28, 2023. R., 73. That Motion requested that the Director appoint an independent hearing officer to conduct the June 6, 2023 hearing "pursuant to I.C. § 42-1701A(2) and IDAPA 37.01.01.410."[12] R., 74. The Director considered and denied the Motion. R., 298. However, at no point did any party petition for the disqualification of the Director without cause under Idaho Code § 67-5252(1). That issue was not presented below and is being raised for the first time on appeal. Therefore, the Court does not consider it. *See e.g., Row v. State*, 135 Idaho 573, 580, 21 P.3d 895, 902 (2001) ("[t]he longstanding rule of this Court is that we will not consider issues that are raised for the first time on appeal"). It follows the Director's denial of the Motion for Appointment of Independent Hearing Officer must be affirmed.

---

[11] To the extent climate variability becomes more pronounced over the course of an irrigation season water demand for the forthcoming season becomes more difficult to predict. Consequently, the utilization of smaller margins to avoid shortfalls to senior rights becomes less tenable. In the Court's decision in the 382 Case, the Court explained that any administration to less than the full decreed quantity must be based on clear and convincing evidence. *Memorandum Decision*, Gooding County Case No. CV-2010-382, p.19 (September 26, 2014). The Court recognized that any shortfall due to underprediction would impermissibility injury senior rights. *Id.*

[12] Idaho Code § 42-1701A(2) provides that "[t]he director, in his discretion, may direct that a hearing be conducted by a hearing officer appointed by the director." IDAPA 37.01.01.410 allows for the appointment of a hearing officer who may be an "employee of the agency or [an] independent contract."

D. The Director's Scheduling Order and Order Limiting Discovery are affirmed.

At the prehearing conference for the June 2023 hearing, "some counsel expressed concern about having enough time to respond to discovery given the compressed period for the hearing." R., 126. The Director "agreed to limit the scope and timing of discovery to address these concerns." R., 126. In the Scheduling Order, the Director held:

> **IT IS HEREBY ORDERED** that discovery will be limited as follows: (1) The parties shall not engage in interrogatories or requests for admissions; (2) The parties may request production of documents. The party upon whom a request for production of documents is served shall respond to the request within 10 days from the date the request is served.

R., 127.

The Director also identified two Department witnesses who would be made available to the parties for deposition and who would testify at the hearing. R., 126. These employees were Jennifer Sukow and Matthew Anders. R., 126. Questions were raised as to the appropriate scope of the depositions. R., 301. In response, the Director issued an Order Limiting Scope of Depositions directing "that the scope of any deposition of a Department employee will preclude questions regarding the Director's deliberative process on legal and policy considerations." R., 301. IGWA argues the Director acted contrary to law in limiting discovery in these respects.

The Idaho Code § 42-1701A(3) hearing was conducted in accordance with the provisions of IDAPA. I.C. § 42-1701A(1) & (3). IDAPA requires "a full disclosure of all relevant facts and issues, including such cross-examination as may be necessary," and "the opportunity to respond and present evidence and argument on all issues involved." Idaho Code § 67-5242(3). Unless otherwise provided by statute, rule, order or notice, the scope of discovery is governed by the Idaho Rules of Civil Procedure." IDAPA 37.01.01.520.02. However, "[t]he presiding officer may limit the type and scope of discovery." IDAPA 37.01.01.521.

In a prior section, the Court found that the proceedings before the Director satisfied due process. The discovery limitations in the Director's Scheduling Order do not upset that analysis. As previously stated, any process employed by the Director must account for the exigencies associated with the timely administration of water within a given irrigation season. The Director's decision to limit written discovery and to shorten the timeframe in which to respond

was within his authority under Rule 521 and does not result in any due process violation. Such limitations simply reflect the time frames associated with priority administration.

Likewise, the Director did not violate due process by limiting the scope of the depositions of Department employees. The Director limited the depositions to "preclude questions regarding the Director's deliberative process on legal and policy considerations." R., 301. The Department employees made available to the parties for deposition are technical staff. They are qualified to testify as to technical matters concerning the changes to the Fourth Methodology Order. They are not qualified to testify as to the Director's legal and policy determinations, as they do not make those determinations.

The Director set forth his determinations and reasoning for making changes to the Fourth Methodology Order, legal and otherwise, in the Fifth Methodology Order. For instance, the Director determined that the baseline year used in the Fourth Methodology Order "no longer satisfies the presumption criteria that total diversions in the BLY should exceed the average annual diversions." R., 11. Rather, he found that year 2018 satisfies all the baseline year selection criteria and explained his reasoning in the Order. R., 11-12, 34. He also determined that the steady-state simulations of ESPAM previously used "will only offset 9% to 15% of the predicted [in-season demand shortfall]," while transient simulations "will offset the full predicted [in-season demand shortfall]". R., 30, 35-36. The legal and policy reasoning behind his decisions in these respects are his own and are set forth in the Fifth Methodology Order. For these reasons, the Director's Scheduling Order and Order Limiting Scope of Depositions must be affirmed.

E. The Director's determination regarding the Twin Falls Canal Company's irrigated acres is affirmed.

The Twin Falls Canal Company's natural flow water rights authorize the irrigation of 196,162 acres. R., 17. Under the Fifth Methodology Order, the Director reduced the amount of irrigation acres attributed to the Twin Falls Canal Company for the 2023 irrigation season to 194,732. R., 10. IGWA asserts the Director erred in this respect and that further reductions were required. The law on this issue is clear. The presumption under Idaho law is that the senior is entitled to his decreed water right. *American Falls Reservoir Dist. No. 2 v. Idaho Dept. of Water Resources*, 143 Idaho 862, 878, 154 P.3d 433, 449 (2006). "Once a decree is presented to an

administrating agency or court, all changes to that decree, permanent or temporary, must be supported by clear and convincing evidence." *A&B Irr. Dist. v. Idaho Dept. of Water Resources*, 153 Idaho 500, 524, 284 P.3d 225, 249 (2012). If junior users believe that the seniors will receive water they cannot beneficially use, "it is their burden under the established evidentiary standards and burdens of proof to prove that fact by clear and convincing evidence." *Memorandum Decision and Order*, Gooding County Case No. CV-2010-382, p.31. (2014).

The Director considers the Surface Water Coalition's irrigation acres in Step 1 of the methodology order. Step 1 requires Coalition members "to submit electronic shape files to the Department delineating the total anticipated irrigation acres for the upcoming year within their water delivery boundary or confirm in writing that the existing electronic shape file submitted by the SWC has not varied by more than five percent." R., 39, 144. The Twin Falls Canal Company members submitted a 2013 shape file in compliance with Step 1 showing 194,732 irrigated acres. R., 1233; 1084. It represented its irrigated acres have not varied by more than five percent from the 2013 shape file numbers. R., 1084. Therefore, the Director used the 2013 shape file number to predict the Twin Falls Canal Company's irrigated acres for 2023. R., 10, 1084.

IGWA argues the Director should have adopted a lesser number in what is referred to herein as the "2017 irrigated lands dataset." However, the Director explained that the 2017 irrigated lands dataset was just a snapshot in time for purposes of ESPAM model calibration" which employs "hindcasts, not forecast":

> The purpose of the 2017 shapefile was to assist Department staff in determining TFCC's irrigation demand in 2017 for use in model calibration. Hr'g Tr. vol. II, at 68, 140–41.
>
> . . .
>
> The 2017 shapefile is more recent than the 2013 shapefile, but it does not necessarily represent the number of acres TFCC may irrigate in 2023. The 2017 shapefile was a snapshot in time. It does not necessarily predict *future* irrigated acres. In compiling the 2017 shapefile, Department staff did not distinguish "hardened acres" —i.e., fields that have been permanently removed from irrigation—from fields that were not irrigated in 2017 but could be in future years. Hr'g Tr. vol. II, at 194–95.
>
> The same is not true for the 2013 shapefile as explained by its author, a TFCC consultant named David Shaw. Mr. Shaw testified that when he compiled the 2013 shapefile, he specifically excluded hardened acres and included acres that could have been irrigated in 2013 but were not. Hr'g Tr. vol. IV, at 152–53. Unlike the

> 2013 shapefile, the 2017 shapefile includes only acres that *were irrigated* in 2017 and excludes the acres that *were not irrigated* in 2017 but *could be* irrigated in future years, e.g., 2023. This is a critical distinction because, as Mr. Shaw explains in the SWC's expert report, TFCC "has no way of knowing whether land covered by shares will or will not be irrigated and must prepare to meet the share delivery obligation." Ex. 4 ¶ 7, at 2.
>
> Mr. Shaw also testified that in his opinion the 2013 shapefile currently represents the best available information for determining TFCC's actual irrigated acreage. Hr'g Tr. vol. IV, at 164–65.

R., 1084. The Court finds the Director's determination that the 2017 irrigated lands dataset employs "hindcasts, not forecast" is supported by substantial and competent evidence in the record. R., 1084. Additionally, IGWA did not establish a lesser number of Twin Falls Canal Company irrigated acres by clear and convincing evidence. This is its burden. In support of its argument, IGWA cites various transcripts, including the Anders Transcript, the Sukow Transcript, and the Barlogi Transcript which are not in the agency record and are therefore not before the Court.[13] Therefore, the Director's determination regarding the Twin Falls Canal Company's irrigated acres must be affirmed.

F. The Director's determination on the forecast supply calculation is affirmed.

IGWA asserts the Director acted contrary to law in using Snake River flows at the T Gage to forecast water supply. The methodology order predicts material injury to reasonable in-season demand by taking the difference between reasonable in-season demand and the forecast supply. Initial forecast supply is calculated in Step 2 of the methodology order. Typically, within the first week of April, the USBR and the USACE issue their Joint Forecast that predicts an unregulated inflow volume at the Heise Gage from April 1 to July 31 for the forthcoming year. The Director found that the joint forecast "is generally as accurate a forecast as is possible

[13] IGWA additionally argues the Director erred by failing to give it adequate time to conduct a field-level examination of Coalition irrigated acres. The record reflects various junior ground water users filed a Motion for Continuance on April 28, 2023, requesting the June 2023 hearing be continued until "a date in December 2023 or January 2024" to allow time to conduct "necessary site investigations" to examine "[w]ater use, irrigation practices, and irrigated areas." R., 80-89. As set forth herein, continuing the hearing until after the irrigation season is not tenable given the Director's duty to timely administer water rights in priority. Furthermore, IGWA is not precluded from undertaking a field-level examination of irrigated acres in anticipation of any application of the methodology order. The methodology order is not new. The parties and their consultants are familiar with the methodology, having worked with it in the context of this call for over ten years.

using current data gathering and forecasting techniques." R., 1022. The Court finds IGWA has failed to carry its burden of proving this finding is not supported by substantial evidence in the record. IGWA cites only the Anders Transcript in support of its argument. The Anders Transcript is not part of the agency record and is therefore not before the Court. Therefore, the Director's determination on the forecast supply calculation must be affirmed.

G. The Director's determination regarding supplemental groundwater is affirmed.

IGWA argues the Director abused his discretion by failing "to evaluate whether the water needs of TFCC can be meet with supplemental groundwater in accordance with CM Rule 42.01.h." IGWA Opening Br., 36. One of the factors the Director may consider when determining material injury includes "the extent to which the requirements of the senior-priority surface water right could be met using alternate reasonable means of diversion or alternate points of diversion. . . ." IDAPA 37.03.11.042.01.h. Under Step 1 of the methodology order, the Director may account for supplemental ground water use in determining the seniors' total irrigated acreage." R., 1045. In this case, the Director found that he "currently does not have sufficient information to accurately determine the contribution of supplemental ground water to lands irrigated with surface water by the [Coalition]." R., 1045. "If and when reliable data is available to the Department, the methodology will be amended to account for the supplemental ground water use." R., 1045.

The presumption under Idaho law is that the senior is entitled to his decreed water right. *American Falls Reservoir Dist. No. 2 v. Idaho Dept. of Water Resources*, 143 Idaho 862, 878, 154 P.3d 433, 449 (2006). "Once a decree is presented to an administrating agency or court, all changes to that decree, permanent or temporary, must be supported by clear and convincing evidence." *A&B Irr. Dist. v. Idaho Dept. of Water Resources*, 153 Idaho 500, 524, 284 P.3d 225, 249 (2012). If junior users believe senior acreage is irrigated with supplemental ground water and therefore the senior should receive less than his full decreed water right, "it is their burden under the established evidentiary standards and burdens of proof to prove that fact by clear and convincing evidence." *Memorandum Decision and Order*, Gooding County Case No. CV-2010-382, p.31. (2014).

The ground water users here failed to provide clear and convincing evidence concerning the quantity of acres they allege Coalition members could irrigate with supplemental ground

water rights. IGWA asserts the Department has a database that assigns a ground water fraction to mixed-source lands and that this is the best science and data available to document supplemental ground water use. This database is not in the record before the Court. Moreover, in the 382 Case, the Court previously found that "the Director's assignment of an entity wide split for each member of the Coalition of the ground water fraction to the surface water fraction is not supported by substantial evidence in the record." 382 Case, p. 19. The Court found "the parties fail to cite the Court to anything submitted before the Department in either written form or via oral testimony establishing the use of supplemental ground water be individual irrigators within the Coalition." *Id.* Such is the case here. IGWA cites the Anders Transcript and the Sukow Transcript in support of its argument. These transcripts are not part of the agency record and are therefore not before the Court. Therefore, the Director's determination regarding supplemental groundwater must be affirmed.

H. The Director's determination that Coalition members operate efficiently within the limits of their delivery system is affirmed.

IGWA argues the Director abused his discretion by failing to require Coalition members to make system improvements to meet their water needs without curtailment. This issue has been previously addressed in the context of this call. Former Idaho Supreme Court Justice Gerald Schroeder, acting in his capacity as an IDWR hearing officer, found that the facilities utilized by Coalition members are reasonable:

> **3. The existing facilities utilized by the Surface Water Coalition members are reasonable.** The evidence does not show substandard facilities for diversion or conveyance. The members of the Surface Water Coalition have improved their conveyance practices since the time the water rights were licensed or decreed. All of the members have changed significant portions of their irrigation practices from gravity flow to sprinkler systems which generally deliver water to the crop more efficiently. Sprinkler practice is not perfect. Evidence from the Twin Falls Canal Company indicates that water from gravity flow that exceeds the need of the initial crop is captured and applied to other portions of the district by water paths that develop. The same process does not occur with sprinkler systems. Also, there are limitations with sprinklers on applying water into corner portions of property. Overall, however, the use of sprinklers is more efficient than gravity flow, and sprinklers are increasingly used by the members of SWC. Additionally, at least Twin Falls Canal Company and North Side Canal Company have gone extensively to the use of computer monitoring of water use to assure its proper application.
> . . .

> There is no evidence of decayed or damaged systems that are allowed to continue or practices that cause water to be wasted in transit. The evidence in this case indicates that each of the SWC members is operating with reasonable diversion and conveyance efficiency.

Opinion Constituting Findings of Fact, Conclusions of Law and Recommendation, p.54-55 (April 29, 2008).

The Director agreed and found that "members of the SWC operate reasonably and without waste." *Order on Reconsideration of Final Order*, p.5 (June 16, 2010). In the 382 Case, this Court noted that the Director found that "members of the SWC operate reasonably and without waste," and that he will not "impose greater project efficiencies upon members of the SWC than have been historically realized." *Memorandum Decision and Order*, Gooding County Case No. CV-2010-382, p.31. (2014). The Court did not set aside and remand the Director on this issue and no appeal was pursued from the Court's decision.

In this case, the Director found that "[t]estimony at the hearing established that the SWC entities operated efficiently within the limits of their delivery system," and that the Twin Falls Canal Company's "diversions and efficiency are reasonable." R., 1089. The Director's finding is supported by substantial evidence in the record. This includes the testimony of Twin Falls Canal Company general manager Jay Barlogi at the June 2023 hearing. Tr. Vol. II, p.75, 90-91, 94-96. It also includes the testimony of Daivd Shaw, a Twin Falls Canal Company consultant, at the June 2023 hearing. Tr. Vol. IV, p.146. Since the Director's finding is supported by substantial evidence in the record it must be affirmed.

I. IGWA's argument that the Director violated IDAPA by using evidence not contained in the record is unavailing.

IGWA argues the Director violated IDAPA by using evidence not contained in the record when issuing the Fifth Methodology Order. IGWA supports its argument in this respect only with citation to the Anders Transcript. That transcript is not part of the agency record and is not before the Court. IGWA has failed to carry its burden on judicial review and its argument is unavailing.

J. The Director did not act contrary to law when he took official notice of information after issuing the Fifth Methodology Order.

IGWA argues the Director acted contrary to law by taking official notice of information after the Fifth Methodology Order was issued. Rule 602 of the Department's Rules of Procedure provides that the presiding officer may take official notice of certain information. IDAPA 37.01.01.602. It provides that notice of taking such official notice of information "should be provided either before or during the hearing, and must be provided before the issuance of any order that is based in whole or in part on facts or material officially noticed." *Id.* "Parties must be given an opportunity to contest and rebut the facts or material officially noticed." *Id.*

As set forth above, there is no requirement that the Director hold a hearing prior to issuing the Fifth Methodology Order. The Director issued that Order on April 21, 2023. R., 1. The Director notified the parties of his intent to take official notice of certain information on May 5, 2023. R., 305. This notice was given approximately one month prior to the June 2023 hearing. The parties that participated in the hearing were given the opportunity to contest and rebut the facts and/or materials officially noticed at that hearing. The Director then issued the Sixth Methodology Order. Therefore, the Court holds IGWA was given notice of the Director's intent to take official notice, the opportunity to contest the material officially noticed, and a hearing prior to the Director's issuance of the Sixth Methodology Order. Therefore, its argument that the Director acted contrary to law when he took official notice of information is unavailing.

K. The Director's determination that the delivery call is not futile is affirmed.

The Director determined the delivery call is not futile. R., 1092. IGWA asserts the Director violated Idaho law and abused his discretion by failing to apply the futile call doctrine to the delivery call. Rule 10.08 of the CM Rules defines a futile call as[14]:

> A delivery call made by the holder of a senior-priority surface or ground water right that, for physical and hydrologic reasons, cannot be satisfied within a reasonable time of the call by immediately curtailing diversions under junior-priority ground water rights or that would result in waste of the water resource.

IDAPA 37.03.11.18.08. IGWA asserts the Department "regularly applies the [futile call] doctrine as between surface water users" and should likewise apply it to the Coalition's call in the same fashion. IGWA Opening Br., 40.

[14] The term "CM Rules" refers to the Rules for Conjunctive Management of Surface and Ground Water Resources found at IDAPA 37.03.11.

IGWA's argument fails to recognize that the relationship of ground water to interconnected surface water differs from the relationship of surface water to surface water. The Idaho Supreme Court has previously acknowledged these differences, noting the unique challenges of applying the futile call doctrine in the context of conjunctive administration:

> [C]urtailing ground water pumping does not provide the immediacy of delivery to the senior user that would be present in the curtailment of surface water. Surface water travels in a channel from one source that may be seen to a destination that can be seen. It can be routed to a particular point. Ground water does not fall into this model. Its route is determined by the contours of fractured basalt interspersed at times with soil of a different composition. Part of the water curtailed may travel one direction, part another. The effects of curtailment may be years to be realized. The parameters of a futile call in surface to surface delivery do not fit in the administration of ground water. If the time for the delivery of water to avoid a futile call defense that is applicable in surface to surface water delivery were applied in calls for the curtailment of ground water, most calls would be futile. In effect ground water pumping could continue uncurtailed despite deleterious effects upon surface water use because curtailment would not have the immediate effect traditionally anticipated.

Clear Springs Foods, Inc. v. Spackman, 150 Idaho 790, 811-812, 252 P.3d 71, 92-93 (2010). "The fact that curtailment will not produce sufficient water immediately to satisfy the senior right does not render [conjunctive management] calls futile." *Id.* To the contrary, "a reasonable time for the result of curtailment to be fully realized [in the context of conjunctive administration] may require years, not days or weeks." *Id.* In light of these differences, IGWA's attempt to compare the Department's futile call practices in surface water to surface water administration to this case is misplaced.

Consistent with the Idaho Supreme Court's analysis, the Director recognized that "[d]elay in the depletive effect of ground water pumping is not grounds for the Ground Water Users to be Excused from water administration under the CM Rules." R., 1092. He determined that "[a]voiding obligation because of delayed cumulative impact is contrary to the intent of the CM Rules," finding that:

> If the Director were to determine that curtailment of some ground water rights would not immediately accrue water to the senior priority surface water rights, even though the cumulative impact is significant, and that the delivery call is futile because there is no immediate benefit for the surface water rights, the holders of junior priority ground water rights could recurringly avoid curtailment.

R., 1092.

The Idaho Supreme Court has instructed that "[o]nce the initial determination is made that material injury is occurring or will occur, the junior then bears the burden of proving that the call would be futile or to challenge, in some other constitutionally permissible way, the senior's call." *American Falls Reservoir Dist. No. 2*, 143 Idaho at 878, 154 P.3d at 449. The junior bears the burden of proving futile call "by clear and convincing evidence." *In Matter of Distribution of Water to Various Water Rights held by or for Benefit of A&B Irr. Dist.*, 155 Idaho 640, 653, 315 P.3d 828, 841 (2013). The Court finds IGWA did not produce clear and convincing evidence before the Department that the Coalition's delivery call is futile, nor does it attempt to dispute the Court's analysis in the *Clear Springs Foods, Inc.* decision. Therefore, the Director's determination that the delivery call is not futile must be affirmed.

L. Substantial rights.

IGWA argues its substantial rights were prejudiced by the Director's Orders. For the reasons set forth herein, IGWA has failed to establish the Director acted contrary to law. Therefore, IGWA has failed to show their substantial rights were prejudiced. It follows the Director's Orders must be affirmed.

M. Attorney fees.

IGWA seeks an award of attorney fees under Idaho Code § 12-117(1). That code section provides for fees to the prevailing party where the Court finds "that the nonprevailing party acted without a reasonable basis in fact or law." In this case, IGWA is not a prevailing party on appeal. Therefore, an award of attorney fees under Idaho Code § 12-117 is unwarranted. IGWA also seeks and award of attorney fees under 42 U.S.C. § 1983. This section allows courts to award the prevailing party attorney fees in actions seeking to enforce section 1983 claims. *Karr v. Bermeosolo*, 142 Idaho 444, 449, 129 P.3d 88, 93 (2005). IGWA is not the prevailing party. Also, the Court finds the proceeding before the Director satisfied due process. Therefore, an award of attorney fees under 42 U.S.C. § 1983 is unwarranted.

IV.

ORDER

THEREFORE, BASED ON THE FORGOING, THE FOLLOWING ARE HEREBY ORDERED:

1. The Fifth Methodology Order is affirmed.

2. The 2023 As-Applied Order is affirmed.

3. The Scheduling Order and Order Authorizing Remote Appearance at Hearing is affirmed.

4. The Order Denying the Cities Appointment of Independent Hearing Officer and Motion for Continuance and Limiting Scope of Deposition is affirmed.

5. The Notice of Materials Department Witnesses May Rely Upon at Hearing and Intent to Take Official Notice is affirmed.

6. The Post-Hearing Order Regarding Methodology for Determining Material Injury to Reasonable In-Season Demand and Reasonable Carryover is affirmed.

7. The Sixth Methodology Order is affirmed.

8. The Order Revising April 23, Forecast Supply and Amending Curtailment Order is affirmed.

IT IS SO ORDERED.

Dated May 31, 2024

IN THE DISTRICT COURT OF THE FOURTH JUDICIAL DISTRICT OF THE STATE OF IDAHO, IN AND FOR THE COUNTY OF ADA

CITY OF IDAHO FALLS, CITY OF POCATELLO, CITY OF BLISS, CITY OF BURLEY, CITY OF CAREY, CITY OF DECLO, CITY OF DIETRICH, CITY OF GOODING, CITY OF HAZELTON, CITY OF HEYBURN, CITY OF JEROME, CITY OF PAUL, CITY OF RICHFIELD, CITY OF RUPERT, CITY OF SHOSHONE, and CITY OF WENDELL, Petitioners, vs. THE IDAHO DEPARTMENT OF WATER RESOURCES, and MATHEW WEAVER in his capacity as the Director of the Idaho Department of Water Resources, Respondents, and IDAHO GROUND WATER APPROPRIATORS INC., A&B IRRIGATION DISTRICT, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, TWIN FALLS CANAL COMPANY, AMERICAN FALLS RESERVOIR DISTRICT #2, MINIDOKA IRRIGATION DISTRICT, BONNEVILLE-JEFFERSON GROUND WATER DISTRICT,	Case No. CV01-23-13238 **MEMORANDUM DECISION AND ORDER**

and BINGHAM GROUNDWATER DISTRICT,

Intervenors.

IN THE MATTER OF THE DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY AND FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIRS DISTRICT NO. 2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY.

I.
BACKGROUND

The Court entered a Memorandum Decision and Order in Ada County Case No. CV01-23-13173 contemporaneously herewith. The facts and background set forth in that Order apply here and are incorporated by reference. In addition, on August 16, 2023, the Petitioners filed a Petition seeking judicial review of the Director's Post-Hearing Order Regarding Fifth Amended Methodology Order dated July 19, 2023 ("Post-Hearing Order"). The Petition asserts the Post-Hearing Order is contrary to law and requests that the Court set it aside and remand for further proceedings. The Court entered Orders permitting the Intervenors to participate in this proceeding. The parties submitted briefing on the issues raised on judicial review and a hearing on the Petition was held before the Court on April 4, 2024.

II.
STANDARD OF REVIEW

Judicial review of a final decision of the director of IDWR is governed by the Idaho Administrative Procedure Act ("IDAPA"). Under IDAPA, the court reviews an appeal from an agency decision based upon the record created before the agency. I.C. § 67-5277. The court shall not substitute its judgment for that of the agency as to the weight of the evidence on

questions of fact. I.C. § 67-5279(1). The court shall affirm the agency decision unless it finds that the agency's findings, inferences, conclusions, or decisions are: (a) in violation of constitutional or statutory provisions; (b) in excess of the statutory authority of the agency; (c) made upon unlawful procedure; (d) not supported by substantial evidence on the record as a whole; or (e) arbitrary, capricious, or an abuse of discretion. I.C. § 67-5279(3). Further, the petitioner must show that one of its substantial rights has been prejudiced. I.C. § 67-5279(4). Even if the evidence in the record is conflicting, the Court shall not overturn an agency's decision that is based on substantial competent evidence in the record. *Barron v. IDWR,* 135 Idaho 414, 417, 18 P.3d 219, 222 (2001). The Petitioner bears the burden of documenting and proving that there was not substantial evidence in the record to support the agency's decision. *Payette River Property Owners Assn. v. Board of Comm'rs.*, 132 Idaho 552, 976 P.2d 477 (1999).

III.

ANALYSIS

A. The Director's determination that the Twin Falls Canal Company's forecast supply is reasonable and sufficiently accurate is affirmed.

The Petitioners argue the Director's forecast supply for the Twin Falls Canal Company underestimated its total water supply given the high snowpack in 2023. Coalition members rely upon a combination of natural flow water from the Snake River and storage water held in reservoirs to meet their irrigation needs. The degree to which each Coalition member relies upon natural flow water as opposed to storage water differs based upon their respective water rights. For example, the Twin Falls Canal Company is primarily dependent upon natural flow water to meet its irrigation needs. This is because it has large natural flow water rights and a relatively small storage water right. High snowpack has a beneficial impact on storage water rights in particular, as the reservoir system in Basin 01 can catch and store snowpack runoff when it occurs for use later in the irrigation season when water demand is high. It has less beneficial impact on natural flow water rights, which rely more on aquifer discharges. The Director commented on this in his Order Denying Motion for Reconsideration of Denial of Continuance:

> The Director disagrees that high snowpack means the SWC will not be injured. While there is a good snowpack in the hills above the ESPA, the snowpack is only part of the SWC's water supply, and recharge from the aquifer is at a record low.

> Additionally, southern Idaho is emerging from a two-year drought, and the existing storage supply going into this irrigation season is low. Forecasters are uncertain whether the storage supply system will fill this year. The Director agrees with the SWC that the "current snowpack does not tell the whole story."

R., 429. As a result, the Twin Falls Canal Company is more reliant on aquifer discharges to satisfy its irrigation needs throughout the entirety of the irrigation season than other Coalition members.

The Director's prediction of reasonable in-season demand under the methodology order is based in part on a regression analysis. R., 1022. The regression analysis is used to predict the amount of natural flow that will be available to Coalition members in a given year utilizing data "from 1990 through the irrigation year previous to the current year." R., 1022. For the Twin Falls Canal Company, a "multi-linear regression equation" is developed "by comparing the actual Snake River near Heise natural flow and the flows at Box Canyon to the natural flow diverted." R., 1022. The actual natural flow volume predicted for each Coalition member is "one standard error below the regression line, which underestimates the available supply." R., 1022. This is "to ensure senior water right holders do not bear the risk of under-prediction of supply." R., 1022.

The regression analysis utilizes a "R-squared" value. The R-squared value is a statistical measurement of how closely data points fit on a regression line." R., 1082. The R-squared value indicates how accurately the regression analysis predicts the diversions for each Coalition member for the upcoming season. R., 1082. "R-squared values are decimal numbers that range from zero to one." R., 1082. The closer the R-squared value is to one, the better the predictive effect. R., 1082.

The R-squared value for the Twin Falls Canal Company is 0.72. R., 1082. The Petitioners challenge this value. They believe using the Joint Forecast along with the multi-linear regression analysis and accompanying 0.72 R-squared value is erroneous. They assert the R-squared values for other Coalition members are better than 0.72. They further assert that the R-squared value for the Twin Falls Canal Company has declined in recent years. The Director recognized that the R-squared value for the Twin Falls Canal Company has declined recently. R., 1082. However, he stated he is "still confident the regression equation is accurately predicting TFCC's natural flow." R., 1082. He therefore concluded that the Twin Falls Canal

Company's "0.72 R-squared value is reasonable and the TFCC's natural flow forecast is sufficiently accurate." R., 1082.

The Director's finding in this respect is supported by substantial evidence in the record. Matt Anders is the technical services bureau chief for the Department. Tr., Vol. I at 20. At the hearing, he testified as to the R-squared value for the Twin Falls Canal Company, providing in part:

> Q. Switching gears a little bit. Do you recall testifying about Twin Falls Canal Company's regression equation?
>
> A. I do.
>
> Q. And based on the R-2, do you think the regression equation still accurately predicts the natural flow for the Twin Falls Canal Company?
>
> A. We think it accurately is still predicting the natural flow for Twin Falls Canal Company. But we're concerned about the downward trend in the R-squared value, indicating that it may be degrading. But we still have confidence in it at this point. We want to see it in a couple more years and see what happens.

Tr.., Vol. I at 224. The Anders' testimony establishes the R-squared value is accurately predicting the natural flow for the Twin Falls Canal Company, and that he has confidence in it at this point. In addition, the Petitioners' expert witness Greg Sullivan testified that he considered "a good relationship is when the R-squared was at least – was above .5." Tr., Vol. 2 at 157. The Court therefore finds the Director's finding is supported by substantial evidence in the record, was reached through an exercise of his discretion, and must be affirmed.

B. The Director's determination to use 2018 as the baseline year is affirmed.

The Petitioners challenge the Director's decision to use 2018 as the baseline year in the Sixth Methodology Order. A baseline year is "a year or average of years when irrigation demand represents conditions that can predict need in the current year of irrigation at the start of the irrigation seasons." R., 1006. The purpose of predicting need is to estimate material injury. R., 1006. In the Sixth Methodology Order, the Director updated the baseline year from the previous average of diversion demands for 2006, 2008 and 2012 irrigation seasons to the diversion demand for the 2018 irrigation season. R., 1015-1016. The baseline year is selected by analyzing: (1) climate; (2) available water supply; and (3) irrigation practices. R., 1007. A

baseline year must "be recent enough to represent current irrigation practices." R., 1013. Additionally, "because the baseline year data is used to predict reasonable in-season demand for senior appropriators, safety factors must be employed to ensure the senior water rights will be satisfied. R., 1080.

The Petitioners argue utilizing a baseline year of 2018 overestimates the reasonable in-seasons demand of the Coalition. This Court previously approved the Director's use of a baseline year as a part of the methodology order in the 382 Case. In that case, the Court addressed a similar issue to that raised here. There, the City of Pocatello and IGWA made a similar argument that the Director must determine the needs of the Coalition based on historic use data associated with a year with average temperatures, evapotranspiration, and precipitation. The Court disagreed:

> The Director did not err in his intentional adoption of a baseline year based on above average temperatures and evapotranspiration and below average precipitation. The Court agrees that use of such data is necessary to protect senior rights if the Director is going to administer to an amount less than the full decreed quantity of the Coalition's rights. The arguments set forth by the City of Pocatello and IGWA that the Director must use data associated with an average year fail to take into account the legal limitations placed on the Director in responding to a delivery call. The senior is entitled to a presumption under Idaho law that he is entitled to his decreed water right. *AFRD#2*, 143 Idaho at 878, 154 P.3d at 449. If the Director is going to administer to less than the full quantity of the decreed water right, his decision must be supported by clear and convincing evidence in order to adequately protect the senior right. *A&B Irr. Dist.*, 153 Idaho at 524, 284 P.3d at 249.
>
> If the Director determined the needs of the Coalition based on historic use data associated with an average year, any decision to administer to less than the full quantity of the Coalition's decreed rights based on that data would not adequately protect its senior rights. Using data associated with an average year by its very definition would result in an under-determination of the needs of the Coalition half of the time. The Director simply cannot rely upon such data if he is going to administer to less than the decreed quantity of the Coalitions' water rights as his analysis would not be supported by clear and convincing evidence.

Memorandum Decision and Order, CV-2010-382, pp.33-34 (September 26, 2014).

Here, the Director determined there were two years that satisfied all necessary criteria for a baseline year: 2018 and 2020. However, for the reasons set forth in the Sixth Methodology Order, the Director selected 2018:

Years 2018 and 2020 satisfy all the BLY selection criteria discussed above. Each

> of these years had (1) total diversions above the average diversions for the years 2000-2021, (2) total growing degree days above the average for the years 1992-2021, and (3) reference ET values above the average for the years 1992-2021. The years 2018 and 2020 also had total precipitation values below the average precipitation for the years 1992- 2021 and were not water supply limited years. The Department has reviewed the SWC's diversion data for the 2020 irrigation season. The Department finds that 2020 ranks as the second-highest year of total diversions for the SWC and is more than one standard deviation above the average for the years 2000-2021. In comparison, 2018 ranks as the fourth-highest year of total diversions for the SWC and is less than one standard deviation above the average for the years 2000-2021. Choosing a BLY with above average diversions but within one standard deviation, ensures that a conservative year is selected that protects the senior while excluding extreme years from consideration. The Director concludes that total diversions for 2018 adequately protect senior water rights when predicting the demand shortfall at the start of the irrigation season and selects 2018 as the BLY.

R., 1016. The Director explained that in 2018 the Coalition's "diversion volume was above average at 104%." R., 1080. And, that "a safety factor of 4% is reasonable." R., 1080. As argued in the 382 Case, the Petitioners here argue that the Director should adopt a baseline year closer to 100% of average. For the reasons set forth herein, the Court finds the Director is (1) within his discretion in selecting 2018 as the baseline year, (2) that his decision is consistent with this Court's holding in the 382 Case, and (3) that his decision is supported by clear and convincing evidence. R., 1079-1082. Therefore, the Director's determination to use 2018 as the baseline year is affirmed. For the reasons set forth in this section and the preceding section, the Court also finds the Petitioners' argument that the Department's safety factors aggressively overpredict demand shortfall to be unavailing.

C. The Director's determination regarding the Twin Falls Canal Company's irrigated acres is affirmed.

The Petitioners assert the Director abused his discretion and acted contrary to law in determining the Twin Falls Canal Company's irrigation acreage. The Court entered a Memorandum Decision and Order in Ada County Case No. CV01-23-13173 contemporaneously herewith. In that Order, the Court found the Director's determination regarding the Twin Falls Canal Company's irrigated acres must be affirmed. It also found the Director's determination regarding supplemental groundwater must be affirmed. The Court incorporates its analysis on those issues herein.

D. The Director acted contrary to law by including acres associated with enlargement water rights in determining A&B Irrigation District's irrigated acres under the methodology order.

The Sixth Methodology Order attributes 15,924 acres to A&B Irrigation District for 2023. R., 1014. The Petitioners assert that evidence presented at the hearing demonstrates that A&B Irrigation District's irrigated acreage improperly included acres associated with its enlargement water rights that bear junior priority dates. At the hearing, Matt Anders testified to this issue as follows:

> Q. Okay. I'll just represent that enlargement rights have an effective priority date of 1994, which is junior to probably all of the ground water rights that are at risk of curtailment under the methodology order. And so my next question is, has there been discussion within the Department staff as to whether the methodology should be run based on the 14,637 acre figure instead of the 15,924 acre figure?
>
> A. No, we haven't had any discussions about that.
>
> Q. Okay. If, as I represented, the enlargement rights are junior to the ground water rights of IGWA and others, do you agree that it would probably be important or appropriate to make that adjustment, and run the methodology based on the 14,637 acre figure?
>
> A. I don't know. I would have to investigate it further.

Tr. Vol. I, p. 205. The Department and the Coalition do not dispute this issue. To the extent the Sixth Methodology Order includes irrigated acreage associated with A&B Irrigation District's enlargement water rights that bear junior priority dates, it violates principles of first in time first in right and is therefore contrary to law.

The Court does not, however, order remand on this issue. The Director did not predict any material injury to A&B Irrigation District in 2023 and did not curtail any junior ground water rights for purposes of predicted injury to A&B Irrigation District in 2023. Therefore, the Court finds that although the Director acted contrary to law, there is no prejudice to any of the Petitioners' substantial rights. It follows his Post-Hearing Order must be affirmed. I.C. § 67-5279(4).

E. The Director's determination that Coalition members operate efficiently within the limits of their delivery system is affirmed.

The Petitioners assert the Director erred in determining that the Twin Falls Canal Company operates efficiently. The Court entered a Memorandum Decision and Order in Ada County Case No. CV01-23-13173 contemporaneously herewith. In that Order, the Court found the Director's determination that Coalition members operate efficiently within the limits of their delivery system must be affirmed. For the reasons set forth in the Court's Order, which reasons are incorporated herein, the Petitioners' argument on this issue is unavailing.

F. The Director's determination to switch to transient-state simulation of ESPAM is affirmed.

The Sixth Methodology Order uses transient-state simulations of the Eastern Snake Plan Aquifer Model ("ESPAM") when determining curtailment priority date. R., 1036, 1041. The ESPAM "simulates the effects of the reduction in aquifer stress and calculates predicted increases in aquifer discharge to the Snake River resulting from the curtailment of ground water pumping from the ESPA." R., 29-30. ESPAM simulations can be either steady-state or transient. R., 30. "Steady-State simulations are appropriate for evaluating the average annual impact of aquifer stresses that have been, or will be, applied for decades." R., 31. "Transient simulations are necessary to evaluate the impacts of aquifer stresses applied for short periods of time." R., 31.

Prior to his adoption of the Fifth and Sixth Methodology Orders, the Director used a steady-state simulation when determining the curtailment priority date. However, when he issued the Fifth Methodology Order, the Director determined that the use of steady-state simulation was no longer supportable:

> In previous years, the Director used steady-state modeling when determining the curtailment priority date. The Department now has multiple years of experience with the methodology to better understand the impact of applying steady-state modeling versus transient modeling to determine a curtailment priority date that would supply adequate water to the senior water right holders. While the first version of the ESPA groundwater flow model was not calibrated at a time-scale that supported in-season transient modeling, the current version was calibrated using monthly stress periods and half-month time steps, a refinement that facilitates in-season transient modeling for calculating the response to curtailment of groundwater use. As part of the Director's ongoing obligation to evaluate the

> methodology, the Director must evaluate whether the use of steady-state continues to be supportable.
>
> . . .
>
> As described in Finding of Fact 87, curtailment to a priority date calculated by the steady state analysis method used in the Fourth Methodology Order will only offset 9% to 15% of the predicted IDS. In contrast, curtailment to a priority date calculated with a transient simulation of a single season curtailment will offset the *full* predicted IDS unless the shortfall exceeds the accruals to the near Blackfoot to Minidoka reach by the end of the irrigation season with curtailment of all junior ground water rights. This methodology order depends on an annual evaluation of material injury and should also employ curtailment and or mitigation that supplies replacement water at the time and place required by the senior-priority water right in a quantity sufficient to offset the depletive effect of ground water withdrawal and to assure protection of the senior-priority right. Curtailment dates, periodically determined at time of recalculating in-season demand shortfall (IDS), should be calculated by a transient model simulation that will return the full quantity of water to the senior priority rights at the time and place required.

R., 35-36. As a result, the Director determined that transient simulations are necessary to simulate the short-term curtailments prescribed in the methodology:

> This methodology order depends on an annual evaluation of material injury and should also employ curtailment and or mitigation that supplies replacement water at the time and place required by the senior-priority water right in a quantity sufficient to offset the shortfall resulting from ground water withdrawal and to assure protection of the senior-priority right. Curtailment dates, periodically determined at time of recalculating in season demand shortfall (IDS), should be calculated by a transient model simulation that will return the full quantity of water to the senior priority rights at the time and place required, or the maximum quantity that can be returned by curtailing all junior water rights.

R., 1091.

The Petitioners assert the Director's adoption of transient model simulations is clearly erroneous. The Court disagrees. The Director concluded that using steady-state simulation does not provide water to senior water rights at the time and place needed. The Director's finding is supported by substantial evidence in the record. The record establishes that transient simulation "predicts timing and magnitude of response to time-varying changes in aquifer stress resulting from short-term curtailment of ground use to address a predicted shortfall." R., 1430. It shows that "less than 15% of the steady state impacts of a single-season curtailment are realized at the river reach within six months of curtailment" under steady-state. R., 1429. Jennifer Sukow, who is a technical engineer for the Department, testified to this point as follows:

Q. Good morning, Ms. Sukow. My name is John Simpson. I represent A & B Irrigation District, et al., with Mr. Thompson. I just have a couple follow up questions for you.

If you could turn to Exhibit 318 from which you testified to before. And I believe that's your slide presentation from November. And, Jennifer, if you could just look at pages 21 and 22. I believe those are your conclusions; is that correct?

A. That's correct.

Q. Those are your conclusions from the modeling you produced as a part of that presentation in November, correct?

A. Correct.

Q. As you sit here today, are those still your conclusions that you would represent to the Hearing Officer and to the parties in terms of the modeling exercise you completed in the comparison between steady state and transient?

A. Yes.

Q. Okay. And then if you would look at page 6 of that presentation. And that's the graph that you testified to earlier regarding examination by Ms. McHugh. Do you see the paragraphs in the middle of the graph regarding the "Less than 15 percent of the steady state impacts of a single-season curtailment are realized?" Do you see that language in that graph, that insert?

A. Yes.

Q. Okay. And that's your conclusion; correct?

A. Yes, that's –

Q. Yes.

A. – date from the analyses.

Q. Right. So that would support your conclusions on page 21 and 22, that the basis for why steady state analysis is not appropriate for short-term river reach gains; is that correct?

A. Well, I think beyond that, because the steady state simulations do not simulate the short-term curtailments that are prescribed in the Surface Water Coalition methodology.

Q. Okay.

A. But the difference in volume is just the result of doing something that does simulate the short-term curtailment.

Q. Right. So if you utilize the steady state model run, you are just not going to realize the amount of water into the reach to mitigate for the identified injury in the Fifth Methodology As-Applied Order; correct?

A. Not within this irrigation season.

Tr., Vol. 1, pp.96-98.

The testimony of David Colvin, an expert for the Coalition supports this conclusion:

Q. And do you want to describe your general conclusions or just refer to those in the report?

. . .

A. Opinion No. 2 was that the steady state use of ESPAM for curtailment analysis in particular is inappropriate due to the methodology's requirement for in-season benefits from curtailment. And so the in-season timing component renders a steady state model ineffective and inappropriate for modeling curtailment benefits.

Tr., Vo. 1, p.108.[1] Therefore, the Court finds the Director's decision to adopt a transient-state simulation is supported by law and substantial evidence in the record. It follows the Director's determination must be affirmed.

G. The proceeding before the Director satisfied due process.

The Petitioners raise due process concerns regarding the process utilized by the Director in issuing the Post-Hearing Order. The Court entered a Memorandum Decision and Order in Ada County Case No. CV01-23-13173 contemporaneously herewith. In that Order, the Court found the proceeding before the Director satisfied due process. Further, that the Director's Scheduling Order and Order Limited Discovery must be affirmed. For the reasons set forth in the Court's Order, which reasons are incorporated herein, the Petitioners' due process concerns are unavailing.

[1] Two of Petitioners own experts admitted that if steady state is used in the modeling that the amount of the shortfall determined by the Director's order would not be supplied during the irrigation season. Tr., Vol. II, pp. 203-204; Tr. Vol. III pp. 91-92.

H. Evidentiary standard.

The Petitioners argue that challenges to those metrics in the methodology order that are not elements of senior water right are subject to a preponderance of the evidence standard. The Court disagrees. The senior is entitled to a presumption under Idaho law that he is entitled to his decreed water right. *AFRD#2*, 143 Idaho at 878, 154 P.3d at 449. If the Director is going to administer to less than the full quantity of the decreed water right, his decision must be supported by clear and convincing evidence in order to adequately protect the senior right. *A&B Irr. Dist.*, 153 Idaho at 524, 284 P.3d at 249.

Through the framework set forth in the methodology order, the Director determines whether the Coalition's water rights are suffering material injury and whether that injury will be addressed via mitigation and/or curtailment.[2] In making that determination the Director uses certain metrics set forth in the methodology order, including the use of a baseline year. The metrics selected in the methodology order are conservatively selected so that they have a built-in safety margin to account for some uncertainty that is inherent with predictions. This is done to ensure no injury to senior rights. If a junior water right holder believes there are better metric figures that also provide for some margin for uncertainty, then that junior user needs to show that by presenting clear and convincing evidence to the Director to ensure no injury to senior rights. Unlike a surface to surface call, there is no remedy to senior water rights should the predictions turn out to be in error to the detriment of senior rights.

I. Substantial rights.

The Petitioners argue their substantial rights were prejudiced by the Director's Post-Hearing Order. For the reasons set forth herein, the Petitioners have failed to establish the Director acted contrary to law except for the issue of enlargement acres. Although the Director acted contrary to law in including A&B Irrigation District's enlargement acres when calculating its irrigated acreage, that error did not result in prejudice to any of the Petitioners' substantial rights for the reasons set forth herein. Therefore, the Petitioners have failed to show their substantial rights were prejudiced. It follows the Director's Post-Hearing Order must be affirmed.

---

[2] When applying that framework, the Director may determine that a senior water right holder is entitled to less than the full quantity of his decreed right, by administering to "reasonable in-season demand."

IV.

ORDER

Therefore, BASED ON THE FOREGOING, it is ordered the Director's Post-Hearing Order is hereby affirmed.

Dated May 31, 2024

ERIC J. WILDMAN
District Judge

Attorneys for Magic Valley Ground Water District and North Snake Ground Water District

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket Nos. CM-DC-2010-001 **JOINT NOTICE OF COMPLIANCE**

Magic Valley Ground Water District and North Snake Ground Water District ("MV," "NS," or collectively the "Districts"), through undersigned counsel and in in response to the Director's *Final Order Curtailing Ground Water Rights Junior to March 31, 1954* (May 30, 2024) ("Curtailment Order"), submit the following 2024 mitigation proposal, seeking Director approval of the same.

I.
BACKGROUND

On May 29, 2024, MV and NS filed their *Notice of Compliance; Request for Clarification* ("Clarification Request") in response to the Director's *Amended Order Determining Deficiency in Notices of Secured Water* (May 28, 2024) ("Amended Deficiency Order"). The Districts proposed

mitigating their proportionate share of the April 2024-predicted IDS of 74,100 AF attributable to the Twin Falls Canal Company. The Districts' proposal was rooted in IGWA's 2009 Storage Water Mitigation Plan (Docket CM-MP-2009-007) ("2009 Plan").

The Director's Curtailment Order confirmed that the 2009 Plan was still viable as a mitigation vehicle for the 2024 irrigation season. But, the Director rejected the Districts' proportionate share-based proposal based on 2009 Plan language suggesting that those seeking safe harbor from curtailment under the plan are required to produce sufficient evidence of the ability to provide the ***full*** 74,100 AF IDS on behalf of all ground water users, rather than only proportionate shares of the 74,100 IDS directly attributable to the districts seeking shelter under the same. Curtailment Order, pp. 7-8. Absent demonstration of the Districts' ability to provide the entire 74,100 AF predicted IDS, the Districts would be subject to curtailment unless they agreed to mitigate under IGWA's 2016 Mitigation Plan (Docket CM-MP-2016-001) ("2016 Plan"). *Id*.; *see also*, *Order Denying IGWA's Second Petition for Reconsideration; Order Determining Deficiency in IGWA's May 17, 2024 Storage Water Leases*, p. 8.

II.
2024 COMPLIANCE PROPOSAL

In response to the Director's Curtailment Order, the Districts provide notice that they intend to comply with the 2016 Plan for the 2024 irrigation season by:

(a) Providing their historic proportionate shares of the 50kAF storage water delivery obligation. By district, those shares equal 8,000 AF (MV) and 6,410 AF (NS), totaling 14,410 AF to be delivered within 21 days of the day of allocation. These historical proportionate shares are illustrated and discussed in the *Declaration of Timothy P. Deeg in Support of AFA's Motion for*

Reconsideration of Order Determining Deficiency in Notices of Secured Water (May 17, 2024) and the SWID Letter Agreement attached to the Districts' Clarification Request[1]; and

(b) Meeting their proportionate shares of the 2024 irrigation season conservation obligation required under the 2016 Plan, as further modified by the Director's *Final Order Specifying Additional Actions* (May 3, 2024) ("Additional Actions Order"). The Director's Additional Actions Order increased the 2016 Plan conservation obligation from 240,000 AF up to 252,000 AF for the 2024 irrigation season. The Districts' respective percentage-based shares of the overall conservation obligation equal 15.8% for MV, and 12.4% for NS under steady-state application of the ESPAM 2.2 model. These conservation obligation percentages are the same as calculated by then-Director Spackman in his *Amended Final Order Regarding Compliance With Approved Mitigation Plan* (Apr. 24, 2023) ("Compliance Order") at Table 2.[2]

---

[1] Though the Districts are not required to provide proof demonstrating their ability to supply the aggregate 14,410 AF of storage water at this time, they nonetheless have already done so within their prior Clarification Request (producing and relying upon the October 27, 2020 *Multi-Year Tribal Lease Agreement* attached thereto).

[2] As noted in the Districts' *Joint Notice of Compliance; 2024 Irrigation Season Mitigation Commitments* (May 2, 2024), the Districts do not admit or concede that steady-state application of the ESPAM model is the correct application of the model, nor determinative of their mitigation obligations going forward under either the 2009 Plan or the 2016 Plan. *See id*., p. 3 (incorporated by this reference herein). To the contrary, the Director has shifted to transient model runs to both predict injury (IDS) and determine the level (priority) of curtailment necessary to mitigate for the injury predicted. The Director's shift to transient modeling undermines (if not entirely negates) the credibility and applicability of the steady-state-based "Re-proportioning" percentages contained in Table 2 of the April 2023 Compliance Order.

Transient runs of the model demonstrate that MV and NS's impacts upon (shares of) the April 2024-predicted IDS are negligible (currently 25 AF for MV and < 1.0 AF for NS). Consequently, the Districts reserve the right to seek reallocation of their shares of injury and mitigation obligation going forward. However, the Districts are willing to mitigate under steady-state application of the ESPAM model for 2024 out of recognition of the effects of legacy pumping, and in a good faith effort to do more than their fair share to encourage additional review and modification of the 2016 Plan prior to the 2025 irrigation season.

III.
CONCLUSION

For the foregoing, the Districts request that the Director: (a) find them in compliance with the 2016 Plan, as well as the Additional Actions Order; and (b) confirm their (and their patrons') safe harbor from curtailment for the 2024 irrigation season by operation of the Director's Curtailment Order.

DATED this 5th day of June, 2024.

Andrew J. Waldera

BEFORE THE DEPARTMENT OF WATER RESOURCES

OF THE STATE OF IDAHO

IN THE MATTER OF DISTRIBUTION OF WATER TO VARIOUS WATER RIGHTS HELD BY OR FOR THE BENEFIT OF A&B IRRIGATION DISTRICT, AMERICAN FALLS RESERVOIR DISTRICT #2, BURLEY IRRIGATION DISTRICT, MILNER IRRIGATION DISTRICT, MINIDOKA IRRIGATION DISTRICT, NORTH SIDE CANAL COMPANY, AND TWIN FALLS CANAL COMPANY	Docket No. CM-DC-2010-001 CM-MP-2016-001 **ORDER APPROVING 2024 STIPULATION AS COMPLIANCE WITH APPROVED MITIGATION PLAN**

BACKGROUND

In 2015, the Surface Water Coalition ("SWC")[1] and certain members of the Idaho Ground Water Appropriators, Inc. ("IGWA")[2] entered into the *Settlement Agreement Entered into June 30, 2015 Between Participating Members of the Surface Water Coalition and Participating Members of the Idaho Ground Water Appropriators, Inc.* ("*2015 Settlement Agreement*").

The parties amended and clarified the *2015 Settlement Agreement* by executing the *Addendum to Settlement Agreement* ("*First Addendum*"), the *Agreement* dated October 7, 2015 ("*A&B-IGWA Agreement*"), and the *Second Addendum to Settlement Agreement* ("*Second Addendum*"). The SWC and IGWA submitted these documents to the Director of the Idaho Department of Water Resources ("Department") as a stipulated mitigation plan in response to the SWC's delivery call (Docket No. CM-DC-2010-001).

The Director approved the mitigation plan and its amendment in his *Final Order Approving Stipulated Mitigation Plan* dated May 2, 2016, and the *Final Order Approving Amendment to Stipulated Mitigation Plan* dated May 9, 2017.

Therefore, six documents are collectively referred to as the *2016 Mitigation Plan* (Docket No CM-MP-2016-001):

1. The *2015 Settlement Agreement*
2. The *First Addendum*
3. The *A&B-IGWA Agreement*
4. The *Second Addendum*
5. The *Order Approving Mitigation Plan*
6. The *Order Approving Amendment to Mitigation Plan*

[1] The SWC is comprised of A&B Irrigation District, American Falls Reservoir District #2, Burley Irrigation District, Milner Irrigation District, Minidoka Irrigation District, North Side Canal Company, and Twin Falls Canal Company.

[2] For purposes of this order, references to IGWA include only the following eight ground water districts, which are the signatories to the *2016 Mitigation Plan*: American Falls-Aberdeen Ground Water District, Bingham Ground Water District, Bonneville-Jefferson Ground Water District, Carey Valley Ground Water District, Henry's Fork Ground Water District Jefferson Clark Ground Water District, Madison Ground Water District, Magic Valley Ground Water District, and North Snake Ground Water District.

In the *2015 Settlement Agreement*, the SWC and IGWA agreed that "[t]otal ground water diversion shall be reduced by 240,000 ac-ft annually." *2015 Settlement Agreement* § 3.a.i. This is commonly referred to as the "conservation obligation" or the "reduction obligation." The SWC and IGWA also agreed that IGWA would annually deliver storage water to the SWC: "IGWA will provide 50,000 ac-ft of storage water through private lease(s) of water from the Upper Snake Reservoir system, delivered to SWC 21 days after the date of allocation, for use to the extent needed to meet irrigation requirements." *Id.* § 3.b.i. Finally, the SWC and IGWA agreed "[n]o ground water user participating in this Agreement will be subject to a delivery call by the SWC members as long as the provisions of the Agreement are being implemented." *Id.* § 5.

On July 19, 2023, the Department issued its *Sixth Final Order Regarding Methodology for Determining Material Injury to Reasonable In Season Demand and Reasonable Carryover* ("*Methodology Order*"). The *Methodology Order* established nine steps for determining material injury to members of the SWC.

On April 18, 2024, the Director issued the *Final Order Regarding April 2024 Forecast Supply (Methodology Steps 1-3)* ("*As-Applied Order*"), which applied steps 1, 2, and 3 of the *Methodology Order*. The Director predicted an April in-season demand shortfall ("IDS") of 74,100 acre-feet. *As-Applied Order*, at 3, No. CM-DC-2010-001. The Director ordered that, by May 2, 2024, ground water users with consumptive water rights "bearing priority dates junior to March 31, 1954, within the Eastern Snake Plain Aquifer area of common ground water supply shall establish, to the satisfaction of the Director, that they can mitigate for their proportionate share of the predicted April IDS of 74,100 acre-feet in accordance with an approved mitigation plan." *Id.* at 6. The Director also ordered that, if such a junior ground water user cannot establish that they can mitigate for their proportionate share of the predicted IDS "in accordance with an approved mitigation plan, the Director will issue an order curtailing the junior-priority ground water user." *Id.*

Historically, IGWA, acting on behalf of its member ground water districts, filed a notice of mitigation with the Department to establish that the ground water districts can mitigate for their proportionate share of the predicted IDS in accordance with an approved mitigation plan. However, this year, individual ground water districts submitted their own mitigation notices. Between May 2 and May 6, 2024, Bonneville-Jefferson, Jefferson-Clark, Magic Valley together with North Snake, Henry's Fork together with Madison, Bingham, Carey Valley, and American Falls-Aberdeen ground water districts (collectively, the "Districts") filed mitigation notices with the Department.

On May 10, 2024, the Director issued an *Order Determining Deficiency in Notices of Secured Water* ("*Order Determining Deficiency*"). In the *Order Determining Deficiency*, the Director found that the mitigation notices filed by the Districts "are deficient and fail to demonstrate that they are operating in accordance with an approved mitigation plan." *Order Determining Deficiency*, at 11, No. CM-DC-2010-001.

Accordingly, the Director gave the Districts until May 17, 2024, "to submit additional notice that demonstrates to the satisfaction of the [D]irector that they have secured storage water in compliance with either the *2009 Storage Water [Mitigation] Plan* or the *2016 Settlement Mitigation Plan*." *Id.*

On May 17, 2024, IGWA submitted *IGWA's Notice of Storage Water Leases* ("*IGWA's Notice*") for the purpose of demonstrating that adequate storage water leases were secured to mitigate material injury caused by ground water use within Bonneville-Jefferson, Jefferson-Clark, Magic Valley, North Snake, Henry's Fork, Madison, Bingham, and Carey Valley ground water districts, in compliance with the *2009 Storage Water Mitigation Plan*.

The same day, American Falls-Aberdeen requested the Director reconsider the *Order Determining Deficiency* to remove any obligation on behalf of the ground water districts to provide proof that 50,000 acre-feet of storage water has been secured under the *2016 Mitigation Plan*. *Mot. for Recons. of Order Determining Deficiency in Notices of Secured Water*, at 5–7, No. CM-DC-2010-001.

The Director ultimately agreed with American Falls-Aberdeen that under the plain language of the *2016 Mitigation Plan* it was complying with the requirements of the plan. Consequently, on May 28, 2024, in the *Amended Order Determining Deficiency in Notices of Secured Water* ("*Amended Order Determining Deficiency*") the Director concluded: "At this time, American Falls-Aberdeen is the only ground water district that has told the Director that it continues to uphold and seek protection under the *2016 Settlement Mitigation Plan* and has demonstrated that it continues to comply with all elements of the plan." *Amended Order Determining Deficiency*, at 10–11, No. CM-DC-2010-001.

In contrast, when the Director evaluated *IGWA's Notice*, the Director found it to be deficient "because it fail[ed] to demonstrate that Bonneville-Jefferson, Jefferson-Clark, Magic Valley, North Snake, Henry's Fork, Madison, Bingham, and Carey Valley ground water districts are operating in accordance with an approved mitigation plan." *Order Denying IGWA's Second Pet. for Recons.; Order Determining Deficiency in IGWA's May 17, 2024 Notice of Storage Water Leases*, at 8, No. CM-DC-2010-001. Therefore, the Director ordered:

> Any ground water district that previously sought protection under the *2009 Storage Water Mitigation Plan* that now wishes to seek protection under the *2016 Settlement Mitigation Plan* has until Wednesday, May 29, 2024, at 5:00 p.m. (MT) to inform the Director of their intention to do so and to demonstrate they are in compliance with the *2016 Settlement Mitigation Plan*.

Id.

Only Henry's Fork and Madison ground water districts filed satisfactory notice. Therefore, the Director concluded in the *Final Order Curtailing Ground Water Rights Junior to March 31, 1954* ("*Curtailment Order*"), issued May 30, 2024, that American Falls-Aberdeen, Henry's Fork, and Madison ground water districts demonstrated that they were operating in accordance with the *2016 Mitigation Plan* so junior ground water users who were members of those districts would not be subject to curtailment during the 2024 irrigation season. *Curtailment Order*, at 7, No. CM-DC-2010-001.

As a result of their deficient notices, the Director concluded that Magic Valley, North Snake, Bingham, Bonneville-Jefferson, Jefferson Clark, and Carey Valley ground water districts were not operating in accordance with a Department approved mitigation plan and would be subject to curtailment during the 2024 irrigation season. *Curtailment Order*, at 7–8.

The *Curtailment Order* required ground water users within the Eastern Snake Plain Aquifer area of common ground water supply, whose rights have a priority date after March 31, 1954, and who have not already established to the satisfaction of the Director that they are operating in accordance with a Department-approved mitigation plan, to cease diverting ground water under those rights. *Curtailment Order*, at 9.

On June 6, 2024, the Director issued the *Order Amending Curtailment List* ("*Amended Curtailment Order*"), which removed all water rights of members of Magic Valley and North Snake from the curtailment list as they established to the satisfaction of the Director that they

were operating in accordance with a Department-approved mitigation plan. *Amended Curtailment Order*, at 1, No. CM-DC-2010-001.

On June 19, 2024, the SWC and IGWA submitted a *Joint Motion for Order Approving 2024 Stipulation*, requesting that the Director issue an order accepting the *2024 Stipulation*, attached as Exhibit A to the motion, as compliance with the *2016 Mitigation Plan* for the 2024 irrigation season. *Joint Motion for Order Approving 2024 Stipulation*, at 2.[3]

Concurrently, the Director received a letter from Jeff Raybould, Chairman of the Idaho Water Resource Board ("IWRB"), confirming IWRB's commitment to provide 5,000 acre-feet of storage water pursuant to the terms of the *2024 Stipulation*.

ANALYSIS

In a delivery call under the Department's Rules for Conjunctive Management of Surface and Ground Water Resources ("CM Rules"), out-of-priority diversion of water by junior priority ground water users is allowable only "pursuant to a mitigation plan that has been approved by the Director." IDAPA 37.03.11.040.01.b. Junior-priority ground water users "covered by an approved and effectively operating mitigation plan" are protected from curtailment under CM Rule 42. IDAPA 37.03.11.042.02. In other words, only those junior ground water users complying with an approved mitigation plan are protected from a curtailment order.

The *2016 Mitigation Plan* obligates IGWA to reduce its total consumptive use volume or recharge the equivalent of 240,000 ac-ft every year and to deliver 50,000 ac-ft of storage water annually. Each IGWA member is annually responsible for their proportionate share of that total. But the Mitigation Plan is structured in such a way that the analysis of IGWA's mitigation efforts from one year are delayed until the following year. These delays are inherent in the Steering Committee process the parties agreed to in the *Second Addendum*.

Because the parties stipulated to the *2016 Mitigation Plan*, the Director allowed significant latitude to the agreeing parties in accepting the provisions of the mitigation plan. Despite the parties' stipulated agreement to the terms of the *2016 Mitigation Plan*, following the drought years of 2021 and 2022, much disagreement and litigation arose between the parties regarding the interpretation, implementation, and enforceability of the plan. *See 2024 Stipulation*, at 1.

In administrative proceedings conducted pursuant to the Steering Committee process, the Director concluded that certain IGWA members failed to satisfy their proportionate mitigation obligations in 2021 and 2022, respectively, and were therefore not operating in accordance with a Department-approved mitigation plan. *Amended Final Order Regarding Compliance with Approved Mitigation Plan* ("*2021 Compliance Order*"), at 16-17, No. CM-MP-2016-001; *Final Order Regarding IGWA's 2022 Mitigation Plan Compliance* ("*2022 Compliance Order*"), at 8, No. CM-MP-2016-001. To resolve the deficiency in 2021, the SWC and IGWA entered into a *Remedy Agreement*, which the Director approved as an appropriate contingency for

[3] The *2024 Stipulation* is entered into and executed by: Idaho Ground Water Appropriators, Inc., North Snake Ground Water District, Magic Valley Ground Water District, Carey Valley Ground Water District, Aberdeen-American Falls Ground Water District, Bingham Ground Water District, Bonneville-Jefferson Ground Water District, Jefferson-Clark Ground Water District, Madison Ground Water District, and Henry's Fork Ground Water District (collectively, the "Groundwater Users"), and Twin Falls Canal Company, North Side Canal Company, American Falls Reservoir District No. 2, Milner Irrigation District, Burley Irrigation District, A&B Irrigation District, and Minidoka Irrigation District (collectively, the "SWC"). *2024 Stipulation*, at 1.

noncompliance. *2021 Compliance Order*, at 17-20. Administrative proceedings addressing the 2022 noncompliance are ongoing before an independent hearing officer.

Rather than continue to litigate their disagreements, the SWC and IGWA have entered into the *2024 Stipulation*, which "prescribe[es] the mutually agreeable terms by which the Groundwater Users will comply with the 2016 [Mitigation] Plan for the 2024 irrigation season." *Joint Motion for Order Approving 2024 Stipulation*, at 3.

By submitting the *2024 Stipulation* to the Department, the parties request the Director "issue an order accepting the *2024 Stipulation* as compliance with the 2016 [Mitigation] Plan for the 2024 irrigation season, and issue an order amending the curtailment list to protect all patrons of the Groundwater Users from curtailment during the 2024 irrigation season under the terms provided in the stipulation." *Id.*

For the ground water districts to be protected from curtailment by operating under the *2016 Mitigation Plan*, they must demonstrate that they continue to comply with all elements of the plan. The two main elements of the plan are the conservation obligation (including curing the 2022 deficiency and fulfilling the 2024 obligation), and the storage water delivery obligation.

A. The 2024 Conservation Obligation

As stated above, the *2016 Mitigation Plan* requires IGWA members to reduce their proportionate share of total diversions or recharge the equivalent of 240,000 ac-ft every year. To demonstrate their continued commitment to this element of the plan for the 2024 irrigation season, the ground water districts agree in the *2024 Stipulation* that:

> [T]he ground water districts will collectively conserve 240,000 acre-feet of groundwater as compared to their average annual diversions during the time period 2010-2014. A 205,000 acre-feet portion is allocated among the ground water districts as it has been historically set forth in Appendix A attached hereto. The remaining 35,000 acre-feet portion is allocated based on steady-state impacts to the Near Blackfoot to Neely reach of the Snake River as set forth in Appendix A. Each district shall be independently responsible to satisfy its respective groundwater conservation obligations as set forth in Appendix A.

2024 Stipulation, at 2 ¶ 5.

Although the *2016 Mitigation Plan* requires 240,000 acre-feet of annual conservation, when the ground water districts failed to achieve the 2023 sentinel well benchmark the SWC requested that the Director specify the additional actions the ground water districts must take as part of ongoing adaptive management requirements. In response, the Director issued the *Final Order Specifying Additional Actions* ("*Additional Actions Order*") on May 3, 2024. In the *Additional Actions Order*, the Director concluded that:

> [I]t is appropriate that the Districts increase their proportionate share of the total annual ground water use reduction of 240,000 acre-feet by an additional 5% (12,000 acre-feet) during the 2024 irrigation season and then increase their proportionate share of the total annual ground water reduction of 240,000 acre-feet by an additional 12,000 acre-feet each year thereafter until the 2023 benchmark is achieved or the Steering Committee fulfills its obligations set forth in § 2.c.ii of the *Second Addendum* and recommends alternative actions.

Additional Actions Order, at 5. Subsequently, IGWA filed a petition for reconsideration and requested a hearing on the *Additional Actions Order*. In the *2024 Stipulation*, the parties express an intent to stay all litigation between them until October 1, 2024 "to enable the parties to focus their attention on cooperative negotiations." *2024 Stipulation*, at 2–3 ¶ 9. The stipulated stay includes Docket No. CM-MP-2016-001, which contains the *Additional Actions Order*.

To further the parties' goals to "work cooperatively and collaboratively to determine groundwater management and mitigation measures for 2025 and future years that resolve past disagreements and are mutually beneficial to the parties" and to encourage the parties to negotiate their own alternative additional actions, the Director hereby stays the *Additional Actions Order* until October 1, 2024, pursuant to Department Rule of Procedure 780. *2024 Stipulation*, at 1 ¶ F; IDAPA 37.01.01.780.

Accordingly, the Director concludes that the ground water districts' commitment to conserving 240,000 acre-feet made in the *2024 Stipulation* is consistent with the conservation obligation required in the *2016 Mitigation Plan*. As compliance with this requirement is measured after the irrigation season is complete, at this time the Director is satisfied that the ground water districts' commitment to the 240,000 acre-foot obligation demonstrates their compliance with this element of the plan for 2024.

B. The 2022 Breach of the Conservation Obligation

In August of 2023, the Director found that certain ground water districts did not satisfy their proportionate share of IGWA's conservation obligation in 2022 and were therefore not in compliance with the *2016 Mitigation Plan* in 2022. *See 2022 Compliance Order*. Administrative proceedings followed and were ongoing prior to the Department's receipt of the *2024 Stipulation*. In the *2024 Stipulation*, the parties resolve the deficient performance in 2022 as follows:
